**42 CFR Parts 405, 410, 411, 414, 415, 418, 422, 423, 424, 425, 455, 489, 491, 495, 498, and 600**

**CMS-1784-F**

**RIN 0938-AV07**

**Medicare and Medicaid Programs; CY 2024 Payment Policies under the Physician Fee Schedule and Other Changes to Part B Payment and Coverage Policies; Medicare Shared Savings Program Requirements; Medicare Advantage; Medicare and Medicaid Provider and Supplier Enrollment Policies; and Basic Health Program**

**AGENCY:** Centers for Medicare & Medicaid Services (CMS), Health and Human Services (HHS).

**ACTION:** Final rule.

**SUMMARY:** This major final rule addresses: changes to the physician fee schedule (PFS); other changes to Medicare Part B payment policies to ensure that payment systems are updated to reflect changes in medical practice, relative value of services, and changes in the statute; payment for dental services inextricably linked to specific covered medical services; Medicare Shared Savings Program requirements; updates to the Quality Payment Program; Medicare coverage of opioid use disorder services furnished by opioid treatment programs; updates to certain Medicare and Medicaid provider and supplier enrollment policies, electronic prescribing for controlled substances for a covered Part D drug under a prescription drug plan or an MA-PD plan under the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities Act (SUPPORT Act); updates to the Ambulance Fee Schedule regulations and the Medicare Ground Ambulance Data Collection System; codification

of the Inflation Reduction Act and Consolidated Appropriations Act, 2023 provisions; expansion of the diabetes screening and diabetes definitions; pulmonary rehabilitation, cardiac rehabilitation and intensive cardiac rehabilitation expansion of supervising practitioners; appropriate use criteria for advanced diagnostic imaging; early release of Medicare Advantage risk adjustment data; a social determinants of health risk assessment in the annual wellness visit and Basic Health Program.

**DATES:** These regulations are effective on January 1, 2024.

**FOR FURTHER INFORMATION CONTACT:**

MedicarePhysicianFeeSchedule@cms.hhs.gov, for any issues not identified below.

Please indicate the specific issue in the subject line of the email.

MedicarePhysicianFeeSchedule@cms.hhs.gov, for the following issues: practice expense, work RVUs, conversion factor, and PFS specialty-specific impacts; the comment solicitation on strategies for updates to practice expense data collection and methodology, caregiver training services, community health integration services, social determinants of health risk assessment, and principal illness navigation services; potentially misvalued services under the PFS, direct supervision using two-way audio/video communication technology, telehealth, and other services involving communications technology; teaching physician services, advancing access to behavioral health services, PFS payment for evaluation and management services, geographic practice cost indices (GPCIs), payment for skin substitutes, supervision of outpatient therapy services, KX modifier thresholds, diabetes self-management training (DSMT) services, and DSMT telehealth services, and dental services inextricably linked to specific covered services.

Laura Ashbaugh, (410) 786-1113, and Erick Carrera, (410) 786-8949, Zehra Hussain, (214) 767-4463, or MedicarePhysicianFeeSchedule@cms.hhs.gov, for issues related to dental services inextricably linked to specific covered medical services.

Laura Kennedy, (410) 786-3377, Adam Brooks, (202) 205-0671, and Rachel Radzyner, (410) 786-8215, for issues related to Drugs and Biological Products Paid Under Medicare Part B MedicarePhysicianFeeSchedule@cms.hhs.gov, for issues related to complex drug administration.

Laura Ashbaugh, (410) 786-1113, and Ariana Pitcher, (667) 290- 8840, or CLFS\_Inquiries@cms.hhs.gov for issues related to Clinical Laboratory Fee Schedule.

Lisa Parker, (410) 786-4949, or FQHC-PPS@cms.hhs.gov, for issues related to FQHC payments.

Michele Franklin, (410) 786-9226, or RHC@cms.hhs.gov, for issues related to RHC payments.

Kianna Banks (410) 786-3498 and Cara Meyer (667) 290-9856, for issues related to RHCs and FQHCs definitions of staff and Conditions for Certification or Coverage.

Sarah Fulton, (410) 786-2749, for issues related to pulmonary rehabilitation, cardiac rehabilitation and intensive cardiac rehabilitation expansion of supervising practitioners.

Lindsey Baldwin, (410) 786-1694, Ariana Pitcher, (667) 290- 8840, or OTP\_Medicare@cms.hhs.gov, for issues related to Medicare coverage of opioid use disorder treatment services furnished by opioid treatment programs.

Sabrina Ahmed, (410) 786-7499, or SharedSavingsProgram@cms.hhs.gov, for issues related to the Medicare Shared Savings Program (Shared Savings Program) Quality performance standard and quality reporting requirements.

Janae James, (410) 786-0801, or Elizabeth November, (410) 786-4518, or SharedSavingsProgram@cms.hhs.gov, for issues related to Shared Savings Program beneficiary assignment and benchmarking methodology.

Lucy Bertocci, (410) 786-3776, or SharedSavingsProgram@cms.hhs.gov, for issues related to Shared Savings Program advance investment payments, and eligibility requirements.

Rachel Radzyner, (410) 786-8215, and Michelle Cruse, (443) 478-6390, for issues related to preventive vaccine administration services.

Mollie Howerton (410) 786-5395, for issues related to Medicare Diabetes Prevention Program.

Sarah Fulton (410) 786-2749, for issues related to appropriate use criteria for advanced diagnostic imaging.

Frank Whelan, (410) 786-1302, for issues related to Medicare and Medicaid provider and supplier enrollment regulation updates.

Daniel Feller (410) 786-6913 for issues related to expanding diabetes screening and definitions.

Daniel Feller (410) 786-6913 for issues related to a social determinants of health risk assessment in the annual wellness visit.

Mei Zhang, (410) 786-7837, and Kimberly Go, (410) 786-4560, for issues related to requirement for electronic prescribing for controlled substances for a covered Part D drug under a prescription drug plan or an MA-PD plan (section 2003 of the SUPPORT Act).

Amy Gruber, (410) 786-1542, or [AmbulanceDataCollection@cms.hhs.gov](mailto:AmbulanceDataCollection@cms.hhs.gov), for issues related to the Ambulance Fee Schedule (AFS) and the Medicare Ground Ambulance Data Collection System.

Mary Rossi-Coajou (410) 786-6051, for issues related to hospice Conditions of Participation.

Cameron Ingram (410) 409-8023 for issues related to Histopathology, Cytology, and Clinical Cytogenetics Regulations under CLIA of 1988.

Meg Barry (410)786-1536, for issues related to the Basic Health Program (BHP) provisions.

Renee O'Neill, (410) 786-8821, or Sophia Sugumar, (410) 786-1648, for inquiries related to Merit-based Incentive Payment System (MIPS) track of the Quality Payment Program.

Richard Jensen, (410) 786-6126, for inquiries related to Alternative Payment Models (APMs).

### **I. Executive Summary**

#### *A. Purpose*

This major final rule revises payment policies under the Medicare PFS and makes other policy changes, including to the implementation of certain provisions of the Consolidated Appropriations Act, 2023 (Pub. L. 117-328, September 29, 2022), Inflation Reduction Act of 2022 (IRA) (Pub. L. 117-169, August 16, 2022), Consolidated Appropriations Act, 2022 (Pub. L. 117-103, March 15, 2022), Consolidated Appropriations Act, 2021 (CAA, 2021) (Pub. L. 116-260, December 27, 2020), Bipartisan Budget Act of 2018 (BBA of 2018) (Pub. L. 115-123, February 9, 2018) and the Substance Use-Disorder Prevention that Promotes Opioid Recovery

and Treatment for Patients and Communities Act (SUPPORT Act) (Pub. L. 115-271, October 24, 2018), related to Medicare Part B payment. In addition, this major final rule includes provisions regarding other Medicare payment policies described in sections III. and IV.

This rulemaking updates the Rural Health Clinic (RHC) and Federally Qualified Health Clinic (FQHC) Conditions for Certification and Conditions for Coverage (CfCs), respectively, to implement the provisions of the Consolidated Appropriations Act (CAA), 2023 (Pub. L. 117-328, December 29, 2022), now allowing payment under Medicare Part B for services furnished by a Marriage and Family Therapist (MFT) or Mental Health Counselor (MHC).

This rulemaking also updates the Hospice Conditions of Participation (CoPs) to implement division FF, section 4121 of the CAA 2023 regarding the addition of marriage and family therapists (MFTs) or mental health counselors (MHCs) as part of the hospice interdisciplinary team and make changes to the hospice personnel requirements.

This rulemaking also seeks to further advance Medicare's overall value-based care strategy of growth, alignment, and equity through the Medicare Shared Savings Program (Shared Savings Program) and the Quality Payment Program (QPP). The structure of the programs enables us to develop a set of tools for measuring and encouraging improvements in care, which may support a shift to clinician payment over time into Advanced Alternative Payment Models (APMs) and accountable care arrangements which reduce care fragmentation and unnecessary costs for patients and the health system.

This rulemaking also updates the public reporting requirements of procedure volume data (Part B non-institutional claims) on clinician profile pages of the Compare Tool to include Medicare Advantage (MA) encounter data. This enables us to use and analyze MA encounter data as part of the aggregated information disclosed through the Care Compare website, more broadly fulfilling the public reporting requirements of section 104 of the MACRA and section 10331 of the ACA and providing beneficiaries with useful and appropriate information when selecting a provider. This rulemaking also amends § 422.310(f)(3) to permit the release of the

MA encounter data on the timeframe(s) used for disclosure and release of the data on the Care Compare website.

This rulemaking also updates the Ambulance Fee Schedule regulations to implement division FF, section 4103 of the CAA 2023 regarding the ground ambulance extenders provisions and also provides further changes and clarifications to the Medicare Ground Ambulance Data Collection System.

This rulemaking also updates Medicare and Medicaid provider and supplier enrollment regulations.

### *B. Summary of the Major Provisions*

The statute requires us to establish payments under the PFS, based on national uniform relative value units (RVUs) that account for the relative resources used in furnishing a service. The statute requires that RVUs be established for three categories of resources: work, practice expense (PE), and malpractice (MP) expense. In addition, the statute requires that each year we establish, by regulation, the payment amounts for physicians' services paid under the PFS, including geographic adjustments to reflect the variations in the costs of furnishing services in different geographic areas.

The statute requires us to establish payments under the PFS, based on national uniform relative value units (RVUs) that account for the relative resources used in furnishing a service. The statute requires that RVUs be established for three categories of resources: work, practice expense (PE), and malpractice (MP) expense. In addition, the statute requires that we establish each year by regulation the payment amounts for physicians' services paid under the PFS, including geographic adjustments to reflect the variations in the costs of furnishing services in different geographic areas.

In this major final rule, we are establishing RVUs for CY 2024 for the PFS to ensure that our payment systems are updated to reflect changes in medical practice and the relative value of services, as well as changes in the statute. This final rule also includes discussions and

provisions regarding several other Medicare Part B payment policies, Medicare and Medicaid provider and supplier enrollment policies, and other policies regarding programs administered by CMS.

Specifically, this final rule addresses:

- Background (section II.A.)
- Determination of PE RVUs (section II.B.)
- Potentially Misvalued Services Under the PFS (section II.C.)
- Payment for Medicare Telehealth Services Under Section 1834(m) of the Social Security Act (the Act) (section II.D.)
- Valuation of Specific Codes (section II.E.)
- Evaluation and Management (E/M) Visits (section II.F.)
- Geographic Practice Cost Indices (GPCI) (section II.G.)
- Payment for Skin Substitutes (section II.H.)
- Supervision of Outpatient Therapy Services, KX Modifier Thresholds, Diabetes Self-Management Training (DSMT) Services by Registered Dietitians and Nutrition Professional, and DSMT Telehealth Services (section II.I.)
- Advancing Access to Behavioral Health Services (section II.J.)
- Policies on Medicare Parts A and B Payment for Dental Services Inextricably Linked to Specific Covered Services (section II.K.)
- Drugs and Biological Products Paid Under Medicare Part B (section III.A.)
- Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs) (section III.B.)
- Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs) Conditions for Certification or Coverage (CfCs) (section III.C.)
- Clinical Laboratory Fee Schedule: Revised Data Reporting Period and Phase-in of Payment Reductions (section III.D.)

- Pulmonary Rehabilitation, Cardiac Rehabilitation and Intensive Cardiac Rehabilitation

Expansion of Supervising Practitioners (section III.E.)

- Modifications Related to Medicare Coverage for Opioid Use Disorder (OUD)

Treatment Services Furnished by Opioid Treatment Programs (OTPs ) (section III.F.)

- Medicare Shared Savings Program (section III.G.)

● Medicare Part B Payment for Preventive Vaccine Administration Services (section III.H.)

- Medicare Diabetes Prevention Program Expanded Model (section III.I.)

- Appropriate Use Criteria for Advanced Diagnostic Imaging (section III.J.)

- Medicare and Medicaid Provider and Supplier Enrollment (section III.K.)

- Expand Diabetes Screening and Diabetes Definitions (section III.L.)

● Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug under a Prescription Drug Plan or an MA-PD Plan (section 2003 of the SUPPORT Act) (section III.M.)

● Changes to the Regulations Associated with the Ambulance Fee Schedule and the Medicare Ground Ambulance Data Collection System (GADCS) (section III.N.)

- Hospice: Changes to the Hospice Conditions of Participation (section III.O.)

● RFI: Histopathology, Cytology, and Clinical Cytogenetics Regulations under the Clinical Laboratory Improvement Amendments (CLIA) of 1988 (section III.P.)

- Changes to the Basic Health Program Regulations (section III.Q.)

● Updates to the Definitions of Certified Electronic Health Record Technology (section III.R.)

● A Social Determinants of Health Risk Assessment in the Annual Wellness Visit (section III.S.)

- Updates to the Quality Payment Program (section IV.)

- Collection of Information Requirements (section V.)

- Response to Comments (section VI.)
- Regulatory Impact Analysis (section VII.)

### *C. Summary of Costs and Benefits*

We have determined that this final rule is economically significant. For a detailed discussion of the economic impacts, see section VII., Regulatory Impact Analysis, of this final rule.

## **II. Provisions of the Final Rule for the PFS**

### A. Background

In accordance with section 1848 of the Act, CMS has paid for physicians' services under the Medicare physician fee schedule (PFS) since January 1, 1992. The PFS relies on national relative values that are established for work, practice expense (PE), and malpractice (MP), which are adjusted for geographic cost variations. These values are multiplied by a conversion factor (CF) to convert the relative value units (RVUs) into payment rates. The concepts and methodology underlying the PFS were enacted as part of the Omnibus Budget Reconciliation Act of 1989 (OBRA '89) (Pub. L. 101-239, December 19, 1989), and the Omnibus Budget Reconciliation Act of 1990 (OBRA '90) (Pub. L. 101-508, November 5, 1990). The final rule published in the November 25, 1991 **Federal Register** (56 FR 59502) set forth the first fee schedule used for Medicare payment for physicians' services.

We note that throughout this final rule, unless otherwise noted, the term "practitioner" is used to describe both physicians and nonphysician practitioners (NPPs) who are permitted to bill Medicare under the PFS for the services they furnish to Medicare beneficiaries.

## B. Determination of PE RVUs

### 1. Overview

Practice expense (PE) is the portion of the resources used in furnishing a service that reflects the general categories of physician and practitioner expenses, such as office rent and personnel wages, but excluding malpractice (MP) expenses, as specified in section 1848(c)(1)(B) of the Act. As required by section 1848(c)(2)(C)(ii) of the Act, we use a resource-based system for determining PE RVUs for each physicians' service. We develop PE RVUs by considering the direct and indirect practice resources involved in furnishing each service. Direct expense categories include clinical labor, medical supplies, and medical equipment. Indirect expenses include administrative labor, office expense, and all other expenses. The sections that follow provide more detailed information about the methodology for translating the resources involved in furnishing each service into service specific PE RVUs. We refer readers to the CY 2010 Physician Fee Schedule (PFS) final rule with comment period (74 FR 61743 through 61748) for a more detailed explanation of the PE methodology.

### 2. Practice Expense Methodology

#### a. Direct Practice Expense

We determine the direct PE for a specific service by adding the costs of the direct resources (that is, the clinical staff, medical supplies, and medical equipment) typically involved with furnishing that service. The costs of the resources are calculated using the refined direct PE inputs assigned to each CPT code in our PE database, which are generally based on our review of recommendations received from the Relative Value Scale Update Committee (RUC) and those provided in response to public comment periods. For a detailed explanation of the direct PE methodology, including examples, we refer readers to the 5-year review of work RVUs under the PFS and proposed changes to the PE methodology in the CY 2007 PFS proposed rule (71 FR 37242) and the CY 2007 PFS final rule with comment period (71 FR 69629).

#### b. Indirect Practice Expense per Hour Data

We use survey data on indirect PEs incurred per hour worked, in developing the indirect portion of the PE RVUs. Prior to CY 2010, we primarily used the PE/HR by specialty that was obtained from the AMA's Socioeconomic Monitoring System (SMS). The AMA administered a new survey in CY 2007 and CY 2008, the Physician Practice Information Survey (PPIS). The PPIS is a multispecialty, nationally representative, PE survey of both physicians and NPPs paid under the PFS using a survey instrument and methods highly consistent with those used for the SMS and the supplemental surveys. The PPIS gathered information from 3,656 respondents across 51 physician specialty and health care professional groups. We believe the PPIS is the most comprehensive source of PE survey information available. We used the PPIS data to update the PE/HR data for the CY 2010 PFS for almost all of the Medicare recognized specialties that participated in the survey.

When we began using the PPIS data in CY 2010, we did not change the PE RVU methodology itself or the manner in which the PE/HR data are used in that methodology. We only updated the PE/HR data based on the new survey. Furthermore, as we explained in the CY 2010 PFS final rule with comment period (74 FR 61751), because of the magnitude of payment reductions for some specialties resulting from the use of the PPIS data, we transitioned its use over a 4-year period from the previous PE RVUs to the PE RVUs developed using the new PPIS data. As provided in the CY 2010 PFS final rule with comment period (74 FR 61751), the transition to the PPIS data was complete for CY 2013. Therefore, PE RVUs from CY 2013 forward are developed based entirely on the PPIS data, except as noted in this section.

Section 1848(c)(2)(H)(i) of the Act requires us to use the medical oncology supplemental survey data submitted in 2003 for oncology drug administration services. Therefore, the PE/HR for medical oncology, hematology, and hematology/oncology reflects the continued use of these supplemental survey data.

Supplemental survey data on independent labs from the College of American Pathologists were implemented for payments beginning in CY 2005. Supplemental survey data

from the National Coalition of Quality Diagnostic Imaging Services (NCQDIS), representing independent diagnostic testing facilities (IDTFs), were blended with supplementary survey data from the American College of Radiology (ACR) and implemented for payments beginning in CY 2007. Neither IDTFs, nor independent labs, participated in the PPIS. Therefore, we continue to use the PE/HR that was developed from their supplemental survey data.

Consistent with our past practice, the previous indirect PE/HR values from the supplemental surveys for these specialties were updated to CY 2006 using the Medicare Economic Index (MEI) to put them on a comparable basis with the PPIS data.

We also do not use the PPIS data for reproductive endocrinology and spine surgery since these specialties currently are not separately recognized by Medicare, nor do we have a method to blend the PPIS data with Medicare recognized specialty data.

Previously, we established PE/HR values for various specialties without SMS or supplemental survey data by crosswalking them to other similar specialties to estimate a proxy PE/HR. For specialties that were part of the PPIS for which we previously used a crosswalked PE/HR, we instead used the PPIS based PE/HR. We use crosswalks for specialties that did not participate in the PPIS. These crosswalks have been generally established through notice and comment rulemaking and are available in the file titled “CY 2024 PFS final rule PE/HR” on the CMS website under downloads for the CY 2024 PFS final rule at

*<http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>*.

#### c. Allocation of PE to Services

To establish PE RVUs for specific services, it is necessary to establish the direct and indirect PE associated with each service.

##### (1) Direct Costs

The relative relationship between the direct cost portions of the PE RVUs for any two services is determined by the relative relationship between the sum of the direct cost resources

(that is, the clinical staff, medical supplies, and medical equipment) typically involved with furnishing each of the services. The costs of these resources are calculated from the refined direct PE inputs in our PE database. For example, if one service has a direct cost sum of \$400 from our PE database and another service has a direct cost sum of \$200, the direct portion of the PE RVUs of the first service would be twice as much as the direct portion of the PE RVUs for the second service.

## (2) Indirect Costs

We allocate the indirect costs at the code level based on the direct costs specifically associated with a code and the greater of either the clinical labor costs or the work RVUs. We also incorporate the survey data described earlier in the PE/HR discussion. The general approach to developing the indirect portion of the PE RVUs is as follows:

- For a given service, we use the direct portion of the PE RVUs calculated as previously described and the average percentage that direct costs represent of total costs (based on survey data) across the specialties that furnish the service to determine an initial indirect allocator. That is, the initial indirect allocator is calculated so that the direct costs equal the average percentage of direct costs of those specialties furnishing the service. For example, if the direct portion of the PE RVUs for a given service is 2.00 and direct costs, on average, represent 25 percent of total costs for the specialties that furnish the service, the initial indirect allocator would be calculated so that it equals 75 percent of the total PE RVUs. Thus, in this example, the initial indirect allocator would equal 6.00, resulting in a total PE RVU of 8.00 (2.00 is 25 percent of 8.00 and 6.00 is 75 percent of 8.00).

- Next, we add the greater of the work RVUs or clinical labor portion of the direct portion of the PE RVUs to this initial indirect allocator. In our example, if this service had a work RVU of 4.00 and the clinical labor portion of the direct PE RVU was 1.50, we would add 4.00 (since the 4.00 work RVUs are greater than the 1.50 clinical labor portion) to the initial indirect allocator of 6.00 to get an indirect allocator of 10.00. In the absence of any further use

of the survey data, the relative relationship between the indirect cost portions of the PE RVUs for any two services would be determined by the relative relationship between these indirect cost allocators. For example, if one service had an indirect cost allocator of 10.00 and another service had an indirect cost allocator of 5.00, the indirect portion of the PE RVUs of the first service would be twice as great as the indirect portion of the PE RVUs for the second service.

- Then, we incorporate the specialty specific indirect PE/HR data into the calculation.

In our example, if, based on the survey data, the average indirect cost of the specialties furnishing the first service with an allocator of 10.00 was half of the average indirect cost of the specialties furnishing the second service with an indirect allocator of 5.00, the indirect portion of the PE RVUs of the first service would be equal to that of the second service.

### (3) Facility and Nonfacility Costs

For procedures that can be furnished in a physician's office, as well as in a facility setting, where Medicare makes a separate payment to the facility for its costs in furnishing a service, we establish two PE RVUs: facility and nonfacility. The methodology for calculating PE RVUs is the same for both the facility and nonfacility RVUs but is applied independently to yield two separate PE RVUs. In calculating the PE RVUs for services furnished in a facility, we do not include resources that would generally not be provided by physicians when furnishing the service. For this reason, the facility PE RVUs are generally lower than the nonfacility PE RVUs.

### (4) Services with Technical Components and Professional Components

Diagnostic services are generally comprised of two components: a professional component (PC); and a technical component (TC). The PC and TC may be furnished independently or by different providers, or they may be furnished together as a global service. When services have separately billable PC and TC components, the payment for the global service equals the sum of the payment for the TC and PC. To achieve this, we use a weighted average of the ratio of indirect to direct costs across all the specialties that furnish the global service, TCs, and PCs; that is, we apply the same weighted average indirect percentage factor to

allocate indirect expenses to the global service, PCs, and TCs for a service. (The direct PE RVUs for the TC and PC sum to the global.)

(5) PE RVU Methodology

For a more detailed description of the PE RVU methodology, we direct readers to the CY 2010 PFS final rule with comment period (74 FR 61745 through 61746). We also direct readers to the file titled “Calculation of PE RVUs under Methodology for Selected Codes” which is available on our website under downloads for the CY 2024 PFS final rule at

<http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>. This file contains a table that illustrates the calculation of PE RVUs as described in this final rule for individual codes.

(a) Setup File

First, we create a setup file for the PE methodology. The setup file contains the direct cost inputs, the utilization for each procedure code at the specialty and facility/nonfacility place of service level, and the specialty specific PE/HR data calculated from the surveys.

(b) Calculate the Direct Cost PE RVUs

Sum the costs of each direct input.

Step 1: Sum the direct costs of the inputs for each service.

Step 2: Calculate the aggregate pool of direct PE costs for the current year. We set the aggregate pool of PE costs equal to the product of the ratio of the current aggregate PE RVUs to current aggregate work RVUs and the projected aggregate work RVUs.

Step 3: Calculate the aggregate pool of direct PE costs for use in ratesetting. This is the product of the aggregate direct costs for all services from Step 1 and the utilization data for that service.

Step 4: Using the results of Step 2 and Step 3, use the CF to calculate a direct PE scaling adjustment to ensure that the aggregate pool of direct PE costs calculated in Step 3 does not vary

from the aggregate pool of direct PE costs for the current year. Apply the scaling adjustment to the direct costs for each service (as calculated in Step 1).

Step 5: Convert the results of Step 4 to an RVU scale for each service. To do this, divide the results of Step 4 by the CF. Note that the actual value of the CF used in this calculation does not influence the final direct cost PE RVUs as long as the same CF is used in Step 4 and Step 5. Different CFs would result in different direct PE scaling adjustments, but this has no effect on the final direct cost PE RVUs since changes in the CFs and changes in the associated direct scaling adjustments offset one another.

(c) Create the Indirect Cost PE RVUs

Create indirect allocators.

Step 6: Based on the survey data, calculate direct and indirect PE percentages for each physician specialty.

Step 7: Calculate direct and indirect PE percentages at the service level by taking a weighted average of the results of Step 6 for the specialties that furnish the service. Note that for services with TCs and PCs, the direct and indirect percentages for a given service do not vary by the PC, TC, and global service.

We generally use an average of the 3 most recent years of available Medicare claims data to determine the specialty mix assigned to each code. Codes with low Medicare service volume require special attention since billing or enrollment irregularities for a given year can result in significant changes in specialty mix assignment. We finalized a policy in the CY 2018 PFS final rule (82 FR 52982 through 52983) to use the most recent year of claims data to determine which codes are low volume for the coming year (those that have fewer than 100 allowed services in the Medicare claims data). For codes that fall into this category, instead of assigning specialty mix based on the specialties of the practitioners reporting the services in the claims data, we use the expected specialty that we identify on a list developed based on medical review and input from expert interested parties. We display this list of expected specialty assignments as part of

the annual set of data files we make available as part of notice and comment rulemaking and consider recommendations from the RUC and other interested parties on changes to this list on an annual basis. Services for which the specialty is automatically assigned based on previously finalized policies under our established methodology (for example, “always therapy” services) are unaffected by the list of expected specialty assignments. We also finalized in the CY 2018 PFS final rule (82 FR 52982 through 52983) a policy to apply these service-level overrides for both PE and MP, rather than one or the other category.

We did not make any proposals associated with the list of expected specialty assignments for low volume services, however we received public comments on this topic from interested parties. The following is a summary of the comments we received and our responses.

*Comment:* Several commenters stated that they had performed an analysis to identify all codes that meet the criteria to receive a specialty override under this CMS policy and drafted updated recommendations for CY 2024. Commenters stated that the purpose of assigning a specialty to these codes was to avoid the major adverse impact on MP RVUs that result from errors in specialty utilization data magnified in representation (percentage) by small sample size. These commenters submitted a list of several dozen low volume HCPCS codes with recommended expected specialty assignments.

*Response:* After reviewing the information provided by the commenters to determine that the submitted specialty assignments were appropriate for the services in question, we are finalizing the additions to the list of expected specialty assignments for low volume services identified in Table 1. We agreed with the commenters that CPT code 33230 should be crosswalked to the Cardiac Electrophysiology specialty and that CPT code 96446 should be crosswalked to the Gynecological Oncology specialty. However, we do not have PE/HR data for these specialties as they were not part of the PPIS when it was conducted in 2007; therefore, we are crosswalking these CPT codes to the Cardiology and Obstetrics/Gynecology specialties, respectively, as listed on Table 1.

We disagreed with the commenters that CPT code 44384 should be crosswalked to the Gastroenterology specialty and that CPT code 60505 should be crosswalked to the General Surgery specialty. In each case, there was another specialty which was reported more than twice as often in the claims data as the requested specialty. Therefore, we are crosswalking CPT code 44384 to the Urology specialty and CPT code 60505 to the Otolaryngology specialty as these were the dominant specialties in the claims data. These crosswalks are included in Table 1.

**TABLE 1: New Additions to Expected Specialty Assignment List**

<b>HCPCS</b>	<b>Short Descriptor</b>	<b>Expected Specialty Assignment</b>
11920	Correct skin color 6.0 cm/<	PLASTIC AND RECONSTRUCTIVE SURGERY
15934	Remove sacrum pressure sore	PLASTIC AND RECONSTRUCTIVE SURGERY
24201	Rmvl fb upper arm/elbw deep	ORTHOPEDIC SURGERY
25035	Treat forearm bone lesion	ORTHOPEDIC SURGERY
25077	Resect forearm/wrist tum<3cm	GENERAL SURGERY
26500	Hand tendon reconstruction	ORTHOPEDIC SURGERY
27049	Resect hip/pelv tum < 5 cm	ORTHOPEDIC SURGERY
27888	Amputation of foot at ankle	VASCULAR SURGERY
28406	Treatment of heel fracture	ORTHOPEDIC SURGERY
28455	Treat midfoot fracture each	PODIATRY
28496	Treat big toe fracture	ORTHOPEDIC SURGERY
28600	Treat foot dislocation	PODIATRY
29435	Apply short leg cast	ORTHOPEDIC SURGERY
31201	Removal of ethmoid sinus	OTOLARYNGOLOGY
31660	Bronch thermoplasty 1 lobe	PULMONARY DISEASE
31750	Repair of windpipe	OTOLARYNGOLOGY
32310	Removal of chest lining	THORACIC SURGERY
32815	Close bronchial fistula	THORACIC SURGERY
33141	Heart tmr w/other procedure	THORACIC SURGERY
33230*	Insrt pulse gen w/dual leads	CARDIOLOGY
34490	Removal of vein clot	VASCULAR SURGERY
35103	Repair artery rupture aorta	VASCULAR SURGERY
42305	Drainage of salivary gland	OTOLARYNGOLOGY
43205	Esophagus endoscopy/ligation	GASTROENTEROLOGY
43327	Esoph fundoplasty lap	GENERAL SURGERY
43635	Removal of stomach partial	GENERAL SURGERY
44384*	Small bowel endoscopy	UROLOGY
50225	Removal kidney open complex	UROLOGY
50236	Removal of kidney & ureter	UROLOGY
50800	Implant ureter in bowel	UROLOGY
51575	Removal of bladder & nodes	UROLOGY
52325	Cystoscopy stone removal	UROLOGY
57284	Repair paravag defect open	OBSTETRICS/GYNECOLOGY
58145	Myomectomy vag method	OBSTETRICS/GYNECOLOGY
58353	Endometr ablate thermal	OBSTETRICS/GYNECOLOGY
58559	Hysteroscopy lysis	OBSTETRICS/GYNECOLOGY
60505*	Explore parathyroid glands	OTOLARYNGOLOGY
61215	Insert brain-fluid device	NEUROSURGERY
62268	Drain spinal cord cyst	NEUROSURGERY
62287	Dcmprn px perq 1/mlt lumbar	INTERVENTIONAL PAIN MANAGEMENT
63185	Incise spine nrv half segmnt	NEUROSURGERY
64605	Injection treatment of nerve	NEUROSURGERY
65175	Removal of ocular implant	OPHTHALMOLOGY
65410	Biopsy of cornea	OPHTHALMOLOGY
67208	Treatment of retinal lesion	OPHTHALMOLOGY
67334	Revise eye muscle w/suture	OPHTHALMOLOGY
67405	Explore/drain eye socket	OPHTHALMOLOGY
67505	Inject/treat eye socket	OPHTHALMOLOGY
68328	Revise/graft eyelid lining	OPHTHALMOLOGY
72255	Myelography thoracic spine	DIAGNOSTIC RADIOLOGY
73085	Contrast x-ray of elbow	DIAGNOSTIC RADIOLOGY
76810	Ob us >= 14 wks addl fetus	OBSTETRICS/GYNECOLOGY
78740	Ureteral reflux study	UROLOGY
88355	Analysis skeletal muscle	CLINICAL LABORATORY
91020	Gastric motility studies	GASTROENTEROLOGY
92312	Contact lens fitting	OPTOMETRY

HCPCS	Short Descriptor	Expected Specialty Assignment
92325	Modification of contact lens	OPTOMETRY
92615	Laryngoscopic sensory i&r	OTOLARYNGOLOGY
96446*	Chemotx admn prtl cavity	OBSTETRICS/GYNECOLOGY

\* Recommended specialty assignment crosswalked; see below.

*Comment:* A commenter noted that the CMS expected specialty assignment list in the public use file that was part of the CY 2024 proposed rule also includes a column specifying if a service that previously had an anticipated specialty override continues to meet the criteria for the override to be applied for CY 2024. The commenter provided a list of approximately a dozen CPT codes and requested additional information as to why the expected specialty override was not being applied in these cases.

*Response:* We reviewed the CPT codes identified by the commenter and can provide the following information about their expected specialty override status for CY 2024. CMS did not apply the specialty override to CPT codes 33238, 33254, 33475, and 33507 as each code exceeded 100 allowed services in the Medicare claims data. CMS did not apply the specialty override to CPT codes 33602, 33619, 33778, and 43045 because they were unneeded, with the entirety of their very small number of allowed services already reported under their expected specialty. CPT codes 33600, 33710, and 43312 did have their respective specialty overrides applied; this was correctly detailed in the public use file for the CY 2024 proposed rule for CPT code 43312 but was missing from CPT codes 33600 and 33710, due to a technical error in the generation of the public use file.

We also note for commenters that each HCPCS code that appears on the list of expected specialty assignments for low volume services remains on the list from year to year, even if the code in question is not a low volume service for a certain calendar year because the volume rises to over 100 services. The HCPCS codes and expected specialty assignment remain on the list, and will be applied should the code fall below the low volume threshold (below 100 services) in

any calendar year; as a result, there is no need to “reactivate” individual codes as some commenters have suggested in past submissions.

After consideration of the public comments, we are finalizing the updates to the list of expected specialty assignments for low volume services as detailed Table 1.

Step 8: Calculate the service level allocators for the indirect PEs based on the percentages calculated in Step 7. The indirect PEs are allocated based on the three components: the direct PE RVUs; the clinical labor PE RVUs; and the work RVUs.

For most services the indirect allocator is: indirect PE percentage \* (direct PE RVUs/direct percentage) + work RVUs.

There are two situations where this formula is modified:

- If the service is a global service (that is, a service with global, professional, and technical components), then the indirect PE allocator is: indirect percentage (direct PE RVUs/direct percentage) + clinical labor PE RVUs + work RVUs.
- If the clinical labor PE RVUs exceed the work RVUs (and the service is not a global service), then the indirect allocator is: indirect PE percentage (direct PE RVUs/direct percentage) + clinical labor PE RVUs.

(Note: For global services, the indirect PE allocator is based on both the work RVUs and the clinical labor PE RVUs. We do this to recognize that, for the PC service, indirect PEs would be allocated using the work RVUs, and for the TC service, indirect PEs would be allocated using the direct PE RVUs and the clinical labor PE RVUs. This also allows the global component RVUs to equal the sum of the PC and TC RVUs.)

For presentation purposes, in the examples in the download file titled “Calculation of PE RVUs under Methodology for Selected Codes”, the formulas were divided into two parts for each service.

- The first part does not vary by service and is the indirect percentage (direct PE RVUs/direct percentage).

- The second part is either the work RVU, clinical labor PE RVU, or both depending on whether the service is a global service and whether the clinical PE RVUs exceed the work RVUs (as described earlier in this step).

Apply a scaling adjustment to the indirect allocators.

Step 9: Calculate the current aggregate pool of indirect PE RVUs by multiplying the result of step 8 by the average indirect PE percentage from the survey data.

Step 10: Calculate an aggregate pool of indirect PE RVUs for all PFS services by adding the product of the indirect PE allocators for a service from Step 8 and the utilization data for that service.

Step 11: Using the results of Step 9 and Step 10, calculate an indirect PE adjustment so that the aggregate indirect allocation does not exceed the available aggregate indirect PE RVUs and apply it to indirect allocators calculated in Step 8.

Calculate the indirect practice cost index.

Step 12: Using the results of Step 11, calculate aggregate pools of specialty specific adjusted indirect PE allocators for all PFS services for a specialty by adding the product of the adjusted indirect PE allocator for each service and the utilization data for that service.

Step 13: Using the specialty specific indirect PE/HR data, calculate specialty specific aggregate pools of indirect PE for all PFS services for that specialty by adding the product of the indirect PE/HR for the specialty, the work time for the service, and the specialty's utilization for the service across all services furnished by the specialty.

Step 14: Using the results of Step 12 and Step 13, calculate the specialty specific indirect PE scaling factors.

Step 15: Using the results of Step 14, calculate an indirect practice cost index at the specialty level by dividing each specialty specific indirect scaling factor by the average indirect scaling factor for the entire PFS.

Step 16: Calculate the indirect practice cost index at the service level to ensure the capture of all indirect costs. Calculate a weighted average of the practice cost index values for the specialties that furnish the service. (Note: For services with TCs and PCs, we calculate the indirect practice cost index across the global service, PCs, and TCs. Under this method, the indirect practice cost index for a given service (for example, echocardiogram) does not vary by the PC, TC, and global service.)

Step 17: Apply the service level indirect practice cost index calculated in Step 16 to the service level adjusted indirect allocators calculated in Step 11 to get the indirect PE RVUs.

(d) Calculate the Final PE RVUs

Step 18: Add the direct PE RVUs from Step 5 to the indirect PE RVUs from Step 17 and apply the final PE budget neutrality (BN) adjustment. The final PE BN adjustment is calculated by comparing the sum of steps 5 and 17 to the aggregate work RVUs scaled by the ratio of current aggregate PE and work RVUs. This adjustment ensures that all PE RVUs in the PFS account for the fact that certain specialties are excluded from the calculation of PE RVUs but included in maintaining overall PFS BN. (See “Specialties excluded from ratesetting calculation” later in this final rule.)

Step 19: Apply the phase-in of significant RVU reductions and its associated adjustment. Section 1848(c)(7) of the Act specifies that for services that are not new or revised codes, if the total RVUs for a service for a year would otherwise be decreased by an estimated 20 percent or more as compared to the total RVUs for the previous year, the applicable adjustments in work, PE, and MP RVUs shall be phased in over a 2-year period. In implementing the phase-in, we consider a 19 percent reduction as the maximum 1-year reduction for any service not described by a new or revised code. This approach limits the year one reduction for the service to the maximum allowed amount (that is, 19 percent), and then phases in the remainder of the reduction. To comply with section 1848(c)(7) of the Act, we adjust the PE RVUs to ensure that the total RVUs for all services that are not new or revised codes decrease by no more than 19

percent, and then apply a relativity adjustment to ensure that the total pool of aggregate PE RVUs remains relative to the pool of work and MP RVUs. For a more detailed description of the methodology for the phase-in of significant RVU changes, we refer readers to the CY 2016 PFS final rule with comment period (80 FR 70927 through 70931).

*Comment:* Several commenters referenced the CY 2018 PFS finalized policy for the adjustment to allocation of indirect PE for some office-based services, generally services associated with behavioral health (82 FR 52999 through 53000). Commenters stated that for each of the services that qualify for the indirect PE allocation adjustment, CMS first establishes an indirect PE floor using the work RVU for the qualifying service and the ratio between the indirect PE RVUs and the work RVUs for the marker code (currently CPT code 99213). Commenters stated that CMS then identifies the difference between the indirect PE RVU for the qualifying service produced under standard methodology and the indirect PE floor; the modified methodology then increases the allocation of indirect PE RVUs to one quarter of that difference. Commenters stated that they supported the current policy, since they believe that the current PFS reimbursement rate methodology undervalues behavioral health services and recommended that CMS expand the indirect PE floor methodology by increasing the minimum value for non-facility indirect PE RVUs by adding the *full* difference between the indirect PE floor RVUs and indirect PE RVUs calculated for the eligible codes under the standard methodology (instead of one quarter of the distance). Commenters stated that this expansion of the current indirect PE floor policy would assure that a more appropriate number of indirect PE RVUs are allocated to these services and would provide greater resources to behavioral health practitioners providing services to Medicare beneficiaries with behavioral and mental health needs.

*Response:* We appreciate the support from the commenters for our previously finalized policy for the adjustment to allocation of indirect PE for some office-based services. While we share the concern of the commenters in ensuring that behavioral health practitioners have the proper resources that they need to provide services to Medicare beneficiaries, we note that we

did not propose to make any adjustments to this indirect PE policy for CY 2024 and we are not finalizing any adjustments to this indirect PE policy for CY 2024. We will consider the recommendations from the commenters for potential use in future rulemaking.

(e) Setup File Information

- Specialties excluded from ratesetting calculation: For the purposes of calculating the PE and MP RVUs, we exclude certain specialties, such as certain NPPs paid at a percentage of the PFS and low volume specialties, from the calculation. These specialties are included for the purposes of calculating the BN adjustment. They are displayed in Table 2.

**TABLE 2: Specialties Excluded from Ratesetting Calculation**

Specialty Code	Specialty Description
49	Ambulatory surgical center
50	Nurse practitioner
51	Medical supply company with certified orthotist
52	Medical supply company with certified prosthetist
53	Medical supply company with certified prosthetist-orthotist
54	Medical supply company not included in 51, 52, or 53.
55	Individual certified orthotist
56	Individual certified prosthetist
57	Individual certified prosthetist-orthotist
58	Medical supply company with registered pharmacist
59	Ambulance service supplier, e.g., private ambulance companies, funeral homes, etc.
60	Public health or welfare agencies
61	Voluntary health or charitable agencies
73	Mass immunization roster biller
74	Radiation therapy centers
87	All other suppliers (e.g., drug and department stores)
88	Unknown supplier/provider specialty
89	Certified clinical nurse specialist
96	Optician
97	Physician assistant
A0	Hospital
A1	SNF
A2	Intermediate care nursing facility
A3	Nursing facility, other
A4	HHA
A5	Pharmacy
A6	Medical supply company with respiratory therapist
A7	Department store
A8	Grocery store
B1	Supplier of oxygen and/or oxygen related equipment (eff. 10/2/2007)
B2	Pedorthic personnel
B3	Medical supply company with pedorthic personnel
B4	Rehabilitation Agency
B5	Ocularist
C1	Centralized Flu
C2	Indirect Payment Procedure
C5	Dentistry

- *Crosswalk certain low volume physician specialties:* Crosswalk the utilization of certain specialties with relatively low PFS utilization to the associated specialties.
- *Physical therapy utilization:* Crosswalk the utilization associated with all physical therapy services to the specialty of physical therapy.
- *Identify professional and technical services not identified under the usual TC and 26 modifiers:* Flag the services that are PC and TC services but do not use TC and 26 modifiers (for example, electrocardiograms). This flag associates the PC and TC with the associated global

code for use in creating the indirect PE RVUs. For example, the professional service, CPT code 93010 (Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only), is associated with the global service, CPT code 93000 (Electrocardiogram, routine ECG with at least 12 leads; with interpretation and report).

- *Payment modifiers:* Payment modifiers are accounted for in the creation of the file consistent with current payment policy as implemented in claims processing. For example, services billed with the assistant at surgery modifier are paid 16 percent of the PFS amount for that service; therefore, the utilization file is modified to only account for 16 percent of any service that contains the assistant at surgery modifier. Similarly, for those services to which volume adjustments are made to account for the payment modifiers, time adjustments are applied as well. For time adjustments to surgical services, the intraoperative portion in the work time file is used; where it is not present, the intraoperative percentage from the payment files used by contractors to process Medicare claims is used instead. Where neither is available, we use the payment adjustment ratio to adjust the time accordingly. Table 3 details the manner in which the modifiers are applied.

**TABLE 3: Application of Payment Modifiers to Utilization Files**

<b>Modifier</b>	<b>Description</b>	<b>Volume Adjustment</b>	<b>Time Adjustment</b>
<b>80,81,82</b>	Assistant at Surgery	16%	Intraoperative portion
<b>AS</b>	Assistant at Surgery – Physician Assistant	14% (85% * 16%)	Intraoperative portion
<b>50 or LT and RT</b>	Bilateral Surgery	150%	150% of work time
<b>51</b>	Multiple Procedure	50%	Intraoperative portion
<b>52</b>	Reduced Services	50%	50%
<b>53</b>	Discontinued Procedure	50%	50%
<b>54</b>	Intraoperative Care only	Preoperative + Intraoperative Percentages on the payment files used by Medicare contractors to process Medicare claims	Preoperative + Intraoperative portion
<b>55</b>	Postoperative Care only	Postoperative Percentage on the payment files used by Medicare contractors to process Medicare claims	Postoperative portion
<b>62</b>	Co-surgeons	62.5%	50%
<b>66</b>	Team Surgeons	33%	33%
<b>CO, CQ</b>	Physical and Occupational Therapy Assistant Services	88%	88%

We also adjust volume and time that correspond to other payment rules, including special multiple procedure endoscopy rules and multiple procedure payment reductions (MPPRs). We note that section 1848(c)(2)(B)(v) of the Act exempts certain reduced payments for multiple imaging procedures and multiple therapy services from the BN calculation under section 1848(c)(2)(B)(ii)(II) of the Act. These MPPRs are not included in the development of the RVUs.

Beginning in CY 2022, section 1834(v)(1) of the Act required that we apply a 15 percent payment reduction for outpatient occupational therapy services and outpatient physical therapy services that are provided, in whole or in part, by a physical therapist assistant (PTA) or occupational therapy assistant (OTA). Section 1834(v)(2)(A) of the Act required CMS to establish modifiers to identify these services, which we did in the CY 2019 PFS final rule (83 FR 59654 through 59661), creating the CQ and CO payment modifiers for services provided in whole or in part by PTAs and OTAs, respectively. These payment modifiers are required to be used on claims for services with dates of service beginning January 1, 2020, as specified in the CY 2020 PFS final rule (84 FR 62702 through 62708). We applied the 15 percent payment reduction to therapy services provided by PTAs (using the CQ modifier) or OTAs (using the CO modifier), as required by statute. Under sections 1834(k) and 1848 of the Act, payment is made for outpatient therapy services at 80 percent of the lesser of the actual charge or applicable fee schedule amount (the allowed charge). The remaining 20 percent is the beneficiary copayment. For therapy services to which the new discount applies, payment will be made at 85 percent of the 80 percent of allowed charges. Therefore, the volume discount factor for therapy services to which the CQ and CO modifiers apply is:  $(0.20 + (0.80 * 0.85))$ , which equals 88 percent.

For anesthesia services, we do not apply adjustments to volume since we use the average allowed charge when simulating RVUs; therefore, the RVUs as calculated already reflect the payments as adjusted by modifiers, and no volume adjustments are necessary. However, a time adjustment of 33 percent is made only for medical direction of two to four cases since that is the

only situation where a single practitioner is involved with multiple beneficiaries concurrently, so that counting each service without regard to the overlap with other services would overstate the amount of time spent by the practitioner furnishing these services.

- *Work RVUs*: The setup file contains the work RVUs from this final rule.

#### (6) Equipment Cost per Minute

The equipment cost per minute is calculated as:

$$(1 / (\text{minutes per year} * \text{usage})) * \text{price} * ((\text{interest rate} / (1 - (1 / ((1 + \text{interest rate})^{\text{life of equipment}})))) + \text{maintenance})$$

Where:

minutes per year = maximum minutes per year if usage were continuous (that is, usage=1); generally, 150,000 minutes.

usage = variable, see discussion below in this final rule.

price = price of the particular piece of equipment.

life of equipment = useful life of the particular piece of equipment.

maintenance = factor for maintenance; 0.05.

interest rate = variable, see discussion below in this final rule.

*Usage*: We currently use an equipment utilization rate assumption of 50 percent for most equipment, with the exception of expensive diagnostic imaging equipment, for which we use a 90 percent assumption as required by section 1848(b)(4)(C) of the Act.

*Useful Life*: In the CY 2005 PFS final rule we stated that we updated the useful life for equipment items primarily based on the AHA's "Estimated Useful Lives of Depreciable Hospital Assets" guidelines (69 FR 66246). The most recent edition of these guidelines was published in 2018. This reference material provides an estimated useful life for hundreds of different types of equipment, the vast majority of which fall in the range of 5 to 10 years, and none of which are lower than 2 years in duration. We believe that the updated editions of this reference material remain the most accurate source for estimating the useful life of depreciable medical equipment.

In the CY 2021 PFS final rule, we finalized a proposal to treat equipment life durations of less than 1 year as having a duration of 1 year for the purpose of our equipment price per minute formula. In the rare cases where items are replaced every few months, we noted that we believe it is more accurate to treat these items as disposable supplies with a fractional supply quantity as opposed to equipment items with very short equipment life durations. For a more detailed discussion of the methodology associated with very short equipment life durations, we referred readers to the CY 2021 PFS final rule (85 FR 84482 through 84483).

- *Maintenance:* We finalized the 5 percent factor for annual maintenance in the CY 1998 PFS final rule with comment period (62 FR 33164). As we previously stated in the CY 2016 PFS final rule with comment period (80 FR 70897), we do not believe the annual maintenance factor for all equipment is precisely 5 percent, and we concur that the current rate likely understates the true cost of maintaining some equipment. We also noted that we believe it likely overstates the maintenance costs for other equipment. When we solicited comments regarding sources of data containing equipment maintenance rates, commenters were unable to identify an auditable, robust data source that could be used by CMS on a wide scale. We noted that we did not believe voluntary submissions regarding the maintenance costs of individual equipment items would be an appropriate methodology for determining costs. As a result, in the absence of publicly available datasets regarding equipment maintenance costs or another systematic data collection methodology for determining a different maintenance factor, we did not propose a variable maintenance factor for equipment cost per minute pricing as we did not believe that we have sufficient information at present. We noted that we would continue to investigate potential avenues for determining equipment maintenance costs across a broad range of equipment items.

- *Interest Rate:* In the CY 2013 PFS final rule with comment period (77 FR 68902), we updated the interest rates used in developing an equipment cost per minute calculation (see 77 FR 68902 for a thorough discussion of this issue). The interest rate was based on the Small

Business Administration (SBA) maximum interest rates for different categories of loan size (equipment cost) and maturity (useful life). The Interest rates are listed in Table 4.

**TABLE 4: SBA Maximum Interest Rates**

Price	Useful Life	Interest Rate
<\$25K	<7 Years	7.50%
\$25K to \$50K	<7 Years	6.50%
>\$50K	<7 Years	5.50%
<\$25K	7+ Years	8.00%
\$25K to \$50K	7+ Years	7.00%
>\$50K	7+ Years	6.00%

We did not propose any changes to the equipment interest rates for CY 2024.

### 3. Adjusting RVUs To Match the PE Share of the Medicare Economic Index (MEI)

In the past, we have stated that we believe that the MEI is the best measure available of the relative weights of the three components in payments under the PFS—work, practice expense (PE), and malpractice (MP). Accordingly, we believe that to assure that the PFS payments reflect the relative resources in each of these PFS components as required by section 1848(c)(3) of the Act, the RVUs used in developing rates should reflect the same weights in each component as the cost share weights in the Medicare Economic Index (MEI). In the past, we have proposed (and subsequently, finalized) to accomplish this by holding the work RVUs constant and adjusting the PE RVUs, MP RVUs, and CF to produce the appropriate balance in RVUs among the three PFS components and payment rates for individual services, that is, that the total RVUs on the PFS are proportioned to approximately 51 percent work RVUs, 45 percent PE RVUs, and 4 percent MP RVUs. As the MEI cost shares are updated, we would typically propose to modify steps 3 and 10 to adjust the aggregate pools of PE costs (direct PE in step 3 and indirect PE in step 10) in proportion to the change in the PE share in the rebased and revised MEI cost share weights, and to recalibrate the relativity adjustment that we apply in step 18 as described “3. Adjusting RVUs To Match PE Share of the Medicare Economic Index (MEI)” of the CY 2023 PFS final rule (87 FR 69414 and 69415) and CY 2014 PFS final rule (78 FR 74236 and 74237). The most recent recalibration was done for the CY 2014 RVUs.

In the CY 2014 PFS proposed rule (78 FR 43287 through 43288) and final rule (78 FR 74236 through 74237), we detailed the steps necessary to accomplish this result (see steps 3, 10, and 18). The CY 2014 proposed and final adjustments were consistent with our longstanding practice to make adjustments to match the RVUs for the PFS components with the MEI cost share weights for the components, including the adjustments described in the CY 1999 PFS final rule (63 FR 58829), CY 2004 PFS final rule (68 FR 63246 and 63247), and CY 2011 PFS final rule (75 FR 73275).

In the CY 2023 PFS final rule (87 FR 69688 through 69711), we finalized to rebase and revise the Medicare Economic Index (MEI) to reflect more current market conditions faced by physicians in furnishing physicians' services. We also finalized a delay of the adjustments to the PE pools in steps 3 and 10 and the recalibration of the relativity adjustment in step 18 until the public had an opportunity to comment on the rebased and revised MEI (87 FR 69414 through 69416). Because we finalized significant methodological and data source changes to the MEI in the CY 2023 PFS final rule and significant time has elapsed since the last rebasing and revision of the MEI in CY 2014, we believed that delaying the implementation of the finalized CY 2023 rebased and revised MEI was consistent with our efforts to balance payment stability and predictability with incorporating new data through more routine updates. We refer readers to the discussion of our comment solicitation in the CY 2023 PFS final rule (87 FR 69429 through 69432), where we reviewed our ongoing efforts to update data inputs for PE to aid stability, transparency, efficiency, and data adequacy. We also solicited comment in the CY 2023 PFS proposed rule on when and how to best incorporate the CY 2023 rebased and revised MEI into PFS ratesetting, and whether it would be appropriate to consider a transition to full implementation for potential future rulemaking. We presented the impacts of implementing the rebased and revised MEI in PFS ratesetting through a 4-year transition and through full immediate implementation, that is, with no transition period in the CY 2023 PFS proposed rule. We also solicited comment on other implementation strategies for potential future rulemaking in

the CY 2023 PFS proposed rule. In the CY 2023 PFS final rule, we discussed that many commenters supported our proposed delayed implementation and many commenters expressed concerns with the redistributive impacts of the implementation of the rebased and revised MEI in PFS ratesetting. Many commenters also noted that the AMA has stated it intends to collect practice cost data from physician practices in the near future which could be used to derive cost share weights for the MEI and RVU shares.

In light of the AMA's intended data collection efforts in the near future and because the methodological and data source changes to the MEI finalized in the CY 2023 PFS final rule would have significant impacts on PFS payments, we continue to believe that delaying the implementation of the finalized 2017-based MEI cost share weights for the RVUs is consistent with our efforts to balance payment stability and predictability with incorporating new data through more routine updates. Therefore, we did not propose to incorporate the 2017-based MEI in PFS ratesetting for CY 2024.

As discussed above, in the CY 2023 PFS rulemaking, we finalized to rebase and revise the MEI to reflect more current market conditions faced by physicians in furnishing physicians' services. The final 2017-based MEI relies on a methodology that uses publicly available data sources for input costs that represent all types of physician practice ownership, not limited to only self-employed physicians. The 2006-based MEI relied on the 2006 AMA PPIS survey data; as of this CY 2024 rulemaking, this survey had not been updated. Given the changes in the physician and supplier industry and the time since the last update to the base year, we finalized a methodology that would allow us to update the MEI on a consistent basis in the future. The 2017-based MEI cost share weights are derived predominantly from the annual expense data from the U.S. Census Bureau's Services Annual Survey (SAS, <https://www.census.gov/programs-surveys/sas.html>). We supplement the 2017 SAS expense data by using several data sources to further disaggregate compensation costs and all other residual costs (87 FR 69688 through 69708).

We continue to review more recently available data from the Census Bureau Services Annual Survey, the main data source for the major components of the 2017-based MEI cost share weights. Data is currently available through 2021. Given that the impact of the PHE may influence the 2020 and 2021 data, we continue to evaluate whether the recent trends are reflective of sustained shifts in cost structures or were temporary as a result of the COVID-19 PHE. The 2022 data from the Services Annual Survey will be available later this year. We will monitor that data and any other data that may become available related to physician services' input expenses and will propose any changes to the MEI, if appropriate, in future rulemaking.

The following is a summary of the comments we received and our responses.

*Comment:* Many commenters supported our continued delayed implementation of the rebased and revised MEI in PFS ratesetting. Most of these commenters urged CMS to pause consideration of other sources for the MEI until the AMA's efforts to collect practice cost data from physician practices have concluded. A few commenters urged CMS to implement the MEI for PFS ratesetting as soon as possible.

*Response:* We appreciate commenters' feedback, specifically as it relates to updating PFS ratesetting, and will consider the commenters' feedback in future rulemaking.

*Comment:* One commenter stated that the methodology for deriving the 2017-based MEI cost share weights is flawed because the use of the SAS data as the primary data source for expenses omits facility-based physicians which, according to BLS Occupational Employment and Wage Statistics (OEWS) data, accounts for 36 percent of physicians who are employed in the health sector. The commenter states that correcting for the omission would result in an increase to the physician work cost share weight and a much smaller reduction to the professional liability insurance (PLI) cost share weight in the MEI.

The commenter noted that in response to a similar comment in the CY 2023 PFS final rule, CMS responded that "for physicians who are employed in other healthcare settings directly, such as hospitals, we do not believe that including costs for physicians that do not incur any

operating expenses associated with running a practice would be technically appropriate."

However, the commenter stated that this fails to consider that the MEI cost share weights also cover physician compensation and professional liability insurance. The commenter stated that by excluding NAICS 6221 General Medical and Surgical Hospitals in the CMS MEI cost share weights analysis, CMS inadvertently omitted over \$30 billion in physician compensation and over \$7 billion in professional liability insurance compensation. Also, the commenter noted that physician practices do still have some indirect PE costs even for providers who are solely facility-based (coding, billing, scheduling, etc.). The commenter claimed that the CMS analysis of the US Census SAS data captured a large majority of PE covered by the PFS but only a subset of the physician compensation and professional liability insurance premiums.

The commenter requested that CMS make changes to the methodology for deriving the MEI cost share weights to correct for the omission of costs for facility-based physicians.

*Response:* We appreciate the commenter's concern regarding the methodology for the 2017-based MEI. As explained in the 2023 PFS final rule (87 FR 69688 through 69710), the development of the MEI cost share weights (which would reflect all costs including work, PE and PLI) is intended to be consistent with costs associated with providing physician services as paid for by the PFS. Thus, we are using a data source that reflects the nature of those costs, which we have determined to be the U.S. Census Bureau's Services Annual Survey. This data source shows all ownership types of physicians' offices as determined by the North American Industrial Classification System (NAICS). Unfortunately, there is currently no data source available that would provide a comprehensive collection of physician expense data for physicians that directly contract with hospitals or other healthcare settings. While there are compensation costs for employed physicians working in an alternative setting such as a hospital or SNF and other associated expenses, including those for PLI, those costs would be captured in reporting for those other settings – such as hospitals, home health agencies, or skilled nursing facilities. For example, if a physician is directly employed by a hospital, that is, not just a

hospital-owned physician practice, then those costs would be captured in the reported SAS expenses for NAICS 622 (Hospitals) and on the Medicare cost report submitted by the hospital. Unfortunately, there is currently no mechanism for identifying those specific expenses distinct to providing physician services separately from the provider's other expenses. Therefore, we have used a data source that we believe reflects the most up-to-date, comprehensive, and regularly published data on physician expenses for the majority of physicians (which would be captured in NAICS 621111 – Offices of Physicians). We welcome the public to provide any other data source that could be considered, in concert with the SAS data, to address the commenters concerns. Additionally, we understand that the AMA is currently collecting data on physician expenses and we will analyze the data if made available to CMS. We note that CMS did not propose changes to the methodology for deriving the MEI cost share weights for CY 2024.

#### 4. Changes to Direct PE Inputs for Specific Services

This section focuses on specific PE inputs. The direct PE inputs are included in the CY 2024 direct PE input public use files, which are available on the CMS website under downloads for the CY 2024 PFS final rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

##### a. Standardization of Clinical Labor Tasks

As we noted in the CY 2015 PFS final rule with comment period (79 FR 67640 through 67641), we continue to make improvements to the direct PE input database to provide the number of clinical labor minutes assigned for each task for every code in the database instead of only including the number of clinical labor minutes for the preservice, service, and post service periods for each code. In addition to increasing the transparency of the information used to set PE RVUs, this level of detail would allow us to compare clinical labor times for activities associated with services across the PFS, which we believe is important to maintaining the relativity of the direct PE inputs. This information would facilitate the identification of the usual numbers of minutes for clinical labor tasks and the identification of exceptions to the usual

values. It would also allow for greater transparency and consistency in the assignment of equipment minutes based on clinical labor times. Finally, we believe that the detailed information can be useful in maintaining standard times for particular clinical labor tasks that can be applied consistently to many codes as they are valued over several years, similar in principle to the use of physician preservice time packages. We believe that setting and maintaining such standards would provide greater consistency among codes that share the same clinical labor tasks and could improve relativity of values among codes. For example, as medical practice and technologies change over time, changes in the standards could be updated simultaneously for all codes with the applicable clinical labor tasks, instead of waiting for individual codes to be reviewed.

In the CY 2016 PFS final rule with comment period (80 FR 70901), we solicited comments on the appropriate standard minutes for the clinical labor tasks associated with services that use digital technology. After consideration of comments received, we finalized standard times for clinical labor tasks associated with digital imaging at 2 minutes for “Availability of prior images confirmed”, 2 minutes for “Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocolled by radiologist”, 2 minutes for “Review examination with interpreting MD”, and 1 minute for “Exam documents scanned into PACS” and “Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue.” In the CY 2017 PFS final rule (81 FR 80184 through 80186), we finalized a policy to establish a range of appropriate standard minutes for the clinical labor activity, “Technologist QCs images in PACS, checking for all images, reformats, and dose page.” These standard minutes will be applied to new and revised codes that make use of this clinical labor activity when they are reviewed by us for valuation. We finalized a policy to establish 2 minutes as the standard for the simple case, 3 minutes as the standard for the intermediate case, 4 minutes as the standard for the complex case, and 5 minutes as the standard for the highly complex case. These values were based upon a review of the existing

minutes assigned for this clinical labor activity; we determined that 2 minutes is the duration for most services and a small number of codes with more complex forms of digital imaging have higher values. We also finalized standard times for a series of clinical labor tasks associated with pathology services in the CY 2016 PFS final rule with comment period (80 FR 70902). We do not believe these activities would be dependent on number of blocks or batch size, and we believe that the finalized standard values accurately reflect the typical time it takes to perform these clinical labor tasks.

In reviewing the RUC-recommended direct PE inputs for CY 2019, we noticed that the 3 minutes of clinical labor time traditionally assigned to the “Prepare room, equipment and supplies” (CA013) clinical labor activity were split into 2 minutes for the “Prepare room, equipment and supplies” activity and 1 minute for the “Confirm order, protocol exam” (CA014) activity. We proposed to maintain the 3 minutes of clinical labor time for the “Prepare room, equipment and supplies” activity and remove the clinical labor time for the “Confirm order, protocol exam” activity wherever we observed this pattern in the RUC-recommended direct PE inputs. Commenters explained in response that when the new version of the PE worksheet introduced the activity codes for clinical labor, there was a need to translate old clinical labor tasks into the new activity codes, and that a prior clinical labor task was split into two of the new clinical labor activity codes: CA007 (*Review patient clinical extant information and questionnaire*) in the preservice period, and CA014 (*Confirm order, protocol exam*) in the service period. Commenters stated that the same clinical labor from the old PE worksheet was now divided into the CA007 and CA014 activity codes, with a standard of 1 minute for each activity. We agreed with commenters that we would finalize the RUC-recommended 2 minutes of clinical labor time for the CA007 activity code and 1 minute for the CA014 activity code in situations where this was the case. However, when reviewing the clinical labor for the reviewed codes affected by this issue, we found that several of the codes did not include this old clinical labor task, and we also noted that several of the reviewed codes that contained the CA014

clinical labor activity code did not contain any clinical labor for the CA007 activity. In these situations, we continue to believe that in these cases, the 3 total minutes of clinical staff time would be more accurately described by the CA013 “Prepare room, equipment and supplies” activity code, and we finalized these clinical labor refinements. For additional details, we direct readers to the discussion in the CY 2019 PFS final rule (83 FR 59463 through 59464).

Following the publication of the CY 2020 PFS proposed rule, one commenter expressed concern with the published list of common refinements to equipment time. The commenter stated that these refinements were the formulaic result of the applying refinements to the clinical labor time and did not constitute separate refinements; the commenter requested that CMS no longer include these refinements in the table published each year. In the CY 2020 PFS final rule, we agreed with the commenter that these equipment time refinements did not reflect errors in the equipment recommendations or policy discrepancies with the RUC’s equipment time recommendations. However, we believed that it was important to publish the specific equipment times that we were proposing (or finalizing in the case of the final rule) when they differed from the recommended values due to the effect that these changes can have on the direct costs associated with equipment time. Therefore, we finalized the separation of the equipment time refinements associated with changes in clinical labor into a separate table of refinements. For additional details, we direct readers to the discussion in the CY 2020 PFS final rule (84 FR 62584).

Historically, the RUC has submitted a “PE worksheet” that details the recommended direct PE inputs for our use in developing PE RVUs. The format of the PE worksheet has varied over time and among the medical specialties developing the recommendations. These variations have made it difficult for both the RUC’s development and our review of code values for individual codes. Beginning with its recommendations for CY 2019, the RUC has mandated the use of a new PE worksheet for purposes of their recommendation development process that standardizes the clinical labor tasks and assigns them a clinical labor activity code. We believe

the RUC's use of the new PE worksheet in developing and submitting recommendations will help us to simplify and standardize the hundreds of different clinical labor tasks currently listed in our direct PE database. As we did in previous calendar years, to facilitate rulemaking for CY 2024, we are continuing to display two versions of the Labor Task Detail public use file: one version with the old listing of clinical labor tasks, and one with the same tasks crosswalked to the new listing of clinical labor activity codes. These lists are available on the CMS website under downloads for the CY 2024 PFS final rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

b. Updates to Prices for Existing Direct PE Inputs

In the CY 2011 PFS final rule with comment period (75 FR 73205), we finalized a process to act on public requests to update equipment and supply price and equipment useful life inputs through annual rulemaking, beginning with the CY 2012 PFS proposed rule. Beginning in CY 2019 and continuing through CY 2022, we conducted a market-based supply and equipment pricing update, using information developed by our contractor, StrategyGen, which updated pricing recommendations for approximately 1300 supplies and 750 equipment items currently used as direct PE inputs. Given the potentially significant changes in payment that would occur, in the CY 2019 PFS final rule we finalized a policy to phase in our use of the new direct PE input pricing over a 4-year period using a 25/75 percent (CY 2019), 50/50 percent (CY 2020), 75/25 percent (CY 2021), and 100/0 percent (CY 2022) split between new and old pricing. We believed that implementing the proposed updated prices with a 4-year phase-in would improve payment accuracy, while maintaining stability and allowing interested parties the opportunity to address potential concerns about changes in payment for particular items. This 4-year transition period to update supply and equipment pricing concluded in CY 2022; for a more detailed discussion, we refer readers to the CY 2019 PFS final rule with comment period (83 FR 59473 through 59480).

For CY 2024, we proposed to update the price of 16 supplies and two equipment items in response to the public submission of invoices following the publication of the CY 2023 PFS final rule. The 16 supply and equipment items with proposed updated prices were listed in the valuation of specific codes section of the preamble under Table 15, CY 2024 Invoices Received for Existing Direct PE Inputs (88 FR 52348).

We did not propose to update the price of another eleven supplies which were the subject of public submission of invoices. Our rationale for not updating these prices is detailed below:

- *Extended external ECG patch, medical magnetic tape recorder (SD339)*: We received additional invoices for the SD339 supply from an interested party. Upon review of the invoices, we determined that they contained the identical price point that we previously incorporated into last year's rule when we finalized a price of \$260.35 for the supply item (87 FR 69514 through 69516). Since these invoices did not contain any new information, we stated in the proposed rule that we are maintaining the previously finalized price of \$260.35 for the SD339 supply.

- *Permanent marking pen (SL477), Liquid coverslip (Ventana 650-010) (SL479), EZ Prep (10X) (Ventana 950-102) (SL481), Cell Conditioning 1 (Ventana 950-124) (SL482), and Hematoxylin II (Ventana 790-2208) (SL483)*: We received invoices from interested parties for use in updating the price of these laboratory supplies. In each case, however, we were able to find the same supply item available for sale online at the current price or cheaper. Therefore, we do not believe that the submitted invoices represent typical market pricing for these supplies and we did not propose to update their prices.

- *Mask, surgical (SB033), scalpel with blade, surgical (#10-20) (SF033), eye shield, non-fog (SG049), gauze, non-sterile 4in x 4in (SG051), and towel, paper (Bounty) (per sheet) (SK082)*: We received invoices from interested parties for use in updating the price of these common supply items. In each case, we received a single invoice and once again we were able to find the same supply items available for sale online at the current price or cheaper. Generally speaking, we avoid updating the price for common supply items like the SB033 surgical mask

(included in approximately 380 HCPCS codes) based on the submission of a single invoice, as an invoice unrepresentative of current market pricing will have far-reaching effects across the PFS. We did not find that the typical price for a surgical mask had increased by more than 60 percent since the supply and equipment pricing update concluded in CY 2022, and as such we stated in the proposed rule that we are maintaining the current price for these supply items.

We received the following comments on our proposed updates to supply and equipment pricing:

*Comment:* Several commenters stated that they supported the proposed pricing updates of the following supplies and equipment items: SC084, SC085, SM008, SL491, EP034, EP111, SA110, SL077, SL495, SL475, SL488, SL474, and SL486. The commenters urged CMS to finalize the updates as proposed.

*Response:* We appreciate the support for our proposed pricing from the commenters.

*Comment:* A commenter stated that they had submitted invoices during the pre-rulemaking period, in February 2023, to support CMS with identifying the appropriate direct PE inputs for equipment and supplies used in physician pathology services. The commenter listed ten supply and equipment items with updated pricing in the proposed rule (EP034, EP111, SA110, SL077, SL474, SL475, SL486, SL488, SL491, SL495) and stated that they supported the proposed pricing changes for these items and urged CMS to finalize them as proposed in the final rule.

*Response:* We appreciate the support for our proposed pricing from the commenter.

*Comment:* Several commenters stated that they appreciated CMS' conclusion that the current price of \$260.35 should be maintained for supply item SD339 (extended external ECG patch, medical magnetic tape recorder) for CY 2024. The commenters stated that the proposed pricing represented much-needed payment stability for providers of the long term electrocardiographic (LT-ECG) monitoring service and it was in the best interest of Medicare

beneficiaries for CMS to support continued patient access to these services through the maintenance of fair and stable provider reimbursement.

*Response:* We appreciate the support for our proposed pricing from the commenters.

*Comment:* A commenter submitted approximately 50 invoices with the intention of persuading CMS to update the pricing for the Tubing set, blood warmer (SC084) and Tubing set, plasma exchange (SC085) supplies. The commenter stated that these invoices were based on sales to U.S. customers in June and July 2023 and requested that CMS update their prices to reflect the data contained on the invoices.

*Response:* We appreciate the large quantity of pricing data provided by the commenter for use in updating the pricing of the SC084 and SC085 supplies. After reviewing the invoices, we agree with the commenter that the Tubing set, blood warmer (SC084) supply is more accurately priced at \$16.27 and the Tubing set, plasma exchange (SC085) supply is more accurately priced at \$277.20. We are finalizing these updated prices based on the market-based pricing contained in this large sample of submitted invoices.

The following are additional comments that we received associated with supply and equipment pricing:

*Comment:* A commenter stated that the non-facility reimbursement is significantly undervalued for CPT code 36836 (*Percutaneous arteriovenous fistula creation, upper extremity, single access of both the peripheral artery and peripheral vein, including fistula maturation procedures (eg, transluminal balloon angioplasty, coil embolization) when performed, including all vascular access, imaging guidance and radiologic supervision and interpretation*). The commenter stated that an angiography room (EL011) should be included in the equipment item inputs for CPT code 36836, since it is included in CPT code 36837, instead of the current vascular ultrasound room (EL016). The commenter also stated that CMS should update the pricing for the Ellipsys Vascular Access Catheter (SD351) supply item as the price of \$6000 is not representative of the current cost of the device. The commenter submitted approximately 70

invoices with the intention of persuading CMS to update the pricing for the SD351 supply to \$7,378.75.

*Response:* We disagree with the commenter that the use of an angiography room would be more typical than the use of a vascular ultrasound room for CPT code 36837; the vascular ultrasound room was recommended by the RUC and finalized by CMS in CY 2023 rulemaking (87 FR 69485 through 69489). However, we appreciate the submission of a large quantity of pricing data provided by the commenter for use in updating the pricing of the SD351 supply. We previously wrote in CY 2023 rulemaking that we were concerned that the submission of a single invoice would represent an increase from \$6000 to \$8950 for the SD351 supply, an extraordinary increase in the span of 6 months since the service was reviewed at the January 2022 RUC meeting, and that we would consider supply pricing in future updates to this service.

With the much larger batch of invoice data supplied by the commenter, it is clear that the Ellipsys Vascular Access Catheter (SD351) supply item has a bimodal pricing structure, with almost exactly half of the submitted invoices listed at the current price of \$6000 while the other half were priced at \$8950. Based on this updated pricing data, we therefore agree that the commenter's suggested price change to \$7,378.75 is an appropriate update to the price of the SD351 supply as it falls between the two poles of the pricing distribution. We are finalizing this update to the price of the SD351 supply to more accurately reflect the typical market price.

*Comment:* A commenter submitted a series of approximately 100 invoices for use in pricing a new supply item known as the WatchPAT One device. The commenter stated that this was a separate supply from the WatchPAT pneumo-opt slp probes (SD263) item currently listed in the CMS supply database priced at \$73.32. The commenter detailed the clinical benefits associated with the WatchPAT One device and provided to CMS copies of purchase invoices reflecting sales of approximately 3,000 units across all geographic regions of the country to support the commenter's requested value of \$98.20 for the supply item.

*Response:* We appreciate the submission of this large quantity of pricing data associated with the WatchPAT One device. Although there are no HCPCS codes that currently include the WatchPAT One device as a supply item, we will add the WatchPAT One device to our supply database with its own supply code (SD362) at the requested price of \$98.20 so that it can be used in future reviews of services that typically make use of this product.

*Comment:* A commenter stated that there are numerous discrepancies between the aggregated cost of some of the supply packs and the individual item components contained within. The commenter stated that these mathematical errors should be rectified as soon as possible by CMS to ensure that the sum correctly matches the totals from the individual items, and the commenter recommended that CMS resolve these pricing discrepancies in the supply packs during CY 2024 rulemaking. The commenter submitted RUC workgroup recommendations to update pricing for a series of supply packs along with their comment letter.

*Response:* We appreciate the additional information and RUC workgroup recommendations provided by the commenter regarding discrepancies in the aggregated cost of some supply packs. However, due to the projected significant cost revisions in the pricing of supply packs, and because we did not propose to address supply pack pricing in the CY 2024 proposed rule, we believe that this issue would be better addressed in future rulemaking. For example, the cleaning and disinfecting endoscope pack (SA042) is included as a supply input in more than 300 HCPCS codes which could have a sizable impact on the overall valuation of these services, and which was not incorporated into the proposed RVUs published for the CY 2024 proposed rule. We believe that interested parties will be better served if CMS addresses this topic in a comprehensive manner during a potential future rulemaking in which commenters could provide feedback in response to proposed pricing updates.

*Comment:* A commenter reviewed the issue of skin adhesives and identified several generic alternatives to the use of the skin adhesive (Dermabond) (SG007) supply. The commenter stated that there are multiple skin adhesive products, at different price points,

available that work similarly to Dermabond and requested that generic alternatives should be used overall in place of brand names in the CMS supply database. The commenter made a series of suggestions for CMS to create new medical supply item codes to encompass the generic formulations of cyanoacrylate skin adhesive in multidose form and single use sterile application.

*Response:* We note that these revisions to the skin adhesive supplies were incorporated into the recommendations from the April 2023 RUC meeting where several skin adhesive procedures were reviewed. As we stated with respect to the pricing of supply packs above, we believe that this issue would be better addressed in a potential future rulemaking, for example as part of the RUC review of these skin adhesive procedures for the upcoming CY 2025 cycle. This would allow CMS to make any potential revisions to the skin adhesive supplies while the HCPCS codes in question are also under formal review to minimize disruption to existing services.

*Comment:* Several commenters recommended that CMS separately identify and pay for high-cost disposable supplies. Commenters stated that this would address the outsized impact that high-cost disposable supplies have within the current PE RVU methodology; if high cost supplies were paid separately with appropriate HCPCS codes, their indirect expense would no longer be associated with that service. Commenters stated that the result would be that indirect PE RVUs would be redistributed throughout the specialty PE pool and the PE for all other services. Commenters recommended that CMS separately identify and pay for high-cost disposable supplies priced more than \$500 using appropriate HCPCS codes.

*Response:* We have received a number of prior requests from interested parties , including the RUC, to implement separately billable alpha-numeric Level II HCPCS codes to allow practitioners to be paid the cost of high cost disposable supplies per patient encounter instead of per CPT code. We stated at the time, and we continue to believe, that this option presents a series of potential problems that we have addressed previously in the context of the broader challenges regarding our ability to price high cost disposable supply items. (For a

discussion of this issue, we direct the reader to our discussion in the CY 2011 PFS final rule with comment period (75 FR 73251)).

After consideration of the comments, we are finalizing updates to the pricing of the supply and equipment items as listed in Table 17 and detailed above. These supply and equipment items with updated prices are listed in the valuation of specific codes section of the preamble under Table 17, CY 2024 Invoices Received for Existing Direct PE Inputs.

#### (1) Invoice Submission

We remind readers that we routinely accept public submission of invoices as part of our process for developing payment rates for new, revised, and potentially misvalued codes. Often these invoices are submitted in conjunction with the RUC-recommended values for the codes. To be included in a given year's proposed rule, we generally need to receive invoices by the same February 10th deadline we noted for consideration of RUC recommendations. However, we will consider invoices submitted as public comments during the comment period following the publication of the PFS proposed rule and would consider any invoices received after February 10th or outside of the public comment process as part of our established annual process for requests to update supply and equipment prices. Interested parties are encouraged to submit invoices with their public comments or, if outside the notice and comment rulemaking process, via email at *PE\_Price\_Input\_Update@cms.hhs.gov*.

#### c. Clinical Labor Pricing Update

Section 220(a) of the PAMA provides that the Secretary may collect or obtain information from any eligible professional or any other source on the resources directly or indirectly related to furnishing services for which payment is made under the PFS, and that such information may be used in the determination of relative values for services under the PFS. Such information may include the time involved in furnishing services; the amounts, types, and prices of PE inputs; overhead and accounting information for practices of physicians and other suppliers, and any other elements that would improve the valuation of services under the PFS.

Beginning in CY 2019, we updated the supply and equipment prices used for PE as part of a market-based pricing transition; CY 2022 was the final year of this 4-year transition. We initiated a market research contract with StrategyGen to conduct an in-depth and robust market research study to update the supply and equipment pricing for CY 2019, and we finalized a policy in CY 2019 to phase in the new pricing over a period of 4 years. However, we did not propose to update the clinical labor pricing, and the pricing for clinical labor has remained unchanged during this pricing transition. Clinical labor rates were last updated for CY 2002 using Bureau of Labor Statistics (BLS) data and other supplementary sources where BLS data were not available; we refer readers to the full discussion in the CY 2002 PFS final rule for additional details (66 FR 55257 through 55262).

Interested parties raised concerns that the long delay since clinical labor pricing was last updated created a significant disparity between CMS' clinical wage data and the market average for clinical labor. In recent years, a number of interested parties suggested that certain wage rates were inadequate because they did not reflect current labor rate information. Some interested parties also stated that updating the supply and equipment pricing without updating the clinical labor pricing could create distortions in the allocation of direct PE. They argued that since the pool of aggregated direct PE inputs is budget neutral, if these rates are not routinely updated, clinical labor may become undervalued over time relative to equipment and supplies, especially since the supply and equipment prices are in the process of being updated. There was considerable interest among interested parties in updating the clinical labor rates, and when we solicited comment on this topic in past rules, such as in the CY 2019 PFS final rule (83 FR 59480), interested parties supported the idea.

Therefore, we proposed to update the clinical labor pricing for CY 2022, in conjunction with the final year of the supply and equipment pricing update (86 FR 39118 through 39123). We believed it was important to update the clinical labor pricing to maintain relativity with the recent supply and equipment pricing updates. We proposed to use the methodology outlined in

the CY 2002 PFS final rule (66 FR 55257), which draws primarily from BLS wage data, to calculate updated clinical labor pricing. As we stated in the CY 2002 PFS final rule, the BLS' reputation for publishing valid estimates that are nationally representative led to the choice to use the BLS data as the main source. We believe that the BLS wage data continues to be the most accurate source to use as a basis for clinical labor pricing and this data will appropriately reflect changes in clinical labor resource inputs for purposes of setting PE RVUs under the PFS. We used the most current BLS survey data (2019) as the main source of wage data for our CY 2022 clinical labor proposal.

We recognized that the BLS survey of wage data does not cover all the staff types contained in our direct PE database. Therefore, we crosswalked or extrapolated the wages for several staff types using supplementary data sources for verification whenever possible. In situations where the price wages of clinical labor types were not referenced in the BLS data, we used the national salary data from the Salary Expert, an online project of the Economic Research Institute that surveys national and local salary ranges and averages for thousands of job titles using mainly government sources. (A detailed explanation of the methodology used by Salary Expert to estimate specific job salaries can be found at [www.salaryexpert.com](http://www.salaryexpert.com)). We previously used Salary Expert information as the primary backup source of wage data during the last update of clinical labor pricing in CY 2002. If we did not have direct BLS wage data available for a clinical labor type, we used the wage data from Salary Expert as a reference for pricing, then crosswalked these clinical labor types to a proxy BLS labor category rate that most closely matched the reference wage data, similar to the crosswalks used in our PE/HR allocation. For example, there is no direct BLS wage data for the Mammography Technologist (L043) clinical labor type; we used the wage data from Salary Expert as a reference and identified the BLS wage data for Respiratory Therapists as the best proxy category. We calculated rates for the "blend" clinical labor categories by combining the rates for each labor type in the blend and then dividing by the total number of labor types in the blend.

As in the CY 2002 clinical labor pricing update, the proposed cost per minute for each clinical staff type was derived by dividing the average hourly wage rate by 60 to arrive at the per minute cost. In cases where an hourly wage rate was not available for a clinical staff type, the proposed cost per minute for the clinical staff type was derived by dividing the annual salary (converted to 2021 dollars using the Medicare Economic Index) by 2080 (the number of hours in a typical work year) to arrive at the hourly wage rate and then again by 60 to arrive at the per minute cost. We ultimately finalized the use of median BLS wage data, as opposed to mean BLS wage data, in response to comments in the CY 2022 PFS final rule. To account for the employers' cost of providing fringe benefits, such as sick leave, we finalized the use of a benefits multiplier of 1.296 based on a BLS release from June 17, 2021 (USDLE-21-1094). As an example of this process, for the Physical Therapy Aide (L023A) clinical labor type, the BLS data reflected a median hourly wage rate of \$12.98, which we multiplied by the 1.296 benefits modifier and then divided by 60 minutes to arrive at the finalized per-minute rate of \$0.28.

After considering the comments on our CY 2022 proposals, we agreed with commenters that the use of a multi-year transition would help smooth out the changes in payment resulting from the clinical labor pricing update, avoiding potentially disruptive changes in payment for affected interested parties, and promoting payment stability from year-to-year. We believed it would be appropriate to use a 4-year transition, as we have for several other broad-based updates or methodological changes. While we recognized that using a 4-year transition to implement the update means that we will continue to rely in part on outdated data for clinical labor pricing until the change is fully completed in CY 2025, we agreed with the commenters that these significant updates to PE valuation should be implemented in the same way, and for the same reasons, as for other major updates to pricing such as the recent supply and equipment update. Therefore, we finalized the implementation of the clinical labor pricing update over 4 years to transition from current prices to the final updated prices in CY 2025. We finalized the implementation of this pricing transition over 4 years, such that one quarter of the difference between the current price

and the fully phased-in price is implemented for CY 2022, one third of the difference between the CY 2022 price and the final price is implemented for CY 2023, and one half of the difference between the CY 2023 price and the final price is implemented for CY 2024, with the new direct PE prices fully implemented for CY 2025. (86 FR 65025) An example of the transition from the current to the fully-implemented new pricing that we finalized in the CY 2022 PFS final rule is provided in Table 5.

**TABLE 5: Example of Clinical Labor Pricing Transition**

<b>Current Price</b>	\$1.00	
<b>Final Price</b>	\$2.00	
Year 1 (CY 2022) Price	\$1.25	1/4 difference between \$1.00 and \$2.00
Year 2 (CY 2023) Price	\$1.50	1/3 difference between \$1.25 and \$2.00
Year 3 (CY 2024) Price	\$1.75	1/2 difference between \$1.50 and \$2.00
Final (CY 2025) Price	\$2.00	

(1) CY 2023 Clinical Labor Pricing Updates

For CY 2023, we received information from one interested party regarding the pricing of the Histotechnologist (L037B) clinical labor type. The interested party provided data from the 2019 Wage Survey of Medical Laboratories which supported an increase in the per-minute rate from the \$0.55 finalized in the CY 2022 PFS final rule to \$0.64. This rate of \$0.64 for the L037B clinical labor type is a close match to the online salary data that we had for the Histotechnologist and matches the \$0.64 rate that we initially proposed for L037B in the CY 2022 PFS proposed rule. Based on the wage data provided by the commenter, we proposed this \$0.64 rate for the L037B clinical labor type for CY 2023; we also proposed a slight increase in the pricing for the Lab Tech/Histotechnologist (L035A) clinical labor type from \$0.55 to \$0.60 as it is a blend of the wage rate for the Lab Technician (L033A) and Histotechnologist clinical labor types. We also proposed the same increase to \$0.60 for the Angio Technician (L041A) clinical labor type, as we previously established a policy in the CY 2022 PFS final rule that the pricing for the L041A clinical labor type would match the rate for the L035A clinical labor type (86 FR 65032).

Based on comments received on the CY 2023 proposed rule, we finalized a change in the descriptive text of the L041A clinical labor type from “Angio Technician” to “Vascular Interventional Technologist”. We also finalized an update in the pricing of three clinical labor types: from \$0.60 to \$0.84 for the Vascular Interventional Technologist (L041A), from \$0.63 to \$0.79 for the Mammography Technologist (L043A), and from \$0.76 to \$0.78 for the CT Technologist (L046A) based on submitted wage data from the 2022 Radiologic Technologist Wage and Salary Survey (87 FR 69422 through 69425).

## (2) CY 2024 Clinical Labor Pricing Update Proposals

We did not receive new wage data or other additional information for use in clinical labor pricing from interested parties prior to the publication of the CY 2024 PFS proposed rule. Therefore, our proposed clinical labor pricing for CY 2024 was based on the clinical labor pricing that we finalized in the CY 2023 PFS final rule, incremented an additional step for Year 3 of the update:

**TABLE 6: Proposed CY 2024 Clinical Labor Pricing**

Labor Code	Labor Description	Source	CY 2021 Rate Per Minute	Final Rate Per Minute	Y3 Phase-In Rate Per Minute	Total % Change
L023A	Physical Therapy Aide	BLS 31-2022	0.23	0.28	0.268	22%

As was the case for the market-based supply and equipment pricing update, the clinical labor rates will remain open for public comment over the course of the 4-year transition period. We updated the pricing of a number of clinical labor types in the CY 2022 and CY 2023 PFS final rules in response to information provided by commenters. For the full discussion of the clinical labor pricing update, we direct readers to the CY 2022 PFS final rule (86 FR 65020 through 65037).

We received the following comments on our clinical labor pricing update proposals for CY 2024:

*Comment:* Several commenters stated that CMS created a rank order anomaly in the pricing of the cytotechnologist (L045A) clinical labor type when it increased the clinical labor rates for the vascular interventional technologist (L041A), mammography technologist (L043A), and CT technologist (L046A) in CY 2023. The commenters stated that the education requirements for a cytotechnologist were greater than the requirements for these clinical labor types and that the cytotechnologist should be valued 10 percent more than the CT technologist based on Salary Expert data. Commenters stated that cytotechnologists are responsible for more intensive clinical responsibilities than MRI technologists, such as preparing and evaluating human cellular samples from all body sites, to detect and highlight for the pathologist's attention cells with pre-cancerous changes, cancer cells, benign tumors, infectious agents, and inflammatory processes. Commenters requested that CMS crosswalk the cytotechnologist clinical labor type to the BLS 29-9092 category (genetic counselors) at a rate of \$0.85 to correct this pricing anomaly and supported their request with data from the 2021 American Society of Clinical Pathologists (ASCP) Wage Survey of Medical Laboratories, in which the average cost per minute for cytotechnologists was \$0.86.

*Response:* We appreciate the additional information surrounding the cytotechnologist (L045A) clinical labor type supplied by the commenters, especially the 2021 ASCP wage survey containing wage data on this clinical labor type. After reviewing the information submitted by the commenters, we concur that a crosswalk to the BLS 29-9092 category at a rate of \$0.85 would be more accurate for the L045A clinical labor type, based on the wage data provided by Salary Expert and the 2021 ASCP wage survey. We are finalizing this update in the clinical labor pricing of the L045A clinical labor type from \$0.76 to \$0.85 based on this new information.

*Comment:* Several commenters expressed their disagreement with the ongoing clinical labor pricing update. Commenters stated that the pricing update continued to apply a huge and unfair burden on specialties that require expensive supplies and/or equipment to care for their patients, and that while the increase in clinical labor pricing was appropriate, it was not appropriate that some physicians were negatively impacted by the change. Commenters stated that these dramatic cuts will also further exacerbate disparities in access to care and health outcomes, among rural and minority populations, by constraining and in some cases preventing physicians in community-based office settings from providing critical patient care to underserved populations. Commenters asked CMS to hold harmless the specialties that were most affected by the clinical labor pricing update and not move forward with the third year of the phase-in. One commenter disagreed with the finalized BLS 2021 benefit multiplier of 1.296 and stated that CMS should use the originally proposed 1.366 benefits multiplier instead.

*Response:* We finalized the implementation of the clinical labor pricing update 2 years ago in the CY 2022 PFS final rule (86 FR 65020 through 65037) where we previously addressed these same comments. As we stated at that time, although we recognize that payment for some services will be reduced because of the pricing update, due to the budget neutrality requirements of the PFS, we do not believe that this is a reason to refrain from updating clinical labor pricing to reflect changes in resource costs over time. The PFS is a resource-based relative value payment system that necessarily relies on accuracy in the pricing of resource inputs; continuing

to use clinical labor cost data that are nearly 2 decades old would maintain distortions in relativity that undervalue many services which involve a higher proportion of clinical labor. As noted above, we also finalized the implementation of the pricing update through a 4-year transition to help address the concerns of the commenters about stabilizing RVUs and reducing large fluctuations in year-to-year payments.

For CY 2024, we solicited comments regarding new wage data or other additional information for use in clinical labor pricing from interested parties. The clinical labor pricing update itself, including its pricing methodology, was previously finalized through rulemaking and the first 2 years of the 4-year transition have already been implemented; as such, these comments are out of scope for CY 2024 rulemaking.

After consideration of the comments, we are finalizing the clinical labor prices as shown in Table 7; aside from the Cytotechnologist (L045A) clinical labor type detailed above, all other clinical labor pricing remains unchanged from the proposed rule.

**TABLE 7: Finalized CY 2024 Clinical Labor Pricing**

Labor Code	Labor Description	Source	CY 2021 Rate Per Minute	Final Rate Per Minute	Y3 Phase-In Rate Per Minute	Total % Change

\* Updated for CY 2024

As was the case for the market-based supply and equipment pricing update, the clinical labor rates will remain open for public comment over the remaining course of the 4-year transition period. We welcome additional feedback on clinical labor pricing from commenters in next year's rulemaking cycle, especially any data that will continue to improve the accuracy of our finalized pricing.

#### d. Technical Corrections to Direct PE Input Database and Supporting Files

Following the publication of the CY 2023 PFS proposed rule, an interested party notified CMS that CPT code 86153 (*Cell enumeration using immunologic selection and identification in fluid specimen (eg, circulating tumor cells in blood); physician interpretation and report, when required*) appeared to be missing its work time in the Physician Work Time public use file. We

reviewed the request from the interested party and determined that this was indeed an unintended technical error; we stated in the CY 2013 PFS final rule that we were finalizing 0 minutes pre-service time, 20 minutes intraservice time, and 0 minutes post-service time to CPT code 86153 (77 FR 69059); however, work time was inadvertently completely missing for this code. Therefore, we proposed to add the correct 20 minutes of intraservice work time to CPT code 86153 for CY 2024.

*Comment:* A commenter stated that they agreed with the correction of this error and urged CMS to finalize the update of 20 minutes of intra service work time for CPT code 86153.

*Response:* We appreciate the support for our proposal from the commenter. We received no other comments regarding this proposal, and we are finalizing the addition of the correct 20 minutes of intraservice work time to CPT code 86153 for CY 2024, as proposed.

We received the following comments on technical corrections to the direct PE input database and supporting files:

*Comment:* A commenter stated that transcatheter valve procedures are extremely technical in nature and require a highly functional multi-disciplinary surgical and operating room team, which was not reflected in the indicators currently assigned to certain Category III codes associated with this service. The commenter stated that these Category III codes should have their assistant surgeon, co-surgeon, and team surgeon indicators match CPT codes 33418 and 33419. Specifically, the commenter requested that CMS change the assistant surgeon payment policy indicator from “0” to “2” for the following transcatheter valve CPT codes: 0483T, 0544T, 0545T, 0569T, 0570T and 0646T; change the co-surgeon payment policy indicator from “0” to “1” for transcatheter valve CPT codes 0544T, 0545T, 0569T and 0570T, and to “2” for CPT code 0646T; and change the team surgeon payment policy indicator from “0” to “1” for CPT code 0646T.

*Response:* We appreciate the feedback from the commenter regarding the need for greater consistency in the indicators for these Category III transcatheter valve procedures. After

reviewing the request from the commenter, we concur that these Category III codes should match the assistant surgeon, co-surgeon, and team surgeon indicators for CPT codes 33418 and 33419 which had a national coverage determination released to this effect in 2014 and 2015 (see <https://www.hhs.gov/guidance/sites/default/files/hhs-guidance-documents/MM9002.pdf>). Therefore, we are finalizing the indicator changes requested by the commenter in the previous paragraph.

*Comment:* Several commenters raised the topic of indirect PE allocation for the home PT/INR monitoring services described by HCPCS codes G0248 and G0249. Commenters stated their appreciation that CMS acknowledged their concerns about the lack of a specialty designation that accurately reflects the indirect costs of home PT/INR monitoring suppliers in the CY 2021 PFS rulemaking cycle and agreed to update the indirect factors for home PT/INR monitoring by crosswalking to the General Practice Specialty (85 FR 84477 through 84478). Commenters stated that proposed policies in the CY 2023 PFS rule completely negated the limited benefit from this crosswalk to General Practice, and they again appreciated that CMS changed the crosswalk for PT/INR suppliers to the All Physician specialty which more closely reflected indirect-to-direct cost ratios for home PT/INR monitoring services (87 FR 69417 through 69419). Commenters noted that CMS did not propose any changes in the crosswalk for these services and requested that the crosswalk remain as previously finalized for CY 2024.

*Response:* As the commenters noted, we did not propose any changes to the specialty crosswalk for indirect PE allocation for home PT/INR monitoring services and we are not finalizing any changes to the crosswalk for PT/INR monitoring services. Nevertheless, we appreciate the support from the commenters for our previously finalized policies.

*Comment:* A commenter questioned the proposed PE RVU for CPT code 97610 (*Low frequency, non-contact, non-thermal ultrasound, including topical application(s), when performed, wound assessment, and instruction(s) for ongoing care, per day*) in the nonfacility setting. The commenter stated that the proposed reduction was an unfair decrease that was

specific only to CPT code 97610 when other clinically similar CPT wound care codes were not similarly reduced. The commenter requested that the nonfacility PE RVU for CPT code 97610 be reviewed for accuracy and increased to match its previous valuation for CY 2024.

*Response:* We reviewed CPT code 97610 in response to the commenter's concerns and we can confirm that there are no technical errors affecting the valuation of this code. We did not make any specific proposals regarding CPT code 97610 for CY 2024; however, the valuation for this code is being affected by the ongoing clinical labor pricing transition. Supply costs make up 94.5 percent of the direct PE inputs for CPT code 97610 and, as a result, the increased pricing for clinical labor across all services on the PFS translates into a lower valuation for CPT code 97610, after budget neutrality is applied to the PE. For additional information on this topic, we direct readers to the extended discussion of the clinical labor pricing update in the CY 2022 final rule (86 FR 65020 through 65037).

*Comment:* A commenter stated that StrategyGen's market-based supply and equipment research contained numerous flaws in how it arrived at the cost of the external counterpulsation (ECP) system (EQ012) used in HCPCS code G0166 (*External counterpulsation, per treatment session*) for CY 2021. The commenter stated that they appreciated CMS' assistance in recent years to correct some of these errors, but the continued phase-in of PE RVU decreases associated with equipment costs, as well as the clinical labor pricing updates adversely impacting services with high capital expenses, continued to place incredible stress on the reimbursement for ECP therapy. The commenter stated that the reimbursement for a full course of therapy has decreased from 2018 to 2023 by nearly the cost of the routinely purchased supplies necessary for delivering this service, and as a result it is no surprise that practices that do not specialize in ECP therapy would rather abandon the service than continue to pay the expensive system maintenance costs.

*Response:* We note for the commenter that we did not make any proposals specifically regarding HCPCS code G0166 or the EQ012 equipment for CY 2024 and the commenter did not supply invoices or other data to support a change in pricing. If the commenter has reason to

believe that the EQ012 equipment is inaccurately priced, interested parties are encouraged to submit invoices containing pricing data with their public comments or, if outside the notice and comment rulemaking process, via email at *PE\_Price\_Input\_Update@cms.hhs.gov*. If the commenter believes that HCPCS code G0166 may be potentially misvalued, we encourage them to consider nominating the code under our potentially misvalued process (detailed in section II.C. of this final rule) for additional review.

## 5. Soliciting Public Comment on Strategies for Updates to Practice Expense Data Collection and Methodology

### a. Background

The AMA PPIS was first introduced in 2007 as a means to collect comprehensive and reliable data on the direct and indirect PEs incurred by physicians (72 FR 66222). In considering the use of PPIS data, the goal was to improve the accuracy and consistency of PE RVUs used in the PFS. The data collection process included a stratified random sample of physicians across various specialties, and the survey was administered between August 2007 and March 2008. Data points from that period of time are integrated into PFS calculations today. In the CY 2009 PFS proposed rule (73 FR 38507 through 3850), we discussed the indirect PE methodology that used data from the AMA's survey that predated the PPIS. In CY 2010 PFS rulemaking, we announced our intent to incorporate the AMA PPIS data into the PFS ratesetting process, which would first affect the PE RVU. In the CY 2010 PFS proposed rule, we outlined a 4-year transition period, during which we would phase in the AMA PPIS data, replacing the existing PE data sources (74 FR 33554). We also explained that our proposals intended to update survey data only (74 FR 33530 through 33531). In our CY 2010 final rule, we finalized our proposal, with minor adjustments based on public comments (74 FR 61749 through 61750). We responded to the comments we received about the transition to using the PPIS to inform indirect PE allocations (74 FR 61750). In the responses, we acknowledged concerns about potential gaps in the data, which could impact the allocation of indirect PE for certain physician specialties and

suppliers, which are issues that remain important today. The CY 2010 PFS final rule explains that section 212 of the Balanced Budget Refinement Act of 1999 (BBRA) (Pub. L. 106-113, November 29, 1999) directed the Secretary to establish a process under which we accept and use, to the maximum extent practicable and consistent with sound data practices, data collected or developed by entities and organizations to supplement the data we normally collect in determining the PE component. BBRA required us to establish criteria for accepting supplemental survey data. Since the supplemental surveys were specific to individual specialties and not part of a comprehensive multispecialty survey, we had required that certain precision levels be met in order to ensure that the supplemental data was sufficiently valid, and acceptable for use in the development of the PE RVUs. At the time, our rationale included the assumption that because the PPIS is a contemporaneous, consistently collected, and comprehensive multispecialty survey, we do not believe similar precision requirements are necessary, and we did not propose to establish them for the use of the PPIS data (74 FR 61742). We noted potential gaps in the data, which could impact the allocation of indirect PE for certain physician and suppliers. The CY 2010 final rule adopted the proposal, with minor adjustments based on public comments, and explained that these minor adjustments were in part due to non-response bias that results when the characteristics of survey respondents differ in meaningful ways, such as in the mix of practices sizes, from the general population (74 FR 61749 through 61750).

Throughout the 4-year transition period, from CY 2010 to CY 2013, we gradually incorporated the AMA PPIS data into the PFS rates, replacing the previous data sources. The process involved addressing concerns and making adjustments as necessary, such as refining the PFS ratesetting methodology in consideration of interested party feedback. For background on the refinements that we considered after the transition began, we refer readers to discussions in the CY 2011 through 2014 final rules (75 FR 73178 through 73179; 76 FR 73033 through 73034; 77 FR 98892; 78 FR 74272 through 74276).

In the CY 2011 PFS proposed rule, we requested comments on the methodology for calculating indirect PE RVUs, explicitly seeking input on using survey data, allocation methods, and potential improvements (75 FR 40050). In our CY 2011 PFS final rule, we addressed comments regarding the methodology for indirect PE calculations, focusing on using survey data, allocation methods, and potential improvements (75 FR 73178 through 73179). We recognized some limitations of the current PFS ratesetting methodology but maintained that the approach was the most appropriate at the time. In the CY 2012 PFS final rule, we responded to comments related to indirect PE methodology, including concerns about allocating indirect PE to specific services and using the AMA PPIS data for certain specialties (76 FR 73033 through 73034). We indicated that CMS would continue to review and refine the methodology and work with interested parties to address their concerns. In the CY PFS 2014 final rule, we responded to comments about fully implementing the AMA PPIS data. By 2014, the AMA PPIS data had been fully integrated into the PFS, serving as the primary source for determining indirect PE inputs (78 FR 74235). We continued to review data and the PE methodology annually, considering interested party feedback and evaluating the need for updates or refinements to ensure the accuracy and relevance of PE RVUs (79 FR 67548). In the years following the full implementation of the AMA PPIS data, we further engaged with interested parties, thought leaders and subject matter experts to improve our PE inputs' accuracy and reliability. For further background, we refer readers to our discussions in final rules for CY 2016 through 2022 (80 FR 70892; 81 FR 80175; 82 FR 52980 through 52981; 83 FR 59455 through 59456; 84 FR 62572; 85 FR 84476 through 84478; 86 FR 62572).

In our CY 2023 PFS final rule, we issued an RFI to solicit public comment on strategies to update PE data collection and methodology (87 FR 69429 through 69432). We solicited comments on current and evolving trends in health care business arrangements, the use of technology, or similar topics that might affect or factor into PE calculations. We reminded readers that we have worked with interested parties and CMS contractors for years to study the

landscape and identify possible strategies to reshape the PE portion of physician payments. The fundamental issues are clear but thought leaders and subject matter experts have advocated for more than one tenable approach to updating our PE methodology.

As described in last year's rule, we have continued interest in developing a roadmap for updates to our PE methodology that account for changes in the health care landscape. Of various considerations necessary to form a roadmap for updates, we reiterate that allocations of indirect PE continue to present a wide range of challenges and opportunities. As discussed in multiple cycles of previous rulemaking, our PE methodology relies on AMA PPIS data, which may represent the best aggregated available source of information at this time. However, we acknowledge the limitations and challenges interested parties have raised about using the current data for indirect PE allocations, which we have also examined in related ongoing research. We noted in last year's rule that there are several competing concerns that CMS must take into account when considering updated data sources, which also should support and enable ongoing refinements to our PE methodology.

Many commenters last year asked that CMS wait for the AMA to complete a refresh of AMA survey data. We responded to these comments by explaining the tension that waiting creates in light of concerns raised by other interested parties. Waiting for refreshed survey data would result in CMS using data nearly 20 years old to form indirect PE inputs to set rates for services on the PFS. We reminded readers that many of the critical issues discussed in the background and history above are mainly unchanged and possibly would not be addressed by an updated survey alone but may also require revisions to the PFS ratesetting methodology.

#### b. Summary of the Comments and Responses for the Request for Information

In the CY 2024 PFS proposed rule, we continued to encourage interested parties to provide feedback and suggestions to CMS that give an evidentiary basis to shape optimal PE data collection and methodological adjustments over time. We stated that submissions should discuss the feasibility and burden of implementing any suggested adjustments and highlight

opportunities to optimize the cadence, frequency, and phase-in of resulting adjustments. We stated that we were continuing to consider ways that we may engage in dialogue with interested parties to better understand how to address possible long-term policies and methods for PFS ratesetting. We believe some of those concerns may be alleviated by having ways to refresh data and make transparent how the information affects valuations for services payable under the PFS more accurately and precisely.

Considering our ratesetting methodology and prior experiences implementing new data, we issued a follow-up solicitation for general information. We solicited comments from interested parties on strategies to incorporate information that could address known challenges we experienced in implementing the initial AMA PPIS data. Our current methodology relies on the AMA PPIS data, legislatively mandated supplemental data sources (for, example, we use supplemental survey data collected in 2003, as required by section 1848(c)(2)(H)(i) of the Act to set rates for oncology and hematology specialties), and in some cases crosswalks to allocate indirect PE as necessary for certain specialties and provider types.

We also sought to understand whether, upon completion of the updated PPIS data collection effort by the AMA, contingencies or alternatives may be necessary and available to address the lack of data availability or response rates for a given specialty, set of specialties, or specific service suppliers who are paid under the PFS.

In light of the considerations discussed above, we requested feedback on the following:

(1) If CMS should consider aggregating data for certain physician specialties to generate indirect allocators so that PE/HR calculations based on PPIS data would be less likely to over-allocate (or under-allocate) indirect PE to a given set of services, specialties, or practice types. Further, what thresholds or methodological approaches could be employed to establish such aggregations?

(2) Whether aggregations of services, for purposes of assigning PE inputs, represent a fair, stable and accurate means to account for indirect PEs across various specialties or practice types?

(3) If and how CMS should balance factors that influence indirect PE inputs when these factors are likely driven by a difference in geographic location or setting of care, specific to individual practitioners (or practitioner types) versus other specialty/practice-specific characteristics (for example, practice size, patient population served)?

(4) What possible unintended consequences may result if CMS were to act upon the respondents' recommendations for any of highlighted considerations above?

(5) Whether specific types of outliers or non-response bias may require different analytical approaches and methodological adjustments to integrate refreshed data?

We received public comments on this RFI. The following is a summary of the comments we received and our responses.

*Comment:* Most commenters stated that CMS should defer significant changes until the AMA PPIS results become available. In responding to our RFI, the AMA RUC provided a set of responses, which many other commenters repeated in their separate, individual comments. In summary, the AMA RUC letter responds to all five prompts in the RFI with rationales that support the assertion that CMS should not consider further changes until PPIS data collection and analysis is complete.

*Response:* We thank the AMA RUC for commenting. In totality, the AMA comments generally do not support any change to the methodology and assert that CMS should wait to consider any further changes until PPIS updates become available. Further, we note that through its contractor, Mathematica, the AMA secured an endorsement for the PPIS updates from each State society, national medical specialty society, and others prior to fielding the survey.<sup>1</sup> We

---

<sup>1</sup> Refer to the AMA's summary of the PPIS, available at <https://www.ama-assn.org/system/files/physician-practice-information-survey-summary.pdf>.

believe the AMA's approach may possibly mitigate nonresponse bias, which created challenges using previous PPIS data. However, we remain uncertain about whether endorsements prior to fielding the survey may inject other types of bias in the validity and reliability of the information collected.

*Comment:* Some commenters did not recommend that CMS defer significant changes until the AMA PPIS results become available. These commenters stated that reliance on the PPIS updates may not improve the accuracy and stability of the PE methodology because of the survey design, possible implementation challenges, and a possible lack of transparency or granularity in resulting datasets.

*Response:* We thank commenters for their feedback. We believe it remains important to reflect on the challenges with our current methodology, and to continue to consider alternatives that improve the stability and accuracy of our overall PE methodology. We reiterate our discussion summarizing the responses to last year's RFI in the CY 2023 final rule (refer to 87 FR 69429 through 69432). In last year's RFI, we signaled our intent to move to a standardized and routine approach to valuation of PE and we solicited feedback. We solicited comment on the appropriate instrument, methods, and timing for updating PE data, and requested information on any alternatives that would result in more predictable results, increased efficiencies, or reduced burdens, for subsequent updates in later years CMS continues to seek alternatives that use verifiable, more objective data sets in the future to supplement or augment survey data used to establish PE RVUs for PFS services.

*Comment:* Some commenters stated that regardless of whether one supports or does not support updating and using updated PPIS data, the duration between updates and the expense of fielding a survey instrument may promote further market consolidation. Additionally, other commenters stated that dependence on the PPIS or survey data in general, due to timing and frequency constraints, may continue to jeopardize independent practice and discourage fair competition among suppliers and providers of services paid under the PFS. These commenters

assert that if current trends continue, it will result in far fewer independent practices and more consolidation before the availability of updated survey data, undermining the sampling methodology of any survey and the general goals of our PE methodology updates.

*Response:* We thank commenters for their feedback, and we encourage interested parties to continue to engage with us regarding the intersection of PE data and these important issues

*Comment:* We received a comment co-signed by a broad and varied set of interested parties (for example, professional membership organizations, vendors, practitioners, health systems) that requested a separate RFI. The authors asked that CMS address topics regarding machine learning, AI, and software and explore a means outside our annual rulemaking cycle, so that CMS may address changes in healthcare related to these topics and better account for such changes in payment moving forward. Commenters asserted that the rapid pace of innovation may require far more significant changes than would be practical to address in a given calendar year. The commenters also highlighted the AMA's efforts to develop Appendix S of the CPT Manual, which establishes a taxonomy for medical AI.

*Response:* We remain committed to fostering dialogue with interested parties on a variety of PE issues, including how to most appropriately incorporate new and evolving technologies in both collection of PE data and the PE methodology itself. Further, we acknowledge the efforts of the AMA to establish a taxonomy for AI, which was informed by engagement with HHS ONC and others (refer to <https://www.healthit.gov/sites/default/files/page/2020-02/GettingerModeratorSlidesAIPanelsforONCAnnualMeeting12720Final.pdf>). We encourage readers to review general resources that provide overviews of efforts across HHS that address these topics. Examples include ONC's AI Showcase, held in late 2022, available at <https://www.healthit.gov/news/events/onc-artificial-intelligence-showcase-seizing-opportunities-and-managing-risks-use-ai> and this year's issuance of a notice of proposed rulemaking for Health Data, Technology, and Interoperability: Certification Program Updates, Algorithm Transparency, and Information Sharing (HTI-1), (88 FR 23746); as well as the FDA's Artificial

Intelligence/Machine Learning (AI/ML)-Based Software as a Medical Device (SaMD) Action Plan, available at <https://www.fda.gov/media/145022/download> and Good Machine Learning Practice for Medical Device Development: Guiding Principles, available at <https://www.fda.gov/medical-devices/software-medical-device-samd/good-machine-learning-practice-medical-device-development-guiding-principles>.

## C. Potentially Misvalued Services Under the PFS

### 1. Background

Section 1848(c)(2)(B) of the Act directs the Secretary to conduct a periodic review, not less often than every 5 years, of the relative value units (RVUs) established under the PFS. Section 1848(c)(2)(K) of the Act requires the Secretary to periodically identify potentially misvalued services using certain criteria and to review and make appropriate adjustments to the relative values for those services. Section 1848(c)(2)(L) of the Act also requires the Secretary to develop a process to validate the RVUs of certain potentially misvalued codes under the PFS, using the same criteria used to identify potentially misvalued codes, and to make appropriate adjustments.

As discussed in section II.E. of this final rule, under Valuation of Specific Codes, each year we develop appropriate adjustments to the RVUs taking into account recommendations provided by the American Medical Association (AMA) Resource-Based Relative Value Scale (RVS) Update Committee (RUC), MedPAC, and other interested parties. For many years, the RUC has provided us with recommendations on the appropriate relative values for new, revised, and potentially misvalued PFS services. We review these recommendations on a code-by-code basis and consider these recommendations in conjunction with analyses of other data, such as claims data, to inform the decision-making process as authorized by statute. We may also consider analyses of work time, work RVUs, or direct PE inputs using other data sources, such as Department of Veteran Affairs (VA), National Surgical Quality Improvement Program (NSQIP), the Society for Thoracic Surgeons (STS), and the Merit-based Incentive Payment System (MIPS) data. In addition to considering the most recently available data, we assess the results of physician surveys and specialty recommendations submitted to us by the RUC for our review. We also considered information provided by other interested parties such as from the general medical-related community and the public. We conducted a review to assess the appropriate RVUs in the context of contemporary medical practice. We note that section

1848(c)(2)(A)(ii) of the Act authorizes the use of extrapolation and other techniques to determine the RVUs for physicians' services for which specific data are not available and requires us to take into account the results of consultations with organizations representing physicians who provide the services. In accordance with section 1848(c) of the Act, we determine and make appropriate adjustments to the RVUs.

In its March 2006 Report to the Congress ([http://www.medpac.gov/docs/default-source/reports/Mar06\\_Ch03.pdf?sfvrsn=0](http://www.medpac.gov/docs/default-source/reports/Mar06_Ch03.pdf?sfvrsn=0)), MedPAC discussed the importance of appropriately valuing physicians' services, noting that misvalued services can distort the market for physicians' services, as well as for other health care services that physicians order, such as hospital services. In that same report, MedPAC postulated that physicians' services under the PFS can become misvalued over time. MedPAC stated, "When a new service is added to the physician fee schedule, it may be assigned a relatively high value because of the time, technical skill, and psychological stress that are often required to furnish that service. Over time, the work required for certain services would be expected to decline as physicians become more familiar with the service and more efficient in furnishing it." We believe services can also become overvalued when PE costs decline. This can happen when the costs of equipment and supplies fall, or when equipment is used more frequently than is estimated in the PE methodology, reducing its cost per use. Likewise, services can become undervalued when physician work increases or PE costs rise.

As MedPAC noted in its March 2009 Report to Congress (<http://www.medpac.gov/docs/default-source/reports/march-2009-report-to-congress-medicare-payment-policy.pdf>), in the intervening years since MedPAC made the initial recommendations, CMS and the RUC have taken several steps to improve the review process. Also, section 1848(c)(2)(K)(ii) of the Act augments our efforts by directing the Secretary to specifically examine, as determined appropriate, potentially misvalued services in the following categories:

- Codes that have experienced the fastest growth.

- Codes that have experienced substantial changes in PE.
- Codes that describe new technologies or services within an appropriate time-period (such as 3 years) after the relative values are initially established for such codes.
- Codes which are multiple codes that are frequently billed in conjunction with furnishing a single service.
- Codes with low relative values, particularly those that are often billed multiple times for a single treatment.
- Codes that have not been subject to review since implementation of the fee schedule.
- Codes that account for the majority of spending under the PFS.
- Codes for services that have experienced a substantial change in the hospital length of stay or procedure time.
- Codes for which there may be a change in the typical site of service since the code was last valued.
- Codes for which there is a significant difference in payment for the same service between different sites of service.
- Codes for which there may be anomalies in relative values within a family of codes.
- Codes for services where there may be efficiencies when a service is furnished at the same time as other services.
- Codes with high intraservice work per unit of time.
- Codes with high PE RVUs.
- Codes with high cost supplies.
- Codes as determined appropriate by the Secretary.

Section 1848(c)(2)(K)(iii) of the Act also specifies that the Secretary may use existing processes to receive recommendations on the review and appropriate adjustment of potentially misvalued services. In addition, the Secretary may conduct surveys, other data collection activities, studies, or other analyses, as the Secretary determines to be appropriate, to facilitate

the review and appropriate adjustment of potentially misvalued services. This section also authorizes the use of analytic contractors to identify and analyze potentially misvalued codes, conduct surveys or collect data, and make recommendations on the review and appropriate adjustment of potentially misvalued services. Additionally, this section provides that the Secretary may coordinate the review and adjustment of any RVU with the periodic review described in section 1848(c)(2)(B) of the Act. Section 1848(c)(2)(K)(iii)(V) of the Act specifies that the Secretary may make appropriate coding revisions (including using existing processes for consideration of coding changes) that may include consolidation of individual services into bundled codes for payment under the PFS.

## 2. Progress in Identifying and Reviewing Potentially Misvalued Codes

To fulfill our statutory mandate, we have identified and reviewed numerous potentially misvalued codes as specified in section 1848(c)(2)(K)(ii) of the Act, and we intend to continue our work examining potentially misvalued codes in these areas over the upcoming years. As part of our current process, we identify potentially misvalued codes for review, and request recommendations from the RUC and other public commenters on revised work RVUs and direct PE inputs for those codes. The RUC, through its own processes, also identifies potentially misvalued codes for review. Through our public nomination process for potentially misvalued codes established in the CY 2012 PFS final rule with comment period (76 FR 73026, 73058 through 73059), other individuals and groups submit nominations for review of potentially misvalued codes as well. Individuals and groups may submit codes for review under the potentially misvalued codes initiative to CMS in one of two ways. Nominations may be submitted to CMS via email or through postal mail. Email submissions should be sent to the CMS e-mailbox at *MedicarePhysicianFeeSchedule@cms.hhs.gov*, with the phrase “Potentially Misvalued Codes” and the referencing CPT code number(s) and/or the CPT descriptor(s) in the subject line. Physical letters for nominations should be sent via the U.S. Postal Service to the Centers for Medicare & Medicaid Services, Mail Stop: C4-01-26, 7500 Security Blvd,

Baltimore, Maryland 21244. Envelopes containing the nomination letters must be labeled “Attention: Division of Practitioner Services, Potentially Misvalued Codes.” Nominations for consideration in our next annual rule cycle should be received by our February 10th deadline. Since CY 2009, as a part of the annual potentially misvalued code review and Five-Year Review process, we have reviewed over 1,700 potentially misvalued codes to refine work RVUs and direct PE inputs. We have assigned appropriate work RVUs and direct PE inputs for these services as a result of these reviews. A more detailed discussion of the extensive prior reviews of potentially misvalued codes is included in the CY 2012 PFS final rule with comment period (76 FR 73052 through 73055). In the same CY 2012 PFS final rule with comment period, we finalized our policy to consolidate the review of physician work and PE at the same time, and established a process for the annual public nomination of potentially misvalued services.

In the CY 2013 PFS final rule with comment period (77 FR 68892, 68896 through 68897), we built upon the work we began in CY 2009 to review potentially misvalued codes that have not been reviewed since the implementation of the PFS (so-called “Harvard-valued codes”<sup>2</sup>). In the CY 2019 PFS proposed rule (73 FR 38589), we requested recommendations from the RUC to aid in our review of Harvard-valued codes that had not yet been reviewed, focusing first on high-volume, low intensity codes. In the fourth Five-Year Review of Work RVUs proposed rule (76 FR 32410, 32419), we requested recommendations from the RUC to aid in our review of Harvard-valued codes with annual utilization of greater than 30,000 services. In the CY 2013 PFS final rule with comment period, we identified specific Harvard-valued services with annual allowed charges that total at least \$10,000,000 as potentially misvalued. In addition to the Harvard-valued codes, in the CY 2013 PFS final rule with comment period we finalized for review a list of potentially misvalued codes that have stand-alone PE (codes with physician

---

<sup>2</sup> The research team and panels of experts at the Harvard School of Public Health developed the original work RVUs for most CPT codes, in a cooperative agreement with the Department of Health and Human Services (HHS). Experts from both inside and outside the Federal Government obtained input from numerous physician specialty groups. This input was incorporated into the initial PFS, which was implemented on January 1, 1992.

work and no listed work time and codes with no physician work that have listed work time). We continue each year to consider and finalize a list of potentially misvalued codes that have or will be reviewed and revised as appropriate in future rulemaking.

### 3. CY 2024 Identification and Review of Potentially Misvalued Services

In the CY 2012 PFS final rule with comment period (76 FR 73058), we finalized a process for the public to nominate potentially misvalued codes. In the CY 2015 PFS final rule with comment period (79 FR 67548, 67606 through 67608), we modified this process whereby the public and interested parties may nominate potentially misvalued codes for review by submitting the code with supporting documentation by February 10<sup>th</sup> of each year. Supporting documentation for codes nominated for the annual review of potentially misvalued codes may include the following:

- Documentation in peer reviewed medical literature or other reliable data that demonstrate changes in physician work due to one or more of the following: technique, knowledge and technology, patient population, site-of-service, length of hospital stay, and work time.
- An anomalous relationship between the code being proposed for review and other codes.
- Evidence that technology has changed physician work.
- Analysis of other data on time and effort measures, such as operating room logs or national and other representative databases.
- Evidence that incorrect assumptions were made in the previous valuation of the service, such as a misleading vignette, survey, or flawed crosswalk assumptions in a previous evaluation.
- Prices for certain high cost supplies or other direct PE inputs that are used to determine PE RVUs are inaccurate and do not reflect current information.

- Analyses of work time, work RVU, or direct PE inputs using other data sources (for example, VA, NSQIP, the STS National Database, and the MIPS data).
- National surveys of work time and intensity from professional and management societies and organizations, such as hospital associations.

We evaluate the supporting documentation submitted with the nominated codes and assess whether the nominated codes appear to be potentially misvalued codes appropriate for review under the annual process. In the following year's PFS proposed rule, we publish the list of nominated codes and indicate for each nominated code whether we agree with its inclusion as a potentially misvalued code. The public has the opportunity to comment on these and all other proposed potentially misvalued codes. In each year's final rule, we finalize our list of potentially misvalued codes.

#### a. Public Nominations

In each proposed rule, we seek nominations from the public and from interested parties of codes that they believe we should consider as potentially misvalued. We receive public nominations for potentially misvalued codes by February 10<sup>th</sup> and we display these nominations on our public website, where we include the submitter's name and their associated organization for full transparency. We sometimes receive submissions for specific, PE-related inputs for codes, and discuss these PE-related submissions, as necessary under the Determination of PE RVUs section of the rule. We summarize below this year's submissions under the potentially misvalued code initiative. For CY 2024, we received 10 nominations concerning various codes. The nominations are as follows:

##### *1) CPT code 59200*

In the CY 2022 PFS proposed rule, an interested party nominated CPT code 59200 (*Insertion cervical dilator (e.g., laminaria, prostaglandin)*) (000 zero day global code) as potentially misvalued, because the direct PE inputs for this code do not include the supply item, Dilapan-S. Previous parties had initially sought to establish a Level II HCPCS code for Dilapan-

S, but CMS did not find sufficient evidence to support that request. The same interested party then submitted Dilapan-S to be considered as a practice expense (PE) supply input to a Level I CPT code 59200 (86 FR 65045). This year, a different interested party nominated CPT code 59200 again, and provided the same reasoning as to why this code is potentially misvalued.

Specifically, the current nominee recommended adding 4 rods of Dilapan-S at \$80.00 per unit, for a total of \$320.00 to this one PE supply inputs, as a replacement for the current PE supply item - laminaria tent (a small rod of dehydrated seaweed that rehydrates, absorbing the water from the surrounding tissue). The laminaria tent is currently listed at \$4.0683 per unit, with a total of 3 units, for a total of \$12.20. The current nominee stated that Dilapan-S is more consistent and reliable, and suggested that it had higher patient satisfaction than the laminaria tent, and that it was less likely to cause leukocytosis. CPT code 59200 is a relatively low volume code, with respect to Medicare claims and, as the nominator stated, this service is more typically billed for the Medicaid population, as evidenced by 1.3 million Medicaid claims for this service. Medicaid programs are able to set their own payment policies, which can be different from Medicare payment policies. The current Medicare payment for CPT code 59200 in CY 2023 is about \$108.10 in the nonfacility/office setting, which is much less than the typical cost of the Dilapan-S supplies requested by the interested party. The requested 4 rods of Dilapan-S would increase the supply costs of CPT code 59200 by a factor of five and represent an enormous increase in the direct costs for the service.

We did not agree that CPT code 59200 was potentially misvalued, and we did not agree with interested parties that the use of the Dilapan-S supply would be typical for the service. By including the increased direct costs of the service (\$320.00, the typical cost of four units of this supply item, Dilapan-S) in the valuation for this code, the cost of this service would expand both Medicare spending and cost sharing for any beneficiary who received this service. The cost of Dilapan-S is over 19 times higher than the cost of the current supply item (laminaria tent) for CPT code 59200. We agreed with the nominator that CPT code 59200 was more frequently

reported in the Medicaid population, and therefore, we suggested that interested parties submit a request for new and separate Medicaid payments to Medicaid.

While we did not propose to consider CPT code 59200 as potentially misvalued for CY 2024, we solicited comments on this code. Specifically, we asked commenters whether the absence of supply item Dilapan-S makes the nonfacility/office Medicare payment for this code potentially misvalued.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Several commenters suggested replacing the laminaria tent supply item with Dilapan-S, both of which are used to dilate the cervix in preparation for the induction of labor. Commenters stated that the code and supply input pricing for CPT code 59200 are both outdated since the service has evolved and the prices for its PE and supply items have increased since the code was last reviewed in 2003. One commenter noted that the use of the laminaria tent instead of Dilapan-S is not typical of, and does not reflect the standard of care for, term induction of labor; and that there are now many methods of cervical dilation, including pharmacological, mechanical, and surgical.

Also, commenters noted that CPT code 59200 only describes the insertion of the cervical dilator using the laminaria and/or prostaglandins and it does not describe the insertion of the cervical dilator with other practice expense supply items. As a result, commenters suggested CPT code 59200 should be reviewed.

*Response:* We thank commenters for pointing out that CPT code 59200 is a specific procedure for cervical dilation and that other methods of cervical dilation (pharmacological, mechanical, and surgical) have come into practice that are not described by CPT code 59200. We also appreciate commenters' pointing out that the current market price of the laminaria tent has increased since the supply item price was established in 2003. Lastly, we acknowledge commenters' suggestion regarding the replacement of the supply item laminaria tent with

Dilapan-S.

*Comment:* A number of commenters stated that CPT code 59200 performed in the office or in the outpatient setting is more efficient in many ways (including in overall costs) and helps in inducing labor, which in turn, helps promote vaginal births rather than concluding as Cesarean sections when there is not enough dilation. The commenters noted that in comparison, vaginal births obviously shorten hospital stays and patient recoveries and improve patient satisfaction in the birthing method.

Commenters noted that alternate cervical dilation such as prostaglandins medication must be administered as inpatient, and mechanical dilation is performed in an outpatient setting, but CPT code 59200 can typically be performed in the office, which is more desirable. Physicians have noted that patient populations today tend to have higher incidences of obesity, hypertension, diabetes, and advancing maternal age complications and to ensure healthy births and maintain the highest standards of care, the induction of labor is necessary, which begins with CPT code 59200, cervical dilation. One commenter adds that the use of laminaria instead of Dilapan-S is not the standard of care for term induction of labor.

*Response:* After reviewing the comments concerning CPT code 59200, we are mainly concerned with whether the code currently represents how the medical procedure is performed today. We agree with commenters that CPT code 59200 is a potentially misvalued service since the code has not been reviewed in 20 years and the current typical practice of this code has likely evolved since then, warranting a comprehensive review. As such, we believe that CPT code 59200 could benefit from a review of its supply, equipment, and clinical labor items, plus physician work RVUs and physician work times. Therefore, based on the information provided by commenters regarding the outdated nature of the code and supply input pricing, we are finalizing CPT code 59200 as potentially misvalued for CY 2024.

2) *CPT code 27279*

CPT code 27279 (*Arthrodesis, sacroiliac joint, percutaneous or minimally invasive (indirect visualization), with image guidance, includes obtaining bone graft when performed, and placement of transfixing device*) (090 day global code) was nominated as potentially misvalued due to the absence of separate direct PE inputs for this 090 day global code in the nonfacility office setting. Currently, the PFS only prices CPT code 27279 in the facility setting, at about \$826.85 for the physician's professional services, but the nominators were seeking separate direct PE inputs for this service to better account for valuation when performed in the nonfacility/office setting.

The nominator claimed that CPT code 27279 could be safely and effectively furnished in the nonfacility setting and that this procedure has a low-risk profile, similar to kyphoplasty (CPT codes 22513, 22514, and 22515), which is currently furnished in the nonfacility setting. The nominator described Kyphoplasty as "a percutaneous minimally invasive procedure depositing poly methyl methacrylate via a cannula into vertebral bodies near neural structures." The nominator stated that permitting payment for direct PE inputs for CPT code 27279 in the nonfacility/office setting would increase access to this service for Medicare patients. The nominator also submitted one sample invoice for \$17,985.00 with three units of the itemized supply item IFuse-3D Implant 7.0 mm x 55mm, US (\$5,995.00 per unit) to illustrate the high direct PE costs for CPT code 27279, should CMS value this code in the nonfacility/office setting.

We expressed concern about whether this 090-day surgical service could be safely and effectively furnished in the non-facility/office setting (for example, in an office-based surgical suite). We welcomed comments on the nomination of CPT code 27279 for consideration as potentially misvalued.

The following is a summary of the comments we received and our responses.

*Comment:* Several commenters supported establishing a nonfacility/office payment for CPT code 27279. Commenters stated that while the procedure is currently performed in ASCs, it can be equally effective, with minimal risk, when done in an office setting. Commenters also

stated that the fact that the service is assigned a 090-day global period does not imply that the code should only be performed in an inpatient setting nor that the service carries a heightened level of risk, since CPT code 27279 is minimally invasive. Additionally, to support their recommendation to create a nonfacility/office payment for CPT code 27279, the commenters cited the dorsal arthrodesis procedure (Dorsal Sacroiliac Joint Arthrodesis CPT code 27278 (2X000)) for comparison since it also has a 090 global period and a nonfacility-office payment.

*Response:* We appreciate the comments in support of establishing a nonfacility/office payment for CPT code 27279.

*Comment:* Several commenters opposed creating a nonfacility/office payment for CPT code 27279 due to patient safety concerns when performed in the office setting. Also, some commenters noted that while the kyphoplasty codes (CPT codes 22513, 22514, 22515) are often cited as an example of codes supporting nonfacility/office payments similar to CPT code 27279, those codes have 010 day global periods and do not have the same level of risk as CPT code 27279. Commenters supported this point by stating that CPT code 27279 is not necessarily minimally invasive because it requires the incision and collection of bone as well as the placement of titanium implants across the sacroiliac joint.

*Response:* We appreciate the comments opposing the establishment of a nonfacility/office payment for CPT code 27279.

We thank the commenters for the multiple perspectives regarding nonfacility/office payment for these services. We note that there does not appear to be a consensus on whether these services may be safely and effectively furnished in the nonfacility/office setting, which is a primary concern in our policy consideration. Therefore, for CY 2024, we are not finalizing CPT code 27279 as potentially misvalued.

However, after reviewing the public comments, we note a growing number of potentially misvalued code nominations requesting that we establish nonfacility payment rates where there currently are none. We acknowledge that the practice of medicine continues to evolve in ways

that, in clinically appropriate and effective circumstances, there may be support for a transition of complex procedures into ambulatory settings. We also acknowledge that PE inputs for such services should be appropriately determined and established to appropriately reflect typical clinical practice. We believe services such as those described by the nominator would benefit from review by other interested parties, such as the AMA RUC and private payors, even as we consider our policies for such services.

We look forward to considering valuation recommendations for such services and additional information that may inform our payment policy considerations in future rulemaking.

### 3) CPT codes 99221, 99222, and 99223

An interested party nominated the Hospital Inpatient and Observation Care visit CPT codes 99221 (*Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A detailed or comprehensive history; A detailed or comprehensive examination; and Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of low severity. Typically, 30 minutes are spent at the bedside and on the patient's hospital floor or unit.*), 99222 (*Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of moderate severity. Typically, 50 minutes are spent at the bedside and on the patient's hospital floor or unit.*), and 99223 (*Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high*

*complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of high severity. Typically, 70 minutes are spent at the bedside and on the patient's hospital floor or unit.)* as potentially misvalued. We note that CMS reviewed these codes in the CY 2023 final rule (87 FR 69588) and established new physician work times and new work RVU payments for these services. The nominator disagreed with these values and asserted that these "facility-based codes are always inherently (or proportionately) more intense than E/M services provided in other settings [in particular]," with patients presenting with potentially infectious diseases, such as meningitis; pneumonia; tuberculosis; HIV/AIDS; Ebola virus; Zika virus; and, most recently, SARS-CoV-2 and mpox, and that the inpatient setting has a predominance of more seriously ill patients, who are sometimes immunocompromised and/or have multiple drug interaction issues and/or with comorbidities, making them extraordinarily more complex than those patients typically found in the office setting (with many of these infections being healthcare-associated infections and antibiotic-resistant bacterial infections). We note that these new requests did not offer appreciably new information relative to last year's nomination/consideration.

The nominator sought a new work RVU value of 1.92 for CPT code 99221, a new work RVU of 2.79 for CPT code 99222, and a new work RVU value of 4.25 for CPT code 99223. Currently, CPT code 99221 has a work RVU of 1.63, a reduction of 15.1 percent from its 1.92 work RVU from CY 2022. CPT code 99222 had a work RVU of 2.61 in CY 2022 and is now at 2.60. CPT code 99223 had a work RVU of 3.86 in CY 2022. It now has a value of 3.50, which is a reduction of 9.3 percent. The nominator requested that the work RVU for CPT code 99221 be restored back to 1.92, that the work RVU of CPT code 99222 be increased to 2.79, and that the work RVU of CPT code 99223 be increased to 4.25 (please see Table 8 for a comparison of work RVU values for CY 2022, CY 2023, and of those requested by the nominator).

**TABLE 8: A Comparison of Work RVU values for CY 2022, CY 2023, and Those Requested by the Nominator**

<b>CPT Code</b>	<b>CY 2022 Work RVU</b>	<b>CY 2023 Work RVU</b>	<b>Requested Work RVU</b>
99221 - 1st hosp ip/obs sf/low 40	1.92	1.63	1.92
99222 - 1st hosp ip/obs moderate 55	2.61	2.60	2.79
99223 - 1st hosp ip/obs high 75v	3.86	3.50	4.25

After consideration of these nominations and their requests for higher work RVUs for CPT codes 99221, 99222, and 99223, we proposed to maintain the values that we finalized for these codes in the CY 2023 PFS final rule (87 FR 69588). Even so, we welcomed comments on the nomination of these codes as potentially misvalued.

The following is a summary of the comments we received and our responses.

*Comment:* Many commenters stated that CMS should not have accepted the CY 2023 AMA RUC-recommended RVU values for CPT codes 99221, 99222, and 99223 because they resulted in payment decreases for all three services (partially due to a decrease in survey times), due to significant flaws with the AMA RUC evaluation process. Several commenters suggested that the work RVUs for CPT codes 99221, 99222, and 99223 be restored to their original values from before CY 2023 or be increased to mimic the increases that the E/M family of codes has experienced in recent years.

Response: We thank commenters for their feedback.

After consideration of public comments, we do not believe CPT codes 99221, 99222, and 99223 are potentially misvalued since they were recently valued in the CY 2023 final rule (87 FR 69588). In that regulation, we accepted the AMA RUC recommendations. We believe that the AMA RUC recommendations are still appropriate and best reflect the work intensity and time involved in furnishing these services. Therefore, for CY 2024, we are not finalizing CPT codes 99221, 99222, and 99223 as potentially misvalued.

4) *CPT codes 36514, 36516, 36522*

An interested party nominated CPT codes 36514 (*Therapeutic apheresis; for plasma pheresis*), 36516 (*Therapeutic apheresis; with extracorporeal immunoadsorption, selective*

*adsorption or selective filtration and plasma reinfusion*), and 36522 (*Photopheresis, extracorporeal*) (all 000 day global codes) as potentially misvalued. The interested party stated that the direct PE of clinical labor L042A, “RN/LPN” (for labor rate of \$0.525 per minute), was incorrect and should be changed to a more specific entry of “a therapeutic apheresis nurse specialist (RN)” (for a labor rate of about \$1.06 to \$1.14 per minute), which would approximately double all three of these codes’ clinical labor PE entries. In addition, the nominator disagreed with the current direct PE of supply item SC085, “Tubing set, plasma exchange” at \$186.12 per item, and believed that this would be worth \$248.77 per item with CPT code 36514, using a quantity of one item. The nominator believed that supply item SC084, “Tubing set, blood warmer,” which we currently have listed at \$8.01 per item, should be worth \$14.71 per item with CPT code 36514, also using a quantity of one item. The nominator submitted sample invoices (not actual invoices) for illustration and support. We welcomed comments on whether these codes were potentially misvalued.

The following is a summary of the comments we received and our responses.

*Comment:* Several commenters were in favor of establishing a specific new Therapeutic Apheresis Nurse Specialist labor category for CPT codes 36514, 36516, and 36522 because they did not believe the current RN/LPN labor code accurately captured their nurses' specialized skills, experience, work, and time. Commenters pointed out that recruiting and retaining nursing personnel has been challenging, and when competing for an experienced specialized apheresis nurse, salary demands are higher to attract and keep them. The nominator also mentioned that a typical apheresis nurse tends to have an extensive clinical background and specialized therapeutic apheresis experience. Additionally, commenters noted that these nurses spend significant time with patients during apheresis procedures, often not leaving the patient's bedside during the long procedure. Commenters noted that these nurses are trained to set up specialized equipment, work with hospital blood banks to acquire blood products, work with pharmacies for required medications, and consult with medical and nursing staff.

*Response:* We thank commenters for their detailed description of the typical duties of an apheresis nurse and how they might differ from a general RN/LPN nurse.

*Comment:* Several commenters opposed the nomination of CPT codes 36514, 36516, 36522 as potentially misvalued and advised us to review the results of the forthcoming AMA PPIS survey before making any changes. One commenter added that there might be a clinical labor type gap that CMS could resolve.

*Response:* We thank commenters for their feedback and for acknowledging the forthcoming AMA PPIS survey.

After considering the public comments, we believe there may be a possible disparity with the clinical labor type for this service and that these codes would benefit from additional review in future rulemaking. We believe that it is likely that a general RN/LPN labor category is not adequately equivalent to an Apheresis Nurse Specialist and while there is currently no Apheresis Nurse category listed in the PFS, there may be existing nurse categories that can act as a substitute, such as an oncology nurse. Therefore, for CY 2024, we are finalizing CPT codes 36514, 36516, and 36522 as potentially misvalued.

#### 5) CPT codes 44205 and 44204

An interested party nominated CPT code 44205 (*Laparoscopy, surgical; colectomy, partial, with removal of terminal ileum with ileocolostomy*), as potentially misvalued, requesting that payment for this code be made equivalent to the higher payment for CPT code 44204 (*Laparoscopy, surgical; colectomy, partial, with anastomosis*). Both codes are 090 day global codes, currently valued only in the facility setting. CPT code 44204 has a total RVU of 45.62 for CY 2023, and CPT code 44205 has a total RVU of 39.62 for CY 2023, with a difference of 6.00 RVUs. CPT code 44204 is associated with 5 to 6 percent more physician work time: 455.0 minutes in total, compared to 428.5 minutes for CPT code 44205. The work RVU for CPT code 44204 is also 15 percent higher than the work RVU for CPT code 44205. The direct PE entries

for both codes are the same regarding supplies, equipment, and clinical labor, except that in the clinical labor and equipment entries, the number of usage minutes is higher for CPT code 44204.

Though these two codes appear to be similar, they are still different in their purpose, physician work times, and direct PE, with CPT code 44204 involving more time and resources (and having a higher payment, accordingly). For these reasons, we disagreed with the assertion that CPT code 44205 is potentially misvalued when compared to CPT code 44204, and we disagree to modify this payment differential by paying more for CPT code 44205. We solicited feedback regarding the nomination of CPT code 44205 as potentially misvalued.

We did not receive public comments on this provision, and therefore, we are finalizing our proposal not to nominate this service as potentially misvalued.

#### 6) CPT codes 93655 and 93657

An interested party nominated CPT codes 93655 (*Intracardiac catheter ablation of a discrete mechanism of arrhythmia which is distinct from the primary ablated mechanism, including repeat diagnostic maneuvers, to treat a spontaneous or induced arrhythmia (List separately in addition to code for primary procedure)*) and 93657 (*Additional linear or focal intracardiac catheter ablation of the left or right atrium for treatment of atrial fibrillation remaining after completion of pulmonary vein isolation (List separately in addition to code for primary procedure)*), as potentially misvalued. We recently reviewed these add-on codes in the CY 2022 (86 FR 65108) and CY 2023 (87 FR 69516) final rules.

The nominator reiterated that the primary procedures involve “high intensity clinical decision making, complexity in the intraoperative skills required for treatment, morbidity/mortality risks to the patient, and work intensity” and that the work RVUs for both of these add-on codes should reflect the AMA RUC recommended work RVU of 7.00. We disagreed with this value in CY 2022 and continued to believe that a work RVU of 5.50 was appropriate for the 60 minutes of physician service time for both codes. We saw no reason to reconsider our valuation of CPT codes 93655 and 93657 for CY 2022 or CY 2023, and we do

not consider these codes to be potentially misvalued now and did not propose to nominate these codes as potentially misvalued for CY 2024.

*Comment:* We received very few comments addressing these two cardiac ablation add-on codes, which were finalized in CY 2023. The commenters urged CMS to accept the AMA RUC's recommendation for CPT codes 93655 and 93657 of 7.00 work RVUs.

*Response:* We believe the code valuations we established in CY 2023 are accurate and that these codes are not potentially misvalued; however, we will continue to monitor this issue and the Medicare claims data for these codes in the coming years.

We continue to believe that the current code valuations are accurate and most appropriate for these services. Therefore, for CY 2024, we are not finalizing these codes as potentially misvalued.

#### 7) CPT code 94762 and 95800

An interested party nominated CPT code 94762 (*Noninvasive ear or pulse oximetry for oxygen saturation; by continuous overnight monitoring (separate procedure)*), a PE-only code as potentially misvalued. The nominator noted that the technology behind this code had changed considerably over the last 14 years, and because the PE inputs were last reviewed in 2009, the PE items included in the service no longer reflected current practice. In their submission, the nominator listed equipment items for CPT code 94762, including EQ212 “pulse oxymetry recording software (prolonged monitoring)” and EQ353 “Pulse oximeter 920 M Plus,” which the nominator asserted are now typically found in a one-time use supply item: SD263 “WatchPAT pneumo-opt slp probes” (extended external overnight pulse oximeter device probe and battery with bluetooth, medical magnetic tape recorder) (WatchPAT One Device) with a cost of \$99.00 each (derived from two sample invoices, not actual invoices, included with the nomination). According to our PE supply list, item SD263 costs \$73.32, which is \$25.68 less than the amounts found in the sample invoices submitted by the nominators. The nominator retained equipment

item EQ212 “pulse oxymetry recording software (prolonged monitoring)”, and replaced equipment item EQ353 with ED021, a “computer, desktop, w-monitor.

The same interested party who nominated CPT code 94762, also nominated CPT code 95800 (*Sleep study, unattended, simultaneous recording; heart rate, oxygen saturation, respiratory analysis (e.g., by airflow or peripheral arterial tone), and sleep time*) as potentially misvalued. The nominator requested that CMS update PE items for this code, asserting that the PE inputs were last reviewed in 2017. CPT code 95800 currently includes the entry of a one-time use supply item, SD263 “WatchPAT pneumo-opt slp probes” (extended external overnight pulse oximeter device probe and battery with bluetooth, medical magnetic tape recorder) (WatchPAT One Device), which costs \$73.32 per item, in contrast to the pricing in the sample invoice - \$99.00 each (case of 12 x \$99.00 = \$1,188.00).

The nominator excluded the current equipment for this code (EQ335 “WatchPAT 200 Unit with strap, cables, charger, booklet and patient video” and EQ336 “Oximetry and Airflow Device”) and instead included ED021 (“computer, desktop, w-monitor”) in the PE for this code. We noted that we did not previously include ED021 as a specialized equipment item dedicated to this function (and EQ212 “pulse oxymetry recording software (prolonged monitoring)” was also not included in the PE for CPT code 95800, as it was with CPT code 94762). The nominator included the PE listings for CPT code 93245 (*Heart rhythm recording, analysis, interpretation and report of continuous external EKG over more than 1 week up to 1 weeks*) as an example of how PE supply items for CPT code 95800 should be structured, but this code included supply item, SD339 “extended external ECG patch, medical magnetic tape recorder” and equipment item ED021 “computer, desktop, w-monitor,” which is presumed to be used to record the data from the ECG patch and to be used to analyze the data.

There is no clear evidence whether the WatchPAT One Device needs or does not need the specific monitoring and recording system (equipment item EQ212 “pulse oxymetry recording software (prolonged monitoring)”) for CPT code 95800, as opposed to any other system/process.

The interested party requested the PE changes discussed above to support their argument that these CPT codes are potentially misvalued (see Table 9).

**TABLE 9: Listing of Nominator’s Practice Expense Items for Addition or Deletion to CPT codes 94762 and 95800**

CPT code	Current Equipment Code	Equipment Description	Non-Facility/ Office Equipment PE Cost	Equipment Status	Current Supply Code	Supply Description	Non-Facility/ Office Supply PE Cost	Supply Status
94762	EQ212	pulse oxymetry recording software (prolonged monitoring) (480 min)	\$0.7360	Retain				
94762	EQ353	Pulse oximeter 920 M Plus (480 min)	\$7.1155	Delete	SD263	WatchPAT pneumo-opt slp probes" (extended external overnight pulse oximeter device probe and battery with bluetooth, medical magnetic tape recorder) (WatchPAT One Device)	\$73.32 Or \$99.00	Add
95800	EQ335	WatchPAT 200 Unit with strap, cables, charger, booklet, and patient video	\$4.7071	Delete				
95800	EQ336	Oximetry and Airflow Device	\$4.5454	Delete				
95800	ED021	computer, desktop, w-monitor (assume 480 min)	\$2.5339	Add	SD263	WatchPAT pneumo-opt slp probes" (extended external overnight pulse oximeter device probe and battery with bluetooth, medical magnetic tape recorder) (WatchPAT One Device)	\$73.32 Or \$99.00	Retain

We welcomed comments as to whether these codes are potentially misvalued.

The following is a summary of the comments we received and our responses.

*Comment:* One commenter disagreed with the replacement of various PE items with alternative items. For example, for CPT code 94762, the existing pulse oximeter 920 M Plus (CMS equipment item EQ353) would be replaced with the disposable WatchPAT One supply

item (SD263). The commenter expressed concern about removing the pulse oximetry devices from CPT code 94762 and whether the WatchPAT One supply item properly assessed and monitored a patient's sleep, as described by the code.

*Response:* We thank commenters for their feedback. There seems to be a general misunderstanding from the original nomination regarding which PE items should be replaced or retained and which items are considered duplicated, according to the public comments received.

We cannot properly assess if CPT codes 94762 and 95800 are potentially misvalued based on the evidence submitted with the original nomination and subsequent public comments we received in response to the CY 2024 PFS proposed rule. After considering the public comments, it is still unclear whether CPT codes 94762 and 95800 are potentially misvalued. We invite the original nominator or other parties to resubmit their nomination with information providing additional clarity for further consideration in future rulemaking. Therefore, for CY 2024, we are not finalizing CPT codes 94762 and 95800 as potentially misvalued.

8) *CPT codes 0596T and 0597T*

An interested party nominated CPT codes 0596T (*Initial insertion of temporary valve-pump in female urethra*) and 0597T (*Replacement of temporary valve-pump in female urethra*) as potentially misvalued. This nominator generally expressed concern about variability in MAC pricing for the contractor-priced service and requested that CMS establish national pricing to stabilize payments that more accurately reflected the work, professional liability costs, and especially the nonfacility PE for these services, including the costs associated with the Vesiflo inFlow System, the primary supply included in the procedures described by the two Category III CPT codes. The nominator stated that the MAC-determined payment amounts had been inappropriately low and did not account for the time and the work involved in furnishing the services or all of the PE. In their submission, the nominator discussed their expected inputs for both codes. For CPT code 0596T, the nominator asserted that a physician would typically spend 60 minutes of work inserting the Vesiflo inFlow System. The nominator also discussed the PE

items used to furnish the procedure. These specified PE items included a power table, a mayo stand, an examination light, clinical labor time of a RN/LPN/MTA totaling to 73 minutes, and a list of supplies summing to \$1,902.76, primarily from the inFlow Measuring Device of \$140.00, the inflow Device of \$495.00, and the inflow Activator Kit of \$1,250.00, with the inflow supply items making up about 99 percent of the total cost of supplies.

For CPT code 0597T, the nominator asserted that a physician would typically spend 25 minutes replacing the Vesiflo inFlow System. The specified PE items for this service included a power table, a mayo stand, an examination light, clinical labor time of a RN/LPN/MTA totaling 38 minutes, and a list of supplies summing to \$505.30, primarily from the inflow device of \$495.00, with the inflow supply items making up about 98 percent of the total cost of supplies. A sample invoice was included in this nomination (as opposed to an actual invoice).

We welcomed comments on whether these two temporary category III CPT codes, CPT codes 0596T and 0597T, were potentially misvalued and whether these codes should remain contractor-priced.

The following is a summary of the comments we received and our responses.

*Comment:* We received several comments supporting our proposal to nominate CPT codes 0596T and 0597T as potentially misvalued. These commenters recommended that we establish national pricing for these services, stating that a change to national pricing would address the misvaluation and pricing variability for the service and allow for the appropriate inclusion of the Vesiflo system in the code's PE.

*Response:* We note that CPT codes 0596T and 0597T are category III codes and describe relatively new and low-volume services. Generally, category III codes are contractor-priced under the PFS, meaning that each MAC can establish pricing for the code for areas within its jurisdiction. We appreciate the nominators' and commenters' concerns about variability in payment across the different MAC jurisdictions.

After consideration of public comments, we are not finalizing CPT codes 0596T and 0597T as potentially misvalued. These are contractor-priced codes and they will remain contractor priced for the present. However, we encourage interested parties to continue to engage with the MACs and provide accurate and appropriate cost data to inform the MAC's consideration and pricing of these services.

9) *CPT code 93000*

An interested party nominated CPT code 93000 (*Electrocardiogram, routine ECG with at least 12 leads; with interpretation and report*) as potentially misvalued, arguing that we should increase Medicare payment for CPT code 93000 to \$35.64 when used in conjunction with other supplies and services, to reflect PE costs equivalent to (1) \$6.10 for EKG leads; (2) \$21.19 for a nurse visit of typically 5 minutes (as illustrated by CPT code 99211 (*Office or other outpatient visit for the evaluation and management of an established patient, that may not require the presence of a physician or other qualified health care professional. Usually, the presenting problem(s) are minimal. Typically, 5 minutes are spent performing or supervising these services.*)); and (3) \$7.64 for the interpretation and report for the EKG service (as illustrated by CPT code 93010 (*Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only*)). While the interested party did not provide invoices or other evidence for consideration, they asked that we value the grouping of these services at \$35.64, even though the direct costs for these identified PE inputs total to \$34.93.

After consideration of submitted information, we decided not to propose to nominate CPT code 93000 as potentially misvalued for CY 2024. We did not believe that the total of a mix of services is a persuasive indication that one code - in this case, CPT code 93000 - was potentially misvalued.

We did not receive public comments on this nomination. Therefore, for CY 2024, we are not finalizing CPT codes code 93000 as potentially misvalued.

10) *19 therapy codes*

An interested party nominated 19 therapy codes as potentially misvalued. We noted in the proposed rule that these 19 therapy codes were last reviewed by CMS in the CY 2018 PFS final rule (82 FR 53073 through 53074). The nominators asserted that the direct PE clinical labor minutes, as recommended by the AMA Relative Value Scale Update Committee (RUC) and Healthcare Professional Advisory Committee (HCPAC) Review Board, reflected inappropriate multiple procedure payment reductions (MPPR), which are likely duplicative of the CMS MPPR policy implemented in CMS' claims processing systems.

As discussed in the proposed rule, we reviewed the clinical labor time entries for these 19 therapy codes. We noted that we did not believe a payment reduction should have been applied to the 19 nominated therapy codes' clinical labor time entries (Table 10) since the payment valuation reduction would be duplicative of the MPPR we apply during claims processing. We proposed to nominate these 19 codes as potentially misvalued for CY 2024, as we believed that the valuation of these services would benefit from additional review through the AMA RUC HCPAC valuation process. We also sought comment on our proposal. The following is a summary of the comments we received and our responses.

*Comment:* Numerous commenters supported our proposal to nominate these 19 therapy codes as potentially misvalued. There were no comments asserting that these codes should not be considered potentially misvalued.

*Response:* After consideration of the public comments for this issue, we are finalizing our proposal to consider the 19 therapy codes as potentially misvalued for CY 2024.

**TABLE 10: 19 “Always Therapy” Service Codes Nominated as Potentially Misvalued for CY 2024**

<b>HCPCS 2023</b>	<b>LONG DESCRIPTION</b>	<b>CY 2023 STATUS CODE</b>
97012	Application of mechanical traction	A
97014	Application of electrical stimulation	I
97016	Application of blood vessel compression device	A
97018	Application of hot wax bath	A
97022	Application of whirlpool therapy	A
97032	Application of electrical stimulation with therapist present, each 15 minutes	A
97033	Application of medication using electrical current, each 15 minutes	A
97034	Application of hot and cold baths, each 15 minutes	A
97035	Application of ultrasound, each 15 minutes	A
97110	Therapy procedure using exercise to develop strength, endurance, range of motion, and flexibility, each 15 minutes	A
97112	Therapy procedure to re-educate brain-to-nerve-to-muscle function, each 15 minutes	A
97113	Therapy procedure using water pool to exercises, each 15 minutes	A
97116	Therapy procedure for walking training, each 15 minutes	A
97140	Therapy procedure using manual technique, each 15 minutes	A
97530	Therapy procedure using functional activities	A
97533	Therapy procedure using sensory experiences	A
97535	Training for self-care or home management, each 15 minutes	A
97537	Training for community or work reintegration, each 15 minutes	A
97542	Evaluation for wheelchair, each 15 minutes	A
G0283	Electrical stimulation (unattended), to one or more areas for indication(s) other than wound care, as part of a therapy plan of care	A

Note: Status code A = Active code – separately paid under the PFS. Status code I = Invalid code – not valid for Medicare purposes.

#### D. Payment for Medicare Telehealth Services Under Section 1834(m) of the Act

As discussed in prior rulemaking, several conditions must be met for Medicare to make payment for telehealth services under the PFS. See further details and full discussion of the scope of Medicare telehealth services in the CY 2018 PFS final rule (82 FR 53006) and CY 2021 PFS final rule (85 FR 84502) and in 42 CFR 410.78 and 414.65.

##### 1. Payment for Medicare Telehealth Services Under Section 1834(m) of the Act

###### a. Changes to the Medicare Telehealth Services List

In the CY 2003 PFS final rule with comment period (67 FR 79988), we established a regulatory process for adding services to or deleting services from the Medicare Telehealth Services List in accordance with section 1834(m)(4)(F)(ii) of the Act (42 CFR 410.78(f)). This process provides the public with an ongoing opportunity to submit requests for adding services, which are then reviewed by us and assigned to categories established through notice and comment rulemaking. Specifically, we assign any submitted request to add to the Medicare Telehealth Services List to one of the following two categories:

- Category 1: Services that are similar to professional consultations, office visits, and office psychiatry services that are currently on the Medicare Telehealth Services List. In reviewing these requests, we look for similarities between the requested and existing telehealth services for the roles of, and interactions among, the beneficiary, the physician (or other practitioner) at the distant site, and, if necessary, the telepresenter, a practitioner who is present with the beneficiary in the originating site. We also look for similarities in the telecommunications system used to deliver the service; for example, the use of interactive audio and video equipment.
- Category 2: Services that are not similar to those on the current Medicare Telehealth Services List. Our review of these requests includes an assessment of whether the service is accurately described by the corresponding code when furnished via telehealth and whether the use of a telecommunications system to furnish the service produces demonstrated clinical benefit

to the patient. Submitted evidence should include both a description of relevant clinical studies that demonstrate the service furnished by telehealth to a Medicare beneficiary improves the diagnosis or treatment of an illness or injury or improves the functioning of a malformed body part, including dates and findings, and a list and copies of published peer reviewed articles relevant to the service when furnished via telehealth. Our evidentiary standard of clinical benefit does not include minor or incidental benefits. Some examples of other clinical benefits that we consider include the following:

- Ability to diagnose a medical condition in a patient population without access to clinically appropriate in-person diagnostic services.
- Treatment option for a patient population without access to clinically appropriate in-person treatment options.
- Reduced rate of complications.
- Decreased rate of subsequent diagnostic or therapeutic interventions (for example, due to reduced rate of recurrence of the disease process).
- Decreased number of future hospitalizations or physician visits.
- More rapid beneficial resolution of the disease process treatment.
- Decreased pain, bleeding, or other quantifiable signs or symptoms.
- Reduced recovery time.
- Category 3: In the CY 2021 PFS final rule (85 FR 84507), we created a third category of criteria for adding services to the Medicare Telehealth Services List on a temporary basis following the end of the public health emergency (PHE) for the COVID-19 pandemic. This new category describes services that were added to the Medicare Telehealth Services List during the PHE, for which there is likely to be clinical benefit when furnished via telehealth, but there is not yet sufficient evidence available to consider the services for permanent addition under the Category 1 or Category 2 criteria. Services added on a temporary, Category 3 basis will ultimately need to meet the criteria under Category 1 or 2 in order to be permanently added to the

Medicare Telehealth Services List. To add specific services on a Category 3 basis, we conducted a clinical assessment to identify those services for which we could foresee a reasonable potential likelihood of clinical benefit when furnished via telehealth. We considered the following factors:

++ Whether, outside of the circumstances of the PHE for COVID-19, there are concerns for patient safety if the service is furnished as a telehealth service.

++ Whether, outside of the circumstances of the PHE for COVID-19, there are concerns about whether the provision of the service via telehealth is likely to jeopardize quality of care.

++ Whether all elements of the service could fully and effectively be performed by a remotely located clinician using two-way, audio/video telecommunications technology.

In the CY 2021 PFS final rule (85 FR 84507), we also temporarily added several services to the Medicare Telehealth Services List using the Category 3 criteria described previously. In this rule, we considered additional requests to add services to the Medicare Telehealth Services List on a Category 3 basis using the previously described Category 3 criteria.

The Medicare Telehealth Services List, including the additions described later in this section, is available on the CMS website at <https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/index.html>.

Beginning in CY 2019, we stated that for CY 2019 and onward, we intend to accept requests through February 10, consistent with the deadline for our receipt of code valuation recommendations from the RUC (83 FR 59491). For CY 2024, requests to add services to the Medicare Telehealth Services List must have been submitted and received by February 10, 2023. Each request to add a service to the Medicare Telehealth Services List must have included any supporting documentation the requester wishes us to consider as we review the request. Because we use the annual PFS rulemaking process as the vehicle to make changes to the Medicare Telehealth Services List, requesters are advised that any information submitted as part of a request is subject to public disclosure for this purpose. For more information on submitting a request in the future to add services to the Medicare Telehealth Services List, including where to

mail these requests, see our website at <https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/index.html>.

b. Requests to Add Services to the Medicare Telehealth Services List for CY 2024

Under our current policy, we add services to the Medicare Telehealth Services List on a Category 1 basis when we determine that they are similar to services on the existing Medicare Telehealth Services List for the roles of, and interactions among, the beneficiary, physician (or other practitioner) at the distant site, and, if necessary, the telepresenter. As we stated in the CY 2012 PFS final rule with comment period (76 FR 73098), we believe that the Category 1 criteria not only streamline our review process for publicly requested services that fall into this category, but also expedite our ability to identify codes for the Medicare Telehealth Services List that resemble those services already on the Medicare Telehealth Services List.

We also note that section 4113 of Division FF, Title IV, Subtitle A of the Consolidated Appropriations Act, 2023 (CAA, 2023) (Pub. L. 117-328, December 29, 2022) extends the telehealth policies enacted in the Consolidated Appropriations Act, 2022 (CAA, 2022) (Pub. L. 117-103, March 15, 2022) through December 31, 2024, if the PHE ends prior to that date, as discussed in section II.D.c. of this final rule.

We received several requests to permanently add various services to the Medicare Telehealth Services List effective for CY 2024. We found that none of the requests we received by the February 10<sup>th</sup> submission deadline met our Category 1 or Category 2 criteria for permanent addition to the Medicare Telehealth Services List. The requested services are listed in Table 11.

**TABLE 11: CY 2024 Requests for Permanent Addition – Services Not Proposed for Permanent Addition to the Medicare Telehealth Services List**

Service Type	HCPCS	Long Descriptor
Cardiovascular Procedures	93793	Anticoagulant management for a patient taking warfarin, must include review and interpretation of a new home, office, or lab international normalized ratio (INR) test result, patient instructions, dosage adjustment (as needed), and scheduling of additional test(s), when performed
Cardiovascular and Pulmonary Rehabilitation	93797	Physician or other qualified health care professional services for outpatient cardiac rehabilitation; without continuous ECG monitoring (per session)
	94625	Physician or other qualified health care professional services for outpatient pulmonary rehabilitation; without continuous oximetry monitoring (per session)
Deep Brain Stimulation	95970	Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain, cranial nerve, spinal cord, peripheral nerve, or sacral nerve, neurostimulator pulse generator/transmitter, without programming
	95983	Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain neurostimulator pulse generator/transmitter programming, first 15 minutes face-to-face time with physician or other qualified health care professional
	95984	Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain neurostimulator pulse generator/transmitter programming, each additional 15 minutes face-to-face time with physician or other qualified health care professional (List separately in addition to code for primary procedure)
Therapy	90901	Biofeedback training by any modality
	97110	Therapeutic procedure, 1 or more areas, each 15 minutes; therapeutic exercises to develop strength and endurance, range of motion and flexibility
	97112	Therapeutic procedure, 1 or more areas, each 15 minutes; neuromuscular reeducation of movement, balance, coordination, kinesthetic sense, posture, and/or proprioception for sitting and/or standing activities
	97116	Therapeutic procedure, 1 or more areas, each 15 minutes; gait training (includes stair climbing)
	97161	Physical therapy evaluation: low complexity, requiring these components: A history with no personal factors and/or comorbidities that impact the plan of care; An examination of body system(s) using standardized tests and measures addressing 1-2 elements from any of the following: body structures and functions, activity limitations, and/or participation restrictions; A clinical presentation with stable and/or uncomplicated characteristics; and Clinical decision making of low complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 20 minutes are spent face-to-face with the patient and/or family.
	97162	Physical therapy evaluation: moderate complexity, requiring these components: A history of present problem with 1-2 personal factors and/or comorbidities that impact the plan of care; An examination of body systems using standardized tests and measures in addressing a total of 3 or more elements from any of the following: body structures and functions, activity limitations, and/or participation restrictions; An evolving clinical presentation with changing characteristics; and Clinical decision making of moderate complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 30 minutes are spent face-to-face with the patient and/or family.
	97163	Physical therapy evaluation: high complexity, requiring these components: A history of present problem with 3 or more personal factors and/or comorbidities that impact the plan of care; An examination of body systems using standardized tests and measures addressing a total of 4 or more elements from any of the following: body structures and functions, activity limitations, and/or participation restrictions; A clinical presentation with unstable and unpredictable characteristics; and Clinical decision making of high complexity using standardized patient assessment instrument and/or measurable assessment of functional outcome. Typically, 45 minutes are spent face-to-face with the patient and/or family.

Service Type	HCPCS	Long Descriptor
Therapy	97164	Re-evaluation of physical therapy established plan of care, requiring these components: An examination including a review of history and use of standardized tests and measures is required; and Revised plan of care using a standardized patient assessment instrument and/or measurable assessment of functional outcome Typically, 20 minutes are spent face-to-face with the patient and/or family.
	97530	Therapeutic activities, direct (one-on-one) patient contact (use of dynamic activities to improve functional performance), each 15 minutes
	97750	Physical performance test or measurement (eg, musculoskeletal, functional capacity), with written report, each 15 minutes
	97763	Orthotic(s)/prosthetic(s) management and/or training, upper extremity(ies), lower extremity(ies), and/or trunk, subsequent orthotic(s)/prosthetic(s) encounter, each 15 minutes
Hospital Care, Emergency Department and Hospital	99221	Initial hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level medical decision making. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded.
	99222	Initial hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 55 minutes must be met or exceeded.
	99223	Initial hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 75 minutes must be met or exceeded.
	99234	Hospital inpatient or observation care, for the evaluation and management of a patient including admission and discharge on the same date, which requires a medically appropriate history and/or examination and straightforward or low level of medical decision making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.
	99235	Hospital inpatient or observation care, for the evaluation and management of a patient including admission and discharge on the same date, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 70 minutes must be met or exceeded.
	99236	Hospital inpatient or observation care, for the evaluation and management of a patient including admission and discharge on the same date, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 85 minutes must be met or exceeded.
	99238	Hospital inpatient or observation discharge day management; 30 minutes or less on the date of the encounter
	99239	Hospital inpatient or observation discharge day management; more than 30 minutes on the date of the encounter
	99281	Emergency department visit for the evaluation and management of a patient that may not require the presence of a physician or other qualified health care professional
	99282	Emergency department visit for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward medical decision making
	99283	Emergency department visit for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and low level of medical decision making
	Health and Well-Being Coaching	0591T
0592T		Health and well-being coaching face-to-face; individual, follow-up session, at least 30 minutes
0593T		Health and well-being coaching face-to-face; group (2 or more individuals), at least 30 minutes

We remind interested parties that the criterion for adding services to the Medicare

telehealth list under Category 1 is that the requested services are similar to professional

consultations, office visits, and office psychiatry services that are currently on the Medicare

Telehealth Services List, and that the criterion for adding services under Category 2 is that there

is evidence of clinical benefit if provided as telehealth. As explained below and in the CY 2024

PFS proposed rule (88 FR 52286 to 52298), we found that none of the requested services listed in Table 11 met the Category 1 criterion. Below is a summary of the reasons why we did not propose to add these services to the Medicare Telehealth Services List on a Category 1 basis, the comments on the proposed rule, and our responses:

*(1) Cardiovascular Procedures*

We received a request to permanently add CPT code 93793 (*Anticoagulant management for a patient taking warfarin, must include review and interpretation of a new home, office, or lab international normalized ratio (INR) test result, patient instructions, dosage adjustment (as needed), and scheduling of additional test(s), when performed*) to the Medicare Telehealth Services List. We did not consider this service to be a Medicare telehealth service, because the service is not an inherently face-to-face service – a patient need not be present in order for the service to be furnished in its entirety. For example, in many instances, clinical staff will not change a patient’s warfarin dosage as a result of the lab INR test result, and they may or may not confirm the need for a follow-up test via phone; either way there is no need for a face-to-face encounter with a practitioner. As we have explained in previous rulemaking (83 FR 59483), certain kinds of services that are furnished remotely using communications technology are not considered Medicare telehealth services and are not subject to the restrictions articulated in section 1834(m) of the Act. This is true for services that were routinely paid separately prior to the enactment of section 1834(m) of the Act and do not usually include patient interaction such as the remote interpretation of diagnostic tests. We did not consider CPT code 93793 to be a telehealth service under section 1834(m) of the Act or our regulation at § 410.78. Therefore, we did not propose to add this service to the Medicare Telehealth Services List on a Category 1 basis.

*Comment:* A few commenters requested that CMS update the status indicator for CPT code 93793 to a covered status indicator such as A, S or V, and that CMS add the service to the telehealth list.

*Response:* The request for a status indicator change is outside the scope of our telehealth proposals. However, we believe it is important to note that the service elements of CPT code 93793 do not describe an in-person service that could, instead, be furnished as a Medicare telehealth service using interactive communications technology. Because CPT code 93793 does not describe an inherently face-to-face service, it would not be appropriate to consider or recognize it as a telehealth service. We believe that the commenter misunderstands the nature of CPT code 93793.

## *(2) Cardiovascular and Pulmonary Rehab*

We received multiple requests to permanently add the following CPT codes to the Medicare Telehealth Services List:

- 93797 (*Physician or other qualified health care professional services for outpatient cardiac rehabilitation; without continuous ECG monitoring (per session)*); and
- 94624 (*Physician or other qualified health care professional services for outpatient pulmonary rehabilitation; without continuous oximetry monitoring (per session)*).

In the CY 2022 PFS final rule (86 FR 65048), we explained that some services were added temporarily to the Medicare Telehealth Services List on an emergency basis to allow practitioners and beneficiaries to have access to medically necessary care while avoiding both risk for infection and further burdening healthcare settings during the PHE for COVID-19. In the same rule, we considered available evidence and noted that as evidence evolves on this subject matter, we welcomed further discussions with interested parties on the topic. In subsequent cycles of annual rulemaking, we have continued conversations with interested parties that furnish, support, and use Cardiovascular and Pulmonary Rehabilitation services. In our CY 2022 PFS final rule (86 FR 65055), we acknowledged that commenters provided a number of studies on the safety and efficacy of these services when furnished via telehealth, and we added the codes to the list on a temporary, Category 3 basis.

We note that some evidence submissions and ongoing discussions with interested parties have focused on the clinical benefits of patients receiving these services in the home. We note that, while demonstrating the clinical benefits of services is important to our decision whether to add a service to the Medicare Telehealth Services List, there are other considerations when deciding whether to add codes to the list on a permanent basis. For example, while the CAA, 2023, does extend certain COVID-19 PHE flexibilities, including allowing the beneficiary's home to serve as an originating site, such flexibilities are only extended through the end of CY 2024. Under current law, beginning on January 1, 2025, the beneficiary's home can be an originating site only for Medicare telehealth services furnished for: (1) the diagnosis, evaluation, or treatment of a mental health disorder; or (2) a beneficiary with a diagnosed substance use disorder (SUD) for purposes of treatment of the SUD or a co-occurring mental health disorder; or (3) monthly ESRD-related clinical assessments furnished to a beneficiary who is receiving home dialysis, beginning January 1, 2025. Therefore, in the absence of further action by Congress, CPT codes 93797 and 94626 will not be able to be furnished via telehealth to a beneficiary in the home beginning January 1, 2025. As such, we did not propose to include these services permanently on the Medicare Telehealth Services List on a Category 1 basis. We instead proposed to continue to include these services on the Medicare Telehealth Services List through CY 2024. We will then remove CPT codes 93797 and 94626 from the Medicare Telehealth Services List for CY 2025.

*Comment:* Commenters were generally supportive and included supportive evidence demonstrating possible clinical benefit for the clinical activities described by these codes.

*Response:* We thank commenters for the feedback.

After consideration of public comments, we are finalizing as proposed. We will continue to include these services on the Medicare Telehealth Services List through CY 2024. We will then remove CPT codes 93797 and 94626 from the Medicare Telehealth Services List for CY 2025.

### *(3) Deep Brain Stimulation*

We received a request to permanently add the following CPT codes to the Medicare Telehealth Services List:

- 95970 (*Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain, cranial nerve, spinal cord, peripheral nerve, or sacral nerve, neurostimulator pulse generator/transmitter, without programming*);
- 95983 (*Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain neurostimulator pulse generator/transmitter programming, first 15 minutes face-to-face time with physician or other qualified health care professional*); and
- 95984 (*Electronic analysis of implanted neurostimulator pulse generator/transmitter (eg, contact group[s], interleaving, amplitude, pulse width, frequency [Hz], on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain neurostimulator pulse generator/transmitter programming, each additional 15 minutes face-to-face time with physician or other qualified health care professional (List separately in addition to code for primary procedure)*).

In our CY 2023 proposed rule (85 FR 45891), we explained that these services do not meet the Category 1 criterion for permanent addition to the Medicare Telehealth Services List. Additionally, we discussed concerns about whether the full scope of service elements could be

furnished via two-way, audio-video communication technology, particularly since it is unclear whether the connection between the implanted device and the analysis/calibration equipment can be done remotely. Additionally, we are concerned about the immediate safety of the patient if the calibration of the neurostimulator were done incorrectly or if some other problem occurred. However, we did include these services on the Medicare Telehealth Services List on a temporary basis during the PHE to allow additional time for additional information to be gathered and presented. Based on this information, we believe there is some possible clinical benefit for these services when furnished via telehealth; however, there is not yet sufficient evidence available to consider the services for permanent addition under the Category 2 criterion. We proposed to keep these services on the Medicare Telehealth Services List for CY 2024. We stated that we would consider additional evidence in future rulemaking to determine whether to add the services to the Medicare Telehealth Services List on a permanent basis.

*Comment:* Several commenters explained that early evidence shows that safe remote programming may set devices to a safe mode in instances where remote programming fails. Commenters asserted that because evidence shows that patient safety risks may be mitigated through such controls, and no evidence of patient harm had been found, that CMS should make these services a permanent addition to the Medicare Telehealth Services List.

*Response:* We consider all evidence submitted and anecdotes shared by commenters. We generally do not question the findings and believe that the services may be safely furnished using only two-way interactive communications technology as a substitute for in-person elements of the service. However, we have not received sufficient evidence to show that the service, when furnished using only virtual interaction, would avoid a subsequent in-person service that addresses instances where the beneficiary received less than the complete service (when the device enters safe mode, remote programming failed, and requires a follow-up in-person visit so that the device may be programmed in-person). We believe more time for further study would be

appropriate, and that adding these services to the Medicare Telehealth Services List on a permanent basis beginning in CY 2024 would be premature.

After consideration of public comments, we are finalizing as proposed. We are not adding these codes to the Medicare Telehealth Services List on a permanent basis.

#### *(4) Therapy*

We received requests to add Therapy Procedures: CPT codes 97110, 97112, 97116; Physical Therapy Evaluations: CPT codes 97161 through 97164; Therapy Personal Care services: CPT code 97530; and Therapy Tests and Measurements services: CPT codes 97750, 97763 and Biofeedback: 90901, to the Medicare Telehealth Services List on a Category 1 or 2 basis. We have considered these codes over several years, in multiple cycles of annual rulemaking. In the CY 2017 final rule (81 FR 80198), we first assessed a request to add CPT codes 97110, 97112, and 97116 (the therapy codes) to the Medicare Telehealth Services List. We did not add the codes to the Medicare Telehealth Services List at the time, because there was no emergency waiver providing an exception to the requirements under section 1834(m)(4)(E) of the Act, and physical therapists, occupational therapists, and speech-language pathologists were not eligible telehealth practitioners. In the CY 2018 final rule (82 FR 53008 and 53009), we reiterated our initial assessment that the codes were not appropriate to add to the Medicare Telehealth Services List, because the majority of the therapy codes listed above are furnished over 90 percent of the time by therapy professionals who are not included on the list of distant site practitioners who can furnish telehealth services at section 1834(m)(4)(E) of the Act. We stated that we believed that adding therapy services to the Medicare Telehealth Services List could result in confusion about who is authorized to furnish and bill for these services when furnished via telehealth (82 FR 53009).

Section 3703 of Division A, Title III, Subtitle D of the Coronavirus Aid, Relief, and Economic Security Act (CARES Act) (Pub. L. 116-136, enacted March 27, 2020) amended section 1135(b)(8) of the Act to give the Secretary emergency authorities to waive or modify

Medicare telehealth payment requirements under section 1834(m) of the Act during the PHE for COVID-19. Using this authority, CMS issued a set of emergency waivers that included waiving the restrictions in section 1834(m)(4)(E) of the Act on the types of practitioners who may furnish telehealth services. This allowed for therapy professionals to furnish telehealth services for the duration of the PHE. In the CY 2022 final rule (86 FR 65051), we reviewed another round of submissions requesting that CMS add therapy codes to the Medicare Telehealth Services List, and we again determined that these codes did not meet the Category 1 criterion for addition to the list. In the CY 2023 PFS final rule (87 FR 69451), through our review of evidence that was submitted by interested parties in support of adding these services to the Medicare Telehealth Services List on a Category 2 basis, we concluded that there was not sufficient information to determine whether all of the necessary elements of these services could be furnished remotely.

In reviewing this year's request, the evidence submission includes evidence similar to what was submitted last year, with a few new additions suggesting that some elements of the individual services may have clinical benefit when furnished via telehealth, but not resolving uncertainty about whether other elements of the services can be fully furnished remotely via telehealth. The evidence submitted also suggests that receiving therapy services via telehealth in the home may offer some practical benefits, such as use of actual stairs in therapy exercise instead of artificial stairs, or meal preparation instructions focused on available kitchen tools and equipment. However, the evidence submitted for review leaves open questions as to whether such differences in the setting of care translate to a clinical benefit that is more than minor or incidental, in typical circumstances for the typical population of beneficiaries who may receive therapy services via telehealth.

We note that for any submission, including submissions received for these therapy services, we consider all elements of a service as described by a particular HCPCS code and apply our review criteria to the specific code. While some submitted information may focus on an individual service within one specific clinical scenario and furnished within one specific

individual model of care delivery, that information may not be generalizable to the varied settings and scenarios under which the service would be typically furnished via telehealth. We reiterate that available evidence should give a reasonable degree of certainty that all elements of the service could fully and effectively be furnished by a remotely-located clinician using two-way, audio/video telecommunications technology.

Based on the evidence we reviewed, we continue to question whether the findings from therapy studies that focused on a specific clinical issue for a narrow population (for example, joint replacement of a specific joint) translate to clinical benefit for some or many of the various other clinical issues that would typically be addressed when therapists furnish therapy services via telehealth to beneficiaries. Despite the evidence, we are still uncertain as to whether all of the elements of a therapy service could typically be furnished through use of only real-time, two-way audio/video communications technology. Because we continue to have these questions, we did not propose to add these services to the Medicare Telehealth Services List on a Category 1 or 2 basis, for the same reasons described in our CY 2018 through CY 2023 rulemaking cycles. Also, we continue to believe that adding these therapy services to the Medicare Telehealth Services List permanently would potentially generate confusion. As discussed in last year's final rule, we note that we do not have authority to expand the list of eligible Medicare telehealth practitioners to include therapists (PTs, OTs, or SLPs) after CY 2024 (87 FR 69449 through 69451). We note that the CAA, 2023, did not permanently change the list of practitioners who can furnish and bill for telehealth services; rather, the CAA, 2023, extended the current telehealth flexibilities through the end of CY 2024. That said, we proposed to keep these therapy services on the Medicare Telehealth Services List until the end of CY 2024. We will consider any further action with regard to these codes in future rulemaking.

*Comment:* Commenters requested that CMS continue coverage of the therapy codes even though physical therapists, occupational therapists, and speech therapists are not currently permitted by statute to provide telehealth services after CY 2024.

*Response:* We direct readers to our discussion of these codes in the proposed rule, and we reiterate that we are still uncertain as to whether all of the elements of a therapy service could typically be furnished through use of only real-time, two-way audio/video communications technology. Further, we note that the scope of our proposals did not include coverage status of the codes, merely whether CMS should change the status of the codes on the telehealth list.

After consideration of public comments, we are finalizing as proposed. These therapy services will remain on the Medicare Telehealth Services List until the end of CY 2024.

*(5) Hospital Care, Emergency Department and Hospital*

We received a request to permanently add the following CPT codes to the Medicare Telehealth Services List:

- 99221 (*Initial hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level medical decision making. When using total time on the date of the encounter for code selection, 40 minutes must be met or exceeded.*)

- 99222 (*Initial hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 55 minutes must be met or exceeded.*)

- 99223 (*Initial hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 55 minutes must be met or exceeded.*)

- 99234 (*Hospital inpatient or observation care, for the evaluation and management of a patient including admission and discharge on the same date, which requires a medically appropriate history and/or examination and straightforward or low level of medical decision*

*making. When using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.)*

- *99235 (Hospital inpatient or observation care, for the evaluation and management of a patient including admission and discharge on the same date, which requires a medically appropriate history and/or examination and moderate level of medical decision making. When using total time on the date of the encounter for code selection, 70 minutes must be met or exceeded.)*

- *99236 (Hospital inpatient or observation care, for the evaluation and management of a patient including admission and discharge on the same date, which requires a medically appropriate history and/or examination and high level of medical decision making. When using total time on the date of the encounter for code selection, 85 minutes must be met or exceeded.)*

- *99238 (Hospital inpatient or observation discharge day management; 30 minutes or less on the date of the encounter)*

- *99239 (Hospital inpatient or observation discharge day management; more than 30 minutes on the date of the encounter)*

- *99281 (Emergency department visit for the evaluation and management of a patient that may not require the presence of a physician or other qualified health care professional)*

- *99282 (Emergency department visit for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward medical decision making)*

- *99283 (Emergency department visit for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and low level of medical decision making)*

In the March 31, 2020 interim final rule with comment period (IFC-1) (85 FR 19234), we added the above services to the Medicare Telehealth Services List on a Category 2 basis for the duration of the PHE for COVID-19, for telehealth services with dates of service beginning

March 1, 2020 through the end of the PHE (including any renewals of the PHE). When we previously considered adding these services to the Medicare Telehealth Services List, either through a public request or through our own internal review, we considered whether these services met the Category 1 or Category 2 criteria. In many cases, we reviewed requests to add these services to the Medicare Telehealth Services List on a Category 1 basis but did not receive or identify information that allowed us to determine whether these services should be added on a Category 2 basis (CY 2017 PFS final rule, at 81 FR 80194 to 80197). We reiterated that, while we do not believe the context of the PHE for COVID-19 changes the assessment of whether these services meet the Category 1 criterion, we reassessed all of these services to determine whether they meet the criteria for inclusion on the Medicare Telehealth Services List on a Category 2 basis, in the context of the widespread presence of COVID-19 in the community. Given the exposure risks for beneficiaries, the health care work force, and the community at large, in-person interaction between professionals and patients posed an immediate potential risk that would not have been present when we previously reviewed these services in 2017. This risk created a unique circumstance where health care professionals needed to weigh the risks associated with disease exposure. For further background, in the CY 2021 final rule (FR 84506 through 84509), we explained the reasoning and considerations necessary for assigning a Category 3 status to certain codes that were added to the Medicare Telehealth Services List on a temporary basis during the PHE for COVID-19. We believe that some risk of COVID-19 remains, but also remain uncertain that available evidence gives clear support for continuing to include these services on a permanent basis under the Category 2 criterion.

As discussed in the CY 2023 PFS final rule (86 FR 69450), we believe these hospital and emergency department services may continue to be furnished safely via two-way, audio-video communication technology. We did not propose to add these services to the list on a permanent basis at this time, but we did propose that they would remain available on the Medicare Telehealth Services List through CY 2024.

*Comment:* Several commenters stated that because CMS had adopted the AMA CPT Editorial Committee’s consolidation of E&M inpatient and observation codes that CMS should change their status on the telehealth list to make these codes permanent.

*Response:* We acknowledge the CPT Editorial Panel deleted seven observation care codes and revised nine codes effective January 1, 2023, to create a single set of codes for inpatient and observation care and also made changes to codes for inpatient and observation discharge. We adopted the E/M inpatient/observation revisions in the CY 2023 PFS final rule. For further background, refer to 87 FR 69586 through 69587. In the CY 2023 PFS final rule, when we finalized new valuations based on AMA RUC recommendations which included a change in code descriptors to reflect “patient history and/or physical exam” as one element of the service, we removed the legacy codes from the list and replaced these with the new code set. To reiterate, we have open questions of patient safety that we expect future submissions to address in full, as evidence generation builds (for example, publication of peer-reviewed literature, updates clinical practice guidelines, further study of hospital patient safety risks). We note that the initial impetus for including these services on the Medicare Telehealth Services List focused on the unique circumstance where health care professionals needed to weigh the risks associated with disease exposure during PHE for COVID-19. Now that the PHE has ended, we expect that future evidence submissions would address study of the appropriateness of furnishing these services via telehealth outside the context of a global pandemic. We note that we have no immediate evidence of patient safety risks associated specifically with furnishing these services via telehealth but we remain cautious and intend to monitor these services moving forward because of possible larger issues of patient safety.<sup>3</sup> With regard to the code consolidation, we reiterate our concerns above, and note that prior to consolidation, none of the separate “legacy”

---

<sup>3</sup> Fleisher, L. A., Schreiber, M., Cardo, D., & Srinivasan, A. (2022). Health Care Safety during the pandemic and beyond — building a system that ensures resilience. *New England Journal of Medicine*, 386(7), 609–611. <https://doi.org/10.1056/nejmp2118285>.

codes, which are now consolidated, were on the Medicare Telehealth Services List on a permanent basis.

After consideration of public comments, we are finalizing as proposed and will keep these hospital and emergency department services on the Medicare Telehealth Services List temporarily through CY 2024. We note that CPT codes 99231 through 99233 are codes that describe subsequent services, and are part of the same Hospital or Observation Care code family (CPT codes 99218-99236), and have permanent status on the Medicare Telehealth Services List. We continue to believe that new patients should be seen in person when the temporary telehealth flexibilities end, and as a result we are not changing determinations of the status of any of these codes.

#### *(6) Health and Well-being Coaching*

We received a request to permanently add the following three Health and Well-being Coaching services to the Medicare Telehealth Services List:

- CPT code 0591T (*Health and well-being coaching face-to-face; individual, initial assessment*);
- CPT code 0592T (*Health and well-being coaching face-to-face; individual, follow-up session, at least 30 minutes*); and
- CPT code 0593T (*Health and well-being coaching face-to-face; group (2 or more individuals), at least 30 minutes*).

We did not propose to add these health and well-being coaching services to the Medicare Telehealth Services List on a permanent basis, but we proposed to add them to the list on a temporary basis for CY 2024. The evidence included in the submitter's request notes that these codes are similar to others already available on the Medicare Telehealth Services List. Further, it appears that all elements of these services may be furnished when using two-way interactive communications technology to replace the face-to-face elements of the service. The submission, which contained two published meta-analyses of literature on the clinical topic and an additional

pre-publication meta-analysis that focuses on outcomes and benefits of the delivery of virtual health and well-being coaching, leaves some open questions as to whether Medicare beneficiaries would receive meaningful clinical benefit from receiving virtual-only health and well-being coaching. While the evidence is clearly evolving, it does suggest that these services could possibly meet Category 2 criteria for inclusion on the Medicare Telehealth Services List as more evidence builds. We also noted in the proposed rule that the published meta-analyses in the submission make clear that further study is necessary for a broader range of medical professionals, because conceptual articles and research and existing practice articles focus on nurses but are sparse or silent about other general categories of medical professionals. We stated that we would expect that any evidence in support of adding these codes on a permanent basis should also establish clinical benefit when delivered directly by or under the supervision of the types of professionals who are Medicare telehealth practitioners. The metanalyses demonstrate that health coaching only requires a few hours of training, and few articles submitted to CMS discussed the intensity of health coach training at all. The pre-publication metanalysis submitted for review had less than definitive conclusions about “potential benefits” of health and well-being coaching and hedged that the authors, “did not find evidence of long-term benefit, possibly due to the paucity of studies examining longer-term outcomes. We caution that the certainty in the evidence for the majority of outcomes was either very low or low, primarily due to high risk of bias, heterogeneity, and impression.” The submission and its content were sufficient to serve as a basis for adding the codes to the Medicare Telehealth Services List on a temporary basis, and we appreciated the thoughtful and transparent way the submission laid out gaps in available evidence. More time is needed to potentially close these gaps. We are not aware of any evidence to suggest that it would be inappropriate to assign a temporary status to these codes. Therefore, we proposed to add the services to the Medicare Telehealth Services List on a temporary basis.

*Comment:* Many commenters requested that CMS change the status of these codes to permanent. The commenters referenced that the National Board of Health and Wellness Coaches,

which is an affiliate of the National Board of Medical Examiners, along with other standard-setting organizations, represent 28,000 qualified coaching professionals; additional evidence submitted addresses the rigor of training and certification requirements, as well as findings on clinical effectiveness of health and wellness coaching services delivered via telehealth to treat chronic disease prevalent in the Medicare population (for example, obesity, hypertension, diabetes, and COPD). The commenters asserted that over 9,500 health professionals have completed a certification exam, and approximately 20 percent of those holding certification also hold a clinical State license of some kind.

*Response:* We thank commenters for the feedback and additional evidence submission. We acknowledge the findings presented in the additional evidence, and the qualifications required to achieve certification that comments referenced. We note that there are over 4 million NPIs in the NPPES NPI Registry (<http://npiregistry.cms.hhs.gov>), and that we do not consider the number of certified individuals providing a service in determining the status of a service on the Medicare Telehealth List. Rather, when pointing to gaps in the available evidence supporting inclusion of a service on the list, we ask whether further study is necessary to establish the clinical benefit of a service for the Medicare population when the individual service is performed using only two-way interactive communications technology as a substitute for face-to-face interactions between the telehealth practitioner and the patient. The clinical value of the service is not at issue when CMS determines whether or how to include a service on the Medicare Telehealth Services List.

We remind readers that one purpose of the telehealth review, and our ongoing claims monitoring process that examines utilization of telehealth services, is for CMS to act as an appropriate safeguard to ensure that beneficiaries can receive all of the elements and benefits of a service when that service is furnished via telehealth rather than in-person. CMS asks whether it is likely that a typical beneficiary receiving the service would receive any clinical benefit beyond mere incidental or minor clinical benefits when the service is performed by the typical telehealth

practitioner. When assessing the clinical benefit of a service when furnished as a telehealth service, long-term and careful study over a period of years may be necessary. We believe the commenters are suggesting that there is potential clinical benefit to providing these services via telehealth, and we agree. Our initial review of evidence also indicates that these services can and should retain their current status on the Medicare Telehealth Services List for CY 2024.

However, we remain cautious because the evidence and analyses provided by commenters appear anecdotal. In future evidence submissions, we would expect to see peer-reviewed literature, where the study population is typical of the Medicare population (for example, specific age bands in study populations), and the methods focus on evaluating utilization and outcomes (for example, claims data and analysis that includes the specific codes at issue). In summary, there is still a lack of scientific study that focuses on use of these codes via telehealth, and in clinical practice. We acknowledge that health coaches may have many types of backgrounds, and we note that we did not intend to question the standards and training of health coaches when we mentioned the variation in their credentialing in the proposed rule. We agree with commenters that suggested many eligible health practitioners would furnish these services to Medicare beneficiaries if they remained on the Medicare Telehealth Services List permanently. Even so, the clinical benefits of these services when furnished as telehealth services for the target population remain an open question in need of further study. We believe that this response should provide further clarity for the public as to the sorts of data that CMS would like to receive and review in future submissions.

After consideration of public comments, we are finalizing as proposed. We will add these health and well-being coaching services to the Medicare Telehealth List on a temporary basis for CY 2024.

*(7) CMS Proposal to Add New Codes to the List*

We proposed to add HCPCS code G0136 (*Administration of a standardized, evidence-based Social Determinants of Health Risk Assessment tool, 5-15 minutes*) to the Medicare

Telehealth Services List. Our proposal to add HCPCS code G0136 to the list was contingent upon finalizing the service code description we proposed in section II.E. of the proposed rule. We refer readers to the proposal in section II.E. of the proposed rule for further background (88 FR 52293). We proposed that HCPCS code G0136, if finalized as proposed, would receive a permanent status on the Medicare Telehealth Services List. One element of the service describes a face-to-face encounter between the clinician and beneficiary. Practitioners use clinical judgement to determine whether to complete the SDOH screening with or without direct patient interaction. Because the service description, as defined in section II.E. of the CY 2024 proposed rule and finalized in section II.E. of this final rule, expects that a patient encounter may be necessary for accurate and complete screening, we believe that this element of the service describes an inherently face-to-face clinical activity. Further, using two-way interactive audio-video technology as a substitute for in-person interaction means an analogous level of care in that using either modality would not affect the accuracy or validity of the results gathered via a standardized screening tool. As discussed in section II.E. of the proposed rule, we proposed that this service must be furnished by the practitioner on the same date they furnish an E/M visit, as the SDOH assessment would be reasonable and necessary when used to inform the patient's diagnosis, and treatment plan established during the visit. Therefore, we noted that we believe HCPCS code G0136 describes a service that is sufficiently similar to services currently on the Medicare Telehealth Services List, specifically E/M services, and that this service should be added to the list on a permanent basis.

*Comment:* Many commenters supported our proposals to include G0136 (*Administration of a standardized, evidence-based Social Determinants of Health Risk Assessment tool, 5-15 minutes*) on the Medicare Telehealth List as a permanent code.

*Response:* We thank commenters for the feedback.

After consideration of public comments, we are finalizing as proposed and assigning HCPCS code G0136 (*Administration of a standardized, evidence-based Social Determinants of*

*Health Risk Assessment tool, 5-15 minutes)* permanent status on the Medicare Telehealth List, beginning in CY 2024.

*Comment:* Many commenters requested that CMS add Principal Illness Navigation (PIN) and Community Health Integration (CHI) services to the Medicare Telehealth List.

*Response:* We refer readers to our discussion of the PIN and CHI services in section II.E. of this final rule. We did not propose to add these services to the Medicare Telehealth Services List for CY 2024 because the elements of the individual services in the code descriptors may not typically require a face-to-face interaction, and therefore PIN (G0023, G0024, G0140, and G0146) and CHI (G0019, G0022) would not be considered as potential Medicare telehealth services under section 1834(m) of the Act. We note that the possible use of asynchronous communications technology to support the provision of these services suggests that our policies for other communications-based technology services should apply instead.

### c. Proposed Clarifications and Revisions to the Process for Considering Changes to the Medicare Telehealth Services List

#### *1. Overview*

In CY 2020, CMS issued an array of waivers and new flexibilities for Medicare telehealth services to respond to the serious public health threats posed by the spread of COVID-19 (85 FR 19230). Our goal was to give individuals and entities that provide services to Medicare beneficiaries the flexibility to respond effectively to the serious public health threats posed by the spread of COVID-19. Recognizing the urgency of this situation and understanding that some pre-existing Medicare payment rules (including the statutory restrictions on telehealth originating sites and telehealth practitioners) needed to be modified to allow patients and practitioners to have access to necessary care while mitigating the risks from COVID-19, we used waiver and regulatory authorities to change certain Medicare payment rules during the PHE for COVID-19 so that physicians and other practitioners, home health and hospice providers, inpatient rehabilitation facilities, rural health clinics (RHCs), and federally qualified health

centers (FQHCs) would be allowed broad flexibilities to furnish services using remote communications technology to avoid exposure risks to health care providers, patients, and the community.

In 2003, as required by section 1834(m)(4)(F)(ii) of the Act, we established a process for adding or deleting services from the Medicare Telehealth Services List, which included consideration under two categories of criteria (Categories 1 and 2) (67 FR 79988). We finalized revisions to the Category 2 review criterion in the CY 2012 PFS final rule (76 FR 73102). Prior to CY 2020, CMS had not added any service to the Medicare Telehealth Services List on a temporary basis. In CY 2020, in response to the PHE for COVID-19, we revised the criteria for adding or removing services on the Medicare Telehealth Services List using a combination of emergency waiver authority and interim final rule making, so that some services would be available for the duration of the PHE on a "temporary Category 2 basis." (85 FR 19234). In the CY 2021 PFS final rule (85 FR 84507), we created a third, temporary category for services included on the Medicare Telehealth Services List on a temporary basis. This new Category 3 includes many, but not all of the services that we added temporarily to the Medicare Telehealth Services List during the COVID-19 PHE. Specifically, we reviewed the services we added temporarily in response to the COVID-19 PHE and identified those for which there is likely to be clinical benefit when furnished via telehealth, but there is not yet sufficient evidence available to add the services as permanent additions to the list. Services added to the Medicare Telehealth Services List on a temporary, Category 3 basis will ultimately need to meet the Category 1 or 2 criteria in order to be added to the Medicare Telehealth Services List on a permanent basis.

Between CY 2020 and CY 2023, we added many services to the Medicare Telehealth List on a temporary basis during the PHE, and through rulemaking, we also added many of these services on a Category 3 basis. Subsequent requests and evidence submitted to CMS supported possible status changes for some of the services that are currently included on the Medicare Telehealth Services List on a Category 3 basis. However, submissions sometimes confused our

use of waiver authority and regulatory flexibilities tied to the COVID-19 PHE which allow us to temporarily add services to the Medicare Telehealth Services List through the end of the PHE, with the generally applicable categories and criteria we use to consider changes to the Medicare Telehealth Services List outside the circumstances of the COVID-19 PHE. Now that the PHE for COVID-19 has ended, we intend to clarify and modify our process for making changes to the Medicare Telehealth Services List. We believe these clarifications will help address potential confusion among interested parties that submit requests for additions to the Medicare Telehealth List stemming from the distinction between services that were added to the telehealth list on the basis of COVID-19 PHE-related authorities versus services that were added temporarily on a Category 3 basis, which does not rely on any PHE-related authority. Specifically, we created the Category 3 basis for considering changes in the Medicare Telehealth Services List as part of the process we are required to establish under section 1834(m)(4)(F)(2) for considering changes to the list in part because, with the significant expansion of remotely-furnished services in response to the COVID-19 PHE, we recognized the emergence of new data suggesting that there may be clinical benefit when certain services are delivered via telehealth, but more time is needed to develop additional evidence to support potential addition of the services on a permanent, Category 1 or Category 2 basis. Under Category 3, services are added to the list on a temporary basis to allow them to continue to be furnished via telehealth while additional evidence is developed.

In brief, throughout the COVID-19 PHE, we have reviewed all requests to add services to the Medicare Telehealth Services List and assessed whether the services in question should be added to the list, temporarily or permanently, under any of the criteria for Category 1, 2, or 3. Further, we did not reject any submissions from interested parties simply because they requested consideration under a specific category, and the submitted data did not support adding the service to the Medicare Telehealth Services List on that basis. Instead, we considered whether the service(s) should be added to the Medicare Telehealth Services List on any basis.

To avoid potential continuing confusion among those who submit requests to add services to the Medicare Telehealth Services List, and as we consider the expiration of the Medicare telehealth flexibilities extended by the CAA, 2023 through the end of CY 2024, we believe it would be beneficial to simplify our current taxonomy and multicategory approach to considering submitted requests. Further, we believe that simplification toward a binary classification approach could address the confusion we have noticed from interested parties submitting requests during the PHE. The simplification restores the simple binary that existed with Category 1 and 2, without displacing or disregarding the flexibility of Category 3. We are finalizing our proposal to simply classify and consider additions to the Medicare Telehealth Services List as either permanent, or provisional.

As we discussed in our CY 2024 proposed rule (88 FR 52262), to consider a request to add a service to the Medicare Telehealth Services List, we need evidence that supports how the telehealth service is either clinically equivalent to a telehealth service already permanently on the list, or evidence that presents studies where findings suggest a clinical benefit sufficient for the service to remain on the list to allow time for confirmative study. We reemphasize the need for clinical evidence because that evidence serves as the principal basis for our consideration of a request; and it is sometimes missing from submissions we receive.

For example, we have received some submissions requesting the addition of services to the Medicare Telehealth Services List that are essentially framed as position papers advocating for changes in statutory requirements of section 1834(m) of the Act. While we do give such requests due consideration, the omission of clinical evidence to support the addition of a service to the Medicare Telehealth Services List using our established criteria generally leads us to conclude that the service should not be proposed for addition to the list. A fair and consistent review process for any and all submissions relies on a standard application of uniform, repeatable procedures for any individual submission, just as sound evidence should describe repeatable methods and replicable findings. Submissions that rely on narrative arguments for

changes in the substantive requirements do not fit within such a fair and consistent review process. Therefore, we believe the following restatement of requirements and our review process is appropriate. We also proposed some procedural refinements to the review process, specifically incorporating additional considerations into our evaluation of services, that we believe would serve to maintain scope and focus in a post-PHE context. We discussed these proposed changes in detail in the CY 2023 PFS proposed rule and in the following section.

Section 1834(m)(4)(F)(ii) of the Act requires that the Secretary establish a process that provides, on an annual basis, for the addition or deletion of services (and HCPCS codes), to the definition of telehealth services for which payment can be made when furnished via telehealth under the conditions specified in section 1834(m). As specified at § 410.78(f), with the exception of a temporary policy that was limited to the PHE for COVID-19, we make changes to the list of Medicare telehealth services through the annual physician fee schedule rulemaking process. The proposed revisions to our current permanent policies, specifically our proposed assignment of a “permanent” or “provisional” status to a service and changes in status as described below, reflect the stepwise method by which we proposed to consider future requests to add services to, remove services from, or change the status of, services on the Medicare Telehealth Services List, beginning for the CY 2025 Medicare Telehealth Services List, which will include submissions received no later than February 10, 2024.

## *2. Proposed Steps of Analysis for Services Under Consideration for Addition, or Removal, or a Change in Status, as Updates to the Medicare Telehealth Services List*

### **Step 1.** *Determine whether the service is separately payable under the PFS.*

When considering whether to add, remove, or change the status of a service on the Medicare Telehealth Services List, we proposed to first determine whether the service, as described by the individual HCPCS code, is separately payable under the PFS. Under section 1834(m)(1) of the Act, Medicare telehealth services are limited to those for which payment can be made to the physician or practitioner when furnished using an interactive telecommunications

system notwithstanding that the practitioner furnishing the services is not in the same location as the beneficiary; and under section 1834(m)(2)(A) of the Act, Medicare pays the same amount for a telehealth service as if the service is furnished in person. As such, Medicare telehealth services are limited to those services for which separate Medicare payment can be made under the PFS.

Thus, through Step 1, we would answer the threshold question of whether a service is separately payable under the PFS. During the PHE, many submissions for addition to the Medicare Telehealth Services List advocated for CMS to change the definition of “Medicare telehealth service” for their specific service; some of those submissions were for services that were not separately payable under the PFS.<sup>4</sup> (87 FR 69449). In the proposed rule, we anticipated that Step 1, if finalized, would encourage submissions that focus on a separately payable PFS service, and that the evidence included with those submissions will show how use of interactive, two-way, audio/video telecommunications technology allows a practitioner to complete an entire, specific service, described by a HCPCS code, that is equivalent to an in-person service.

We recognize that certain codes that had non-payable or bundled (not separately payable) status under the PFS before the PHE for COVID-19 were temporarily included on the Medicare Telehealth Services List to facilitate access to health care services during the PHE. However, the PHE for COVID-19 has now expired.

We believe that proposed Step 1, if finalized, would lessen the administrative burden of our telehealth services review process for both CMS and the public. We note that before gathering evidence and preparing to submit a request to add a service to the Medicare Telehealth Services List, the submitter should first check the payment status for a given service and ensure that the service (as identified by a HCPCS code), is a covered and separately payable service under the PFS (as identified by payment status indicators A, C, T, or R on our public use files). For a full list of all PFS payment status indicators and descriptions, see the Medicare Claims

---

<sup>4</sup> Services on the Medicare Telehealth List are used in the definition of Medicare telehealth. Some submissions may have conflated the distinction. Step 1 clarifies. Refer to the CMS website instructions for a Request for Addition at <https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/Addition>.

Processing Manual (IOM Pub. 100-04, chapter 23, section 30.2.2) and the Addendum for the MPFSDB File Record Layout. Researchers and others preparing submissions should also refer to the data dictionaries available at <https://resdac.org/cms-data/files/carrier-ffs/data-documentation>, to review whether the methodology and conclusions contained in supporting evidence, or a submission itself, applies an appropriate methodology to study both individual services and individuals that are representative of the Medicare population.

We further proposed that, if we find that a service identified in a submission is not separately payable under the PFS, we would not conduct any further review of that service. We would identify the code submitted for consideration and explain that we did not propose it for addition. CMS sends confirmation from [CMS\\_telehealthreview@cms.hhs.gov](mailto:CMS_telehealthreview@cms.hhs.gov) when we receive a submission requesting addition of a service to, removal of a service from, or a change in status for a service included on, the Medicare Telehealth Services List. We proposed to inform each submitter in the confirmation whether the submission was complete, lacking required information, or outside the scope of issues we consider under the process for considering changes in the Medicare Telehealth Services List. We noted that we also expect submissions to include copies of any source material used to support assertions, which has been the longstanding direction included in our website instructions. For further background, refer to details available on our website at <https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/Addition>.

**Step 2.** *Determine whether the service is subject to the provisions of section 1834(m) of the Act.*

If we determine at Step 1 that a service is separately payable under the PFS, we propose to apply Step 2 under which we would determine whether the service at issue is subject to the provisions of section 1834(m) of the Act. A service is subject to the provisions of section 1834(m) of the Act when at least some elements of the service, when delivered via telehealth, are a substitute for an in-person, face-to-face encounter, and all of those face-to-face elements of the

service are furnished using an interactive telecommunications system as defined in § 410.78(a)(3). The aim of this step is to determine whether the service is, in whole or in part, inherently a face-to-face service. As we discussed in the CY 2018 PFS final rule (83 FR 59483), it has long been the case that certain services that are furnished remotely using communications technology are not considered Medicare telehealth services and are not subject to the requirements of section 1834(m) of the Act. We proposed Step 2 to emphasize the circumstances under which the criteria under section 1834(m) of the Act apply, and also highlight circumstances in which the criteria under section 1834(m) of the Act do not apply. As previously noted, section 1834(m) of the Act provides for payment to a physician or practitioner for a service furnished via an interactive telecommunications system notwithstanding that the furnishing practitioner and patient are not in the same location at the same amount that would have been paid if the service was furnished without the telecommunications system. We read this to mean that the scope of section 1834(m) of the Act is limited to services that would ordinarily be furnished with the furnishing practitioner and patient in the same location.

Our application of Step 2 remains consistent with longstanding policy. We reiterate that there is a range of services delivered using certain telecommunications technology that do not fall within the scope of Medicare telehealth services, though they are separately payable under the PFS. Such services generally include services that do not require the presence of, or involve interaction with, the patient (for example, remote interpretation of diagnostic imaging tests, and certain care management services). Other examples include virtual check-ins, e-visits, and remote patient monitoring services which involve the use of telecommunications technology to facilitate interactions between the patient and practitioner, but do not serve as a substitute for an in-person encounter, for example, to assess whether an in-person or telehealth visit is needed or to transmit health information to the practitioner.

In determining whether a service is subject to the provisions of section 1834(m) of the Act, we will consider whether one or more of the elements of the service, as described by the

particular HCPCS code at issue, ordinarily involve direct, face-to-face interaction between the patient and practitioner such that the use of an interactive telecommunications system to deliver the service would be a substitute for an in-person visit. For interested parties preparing a request to add a service to the Medicare Telehealth Services List, we believe this Step 2 clarifies that a service must be inherently a face-to-face service. We believe reframing this Step 2 has the practical advantage of refining and improving consistency. We do not believe it would be appropriate to add a service to the Medicare Telehealth Services List if it is not subject to section 1834(m) of the Act. We would explain our finding in notice and comment rulemaking.

*Step 3. Review the elements of the service as described by the HCPCS code and determine whether each of them is capable of being furnished using an interactive telecommunications system as defined in § 410.78(a)(3)*

We believe that the proposed Step 3 is fundamental to our commitment to health equity, as this step could have a beneficial impact on access to care for vulnerable populations. Step 3 is corollary to Step 2, and used to determine whether one or more elements of a service are capable of being delivered via an interactive telecommunication system as defined in § 410.78(a)(3). In Step 3, we consider whether one or more face-to-face component(s) of the service, if furnished via audio-video communications technology, would be equivalent to the service being furnished in-person, and we seek information from submitters to demonstrate evidence of substantial clinical improvement in different beneficiary populations that may benefit from the requested service when furnished via telehealth, including, for example, in rural populations. The services are not equivalent when the clinical actions, or patient interaction, would not be of similar content as an in-person visit, or could not be completed. We note that completing each element of the defined service is a different question than whether a beneficiary receives any benefit at all from the telehealth-only form of a candidate service. The practical basis for Step 3 mirrors the practical basis for proposed Step 1 and 2, which is a consistent application of review criteria. Many submissions that CMS received during the PHE lacked evidence indicating that some or

all elements of a service could be completed using an interactive telecommunications system without still requiring an in-person interaction with a patient to furnish the complete service. We note that studies of patient satisfaction alone, and submissions with an excessive focus on patient satisfaction alone, present risks of bias in many ways, possibly complicating or obfuscating the question of whether it is possible, or potentially safe, to deliver an inherently face-to-face service via telehealth. Step 3 is integral to avoiding the possible unintended consequences of creating new gaps in care when telehealth is used as a substitute for in-person care.

**Step 4.** *Consider whether the service elements of the requested service map to the service elements of a service on the list that has a permanent status described in previous final rulemaking.*

The purpose of the proposed Step 4 of our analysis is to simplify and reduce the administrative burden of submission and review. For Step 4, we proposed to consider whether the service elements of a code that we are considering for addition to, or removal from, the Medicare Telehealth Services List map to the service elements of a service that is already on the list and has a permanent status, because any code that satisfies this criterion would require no further analysis: if a code describes a service that maps to the service elements of a code that is included on the Medicare Telehealth Services List on a permanent basis, we would add the code to the Medicare Telehealth Services List on a permanent basis.

We note that section 1834(m)(4)(F)(i) of the Act defines telehealth services as professional consultations, office visits, and office psychiatry services (as identified as of July 1, 2000, by HCPCS codes 99241– 99275, 99201–99215, 90804–90809, and 90862 (and as subsequently modified by the Secretary)), and any additional service specified by the Secretary. Over the years, CMS has assigned Category 1 (permanent) status to services that were either included in the list of codes specified in section 1834(m)(4)(F)(i) of the Act or added as successor codes to those enumerated by statute. Successor codes are updates to or replacements for the codes listed in section 1834(m)(4)(F)(i) of the Act. Therefore, this proposed step would

ensure that CMS includes successor codes on the Medicare Telehealth Services List. We note that even if a code that we are considering for addition to the Medicare Telehealth Services List is not a successor code, we would consider whether the service described in the submission is similar to professional consultations, office visits, and office psychiatry services that are already on the Medicare Telehealth Services List on a permanent basis. While we have not previously found that the elements of service we are considering for addition to the list map to the elements of a service that was previously added to the list on a permanent basis using the Category 2 criteria, we believe that it would be appropriate to apply this step 4 analysis to compare the candidate service with *any permanent code that is on the list on a permanent basis*. As such, in step 4, we proposed to maintain any previous analytical determinations from Steps 1 through 3 and directly map the successor code to a code on the list that has a permanent status described in previous final rulemaking. For example, if a code currently categorized as a finalized Category 2 permanent code was replaced or revised by a successor code in a future year, CMS would ensure that these revisions did not change the Step 1-3 results and add the successor code under Step 4. We further proposed that if we find that the service we are considering satisfies Step 4, we would end our review and propose to add the service to the Medicare Telehealth Services List on a permanent basis in the next PFS proposed rule. When Step 4 is met, further evidence review is not necessary. We proposed to continue to Step 5 if Step 4 was not met.

**Step 5.** *Consider whether there is evidence of clinical benefit analogous to the clinical benefit of the in-person service when the patient, who is located at a telehealth originating site, receives a service furnished by a physician or practitioner located at a distant site using an interactive telecommunications system*

Similar to Steps 3, 4, and 5 above, the purpose of the proposed step 5 is to simplify and reduce the administrative burden. Under proposed Step 5, we would review the evidence provided with a submission to determine the clinical benefit of a service. We would then compare the clinical benefit of that service, when provided via telehealth, to the clinical benefit

of the service if it were to be furnished in person. Proposed Step 5 would continue the existing standard that we have applied when considering whether to add a code to the Medicare Telehealth Services List on a Category 2 basis. We further proposed that: if there is enough evidence to suggest that further study may demonstrate that the service, when provided via telehealth, is of clinical benefit, CMS would assign the code a "provisional" status on the Medicare Telehealth Services List. Where the clinical benefit of a service, when provided via telehealth, is clearly analogous to the clinical benefit of the service when provided in person, CMS would assign the code "permanent" status on the Medicare Telehealth Services List, even if the code's service elements do not map to the service elements of a service that already has permanent status.

We reminded readers that our evidentiary standard of demonstrated clinical benefit does not include minor or incidental benefits (81 FR 80194), and if finalized, our proposal would not alter or displace this longstanding requirement. We will review the evidence submitted by interested parties, and other evidence that CMS has on hand. The evidence should indicate that the service can be safely delivered using two-way interactive audio-video communications technology. Clinical practice guidelines, peer-reviewed literature, and similar materials, should illustrate specifically how the methods and findings within the material establish a foundation of support that each element of the defined, individual service described by the existing face-to-face service code has been studied in the typical setting of care, typical population of beneficiaries, and typical clinical scenarios that practitioners would encounter when furnishing the service using only interactive, two-way audio-video communications technology to complete the visit or encounter with Medicare beneficiaries. This analysis is fundamental to either of the current Category 1 or Category 2 descriptions.

General evidence may also answer the question of whether a certain beneficiary population requiring care for a specific illness or injury may benefit from receiving a service via telehealth versus receiving no service at all, but must establish that the service is a substitute for

an equivalent in-person service. Evidence should demonstrate how all elements described by the individual service code can be met when two-way, interactive audio-video communications technology is used as a complete substitute for any face-to-face interaction required between the patient and practitioner that are described in the individual code descriptor. We further remind readers that submissions reflecting practitioner services furnished to Medicare beneficiaries are helpful in our considerations.

### **Proposed Assignment of “permanent” or “provisional” Status to a Service and Changes in Status.**

We proposed to assign “permanent” or “provisional” status to any services for which the service elements map to the service elements of a service on the list that has a permanent status described in previous final rulemaking (see proposed step 4) or for which there is evidence of clinical benefit analogous to the clinical benefit of the in-person service when the service is furnished via telehealth by an eligible Medicare telehealth physician or practitioner (see proposed step 5). These two designations (that is, “permanent” or “provisional”) are intended to replace the Category 1-3 taxonomy that CMS currently uses. This proposed change is intended to reduce confusion regarding the status of codes on the Medicare Telehealth Services List and to simplify the outcome of our analysis. After a code receives the “provisional” status, as evidence generation builds, we may assign “permanent” status in a future year, or we may remove the service from the list in the interest of patient safety based on findings from ongoing monitoring of telehealth services within CMS and informed by publicly available information. We would revisit provisional status through our regular annual submissions and rulemaking processes where a submission provides new evidence, or our claims monitoring shows anomalous activity, or as indicated by patient safety considerations. CMS would handle changes in status by revisiting the same steps 1 through 5 above.

### **Summary and Request for Feedback on Proposals to Update the Process of Review for Adding, Removing, or Changing the Status of Services on the Medicare Telehealth List**

In the proposed rule, we noted that the timeline for our proposed process to analyze submissions would remain the same. CY 2025 submissions would be due by February 10, 2024. Additionally, we would continue to address each submitted request for addition, deletion, or modification of services on the Medicare Telehealth Services List through annual notice and comment rulemaking.

As the end of the PHE for COVID-19 was uncertain at the time of last year's rule, many of the submissions for both CY 2023 and CY 2024 involved requests to change the status of services on the Medicare Telehealth Services List from temporary to permanent. In other words, many requestors requested that CMS consider changing the status of one or more services from Category 3 to Category 1 or 2. Based on the number of requests we received asking that CMS assign a different status to a given service, we believe a clarification is necessary to remind readers of the steps that we take when analyzing a given service for addition to, removal from, or a change in status on the Medicare Telehealth Services List. Through this proposal, we intended to refine our process and reduce confusion going forward.

To reiterate some of our discussion above, our proposals are consistent with the existing principles that CMS has applied to requests to add, remove, or change the status of a code during the COVID-19 PHE. When reviewing submissions during the PHE, in the absence of evidence supporting clinical benefit, but public comment expressing support for possible clinical benefit, CMS would generally accept a temporary addition to the Medicare Telehealth Services list, allowing more time for evidence generation. We anticipated that our approach would generally remain consistent with this particular point of flexibility if this proposal were finalized; a code could potentially receive provisional status on the Medicare Telehealth Services List in such a situation, with the caveat that our proposed Steps 1, 2, and 3, are thresholds for inclusion on the Medicare Telehealth Services List. If CMS finds that a service is not separately payable under the PFS (see proposed step 1) or it is not subject to section 1834(m) of the Act (see proposed Step 2), that service would not be added to the Medicare Telehealth Services List on any basis

(and notice of the rejection would be provided to the submitter, as noted above). We do not intend to reject a submission based solely on the fact that the requestor did not request the appropriate basis for consideration; we would still analyze the submission based on the proposed steps, and then we would propose to add, remove, or change the status of the service, or we would explain why we were not doing so.

We received comments on our proposed analysis procedures for additions to, removals from, or changes in status for services on the Medicare Telehealth Services List. The following is a summary of the comments we received and our responses.

*Comment:* Overall, commenters agreed with our proposal. Many commenters expressed general support for our proposal to simplify our process for managing updates to the telehealth list. We did not receive any comments that requested CMS delay or forgo the proposed changes. Some commenters requested more clarity about the timing of updates and requested greater visibility into determinations of permanent or provisional services. Several commenters expressed concern that a static list may not be able to keep pace with innovation or asserted that CMS has not gone far enough with its temporary services policies to allow room for experimentation.

*Response:* We note that our flexibility to make subregulatory changes to the Medicare Telehealth Services List expired at the end of the PHE. As a result, CMS must effectuate any change to the list through notice and comment rulemaking. Further, as we explained in our restatement of the longstanding criteria in this year's proposed rule, the points of evaluation, and timing of review period, both remain unchanged under our proposal. However, we believe modifications to our procedures may result in less confusion. Study and observation of these services in clinical practice add to available evidence, thereby continuing to address gaps in evidence. A revised process lends greater opportunity to focus on evidence generation. Whether a service has an appropriate valuation or whether a clinical action is appropriate as described in the service itself are not open questions, so submissions need not take up those questions. The

matter at hand, is whether audio-video communication can fully substitute in-person interactions and still complete the service while providing clinical benefit. Submissions should include verifiable and transparent studies that compare the typical beneficiary populations who receive the in-person service versus the telehealth service, and set forth methods, analysis, observations, and conclusions that address any differences in receiving in-person versus telehealth service.

*Comment:* Some commenters suggested that CMS need not go beyond Step 3 to determine whether a service should be included on the list. One commenter requested clarification as to whether Step 3 requires, “substantial clinical improvement.”

*Response:* We disagree with commenters that only Steps 1-3 are necessary and remind readers that section 1834(m)(4)(F)(ii) of the Act requires that the Secretary establish a process that provides, on an annual basis, for the addition or deletion of services (and HCPCS codes), to the definition of telehealth services for which payment can be made when furnished via telehealth under the conditions specified in section 1834(m) of the Act. Since we added many services to the Medicare Telehealth List during the PHE, maintaining any of these additional services after the PHE would become difficult to administer in future years without Steps 4 and 5 (or something analogous) because Steps 1-3 only consider whether 1834(m) may apply, whereas later steps help us decide whether there is clinical benefit for a service when face-to-face interactions are substituted with the use of two-way audio-video communications technology.

Stopping at Step 3 would leave us without some basis that the full service could be performed without fundamentally changing the design, meaning, and RVUs already established in making the code payable under the PFS, for any given code we review for consideration on our Medicare Telehealth List. Analysis of the effects of complete substitution of any and all of the otherwise in-person elements in a given code happens in two ways. If the individual code is so similar to the statutorily enumerated codes described in section 1834(m) of the Act, then the code may be added without further examination (that is, without Step 4).

Responsive to concerns that the review process may not keep pace with innovation, we disagree that Steps 4 and 5 threaten innovation. We also do not believe that the update and review process for the Medicare Telehealth List should be the driver for innovation. We note this Step 3 analysis is different from any substantial clinical improvement analysis. Our process is intended to strike a balance between the uncertainty of innovation, which may not be well-accounted for in the framework of section 1834(m) of the Act, with our recent history of regulations promulgated to implement the statutory requirements of section 1834(m) of the Act.

*Comment:* A few commenters expressed concern that we have hesitated or declined to extend telehealth flexibilities over the past 3 years and have added significant qualifiers, including in-person requirements, to mental health services. Other commenters expressed concern that maintaining the PHE flexibilities may interfere with the doctor-patient relationship or create the unintended consequence of reducing access and clinical benefits of in-person care. There remains a diversity of opinions across various interested parties.

*Response:* We note that CMS has implemented a broad range of telehealth flexibilities and related policies to expand access to services and address gaps in care, including a focus on expanding access to behavioral health. We believe it is important to note that Congress mandated the in-person requirements for Medicare telehealth services for diagnosis, evaluation, or treatment of a mental health disorder through the CAA, 2021, and has twice delayed the requirement in the CAA, 2022 and CAA, 2023. As a result, we have not yet enforced the in-person requirement for telehealth services for diagnosing, evaluating, or treating a mental health disorder.

We are finalizing, as proposed, our consolidation of categories for services currently on the Medicare Telehealth List, as described in the following section.

d. Consolidation of the Categories for Services Currently on the Medicare Telehealth Services List.

We also proposed consolidating Categories 1, 2, and 3, as proposed above, for all services currently on the Medicare Telehealth Services List. For CY 2024, we proposed to redesignate any services that are currently on the Medicare Telehealth Services List on a Category 1 or 2 basis and would be on the list for CY 2024 to the proposed new “permanent,” category while any services currently added on a “temporary Category 2” or Category 3 basis would be assigned to the "provisional" category. We believe redesignations in this calendar year would help ease confusion in future years, including in the event of subsequent legislation regarding Medicare telehealth services.

Furthermore, for a code that receives provisional status, as evidence generation builds, we may grant the code a permanent status in a future year or remove the service from the list in the interest of patient safety based on findings from ongoing monitoring of telehealth services within CMS and informed by publicly available information. Our proposal did not set any specific timing for reevaluation of services added to the Medicare Telehealth Services List on a provisional basis because evidence generation may not align with a specific timeframe. Our proposal not to establish any specific timing for considering changes from provisional to permanent status avoids a potential situation in which we must remove provisional services from the Medicare Telehealth Services List because the set period tolls, only to later find evidence demonstrating that the removed service should receive permanent status. Under our proposal, we would assign a provisional status for codes that satisfy the proposed threshold steps (1, 2, and 3), and then the evidence available leaves a “close call” between permanent and provisional status. We do not assign provisional status when it is improbable that the code would ever achieve permanent status.

We received comments on our proposal to consolidate categories for services currently on the Medicare Telehealth List. The following is a summary of the comments we received and our responses.

*Comment:* Overall, commenters expressed support for our proposal to consolidate categories for services currently on the list. Some commenters requested that CMS set a specific timing, with more transparency about the change in status of provisional codes. Commenters also asserted that CMS should broaden its narrow interpretation of the requirements of section 1834(m) of the Act. Many commenters referenced the *CONNECT for Health Act*, HR 3875 / S.2016 (refer to [congress.gov/bill/118th-congress/house-bill/3875/committees?s=1&r=38](https://congress.gov/bill/118th-congress/house-bill/3875/committees?s=1&r=38)).

*Response:* We reiterate our discussion of timing and note that CMS has no plans to remove any provisional service from the current telehealth list where evidence generation remains in-process, and the individual code is subject to section 1834(m) of the Act. We would remove a provisional service from the list if evidence demonstrated patient safety issues. Our consideration of provisional services requires us to balance the statutory requirements of section 1834(m) of the Act with the availability of clinical evidence. The statutory and clinical research landscapes may change on a different timing and cadence.

Regarding the timing and change in status of a provisional code to a permanent code, this change in status would depend on a few factors. For example, if we become aware of updated clinical guidelines reflecting changes that show it is appropriate for the Medicare population to receive a telehealth service identified as provisional, then we would consider that evidence as support for a potential change from provisional to permanent status. For further background, we refer readers to the section that follows. We disagree with commenters who suggested that our interpretation of section 1834(m) of the Act is excessively narrow.

We believe it remains important to underscore that the purpose of designations of permanent versus provisional services on the Medicare Telehealth List is to signal where more study is necessary while avoiding the unintended consequence where a change in status itself drives the formation of new clinical standards or practices.

Table 11 lists codes we are finalizing for the Medicare Telehealth Services List and includes the simplified categorization of each service as either provisional or permanent. The

provisional services are those that are currently temporary, while the permanent services are those that are currently permanent as category 1 or 2. As in Medicare Telehealth Services Lists included in previous PFS final rules and posted on our website at <https://www.cms.gov/medicare/coverage/telehealth/list-services>, the audio-only column designates those services that may be furnished using audio-only technology, including telehealth services for mental health (including SUD). We are finalizing our proposal to use the simplified “provisional” or “permanent” designations for the current year, and to apply our revised review process beginning with reviews for the CY 2025 PFS proposed rule.

**TABLE 11: CY 2024 Medicare Telehealth Services List**

e. Implementation of Provisions of the CAA, 2023

(1) *Overview and Background*

The CAA, 2022 included several provisions that extend certain Medicare telehealth flexibilities adopted during the COVID-19 PHE for 151 days after the end of the PHE.

Specifically, sections 301 through 305 of Division P, Title III, Subtitle A of the CAA, 2022 amended section 1834(m) of the Act to generally extend certain PHE-related telehealth policies for services that were on the Medicare Telehealth Services List as of the date of enactment (March 15, 2021). The CAA, 2022, temporarily removed restrictions on telehealth originating

sites for those services to allow telehealth services to patients located in any site in the United States at the time of the telehealth service, including an individual's home; expanded the definition of telehealth practitioners to include qualified occupational therapists, qualified physical therapists, qualified speech-language pathologists, and qualified audiologists; continued payment for telehealth services furnished by FQHCs and RHCs using the methodology established for those telehealth services during the PHE; delayed the requirement for an in-person visit with the physician or practitioner within 6 months prior to initiating mental health telehealth services to a beneficiary in their home, and again at subsequent intervals as the Secretary determines appropriate, as well as similar requirements for RHCs and FQHCs; and continued to provide for payment of telehealth services included on the Medicare Telehealth Services List as of the March 15, 2020, that are furnished via an audio-only telecommunications system. A full discussion of these policies available in the CY 2023 PFS final rule at 87 FR 69462.

In addition, section 309 of the CAA, 2022 authorized the Secretary to implement the amendments described above, made by sections 301 through 305, through program instruction or otherwise. In the CY 2023 PFS final rule (87 FR 69446), we finalized specific telehealth policies to conform to and align with amendments made by the CAA, 2022. In our CY 2023 PFS final rule (87 FR 69462-69464), we described how CMS would issue program instructions to implement specific requirements of the CAA, 2022. We also implemented the provisions enacted in the CAA, 2022 for a 151-day extension period of certain telehealth flexibilities (discussed previously in this final rule). On December 29, 2022, the President signed the CAA, 2023 into law. Section 4113 of the CAA, 2023 further extends the previously-extended PHE-related telehealth policies; it requires CMS to extend the telehealth flexibilities that were previously extended (initially for 151 days after the end of the PHE) under the CAA, 2022, through December 31, 2024.

We seek to address various telehealth policies that we finalized in the CY 2023 final rule, in light of the CAA, 2023. For example, the 151-day extension period for certain flexibilities discussed in our CY 2023 final rule (and previously in this final rule) no longer applies, since section 4113 of the CAA, 2023 extends these flexibilities until December 31, 2024 (the extended flexibilities include: temporary expansion of the scope of telehealth originating sites for services furnished via telehealth to include any site in the United States where the beneficiary is located at the time of the telehealth service, including an individual's home; expansion of the definition of eligible telehealth practitioners to include qualified occupational therapists, qualified physical therapists, qualified speech-language pathologists, and qualified audiologists; continued payment for telehealth services furnished by FQHCs and RHCs using the methodology established for those telehealth services during the PHE; delaying the requirement for an in-person visit with the physician or practitioner within 6 months prior to initiating mental health telehealth services, and again at subsequent intervals as the Secretary determines appropriate, as well as similar requirements for RHCs and FQHCs; and continued coverage and payment of telehealth services included on the Medicare Telehealth Services List as of March 15, 2020) until December 31, 2024. Both the CAA, 2022 and CAA, 2023 have the same operative effect on the scope of Medicare telehealth services; both the CAA, 2022 and CAA, 2023 give the Secretary the authority to implement the relevant telehealth provisions outside of notice and comment rulemaking through program instruction or otherwise. We intend to implement the provisions discussed above, as enacted by the CAA, 2023.

Similar to the goals of our telehealth policies addressed in last year's final rule, for CY 2024, we again seek to retain payment stability, reduce confusion, and burden, and conform to all statutory requirements without unnecessary restrictions on beneficiaries' access to telehealth care. Our discussion here does not alter payment amounts or billing rules that are in effect as of January 1, 2023, and those policies will remain in effect through December 31, 2024. Instead, it is our intent in this final rule to clarify that certain telehealth flexibilities that were previously

extended until 151 days after the end of the PHE, by the CAA, 2022, have been extended until December 31, 2024, in accordance with the amendments made by provisions of the CAA, 2023.

*(2) In-person Requirements for Mental Health Telehealth*

Section 4113(d)(1) of section FF, Title IV, Subtitle B of the CAA, 2023 amends section 1834(m)(7)(B)(i) of the Act to delay the requirement for an in-person visit with the physician or practitioner within 6 months prior to the initial mental health telehealth service, and again at subsequent intervals as the Secretary determines appropriate. In light of this amendment, the in-person requirements for telehealth services furnished for purposes of diagnosis, evaluation, or treatment of a mental health disorder will again be effective on January 1, 2025. In addition, 4113(d)(2) of section FF, Title IV, Subtitle B of the CAA, 2023 modified sections 1834(y) and 1834(o)(4) of the Act, respectively, to similarly delay in-person visit requirements for mental health visits furnished by Rural Health Clinics and Federally Qualified Health Centers via telecommunications technology. Therefore, we proposed to revise the regulatory text at § 410.78(b)(3)(xiv) and (b)(4)(iv)(D) to recognize the delay of the in-person requirements for mental health visits furnished by RHCs and FQHCs through telecommunication technology under Medicare until January 1, 2025, rather than until the 152<sup>nd</sup> day after the end of the PHE, to conform with the CAA, 2023. See section III.B. of this final rule for our provision to implement similar changes for RHC and FQHC mental health visits.

We received public comments on the proposal to delay in-person requirements for mental health telehealth. The following is a summary of the comments we received and our responses.

*Comment:* Some commenters supported our proposals to extend the delay of in-person requirements for mental health telehealth. We received many form letters in a coordinated response from state health organizations that requested we make the delay permanent. Some commenters highlighted that recent data suggest that even in complex patients with significant

behavioral health issues, virtual-only care does not result in worse outcomes. The feedback also cited findings of significant behavioral healthcare workforce shortages that are likely to persist.<sup>5</sup>

*Response:* We thank commenters for the feedback. We understand why some commenters might want us to extend the delay of in-person requirements for mental health telehealth permanently, but we remind commenters that we are simply revising the regulations to conform to the requirements in section 4113(d) of section FF, title IV, Subtitle B of the CAA, 2023, which only delays in-person requirements for telehealth services furnished for purposes of diagnosis, evaluation, or treatment of a mental health disorder through the end of CY 2024.

*Comment:* Some commenters stated that CMS should implement the in-person requirements when the delay mandated by the CAA, 2023 expires. One life sciences company expressed concern that in absence of regular in-person care, practitioners may not appropriately manage therapy regimens for patients who receive medication to treat certain mental health conditions. A State-wide medical professional organization with a significant rural population cautioned against further delay of requirements and noted concern that direct-to-consumer telehealth entities may be engaging with beneficiaries in ways that raise concerns.<sup>6</sup> One commenter stated that an indefinite delay of in-person requirements may risk communication benefits that come with in-person interactions important in the Medicare population.<sup>7</sup>

*Response:* We thank commenters for the feedback, and we direct them to the statutory requirements specified in the CAA, 2023 and described in further detail previously in this section.

---

<sup>5</sup> Many commenters made general statements about shortages without specific studies or data. We did receive form letter responses with various sources for statistic, and some with sources unavailable. CMS staff found the following resource referenced in some comments, but at a different location. “In 2021, health centers employed 17,415 full-time behavioral health staff, with psychiatrists and licensed clinical psychologists making up 10% of that workforce at 5% each. Document at <https://www.nachc.org/wp-content/uploads/2023/07/Community-Health-Center-Chartbook-2023-2021UDS.pdf>.

<sup>6</sup> The commenter included a link to investigative journalism focused on the issue, available at <https://www.codastory.com/waronscience/pseudohealth/telehealth-companies-misinformation/#:~:text=Bypassing%20traditional%20healthcare,your%20health%20itself>.

<sup>7</sup> The commenters referenced recent peer-reviewed literature available at <https://journals.sagepub.com/doi/full/10.1177/10748407211031980>.

We are finalizing as proposed our policy to delay in-person requirements for telehealth behavioral health services until January 1, 2025.

We remind suppliers of behavioral health services who furnish telehealth services to beneficiaries for purposes of diagnosis, treatment, and management of behavioral health conditions (including SUD), that the in-person requirements for behavioral telehealth services set forth in our regulations at § 410.78(b)(3)(xiv) are set to take effect beginning for CY 2025. Section 410.78(b)(3)(xiv)(A) requires that the initial telehealth service shall be furnished only after an in-person visit within 6 months of the initial telehealth service; § 410.78(b)(3)(xiv)(B) requires that any subsequent telehealth service, that is, for established patients with both a prior in-person visit, and an initial telehealth visit, must be furnished only when the beneficiary has received an in-person service no longer than 12 months prior; and § 410.78(b)(3)(xiv)(B) provides flexibility to recognize beneficiary preferences, including that concerns of privacy or other burdens and risks may dictate a longer interval between the most recent in-person visit and a subsequent telehealth visit, when circumstances dictate an exception, the documentation substantiating the need for such an exception must be documented in the medical record; and § 410.78(b)(3)(xiv)(C) specifies that either in-person requirement (initial or subsequent) may be met by another practitioner of the same specialty and subspecialty in the same group as the practitioner that furnishes the telehealth services only when the practitioner who furnishes the telehealth service is not available.

We reiterate rules that we finalized and discussed at length in previous rulemaking (87 FR 69463 and 69464; 86 FR 65055 through 65059), in response to some confusion expressed by commenters on the scope of the in-person requirements, and divergent views on possible unintended consequences of maintaining or eliminating the in-person requirements. The regulations at § 410.78(b)(3)(xiv) describe two exceptions to the in-person requirements that will go into effect on January 1, 2025: beneficiaries who already receive telehealth behavioral health services and have circumstances where in-person care may not be appropriate would have an

exception and groups with limited availability for in-person behavioral health visits would have available the flexibility to arrange for practitioners to furnish in-person and telehealth visits with different practitioners, based on availability.

### *(3) Originating Site Requirements*

Section 4113(a)(2) of the CAA, 2023 amended section 1834(m)(4)(C)(iii) of the Act to temporarily expand the telehealth originating sites for any service on the Medicare Telehealth Services List to include any site in the United States where the beneficiary is located at the time of the telehealth service, including an individual's home, beginning on the first day after the end of the PHE for COVID-19 through December 31, 2024. The list of telehealth originating sites remains as listed in our regulation at § 410.78(b)(3).

We received public comments on the proposal to temporarily expand telehealth originating sites to include the patient's home, for any non-mental health telehealth service on the Medicare Telehealth Services List through December 31, 2024. The following is a summary of the comments we received and our responses.

*Comment:* Commenters urged CMS to maintain the definition of “the patient’s home” under §410.78(b)(3) to broadly include homeless shelters, group homes, or other settings that the beneficiary identifies as their home or residence, whether permanent or temporary.

*Response:* As discussed in the CY 2022 PFS final rule (FR 86 65059), our definition of home, both in general and for this purpose, continues to include temporary lodging such as hotels and homeless shelters. As stated in that final rule, for circumstances where the patient, for privacy or other personal reasons, chooses to travel a short distance from the exact home location during a telehealth service, the service is still considered to be furnished “in the home of an individual” for purposes of section 1834(m)(4)(C)(ii)(X) of the Act.

*Comment:* We received many comments that requested CMS clarify policies related to, but separate from, our originating site proposals. Commenters expressed concerns regarding the expiring flexibility for telehealth practitioners to use their currently enrolled location instead of

their home address when providing services from their home. CMS issued an FAQ, available at <https://www.cms.gov/files/document/physicians-and-other-clinicians-cms-flexibilities-fight-covid-19.pdf>, which extended the flexibility through December 31, 2023. We also met with a coalition of interested parties to receive feedback on this particular issue, during the comment period. The interested parties suggested that expiration of this flexibility poses a potential and imminent threat to public safety (that is, the safety of the health care workforce). In these comments and our meeting with the coalition, interested parties voiced concerns about the safety and privacy of health professionals who work from home and furnish telehealth services. Commenters requested that CMS take steps to protect telehealth practitioners by adjusting enrollment requirements so that individual practitioners did not have to list their home addresses on enrollment forms. The commenters also cited recent examples of workplace violence in health care facilities, where direct harm to nurses and other medical staff occurred. As an additional consideration, interested parties explained that a significant number of practices and providers would need to change billing practices or add their home address to the Medicare enrollment file, coordinating with the appropriate Medicare Administrative Contractor in their jurisdiction.

*Response:* We thank commenters for bringing this issue to our attention. Through CY 2024, we will continue to permit the distant site practitioner to use their currently enrolled practice location instead of their home address when providing telehealth services from their home. We will also consider this issue further for future rulemaking and request that interested parties provide clear examples of how the enrollment process shows material privacy risks to inform future enrollment and payment policy development. We request further information from interested parties to better understand the scope of considerations involved with including a practitioner's home address as an enrolled practice location when that address is the distant site location where they furnish Medicare telehealth services

*(4) Telehealth Practitioners*

Section 4113(b) of the CAA, 2023 amends section 1834(m)(4)(E) of the Act to require that qualified occupational therapists, qualified physical therapists, qualified speech-language pathologists, and qualified audiologists continue to be included as telehealth practitioners beginning on the first day after the end of the PHE for COVID-19 through December 31, 2024. Therefore, the list of telehealth practitioners remains as described in our CY 2023 final rule. We will also recognize marriage and family therapists (MFT) and mental health counselors (MHC) as telehealth practitioners, effective January 1, 2024, in accordance with amendments made by section 4121 of the CAA, 2023. That section of the CAA, 2023 amends section 1861(s)(2) of the Act by adding a new subparagraph (II) that establishes a new benefit category under Part B for marriage and family therapist services (as defined in section 1861(III)(1)) of the Act and mental health counselor services (as defined in section 1861(III)(3) of the Act). Further, section 4121(a)(5) of the CAA, 2023 amended section 1842(b)(18)(C) of the Act to add MFTs and MHCs to the list of practitioners to whom Medicare payment may be made for their services on a reasonable charge or fee schedule basis only on an assignment-related basis. Because the definition of practitioners in section 1834(m)(4)(E) of the Act for purposes of Medicare telehealth services includes the practitioners described in section 1842(b)(18)(C) of the Act, this provision also has the effect of adding MFTs and MHCs as practitioners who can furnish telehealth services.

We proposed to amend § 410.78(b)(2) to add new paragraphs (xi) and (xii) to specify that a marriage and family therapist as described in proposed § 410.53 and a mental health counselor as described in proposed § 410.54 are included as distant site practitioners for purposes of furnishing telehealth services.

We received public comments on the proposal to permanently add MFTs and MHCs as distant site practitioners for purposes of furnishing telehealth services. The following is a summary of the comments we received and our responses.

*Comment:* Commenters expressed support for our proposals.

*Response:* After consideration of public comments, we are finalizing our proposal to add MFTs and MHCs as distant site practitioners for purposes of furnishing telehealth services. We are finalizing our proposed amendments to add MFTs and MHCs to the list of distant site practitioners in the telehealth regulation at § 410.78(b)(2)(xi),(xii).

#### (5) Audio-Only Services

Section 4113(e) of Division FF, Title IV, Subtitle C of the CAA, 2023 amends section 1834(m)(9) of the Act to require that the Secretary shall continue to provide for coverage and payment of telehealth services via an audio-only communications system during the period beginning on the first day after the end of such emergency period and ending on December 31, 2024. This provision applies only to telehealth services specified on the Medicare Telehealth Services List under section 1834(m)(4)(F)(i) of the Act that are permitted to be furnished via audio-only technology as of the date of enactment of the CAA, 2023 (that is, December 29, 2022).

As discussed below in the section titled "Other Clarifications for Appropriate Billing," CPT codes 99441 through 99443 are on the Medicare Telehealth Services List and will remain actively priced through 2024. We proposed to continue to assign an active payment status to CPT codes 98966 through 98968 for CY 2024.

#### e. Place of Service for Medicare Telehealth Services

When a physician or practitioner submits a claim for their professional services, including claims for telehealth services, they include a Place of Service (POS) code that is used to determine whether a service is paid using the facility or non-facility rate. Under the PFS, there are two payment rates for many physicians' services: the facility rate, which applies when the service is furnished in hospital or skilled nursing facility (SNF) setting, and the non-facility rate, which applies when the service is furnished in an office or other setting. The PFS non-facility rate is the single geographically adjusted fee schedule amount paid to a physician or other practitioner for services furnished in their office or other non-facility outpatient setting. The PFS

facility rate is the single, geographically adjusted amount paid to a physician or other practitioner when a service is furnished in a hospital or SNF setting where Medicare is making a separate payment for the services to the facility in addition to the payment to the billing physician or practitioner for their professional services. This separate payment to the facility (hospital or SNF), often referred to as a “facility fee,” is made under other payment systems and reflects the facility’s costs associated with the service (clinical staff, supplies, equipment, overhead) and is paid in addition to what is paid to the professional under the PFS.

Prior to CY 2017, Medicare telehealth services were reported using the GT modifier. In the CY 2017 PFS final rule, we finalized creation of a new Place of Service (POS) code to identify services furnished as Medicare telehealth services, POS “02” (81 FR 80199-80201). In the CY 2022 PFS final rule, we created a new POS code “10” to identify Medicare telehealth services for which the patient’s home is the originating site (87 FR 70110 and 70111).

In response to the PHE for COVID-19, we adopted temporary policies for POS codes and PFS payment rates applicable to Medicare telehealth services. As discussed in the March 31, 2020 IFC, (85 FR 19230), we stated that, as physician practices suddenly transitioned a potentially significant portion of their services from in-person to telehealth visits in the context of the PHE for COVID-19, the relative resource costs of furnishing these services via telehealth may not significantly differ from the resource costs involved when these services are furnished in-person. Therefore, we instructed physicians and practitioners who billed for Medicare telehealth services to report the POS code that they would have reported had the service been furnished in-person. This would allow our systems to make appropriate payment for services furnished via Medicare telehealth, which, if not for the PHE for COVID-19, would have been furnished in-person, at the same rate they would have been paid if the services were furnished in-person. In order to effectuate this change, we finalized on an interim basis (85 FR 19233) the use of the CPT telehealth modifier, modifier “95”, for the duration of the PHE for COVID-19, which is applied to claim lines that describe services furnished via telehealth; and that the practitioner

should report the POS code where the service would have occurred had it not been furnished via telehealth. This allowed telehealth services to be paid at the PFS non-facility rate.

We further noted that we were maintaining the facility payment rate for services billed using the general telehealth POS code “02”, should practitioners choose to maintain their current billing practices for Medicare telehealth during the PHE for COVID-19. In the CY 2023 PFS final rule (87 FR 69467), we finalized that we would continue to maintain payment at the rate for a service had the service been furnished in person, and that this would allow payments to continue to be made at the non-facility based rate for Medicare telehealth services through the latter of the end of CY 2023 or the end of the calendar year in which the PHE ends.

In the CY 2023 PFS final rule (87 FR 69467), we finalized that, following the end of the end of the calendar year in which the PHE ends, practitioners will no longer bill claims with Modifier ‘95’ along with the POS code that would have applied had the service been furnished in person, and telehealth claims will instead be billed with the POS indicators:

- POS "02" - is redefined as Telehealth Provided Other than in Patient’s Home (Descriptor: The location where health services and health related services are provided or received, through telecommunication technology. Patient is not located in their home when receiving health services or health related services through telecommunication technology.); and
- POS “10” - Telehealth Provided in Patient’s Home (Descriptor: The location where health services and health related services are provided or received through telecommunication technology. Patient is located in their home (which is a location other than a hospital or other facility where the patient receives care in a private residence) when receiving health services or health related services through telecommunication technology.).

We recognize that, beginning with the PHE for COVID-19, behavioral health services that otherwise would have been furnished in-person have been furnished via telehealth in the patient’s home. With few exceptions, prior to the PHE for COVID-19, originating sites were limited to sites such as physician’s offices and hospitals. Now that behavioral health telehealth

services may be furnished in a patient's home, which now may serve as an originating site, we believe these behavioral health services are most accurately valued the way they would have been valued without the use of telecommunications technology, namely in an office setting. There was an increase in utilization of these mental health services during the PHE that has persisted throughout and after expiration of the PHE for COVID-19. It appears that practice patterns for many mental health practitioners have evolved, and they are now seeing patients in office settings, as well as via telehealth. As a result, these practitioners continue to maintain their office presence even as a significant proportion of their practice's utilization may be comprised of telehealth visits. As such, we stated that we believe their practice expense (PE) costs are more accurately reflected by the non-facility rate.

Therefore, we proposed that, beginning in CY 2024, claims billed with POS 10 (Telehealth Provided in Patient's Home) would be paid at the non-facility PFS rate. When considering certain practice situations (such as in behavioral health settings, where practitioners have been seeing greater numbers of patients via telehealth), practitioners will typically need to maintain both an in-person practice setting and a robust telehealth setting. We expect that these practitioners will be functionally maintaining all of their PEs, while furnishing services via telehealth. When valuing services, we believe that there are few differences in PE when behavioral health services are furnished to a patient at home via telehealth as opposed to services furnished in-person (that is, behavioral health settings require few supplies relative to other healthcare services). Claims billed with POS 02 (Telehealth Provided Other than in Patient's Home) will continue to be paid at the PFS facility rate beginning on January 1, 2024, as we believe those services will be furnished in originating sites that were typical prior to the PHE for COVID-19, and we continue to believe that, as discussed in the CY 2017 PFS final rule (81 FR 80199 through 80201), the facility rate more accurately reflects the PE of these telehealth services; this applies to non-home originating sites such as physician's offices and hospitals. In this way, we believe we would be protecting access to mental health and other telehealth services

by aligning with telehealth-related flexibilities that were extended via the CAA, 2023, as we will be more accurately recognizing the resource costs of behavioral health providers, given shifting practice models.

We received public comments on the proposal that claims billed with POS 10 be paid at the non-facility PFS rate, and claims billed with POS 02 will continue to be paid at the facility rate. The following is a summary of the comments we received and our responses.

*Comment:* Many commenters stated that our proposal would enhance patient access and protect payment parity. Other commenters supported paying claims billed with POS 10 at the non-facility rate but opposed maintaining payment for claims billed with POS 02 at the facility rate, stating that this will reduce access to telehealth services by disincentivizing office-based practices by paying a lower PE RVU in instances where there is a site of service differential. A few commenters opposed paying the non-facility rate for any telehealth service, stating that the facility rate more accurately reflects the resource-based costs of telehealth services. Some commenters urged us to continue allowing practitioners to report the POS code that they would have used had the service been furnished in person. One commenter urged us to gather more data on the PE resource costs associated with telehealth services for a range of services before paying the higher, non-facility rate; this commenter stated that if rates for telehealth services continue to be set equal to rates for in-office services, providers may face a strong financial incentive to favor these services over comparable in-person services, even when an in-person service may be more clinically appropriate. A commenter requested that CMS wait until the potential implementation of the telemedicine codes that CPT is considering for 2025 until revising the current place of service policy for telehealth services.

*Response:* Telehealth services that are not furnished in the patient's home will continue to be furnished in the same types of originating sites in which they were furnished prior to the PHE, such as hospitals or rural health clinics; therefore, the resource costs associated with these services will resemble those of services furnished in person in a facility setting as they did prior

to the PHE. As discussed in the 2017 final rule (81 FR 80199 -80200), for telehealth services, we believe that facility costs (clinical staff, supplies, and equipment) associated with furnishing the service would generally be incurred by the originating site, where the patient is located, and not by the practitioner at the distant site. The statute requires Medicare to pay a fee to the site that hosts the patient. This is analogous to the circumstances under which the facility PE RVUs are used to pay for services under the PFS. That is why we believe that the facility PE RVUs most accurately reflect the resource costs for telehealth services when the home is not the originating site. We note that beginning in 2025, most telehealth services will once again be subject to the statutory restrictions under section 1834(m)(4), including the limitation on payment for telehealth services to those furnished in specified originating sites and in areas that are designated as a rural health professional shortage area or in a county that is not included in a Metropolitan Statistical Area and to sites that are certain medical facilities such as physician offices, hospitals, and skilled nursing facilities. Following 2024, mental health telehealth services, as previously noted, as well as certain other services including End-Stage Renal Disease (ESRD)-related services for home dialysis, will continue to be paid when furnished in the patient's home without geographic restrictions. They will more likely be furnished by office-based mental health practitioners. Practitioners furnishing mental health services via telehealth will more typically be practicing in non-facility based settings, rather than in facility settings that are associated with originating sites that were eligible originating sites prior to the addition of the home as an originating site, and they are therefore more likely to have office-based practices and so are incurring all of those resource costs. Beginning in 2025, in-person visit requirements will apply for mental health services furnished via telehealth. This includes a required in-person visit within the six months prior to the initial telehealth treatment as well as the requirement that subsequent in-person visits be furnished at least every 12 months. Therefore, mental health practitioners necessarily will be maintaining offices as they will be required to have in-person visits, and we believe they will be incurring the PE costs of maintaining these hybrid models. We

also note that claims data indicate that during the PHE, the majority of mental health services that were furnished via telehealth were billed with the POS associated with the office setting. We believe that for mental health services furnished via telehealth, resource costs will be incurred by the distant site provider, where the practitioner is located, and not by the originating site, unlike other telehealth services for which we believe the resource costs will continue to be incurred by the originating site, where the patient is located, and not by the practitioner at the distant site. Therefore, we continue to believe that paying for claims billed with POS 10 at the non-facility rate while continuing to pay for claims billed with POS 02 at the facility rate most accurately captures the resource costs inherent in these types of telehealth visits.

*Comment:* A commenter requested that CMS clarify that CMS will pay the PFS non-facility rate for any service appended with POS 10, not just mental health services.

*Response:* We clarify that any service appropriately billed with POS 10 will be paid at the non-facility rate.

*Comment:* A few commenters requested that CMS clarify the appropriate billing and payment for telehealth services when the clinician is in the hospital and the patient is in the home, and whether we require that facility-based clinicians should report POS 02.

*Response:* We wish to clarify that for telehealth services, when the clinician is in the hospital and the patient is in the home, the billing practitioner should use a hospital POS code along with modifier '95.'

*Comment:* Some commenters requested that CMS confirm that all outpatient therapy telehealth services will continue to be paid at the non-facility rate regardless of the POS code, citing manual language in Chapter 12 Section 20.4.2 that states: "Non-facility rates are applicable to outpatient rehabilitative therapy procedures, including those relating to physical therapy, occupational therapy and speech-language pathology, regardless of whether they are furnished in facility or non-facility settings."

*Response:* We wish to clarify that, for outpatient therapy services furnished via telehealth by PT, OT, or SLP distant site practitioners, the furnishing practitioner should continue to append the 95 modifier to identify them as telehealth services rather than a telehealth POS code. We also note that payment will continue to be made for telehealth services furnished by distant site PTs, OTs, or SLPs through the end of CY 2024, and that these services will continue to be paid the non-facility rate.

*Comment:* Some commenters expressed uncertainty about whether use of POS 10 would be appropriate when furnishing telehealth services to beneficiaries located in their homes for reasonable and necessary care related to the treatment of an injury or illness for something not related to the diagnosis, treatment, or management of an ongoing behavioral health, mental health, or SUD issue.

*Response:* After consideration of public comments, we are finalizing as proposed that beginning in CY 2024, claims for telehealth services billed with POS 10 will be paid at the non-facility PFS rate. Claims billed with POS 02 will continue to be paid at the facility rate. In addition, we are clarifying that modifier '95' should be used when the clinician is in the hospital and the patient is in the home, as well as for outpatient therapy services furnished via telehealth by PT, OT, or SLP.

#### f. Frequency Limitations on Medicare Telehealth Subsequent Care Services in Inpatient and Nursing Facility Settings, and Critical Care Consultations

When adding some services to the Medicare Telehealth Services List in the past, we have included certain restrictions on how frequently a service may be furnished via Medicare telehealth. These limitations include a limit of once every 3 days for subsequent inpatient visits, added in in the CY 2011 PFS final rule (75 FR 73317 through 73318), and once every 14 days for subsequent nursing facility (NF) visits, added in the CY 2016 final rule (80 FR 71062) furnished via Medicare telehealth and a limit of once per day for critical care consultation services; in establishing these limits, we cited concerns regarding the potential acuity of these patients. End-

stage renal disease (ESRD)-related clinical assessments may be furnished via telehealth, subject to the frequency limitations in section 1881(b)(3)(B) of the Act, which provides that patients must receive a face-to-face visit, without the use of telehealth, at least monthly in the case of the initial 3 months of home dialysis and at least once every 3 consecutive months after the initial 3 months.

In the March 31, 2020 COVID-19 IFC (85 FR 19241), we stated that as it was our assessment that there was a patient population who would otherwise not have had access to clinically appropriate in-person treatment, and we did not believe these frequency limitations were appropriate or necessary under the circumstances of the PHE. Therefore, we removed the frequency restrictions for certain subsequent inpatient visits, subsequent NF visits, and for critical care consultations furnished via Medicare telehealth for the duration the PHE for COVID-19. The frequency limitations resumed effect beginning on May 12, 2023, (upon expiration of the PHE), in accordance with the March 31, 2020 IFC. However, we stated that, pursuant to waiver authority added under section 1135(b)(8) of the Act by the Coronavirus Preparedness and Response Supplemental Appropriations Act, 2020<sup>8</sup>, we were exercising enforcement discretion and will not consider these frequency limitations through December 31, 2023; and that we anticipated considering our policy further through our rulemaking process. As discussed below, we proposed once again remove these telehealth frequency limitations beginning CY 2024. We proposed to remove the telehealth frequency limitations for the following codes:

1. Subsequent Inpatient Visit CPT Codes:

- 99231 (*Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level of medical decision making. when using total time on the date of the encounter for code selection, 25 minutes must be met or exceeded.*);

---

<sup>8</sup> <https://www.cms.gov/files/document/physicians-and-other-clinicians-cms-flexibilities-fight-covid-19.pdf>.

- 99232 (*Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. when using total time on the date of the encounter for code selection, 35 minutes must be met or exceeded.*); and

- 99233 (*Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making. when using total time on the date of the encounter for code selection, 50 minutes must be met or exceeded.*)

## 2. Subsequent Nursing Facility Visit CPT Codes:

- 99307 (*Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. when using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.*);

- 99308 (*Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and low level of medical decision making. when using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.*);

- 99309 (*Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. when using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.*); and

- 99310 (*Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making. when using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.*)

## 3. Critical Care Consultation Services: HCPCS Codes

- G0508 (*Telehealth consultation, critical care, initial, physicians typically spend 60 minutes communicating with the patient and providers via telehealth.*); and
- G0509 (*Telehealth consultation, critical care, subsequent, physicians typically spend 50 minutes communicating with the patient and providers via telehealth.*)

We proposed to remove the frequency limitations for these codes for the duration of CY 2024, which aligns with other telehealth-related flexibilities extended by the CAA, 2023. CMS is broadly assessing our telehealth regulations, in light of the way practice patterns may have changed in the roughly 3 years of the PHE for COVID-19 and, while we engage in this assessment, we believe it is reasonable to pause certain pre-pandemic restrictions, such as these frequency limitations, to allow us to gather more information. We are seeking information from interested parties on how practitioners have been ensuring that Medicare beneficiaries receive subsequent inpatient and nursing facility visits, as well as critical care consultation services since the expiration of the PHE.

We received public comments on our proposals to remove frequency limitations for Medicare Telehealth Subsequent Care Services in Nursing Facility Settings, Subsequent Nursing Facility Visit, and Critical Care Consultations. The following is a summary of the comments we received and our responses.

*Comment:* Many commenters supported our proposal to remove frequency limitations for 2024 for Medicare Telehealth Subsequent Care Services in Nursing Facility Settings, Subsequent Nursing Facility Visit, and Critical Care Consultations, stating that these frequency limitations are arbitrary and would result in decreased access to care, potentially leading to negative clinical outcomes. Some commenters urged us to remove these limits permanently; according to one such commenter, practitioners should be allowed to use their clinical judgment to determine the type of visit, how many visits, and the type of treatment that is the best fit for the patient so long as the standard of care is met. A commenter stated that the lifting these limitations during the PHE has been instructive and demonstrates the value of continuing such

flexibilities. Another commenter stated that removing frequency limitations helps practitioners keep patients in SNFs from being unnecessarily evaluated in Emergency Departments and prevents readmissions. In response to our concerns regarding patient safety and program integrity, a commenter urged the agency to closely monitor utilization patterns to determine whether the elimination of these limitations leads to an increase in inappropriate utilization. A few commenters did not support this proposal, stating that continuing to waive these limitations without any guardrails will compromise patient safety, as they do not believe that it is best practice for patients in acute care settings (unless such settings are in rural or underserved areas) to be treated daily via non-face-to-face telehealth visits/consultations in lieu of in-person visits. Similarly, another commenter stated that telehealth patient assessments and evaluations are never the same as in-person, hands on visits and should not be considered a viable replacement with no limitations for in-person care.

*Response:* We believe that continuing to suspend these frequency limitations on a temporary basis for CY 2024 will allow us more time to continue to evaluate patient safety while preserving access in a way that is not disruptive to practice patterns that were established during the PHE. We look forward to evaluating the information received in response to this comment solicitation, as well as utilization data and other data as we consider the most appropriate way to balance patient safety concerns with the interest of supporting healthcare access. We expect to address in future rulemaking.

*Comment:* A commenter stated that we should exercise enforcement discretion for telehealth frequency limitations for home dialysis clinical assessment while gathering information and evaluating changing practice patterns. The commenter noted that, without explanation, CMS is again not extending the enforcement discretion to ESRD clinical assessments, even though there has similarly been a change in practice patterns for nephrologists during the PHE.

*Response:* We appreciate the commenters' concern; however, outside of the circumstances of the PHE for COVID-19, we are continuing to enforce the statutory requirement for in-person visits associated with ESRD-related clinical assessments as established at section 1881(b)(3)(B) of the Act which requires that an individual determined to have end stage renal disease receiving home dialysis receive a face-to-face visit, without the use of telehealth, at least monthly in the case of the initial 3 months of home dialysis and at least once every 3 consecutive months after the initial 3 months

After consideration of public comments, we are finalizing as proposed our proposal for CY 2024 to continue the removal of Medicare telehealth services frequency limitations for Subsequent Inpatient Visit, Subsequent Nursing Facility Visit, and Critical Care Consultation Services.

## 2. Other Non-Face-to-Face Services Involving Communications Technology under the PFS

### a. Direct Supervision via Use of Two-way Audio/Video Communications Technology

Under Medicare Part B, certain types of services, including diagnostic tests, services incident to physicians' or practitioners' professional services, and other services, are required to be furnished under specific minimum levels of supervision by a physician or practitioner. For most services furnished by auxiliary personnel incident to the services of the billing physician or practitioner (see § 410.26) and many diagnostic tests (see § 410.32), direct supervision is required. Additionally, for pulmonary rehabilitation services (see § 410.47) and for cardiac rehabilitation and intensive cardiac rehabilitation services (see § 410.49), direct supervision by a physician, PA, NP, or CNS is required (see also § 410.27(a)(1)(iv)(B)(I) for hospital outpatient services). Outside the circumstances of the PHE, direct supervision requires the immediate availability of the supervising physician or other practitioner, but the professional need not be present in the same room during the service. We have established this "immediate availability" requirement to mean in-person, physical, not virtual, availability (please see the April 6, 2020 IFC (85 FR 19245) and the CY 2022 PFS final rule (86 FR 65062)). Through the March 31,

2020 COVID-19 IFC, we changed the definition of “direct supervision” during the PHE for COVID-19 (85 FR 19245 through 19246) as it pertains to supervision of diagnostic tests, physicians' services, and some hospital outpatient services, to allow the supervising professional to be immediately available through virtual presence using two-way, real-time audio/video technology, instead of requiring their physical presence. In the CY 2021 PFS final rule (85 FR 84538 through 84540), we finalized continuation of this policy through the later of the end of the calendar year in which the PHE for COVID-19 ends or December 31, 2021. In the March 31, 2020 IFC (85 FR 19246) and in our CY 2022 PFS final rule (see 85 FR 65063), we also noted that the temporary exception to allow immediate availability for direct supervision through virtual presence facilitates the provision of Medicare telehealth services by clinical staff of physicians and other practitioners’ incident to their own professional services. This is especially relevant for services such as physical therapy, occupational therapy, and speech language pathology services, since those practitioners were previously only able to bill Medicare for telehealth services under Medicare telehealth waivers that were effective during the PHE for COVID-19 (based on the emergency waiver authority established in section 1135(b)(8) of the Act), until the CAA, 2023 extended the time period during which these practitioners could bill for Medicare telehealth services through December 31, 2024. We noted that sections 1834(m)(4)(D) and (E) of the Act specify the types of clinicians who may furnish and bill for Medicare telehealth services. After December 31, 2024, the types of clinicians who may furnish and bill for Medicare telehealth services include only physicians as defined in section 1861(r) of the Act and practitioners described in section 1842(b)(18)(C) of the Act. We note that this will include mental health counselors (MHCs) and marriage and family therapists (MFTs) beginning January 1, 2024.

We noted in the CY 2021 PFS final rule (85 FR 84539) that, to the extent our policy allows direct supervision through virtual presence using audio/video real-time communications technology, the requirement could be met by the supervising physician (or other practitioner)

being immediately available to engage via audio/video technology (excluding audio-only), and would not require real-time presence or observation of the service via interactive audio and video technology throughout the performance of the procedure; this was the case during the PHE, and will continue to be the case following the PHE. Under current policy as described in the CY 2021 final rule (85 FR 84539 and 84540, after December 31, 2023, the pre-PHE rules for direct supervision at § 410.32(b)(3)(ii) would apply. As noted in the CY 2022 PFS final rule (86 FR 65062), this means the temporary exception allowing immediate availability for direct supervision through virtual presence, which facilitates the provision of telehealth services by clinical staff of physicians and other practitioners incident to their professional services, will no longer apply after CY 2023.

We are concerned about an abrupt transition to our pre-PHE policy that defines direct supervision under § 410.32(b)(3)(ii) to require the physical presence of the supervising practitioner beginning after December 31, 2023, given that practitioners have established new patterns of practice during the PHE for COVID-19. In the absence of evidence that patient safety is compromised by virtual direct supervision, we believe that an immediate reversion to the pre-PHE definition of direct supervision would prohibit virtual direct supervision, which may present a barrier to access to many services, such as those furnished incident-to a physician's service. We believe physicians and practitioners will need time to reorganize their practice patterns established during the PHE to reimplement the pre-PHE approach to direct supervision without the use of audio/video technology. Recognizing these concerns, we proposed to continue to define direct supervision to permit the presence and "immediate availability" of the supervising practitioner through real-time audio and visual interactive telecommunications through December 31, 2024. We believe that extending this definition of direct supervision through December 31, 2024 would align the timeframe of this policy with many of the previously discussed PHE-related telehealth policies that were extended under provisions of the CAA, 2023. We proposed to revise the regulatory text at § 410.32(b)(3)(ii) to state that, through December

31, 2024, the presence of the physician (or other practitioner) includes virtual presence through audio/video real-time communications technology (excluding audio-only).

We believe this additional time will allow us further opportunity to collect information through the coming year as we consider an appropriate more permanent approach to direct supervision policy following the PHE for COVID-19. We solicited comment on whether we should consider extending the definition of direct supervision to permit virtual presence beyond December 31, 2024. Specifically, we stated that we were interested in input from interested parties on potential patient safety or quality concerns when direct supervision occurs virtually; for instance, if virtual direct supervision of certain types of services is more or less likely to present patient safety concerns, or if this flexibility would be more appropriate for certain types of services, or when certain types of auxiliary personnel are performing the supervised service. We were also interested in potential program integrity concerns such as overutilization or fraud and abuse that interested parties may have regarding this policy.

In the proposed rule, we noted that one potential approach to direct supervision which we could consider for future rulemaking, could be to extend or permanently establish this virtual presence flexibility for services that are valued under the PFS based on the presumption that they are nearly always performed in entirety by auxiliary personnel. Such services would include any service wholly furnished incident to a physician or practitioner's professional service, as well as the Level I office or other outpatient evaluation and management visit for established patients and the Level I Emergency Department visit. Allowing virtual presence for direct supervision of these services may balance patient safety concerns with the interest of supporting access and preserving workforce capacity for medical professionals while considering potential quality and program integrity concerns. We solicited comment on this potential approach for CY 2025, as well as any other approaches by which direct supervision could occur virtually that would both protect patient access and safety, as well as quality of care and program integrity concerns following CY 2024.

We received public comments on our proposals to extend the flexibilities for virtual direct supervision. The following is a summary of the comments we received and our responses.

*Comment:* Many commenters supported our proposal to continue to define ‘immediate availability’ to include availability through virtual means, stating that it will benefit healthcare providers while greatly enhancing patient access to quality care, particularly in underserved areas. Many stated that removing overly restrictive supervision requirements will help practices free up personnel to ensure more Americans have timely access to care. A commenter stated that there has been no evidence that this type of direct supervision has caused patient safety or quality concerns, and that virtual supervision makes workflows more efficient by freeing up practitioners’ time. A commenter submitted data that they say indicates no clinically meaningful statistical difference in patient outcomes for virtual direct supervision as compared to direct supervision. Some commenters stated that we should extend this flexibility permanently; one such commenter stated that failure to allow supervision via interactive telecommunications could mean that a patient would be unable to receive the service at all, rather than forcing in-person supervision to occur. The commenter stated that both patients and CMS rely on physicians’ professional judgment to determine the most appropriate services to deliver; the same principle should apply to how supervision is provided. Another commenter encouraged CMS to consider permanently permitting the use of remote direct supervision for Level 2 diagnostic tests, and that, absent a permanent change, CMS should consider extending current flexibilities through at least 2025. Some commenters stated that the "immediate availability" requirement should be defined as including virtual means permanently for Intensive Cardiac Rehabilitation (ICR) and cardiac rehab (CR) services, as well as for pulmonary rehabilitation (PR) stating that evidence from the PHE demonstrated that virtual supervision is safe and effective for the delivery of these services. Many commenters noted the importance of this flexibility in protecting access specifically for ICR, CR, and PR services. One such commenter submitted studies that the commenter says demonstrates the effectiveness and safety of virtual CR and PR services as well as that virtual

and hybrid delivery of CR and PR services provided by staff are safe, improve health outcomes and adherence, and address barriers to access. Some commenters stated that this should be permanently established for external counterpulsation (ECP) therapy (HCPCS code G0166). One such commenter stated that as this is a service that is entirely provided by auxiliary personnel that it would be consistent with our suggested approach included in our comment solicitation as discussed above. A commenter submitted information on the clinical benefits of ECP and argued that ECP is underutilized and that the in-person direct supervision requirement presents an access barrier. Some commenters specified that this should be established permanently for mental health and substance use disorder related services. In response to our patient safety concerns, a commenter stated that if CMS were to extend this policy permanently, it should be limited to circumstances where the billing practitioner is supervising clinical staff who are not authorized to bill the Medicare program directly, consistent with MedPAC's recommendations in their June 2019 report. A few commenters reacted to the potential approach we suggested of permanently establishing this virtual presence flexibility for services that are valued under the PFS based on the presumption that they are nearly always performed in entirety by auxiliary personnel. One such comment stated that this approach may prove a conservative place to start or could be attempted through pilot tests to collect more data to inform future decision-making. Another stated that this approach would be overly restrictive and would be contrary to the principles of a successful telehealth model, such as increasing workforce capacity and reducing patient travel.

*Response:* We appreciate the support of commenters, as well as the comments received in response to our comment solicitation. We look forward to considering this and other information as we consider the most appropriate way to balance patient safety concerns with the interest of supporting access that we expect to address in future rulemaking. We continue to believe that it is appropriate to continue to permit direct supervision via virtual means using audio/video real-time communications technology through the end of CY 2024 given that many telehealth flexibilities adopted to address the PHE for COVID-19 are set to expire under the

statute following this time period. We believe that this is the most appropriate way to balance patient safety with access while avoiding confusion for 2024.

*Comment:* A commenter requested that CMS clarify whether, to meet the direct supervision requirement using real-time audio-visual technology, the physician needs to be constantly present on the real-time audio-visual technology during the entirety of the provision of an “incident to” service by their clinical staff.

*Response:* As direct supervision as defined at § 410.32 requires the supervising practitioner’s immediately available to furnish assistance and direction throughout the performance of the procedure, but not that the supervising practitioner must be present in the room when the procedure is performed, when the supervising practitioner provides direct supervision using real-time audio-visual technology, the supervising practitioner likewise does not need to be virtually present throughout the performance of the procedure, but they need to be immediately available to provide the virtual presence whenever necessary.

After consideration of public comments, we are finalizing as proposed. We will continue to define direct supervision to permit the immediate availability of the supervising practitioner through real-time audio and visual interactive telecommunications through December 31, 2024. We will consider addressing this topic in possible future rulemaking.

#### (1) Teaching Physician Billing for Services Involving Residents in Teaching Settings

In the CY 2021 PFS final rule (85 FR 84577 through 84584), we established a policy that, after the end of the PHE for COVID-19, teaching physicians may meet the requirements to be present for the key or critical portions of services when furnished involving residents through audio/video real-time communications technology (virtual presence), but only for services furnished in residency training sites that are located outside of an Office of Management and Budget (OMB)-defined metropolitan statistical area (MSA). We made this location distinction consistent with our longstanding interest to increase beneficiary access to Medicare-covered services in rural areas and noted the ability to expand training opportunities for residents in rural

settings. For all other locations, we expressed concerns that continuing to permit teaching physicians to bill for services furnished involving residents when they are virtually present, outside the conditions of the PHE for COVID-19, may not allow the teaching physician to have personal oversight and involvement over the management of the portion of the case for which the payment is sought, in accordance with section 1842(b)(7)(A)(i)(I) of the Act. In addition, we stated concerns about patient populations that may require a teaching physician's experience and skill to recognize specialized needs or testing, and whether it is possible for the teaching physician to meet these clinical needs while having a virtual presence for the key portion of the service. For a more detailed description of our specific concerns, we referred readers to the CY 2021 PFS final rule (85 FR 84577 through 84584). At the end of the PHE for COVID-19, and as finalized in the CY 2021 PFS final rule, we intended for the teaching physician to have a physical presence during the key portion of the service personally provided by residents in order to be paid for the service under the PFS, in locations that were within a MSA. This policy applied to all services, regardless of whether the patient was co-located with the resident or only present virtually (for example, the service was furnished as a 3-way telehealth visit, with the teaching physician, resident, and patient in different locations). However, interested parties expressed concerns regarding the requirement that the teaching physician have a physical presence with the resident when a service is furnished virtually within a MSA (that is, as a Medicare telehealth service). Some interested parties stated that during the PHE for COVID-19, when residents provided telehealth services and the teaching physician was virtually present, the same safe and high-quality oversight was provided as when the teaching physician and resident were physically co-located. In addition, these interested parties stated that during telehealth visits, the teaching physician was virtually present during the key and critical portions of the telehealth service, available immediately in real-time, and had access to the electronic health record. As stated in section II.D.2.a. of this final rule, we were concerned that an abrupt transition to our pre-PHE policy may present a barrier to access to many services, and we

understood that practitioners gained clinical experience during the PHE for COVID–19, and could identify circumstances for which the teaching physician can routinely render sufficient personal and identifiable services to the patient, with a virtual presence during the key portion of the virtual service. Given these considerations, we proposed to allow the teaching physician to have a virtual presence in all teaching settings, only in clinical instances when the service is furnished virtually (for example, a 3-way telehealth visit, with all parties in separate locations). This would permit teaching physicians to have a virtual presence during the key portion of the virtual service for which payment is sought, through audio/video real-time communications technology, for all residency training locations through December 31, 2024. The virtual presence policy would continue to require real-time observation (not mere availability) by the teaching physician, and excludes audio-only technology. The documentation in the medical record must continue to demonstrate whether the teaching physician was physically present or present through audio/video real-time communications technology at the time of the virtual service, this includes documenting the specific portion of the service for which the teaching physician was present through audio/video real-time communications technology. This policy does not preclude teaching physicians from providing a greater degree of involvement in services furnished with residents, and teaching physicians should still use discretion to determine whether it is appropriate to have a virtual presence rather than in person, depending on the services being furnished and the experience of the particular residents involved.

We announced that we were exercising enforcement discretion to allow teaching physicians in all residency training sites, to be present through audio/video real-time communications technology, for purposes of billing under the PFS for services they furnish involving residents. We exercised this enforcement discretion through December 31, 2023, as we considered our virtual presence policies for services involving teaching physicians and residents further through our rulemaking process for CY 2024. For more background we referred readers

to <https://www.cms.gov/files/document/frequently-asked-questions-cms-waivers-flexibilities-and-end-covid-19-public-health-emergency.pdf>.

We sought comment and information to help us consider how virtual services could be furnished in all residency training locations beyond December 31, 2024, to include what other clinical treatment situations are appropriate to permit the virtual presence of the teaching physician. Specifically, we anticipated considering various types of teaching physician services, when it is appropriate for the teaching physician and resident to be co-located, and how virtual presence could support patient safety for all patients, particularly at-risk patients. We also invited commenters to provide data or other information on how the teaching physician's virtual presence could continue to support patient safety, while meeting the clinical needs for all patients, and ensure burden reduction without creating risks to patient care or increasing opportunities for fraud.

We received public comments on our proposal to allow teaching physicians to have a virtual presence in all teaching settings, only in clinical instances when the service is furnished virtually, through December 31, 2024. The following is a summary of the comments we received and our responses.

*Comment:* Some commenters thanked CMS for exercising enforcement discretion to allow teaching physicians in all residency training sites to be present through audio/video real-time communications technology, for purposes of billing under the PFS, for services they furnish involving residents through 2024.

*Response:* We appreciate the support from commenters but reiterate that we are only exercising enforcement discretion through December 31, 2023.

*Comment:* One commenter stated that CMS should not reimburse anesthesiologists that are not providing actual anesthesia care, through billing for remote so-called "supervision" services.

*Response:* As stated in our regulation at § 415.172(a)(1), for surgical, high risk, interventional, endoscopic, or other complex procedures the teaching physician must not only be present for the critical portions of the procedure, but also immediately available to furnish services during the entire procedure in order for PFS payment to be made for the service. Similarly, § 415.178 requires a teaching physician to be present during critical (or key) portions of the procedure and immediately available to furnish anesthesia services during the entire service. We continue to believe the requirements for the presence of the teaching physician during all key or critical portions of the procedure and immediate availability to furnish services during the entire service or procedure is necessary for patient safety given the risks associated with these services.

*Comment:* One commenter requested clarification on whether the proposal to allow teaching physicians to have a virtual presence, only in clinical instances when the service is furnished virtually, would also include instances where the resident and patient are in one location and the supervising physician is in another. The commenter stated that the resident should be able to “dial-in” the supervising physician in these instances.

*Response:* The proposed policy would continue to permit PFS payment when the teaching physician is present virtually only when the service is furnished virtually. The example we provided in the proposed rule is a 3-way Medicare telehealth visit, with all parties in separate locations. In this situation, the teaching physician and resident would not need to be physically co-located during the telehealth service that is furnished remotely to the patient. The teaching physician would have a virtual presence during the key portion of that Medicare telehealth service for which payment is sought, through audio/video real-time communications technology. In the example provided by the commenter, the service would be furnished with the resident in person at the same location with the patient, and only the teaching physician would be present virtually through the use of real-time audio/video communications technology, and this scenario was not included in the proposal. In the commenter’s example, the teaching physician would be

required to have a physical presence with the resident, unless the residency training location is outside a MSA. The policy continues to exclude audio-only technology.

*Comment:* Several commenters requested that CMS consider permanently expanding the list of services that can be furnished under the so-called primary care exception set forth at § 415.174 to include high-value primary care services. These commenters stated that the flexibilities allowed during the PHE for COVID-19, which allowed level 4 and 5 E/M visits to be furnished under the primary care exception benefitted both patients and primary care training programs. The commenters noted that they believe that the absence of high-value services under the primary care exception could negatively impact resident training and patient outcomes in the long term, and provided a list of suggested services to be permanently included under the primary care exception.

*Response:* The primary care exception permits the teaching physician to bill for certain lower and mid-level complexity physicians' services furnished by residents in certain types of residency training settings even when the teaching physician is not present with the resident during the services as long as certain conditions are met, including that the services are furnished by residents with more than 6 months of training in the approved residency program; and that the teaching physician directs the care of no more than four residents at a time, remains immediately available and has no other responsibilities while directing the care, assumes management responsibility for beneficiaries seen by the residents, ensures that the services furnished are appropriate, and reviews certain elements of the services with each resident during or immediately after each visit. We believe the primary care exception was intended to broaden opportunities for teaching physicians to involve residents in furnishing services under circumstances that preserve teaching physician direction of the care, and promote safe, high quality patient care. Although we temporarily modified the scope of services that could be provided under the primary care exception to address the circumstances of the PHE for COVID-19, we did not propose to broaden the array of services that meet the conditions for PFS payment

set forth in our regulations at § 415.174. For a more detailed description of the finalized primary care exception policy, we refer readers to the CY 2021 PFS final rule (85 FR 84585 through 84590).

*Comment:* Many commenters supported the proposal to allow teaching physicians to have a virtual presence in all teaching settings, only in clinical instances when the service is furnished virtually, which then permits teaching physicians to have a virtual presence during the key portion of that Medicare telehealth service, through audio/video real-time communications technology, for all residency training locations through December 31, 2024. However, several commenters encouraged CMS to include in-person services to promote access to care and to establish this policy permanently. These commenters stated that teaching physicians should be allowed to determine when their virtual presence would be clinically appropriate, based on their assessment of the patient's needs and the competency level of the resident. In addition, commenters recommend that CMS consider the Accreditation Council for Graduate Medical Education (ACGME) rules that allow teaching physicians to concurrently monitor patient care through appropriate telecommunication technology when the teaching physician and/or patient is not physically present with the resident.

*Response:* At this time, we are not extending the proposed policy to include in-person services furnished by residents. We may consider other clinical instances that could allow teaching physicians to have a virtual presence in future rulemaking, and will contemplate the comments received to ensure the teaching physician is rendering sufficient personal services to exercise full, personal control of the key portion of the case. We thank commenters for providing information on certain ACGME rules. We note that the ACGME regulates residency training programs and their rules ensure that there is appropriate teaching physician involvement in care delivery for educational purposes. However, our regulations determine when PFS payment is appropriate when teaching physicians furnish services that involve residents, and the teaching

physician has personal oversight and involvement over the management of the portion of the case for which the payment is sought.

After consideration of public comments, we are finalizing the policy as proposed, to allow teaching physicians to have a virtual presence in all teaching settings, only in clinical instances when the service is furnished virtually. This permits teaching physicians to have a virtual presence during the key portion of the virtual service for which payment is sought, through audio/video real-time communications technology, for all residency training locations through December 31, 2024. As finalized in the CY 2021 PFS final rule (84577 through 84581), the required physical presence of a teaching physician in order to bill under the PFS for their services at a residency training site that is located outside of a MSA, can be met through interactive, audio/video real-time communications technology, and does not include audio-only technology.

## b. Clarifications for Remote Monitoring Services

### (1) Background and Overview

In recent years, we have established payment for two code families that describe certain remote monitoring services: remote physiologic monitoring (RPM) and remote therapy monitoring (RTM).

#### Remote Physiologic Monitoring

- 99453 (*Remote monitoring of physiologic parameter(s) (eg, weight, blood pressure, pulse oximetry, respiratory flow rate), initial; set-up and patient education on use of equipment*);
- 99454 (*Remote monitoring of physiologic parameter(s) (eg, weight, blood pressure, pulse oximetry, respiratory flow rate), initial; device(s) supply with daily recording(s) or programmed alert(s) transmission, each 30 days*);
- 99457 (*Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; first 20 minutes*); and

- 99458 (*Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; each additional 20 minutes (List separately in addition to code for primary procedure)*).

#### Remote Therapeutic Monitoring

- 98975 (*Remote therapeutic monitoring (eg, therapy adherence, therapy response); initial set-up and patient education on use of equipment*);

- 98976 (*Remote therapeutic monitoring (eg, therapy adherence, therapy response); device(s) supply with scheduled (eg, daily) recording(s) and/or programmed alert(s) transmission to monitor respiratory system, each 30 days*);

- 98977 (*Remote therapeutic monitoring (eg, therapy adherence, therapy response); device(s) supply with scheduled (eg, daily) recording(s) and/or programmed alert(s) transmission to monitor musculoskeletal system, each 30 days*);

- 98978 (*Remote therapeutic monitoring (eg, therapy adherence, therapy response); device(s) supply with scheduled (eg, daily) recording(s) and/or programmed alert(s) transmission to monitor cognitive behavioral therapy, each 30 days*);

- 98980 (*Remote therapeutic monitoring treatment management services, physician or other qualified health care professional time in a calendar month requiring at least one interactive communication with the patient or caregiver during the calendar month; first 20 minutes*); and

- 98981 (*Remote therapeutic monitoring treatment management services, physician or other qualified health care professional time in a calendar month requiring at least one interactive communication with the patient or caregiver during the calendar month; each additional 20 minutes (List separately in addition to code for primary procedure)*)

In our CY 2018 PFS final rule, we summarized feedback from a comment solicitation aimed at informing new payment policies that would allow for separate payment for remote

monitoring services (82 FR 53014). In our CY 2019 PFS final rule (83 FR 59574 to 59576), we established valuations and payment policy for the RPM code family. In our CY 2020 PFS final rule (84 FR 62697-8), we explained that the RPM code family describes chronic care RPM services that involve the collection, analysis, and interpretation of digitally collected physiologic data, followed by the development of a treatment plan and the managing of a patient under the treatment plan. (84 FR 62697). In our CY 2020 PFS final rule, we also discussed that remote monitoring codes would be designated as care management services, which means our rules for general supervision would apply (84 FR 62698). In our CY 2023 PFS final rule, in response to comments, we clarified that RTM or RPM services could be billed concurrently with Chronic Care Management (CCM), Transitional Care Management TCM, Principal Care Management (PCM), Chronic Pain Management (CPM), or Behavioral Health Integration (BHI) (86 FR 69528-69539).

We have received many questions from interested parties about billing scenarios and requests for clarifications on the appropriate use of these codes in general. We believe it is important to share with all interested parties a restatement/clarification of certain policies. We refer readers to the CY 2021 PFS final rule (85 FR 84542 to 84546) for further discussion and explanation of the basis for interim policies that expired on the last day of the PHE for COVID-19.

#### (2) New vs. established patient requirements

In the CY 2021 PFS final rule (85 FR 84542-6), we established that, when the PHE for COVID-19 ends, we again will require that RPM services be furnished only to an established patient. Patients who received initial remote monitoring services during PHE are considered established patients for purposes of the new patient requirements that are effective after the last day of the PHE for COVID-19.

#### (3) Data collection requirements

We have received various comments and inquiries about our temporary exception to

minimum data collection for remote monitoring. As discussed in our CY 2021 final rule, we are not extending beyond the end of the PHE the interim policy to permit billing for remote monitoring codes, which require data collection for at least 16 days in a 30-day period, when less than 16 of days data are collected within a given 30-day period. (85 FR 84542 through 84546). As of the end of the PHE, the 16-day monitoring requirement was reinstated. Monitoring must occur over at least 16 days of a 30-day period. We proposed to clarify that the data collection minimums apply to existing RPM and RTM code families for CY 2024.

The following remote monitoring codes currently depend on collection of no fewer than 16 days of data in a 30-day period, as defined and specified in the code descriptions:

- 98976 (*Remote therapeutic monitoring (eg, therapy adherence, therapy response); device(s) supply with scheduled (eg, daily) recording(s) and/or programmed alert(s) transmission to monitor respiratory system, each 30 days*);
- 98977 (*Remote therapeutic monitoring (eg, therapy adherence, therapy response); device(s) supply with scheduled (eg, daily) recording(s) and/or programmed alert(s) transmission to monitor musculoskeletal system, each 30 days*);
- 98978 (*Remote therapeutic monitoring (eg, therapy adherence, therapy response); device(s) supply with scheduled (eg, daily) recording(s) and/or programmed alert(s) transmission to monitor cognitive behavioral therapy, each 30 days*);
- 98980 (*Remote therapeutic monitoring treatment management services, physician or other qualified health care professional time in a calendar month requiring at least one interactive communication with the patient or caregiver during the calendar month; first 20 minutes*); and
- 98981 (*Remote therapeutic monitoring treatment management services, physician or other qualified health care professional time in a calendar month requiring at least one interactive communication with the patient or caregiver during the calendar month; each additional 20 minutes (List separately in addition to code for primary procedure)*)

We remind readers that our discussion in the CY 2021 PFS final rule addresses the interim policy on data collection minimums, and provides notice and the rationale for the data collection policy that is in effect now that the PHE for COVID-19 has ended. Remotely monitored monthly services should be reported only once during a 30-day period – and only when reasonable and necessary. As a clarification for either RPM or RTM, only one practitioner can bill CPT codes 99453 and 99454, or CPT codes 98976, 98977, 98980, and 98981, during a 30-day period, and only when at least 16 days of data have been collected on at least one medical device as defined in section 201(h) of the FFDCA.

We reiterate our analysis described in the CY 2021 PFS final rule, in which we explained that CPT code descriptor language suggests that, even when multiple medical devices are provided to a patient, the services associated with all the medical devices can be billed only once per patient per 30-day period and only when at least 16 days of data have been collected (85 FR 84545). We refer readers to our CY 2021 PFS final rule (85 FR 84545) for additional background.

#### (4) Use of RPM, RTM, in conjunction with other services

Practitioners may bill RPM or RTM, but not both RPM and RTM, concurrently with the following care management services: CCM/TCM/BHI, PCM, and CPM. These various codes, which describe other care management services, may be billed with RPM or RTM, for the same patient, if the time or effort is not counted twice. As specified in the CY 2023 PFS final rule, if all requirements to report each service are met, without time or effort being counted more than once, RPM or RTM (not both RPM and RTM) may be billed in conjunction with any one of CCM, TCM, BHI, PCM, or CPM codes. According to the 2023 CPT Codebook (pg. 849), CPT code 98980 (*RTM treatment management*) cannot be reported in conjunction with CPT codes 99457/99458 (*RPM treatment management*). Our intention is to allow the maximum flexibility for a given practitioner to select the appropriate mix of care management services, without creating significant issues of possible fraud, waste, and abuse associated with overbilling of these

services. We continue to gain experience with each family of remote monitoring codes, and request feedback from commenters that would provide additional context that could inform us as we continue to develop and clarify our payment policies for these services.

We proposed to clarify that RPM and RTM may not be billed together, so that no time is counted twice by billing for concurrent RPM and RTM services. In instances where the same patient receives RPM and RTM services, there may be multiple devices used for monitoring, and in these cases, we will to apply our existing rules, which we finalized when establishing the RPM code family, meaning that the services associated with all the medical devices can be billed by only one practitioner, only once per patient, per 30-day period, and only when at least 16 days of data have been collected; and that the services must be reasonable and necessary (85 FR 84544 through 84545).

#### (5) Other Clarifications for Appropriate Billing

We have received inquiries from interested parties during public forums regarding use of remote monitoring during global periods for surgery. In the proposed rule, we clarified that, in circumstances where an individual beneficiary may receive a procedure or surgery, and related services, which are covered under a payment for a global period, RPM services or RTM services (but not both RPM and RTM services concurrently) may be furnished separately to the beneficiary, and the practitioner would receive payment for the RTM or RPM services, separate from the global service payment, so long as other requirements for the global service and any other service during the global period are met. For an individual beneficiary who is currently receiving services during a global period, a practitioner may furnish RPM or RTM services (but not both RPM or RTM services) to the individual beneficiary, and the practitioner will receive separate payment, so long as the remote monitoring services are unrelated to the diagnosis for which the global procedure is performed, and as long as the purpose of the remote monitoring addresses an episode of care that is separate and distinct from the episode of care for the global procedure - meaning that the remote monitoring services address an underlying condition that is

not linked to the global procedure or service.

We solicited comments on the proposed clarifications, as well as issued a request for general feedback from the public that may be useful in further development of our payment policies for remote monitoring services that are separately payable under the current PFS. The following is a summary of the comments we received and our responses.

*Comment:* Commenters requested changes be made to RPM and RTM coding and service requirements and requested that interim policies that expired on the last day of the PHE for COVID–19 become permanent.

*Response:* We thank commenters for the general feedback that may be useful in further development of our payment policies for remote monitoring services that are separately payable under the current PFS. We refer readers to the CY 2021 PFS final rule (85 FR 84542 through 84546) for further discussion and explanation of the basis for interim policies that expired on the last day of the PHE for COVID–19.

*Comment:* Several commenters requested clarification on patient requirements for remote therapeutic monitoring. One commenter requested clarification on new patients receiving RPM from the end of the PHE forward.

*Response:* We are offering additional clarification regarding the new patient requirement and that RPM, not RTM, services require an established patient relationship after the end of the PHE. While we have not specified in rulemaking whether the RTM services require an established patient relationship, we believe that similar to RPM, such services would be furnished to a patient after a treatment plan had been established. Presumably, a billing practitioner would establish such treatment plan after some initial interaction with the patient. We will work to clarify this policy further in future rulemaking. We hope to continue dialogue with interested parties who may have information that could inform our rulemaking. Patients who received initial remote monitoring services during the PHE are considered established patients for purposes of the new patient requirements that are effective after the last day of the

PHE for COVID-19. Per our existing policy, any patients receiving RPM services from the end of the PHE forward will need to be established patients before beginning RPM services.

*Comment:* Many commenters inquired about whether RPM or RTM used in physical and occupational therapy services were excluded from the global period rules for surgery.

*Response:* We would like to clarify that the policy that prohibits RPM or RTM services being furnished during the global period only applies to billing practitioners who are receiving the global service payment. Practitioners, such as therapists, who are not receiving a global service payment because they did not furnish the global procedure, would be permitted to furnish RPM or RTM services during a global period. After consideration of public comments, we are finalizing that providing RTM or RPM services during the global period is permitted if the practitioner is not receiving global service payment because they did not furnish the global procedure.

We note that in the CY 2024 PFS proposed rule, we inadvertently listed all of the RTM codes (88 FR 53204) in our discussion of these services and had made a general statement about the applicability of the 16-day data collection requirement. We would like to offer clarification that the 16 day data collection requirement does not apply to CPT codes 99457, 99458, 98980, and 98981. These CPT codes are treatment management codes that account for time spent in a calendar month and do not require 16 days of data collection in a 30-day period.

#### c. Telephone Evaluation and Management Services

In the March 31st COVID-19 IFC (85 FR 19264 through 19265), we finalized separate payment for CPT codes 99441 through 99443 and 98966 through 98968, which describe E/M and assessment and management services furnished via telephone. CPT codes 99441 through 99443 are on the Medicare Telehealth Services List and will remain actively priced through 2024. CPT codes 98966 through 98968; however, describe telephone assessment and management services provided by a qualified non-physician healthcare professional, and they were added on a subregulatory basis during the PHE.. We proposed to continue to assign an

active payment status to CPT codes 98966 through 98968 for CY 2024 to align with telehealth-related flexibilities that were extended via the CAA, 2023, specifically section 4113(e) of the CAA, 2023, which permits the provision of telehealth services through audio-only telecommunications through the end of 2024.

We received comments on our proposals to keep active payment status for CPT codes 98966 through 98968 for CY 2024 to align with policy extensions under the CAA, 2023. The following is a summary of the comments received and our responses.

*Comment:* Commenters were supportive of our proposal to continue to pay for physician and non-physician telephone services through December 31, 2024, and to continue to assign active payment status to CPT codes 99441 through 99443 as well as to CPT codes 98966 through 98968, which they stated supports payment for audio-only visits. The commenters stated that these services are a critical component of how care is provided to patients and are particularly valuable in connecting with patients living in rural areas where regular internet connection and/or cellular reception may be entirely unavailable or unreliable.

*Response:* In response to comments, we are finalizing our proposal to continue active payment status for CPT codes 98966 through 98968. These services will be available through the end of CY 2024.

### 3. Telehealth Originating Site Facility Fee Payment Amount Update

Section 1834(m)(2)(B) of the Act established the Medicare telehealth originating site facility fee for telehealth services furnished from October 1, 2001 through December 31, 2002 at \$20.00, and specifies that, for telehealth services furnished on or after January 1 of each subsequent calendar year, the telehealth originating site facility fee is increased by the percentage increase in the Medicare Economic Index (MEI) as defined in section 1842(i)(3) of the Act. We proposed to update the telehealth originating site facility fee for telehealth services by the expected increase in the MEI of 4.5 percent for CY 2024. Furthermore, we proposed that if more recent data became available after the publication of the proposed rule and before the publication

of the final rule (for example, a more recent estimate of the MEI percentage increase), we would use such data, if appropriate, to determine the CY 2024 MEI percentage increase in the final rule. Therefore, the final MEI increase for CY 2024 is 4.6 percent and is based on the most recent historical percentage increase of the 2017-based MEI reflecting historical data through for the second quarter of 2023.

Therefore, for CY 2024, the final payment amount for HCPCS code Q3014 (*Telehealth originating site facility fee*) is \$29.96. Table 12 shows the Medicare telehealth originating site facility fee and the corresponding MEI percentage increase for each applicable time period. We did not receive any comments on this proposal and are finalizing as proposed.

**TABLE 12: The Medicare Telehealth Originating Site Facility Fee**

<b>Time Period</b>	<b>MEI (%)</b>	<b>Facility Fee for Q3014</b>
Oct. 1, 2001 to Dec. 31, 2002	NA	\$ 20.00
2003	3.0	\$ 20.60
2004	2.9	\$ 21.20
2005	3.1	\$ 21.86
2006	2.8	\$ 22.47
2007	2.1	\$ 22.94
2008	1.8	\$ 23.35
2009	1.6	\$ 23.72
2010	1.2	\$ 24.00
2011	0.4	\$ 24.10
2012	0.6	\$ 24.24
2013	0.8	\$ 24.43
2014	0.8	\$ 24.63
2015	0.8	\$ 24.83
2016	1.1	\$ 25.10
2017	1.2	\$ 25.40
2018	1.4	\$ 25.76
2019	1.5	\$ 26.15
2020	1.9	\$ 26.65
2021	1.4	\$ 27.02
2022	2.1	\$ 27.59
2023	3.8	\$ 28.64
2024*	4.6	\$ 29.96

\*Reflects the most recent estimate of the CY 2024 MEI percentage increase and will be updated in the final rule based on historical data through the second quarter of 2023.

4. Payment for Outpatient Therapy Services, Diabetes Self-Management Training, and Medical Nutrition Therapy when Furnished by Institutional Staff to Beneficiaries in Their Homes Through Communication Technology

a. Background on Outpatient Therapy Services, Diabetes Self-Management Training and Medical Nutrition Therapy

Section 1861(p) of the Act establishes the benefit category for outpatient PT, SLP and OT services, (expressly for PT services and, through section 1861(l)(2) of the Act, for outpatient SLP services and, through section 1861(g) of the Act, for outpatient OT services). Section 1861(p) of the Act defines outpatient therapy services in the three disciplines as those furnished by a provider of services, a clinic, rehabilitation agency, or a public health agency, or by others under an arrangement with, and under the supervision of, such provider, clinic, rehabilitation agency, or public health agency to an individual as an outpatient; and those furnished by a therapist not under arrangements with a provider of services, clinic, rehabilitation agency, or a public health agency. As such, section 1861(p) of the Act defines outpatient therapy services very broadly to include those furnished by providers and other institutional settings, as well as those furnished in office settings. Section 1834(k)(3) of the Act requires payment for outpatient therapy services to be made based on the PFS (via section 1848 of the Act), for all institutional providers listed at sections 1833(a)(8) and (9) of the Act. These providers include clinics, rehabilitation agencies, public health agencies, comprehensive outpatient rehabilitation agencies (CORFs), SNFs, home health agencies (HHAs) (to individuals who are not homebound), hospitals to outpatients or hospital inpatients who are entitled to benefits under part A but have exhausted benefits for inpatient hospital services during a spell of illness or is not so entitled to benefits under part A), and all other CORF services.

Section 1861(qq) of the Act defines Diabetes Self-Management Training (DSMT) services and authorizes CMS to regulate Medicare DSMT outpatient services. A “certified provider” of DSMT is further defined in section 1861(qq)(2)(A) of the Act as a physician or other individual or entity designated by the Secretary who meets certain quality requirements described in section 1861(qq)(2)(B) of the Act. In CY 2000, we finalized a standalone rule titled “Medicare Program; Expanded Coverage for Outpatient Diabetes Self-Management Training and

Diabetes Outcome Measurements.” In that rule, we finalized that payment for outpatient DSMT would be made under the PFS (65 FR 83132). We further established that, in the case of payments made to other approved entities, such as hospital outpatient departments, ESRD facilities, and durable medical equipment suppliers, the payment would be equal to the amounts established under the PFS and made under the appropriate payment systems (65 FR 83142).

Section 1861(s)(2)(V) of the Act authorizes Medicare Part B coverage of medical nutrition therapy services (MNT) for certain beneficiaries who have diabetes or a renal disease. In the CY 2000 PFS final rule, we established that payment for MNT services furnished in the institutional setting, including hospital outpatient departments (HOPDs), would be made under the PFS, not under the hospital Outpatient Prospective Payment System (OPPS) (66 FR 55279).

During the PHE for COVID-19, outpatient therapy services, DSMT, and MNT could be furnished via a telecommunications system to beneficiaries in their homes, and bills for these services were submitted and paid either separately or as part of a bundled payment, when either personally provided by the billing practitioner or provided by institutional staff and billed for by institutions, such as HOPDs, SNFs, and HHAs. For professionals, CMS used waiver authority to expand the range of practitioners that can serve as distant site practitioners for Medicare telehealth services as described in section 1834(m)(4)(E) of the Act and §410.78 (b)(2), as well as to waive the originating site requirements for Medicare telehealth services described in section 1834(m)(4)(C) of the Act. This allowed for outpatient therapy services to be furnished and billed by therapists in private practice, as well as for outpatient therapy services, DSMT, and MNT to be furnished via Medicare telehealth to beneficiaries in urban, as well as rural, areas, including to beneficiaries located in their homes.

When therapists (PTs, OTs and SLPs) were added as distant site telehealth practitioners using waiver authority during the PHE for COVID-19, CMS generally took the position for services furnished in HOPDs that waiver authority was needed to allow hospitals to bill for services furnished by hospital staff through communication technology to beneficiaries in their

homes. CMS implemented the Hospitals Without Walls (HWW) policy that relied on waiver authority, which allowed hospitals to reclassify patients' homes as part of the hospital. HWW allowed hospitals to bill two different kinds of fees for services furnished remotely to patients in their homes: (1) hospital facility payment in association with professional services billed under the PFS; and (2) single payment for a limited number of practitioner services, when statute or other applicable rules only allow the hospital to bill for services personally provided by their staff. These services are either billed by hospitals or by professionals, there would not be separate facility and professional billing. This latter category includes outpatient therapy services, DSMT, and MNT. However, while maintaining that waiver authority was needed to allow hospital billing for these services, CMS also issued guidance instructing HOPDs to bill using modifiers consistent with those used for Medicare telehealth services. For further background, we refer readers to <https://www.cms.gov/files/document/03092020-covid-19-faqs-508.pdf>. In the same referenced document, CMS also issued specific guidance for other institutional providers of therapy services to use modifier 95 (indicating a Medicare telehealth service), along with the specific bill types for outpatient therapy services furnished by their staff.

The CAA, 2023 extended many of the flexibilities that were available for Medicare telehealth services during the PHE for COVID-19 under emergency waiver authorities, including adding physical and occupational therapists and speech-language pathologists as distant site practitioners through the end of CY 2024. In developing post-PHE guidance, CMS initially took the position that institutions billing for services furnished remotely by their employed practitioners (where the practitioners do not bill for their own services), would end with the PHE for COVID-19 along with the HWW waivers. However, after reviewing input from interested parties, as well as relevant guidance, including applicable billing instructions, we are considering whether certain institutions, as the furnishing providers, can bill for certain remotely furnished services personally performed by employed practitioners.

b. Proposal to Extend Billing Flexibilities for Certain Remotely Furnished Services Through the End of CY 2024 and Comment Solicitation

While we consider how we might address this ambiguity in future rulemaking, in the interests of maintaining access to outpatient therapy, DSMT, and MNT services furnished remotely by institutional staff to beneficiaries in their homes consistent with the accessibility of these services when furnished by professionals via Medicare telehealth, we proposed to continue to allow institutional providers to bill for these services when furnished remotely in the same manner they have during the PHE for COVID-19 through the end of CY 2024. We sought comment on current practice for these services when billed, including how and to what degree they continue to be provided remotely to beneficiaries in their homes. We sought comment as to whether these services may fall within the scope of Medicare telehealth at section 1834(m) of the Act or if there are other relevant authorities CMS might consider in future rulemaking.

For DSMT specifically, the clinical staff personally delivering the service may be a type of practitioner authorized to furnish Medicare telehealth services under section 1834(m) of the Act; but we also understand that DSMT may be provided by other types of staff. Accordingly, we noted in sub-regulatory guidance that we are exercising enforcement discretion in reviewing the telehealth eligibility status of the practitioner personally providing any part of a remotely furnished DSMT service, so long as the persons were otherwise qualified to provide the service. For more background we refer readers to

*<https://www.cms.gov/files/document/frequently-asked-questions-cms-waivers-flexibilities-and-end-covid-19-public-health-emergency.pdf>*.

As we review our telehealth policies following the end of the PHE for COVID-19, and consider care delivery and beneficiary access concerns raised by practitioners and beneficiary advocates, we broadly considered billing and payment for telehealth services in institutional settings, including when these services are furnished by practitioners who have reassigned their rights to bill under and receive payment from the Medicare program (billing rights) to an

institution. We acknowledge that one such setting where this billing arrangement exists includes Critical Access Hospitals (CAHs), where a practitioner has reassigned their billing rights to the CAH, and CMS makes payment for the practitioner's services under an optional payment method, referred to as CAH method II (Pub. 100-04, Chapter 4, Section 250.2). We note that in situations when a practitioner is furnishing a telehealth service and has reassigned their billing rights to a CAH under Method II, CMS makes payment for the telehealth service at the same rate generally paid for other in-person services (100 percent of the PFS payment amount) rather than the payment amount established under the optional method as discussed in Pub. 100-04, Chapter 4, Section 250.2. We are interested in and solicited comment on how telehealth services furnished under CAH method II arrangements are furnished, and whether they would be most accurately characterized in the context of section 1834(m) of the Act or services of the CAH under Method II.

*Comment:* Many commenters supported our proposal to continue to allow institutional providers to provide remote outpatient PT, OT, SLP, DSMT, and MNT services in patients' homes through CY 2024. Some of these commenters told us these services are invaluable for their patients who cannot attend on-site services due to, for example, a mobility impairment, cancer-related fatigue, they reside in rural and underserved areas that are less accessible and lack caregiver transport to the healthcare facility.

*Response:* We appreciate the commenters support and feedback.

*Comment:* Several commenters supported our proposal for outpatient physical therapy, occupational therapy, and speech-language pathology services being furnished by other institutional providers of Part B services — including comprehensive outpatient rehabilitation facilities, rehabilitation agencies, skilled nursing facilities, outpatient hospitals, critical access hospitals (CAHs) and home health agencies (HHAs) (for individuals not under a HH plan of care) — and their being able to continue to bill for these services when furnished remotely through CY 2024 in the same manner they have during the COVID-19 PHE and CY 2023.

Several of these commenters requested that CMS clarify how to document the use of telehealth on the institutional claim form (UB-04), since it lacks a POS field. These commenters requested that CMS permit the use of the 95 modifier and instruct contractors to accept modifier 95 for telehealth on the institutional claim. Several commenters requested that if the 95 modifier could not be used that it would cause unsustainable organizational realignment (that is, different workflows, EHR modules, billing processes, accounting systems, etc.) to migrate hospital-based therapists to CMS-1500 claims forms.

*Response:* We clarify that it is not necessary to migrate claims for PT, OT, or SLP services provided in institutional settings, including the hospital, to the 1500 claim form. This is because of statutory provisions that require (a) therapists in private practice to furnish services only in their offices and in an individual's home (section 1861(p) of the Act for outpatient PT services (and through sections 1861(g) and 1861(l)(2) of the Act for outpatient OT and SLP services, respectively)), (b) institutional providers to bill for them (sections 1833(a)(8) and (9) of the Act), and (c) CMS to make payment for them at PFS rates (section 1834(k)(3) of the Act). As we will finalize below, CMS will instruct institutional providers to use the 95 modifier on the 1450 claim form (UB-04) for these services.

*Comment:* A number of commenters responded to our request for information about their current practice of billing for these services, such as how much they continue to provide remotely. One commenter stated that although there has been a significant reduction in the number of services furnished as telehealth, 10-20 percent of these services are currently provided via telehealth by their hospital. The same commenter stated that these telehealth therapies allow patients throughout the State increased access to care. Another commenter stated they are located in a health professional shortage area where people oftentimes drive for hours to reach their center for in-person treatment — they currently provide services to between 500-700 patients per day via telehealth. Another commenter stated that their post-acute telehealth program (launched in 2018) in response to CMS's Comprehensive Care for Joint Replacement (CJR) program is on

pace for more than 5,500 telehealth PT visits in 2023, slightly less than those in 2022. This commenter also transitioned some of their in-person visits to telehealth during the COVID-19 PHE declining each year after 2020 when it was ~35 percent of telehealth services decreased to 9 percent, 5 percent, and 4 percent of total visits in 2021 through 2023, respectively. Many commenters, while not specifying the amount of outpatient therapy, DSMT, and/or MNT services they furnish, remarked that patients would lose an invaluable resource should their ability to bill for these services as telehealth be discontinued. Additionally, some commenters cited studies to show the efficacy of telehealth services.

*Response:* We appreciate the commenters feedback.

*Comment:* Many commenters questioned whether these services may fall within the scope of Medicare telehealth at section 1834(m) of the Act or if there are other authorities that might be relevant for us to consider in future rulemaking. Some commenters requested that CMS make these flexibilities permanent and urged CMS to work with Congress to gain the statutory authority needed for the institutional settings to provide these important services via telehealth. Several commenters agreed that the telehealth/virtual outpatient therapy, DSMT and MNT services furnished by staff in outpatient hospitals and other facilities appropriately fall within the scope of Medicare telehealth at section 1834(m) of the Act. We also heard from several commenters that suggested we create new remote G-codes for all these services to be billed through the OPSS starting January 1, 2025.

*Response:* We thank the many commenters for their feedback.

*Comment:* Some commenters requested that CMS provide additional clarity in the final rule on how institutional providers should bill for these services in CY 2024, including the specific use of modifiers. Several of these commenters questioned if these instructions would be different from the CMS subregulatory policy found in the online instruction given for CY 2023, which did not include the use of a modifier. The commenters stated that the instruction essentially states: “Through the end of CY2023, hospital and other providers of PT, OT, SLP,

DSMT, and MNT services that remain on the telehealth list, can continue to bill for these services when furnished remotely in the same way they have been during the PHE, except that beneficiaries' homes will no longer need to be registered as provider-based departments of the hospital to allow for hospitals to bill for these services.”

*Response:* The commenters are correct that our billing policy for CY 2024 will reflect the online billing policy for CY 2023 that is found at:

<https://www.cms.gov/files/document/hospitals-and-cahs-ascs-and-cmhcs-cms-flexibilities-fight-covid-19.pdf>. However, with respect to the use of modifiers, we are clarifying that for services furnished beginning in CY 2024 that we require the use of the 95 modifier to be applied to claims from outpatient hospitals, as soon as hospitals can update their systems — in addition to the continued use of the 95 modifier for outpatient therapy services discussed above for all other institutional providers furnishing outpatient therapy services via telehealth under Part B. This policy will facilitate our ability to track all services in the same manner. Although we did not receive comments specifically from CAHs electing Method II, these CAHs will continue their longstanding practice of using the GT/GQ modifier, as appropriate.

In addition, we received several public comments that were outside the scope of the proposals made in the CY 2024 PFS proposed rule. Consequently, we did not summarize or respond to those comments.

After reviewing the comments, we are finalizing our proposal, with one amendment for modifiers, to allow outpatient hospitals and other providers of physical therapy, occupational therapy, and speech-language pathology, DSMT and MNT services that remain on the Medicare Telehealth Services List for CY 2024 to bill for these services when furnished remotely in the same way they have been during the COVID-19 PHE and through the end of CY 2023, including that for hospitals, beneficiaries' homes will no longer need to be registered as provider-based departments of the hospital to allow for hospitals to bill for these services. Additionally, our final subregulatory policy requires all institutional providers that bill for therapy, DSMT, and/or

MNT services, with the exception of Method II CAHs, to apply the 95 modifier on each applicable line if these services are furnished via telecommunication technology once hospitals that need to do so can update their systems. For CAHs opting for payment under Method II, these CAHs will continue their long-standing practice of using the GT/GQ modifier, as appropriate, when billing for their services furnished via telehealth.

#### E. Valuation of Specific Codes

##### 1. Background: Process for Valuing New, Revised, and Potentially Misvalued Codes

Establishing valuations for newly created and revised CPT codes is a routine part of maintaining the PFS. Since the inception of the PFS, it has also been a priority to revalue services regularly to make sure that the payment rates reflect the changing trends in the practice of medicine and current prices for inputs used in the PE calculations. Initially, this was accomplished primarily through the 5-year review process, which resulted in revised work RVUs for CY 1997, CY 2002, CY 2007, and CY 2012, and revised PE RVUs in CY 2001, CY 2006, and CY 2011, and revised MP RVUs in CY 2010, CY 2015, and CY 2020. Under the 5-year review process, revisions in RVUs were proposed and finalized via rulemaking. In addition to the 5-year reviews, beginning with CY 2009, CMS and the RUC identified a number of potentially misvalued codes each year using various identification screens, as outlined in section II.C. of the proposed rule, Potentially Misvalued Services under the PFS. Historically, when we received RUC recommendations, our process had been to establish interim final RVUs for the potentially misvalued codes, new codes, and any other codes for which there were coding changes in the final rule with comment period for a year. Then, during the 60-day period following the publication of the final rule with comment period, we accepted public comment about those valuations. For services furnished during the calendar year following the publication of interim final rates, we paid for services based upon the interim final values established in the final rule. In the final rule with comment period for the subsequent year, we considered and

responded to public comments received on the interim final values, and typically made any appropriate adjustments and finalized those values.

In the CY 2015 PFS final rule with comment period (79 FR 67547), we finalized a new process for establishing values for new, revised and potentially misvalued codes. Under the new process, we include proposed values for these services in the proposed rule, rather than establishing them as interim final in the final rule with comment period. Beginning with the CY 2017 PFS proposed rule (81 FR 46162), the new process was applicable to all codes, except for new codes that describe truly new services. For CY 2017, we proposed new values in the CY 2017 PFS proposed rule for the vast majority of new, revised, and potentially misvalued codes for which we received complete RUC recommendations by February 10, 2016. To complete the transition to this new process, for codes for which we established interim final values in the CY 2016 PFS final rule with comment period (81 FR 80170), we reviewed the comments received during the 60-day public comment period following release of the CY 2016 PFS final rule with comment period (80 FR 70886), and re-proposed values for those codes in the CY 2017 PFS proposed rule.

We considered public comments received during the 60-day public comment period for the proposed rule before establishing final values in the CY 2017 PFS final rule. As part of our established process, we will adopt interim final values only in the case of wholly new services for which there are no predecessor codes or values and for which we do not receive recommendations in time to propose values.

As part of our obligation to establish RVUs for the PFS, we thoroughly review and consider available information including recommendations and supporting information from the RUC, the Health Care Professionals Advisory Committee (HCPAC), public commenters, medical literature, Medicare claims data, comparative databases, comparison with other codes within the PFS, as well as consultation with other physicians and healthcare professionals within CMS and the Federal Government as part of our process for establishing valuations. Where we

concur that the RUC's recommendations, or recommendations from other commenters, are reasonable and appropriate and are consistent with the time and intensity paradigm of physician work, we proposed those values as recommended. Additionally, we continually engage with interested parties, including the RUC, with regard to our approach for accurately valuing codes, and as we prioritize our obligation to value new, revised, and potentially misvalued codes. We continue to welcome feedback from all interested parties regarding valuation of services for consideration through our rulemaking process.

## 2. Methodology for Establishing Work RVUs

For each code identified in this section, we conduct a review that includes the current work RVU (if any), RUC-recommended work RVU, intensity, time to furnish the preservice, intraservice, and postservice activities, as well as other components of the service that contribute to the value. Our reviews of recommended work RVUs and time inputs generally include, but have not been limited to, a review of information provided by the RUC, the HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, consultation with other physicians and health care professionals within CMS and the Federal Government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. In the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329), we discussed a variety of methodologies and approaches used to develop work RVUs, including survey data, building blocks, crosswalks to key reference or similar codes, and magnitude estimation (see the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329) for more information). When referring to a survey, unless otherwise noted, we mean the surveys conducted by specialty societies as part of the formal RUC process.

Components that we use in the building block approach may include preservice, intraservice, or postservice time and post-procedure visits. When referring to a bundled CPT

code, the building block components could include the CPT codes that make up the bundled code and the inputs associated with those codes. We use the building block methodology to construct, or deconstruct, the work RVU for a CPT code based on component pieces of the code.

Magnitude estimation refers to a methodology for valuing work that determines the appropriate work RVU for a service by gauging the total amount of work for that service relative to the work for a similar service across the PFS without explicitly valuing the components of that work. In addition to these methodologies, we frequently utilize an incremental methodology in which we value a code based upon its incremental difference between another code and another family of codes. Section 1848(c)(1)(A) of the Act specifically defines the work component as the resources that reflect time and intensity in furnishing the service. Also, the published literature on valuing work has recognized the key role of time in overall work. For particular codes, we refine the work RVUs in direct proportion to the changes in the best information regarding the time resources involved in furnishing particular services, either considering the total time or the intraservice time.

Several years ago, to aid in the development of preservice time recommendations for new and revised CPT codes, the RUC created standardized preservice time packages. The packages include preservice evaluation time, preservice positioning time, and preservice scrub, dress and wait time. Currently, there are preservice time packages for services typically furnished in the facility setting (for example, preservice time packages reflecting the different combinations of straightforward or difficult procedure, and straightforward or difficult patient). Currently, there are three preservice time packages for services typically furnished in the nonfacility setting.

We developed several standard building block methodologies to value services appropriately when they have common billing patterns. In cases where a service is typically furnished to a beneficiary on the same day as an E/M service, we believe that there is overlap between the two services in some of the activities furnished during the preservice evaluation and postservice time. Our longstanding adjustments have reflected a broad assumption that at least

one-third of the work time in both the preservice evaluation and postservice period is duplicative of work furnished during the E/M visit.

Accordingly, in cases where we believe that the RUC has not adequately accounted for the overlapping activities in the recommended work RVU and/or times, we adjust the work RVU and/or times to account for the overlap. The work RVU for a service is the product of the time involved in furnishing the service multiplied by the intensity of the work. Preservice evaluation time and postservice time both have a long-established intensity of work per unit of time (IWPUT) of 0.0224, which means that 1 minute of preservice evaluation or postservice time equates to 0.0224 of a work RVU.

Therefore, in many cases when we remove 2 minutes of preservice time and 2 minutes of postservice time from a procedure to account for the overlap with the same day E/M service, we also remove a work RVU of 0.09 (4 minutes  $\times$  0.0224 IWPUT) if we do not believe the overlap in time had already been accounted for in the work RVU. The RUC has recognized this valuation policy and, in many cases, now addresses the overlap in time and work when a service is typically furnished on the same day as an E/M service.

The following paragraphs discuss our approach to reviewing RUC recommendations and developing proposed values for specific codes. When they exist, we also include a summary of interested party reactions to our approach. We noted that many commenters and interested parties have expressed concerns over the years with our ongoing adjustment of work RVUs based on changes in the best information we had regarding the time resources involved in furnishing individual services. We have been particularly concerned with the RUC's and various specialty societies' objections to our approach given the significance of their recommendations to our process for valuing services and since much of the information we used to make the adjustments is derived from their survey process. We note that we are obligated under the statute to consider both time and intensity in establishing work RVUs for PFS services. As explained in the CY 2016 PFS final rule with comment period (80 FR 70933), we recognize that adjusting

work RVUs for changes in time is not always a straightforward process, so we have applied various methodologies to identify several potential work values for individual codes.

We have observed that for many codes reviewed by the RUC, recommended work RVUs have appeared to be incongruous with recommended assumptions regarding the resource costs in time. This has been the case for a significant portion of codes for which we recently established or proposed work RVUs that are based on refinements to the RUC-recommended values. When we have adjusted work RVUs to account for significant changes in time, we have started by looking at the change in the time in the context of the RUC-recommended work RVU. When the recommended work RVUs do not appear to account for significant changes in time, we have employed the different approaches to identify potential values that reconcile the recommended work RVUs with the recommended time values. Many of these methodologies, such as survey data, building block, crosswalks to key reference or similar codes, and magnitude estimation have long been used in developing work RVUs under the PFS. In addition to these, we sometimes use the relationship between the old time values and the new time values for particular services to identify alternative work RVUs based on changes in time components.

In so doing, rather than ignoring the RUC-recommended value, we have used the recommended values as a starting reference and then applied one of these several methodologies to account for the reductions in time that we believe were not otherwise reflected in the RUC-recommended value. If we believe that such changes in time are already accounted for in the RUC's recommendation, then we do not make such adjustments. Likewise, we do not arbitrarily apply time ratios to current work RVUs to calculate proposed work RVUs. We use the ratios to identify potential work RVUs and consider these work RVUs as potential options relative to the values developed through other options.

We do not imply that the decrease in time as reflected in survey values should always equate to a one-to-one or linear decrease in newly valued work RVUs. Instead, we believe that, since the two components of work are time and intensity, absent an obvious or explicitly stated

rationale for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs. If the RUC's recommendation has appeared to disregard or dismiss the changes in time, without a persuasive explanation of why such a change should not be accounted for in the overall work of the service, then we have generally used one of the aforementioned methodologies to identify potential work RVUs, including the methodologies intended to account for the changes in the resources involved in furnishing the procedure.

Several interested parties, including the RUC, have expressed general objections to our use of these methodologies and deemed our actions in adjusting the recommended work RVUs as inappropriate; other interested parties have also expressed general concerns with CMS refinements to RUC-recommended values in general. In the CY 2017 PFS final rule (81 FR 80272 through 80277), we responded in detail to several comments that we received regarding this issue. In the CY 2017 PFS proposed rule (81 FR 46162), we requested comments regarding potential alternatives to making adjustments that would recognize overall estimates of work in the context of changes in the resource of time for particular services; however, we did not receive any specific potential alternatives. As described earlier in this section, crosswalks to key reference or similar codes are one of the many methodological approaches we have employed to identify potential values that reconcile the RUC-recommended work RVUs with the recommended time values when the RUC-recommended work RVUs did not appear to account for significant changes in time.

We received several comments regarding our methodologies for work valuation in response to the CY 2024 PFS proposed rule and those comments are summarized below.

*Comment:* Several commenters disagreed with CMS' reference to older work time sources and stated that their use led to the proposal of work RVUs based on flawed assumptions. Commenters stated that codes with "CMS/Other" or "Harvard" work time sources, used in the original valuation of certain older services, were not surveyed, and therefore, were not resource-

based. Commenters also stated that it was invalid to draw comparisons between the current work times and work RVUs of these services to the newly surveyed work time and work RVUs as recommended by the RUC.

*Response:* We agree that it is important to use the recent data available regarding work times and note that when many years have passed since work time has been measured, significant discrepancies can occur. However, we also believe that our operating assumption regarding the validity of the existing values as a point of comparison is critical to the integrity of the relative value system as currently constructed. The work times currently associated with codes play a very important role in PFS ratesetting, both as points of comparison in establishing work RVUs and in the allocation of indirect PE RVUs by specialty. If we were to operate under the assumption that previously recommended work times had been routinely overestimated, this would undermine the relativity of the work RVUs on the PFS in general, in light of the fact that codes are often valued based on comparisons to other codes with similar work times. Such an assumption would also undermine the validity of the allocation of indirect PE RVUs to physician specialties across the PFS.

Instead, we believe that it is crucial that the code valuation process take place with the understanding that the existing work times that have been used in PFS ratesetting are accurate. We recognize that adjusting work RVUs for changes in time is not always a straightforward process and that the intensity associated with changes in time is not necessarily always linear, which is why we apply various methodologies to identify several potential work values for individual codes. However, we reiterate that we believe it would be irresponsible to ignore changes in time based on the best data available, and that we are statutorily obligated to consider both time and intensity in establishing work RVUs for PFS services. For additional information regarding the use of old work time values that were established many years ago and have not since been reviewed in our methodology, we refer readers to our discussion of the subject in the CY 2017 PFS final rule (81 FR 80273 through 80274).

*Comment:* Several commenters disagreed with the use of time ratio methodologies for work valuation. Commenters stated that this use of time ratios is not a valid methodology for valuation of physician services. Commenters stated that treating all components of physician time (preservice, intraservice, postservice and post-operative visits) as having identical intensity is incorrect, and inconsistently applying it to only certain services under review creates inherent payment disparities in a payment system, which is based on relative valuation. Commenters stated that in many scenarios, CMS selects an arbitrary combination of inputs to apply rather than seeking a valid clinically relevant relationship that would preserve relativity. Commenters suggested that CMS determine the work valuation for each code based not only on surveyed work times, but also the intensity and complexity of the service and relativity to other similar services, rather than basing the work value entirely on time. Commenters recommended that CMS embrace the clinical input from practicing physicians when valid surveys were conducted and provide a clinical rationale when proposing crosswalks for valuation of services.

*Response:* We disagree and continue to believe that the use of time ratios is one of several appropriate methods for identifying potential work RVUs for particular PFS services, particularly when the alternative values recommended by the RUC and other commenters do not account for survey information that suggests the amount of time involved in furnishing the service has changed significantly. We reiterate that, consistent with the statute, we are required to value the work RVU based on the relative resources involved in furnishing the service, which include time and intensity. In accordance with the statute, we believe that changes in time and intensity must be accounted for when developing work RVUs. When our review of recommended values reveals that changes in time are not accounted for in a RUC-recommended work RVU, the obligation to account for that change when establishing proposed and final work RVUs remains.

We recognize that it would not be appropriate to develop work RVUs solely based on time, given that intensity is also an element of work, but in applying the time ratios, we are using

derived intensity measures based on current work RVUs for individual procedures. We clarify again that we do not treat all components of physician time as having identical intensity. If we were to disregard intensity altogether, the work RVUs for all services would be developed based solely on time values and that is not the case, as indicated by the many services that share the same time values but have different work RVUs. For example, among the codes reviewed in this CY 2024 PFS final rule, CPT codes 76987 (*Intraoperative epicardial cardiac (eg, echocardiography) ultrasound for congenital heart disease, diagnostic; including placement and manipulation of transducer, image acquisition, interpretation and report*), 97550 (*Caregiver training in strategies and techniques to facilitate the patient's functional performance in the home or community (eg, activities of daily living [adls], instrumental adls [iadls], transfers, mobility, communication, swallowing, feeding, problem solving, safety practices) (without the patient present), face-to-face; initial 30 minutes*), and 99497 (*Advance care planning including the explanation and discussion of advance directives such as standard forms (with completion of such forms, when performed), by the physician or other qualified health care professional; first 30 minutes, face-to-face with the patient, family member(s), and/or surrogate*) all share the same total work time of 40 minutes. However, these codes had very different proposed work RVUs of 1.62, 1.00 and 1.50, respectively. These examples demonstrate that we do not value services purely based on work time; instead, we incorporate time as one of multiple different factors in our review process. Furthermore, we reiterate that we use time ratios to identify potentially appropriate work RVUs, and then use other methods (including estimates of work from CMS medical personnel and crosswalks to key references or similar codes) to validate these RVUs. For more details on our methodology for developing work RVUs, we direct readers to the discussion CY 2017 PFS final rule (81 FR 80272 through 80277).

We also clarify for the commenters that our review process is not arbitrary in nature. Our reviews of recommended work RVUs and time inputs generally include, but have not been limited to, a review of information provided by the RUC, the HCPAC, and other public

commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, consultation with other physicians and health care professionals within CMS and the Federal Government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. In the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329), we discussed a variety of methodologies and approaches used to develop work RVUs, including survey data, building blocks, crosswalks to key reference or similar codes, and magnitude estimation (see the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329) for more information).

With regard to the commenter's concerns regarding clinically relevant relationships, we emphasize that we continue to believe that the nature of the PFS relative value system is such that all services are appropriately subject to comparisons to one another. Although codes that describe clinically similar services are sometimes stronger comparator codes, we do not agree that codes must share the same site of service, patient population, or utilization level to serve as an appropriate crosswalk.

*Comment:* Several commenters raised the issue of the refinement panel which was last reformed in CY 2016. Commenters stated that the refinement panel was not obsolete and was not mutually exclusive with the change to include all proposed valuations in each year's proposed rule. Commenters stated that for 2 decades, the refinement panel process was considered by interested parties to be an appeals process and its elimination discontinued CMS' reliance on outside interested parties to provide accountability through a transparent appeals process. Commenters requested that CMS consider these issues and create an objective, transparent and consistently applied formal appeals process that would be open to any commenting organization.

*Response:* We did not propose any changes to the refinement panel for CY 2024. As we stated in the CY 2016 PFS final rule (80 FR 70917 and 70918), the refinement panel was established to assist us in reviewing the public comments on CPT codes with interim final work

RVUs and in balancing the interests of the specialty societies who commented on the work RVUs with the budgetary and redistributive effects that could occur if we accepted extensive increases in work RVUs across a broad range of services. When developing the CY 2016 proposed rule, and continuing to the present, we did not believe that the refinement panel had generally served as the kind of “appeals” or reconsideration process that some interested parties envisioned in their comments. We also believe that the refinement panel was not achieving its intended purpose. Rather than providing us with additional information, balanced across specialty interests, to assist us in establishing work RVUs, the refinement panel process generally served to rehash the issues raised and information already discussed at the RUC meetings and considered by CMS. In contrast to the prior process of establishing interim final values and using a refinement panel process that generally was not observed by members of the public, we continue to believe that the current process of proposing the majority of code values in a proposed rule, giving the public the opportunity to comment on those proposed values, and then finalizing those values in a final rule offers greater transparency and accountability.

We also note that we did not finalize our proposal to eliminate the refinement panel completely in CY 2016. We retain the ability to convene refinement panels for codes with interim final values under circumstances where additional input provided by the panel is likely to add value as a supplement to notice and comment rulemaking. We also remind interested parties that we have established an annual process for the public nomination of potentially misvalued codes. This process, described in the CY 2012 PFS final rule (76 FR 73058), provides an annual means for those who believe that values for individual services are inaccurate and should be readdressed through notice and comment rulemaking to bring those codes to our attention.

In response to comments, in the CY 2019 PFS final rule (83 FR 59515), we clarified that terms “reference services”, “key reference services”, and “crosswalks” as described by the commenters are part of the RUC’s process for code valuation. These are not terms that we created, and we do not agree that we necessarily must employ them in the identical fashion for

the purposes of discussing our valuation of individual services that come up for review. However, in the interest of minimizing confusion and providing clear language to facilitate feedback from interested parties, we stated that we would seek to limit the use of the term, “crosswalk,” to those cases where we are making a comparison to a CPT code with the identical work RVU. (83 FR 59515) We note that we also occasionally make use of a “bracket” for code valuation. A “bracket” refers to when a work RVU falls between the values of two CPT codes, one at a higher work RVU and one at a lower work RVU.

We look forward to continuing to engage with interested parties and commenters, including the RUC, as we prioritize our obligation to value new, revised, and potentially misvalued codes; and we will continue to welcome feedback from all interested parties regarding valuation of services for consideration through our rulemaking process. We refer readers to the detailed discussion in this section of the valuation considered for specific codes. Table 14 contains a list of codes and descriptors for which we are finalizing work RVUs for CY 2024; this includes all codes for which we received RUC recommendations by February 10, 2023. The proposed work RVUs, work time and other payment information for all CY 2024 payable codes are available on the CMS website under downloads for the CY 2024 PFS final rule at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html>).

### 3. Methodology for the Direct PE Inputs to Develop PE RVUs

#### a. Background

On an annual basis, the RUC provides us with recommendations regarding PE inputs for new, revised, and potentially misvalued codes. We review the RUC-recommended direct PE inputs on a code by code basis. Like our review of recommended work RVUs, our review of recommended direct PE inputs generally includes, but is not limited to, a review of information provided by the RUC, HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, and

consultation with physicians and health care professionals within CMS and the Federal Government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. When we determine that the RUC's recommendations appropriately estimate the direct PE inputs (clinical labor, disposable supplies, and medical equipment) required for the typical service, are consistent with the principles of relativity, and reflect our payment policies, we use those direct PE inputs to value a service. If not, we refine the recommended PE inputs to better reflect our estimate of the PE resources required for the service. We also confirm whether CPT codes should have facility and/or nonfacility direct PE inputs and refine the inputs accordingly.

Our review and refinement of the RUC-recommended direct PE inputs includes many refinements that are common across codes, as well as refinements that are specific to particular services. Table 15 details our refinements of the RUC's direct PE recommendations at the code-specific level. In section II.B. of this final rule, Determination of Practice Expense Relative Value Units (PE RVUs), we address certain refinements that will be common across codes. Refinements to particular codes are addressed in the portions of that section that are dedicated to particular codes. We note that for each refinement, we indicate the impact on direct costs for that service. We note that, on average, in any case where the impact on the direct cost for a particular refinement is \$0.35 or less, the refinement has no impact on the PE RVUs. This calculation considers both the impact on the direct portion of the PE RVU, as well as the impact on the indirect allocator for the average service. In this final rule, we also note that many of the refinements listed in Table 14 result in changes under the \$0.35 threshold and would be unlikely to result in a change to the RVUs.

We note that the direct PE inputs for CY 2024 are displayed in the CY 2024 direct PE input files, available on the CMS website under the downloads for the CY 2024 PFS final rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS->

*Federal-Regulation-Notices.html*. The inputs displayed there have been used in developing the CY 2024 PE RVUs as displayed in Addendum B.

b. Common Refinements

(1) Changes in Work Time

Some direct PE inputs are directly affected by revisions in work time. Specifically, changes in the intraservice portions of the work time and changes in the number or level of postoperative visits associated with the global periods result in corresponding changes to direct PE inputs. The direct PE input recommendations generally correspond to the work time values associated with services. We believe that inadvertent discrepancies between work time values and direct PE inputs should be refined or adjusted in the establishment of proposed direct PE inputs to resolve the discrepancies.

(2) Equipment Time

Prior to CY 2010, the RUC did not generally provide CMS with recommendations regarding equipment time inputs. In CY 2010, in the interest of ensuring the greatest possible degree of accuracy in allocating equipment minutes, we requested that the RUC provide equipment times along with the other direct PE recommendations, and we provided the RUC with general guidelines regarding appropriate equipment time inputs. We appreciate the RUC's willingness to provide us with these additional inputs as part of its PE recommendations.

In general, the equipment time inputs correspond to the service period portion of the clinical labor times. We clarified this principle over several years of rulemaking, indicating that we consider equipment time as the time within the intraservice period when a clinician is using the piece of equipment plus any additional time that the piece of equipment is not available for use for another patient due to its use during the designated procedure. For those services for which we allocate cleaning time to portable equipment items, because the portable equipment does not need to be cleaned in the room where the service is furnished, we do not include that cleaning time for the remaining equipment items, as those items and the room are both available

for use for other patients during that time. In addition, when a piece of equipment is typically used during follow-up postoperative visits included in the global period for a service, the equipment time will also reflect that use.

We believe that certain highly technical pieces of equipment and equipment rooms are less likely to be used during all of the preservice or postservice tasks performed by clinical labor staff on the day of the procedure (the clinical labor service period) and are typically available for other patients even when one member of the clinical staff may be occupied with a preservice or postservice task related to the procedure. We also noted that we believe these same assumptions will apply to inexpensive equipment items that are used in conjunction with and located in a room with non-portable highly technical equipment items since any items in the room in question will be available if the room is not being occupied by a particular patient. For additional information, we referred readers to our discussion of these issues in the CY 2012 PFS final rule with comment period (76 FR 73182) and the CY 2015 PFS final rule with comment period (79 FR 67639).

### (3) Standard Tasks and Minutes for Clinical Labor Tasks

In general, the preservice, intraservice, and postservice clinical labor minutes associated with clinical labor inputs in the direct PE input database reflect the sum of particular tasks described in the information that accompanies the RUC-recommended direct PE inputs, commonly called the “PE worksheets.” For most of these described tasks, there is a standardized number of minutes, depending on the type of procedure, its typical setting, its global period, and the other procedures with which it is typically reported. The RUC sometimes recommends a number of minutes either greater than or less than the time typically allotted for certain tasks. In those cases, we review the deviations from the standards and any rationale provided for the deviations. When we do not accept the RUC-recommended exceptions, we refine the proposed direct PE inputs to conform to the standard times for those tasks. In addition, in cases when a

service is typically billed with an E/M service, we remove the preservice clinical labor tasks to avoid duplicative inputs and to reflect the resource costs of furnishing the typical service.

We refer readers to section II.B. of this final rule, Determination of Practice Expense Relative Value Units (PE RVUs), for more information regarding the collaborative work of CMS and the RUC in improvements in standardizing clinical labor tasks.

#### (4) Recommended Items that are not Direct PE Inputs

In some cases, the PE worksheets included with the RUC's recommendations include items that are not clinical labor, disposable supplies, or medical equipment or that cannot be allocated to individual services or patients. We addressed these kinds of recommendations in previous rulemaking (78 FR 74242), and we do not use items included in these recommendations as direct PE inputs in the calculation of PE RVUs.

#### (5) New Supply and Equipment Items

The RUC generally recommends the use of supply and equipment items that already exist in the direct PE input database for new, revised, and potentially misvalued codes. However, some recommendations include supply or equipment items that are not currently in the direct PE input database. In these cases, the RUC has historically recommended that a new item be created and has facilitated our pricing of that item by working with the specialty societies to provide us copies of sales invoices. For CY 2024 we received invoices for several new supply and equipment items. Tables 17 and 18 detail the invoices received for new and existing items in the direct PE database. As discussed in section II.B. of this final rule, Determination of Practice Expense Relative Value Units, we encourage interested parties to review the prices associated with these new and existing items to determine whether these prices appear to be accurate. Where prices appear inaccurate, we encourage interested parties to submit invoices or other information to improve the accuracy of pricing for these items in the direct PE database by February 10th of the following year for consideration in future rulemaking, similar to our process for consideration of RUC recommendations.

We remind interested parties that due to the relativity inherent in the development of RVUs, reductions in existing prices for any items in the direct PE database increase the pool of direct PE RVUs available to all other PFS services. Tables 17 and 18 also include the number of invoices received and the number of nonfacility allowed services for procedures that use these equipment items. We provide the nonfacility allowed services so that interested parties will note the impact the particular price might have on PE relativity, as well as to identify items that are used frequently, since we believe that interested parties are more likely to have better pricing information for items used more frequently. A single invoice may not be reflective of typical costs, and we encourage interested parties to provide additional invoices so that we might identify and use accurate prices in the development of PE RVUs.

In some cases, we do not use the price listed on the invoice that accompanies the recommendation because we identify publicly available alternative prices or information that suggests a different price is more accurate. In these cases, we include this in the discussion of these codes. In other cases, we cannot adequately price a newly recommended item due to inadequate information. Sometimes, no supporting information regarding the price of the item has been included in the recommendation. In other cases, the supporting information does not demonstrate that the item has been purchased at the listed price (for example, vendor price quotes instead of paid invoices). In cases where the information provided on the item allows us to identify clinically appropriate proxy items, we might use existing items as proxies for the newly recommended items. In other cases, we include the item in the direct PE input database without any associated price. Although including the item without an associated price means that the item does not contribute to the calculation of the final PE RVU for particular services, it facilitates our ability to incorporate a price once we obtain information and are able to do so.

#### (6) Service Period Clinical Labor Time in the Facility Setting

Generally speaking, our direct PE inputs do not include clinical labor minutes assigned to the service period because the cost of clinical labor during the service period for a procedure in

the facility setting is not considered a resource cost to the practitioner since Medicare makes separate payment to the facility for these costs. We address code-specific refinements to clinical labor in the individual code sections.

#### (7) Procedures Subject to the Multiple Procedure Payment Reduction (MPPR) and the OPFS Cap

We noted that the list of services for the upcoming calendar year that are subject to the MPPR on diagnostic cardiovascular services, diagnostic imaging services, diagnostic ophthalmology services, and therapy services; and the list of procedures that meet the definition of imaging under section 1848(b)(4)(B) of the Act, and therefore, are subject to the OPFS cap; are displayed in the public use files for the PFS proposed and final rules for each year. The public use files for CY 2024 are available on the CMS website under downloads for the CY 2024 PFS final rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>. For more information regarding the history of the MPPR policy, we refer readers to the CY 2014 PFS final rule with comment period (78 FR 74261 through 74263).

Effective January 1, 2007, section 5102(b)(1) of the Deficit Reduction Act of 2005 (Pub. L. 109–171) (DRA) amended section 1848(b)(4) of the Act to require that, for imaging services, if— (i) The TC (including the TC portion of a global fee) of the service established for a year under the fee schedule without application of the geographic adjustment factor, exceeds (ii) The Medicare OPD fee schedule amount established under the prospective payment system (PPS) for HOPD services under section 1833(t)(3)(D) of the Act for such service for such year, determined without regard to geographic adjustment under paragraph (t)(2)(D) of such section, the Secretary shall substitute the amount described in clause (ii), adjusted by the geographic adjustment factor [under the PFS], for the fee schedule amount for such TC for such year. As required by section 1848(b)(4)(A) of the Act, for imaging services furnished on or after January 1, 2007, we cap the TC of the PFS payment amount for the year (prior to geographic adjustment) by the Outpatient

Prospective Payment System (OPPS) payment amount for the service (prior to geographic adjustment). We then apply the PFS geographic adjustment to the capped payment amount. Section 1848(b)(4)(B) of the Act defines imaging services as “imaging and computer-assisted imaging services, including X-ray, ultrasound (including echocardiography), nuclear medicine (including PET), magnetic resonance imaging (MRI), computed tomography (CT), and fluoroscopy, but excluding diagnostic and screening mammography.” For more information regarding the history of the cap on the TC of the PFS payment amount under the DRA (the “OPPS cap”), we refer readers to the CY 2007 PFS final rule with comment period (71 FR 69659 through 69662).

For CY 2024, we identified new and revised codes to determine which services meet the definition of “imaging services” as defined previously in this final rule for purposes of this cap. Beginning for CY 2024, we proposed to include the following services on the list of codes to which the OPPS cap applies: CPT codes 76883 (*Ultrasound, nerve(s) and accompanying structures throughout their entire anatomic course in one extremity, comprehensive, including real-time cine imaging with image documentation, per extremity*), 76984 (*Ultrasound, intraoperative thoracic aorta (eg, epiaortic), diagnostic*), 76987 (*Intraoperative epicardial cardiac (eg, echocardiography) ultrasound for congenital heart disease, diagnostic; including placement and manipulation of transducer*), 76988 (*Intraoperative epicardial cardiac (eg, echocardiography) ultrasound for congenital heart disease, diagnostic; placement, manipulation of transducer, and image acquisition only*), 76989 (*Intraoperative epicardial cardiac (eg, )echocardiography) ultrasound for congenital heart disease, diagnostic; interpretation and report only*), 93584 (*Venography for congenital heart defect(s), including catheter placement, and radiological supervision and interpretation; anomalous or persistent superior vena cava when it exists as a second contralateral superior vena cava, with native drainage to heart (List separately in addition to code for primary procedure)*), 93585 (*Venography for congenital heart defect(s), including catheter placement, and radiological supervision and interpretation;*

*azygos/hemi-azygos venous system (List separately in addition to code for primary procedure)), 93586 (Venography for congenital heart defect(s), including catheter placement, and radiological supervision and interpretation; coronary sinus (List separately in addition to code for primary procedure)), 93587 (Venography for congenital heart defect(s), including catheter placement, and radiological supervision and interpretation; venovenous collaterals originating at or above the heart (eg, from innominate vein) (List separately in addition to code for primary procedure)), and 93588 (Venography for congenital heart defect(s), including catheter placement, and radiological supervision and interpretation; venovenous collaterals originating below the heart (eg, from the inferior vena cava) (List separately in addition to code for primary procedure)).* We believe that these codes meet the definition of imaging services under section 1848(b)(4)(B) of the Act, and thus, should be subject to the OPSS cap. We note that we previously proposed to add CPT code 76883 to the list of codes to which the OPSS cap applies in the CY 2023 PFS proposed rule, but we did not finalize its addition, noting that it was not within the statutory scope of services to which the OPSS cap applies, as it could not be split into professional and technical components at that time (87 FR 69475). Since that time, we have reinstated CPT code 76883's PC/TC split based on feedback from billing practitioners, therefore we proposed to add it to the OPSS cap list for CY 2024.

*Comment:* Some commenters requested that CMS remove CPT code 92229 (*Imaging of retina for detection or monitoring of disease; point-of-care autonomous analysis and report, unilateral or bilateral*) from the OPSS cap list because it does not include an associated PC or physician interpretation and it is primarily utilized in the physician office setting. Commenters also noted that this service falls outside the scope of the definition of "imaging services" under the DRA. One commenter stated that, while it may be appropriate for the technical components of CPT codes 92227 (*Imaging of retina for detection or monitoring of disease; with remote clinical staff review and report, unilateral or bilateral*) and 92228 (*Imaging of retina for detection or monitoring of disease; with remote physician or other qualified health care*

*professional interpretation and report, unilateral or bilateral*) to be on the OPSS Cap List, the same logic does not apply to CPT code 92229 despite all three codes being in the same family of codes and representing the same imaging service, only differentiated by the modality of review and interpretation.

*Response:* We appreciate the commenters' feedback regarding CPT code 92229. We note that CPT codes 92227, 92228, and 92229 have been subject to the OPSS cap since their addition to the OPSS cap list for CY 2021 and we did not make any proposals related to CPT code 92229 for CY 2024, therefore these comments are considered to be out of scope of the proposed rule. We will consider the commenters' suggestions for future rulemaking.

We did not receive public comments on the proposed additions to the OPSS cap list for CY 2024. We are finalizing the addition of the services listed above to the list of codes to which the OPSS cap applies, as proposed.

#### 4. Valuation of Specific Codes for CY 2024

##### (1) Dorsal Sacroiliac Joint Arthrodesis (CPT code 27278)

In September 2022, CPT deleted category III CPT code 0775T (*Arthrodesis, sacroiliac joint, percutaneous, with image guidance, includes placement of intra-articular implant(s) (eg, bone allograft[s], synthetic device[s])*) and created a new Category I CPT code 27278 (*Arthrodesis, sacroiliac joint, percutaneous, with image guidance, including placement of intra-articular implant(s) (eg, bone allograft[s], synthetic device[s]), without placement of transfixation device*), which was surveyed for the January 2023 RUC meeting. CPT codes 27279 (*Arthrodesis, sacroiliac joint, percutaneous or minimally invasive (indirect visualization), with image guidance, includes obtaining bone graft when performed, and placement of transfixing device*) and 27280 (*Arthrodesis, sacroiliac joint, open, includes obtaining bone graft, including instrumentation, when performed*) were added as family codes to the level of interest (LOI) form for the RUC to review. However, the specialty societies indicated that they do not consider CPT codes 27279 and 27280 as part of the same code family and requested that they not be re-

reviewed by the RUC for the January 2023 meeting. The RUC agreed with the specialty societies and did not review these codes at the January 2023 meeting. The RUC stated in their recommendations for 27278 that the clinical nature of CPT codes 27279 and 27280 is extensively disparate from 27278 for both the surgical approach and the specialties that perform the procedures. Additionally, they stated that no substantive changes were made to CPT codes 27279 and 27280 at the September 2022 CPT panel meeting and 27279 has been reviewed by the RUC as recently as 2018.

We proposed the RUC-recommended work RVU of 7.86 for CPT code 27278. We also proposed the RUC-recommended direct PE inputs without refinement.

*Comment:* Several commenters supported CMS' proposed valuation of 7.86 work RVUs for CPT code 27278. They also supported CMS' proposed RUC-recommended direct PE inputs for the non-facility site of service as they noted that current study data has sufficiently demonstrated safety and efficacy in the non-facility setting. However, several commenters expressed concern that the non-facility site of service is not appropriate for this procedure. They stated that the procedure is new and without a pre-established safety record.

*Response:* We thank commenters for their support of our proposed work RVU and non-facility direct PE inputs. However, we also acknowledge other commenters' concerns regarding CPT code 27278 being performed in the non-facility setting. At this time, we agree with the RUC's recommended valuations, including the non-facility direct PE inputs. However, given consideration of all comments received, we believe that CPT code 27278 could benefit from additional future review by the RUC, as a service that includes a new technology supply item (dorsal SI joint arthrodesis implant), as well as considerations for the site of service. If we were to receive new RUC recommendations at a future date, we would consider that information and any discussions with interested parties for rulemaking.

*Comment:* Some commenters expressed concerns about the cost of the direct PE supply item, dorsal SI joint arthrodesis implant, valued at \$11,500. They stated that the high cost of this

supply will negatively impact PE RVUs and cause undesirable effects on the PFS budget neutrality as a service with one of the highest costs on the fee schedule. Commenters were also concerned with the potential overutilization of the service in the non-facility setting.

*Response:* The payment for the dorsal SI joint arthrodesis implant is based on invoices received from the manufacturer and a formal review to determine if each direct PE input is typical and medically necessary, which is part of our standard code review process. While we acknowledge that the supply is a high-cost item, we do not believe it is appropriate to undervalue a service to minimize impacts on budget neutrality. We also remind commenters that the utilization for this new CPT category I code is crosswalked from CPT code 0775T. As such, we do not anticipate a large impact on budget neutrality and will continue to monitor utilization as part of our standard ratesetting process.

After consideration of the public comments, we are finalizing the RUC-recommended work RVU of 7.86 and direct PE inputs as proposed for CPT code 27278.

(2) Vertebral Body Tethering (CPT codes 22836, 22837, and 22838)

At the September 2022 CPT Panel meeting, two new Category I CPT codes, 22836 (*Anterior thoracic vertebral body tethering, including thoracoscopy, when performed; up to 7 vertebral segments*) and 22837 (*Anterior thoracic vertebral body tethering, including thoracoscopy, when performed; 8 or more vertebral segments*) were established for thoracic tethering. In addition, another new Category I CPT code, 22838 (*Revision (eg, augmentation, division of tether), replacement, or removal of thoracic vertebral body tethering, including thoracoscopy, when performed*) was established for tether revision, replacement or removal. This code family was then surveyed for the January 2023 RUC meeting.

We proposed the RUC-recommended work RVUs of 32.00 for CPT code 22836, 35.50 for CPT code 22837, and 36.00 for CPT code 22838. We also proposed the RUC-recommended direct PE inputs without refinement.

*Comment:* We received comments in support of the proposed work RVU and direct PE inputs for this code family.

*Response:* We thank commenters for their support. After consideration of the public comments, we are finalizing our work RVU and direct PE inputs for the codes in the Vertebral Body Tethering family as proposed.

(3) Total Disc Arthroplasty (CPT codes 22857 and 22860)

In September 2021, the CPT Editorial Panel created CPT Category I code 22860 to describe *Total disc arthroplasty (artificial disc), anterior approach, including discectomy to prepare interspace (other than for decompression); second interspace, lumbar (List separately in addition to code for primary procedure)* and replace CPT Category III code 0163T (*Total disc arthroplasty (artificial disc), anterior approach, including discectomy to prepare interspace (other than for decompression), each additional interspace, lumbar (List separately in addition to code for primary procedure)*), which prompted CPT codes 22860 and 22857 (*Total disc arthroplasty (artificial disc), anterior approach, including discectomy to prepare interspace (other than for decompression); single interspace, lumbar*) to be surveyed for the January 2022 RUC meeting. At the January 2022 RUC meeting, the specialty societies indicated, and the RUC agreed, that the survey results for both CPT codes 22857 and 22860 were erroneous and that the codes should be resurveyed for the April 2022 RUC meeting. Therefore, we proposed and finalized to maintain the RUC-recommended work RVU of 27.13 for CPT code 22857 and contractor pricing for CPT code 22860 for CY 2023.

For CY 2024, we proposed the April 2022 RUC-recommended work RVU of 27.13 for CPT code 22857, which represents no change from the current work RVU. For CPT code 22860, we disagreed with the April 2022 RUC-recommended survey median work RVU of 7.50 and proposed the survey (with experience) 25<sup>th</sup> percentile work RVU of 6.88. We noted that, of the 46 ZZZ-codes with an intraservice time of 60 minutes, only 4 have a work RVU higher than the RUC-recommended 7.50.

We noted that our proposed work RVU of 6.88 will maintain relativity with CPT codes 22552 (*Arthrodesis, anterior interbody, including disc space preparation, discectomy, osteophylectomy and decompression of spinal cord and/or nerve roots; cervical below C2, each additional interspace (List separately in addition to code for primary procedure)*) (work RVU = 6.50, 45 minutes intra-service and 50 minutes total time), which is an anterior approach spine procedure that requires less time, and CPT code 22208 (*Osteotomy of spine, posterior or posterolateral approach, 3 columns, 1 vertebral segment (eg, pedicle/vertebral body subtraction); each additional vertebral segment (List separately in addition to code for primary procedure)*) (work RVU = 9.66, 120 minutes intra-service and 135 minutes total time). As the RUC mentioned in their recommendations, these codes appropriately bracket CPT code 22860 and demonstrate relativity among similar surgical spine add-on codes. The RUC noted that their recommended work RVU of 7.50 reflects the increased intensity of spine procedures performed from an anterior approach, but we note that CPT code 22226 (*Osteotomy of spine, including discectomy, anterior approach, single vertebral segment; each additional vertebral segment (List separately in addition to code for primary procedure)*), which represents an anterior approach, and CPT code 22216 (*Osteotomy of spine, posterior or posterolateral approach, 1 vertebral segment; each additional vertebral segment (List separately in addition to primary procedure)*), which represents a posterior or posterolateral approach, are both valued at 6.03 work RVUs and have identical IWPUTs of 0.1005. CPT codes 22216 and 22226 are ZZZ codes and have identical times as CPT code 22860, and therefore, we believe the proposed survey (with experience) 25<sup>th</sup> percentile work RVU of 6.88 for CPT code 22860 is more appropriate than the RUC recommended work RVU.

We proposed the RUC-recommended direct PE inputs for both codes without refinement.

*Comment:* Some commenters disagreed with the proposed work RVU of 6.88 for CPT code 22860 and encouraged CMS to finalize the RUC-recommended work RVU of 7.50. Some commenters reiterated that CPT codes 22552 and 22208 appropriately bracket CPT code 22860,

with work RVUs of 6.50 and 9.66, respectively. Some commenters also stated that the exposure of the second interspace (represented by CPT code 22860) is technically more difficult than the initial interspace (represented by CPT code 22857) and more intense compared to an osteotomy of the spine (represented by CPT codes 22208 and 22226). Commenters generally disagreed with the comparison of CPT code 22860 to CPT codes 22216 and 22226 because they were valued over 25 years ago and had limited survey responses.

*Response:* We agree with the commenters that the intensity of the second interspace exposure (CPT code 22860) is greater than the identically timed CPT code 22226, which represents an anterior approach osteotomy of the spine, and the technical difficulty of the first interspace exposure (CPT code 22857). The proposed work RVU of 6.88 for CPT code 22860 accurately values the surgeon's 60 minutes of intraservice time more than the identical 60 minutes of intraservice time for CPT code 22226 and yields a higher intensity (IWPUT) of 0.115 for CPT code 22860 for the exposure of the second interspace compared to exposure of the first interspace in CPT code 22857 of 0.092. Commenters were supportive of bracketing a work RVU of 7.50 with CPT codes 22552 and 22208, with work RVUs of 6.50 and 9.66, respectively, but we note that the proposed work RVU of 6.88 is also appropriately bracketed by these codes as well.

After consideration of the public comments, we are finalizing a work RVU of 27.13 for CPT code 22857 and a work RVU of 6.88 for CPT code 22860, as proposed. We are also finalizing the direct PE inputs as proposed.

(4) Phrenic Nerve Stimulation System (CPT codes 33276, 33277, 33278, 33279, 33280, 33281, 33287, 33288, 93150, 93151, 93152, and 93153)

In September 2022, the CPT Editorial Panel created eight new Category I CPT codes to describe the insertion, repositioning, removal, and removal and replacement of a phrenic nerve stimulator system, as well as adding four additional new Category I codes to describe activation, interrogation, and programming of a phrenic nerve stimulator system. These new codes will

replace thirteen Category III codes, 0424T-0436T. The twelve new Category I codes were surveyed and then reviewed for the January 2023 RUC meeting.

We proposed the RUC-recommended work RVU for all twelve codes in the Phrenic Nerve Stimulation System family. We proposed a work RVU of 9.50 for CPT code 33276 (*Insertion of phrenic nerve stimulator system (pulse generator and stimulating lead[s]) including vessel catheterization, all imaging guidance, and pulse generator initial analysis with diagnostic mode activation when performed*), a work RVU of 5.43 for CPT code 33277 (*Insertion of phrenic nerve stimulator transvenous sensing lead*), a work RVU of 9.55 for CPT code 33278 (*Removal of phrenic nerve stimulator including vessel catheterization, all imaging guidance, and interrogation and programming, when performed; system, including pulse generator and lead(s)*), a work RVU of 5.42 for CPT code 33279 (*Removal of phrenic nerve stimulator including vessel catheterization, all imaging guidance, and interrogation and programming, when performed; transvenous stimulation or sensing lead(s) only*), a work RVU of 3.04 for CPT code 33280 (*Removal of phrenic nerve stimulator including vessel catheterization, all imaging guidance, and interrogation and programming, when performed; pulse generator only*), a work RVU of 6.00 for CPT code 33281 (*Repositioning of phrenic nerve stimulator transvenous lead(s)*), a work RVU of 6.05 for CPT code 33287 (*Removal and replacement of phrenic nerve stimulator including vessel catheterization, all imaging guidance, and interrogation and programming when performed; pulse generator*), a work RVU of 8.51 for CPT code 33288 (*Removal and replacement of phrenic nerve stimulator including vessel catheterization, all imaging guidance, and interrogation and programming when performed; transvenous stimulation or sensing lead*), a work RVU of 0.85 for CPT code 93150 (*Therapy activation of implanted phrenic nerve stimulator system including all interrogation and programming*), a work RVU of 0.80 for CPT code 9X046 (*Interrogation and programming (minimum one parameter) of implanted phrenic nerve stimulator system*), and a work RVU of 0.43 for

CPT code 93153 (*Interrogation, without programming of implanted phrenic nerve stimulator system*).

We proposed to refine the CA039 Post-operative visits (total time) for CPT code 33287 from 36 minutes to 53 minutes to reflect the fact that this code has a Level 4 office visit and not a Level 3 office visit included in its global period; we believe that this was an unintended technical error in the RUC recommendation. We also proposed to refine the equipment time for the exam table (EF023) equipment from 36 minutes to 53 minutes for CPT code 33287 to conform to this change in clinical labor time. For all other codes, we proposed the direct PE inputs as recommended by the RUC without refinement.

*Comment:* Several commenters stated that they supported the CMS proposal of the RUC's recommended work RVUs for all twelve codes in the family. Several commenters also stated that they agreed with the correction of a clerical error in the CA039 Post-operative visits (total time) for CPT code 33287 and otherwise supported the CMS proposal of the RUC's recommended direct PE inputs.

*Response:* We appreciate the support for our proposals from the commenters.

After consideration of the public comments, we are finalizing the work RVUs and direct PE inputs for the code family as proposed.

(5) Posterior Nasal Nerve Ablation (CPT codes 30117, 30118, 31242, and 31243)

In September 2022, the CPT Editorial Panel created two new endoscopy codes for ablation of the posterior nasal nerve: CPT code 31242 (*Nasal/sinus endoscopy, surgical; with destruction by radiofrequency ablation, posterior nasal nerve*), and CPT code 31243 (*Nasal/sinus endoscopy, surgical; with destruction by cryoablation, posterior nasal nerve*). In preparation for the January 2023 RUC meeting, both new posterior nasal nerve codes, 31242 and 31243, as well as family CPT codes 30117 and 30118, were surveyed. For CY 2024, the RUC recommended a work RVU of 3.91 for CPT code 30117, a work RVU of 9.55 for CPT code 30118, and a work RVU of 2.70 for both CPT codes 31242 and 31243.

We proposed the RUC-recommended work RVU of 3.91 for CPT code 30117. We proposed to remove the clinical labor for the CA037 (*Conduct patient communications*) activity code for CPT code 30117. This clinical labor is associated with patient communications which already take place during the CA036 (*Discharge day management*) activity code for 10-day and 90-day global procedures. We proposed to remove this clinical labor as it would be duplicative with the communications already taking place under the CA036 activity code. We proposed to delete supply item SB027 (*gown, staff, impervious*) because supply items SA042 (*pack, cleaning and disinfecting, endoscope*) and SA043 (*pack, cleaning, surgical instruments*) each include this same item. Supply items SA042 and SA043 are both included in the direct PE inputs for CPT code 30117.

We disagreed with the RUC-recommended work RVU of 9.55 for CPT code 30118 and proposed a work RVU of 7.75, based on a direct crosswalk from CPT code 28298 (*Correction, hallux valgus (bunionectomy), with sesamoidectomy, when performed; with proximal phalanx osteotomy, any method*) which has the same 60 minutes of intra-service time and similar total time as CPT code 30118. We believe the work RVU should be lower than the RUC recommendation of 9.55 to reflect the decrease in intra-service time from 105 minutes to 60 minutes, and the decrease in total time from 288 minutes to 211 minutes. In the case of CPT code 30118, the intra-service work time is decreasing by 43 percent and the total work time is decreasing by 27 percent but the RUC-recommended work RVU is only decreasing by 4 percent. Although we do not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in the surveyed work time should be reflected in commensurate decreases to work RVUs.

We also noted that at the RUC-recommended work RVU of 9.55, the intensity of CPT code 30118 would be increasing by more than 50 percent. We disagreed that there would be such a significant increase in the intensity for the procedure, as it is transitioning from inpatient to

outpatient status which suggests that the intensity has remained the same or decreased over time. We also disagreed that this would be the case since the intensity for CPT code 30117 is decreasing at the RUC-recommended work RVU of 3.91. Therefore, we also proposed a work RVU of 7.75 because it maintains the current intensity of CPT code 30118 instead of resulting in an increase in intensity. The work RVU of 7.75 is supported by the reference CPT codes we compared to CPT code 30118 with the same 60 minutes of intra-service time and similar total time as CPT code 30118; reference CPT code 11970 (*Replacement of tissue expander with permanent implant*) has a work RVU of 7.49, and reference CPT code 19325 (*Breast augmentation with implant*) has a work RVU of 8.12. We believe the RVU of 7.75 is a more appropriate value overall than 9.55 when compared to the range of codes with the same intra-service time and similar total time.

We proposed to remove the clinical labor for the CA037 (*Conduct patient communications*) activity code for CPT code 30118. This clinical labor is associated with patient communications which already take place during the CA036 (*Discharge day management*) activity code for 10-day and 90-day global procedures. We proposed to remove this clinical labor from CPT code 30118 as it would be duplicative with the communications already taking place under the CA036 activity code.

We proposed the RUC-recommended work RVU of 2.70 for CPT codes 31242 and 31243. Both CPT codes 31242 and 31243 are endoscopic procedures; therefore, we proposed CPT code 31231 (*Nasal endoscopy, diagnostic, unilateral or bilateral (separate procedure)*) as the endoscopic base code for both of these codes because the description of these procedures includes what is described for CPT code 31231, with the additional component of the posterior nasal nerve ablation. Both of these procedures are performed with an endoscope. CPT codes 31242 and 31243 are not add-on codes, and both have a 0-day global period. The endoscopic base code that we are assigning to CPT codes 31242 and 31243 is used in a specific type of multiple procedure payment reduction that applies to some endoscopy codes.

We proposed to refine the RUC-recommended direct PE inputs for both CPT codes 31242 and 31243. For CPT code 31242, we are refining the equipment time for the ES031 equipment (*scope video system (monitor, processor, digital capture, cart, printer, LED light)*) from 39 minutes to 32 minutes. The RUC used the CA025 (*clean scope*) time of 10 minutes instead of the CA024 (*clean room/equipment by clinical staff*) time of 3 minutes in the Scope Systems formula, when the time for CA024 is the standard; we believe that this was an unintended technical error in the RUC recommendation. We are similarly refining the equipment time for ES031 from 39 minutes to 34 minutes for CPT code 31243.

For CPT code 31243, we are refining the equipment time for the ES040 equipment (*PROXY endoscope, rigid, sinoscopy (0 degrees)*) from 39 minutes to 41 minutes because the RUC used 18 minutes of intra-service time for CA018 (*Assist physician or other qualified healthcare professional---directly related to physician work time (100%)*) instead of 20 minutes in the standard Scope formula. Also, for both CPT codes 31242 and 31243, we proposed to delete supply item SB027 (*gown, staff, impervious*) because SA042 (*pack, cleaning and disinfecting, endoscope*) and SA043 (*pack, cleaning, surgical instruments*) each include this same item. Supply items SA042 and SA043 are both included in the PE inputs for CPT codes 31242 and 31243.

The following is a summary of the comments we received and our responses.

*Comment:* Commenters supported CMS' proposal of the RUC-recommended work RVUs for CPT codes 30117, 31242, and 31243.

*Response:* We thank the commenters for their support, and we are finalizing the RUC-recommended work RVU of 3.91 for CPT code 30117, and the work RVU of 2.70 for CPT codes 31242 and 31243, as proposed.

*Comment:* For CPT code 30118, we received a few comments that disagreed with CMS' proposed work RVU of 7.75. The commenters stated that the proposed work RVU of 7.75 fails to maintain relativity within the code family of CPT codes 30117, 30118, 31242 and 31243, and

it does not account for the higher clinical complexity and intraoperative intensity for CPT code 30118. Commenters stated that the intra-service time required for CPT code 30118 is twice as long as CPT code 30117, which is attributable to the difficulty of this procedure. One commenter stated that the intensity (IWPUT) for CPT code 30118 is 0.079, which is more than four times the typical intensity of work compared to the IWPUT of 0.018 for CPT code 30117. Commenters stated that the proposed CMS crosswalk of CPT code 28298 was completely inappropriate in terms of intensity, and the skill needed to perform CPT code 30118 is greater than CPT code 28298. Although CPT code 28298 has similar intra-service time and total time, it has an IWPUT of 0.047 which is considerably less than the IWPUT for CPT code 30118. In addition, commenters stated that the two comparison codes that CMS chose as support for the CPT code 28298 crosswalk (CPT codes 11970 and 19325) do not compare in intensity to CPT code 30118, even though they have similar intra-service time and total time. Commenters also stated that CPT code 30118 was undervalued in terms of its intensity during the initial Harvard valuation.

*Response:* We disagree with the commenters and continue to believe that a direct crosswalk from CPT code 28298 is appropriate since it has the same 60 minutes of intra-service time and similar total time as CPT code 30118. We also believe that the nature of the PFS relative value system is such that all services are appropriately subject to comparisons to one another. Although codes that describe clinically similar services are sometimes stronger comparator codes, we do not agree that codes must share the same site of service, patient population, or utilization level to serve as an appropriate crosswalk. The work RVU for CPT code 30118 should be lower than the RUC recommendation of 9.55 to reflect the decrease in intra-service time from 105 minutes to 60 minutes, and the decrease in total time from 288 minutes to 211 minutes. Although we do not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we

believe that since the two components of work are time and intensity, significant decreases in the surveyed work time should be reflected in commensurate decreases to work RVUs.

The intensity of CPT code 30118 would increase by more than 50 percent with the RUC-recommended RVU of 9.55. However, we disagree that the intensity for CPT code 30118 would increase in such a significant way because this procedure is transitioning from an inpatient to an outpatient status. We also note that the intensity for CPT code 30117 has decreased with the RUC-recommended work RVU of 3.91. Therefore, we believe that our proposed work RVU of 7.75, which maintains the current intensity of CPT code 30118 instead of resulting in an increase in intensity, is the most accurate valuation for this service. We continue to believe that the proposed work RVU of 7.75 is a more appropriate value overall than the RUC's recommended work RVU of 9.55 when compared to the range of codes with the same intra-service time and similar total time. Therefore, we are finalizing the proposed work RVU of 7.75 for CPT code 30118.

*Comment:* For CPT code 31243, one commenter disagreed with the scope video system PE input equipment time refinement from 39 minutes to 34 minutes for ES031 and requested that we accept the RUC recommendation of 39 minutes, which they stated was the appropriate value for this input.

*Response:* We disagree with the commenter. The standard Scope Systems equipment formula the RUC used was incorrect. For CPT code 31243, the RUC initially recommended 39 minutes for PE input ES031. However, the RUC used the CA025 clinical labor task instead of CA024 in the formula; this was in error since CA024 is in the standard Scope Systems formula and CA025 is not. Using CA024 results in 7 minutes less time for ES031. Also, the RUC inadvertently used 18 minutes of intra-service time for CA018 in the formula instead of 20 minutes. Using the correct time of 20 minutes for CA018 results in an increase of 2 minutes. The net result of these corrections is 34 minutes for ES031 ( $(39 + 2) - 7 = 34$ ). We also note that the RUC comments on the PE inputs for CPT code 31243 agreed with our proposed refinement

for ES031. Therefore, for CPT code 31243 we are finalizing the equipment time refinement of 34 minutes for ES031 as proposed.

*Comment:* For CPT codes 30117 and 30118, some commenters disagreed with the proposal to remove the clinical labor for the CA037 activity code from the direct PE inputs. Commenters stated that this is a follow-up phone call by staff to see how the patient is doing, 1 to 2 days after the procedure, and should be included in both the facility and non-facility settings. The commenters stated that this staff contact with the patient is completely different than, and separate from, what occurs the day of the procedure for CA036. While a follow-up phone call is outside of the 090-day global standard, this type of postoperative communication is evolving and reflects best practice.

*Response:* We continue to believe that the CA037 clinical labor task should not be included in the PE inputs for CPT codes 30117 and 30118 since the standard for the postoperative period for 010-day and 090-day global procedures does not include clinical labor for phone calls as a separate direct PE input, and both of these codes are 090-day global procedures. We also continue to believe that CA037 is duplicative with the communications already taking place under the CA036 clinical labor activity. Therefore, we are finalizing the PE input refinement to remove the CA037 clinical labor from CPT codes 30117 and 30118.

After consideration of the public comments, we are finalizing the work RVU values for the Posterior Nasal Nerve Ablation code family (CPT codes 30117, 30118, 31242, and 31243) as proposed. We are also finalizing the direct PE inputs for CPT codes 30117, 30118, 31242, and 31243 as proposed.

(6) Cystourethroscopy with Urethral Therapeutic Drug Delivery (CPT code 52284)

In September 2022, the CPT Editorial Panel replaced Category III code 0499T (*Cystourethroscopy, with mechanical dilation and urethral therapeutic drug delivery for urethral stricture or stenosis, including fluoroscopy, when performed*) with the new Category I CPT code 52284 (*Cystourethroscopy, with mechanical urethral dilation and urethral therapeutic drug*

*delivery by drug coated balloon catheter for urethral stricture or stenosis, male, including fluoroscopy, when performed*) to describe cystourethroscopy with mechanical urethral dilation and urethral therapeutic drug delivery. For CY 2024, the RUC recommended a work RVU of 3.10 for CPT code 52284.

We proposed the RUC-recommended work RVU of 3.10 for CPT code 52284. We also proposed the RUC-recommended direct PE inputs for CPT code 52284 without refinement.

Since this is an endoscopic procedure, we proposed CPT code 52000 (*Cystourethroscopy (separate procedure)*) as the endoscopic base code for CPT code 52284 because the description of this procedure includes what is described for CPT code 52000 with the additional component of the urethral therapeutic drug delivery. This procedure is performed with a cystoscope. CPT code 52284 is not an add-on code, it has a 0-day global period. The endoscopic base code that we assigned to CPT code 52284 is a specific type of multiple procedure payment reduction that applies to some endoscopy codes.

The following is a summary of the comments we received and our responses.

*Comment:* The commenters supported CMS' proposal of the RUC-recommended work RVU and direct PE inputs.

*Response:* We thank the commenters for their support and are finalizing as proposed.

After consideration of the public comments, we are finalizing the work RVU of 3.10 for the CPT code 52284 as proposed. We are also finalizing the direct PE inputs for code 52284 without refinement.

#### (7) Transcervical RF Ablation of Uterine Fibroids (CPT code 58580)

In September 2022, the CPT Editorial Panel deleted Category III code 0404T (*Transcervical uterine fibroid(s) ablation with ultrasound guidance, radiofrequency*) and created a new Category I CPT code 58580 (*Transcervical ablation of uterine fibroid(s), including intraoperative ultrasound guidance and monitoring, radiofrequency*) to report and describe transcervical radiofrequency ablation of uterine fibroid(s) which prompted CPT code 58580 to be

surveyed for the January 2023 RUC meeting. At the January 2023 RUC meeting, the specialty societies indicated, and the RUC agreed, that the survey results for CPT code 58580 showed that the survey 25<sup>th</sup> percentile work RVU of 7.21 appropriately recognizes the work involved in this service.

We proposed the RUC-recommended work RVU of 7.21 for CPT code 58580. We note that the RUC recommended in their review that CPT code 58580 be placed on the New Technology list to be re-reviewed by the RUC in 3 years to ensure correct valuation and utilization assumptions. We will revisit the valuations of CPT code 58580 in future rulemaking as needed, based on our typical annual review process.

CPT code 58580 includes a medium instrument pack (EQ138) as one of the practice expense inputs for this code. Since the medium instrument pack is classified as equipment, it should include time for cleaning the surgical instrument package. We noted a mistake in one of the equipment time formulas for the medium instrument pack (EQ138), which used the CA024 clean room/equipment by clinical staff time instead of the CA026 clean surgical instrument package time in the equipment formula. Therefore, we proposed to refine the medium instrument pack equipment time from 65 minutes to 77 minutes to conform to our established policy for surgical instrument packs; otherwise, we proposed the RUC-recommended direct PE inputs without refinement.

*Comment:* Several commenters supported the CMS proposal of the RUC-recommended work RVU of 7.21. Commenters also agreed with the proposed refinement to the medium instrument pack (EQ138) equipment time.

*Response:* We appreciate the support for our proposed policies from the commenters.

*Comment:* A few commenters disagreed with the CMS proposal of the RUC-recommended work RVU of 7.21 for CPT code 58580. The commenters stated that the RUC's recommendation of a work RVU of 7.21 for this procedure was insufficient and suggested that CPT code 58674, to which CMS has assigned a work RVU of 14.08, would be more appropriate.

Another commenter suggested that CMS increase the work RVU for CPT code 58580 to 8.00 to bring the valuation in line with CPT code 22514, which has a work RVU of 7.99 and which the RUC used as a comparator code.

*Response:* We thank the commenters for their suggestions; however we disagree with the commenters and continue to agree with the RUC that a work RVU of 7.21 is the most accurate valuation for CPT code 58580. The suggestion from commenters to assign a work RVU of 14.08 based on a crosswalk to CPT code 58674 would not be appropriate for CPT code 58580, as CPT code 58674 is a surgical laparoscopy with more than double the intraservice work time. The alternate suggestion of finalizing a work RVU of 8.00 based on a near-match of CPT code 22514 is a better fit, as this code shares the same intraservice work time and similar total work time with CPT code 58580. However, we believe that CPT code 22514 is a more intensive procedure as compared with CPT code 58580 due to its nature as a percutaneous vertebral augmentation, which justifies having a higher work RVU.

At the January 2023 RUC meeting, the specialty societies indicated, and the RUC agreed, that the survey results for CPT code 58580 showed that the survey 25<sup>th</sup> percentile work RVU of 7.21 appropriately recognizes the work involved in this service. To justify a work RVU of 7.21, the RUC also referenced top key reference code CPT code 58356 (*Endometrial cryoablation with ultrasonic guidance, including endometrial curettage, when performed*) with a work RVU=6.41, intra-service time of 45 minutes, total time of 167 minutes, and noted that although both services involve identical intra-service time, the majority of survey respondents that selected this key reference code indicated the surveyed code was a more intense and complex service to perform (94 percent). While we do not always agree with the RUC, we believe that the proposed work RVU of 7.21 accurately captures the work completed in this service.

*Comment:* One commenter stated that the proposed non-facility practice expense RVU for CPT code 58580 would be insufficient for the costs expected in an office setting.

*Response:* We appreciate the concerns raised by the commenter; however, the commenter did not specify which additional PE expenses were not being captured in the proposed valuation for CPT code 58580. If the commenter has reason to believe that the RUC's recommended direct PE inputs failed to capture the costs associated with this procedure, we encourage them to consider nominating CPT code 58580 as potentially misvalued for addition review. (We direct readers to the Potentially Misvalued Services Under the PFS (section II.C.) earlier in this final rule for additional details).

*Comment:* Several commenters recommended that CMS increase the malpractice RVU for CPT code 58580, as they stated that the proposed value was insufficient to cover malpractice costs.

*Response:* The malpractice RVU for each service is a derived valuation largely based on the work RVU and the risk factors associated with the specialties reporting that service in claims data. We do not propose specific malpractice RVUs which are derived as a result of our larger ratesetting process; for additional information, we direct readers to the Determination of Malpractice Relative Value Units (RVUs) (section II.H.) in last year's final rule (87 FR 69634 through 69641).

After consideration of the public comments for CPT code 58580, we are finalizing the RUC-recommended work RVU of 7.21 as proposed. We are also finalizing our proposal to refine the medium instrument pack equipment time from 65 minutes to 77 minutes to conform to our established policy for surgical instrument packs. Otherwise, we are finalizing the RUC-recommended direct PE inputs without refinement.

#### (8) Suprachoroidal Injection (CPT code 67516)

In September 2022, the CPT Editorial Panel introduced category I CPT code 67516 as a new code. CPT code 67516 describes suprachoroidal injection, which is the injection of medication into the space between the choroid and the sclera of the eye with procedure-specific needles and an injection kit. CPT code 67516 replaces temporary category III CPT code 0465T

*(Suprachoroidal injection of a pharmacologic agent (does not include supply of medication)),* which was contractor priced. While there are other existing general CPT codes for injections to the eye, the AMA RUC is adding CPT code 67516(*Suprachoroidal space injection of pharmacologic agent (separate procedure) (Report medication separately)*) to describe a more specific service to better distinguish this procedure from the rest of the codes for eye injections in this family. CPT code 67516 is a 000-day global code and currently, there is only one FDA-approved medication to treat macular edema associated with uveitis which is reported separately with HCPCS J-code J3299 triamcinolone acetonide (Xipere®).

We proposed the RUC-recommended work RVU of 1.53 for CPT code 67516. We also proposed the RUC-recommended direct PE inputs for the code without refinement.

*Comment:* We received a few comments for CPT code 67516 in favor of establishing this code as a permanent category I code with active pricing. We received no comments opposing CPT code 67516.

*Response:* We thank commenters for taking the time to submit comments.

After reviewing the comments, we are finalizing the proposed work RVU and direct PE inputs for CPT code 67516.

#### (9) Skull Mounted Cranial Neurostimulator (CPT codes 61889, 61891, and 61892)

In February 2022, the CPT Editorial Panel created codes 61889, 61891, and 61892 to describe Skull-Mounted Cranial Neurostimulator, and these codes were surveyed for the October 2022 RUC meeting.

We proposed the RUC-recommended work RVU of 25.75 for CPT code 61889 (*Insertion of skull-mounted cranial neurostimulator pulse generator or receiver, including craniectomy or craniotomy, when performed, with direct or inductive coupling, with connection to depth and/or cortical strip electrode array(s)*), the RUC-recommended work RVU of 11.25 for CPT code 61891 (*Revision or replacement of skull-mounted cranial neurostimulator pulse generator or receiver with connection to depth and/or cortical strip electrode array(s)*), and the RUC-

recommended work RVU of 15.00 for CPT code 61892 (*Removal of skull-mounted cranial neurostimulator pulse generator or receiver with cranioplasty, when performed*).

We proposed the RUC-recommended direct PE inputs for CPT codes 61889, 61891, and 61892 without refinement.

We did not receive comments on our proposals. We are finalizing as proposed the RUC-recommended work RVU and PE inputs for CPT codes 61889, 61891, and 61892 respectively.

(10) Spinal Neurostimulator Services (CPT codes 63685, 63688, 64596, 64597, and 64598)

For CPT codes 63685 (*Insertion or replacement of spinal neurostimulator pulse generator or receiver requiring pocket creation and connection between electrode array and pulse generator or receiver*) and 63688 (*Revision or removal of implanted spinal neurostimulator pulse generator or receiver, with detachable connection to electrode array*) we proposed the RUC-recommended work RVUs of 5.19 and 4.35, respectively. We proposed the RUC-recommended direct PE inputs for CPT codes 63685 and 63688 without refinement.

We agreed with the RUC recommended contractor pricing for CPT codes 64596 (*Insertion or replacement of percutaneous electrode array, peripheral nerve, with integrated neurostimulator including imaging guidance, when performed; initial electrode array*), 64597 (*Insertion or replacement of percutaneous electrode array, peripheral nerve, with integrated neurostimulator including imaging guidance, when performed; each additional electrode array*), and 64598 (*Revision or removal of neurostimulator electrode array, peripheral nerve, with integrated neurostimulator*); and we proposed contractor pricing for these three codes.

*Comment:* One commenter disagreed with the proposed work RVU of 4.35 for CPT code 63688, stating that the current work RVU of 5.30 is more appropriate. This commenter stated, without further explanation, that the valuation of the revision code should be greater than the initial insertion, as it is more complex to revise or remove an existing implant than to insert a new implant.

*Response:* We appreciate the feedback, but we note that the RUC's Summary of Recommendations (SOR) for CPT code 63688 contained two key reference codes that appropriately support the proposed valuation. Without additional data provided by the commenter, we continue to believe that the RUC-reviewed survey 25th percentile work RVU of 4.35 accurately reflects the time and intensity of CPT code 63688.

*Comment:* Several commenters stated that they supported the proposal of the RUC-recommended work RVUs and direct PE inputs for CPT codes 63685 and 63688. These commenters also supported our proposal to assign contractor pricing to CPT codes 64596, 64597, and 64598.

*Response:* We appreciate the support for our proposals from commenters.

After consideration of all comments on our proposals for CPT codes 63685 and 63688, we are finalizing the RUC-recommended work RVUs of 5.19 and 4.35, respectively. We are finalizing the RUC-recommended direct PE inputs for CPT codes 63685 and 63688 without refinement. We are also finalizing the RUC-recommended contractor pricing for CPT codes 64596, 64597, and 64598 as proposed.

#### (11) Neurostimulator Services-Bladder Dysfunction (CPT codes 64590 and 64595)

For CPT codes 64590 (*Insertion or replacement of peripheral, sacral, or gastric neurostimulator pulse generator or receiver, requiring pocket creation and connection between electrode array and pulse generator or receiver*) and 64595 (*Revision or removal of peripheral, sacral, or gastric neurostimulator pulse generator or receiver, with detachable connection to electrode array*) we proposed the RUC-recommended work RVUs of 5.10 and 3.79, respectively.

We requested clarification on the direct PE inputs for CPT code 64590 in the non-facility setting. Specifically, we believed the RUC inadvertently proposed 56 minutes of equipment time for the EQ114 equipment (electrosurgical generator), instead of 48 minutes using the default formula for calculating equipment time. We believed that 48 minutes of equipment time for

EQ114 was appropriate and matched the clinical labor time; therefore, we proposed 48 minutes for the EQ114 equipment for CPT code 64590. We also believed that the EQ209 equipment (*programmer, neurostimulator (w-printer)*) was intended to match the same 84 minutes of equipment time listed for the EF031 power table as both were indicated to be used during the follow-up office visit. Therefore, we proposed 84 minutes of equipment time for EQ209 for CPT code 64590.

We proposed the remaining RUC-recommended direct PE inputs for CPT code 64590 without refinement. We also proposed the RUC-recommended direct PE inputs for CPT code 64595 without refinement.

*Comment:* The RUC agreed with the proposed 48 minutes of equipment time for the EQ114 equipment, and 84 minutes of equipment time for EQ209 for CPT code 64590.

*Response:* We appreciate the additional information provided by the RUC to clarify the equipment time.

*Comment:* Several commenters stated that they supported the proposal of the RUC-recommended work RVUs and direct PE inputs for CPT codes 64590 and 64595.

*Response:* We appreciate the support for our proposed work RVUs and direct PE inputs from the commenters.

After consideration of all comments on our proposals for CPT codes 64590 and 64595, we are finalizing the RUC-recommended work RVUs of 5.10 and 3.79, respectively. We are finalizing 48 minutes of equipment time for EQ114 and 84 minutes of equipment time for EQ209 for CPT code 64590. We are also finalizing the remaining RUC-recommended direct PE inputs for CPT codes 64590 and 64595 as proposed.

(12) Ocular Surface Amniotic Membrane Placement/Reconstruction (CPT codes 65778, 65779, and 65780)

CPT code 65778 (*Placement of amniotic membrane on the ocular surface; without sutures*) was identified by the Relativity Assessment Workgroup (RAW) via the high-volume

growth screen for codes with Medicare utilization over 10,000 screen. During the September 2022 RAW meeting, the specialty societies stated that CPT codes 65778, 65779 (*Placement of amniotic membrane on the ocular surface; single layer, sutured*), and 65780 (*Ocular surface reconstruction; amniotic membrane transplantation, multiple layers*) would be surveyed for the January 2023 RUC meeting.

For CY 2024, we proposed the RUC-recommended work RVUs for all three CPT codes. We proposed a work RVU of 0.84 for CPT code 65778 (*Placement of amniotic membrane on the ocular surface; without sutures*), a work RVU of 1.75 for CPT code 65779 (*Placement of amniotic membrane on the ocular surface; single layer, sutured*), and a work RVU of 7.03 for CPT code 65780 (*Ocular surface reconstruction; amniotic membrane transplantation, multiple layers*). We also proposed the RUC-recommended direct PE inputs for CPT codes 65778, 65779, and 65780 without refinement.

*Comment:* Several commenters disagreed with the proposed work RVU of 0.84, stating that the amniotic membrane supply product, Prokera, has a higher cost than the proposed rate. These commenters also stated that the proposed work RVU does not account for the time spent explaining the product at the time of insertion, and stated that the valuation should not decrease from the current work RVU of 1.00.

*Response:* We did not receive additional pricing data from these commenters to support a change in the pricing of the amniotic membrane supply. Additionally, we did not receive information supporting a change to the proposed work RVU. The RUC-recommended time values have remained unchanged since the code was last valued in 2015. However, the previous valuation was based on a crosswalk and marked not to use to validate physician work for other services in the RUC database. Therefore, the RUC determined that the survey 25th percentile work RVU of 0.84 appropriately accounts for the work required to perform this service. We continue to agree with the RUC-recommended work RVU for CPT code 65778.

*Comment:* A commenter disagreed with the proposed pricing of the human amniotic membrane allograft mounted on a non-absorbable self-retaining ring (SD248) supply. The commenter stated that the proposed pricing of \$872.50 was not typical for the SD248 supply and submitted more than 100 invoices to support their recommendation of increased pricing.

*Response:* We appreciate the submission of such a large quantity of invoices for more accurate pricing of the human amniotic membrane allograft mounted on a non-absorbable self-retaining ring (SD248) supply. The submitted invoices all displayed the identical price of \$1049 for the Prokera Plus item, and we agree with the commenter that this is the current market price for the Prokera Plus device. However, we disagree that using the Prokera Plus would necessarily be typical for use in CPT code 65778. We also received invoices in the RUC's recommended materials for this code family containing prices for the Prokera Slim (\$850) and Prokera Classic (\$895) devices which the RUC indicated would also be appropriate for use in CPT code 65778. The manufacturer's website described the Prokera Plus as an item that "maximizes the therapeutic benefit," which is intended "for patients who need intensive treatment." As a result, we do not believe it would be appropriate to use the pricing for the Prokera Plus item for the SD248 supply as we do not believe that it would be typical for providers to use the most intensive and expensive product as the standard of care. We are instead averaging together the invoice prices of the Prokera Slim, Prokera Classic, and Prokera Plus to price the SD248 supply at \$931.33, which is an increase of \$58.83 above our proposed price of \$872.50. We believe that averaging these products' prices together will more accurately capture the market-based pricing of the devices currently used in CPT code 65778.

After consideration of the public comments, we are finalizing the RUC-recommended work RVUs of 0.84 for CPT code 65778, 1.75 for CPT code 65779, and 7.03 for CPT code 65780. We are finalizing \$931.33 as the price for the SD248 supply item for CPT code 65778, and the remaining direct PE inputs for this code as proposed. We are also finalizing the RUC-recommended direct PE inputs for CPT codes 65779 and 65780 without refinement.

(13) Fractional Flow Reserve with CT (CPT code 75580)

For CY 2018, the CPT Editorial Panel established four new Category III CPT codes for fractional flow reserve derived from computed tomography (FFRCT): CPT codes 0501T-0504T. Medicare began payment for CPT code 0503T (*Noninvasive estimated coronary fractional flow reserve (FFR) derived from coronary computed tomography angiography data using computation fluid dynamics physiologic simulation software analysis of functional data to assess the severity of coronary artery disease; analysis of fluid dynamics and simulated maximal coronary hyperemia, and generation of estimated FFR model*) in the hospital outpatient department setting under the Outpatient Prospective Payment System (OPPS) in CY 2018 (82 FR 59284). We typically assign contractor pricing for Category III codes for the PFS since they are temporary codes assigned to emerging technology and services. However, we made an exception for FFRCT services, and we have since been trying to understand the costs of the PE resource inputs for CPT code 0503T in the physician's office setting. In the CY 2021 PFS final rule (85 FR 84630), we stated that we found FFRCT to be similar to other technologies that use algorithms, artificial intelligence, or other innovative forms of analysis to determine a course of treatment, where the analysis portion of the service cannot adequately be reflected under the PE methodology; and that our recent reviews for the overall cost of CPT code 0503T had shown the costs in the physician office setting to be similar to costs reflected in payment under the OPPS (85 FR 84630). As such, we proposed to use the geometric mean costs under the OPPS as a proxy for CPT code 0503T and ultimately finalized national pricing for CPT code 0503T based on a valuation crosswalk to the technical component (TC) of CPT code 93457 in the CY 2022 PFS final rule (86 FR 65037-65042).

For CY 2024, the CPT Editorial Panel approved the replacement of Category III codes 0501T-0504T with a single new Category I code (75580) to report a non-invasive estimate of coronary fractional flow reserve derived from augmentative software analysis of the dataset from a coronary computed tomography angiography. CPT code 75580 (*Noninvasive estimate of*

*coronary fractional flow reserve derived from augmentative software analysis of the data set from a coronary computed tomography angiography, with interpretation and report by a physician or other qualified health care professional*) was reviewed at the January 2023 RUC meeting and valuation recommendations were submitted to CMS. These recommendations include a software analysis fee for FFRCT listed as a supply input which accounts for the overwhelming majority of the code's valuation.

We have long had concerns that the software algorithm in the analysis fee for CPT code 75580 is not well accounted for in our PE methodology; however, we recognize that practitioners are incurring resource costs for purchasing the FFRCT software and its ongoing use. This was the rationale for our previous policy to use a crosswalk that reflected this service's overall relative resource costs. At the same time, we continued to consider potentially refining and updating our PE methodology. The RUC recommendations include the previously mentioned software analysis fee for FFRCT as a supply input. However, analysis fees are not well accounted for in our current PE methodology. Although we recognize that these fees are a cost for practitioners, we have not traditionally recognized these analysis fees as forms of direct PE in our methodology. We previously stated our belief that crosswalking the RVUs for CPT code 0503T to a code with similar resource costs (the TC for CPT code 93457) allowed CMS to recognize that practitioners are incurring resource costs for the purchase and ongoing use of the software employed in CPT code 0503T, which would not typically be considered direct PE under our current methodology (86 FR 65038 and 65039).

Therefore, we proposed maintaining the previous valuation crosswalk to the technical component of CPT code 93457 for the new FFRCT code 75580. This new Category I code is intended as a direct replacement for Category III code 0503T, and maintaining the current crosswalk will allow the geometric mean costs under the OPPS to continue serving as a valuation proxy. We are specifically crosswalking the technical component of CPT code 75580 to the technical component of CPT code 93457; we proposed the RUC-recommended work RVU of

0.75 for the professional component of CPT code 75580, and the global component will be comprised of their sums as usual. We also noted that there was an error in the RUC's recommended equipment time for the Professional PACS Workstation (ED053), which was listed at 14.5 minutes instead of the correct 13.5 minutes based on the sum of the intraservice work time (11 minutes) plus half of the preservice work time (5 divided by 2 = 2.5 minutes).

*Comment:* Many commenters stated their approval of the CMS proposal of the RUC's recommended work RVU of 0.75 for the professional component of CPT code 75580 and the proposal to maintain the crosswalk from CPT code 75580's predecessor code to the technical component of CPT code 93457 for the technical component of the procedure. Commenters stated that given the predominance of the cost of the analysis fee for CPT code 75580, it was critical that CMS utilize something other than the current PE methodology when establishing the physician fee schedule rate for the procedure. Commenters stated that CMS' proposal to continue to use the crosswalking methodology, that has been in place since CY 2022, was an appropriate alternative for the valuation of the technical component of CPT code 75580 and should be finalized. Commenters stated that the proposed crosswalk to the technical component of CPT code 93457 was an appropriate method to account for the costs physicians incur to provide FFRCT. Many commenters detailed the clinical benefits of FFRCT services, such as leading to a 70% reduction in rates of heart attack, death, or unnecessary invasive catheterization in one study, and urged CMS to finalize their proposed policies.

*Response:* We appreciate the support for our proposed policies from the commenters.

*Comment:* A commenter disagreed with the proposed crosswalk to the technical component of CPT code 93457 and objected to CMS using data from the OPSS in establishing relative values for the PFS. The commenter stated that any proposal to use the relativity of hospital charge data to determine the relativity of practice costs within a physician office is not consistent with statutory provisions under Section 4505 of the Balanced Budget Act of 1997.

*Response:* We disagree with the commenter and believe that we can use OPPS data in certain circumstances to inform payment under the PFS. As we stated in the proposed rule, our recent reviews for the overall cost of CPT code 0503T showed the costs in the physician office setting to be similar to those reflected in payment under the OPPS (85 FR 84630). As such, we proposed to use the geometric mean costs under the OPPS as a proxy for CPT code 0503T and ultimately finalized national pricing for CPT code 0503T based on a valuation crosswalk to the technical component (TC) of CPT code 93457 in the CY 2022 PFS final rule (86 FR 65037-65042). We then carried over this proposed policy to CPT code 75580, the direct replacement for CPT code 0503T. We believe this is a more accurate way to value the service due to the problems that this service's analysis fee poses for our PE methodology.

*Comment:* A commenter disagreed with the proposed crosswalk to the technical component of CPT code 93457 by stating that this crosswalk approach was not resource-based. The commenter stated that the software analysis fee was the only supply input and represented a per-patient, single-use item, and thus was appropriately included as a direct supply. The commenter recommended that CMS negate the need for a crosswalk by accepting this software as a direct practice expense input.

*Response:* As we stated in the proposed rule, we have long had concerns that the software algorithm in the analysis fee for CPT code 75580 is not well accounted for in our PE methodology; however, we recognize that practitioners are incurring resource costs for purchasing the FFRCT software and its ongoing use. This was the rationale for our previous policy to use a crosswalk (86 FR 65037 through 65042) that reflected the overall relative resource costs for this service while we continued to consider potentially refining and updating our PE methodology. The RUC recommendations included the previously mentioned software analysis fee for FFRCT as a supply input. However, analysis fees are not well accounted for in our current PE methodology. Although we recognize that these fees are a cost for practitioners, we have not traditionally recognized these analysis fees as forms of direct PE in our

methodology. We continue to believe that the software analysis fee would not be considered as a form of direct PE under our current methodology, and therefore, we proposed to maintain the previous valuation crosswalk to the technical component of CPT code 93457 to incorporate these costs.

*Comment:* Several commenters recommended that CMS separately identify and pay for high-cost disposable supplies. Commenters stated that creating separate high-cost supply codes would be a way to pay for the software analysis fee included in CPT code 75580.

*Response:* We have received a number of prior requests from interested parties, including the RUC, to implement separately billable alpha-numeric Level II HCPCS codes to allow practitioners to be paid the cost of high cost disposable supplies per patient encounter instead of per CPT code. We stated at the time, and we continue to believe, that this option presents a series of potential problems that we have addressed previously in the context of the broader challenges regarding our ability to price high cost disposable supply items. (For a discussion of this issue, we direct the reader to our discussion in the CY 2011 PFS final rule with comment period (75 FR 73251)).

After consideration of the public comments, we are finalizing our proposal of the RUC-recommended work RVU of 0.75 for the professional component of CPT code 75580. We are also finalizing our proposal to crosswalk the technical component of CPT code 75580 to the technical component of CPT code 93457, maintaining the previous crosswalk in place for CPT code 0503T, as well as finalizing our proposed equipment time for the Professional PACS Workstation (ED053), which was unmentioned by commenters.

#### (14) Ultrasound Guidance for Vascular Access (CPT code 76937)

To specify the insertion of a peripherally inserted central venous catheter (PICC), the CPT Editorial Panel decided to create two new codes: CPT code 36572 and CPT code 36573, and revised CPT codes 36568, 36569 and 36584 in September of 2017. This revision of these codes created a scenario where these bundled services could be performed by a clinician that

performs the procedure without imaging guidance or a radiologist that performs the procedure with imaging guidance. When this code family was surveyed again in January 2018, CPT code 76937 (*Ultrasound guidance for vascular access requiring ultrasound evaluation of potential access sites, documentation of selected vessel patency, concurrent realtime ultrasound visualization of vascular needle entry, with permanent recording and reporting (List separately in addition to code for primary procedure)*) was identified as part of this code family. Since it was expected that utilization of PICC procedures would decrease once CPT code 76937 was bundled with these services, the specialty societies that perform this service proposed to review CPT code 76937 after 2 years, once more data about these services became available. CPT code 76937 was reviewed at the October 2022 RUC meeting for CY 2024.

We proposed the RUC-recommended work RVU of 0.30 for CPT code 76937. We also proposed the RUC-recommended direct PE inputs for CPT code 76937.

*Comment:* Commenters were in support of the CMS proposal of the RUC-recommended values for CPT code 76937.

*Response:* We thank the commenters for their support.

After consideration of the comments, we are finalizing a work RVU of 0.30 for CPT code 76937 as proposed. We are also finalizing the direct PE inputs as proposed.

(15) Neuromuscular Ultrasound (CPT codes 76881, 76882, and 76883)

Since their creation in 2011, CPT codes 76881 (*Ultrasound, complete joint (ie, joint space and peri-articular soft-tissue structures), real-time with image documentation*) and 76882 (*Ultrasound, limited, joint or other nonvascular extremity structure(s) (e.g., joint space, peri-articular tendon[s], muscle[s], nerve[s], other soft-tissue structure[s], or soft-tissue mass[es]), real-time with image documentation*) have been reviewed numerous times as New Technology/New Services by the Relativity Assessment Workgroup (RAW). In October 2016, the RAW reviewed these codes and agreed with the specialty societies that the dominant specialties providing the complete (CPT code 76881) versus the limited (CPT code 76882)

ultrasound of extremity services were different than originally thought, causing variation in the typical PE inputs. The RAW recommended referral to the Practice Expense Subcommittee for review of the direct PE inputs and the CPT Editorial Panel to clarify the introductory language regarding the reference to one joint in the complete ultrasound. The PE Subcommittee reviewed the direct PE inputs for CPT codes 76881 and 76882 and adjusted the clinical staff time at the January 2017 RUC meeting, and the CPT Editorial Panel editorially revised CPT codes 76881 and 76882 to clarify the distinction between complete and limited studies and revised the introductory guidelines to clarify the reference to one joint in the complete ultrasound procedure in June 2017.

In October 2021, the CPT Editorial Panel approved the addition of CPT code 76883 (*Ultrasound, nerve(s) and accompanying structures throughout their entire anatomic course in one extremity, comprehensive, including real-time cine imaging with image documentation, per extremity*) for reporting real-time, complete neuromuscular ultrasound of nerves and accompanying structures throughout their anatomic course, per extremity, and the revision of CPT code 76882 to add focal evaluation. CPT codes 76881 and 76882 were identified as part of the neuromuscular ultrasound code family with CPT code 76883 and surveyed for the January 2022 RUC meeting. We reviewed these recommendations for CY 2023 and discussed our concerns with the commenters' assertions regarding typical PE inputs for CPT code 76882 in the CY 2023 PFS final rule (87 FR 69506 through 69510). Specifically, given the changes in dominant specialty for these CPT codes from 2010 to 2017, and again from 2017 to 2022, we recommended that the RUC and interested parties reconsider the PE inputs for each code based on the dominant specialty for each CPT code, based on the most recent year's Medicare claims data, and consideration of survey responses submitted to CMS in response to the CY 2023 PFS proposed rule.

The PE inputs for CPT codes 76881, 76882, and 76883 were subsequently re-reviewed at the January 2023 RUC meeting and the RUC submitted refinements to the PE inputs for CPT

code 76882 only. We proposed the RUC-recommended PE refinements for CPT code 76882 with the exception of the RUC-recommended 13.5 minutes for ED053 (Professional PACS workstation) and 23 minutes for EQ250 (ultrasound unit, portable). We noted that the old intraservice time of 11 minutes was used in error when calculating the standard equipment time for ED053. Therefore, we disagreed with the RUC-recommended equipment time of 13.5 minutes and proposed 17.5 minutes for ED053, which is calculated by using the standard equipment formula for ED053 established in the CY 2017 PFS final rule (81 FR 80182) with the updated intraservice time from the CY 2023 PFS final rule  $((0.5*5)+15 = 17.5)$ .

We disagreed with the RUC-recommended 23 minutes of equipment time for EQ250, which includes one minute of clinical labor time for CA014 (Confirm order, protocol exam) in the highly technical equipment formula, as discussed beginning in the CY 2013 PFS final rule (77 FR 69028), in error. Therefore, the correct equipment time for EQ250 using the highly technical equipment formula would be 22 minutes. However, because the Summary of Recommendations included in the RUC recommendations did not provide a rationale for the use of the highly technical equipment formula for EQ250, we proposed to maintain the 15 minutes of equipment time for EQ250 for CPT code 78882, which corresponds to the interservice time for this code and maintains consistency with how equipment time is allotted for EQ250 across the three codes in this family. We referred readers to the classification of highly technical equipment in the CY 2014 PFS final rule (79 FR 67639).

The RUC did not make recommendations on the work RVUs for CPT codes 76881, 76882, and 76883, and CMS did not propose any changes.

*Comment:* Some commenters thanked CMS for proposing the RUC recommended direct PE inputs for CPT code 76882. One commenter agreed with the CMS PE refinements for CPT code 76882, including the refinement for EQ250.

*Response:* We thank the commenters for their support.

*Comment:* Some commenters expressed continued concern about the PE inputs for CPT code 76881, and one commenter submitted several invoices for ultrasound machine technology used by rheumatologists for neuromuscular ultrasound services. The commenter stated that the clinical labor, which they believed was typically a diagnostic medical sonographer, and the dedicated ultrasound room and high-quality ultrasound machines utilized by rheumatologists were not appropriately accounted for in CPT code 76881. Some commenters requested that CMS utilize the invoices and informal survey data provided in response to last year's CY 2023 PFS proposed rule to raise the PE values for CPT code 76881 to match the proposed PE values of CPT code 76882 until a formal workforce survey of typical rheumatology practice expenses has been conducted to prevent a rank order anomaly. Multiple commenters stated that rheumatologists' typical practice expenses are not accounted for in the valuation of CPT code 76881, and many offered to provide more resources to capture these expenses. Some commenters asserted that rheumatologists were not surveyed on their typical practice expense and requested a similar re-review for CPT code 76881 that was done for CPT code 76882.

*Response:* As stated in the CY 2023 PFS final rule, we appreciate the commenters' survey collection efforts to reflect rheumatologists' costs in performing neuromuscular ultrasound and the concern regarding the accounting of rheumatologists' typical clinical labor and equipment in the RUC recommendations. We encourage the commenters to coordinate with the RUC to provide their survey data to facilitate a reconsideration of PE inputs if the commenters believe certain specialties were not appropriately queried. Because the RUC has standardized procedures for PE and physician surveys, and the fact that the commenters' survey results differ so drastically from the January 2022 and 2023 RUC recommendations, we encourage the RUC and other interested parties to consider the commenters' survey efforts. We encourage collaboration with the RUC PE subcommittee and the submission of specific invoices to support the surveys' results and robust data to show the typicality of these PE inputs.

We note that the RUC submitted a letter in their January 2023 recommendations outlining the process for re-surveying these codes. The RUC noted that PE recommendations were formulated at the January 2022 meeting based on RUC database claims at the time, which showed Rheumatology as the highest single provider of CPT code 76881 and Radiology as the highest single specialty provider of CPT code 76882, although for both codes no single specialty has more than a plurality. For the January 2023 RUC meeting, there was a change in the dominant specialty for CPT code 76882 to Podiatry, rather than Radiology, in the non-facility setting; therefore, the PE recommendations were adjusted to reflect the more common hand-held ultrasound device, rather than the ultrasound room, sonographer, and PACS workstation that are typical in radiology practices. The RUC's letter stated that they reviewed the several hundred letters from rheumatologists submitted in response to the CY 2023 PFS proposed rule.

In response, the American College of Radiology, American Academy of Neurology, American Association of Neuromuscular and Electrodiagnostic Medicine, American Academy of Physical Medicine and Rehabilitation, American College of Rheumatology, and American Podiatric Medical Association convened a panel that included experts familiar with these services and typical practice expense to reevaluate the direct practice expense inputs for neuromuscular ultrasound. At the time of the panel, rheumatology was the dominant specialty for CPT code 76881 at 26 percent, and radiology was the dominant specialty for CPT code 76882 at 27 percent. Because of the dominant specialty change back to radiology for CPT code 76882, which has been the historical standard and was temporarily changed to Podiatry based on COVID pandemic alterations of the utilization, the RUC-recommended inputs for CPT code 76882 submitted for the January 2023 meeting reflected updated clinical staff, clinical activities, supplies, and equipment (PACS) utilized when performed by Radiology. The letter also stated that the expert panel carefully considered the comments submitted to CMS regarding the practice expense for CPT code 76881. The letter stated the following: "While the use of dedicated sonographers is increasing in Rheumatology, we did not believe it was yet the typical clinical

staff in the non-facility setting and will re-evaluate the issue when the code family returns for review under the new technology process. The expert panel recognizes that many non-radiology specialties are increasingly adopting a “picture archiving and communication system (PACS)” for image storage and important patient care. However, the RUC has previously indicated that these are general practice expenses not typically allocated to a single patient/code and that only the specific use of the PACS workstation is acceptable under PE supplies. As many PACS vendors increasingly shift to a per-patient cost, the RUC may need to reconsider how these supplies are allocated in practice expense.”

We also remind interested parties that we have established an annual process for the public nomination of potentially misvalued codes. This process provides an annual means for those who believe that values for individual services are inaccurate and should be readdressed through notice and comment rulemaking to bring those codes to our attention, as detailed in section II.C. of this final rule. As part of our current process, we identify potentially misvalued codes for review, and request recommendations from the RUC and other public commenters on revised work RVUs and direct PE inputs for those codes. While this process is available to interested parties, we remind commenters that the RUC plans to review the practice expense for CPT codes 76881, 76882, and 76883 with additional data according to their new technology process at a future RUC meeting.

After consideration of the comments, we are finalizing the direct PE refinements as proposed for CPT codes 76881, 76882, and 76883. We did not propose and are not finalizing any changes to the work RVU for CPT codes 76881, 76882, and 76883.

(16) Intraoperative Ultrasound Services (CPT codes 76998, 76984, 76987, 76988, and 76989)

In October 2018, the Relativity Assessment Workgroup (RAW) created a screen for CMS/Other codes with Medicare utilization of 20,000 or more, and CPT code 76998 (*Ultrasonic guidance, intraoperative*) was subsequently identified as part of that screen. When CPT code 76998 was identified in the CMS/Other screen, it was noted that many specialties were

represented in the Medicare claims data. Specialties representing cardiothoracic surgery, general surgery, breast surgery, urology, interventional cardiology, interventional radiology and vascular surgery jointly submitted an action plan that the RAW reviewed in October 2019. Based on the variability of intraoperative ultrasound for each specialty with differences in the typical patient and physician work, it was decided that each society would submit applications for new code(s) as needed to carve out the work currently reported with CPT code 76998 until the code was no longer needed, or until it was clear what the final dominant use of CPT code 76998 was so that a survey could be conducted.

In October 2019, the RUC referred this issue to the CPT Editorial Panel to clarify correct coding and accurately differentiate physician work, as multiple specialties currently report CPT code 76998. The CPT Editorial Panel addressed CPT code 76998 in 2020 and 2021 by adding instructional parentheticals that restrict the use of imaging guidance with vein ablation procedures and adding new codes that bundled imaging guidance for urological procedures. In May 2022, the CPT Editorial Panel created four new codes to report intraoperative cardiac ultrasound services, thus carving out most of the prior reporting of CPT code 76998 by cardiothoracic surgeons and cardiologists.

After utilization was removed from CPT code 76998 for vein ablation procedures, most urological procedures, cardiac procedures, and intra-abdominal procedures through instructions and/or new or revised codes, it was determined that the dominant use of the code would be related to breast surgery, allowing for CPT code 76998 to be surveyed. CPT codes 76984 (*Ultrasound, intraoperative thoracic aorta (eg, epiaortic), diagnostic*), 76987 (*Intraoperative epicardial cardiac (eg, echocardiography) ultrasound for congenital heart disease, diagnostic; including placement and manipulation of transducer, image acquisition, interpretation and report*), 76988 (*Intraoperative epicardial cardiac (eg, echocardiography) ultrasound for congenital heart disease, diagnostic; placement, manipulation of transducer, and image acquisition only*), 76989 (*Intraoperative epicardial cardiac (eg, echocardiography) ultrasound*

*for congenital heart disease, diagnostic; interpretation and report only*), and 76998 were surveyed by the specialty societies for the September 2022 RUC meeting.

We disagreed with the RUC-recommended work RVU of 1.20 for CPT code 76998 and proposed the total time ratio work RVU of 0.91. The RUC recommended a 7-minute total time decrease for CPT code 76998. We agreed with the RUC that the intensity of CPT code 76998 (real-time during an operation) is greater than the identically-timed CPT code 76641 (*Ultrasound, breast, unilateral, real time with image documentation, including axilla when performed; complete*), which represents a single ultrasound session typically performed by a technician, whereas CPT code 76998 includes multiple, separate ultrasound maneuvers during a surgical procedure that require a more intense, immediate interpretation in order to direct resection of the breast tissue and ensure a thorough and complete surgical excision of the abnormal breast tissue. The work RVU of 0.91 for CPT code 76998 adequately values the surgeon's 5 minutes of pre-service time, 12 minutes of intraservice time, and 5 minutes of immediate post-service time more than the same 5, 12, and 5 minutes of the technician's time for CPT code 76641, which has a work RVU of 0.73.

Additionally, the IWPUT of CPT code 76641 is appropriately less than the IWPUT of CPT code 76698, with IWPUTs of 0.0422 and 0.0572, respectively. We remind interested parties that we believe that, since the two components of work are time and intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, decreases in time should be reflected in decreases to work RVUs. We disagreed with the RUC-recommended maintenance of the current work RVU for CPT code 76998 for a few reasons: the RUC recommendations did not advocate for a change in intensity, and presumably some higher-intensity cardiac procedures will no longer be reported using CPT code 76998, as they can now be reported using CPT codes 76984 through 76989. Instead, we proposed an appropriately lower work RVU and associated IWPUT to account for the 7-minute decrease in total time and removal of higher-intensity cardiac procedures previously reported by CPT code 76998. We

noted that the work RVU of 0.91 for CPT code 76998 is supported by the upper brackets of CPT codes 72125 (*Computed tomography, cervical spine; without contrast material*), 72128 (*Computed tomography, thoracic spine; without contrast material*), and 72131 (*Computed tomography, lumbar spine; without contrast material*), and a lower bracket of CPT code 76641. CPT codes 72125, 72128, and 72131 represent spinal computed tomography (CT) of the cervical, thoracic, and lumbar spine, respectively.

We proposed the RUC-recommended work RVU of 0.60 and work times of 5 minutes of pre-evaluation time, 10 minutes of intraservice time, and 3 minutes of immediate postservice time for total time of 18 minutes for CPT code 76984. We also proposed the RUC-recommended work times for CPT codes 76987 and 76988 of 10 minutes of pre-evaluation time and 20 minutes of intraservice time for both codes, and 5 and 10 minutes of immediate postservice time, for total times of 40 and 35 minutes, respectively. We proposed the RUC-recommended work times for CPT code 76989 with the exception of the intraservice time. We proposed the survey median intraservice time of 15 minutes rather than the RUC-recommended 75<sup>th</sup> percentile based on the assertion in the RUC's Summary of Recommendations that the cardiologist is typically in the operating room intraoperatively with the cardiothoracic surgeon prior to and after the cardiac repair. Based on this assertion, we do not believe the cardiologist spends the same amount of time in the operating room as the cardiothoracic surgeon in CPT codes 76987 and 76988. Therefore, we proposed 5 minutes of pre-evaluation time, 15 minutes of intraservice time, and 10 minutes of immediate postservice time for total time of 30 minutes for CPT code 76989.

Due to the CPT code descriptor for CPT code 76987, we believe that the appropriate work for this service is reflected in the combined work of CPT codes 76988 and 76989. We noted that in the CY 2015 PFS final rule (79 FR 67669), we reviewed a similarly constructed family of codes representing interventional transesophageal echocardiography (TEE) for congenital cardiac anomalies in the same way by proposing and finalizing a work RVU for CPT code 93315 (*Transesophageal echocardiography for congenital cardiac anomalies; including*

*probe placement, image acquisition, interpretation and report*) equal to the combined work RVUs of CPT codes 93316 (*Transesophageal echocardiography for congenital cardiac anomalies; placement of transesophageal probe only*) and 93317 (*Transesophageal echocardiography for congenital cardiac anomalies; image acquisition, interpretation and report only*). We noted that the Summary of Recommendations for CPT codes 76987 through 76989 state that these intraoperative ultrasound services are expected to be very rare, as intraoperative TEE is considered the gold standard and can be performed for most patients instead, which could be reported using CPT codes 93315 through 93317. Because CPT codes 76987 through 76989 are an alternative to CPT codes 93315 through 93317 for congenital cardiac anomalies when intraoperative TEE is contraindicated, we believe we should maintain consistency and propose a work RVU for CPT code 76987 that equals the combined work RVUs of CPT codes 76988 and 76989.

Therefore, we disagreed with the RUC-recommended work RVUs of 1.90, 1.20, and 1.55 for CPT codes 76987, 76988, and 76989, respectively. We proposed a work RVU of 1.62 for CPT code 76987 based on a crosswalk to CPT codes 73219 (*Magnetic resonance (eg, proton) imaging, upper extremity, other than joint; with contrast material(s)*) and 78452 (*Myocardial perfusion imaging, tomographic (SPECT) (including attenuation correction, qualitative or quantitative wall motion, ejection fraction by first pass or gated technique, additional quantification, when performed); multiple studies, at rest and/or stress (exercise or pharmacologic) and/or redistribution and/or rest reinjection*). We noted that this crosswalk is supported by total time ratios between CPT code 76987 and reference CPT codes 93312 (*Echocardiography, transesophageal, real-time with image documentation (2D) (with or without M-mode recording); including probe placement, image acquisition, interpretation and report*) and 93315, which equal 1.66 and 1.67 respectively. We also noted that this is supported by a total time ratio to the current time and work RVU for the code that cardiothoracic surgeons currently use to report this service before the creation of CPT code 76987, CPT code 76998

$((40/29)*1.20 = 1.66)$ . Lastly, this is also supported by a total time ratio to the same CPT code 76998 after factoring in the updated total time of 22 minutes and our work RVU for CPT code 76998 of 0.91 ( $((40/22)*0.91 = 1.65)$ ). We noted that a work RVU of 1.62 for CPT code 76987 yields an IWP/UT of 0.059, which is slightly higher than the IWP/UTs of the intraoperative TEE CPT codes 93315 and 93312 that represent the complete procedure, which are 0.0532 and 0.0580, respectively.

Similar to how CPT code 76987 is broken down into service parts by CPT codes 76988 and 76989 to allow for multiple providers to perform different parts of the whole service done by one provider (represented by CPT code 76987), CPT codes 93312 through 93314 and 93315 through 93317 are broken down as well. According to the RUC Database, CPT code 93316 represents placement of transesophageal probe only, typically performed by a cardiac anesthesiologist. CPT code 93313 (*Echocardiography, transesophageal, real-time with image documentation (2D) (with or without M-mode recording); placement of transesophageal probe only*) also represents placement of transesophageal probe only, when performed by a cardiac anesthesiologist. Similarly, CPT code 76988 represents placement and manipulation of transducer and image acquisition only, which is typically performed by a cardiothoracic surgeon according to the Summary of Recommendations.

According to the RUC Database, CPT code 93317 represents image acquisition and interpretation and report only, typically done by the cardiologist after probe placement typically performed by the cardiac anesthesiologist, represented by CPT code 93316. CPT code 93314 (*Echocardiography, transesophageal, real-time with image documentation (2D) (with or without M-mode recording); image acquisition, interpretation and report only*) also represents image acquisition and interpretation and report only, typically done by the cardiologist after probe placement typically performed by the anesthesiologist, represented by CPT code 93313. Similarly, CPT code 76989 represents interpretation and report only, which is typically performed by a cardiologist according to the Summary of Recommendations.

Because this family is broken down into service parts in the same way CPT codes 93312 through 93314 and 93315 through 93317 are, we disagreed with the RUC's recommendation to assign work RVUs for CPT codes 76988 and 76989 that sum to more than the aggregate work RVU for CPT code 76987. Therefore, we proposed a work RVU of 1.08 for CPT code 76988 and a work RVU of 0.54 for CPT code 76989, which sum to the aggregate work RVU of 1.62 for CPT code 76987. The work RVUs for CPT code 76988 and 76989 were calculated by taking the aggregate work RVU of the whole service, represented by CPT code 76987, and dividing by three based on the number of discernable service parts: probe placement and manipulation, image acquisition, and interpretation and report. Because CPT code 76988 represents two of the three service parts performed by a cardiothoracic surgeon, we allotted 2/3rds of the aggregated work RVU for CPT code 76987, equaling 1.08 ( $1.62 * 2/3 = 1.08$ ). Because CPT code 76989 represents one of the three service parts performed by a cardiologist, we allotted 1/3rd of the aggregated work RVU for CPT code 76987, equaling 0.54 ( $1.62 * 1/3 = 0.54$ ). Because the Summary of Recommendations was unclear regarding the intensity of each part of the service as broken out, we invited comments on additional ways to break down the aggregate work RVU of CPT code 76987 to adequately account for the cardiothoracic surgeon and cardiologist's time and intensity to perform CPT codes 76988 and 76989, but we believe that the work RVUs should sum to no more than the aggregate work RVU for CPT code 76987 based on similarly broken down code families that represent the more widely used intraoperative TEE procedures.

The RUC did not recommend, and we did not propose any direct PE inputs for the five codes in the Intraoperative Ultrasound family.

*Comment:* Some commenters disagreed with CMS' proposed work RVU of 0.91 for CPT code 76998, stating that it is invalid to draw comparisons between the current work times and work RVUs to the newly surveyed work time and work RVUs as recommended by the RUC because they were "Harvard" times. One commenter disagreed with the use of total time ratios to account for changes in time and stated that the work RVU was reduced by CMS for CY 1993

and 1995 without the time being adjusted, rendering the originally assigned times and work RVUs untethered. The commenter also stated that the proposed work RVU of 0.91 for CPT code 76998 is only 1/3rd more intense than CPT code 76641, which describes a diagnostic ultrasound study that is typically performed by a technician, where the saved images are then reviewed, and an interpretation report is generated by a radiologist at a later time. In comparison, a surgeon uses an ultrasound probe periodically during the operation and interprets the images in real time to help direct the limits of surgical excision of a mass, images are saved, and a report is generated by the surgeon for CPT code 76998. The commenter stated that the intensity and complexity of CPT code 76998 (dynamic real-time ultrasound at operation) is significantly greater than CPT code 76641. The commenter also stated that CPT code 76641 represents a single ultrasound session typically performed by a technician, whereas CPT code 76998 includes multiple separate ultrasound maneuvers throughout an operative procedure by the surgeon, which require a more intense immediate interpretation in order to direct resection of the breast tissue to ensure a thorough and complete surgical excision of the abnormal breast tissue.

*Response:* We agree that it is important to use the recent data available regarding work times, and we note that when many years have passed since work time has been measured, significant discrepancies can occur. However, we also believe that our operating assumption regarding the validity of the existing values as a point of comparison is critical to the integrity of the relative value system as currently constructed. The work times currently associated with codes play a very important role in PFS ratesetting, both as points of comparison in establishing work RVUs and in the allocation of indirect PE RVUs by specialty. If we were to operate under the assumption that previously recommended work times had been routinely overestimated, this would undermine the relativity of the work RVUs on the PFS in general, in light of the fact that codes are often valued based on comparisons to other codes with similar work times. Such an assumption would also undermine the validity of the allocation of indirect PE RVUs to physician specialties across the PFS.

Instead, we believe that it is crucial that the code valuation process take place with the understanding that the existing work times that have been used in PFS ratesetting are accurate. We recognize that adjusting work RVUs for changes in time is not always a straightforward process and that the intensity associated with changes in time is not necessarily always linear, so we apply various methodologies to identify several potential work values for individual codes. However, we reiterate that we believe it would be irresponsible to ignore changes in time based on the best data available and that we are statutorily obligated to consider both time and intensity in establishing work RVUs for PFS services. For additional information regarding the use of old work time values that were established many years ago and have not since been reviewed in our methodology, we refer readers to our discussion of the subject in the CY 2017 PFS final rule (81 FR 80273 through 80274).

We also disagree and continue to believe that the use of time ratios is one of several appropriate methods for identifying potential work RVUs for particular PFS services, particularly when the alternative values recommended by the RUC and other commenters do not account for survey information that suggests the amount of time involved in furnishing the service has changed significantly. We reiterate that, consistent with the statute, we are required to value the work RVU based on the relative resources involved in furnishing the service, which include time and intensity. In accordance with the statute, we believe that changes in time and intensity must be accounted for when developing work RVUs. When our review of recommended values reveals that changes in time are not accounted for in a RUC-recommended work RVU, the obligation to account for that change when establishing proposed and final work RVUs remains.

With regards to the relativity of intensity and complexity of CPT code 76998 (dynamic real-time ultrasound at operation) compared to CPT code 76641, we continue to believe that the intensity of CPT code 76998 (real-time during an operation) is greater than the identically-timed CPT code 76641. The work RVU of 0.91 for CPT code 76998 adequately values the surgeon's 5

minutes of pre-service time, 12 minutes of intraservice time, and 5 minutes of immediate post-service time more than the same 5, 12, and 5 minutes for CPT code 76641, which has a work RVU of 0.73. Additionally, the IWPUT of CPT code 76641 is appropriately less than the IWPUT of CPT code 76698, with IWPUTs of 0.0422 and 0.0572, respectively.

*Comment:* Commenters disagreed with the comparison to intraoperative TEE and stated that the sum of the different components of work will not be the same as the combined work as it is for intraoperative TEE. The commenters stated that there would be time savings, as represented by the surveyed times, if the cardiothoracic surgeon provides the service alone, represented by CPT code 76987. Commenters also stated that CPT codes 73219 and 78452 are inappropriate comparator codes, as they are not intraoperative services and CPT code 78452 describes cardiac imaging performed on a patient before and after exercise in which a technologist typically handles the image acquisition. Commenters stated that CPT code 76987 is rarely performed and describes ultrasound image acquisition performed in the operating room through an open chest where the ultrasound probe is placed directly on the patient's beating heart and sterility must be maintained throughout. Commenters suggested that a work RVU of 1.90 was supported by comparison to CPT code 93317, with a work RVU of 1.84, intraservice time of 20 minutes, and total time of 40 minutes, which is the component code for the image acquisition, interpretation and report only of the congenital TEE codes.

*Response:* We agree with commenters that the proposed work RVU does not adequately account for the complexity of the intraoperative ultrasound image acquisition performed on a beating heart with abnormal heart structure, and that CPT code 93317 is a better comparator code with a work RVU of 1.84. Therefore, we are finalizing the RUC-recommended work RVU of 1.90 for CPT code 76987.

*Comment:* Some commenters disagreed with CMS' proposed work RVU of 1.08 for CPT code 76988. Commenters stated that CPT code 76988 describes ultrasound image acquisition performed in the operating room through an open chest in a sterile field where the ultrasound

probe is placed directly on the patient's beating heart. Commenters stated that the cardiologist can provide guidance to the cardiothoracic surgeon to ensure capture of certain views and that work by the cardiologist is captured in CPT code 76989. The physician work involved in placing and manipulating the echo probe both before surgical repair and after repair with various suture lines requires careful manual manipulation and positioning by the cardiothoracic surgeon in order to obtain certain views. The commenters stated that, because of the abnormal structure of the heart and the surgical repair, the normal external landmarks for probe positioning are not present adding increased complexity to the procedure.

*Response:* We agree with commenters that the proposed work RVU does not adequately account for the complexity of the intraoperative ultrasound image acquisition performed on a beating heart with abnormal heart structure and are finalizing the RUC-recommended work RVU of 1.20 for CPT code 76987.

*Comment:* Some commenters disagreed that the combination of CPT codes 76988 and 76989 should equal the value for CPT code 76987, and stated that this methodology is flawed and inconsistent with how CMS pays for most services that are performed by multiple providers for which CMS provides payment that is greater than 100% to the two surgeons. The commenters stated that when there are co-surgeons (modifier 62), CMS's payment of 125 percent is split between the two surgeons. Similarly, when there is an assistant at surgery (modifier 80), CMS pays the primary surgeon 100 percent and the assistant at surgery 16 percent. Commenters also disagreed with the proposed median intraservice time of 15 minutes rather than the rather than the RUC-recommended 75<sup>th</sup> percentile intraservice time, stating that pediatric cardiologists completing the survey underestimated the amount of time they spent in the operating room and stated that the nature of the service where the cardiologist is not in the operating room during the entire procedure but rather in the operating room prior to the repair(s), leaves and then comes back at the completion of the repair(s) could have resulted in the survey

respondent's underestimation of time. Therefore, the commenters stated that the 75th percentile intraservice time of 20 minutes is more appropriate for CPT code 76989.

*Response:* We continue to believe that, because this family is broken down into service parts in the same way CPT codes 93312 through 93314 and 93315 through 93317 are, the work RVUs for CPT codes 76988 and 76989 should not sum to more than the aggregate work RVU for CPT code 76987. We did not receive comments that clarified the intensity of each part of the service as broken out from the aggregate work RVU of CPT code 76987 to adequately account for the cardiothoracic surgeon and cardiologist's time and intensity to perform CPT codes 76988 and 76989. Commenters only stated that co-surgeons and assistants at surgery are paid more than 100 percent and commenters reiterated that the RUC recommended that CPT code 76989 to be valued higher than CPT code 76988. While this is true, these codes along with the intraoperative TEE codes for congenital cardiac anomalies are not structured to allow the billing of co-surgeons or assistants at surgery. Rather, the CPT Editorial Panel structured these codes to have clearly sanctioned, disaggregated service parts to allow for multiple providers to perform different parts of the aggregate service represented by CPT codes 76987 and 93315.

As stated above, CPT code 93317 represents image acquisition and interpretation and report only, typically done by the cardiologist after probe placement typically performed by the cardiac anesthesiologist, represented by CPT code 93316. Similarly, CPT code 76989 represents interpretation and report only, which is typically performed by a cardiologist according to the Summary of Recommendations. We note that the services as described by the disaggregated component CPT codes 76988 and 76989 would likely be an assistant at surgery situation if the codes were structured to be billed this way because CPT code 76989 is described as the cardiologist assisting the cardiothoracic surgeon on probe placement and manipulation with real-time image interpretation, guidance, and discussion of the findings before and after the cardiac repair(s) to ensure accurate image acquisition and to determine if the repair(s) is adequate or additional procedures are needed after the cardiac repair is complete. In this case, where the

cardiologist is acting as an assistant at surgery, the primary surgeon who is actually placing and manipulating the probe on the beating heart would be paid 100 percent and the assistant surgeon would be paid 16 percent. If this were the case, the cardiologist that performs the work described by CPT code 76989 would be valued at 0.30 work RVUs (based on 16 percent of the finalized work RVU of 1.90 for CPT code 96987). Similarly, CPT code 93315 cannot be billed with modifier 62 or 80, but rather the codes were structured to allow for multiple providers to perform different parts of the aggregate service represented by CPT code 93315 by cardiologists and cardiac anesthesiologists, yet the work RVUs of CPT codes 93317 and 93316 do not total more than the work RVU of CPT code 93315.

We continue to believe that the sum of the work RVUs for CPT codes 76988 and 76989 should not be more than the aggregate work RVU of CPT code 76987 and disagree with the RUC that CPT code 76989 should be valued higher than CPT code 76988 based on the code descriptions and breakdown of service parts. Therefore, we are finalizing a work RVU of 0.70 for CPT code 76989 based on the subtraction of the finalized work RVU of 1.20 for CPT code 76988 from finalized work RVU of 1.90 for CPT code 76987. We subtracted these final work RVUs from each other to calculate the work RVU for CPT code 76989 to maintain the relationship where the work RVUs for CPT codes 76988 and 76989 sum to the work RVU of CPT code 76987. We note that commenters did not respond to the request for additional information that clarified the intensity of each part of the service as broken out from the aggregate work RVU of CPT code 76987 to adequately account for the cardiothoracic surgeon and cardiologist's time and intensity to perform CPT codes 76988 and 76989. We note that this final work RVU is greater than the 0.30 work RVUs that the cardiologist would receive if the surgeons were able to bill CPT code 76987 with modifier 80, greater than the proposed work RVU of 0.54, and greater than the work RVU of 0.63 that would result if we maintained the proposed methodology for calculating a work RVU for CPT code 76989, in which it where it was based on 1/3 of the work RVU of CPT code 76987 ( $1.90 * 1/3 = 0.63$ ).

With regards to the intraservice time for CPT code 76989, we agree with the commenters that it is possible that the survey respondents underestimated their intraservice time because they are in and out of the operating room throughout the procedure, and that it is typical that the cardiologist spends 20 minutes of intraservice time for CPT code 76989 rather than the proposed 15 minutes. Therefore, we are finalizing the RUC-recommended work times for CPT code 76989 as follows: 5 minutes of pre-evaluation time, 20 minutes of intraservice time, and 10 minutes of immediate postservice time for total time of 35 minutes.

After consideration of the public comments, we are finalizing the proposed work RVUs for CPT codes 76984 and 76998 of 0.60 and 0.91, respectively, the RUC-recommended work RVUs of 1.90 and 1.20 for CPT codes 76987 and 76988, respectively, and a work RVU of 0.70 for CPT code 76989.

(17) Percutaneous Coronary Interventions (CPT code 92972)

In September 2022, the CPT Editorial Panel created one new Category I CPT code for percutaneous coronary lithotripsy. Sixteen other percutaneous coronary intervention (PCI) codes were considered part of the code family but were ultimately not reviewed by the RUC. New add-on CPT code 92972 was reviewed by the RUC on an interim basis for CY 2024 while the entire percutaneous coronary intervention code family was referred to the CPT Editorial Panel for restructuring for the CY 2025 cycle.

We proposed the RUC-recommended work RVU of 2.97 for CPT code 92972 (*Percutaneous transluminal coronary lithotripsy*). The RUC did not recommend and we did not propose any direct PE inputs for this facility-based add-on service.

*Comment:* Several commenters thanked CMS for our consideration and for proposing the RUC's recommended work RVU for this code.

*Response:* We appreciate the support for our proposals from the commenters.

After consideration of the public comments, we are finalizing the work RVU and lack of direct PE inputs for CPT code 92972 as proposed.

(18) Auditory Osseointegrated Device Services (CPT codes 92622 and 92623)

In February 2022, the CPT Editorial Panel created CPT code 92622 (*Diagnostic analysis, programming, and verification of an auditory osseointegrated sound processor, any type; first 60 minutes*) and 92623 (*Diagnostic analysis, programming, and verification of an auditory osseointegrated sound processor, any type; each additional 15 minutes (list separately in addition to code for primary procedure)*) for CY 2024. CPT code 92623 serves as the add-on code for base CPT code 92622.

We proposed the RUC-recommended work RVU of 1.25 for CPT code 92622 and 0.33 for CPT code 92623. We also proposed the RUC-recommended direct PE inputs for both codes. Additionally, because audiologists provide these services, we proposed to add CPT codes 92622 and 92623 to the list of audiology services that can be billed with the AB modifier, that is personally provided by audiologists without a physician/NPP referral for non-acute hearing conditions — the list for CY 2023 is available at <https://www.cms.gov/audiology-services>.

*Comment:* A majority of commenters supported the CMS proposal of the RUC-recommended values for CPT codes 92622 and 92623, as well as the proposal to add the AB modifier.

*Response:* We thank the commenters for their support.

*Comment:* One commenter disagreed with the valuation of these codes and stated that the RVU work value of 1.25 for CPT code 92622 is lower than other, less technical timed audiology codes and as a result will cause financial problems for audiologists to continue providing these procedures. This commenter urged CMS to reconsider the valuation of these codes.

*Response:* We thank the commenter for their feedback but we continue to believe that the RUC-recommended values for these codes are correct. The RUC's recommended work RVU was based on a survey of 45 audiologists and supported by two key reference service codes: CPT codes 92626 (Evaluation of auditory function for surgically implanted device(s) candidacy or postoperative status of a surgically implanted device(s); first hour) (work RVU = 1.40, 7 minutes

pre-service, 60 minutes intra-service and 10 minutes post-service time)) and 92603 (Diagnostic analysis of cochlear implant, age 7 years or older; with programming) (work RVU = 2.25, 20 minutes pre-service, 82 minutes intra-service and 20 minutes post-service time)). These codes are optimal comparators as both have similar intensity to the surveyed code and service period times that increase respectively as the RVU increases. These reference service codes demonstrate appropriate relativity within other XXX-global audiologic and hearing implant testing services.

After consideration of the comments, we are finalizing the work RVUs and direct PE inputs for CPT codes 92622 and 92623 as proposed.

(19) Venography Services (CPT codes 93584, 93585, 93586, 93587, and 93588)

In February 2022, the CPT Editorial Panel created six new CPT add-on codes to describe Venography services that are performed during cardiac catheterization for congenital heart defects in the superior vena cava (SVC), the inferior vena cava (IVC), and in other congenital veins, that will be reported in conjunction with the main cardiac catheterization procedure codes (CPT codes 93593 – 93598). CPT codes 93584 (*Venography for congenital heart defect(s), including catheter placement, and radiological supervision and interpretation; anomalous or persistent superior vena cava when it exists as a second contralateral superior vena cava, with native drainage to heart (List separately in addition to code for primary procedure)*) and CPT codes 9X001 (*Venography for congenital heart defect(s), including catheter placement, and radiological supervision and interpretation; inferior vena cava (List separately in addition to code for primary procedure)*) were to replace the two more general CPT codes 75827 (*Venography, caval, superior, with serialography, radiological supervision and interpretation*) and 75825 (*Venography, caval, inferior, with serialography, radiological supervision and interpretation*). CPT code 9X001 has since been rescinded, and all the remaining new add-on codes have been clarified to state in their descriptors that they are specifically for congenital heart defects.

For CPT code 93584 (*Venography for congenital heart defect(s), including catheter placement, and radiological supervision and interpretation; anomalous or persistent superior vena cava when it exists as a second contralateral superior vena cava, with native drainage to heart (List separately in addition to code for primary procedure)*), the AMA RUC proposed a work RVU of 1.20 for 10 minutes of intra-service time and total time. We proposed the AMA RUC recommended work RVU of 1.20 with 10 minutes of intra-service time and total time for CPT code 93584.

For CPT code 93585 (*Venography for congenital heart defect(s), including catheter placement, and radiological supervision and interpretation; azygos/hemi-azygos venous system (List separately in addition to code for primary procedure)*), the AMA RUC proposed a work RVU of 1.13 for 10 minutes of intra-service time and total time. We noted that this code has the same number of minutes as CPT code 93584, but with a lower recommended work RVU. We proposed the AMA RUC recommended work RVU of 1.13 with 10 minutes of intra-service time and total time for CPT code 93585.

For CPT code 93586 (*Venography for congenital heart defect(s), including catheter placement, and radiological supervision and interpretation; coronary sinus (List separately in addition to code for primary procedure)*) the AMA RUC proposed a work RVU of 1.43 for 12 minutes of intra-service time and total time. We noted that this code has two additional minutes than CPT code 93584 which is 20 percent more in physician time than the 10 minutes from CPT code 93584. We proposed the AMA RUC recommended work RVU of 1.43 with 12 minutes of intra-service time and total time for CPT code 93586.

For CPT code 93587 (*Venography for congenital heart defect(s), including catheter placement, and radiological supervision and interpretation; venovenous collaterals originating at or above the heart (e.g., from innominate vein) (List separately in addition to code for primary procedure)*), the AMA RUC proposed a work RVU of 2.11 for 16 minutes of intra-service time and total time. We noted that this code has six additional minutes more than CPT code 93584

(10 minutes), which is 60 percent more physician time. Although we do not imply that increases in time as reflected in survey values must equate to a one-to-one or linear increase in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant increases in time within the same code family should typically be reflected in increases to work RVUs. In the case of CPT code 93587, we believe that it would be more accurate to propose a work RVU of 1.92 to account for this increase in the surveyed work time as compared with CPT code 93584. Therefore, we proposed a work RVU of 1.92 along with 16 minutes of intra-service time and total time for CPT code 93587.

For CPT code 93588 (*Venography for congenital heart defect(s), including catheter placement, and radiological supervision and interpretation; venovenous collaterals originating below the heart (e.g., from the inferior vena cava) (List separately in addition to code for primary procedure)*), the AMA RUC proposed a work RVU of 2.13 for 17 minutes of intra-service time and total time. We noted that this code has seven additional minutes more than CPT code 93584 (10 minutes), which is 70 percent more physician time than CPT code 93584. Although we do not imply that increases in time as reflected in survey values must equate to a one-to-one or linear increase in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant increases in time within the same code family should typically be reflected in increases to work RVUs. In the case of CPT code 93588, we believe that it would be more accurate to propose a work RVU of 2.04 to account for this increase in the surveyed work time as compared with CPT code 993584. Therefore, we proposed a work RVU of 2.04 along with 17 minutes of intra-service time and total time for CPT code 93588.

The RUC did not recommend and we did not propose any direct PE inputs for the five codes in the Venography Services family.

*Comment:* We received a few comments concerning these five new add-on codes for Venography congenital heart defect(s). All commenters were in favor of CMS accepting the

AMA RUC recommended work RVUs for CPT codes 93584, 93585, and 93586. All commenters were also not in favor of the CMS proposed work RVUs for CPT codes 93587 and 93588, and they urged CMS to withdraw our proposed values and accept the RUC recommended values. Additionally, commenters stated that CPT codes 93584, 93585, 93586, 93587 and 93588, which were introduced for review as a family of congenital heart catheter add-on codes, are actually more of a selectively unique group of codes that are distinct from one another, rather than a family of codes in the usual sense, and CMS had mistakenly treated them as a usual family of codes.

*Response:* We agree with the commenters regarding the grouping of these congenital heart catheter add-on codes. We acknowledge that these codes are services that are selectively unique and distinct from one another, and that they are not a just family of codes that are a series of similar services, as in having a base code with successively increasing values of magnitude of similar iterations in a rank order. As a result, we are finalizing the AMA RUC recommended work RVUs of 2.11 for CPT code 93587, and 2.13 for 93588. We are also finalizing the AMA RUC recommended work RVUs for CPT codes 93584, 93585, and 93586, as proposed.

(20) Post Operative Low-Level Laser Therapy (CPT code 97037)

In May 2022, the CPT Editorial Panel created CPT code 97037 (*Application of a modality to 1 or more areas; low-level laser therapy (ie, non-thermal and non-ablative), for post operative pain reduction*) to describe the application of low-level laser therapy for post operative pain reduction. The RUC did not offer a recommendation on CPT code 97037 and we did not realize that this code would be added to the CPT code set for CY 2024 until after the publication of the proposed rule. Although we did not receive recommendations for CPT code 97037 and did not have the opportunity to solicit public comments on its valuation, we are finalizing non-covered status (Procedure Status “N”) for CPT code 97037 because NCD 270.6 states: The use of infrared and/or near-infrared light and/or heat, including monochromatic infrared energy, is non-covered for the treatment, including the symptoms such as pain arising from these

conditions, of diabetic and/or non-diabetic peripheral sensory neuropathy, wounds and/or ulcers of the skin and/or subcutaneous tissues. Thus, it is noncovered by Medicare.

(21) General Behavioral Health Integration Care Management (CPT code 99484, and HCPCS code G0323)

We proposed to refine the work RVU of both CPT code 99484 and HCPCS code G0323, (see section II.J.1.c. of this final rule), by increasing the work RVU to 0.93 from the current 0.61 and increasing the work time to 21 minutes to match the results of the surveyed work time. For CPT code 99484 we proposed the direct PE inputs as recommended by the RUC without refinement. We also proposed the same PE inputs for HCPCS code G0323.

CMS created four behavioral health integration (BHI) HCPCS G-codes for CY 2017. In 2018 the codes were replaced by new CPT codes. At that time RUC specialty societies undertook a survey, but the RUC did not use the survey results to establish work RVUs, and instead adopted the valuations we had finalized in 2017. For CY 2017 we finalized a work RVU of 0.61 based on a direct crosswalk from CPT code 99490 (chronic care management services) (81 FR 80351). We recognized that the services described by CPT code 99490 are distinct from those furnished under BHI, but we stated that until we have more information about how the services described by HCPCS code G0507 (replaced in 2018 by CPT code 99484) are typically furnished, we believed valuation based on an estimate of the typical resources would be most appropriate (81 FR 80351). For CY 2022 we increased the value of CPT code 99490 from 0.61 to 1.00 (86 FR 65118).

In the CY 2023 PFS final rule (87 FR 69549), we finalized a new HCPCS code G0323 (care management services for behavioral health conditions, at least 20 minutes of clinical psychologist or clinical social worker time, per calendar month. *(These services include the following required elements: Initial assessment or follow-up monitoring, including the use of applicable validated rating scales; behavioral health care planning in relation to behavioral/psychiatric health problems, including revision for patients who are not progressing*

*or whose status changes; facilitating and coordinating treatment such as psychotherapy, coordination with and/or referral to physicians and practitioners who are authorized by Medicare to prescribe medications and furnish E/M services, counseling and/or psychiatric consultation; and continuity of care with a designated member of the care team.))* (See section II.J.1.c. of this final rule, for final code descriptor refinement.) We valued HCPCS code G0323 based on a direct crosswalk to the work values and direct PE inputs for CPT code 99484, because we believed the services described by HCPCS code G0323 mirrored those described by CPT code 99484. We noted that we may consider changes in how this code is valued for future rulemaking.

We continue to be concerned about undervaluing care management services under the PFS given the variability of costs involved with these evolving models of care. The RUC has recommended revaluing CPT code 99484, following a survey of 63 respondents. The median survey work RVU was 1.30, and the median time was 21 minutes (all intra-service). The specialty societies recommend a value of 0.93 based on a crosswalk to code 99202. We believe the specialty societies are in a good position to understand the evolving practice models. The RUC has recommended the 25<sup>th</sup> percentile survey work RVU of 0.85. Consistent with our goals of ensuring continued and consistent access to these crucial care management services we are finalizing to increase the work RVU of CPT code 99484 to 0.93. This value reflects the work RVU of CPT code 99202, which has a similar work time.

We continue to believe that the services described by HCPCS code G0323 (section II.J.1.c. of this final rule) closely mirror those described by CPT code 99484. As we proposed to update the work RVU and one of the PE inputs for CPT code 99484, we continue to believe that a direct crosswalk to the work values and direct PE inputs for CPT code 99484, is an appropriate valuation of the level, time, and intensity of the services under HCPCS code G0323 (section II.J.1.c. of this final rule). As such we proposed to value HCPCS code G0323, (section II.J.1.c. of

this final rule), based on a direct crosswalk to the work values and direct PE inputs for CPT code 99484, previously in this section.

We continue to believe that there is a systemic undervaluation of work estimates for behavioral health services. We proposed values for CY 2024 that we believe will more accurately value the work involved in delivering behavioral health services.

*Comment:* Nearly all commenters were supportive of our proposal to increase payment for general behavioral health integration services. Some also expressed their appreciation for our support for multiple evidence-based models of integrated care, as it allows psychologists the flexibility required to support the behavioral health needs of the broader community. Some requested that we increase the payment for CPT code 99484 and HCPCS code G0323 to, at a minimum, account for the lower reimbursement rate that nonphysician MH and SUD counselors receive for delivering these services (75 percent of the Physician Fee Schedule) and ensure that such providers receive an adequate rate. Other commenters urged us to ensure the reimbursement rates are adequate, accounting for the systemic undervaluation of work for behavioral health services and increase where appropriate.

*Response:* We thank commenters for their overwhelming support for our proposal. We note that the statute requires that clinical social workers are paid 75 percent of the amount paid to clinical psychologists. We also note that we are refining the code descriptor for HCPCS code G0323 to allow two new provider types to bill HCPCS code G0323. We refer commenters to section II.J.1.c. of this final rule for discussion of these two new provider types and to section II.J.5. of this final rule discussion of steps we are taking to improve the accuracy of the valuation of behavioral health services. We are finalizing values for CPT code 99484 and HCPCS code G0323, as proposed.

*Comment:* Some commenters requested that CMS consider creating a code for 20 minutes of additional care management services for behavioral health conditions. One commenter requested that CMS also increase payment for the three Collaborative Care Model

behavioral health integration codes. Another requested that CMS also increase payment for Screening, Brief Intervention, and Referral to Treatment (SBIRT) services (HCPCS codes G0396 and G0397) to encourage greater integration of SUD treatment in primary care and more widespread screening for SUDs.

*Response:* We may consider the development of a code for 20 additional minutes of care management services for behavioral health conditions in future rulemaking. We note that we have a process for potentially misvalued codes, whereby we adjust the codes' RVUs taking into account recommendations provided by interested parties. On an annual basis prior to developing the proposed rule, we seek nominations from the public and from interested parties for codes that they believe we should consider as potentially misvalued. We invite the commenters to make such nominations per the process outlined in section II.C. of this final rule.

*Comment:* One commenter encouraged us to ensure that non-Medicare eligible Addiction Counselors and peer support specialists be permitted to participate in furnishing BHI services, consistent with applicable requirements for auxiliary personnel.

*Response:* We thank the commenter for raising the contributions that addiction counselors and peer support specialists might be able to make in the delivery of general behavioral health integration services as auxiliary personnel. CPT code 99484 may be billed by a physician or nonphysician practitioner (NPP), referred to as a qualified health care professional in the AMA's CPT Editorial Panel CPT® codebook, whose State licensure and scope of practice includes evaluation & management (E/M) services and who is authorized under their Medicare statutory benefit category to bill Medicare independently for their services (See FAQs about billing Medicare for BHI services, <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Downloads/Behavioral-Health-Integration-FAQs.pdf>). Medicare Part B pays for services and supplies incident to the service of a physician (or other practitioner), under § 410.26. This regulation permits payment for services and supplies furnished by the physician or other practitioner with an incident to benefit or auxiliary personnel. Auxiliary

personnel must meet any applicable requirements to provide incident to services, including licensure, imposed by the State in which the services are being furnished. As such, a physician or NPP would be able to bill for behavioral health integration services furnished by addiction counselors and peer support specialists as auxiliary personnel under their general supervision if the addiction counselors and peer support specialists meet all the requirements under § 410.26.

We created HCPCS code G0323 specifically for clinical psychologists and social workers (section II.J.1.c. of this final rule), whose scope of practice does not include evaluation & management (E/M) services, to bill general behavioral health integration services. Only clinical psychologists have an incident to benefit enabling them to bill for general behavioral health integration services furnished under their general supervision by auxiliary personnel.

*Comment:* One commenter expressed dissatisfaction with the adequacy of the behavioral health integration codes and on that basis stated there was no need to increase their payment rates at this time. On the other hand, the commenter did offer that over time CMS should review and increase payment for more mental health and substance use services and integrated care codes to incentivize more providers to participate in Medicare and support innovation.

*Response:* We thank the commenter for their perspective and feedback. As discussed in the proposal we agree with the RUC and specialty societies that an increase in work RVUs is appropriate at this time. We are finalizing as proposed the work RVUs for both CPT code 99484 and HCPCS code G0323, (see section II.J.1.c. of this final rule), by increasing the work RVU to 0.93 from the current 0.61 and increasing the work time to 21 minutes to match the results of the surveyed work time. For CPT code 99484, we are finalizing the direct PE inputs as recommended by the RUC without refinement. We are also finalizing the same PE inputs for HCPCS code G0323.

## (22) Advance Care Planning (CPT codes 99497 and 99498)

In January 2022, the Relativity Assessment Workgroup reviewed CPT codes 99497 and 99498. The Workgroup determined these advance care planning services should be examined

given the recent changes in evaluation and management services. The RUC recommended that CPT codes 99497 and 99498 be surveyed for physician work and practice expense for the April 2022 RUC meeting. The RUC recommended no changes in physician time, work RVUs, or direct PE inputs for these services for CY 2024.

We proposed the RUC-recommended work RVU of 1.50 for CPT code 99497 and 1.40 for CPT code 99498, which are the current values for these codes. We proposed the RUC-recommended direct PE inputs for these codes without refinement.

*Comment:* Some commenters supported our proposal to value these services with the RUC-recommended work RVUs and direct PE inputs without refinement.

*Response:* We appreciate the support of commenters.

*Comment:* One commenter did not support our proposal and stated that we should instead finalize work RVUs based on the survey median values, stating that the fact that CPT code 99498 is valued at an interval between the 25th and the median work RVU is anomalous and that the proposed values do not reflect that primary care delivery has become significantly more complex for providers and patients.

*Response:* As the commenter noted, the RUC survey material states, “When CPT code 99498 is reported, it is typically a much more difficult situation that requires extra time and effort beyond that required for the base code and usually includes the presence of family members. This add-on code is more intense than the first 30 minutes of advance care planning because the physician or qualified health care professional (QHP) is not just filling out forms but is working through contentious and difficult issues and educating the family members on all diagnoses to reach planning decisions.” We believe this difference in intensity between the two codes is accurately reflected in the slightly higher intensity of CPT code 99498 that results from the RUC-recommended values.

After considering the comments, we are finalizing the RUC-recommended work RVUs and direct PE inputs for these codes without refinement, as proposed.

(23) Pelvic Exam (CPT code 99459)

In September 2022, the CPT Editorial Panel created a new CPT code for reporting a pelvic exam – CPT code 99459. The specialty societies noted that reimbursement for the work would be captured with the problem-oriented E/M code billed for the visit. The CPT Editorial Panel agreed, thus the new code is a practice expense only code that captures the direct practice expenses associated with performing a pelvic exam in the non-facility setting. CPT code 99459 (*Pelvic Exam*) captures the 4 minutes of clinical staff time associated with chaperoning a pelvic exam.

We proposed the RUC-recommended direct-PE inputs for CPT code 99459 without refinement. As a PE-only service, the RUC did not recommend and we did not propose a work RVU for this code.

*Comment:* One commenter noted that they believe there was an error with Addendum B regarding the PE RVUs for CPT code 99459.

*Response:* We thank the commenter for their support. We do not believe there is an error in Addendum B for CPT code 99459. The PE RVUs are listed correctly with 0.68 RVUs for non-facility and “NA” for facility, as there are no direct-PE inputs for this code in the facility setting.

After consideration of the public comments, we are finalizing our direct PE inputs for CPT code 99459 as proposed.

(24) Hyperthermic Intraperitoneal Chemotherapy (HIPEC) (CPT codes 96547 and 96548)

In September 2022, the CPT Editorial Panel created two time-based add-on Category I CPT codes 96547 (*Intraoperative hyperthermic intraperitoneal chemotherapy (HIPEC) procedure, including separate incision(s) and closure, when performed; first 60 minutes*) and 96548 (*Intraoperative hyperthermic intraperitoneal chemotherapy (HIPEC) procedure, including separate incision(s) and closure, when performed; each additional 30 minutes*). CPT codes 96547 and 96548 were surveyed for the January 2023 RUC meeting. While reviewing the survey data, it was noted by specialty societies that the instructions were not sufficient as the

survey data reflected time estimates that exceeded the time specified in the new time-based code descriptors. The RUC has stated that the survey results for both CPT codes 96547 and 96548 are inaccurate and that the codes should be resurveyed for 2025. Therefore, the RUC recommended contractor pricing for CPT codes 96547 and 96548 and that they be referred to the CPT Editorial Panel for revision.

We proposed to contractor price CPT codes 96547 and 96548 for CY 2024.

*Comment:* We received comments in support of our proposed contractor pricing for Hyperthermic Intraperitoneal Chemotherapy (HIPEC).

*Response:* We thank commenters for their support. After consideration of the public comments, we are finalizing contractor pricing for these codes as proposed.

#### (25) Hyperbaric Oxygen Under Pressure (HCPCS code G0277)

In 2015, CMS created HCPCS code G0277 (*Hyperbaric oxygen under pressure, full body chamber, per 30 minute interval*) to describe direct practice expense inputs associated with CPT code 99183 (*Physician or other qualified health care professional attendance and supervision of hyperbaric oxygen therapy, per session*) (consistent with the Medicare Hospital Outpatient Prospective Payment System coding mechanism). At the September 2022 Relativity Assessment Workgroup meeting, HCPCS code G0277 was identified as a high-volume growth code with Medicare utilization of 10,000 or more that have increased by at least 100 percent from 2015 through 2022 and was reviewed at the January 2023 RUC meeting. Hyperbaric oxygen therapy is typically administered to one patient in one hyperbaric chamber for 2 hours. Two hours is typical, and all inputs are prorated for four units being performed (each 30 minutes, totaling 2 hours). All medical supply and time inputs were divided into quarters.

There was a change in the dominant specialty providing this service, which is now primarily performed by family medicine. There was also a change in clinical staff type, and it is now typical for a single staff person to perform all activities (RN/ Respiratory Therapist) as opposed to two staff (an RN/LPN/MA and an RN/respiratory therapist). This was primarily due

to a 2016 change by the National Board of Diving and Hyperbaric Medical Technology to no longer allow certified nursing assistants and certified medical assistants to be eligible to take the certified hyperbaric technologist examination. The PE Subcommittee agreed with the specialty societies to update the clinical staff type to reflect solely L047C *RN/Respiratory Therapist*. We agreed with the specialties that the intra-service time is more appropriately labeled as clinical activity CA021 (*Perform procedure/service---NOT directly related to physician work time*) as opposed to CA018 due to the change in clinical staff type.

We proposed to refine the clinical labor time for the CA013 activity (*Prepare room, equipment, and supplies*) from 1.5 minutes to 0.5 minutes, as well as the clinical labor time for the CA016 activity (*Prepare, set-up and start IV, initial positioning and monitoring of patient*) from 1 minute to 0.5 minutes to align with the 2-minute standard for these clinical activities. We arrived at these refinements by dividing the standard 2-minutes of clinical labor times for CA013 and CA016 by four to account for all inputs being prorated for four units being performed for one typical 2-hour session. CA013 and CA016 would each be 0.5 minutes per 30-minute interval, which amounts to the standard 2 minutes for these clinical activities when four units are billed for the typical 2-hour session. The RUC recommended 30 minutes for clinical labor activity CA021 (*Perform procedure/service---Not directly related to physician work time (intra-service time)*) based on a flawed assumption that the current 15 minutes for CA021 accounts for two patients receiving treatment simultaneously. We noted that it had been standard for one patient to receive treatment at a time, and the current 15 minutes for CA021 was based on a time ratio to the CY 2015 RUC-recommended direct PE inputs for CPT code 99183; therefore, we disagreed with this RUC recommendation and proposed to refine the recommended intra-service CA021 clinical labor time to maintain the current 15 minutes. This was to reflect the 2015 PFS final rule where “we used the RUC recommended direct PE inputs for CPT code 99183 and adjusted them to align with the 30-minute treatment interval” (79 FR 67677). Each PE input was prorated for four units of HCPS code G0277 being provided in one typical 2-hour session. Since

CPT code 99183 (*Physician or other qualified health care professional attendance and supervision of hyperbaric oxygen therapy, per session*) was a 120-minute code with 60-minute intra-service time, all PE inputs in HCPCS code G0277 were prorated for four units being performed.

To conform to these changes in clinical labor time, we also proposed to refine the equipment time for the EQ362 (*HBOT air break breathing apparatus demand system (hoses, masks, penetrator, and demand valve)*) and EQ131 (*hyperbaric chamber*) equipment items from the recommended 39.75 minutes to 23.25 minutes. This was a result of the 15-minute intra-service time, as opposed to the RUC recommendation of 30 minutes of intra-service time.

*Comment:* We received many public comments disagreeing with the proposed refinements to the intra-service time (CA021) for HCPCS code G0277. Many of these comments were based on a concern for patient safety and supervision. Commenters stated that the standard of practice for patient safety is attendance and availability of clinical staff for 100 percent of the time. In case of an adverse event that could occur at any point in treatment, the clinical staff must be present to notify the physician to alter or stop the treatment. One staff member per patient must be available to carry out emergency procedures. Commenters provided many scenarios where an adverse event may require clinical staff attendance and availability. Due to this standard of practice, commenters stated that it is necessary for the clinical staff time to align with the code descriptor (30 minutes). The 30-minute clinical staff time is required because the patient is at pressure for longer than the 15-minute proposed time during the treatment. In a standard 2-hour session, which would account for four units of HCPCS code G0277, patients are at pressure for 106-110 minutes. Having a clinical staff time for a total of 60-minutes would not meet the standard of practice in which the clinical staff is in attendance for the entire treatment. There were similar comments regarding the equipment times; commenters specified that the equipment is used the entire treatment time. Commenters also provided information about the rarity of multiple patients to receive treatment at the same time, so intra-service time must be 30 minutes.

*Response:* We agree with the commenters and are finalizing the RUC-recommended clinical labor time of 30 minutes for the CA021 clinical labor task. We acknowledge that this time is needed to meet the standard of practice for clinical staff supervision during the entire treatment to ensure patient safety and to align with the time that patients are at pressure. This will also affect the equipment times (EQ362 and EQ131), adjusting each to 38.25 minutes to align with the adjustment to clinical staff time. This is because clinical labor task CA021 is used in the formula to calculate EQ362 and EQ131, so any refinements to CA021 also changes those values. We are finalizing RUC proposed values for CA021, EQ362, and EQ131.

*Comment:* Many commenters pointed out that clinical staff must be supervised by a physician the entire time, so clinical staff time should not be separate from physician work.

*Response:* The change in designation of intra-service time from CA018 to CA021 was a RUC recommendation that CMS agreed with. We specify that clinical staff are supervised by physicians during the entirety of the treatment. Physician or QHP work is accounted for in CPT code 99183 (Physician or other qualified health care professional attendance and supervision of hyperbaric oxygen therapy), while HCPCS code G0277 solely accounts for practice expenses associated with hyperbaric oxygen therapy. The change from the CA018 to the CA021 clinical labor task is a clerical update to reflect the fact that HCPCS code G0277 does not have an intraservice work time by virtue of being a PE-only code. We are finalizing as proposed to change the intra-service time from CA018 to CA021, consistent with the RUC recommendations.

*Comment:* We received many public comments disagreeing with CMS' proposed refinements to the clinical staff time (CA013 and CA016) which CMS proposed at 0.5 minutes per 30-minute interval, which amounts for each of them to equal the standard 2 minutes for these clinical activities when four units are billed for the typical 2-hour session. Commenters stated that clinical activities must align with the same clinical labor values for CPT code 99183 (the code for this service that is associated with physician work), which exceed the 2-minute standard. One commenter stated that during this clinical activity time, clinical staff complete

additional activities. Commenters specified that one reason for clinical activity time to be beyond the standard, is due to increased need for disinfecting and infection control for the next patient.

*Response:* We note that all input values for HCPCS code G0277 do not align with CPT code 99183, and therefore, clinical activity times do not need to have the same values. We do not agree that CA013 and CA016 exceed the 2-minute standard for those inputs. We calculated these times to align with these specific clinical activities (in this case CA013 and CA016). Each clinical activity has a separate time calculation; therefore, the 2 minutes total for CA013 only includes preparing the room, equipment, and supplies. The 2 minutes total for CA016 only includes preparing, setting up and starting the IV and initial positioning and monitoring of patient. We do not consider staff completing additional activities during these specified times . We note that we did not adjust any of the time requirements that involve post-service time, for example cleaning rooms and equipment. The refinements to CA013 and CA016 that we are finalizing do not affect the time spent ensuring infection control. We would also like to note that CA013 and CA016 are not the only aspects of pre-service for the treatment, they are the only ones that had refinements in this rulemaking cycle. All other values for pre-service time are aligned with the RUC recommendations. We disagree with commenters and are finalizing the proposed time refinements for CA013 and CA016 to align with the standard 2 minutes for these clinical activities.

After consideration of the public comments, we are finalizing the proposed CA013 and CA016 direct PE inputs for HCPCS code G0277 and we are finalizing the RUC-recommended clinical labor time of 30 minutes for CA021 and equipment times (EQ362 and EQ131) of 38.25 minutes, as detailed above.

(26) Remote Interrogation Device Evaluation – Cardiovascular (HCPCS code G2066, and CPT codes 93297, and 93298)

CPT code 93299 (*Interrogation device evaluation(s), (remote) up to 30 days; implantable cardiovascular physiologic monitor system or subcutaneous cardiac rhythm monitor system,*

*remote data acquisitions(s)*, receipt of transmissions and technician review, technical support and distribution of results) was meant to serve as a catch-all for both base CPT codes 93297 and 93298, which are work-only codes. However, the CPT Editorial Panel determined that CPT code 93299 was no longer necessary if CPT codes 93297 and 93298 were assigned direct PE inputs and therefore recommended CMS to delete CPT code 93299 at the beginning of CY 2020 under the assumption that CPT codes 93297 and 93298 would be assigned direct PE inputs. Since CMS did not agree with the recommended values, CMS decided to not allocate direct PE inputs for CPT codes 93297 or 93298 and instead created contractor priced HCPCS code G2066 for CY 2020 to ensure these services could still be furnished that were previously described under CPT code 93299 (84 FR 62777 and 62778). Since the publication of the CY 2020 PFS final rule, HCPCS code G2066 has remained contractor priced and CPT codes 93297 and 93298 remain as work-only codes. CMS continues to work with MACs and interested parties to address a lot of the payment concerns surrounding G2066 such as discrepancies in payment between jurisdictions. However, interested parties have indicated that a long-term solution is needed from CMS in order to help establish payment stability for these services.

Therefore, for CY 2024, we proposed to delete HCPCS code G2066 and proposed the RUC-recommended direct PE inputs for CPT codes 93297 and 93298. Since CPT code 93298 is most commonly billed with G2066, the RUC recommended the same inputs for CPT code 93298 and HCPCS code G2066 in the event that no change would be made for HCPCS code G2066. Since CMS does agree with the RUC recommended values, we proposed to delete HCPCS code G2066 altogether and establish direct PE-inputs for CPT codes 93297 and 93298 based on the RUC recommendations.

The RUC did not make recommendations on, and we did not propose any changes to the work RVUs for CPT codes 93297 and 93298.

*Comment:* One commenter disagreed with the proposal to delete HCPCS code G2066 and establish direct PE inputs for CPT Codes 93297 and 93298 because they believed CMS did not

establish an alternative billing mechanism to allow continued access to these services in the facility setting.

*Response:* We disagree with the commenter that access to these services will be altered with the coding change. We note that the services which were previously billed under HCPCS code G2066 will now be billed under CPT codes 93297 and 93298. This will only change how the services will be reported but access to these services will remain the same.

*Comment:* Several commenters disagreed with the CMS proposal of the RUC's recommended equipment times for the pacemaker follow-up system (incl software and hardware) (Paceart) (EQ198) for CPT codes 93297 and 93298. The commenters stated that the RUC's PE subcommittee decided that the EQ198 equipment is not used when the technician is educating or re-educating the patient and accordingly reduced the total equipment minutes per service assigned to the equipment system. The commenters stated that this is an inaccurate assumption as the equipment must be operational and accessible for the technician to train the patient on how to use and understand the monitor, to review clinical status with the patient, to verify connection status and to further educate the patient about how to initiate transmissions when needed. The commenters recommended that CMS update the equipment time assigned to CPT codes 93297 and 93298 to reflect the total clinical labor time assigned to these services, 33 and 69 minutes, respectively.

*Response:* We disagree with the commenters and continue to agree with the RUC's recommendation that the EQ198 equipment would not typically be in use when the technician is educating or re-educating the patient. We agree with the commenters that the equipment time would be needed for tasks such as initiating transmissions with the patient and verifying their connection status. However, this equipment time is already incorporated into CPT codes 93297 and 93298 under the 4 minutes allocated for troubleshooting activities, and as a result we continue to believe that EQ198 would not typically require additional equipment time above what the RUC recommended.

*Comment:* The same commenters stated that if CMS continued to apply fewer minutes of EQ198 equipment time than the total clinical labor time for CPT codes 93297 and 93298, then CMS needed to correct a clerical error in the time assigned to the equipment. The commenters stated that the RUC's recommendations included 4 minutes of clinical labor time for education/re-education tasks, however the equipment time assigned to these services was inadvertently reduced by 11 minutes, in what appeared to be a clerical error. The commenters stated that if CMS would not set the EQ198 equipment time equal to the total clinical labor time assigned to these services, then CMS must correct the equipment time to only remove the 4 minutes assigned to education/re-education and finalize 29 minutes of equipment time for CPT code 93297 and 65 minutes of equipment time for CPT code 93298.

*Response:* After reviewing this information from the commenters, along with the RUC's recommendations for CPT codes 93297 and 93298, we agree that there appears to be a clerical error in the equipment minutes for EQ198. The RUC provided a sum of clinical labor tasks in its recommendations listing 33 total minutes for CPT code 93297 and 69 total minutes for CPT code 93298. The RUC stated that it was recommending a removal of the 4 minutes of clinical labor time allotted for education/re-education tasks from the EQ198 equipment time, but instead recommended 22 minutes and 58 minutes respectively for the two codes, a decrease of 11 minutes instead of 4 minutes. This was mostly likely an inadvertent error since one of the other clinical labor tasks (Technician requested transmissions) was listed at 11 minutes. We are therefore finalizing an increase in the EQ198 equipment time, for both codes, to 29 minutes for CPT code 93297 and to 65 minutes for CPT code 93298. These refinements should correct the errors and align with what the RUC presumably intended to recommend.

After consideration of the public comments, we are finalizing our proposal to delete contractor priced code HCPCS code G2066 and establish direct PE inputs for CPT codes 93297 and 93298.

(27) Payment for Caregiver Training Services

## a. Background

In CY 2022, we received AMA RUC recommendations for a new code family of two codes (CPT code 96202 (*Multiple-family group behavior management/modification training for parent(s)/guardian(s)/caregiver(s) of patients with a mental or physical health diagnosis, administered by physician or other qualified health care professional (without the patient present), face-to-face with multiple sets of parent(s)/guardian(s)/caregiver(s); initial 60 minutes*) and CPT code 96203 (*Multiple-family group behavior management/modification training for parent(s)/guardian(s)/caregiver(s) of patients with a mental or physical health diagnosis, administered by physician or other qualified health care professional (without the patient present), face-to-face with multiple sets of parent(s)/guardian(s)/caregiver(s); each additional 15 minutes (List separately in addition to code for primary service)*) that described group caregiver training services for patient behavior management/modification (without the patient in attendance). In CY 2023 we received AMA RUC recommendations for a family of three new caregiver training codes (CPT code 97550 (*Caregiver training in strategies and techniques to facilitate the patient's functional performance in the home or community (e.g., activities of daily living [ADLs], instrumental ADLs [IADLs], transfers, mobility, communication, swallowing, feeding, problem solving, safety practices) (without the patient present), face-to-face; initial 30 minutes*), and add-on code, CPT code 97551 (*each additional 15 minutes (List separately in addition to code for primary service) (Use 97551 in conjunction with 97550)*), and 97552 (*Group caregiver training in strategies and techniques to facilitate the patient's functional performance in the home or community (eg, activities of daily living [ADLs], instrumental ADLs [IADLs], transfers, mobility, communication, swallowing, feeding, problem solving, safety practices) (without the patient present), face-to-face with multiple sets of caregivers*). Historically, we have taken the position that codes describing services furnished to other individuals without the patient's presence are not covered services. As we noted in the CY 2023 PFS final rule (87 FR 69521), we have explained in previous rulemaking that we read section 1862(a)(1)(A) of the Act

to limit Medicare coverage and payment to items and services that are reasonable and necessary for the diagnosis and treatment of an individual Medicare patient's illness or injury or that improve the functioning of an individual Medicare patient's malformed body member. For example, in the CY 2013 PFS final rule (77 FR 68979), when discussing payment for the non-face-to-face care management services that are part of E/M services, we stated that Medicare does not pay for services furnished to parties other than the patient. We listed, as an example, communication with caregivers. Because the codes for caregiver behavior management training described services furnished exclusively to caregivers rather than to the individual Medicare patient, we indicated that we did not review the RUC-recommended valuation of these codes or propose to establish RVUs for these codes for purposes of PFS payment. Although we did not establish payment for the new caregiver behavior management training codes in the CY 2023 PFS final rule, we indicated that there could be circumstances where separate payment for such services may be appropriate. We stated that we would continue to consider the status of these and similar services in rulemaking for CY 2024 (87 FR 69522 through 69523). We specifically requested public comment on how a patient may benefit in medical circumstances when a caregiver is trained to effectively modify the patient's behavior, how current Medicare policies regarding these caregiver training services (CTS) can impact a patient's health, and how the services described by these codes might currently be bundled into existing Medicare-covered services. (87 FR 69521). Public comments were generally in favor of CMS making payment for these codes, stating that there is extensive empirical support for training parents/guardians/caregivers in behavior management/modification as a component of the standard of care for the treatment of certain social determinants of health (SDOH) behavior issues and that this training promotes improved outcomes. Commenters also noted that there are several CPT codes paid under the PFS that describe services that do not include direct contact with the patient but are still considered integral to the patient's care, including, for example, separately billable care management services, interprofessional consultations, and caregiver-

focused health risk assessment instrument (eg, depression inventory) for the benefit of the patient. In response to public comments, we acknowledged the important role caregivers could have in a patient's overall care.

As indicated in the CY 2023 PFS final rule, we have continued to consider whether the caregiver behavior management training and similar caregiver training services could be considered to fall within the scope of services that are reasonable and necessary under section 1862(a)(1)(A) of the Act, in alignment with the principles of the recent Executive Order on Increasing Access to High-Quality Care and Supporting Caregivers (<https://www.whitehouse.gov/briefing-room/presidential-actions/2023/04/18/executive-order-on-increasing-access-to-high-quality-care-and-supporting-caregivers/>), and as part of a HHS level review of our payment policies to identify opportunities to better account for patient-centered care (<https://acl.gov/programs/support-caregivers/raise-family-caregiving-advisory-council>), changes in medical practice that have led to more care coordination and team-based care, and to promote equitable access to reasonable and necessary medical services. We also believed it was important for practitioners furnishing patient-centered care to use various effective communication techniques when providing patient-centered care, in alignment with requirements under section 1557 of the Affordable Care Act. We stated that we believe that, in certain circumstances, caregivers can play a key role in developing and carrying out the treatment plan or, as applicable to physical, occupational, or speech-language therapy, the therapy plan of care (collectively referred to in this discussion as the "treatment plan") established for the patient by the treating practitioner (which for purposes of this discussion could include a physician; NPP such as a nurse practitioner, physician assistant, clinical nurse specialist, clinical psychologist; or a physical therapist, occupational therapist, or speech-language pathologist). In this context, we believed Caregiver Training Services (CTS) could be reasonable and necessary to treat the patient's illness or injury as required under section 1862 (a)(1)(A) of the Act. We had the opportunity to consider the best approach to establishing separate payment for the services

described by the caregiver training codes, especially as it relates to a practitioner treating a patient and expending resources to train a caregiver who is assisting or acting as a proxy for the patient.

For CY 2024, we proposed to establish an active payment status for CPT codes 96202 and 96203 (caregiver behavior management/modification training services) and CPT codes 97550, 97551, and 97552 (caregiver training services under a therapy plan of care established by a PT, OT, SLP). These codes allow treating practitioners to report the training furnished to a caregiver, in tandem with the diagnostic and treatment services furnished directly to the patient, in strategies and specific activities to assist the patient to carry out the treatment plan. We believed that CTS may be reasonable and necessary when they are integral to a patient's overall treatment and furnished after the treatment plan (or therapy plan of care) is established. The CTS themselves need to be congruent with the treatment plan and designed to effectuate the desired patient outcomes. We believe this is especially the case in medical treatment scenarios where assistance by the caregiver receiving the CTS is necessary to ensure a successful treatment outcome for the patient--for example, when the patient cannot follow through with the treatment plan for themselves.

We solicited public comment on this definition of 'caregiver' for purposes of CTS and were interested if there were any additional elements of a caregiver that we considered incorporating in the proposed CTS caregiver definition. We believed that our definition would allow for holistic patient care with those who know and understand the patient, their condition, and their environment. We were interested in and solicited comment on how the clinician and caregiver interactions would typically occur, including when the practitioner is dealing with multiple caregivers and how often these services would be billed, considering the established treatment plan involving caregivers for the typical patient.

We proposed that payment may be made for CTS when the treating practitioner identified a need to involve and train one or more caregivers to assist the patient in carrying out a patient-

centered treatment plan. We further proposed that because CTS are furnished outside the patient's presence, the treating practitioner must obtain the patient's (or representative's) consent for the caregiver to receive the CTS. We further proposed that the identified need for CTS and the patient's (or representative's) consent for one or more specific caregivers to receive CTS must be documented in the patient's medical record. In the following discussion, we detail the specific aspects of our proposal and the comments received.

*Comment:* Most commenters supported the proposals. Many commenters detailed their experiences as caregivers, while others explained how CTS would have benefited them in the past. Some commenters also expressed support for CMS' recognition of the efforts of caregivers in effectuating the treatment of beneficiaries.

*Response:* We thank commenters for their feedback and value commenters sharing their experiences on how Caregiver Training Services could be beneficial.

*Comment:* Some commenters opposed our CTS proposals and stated that the proposed services are currently provided by organizations better equipped to provide CTS, such as home health agencies, home and community-based services, and non-profit organizations. Some commenters expressed concern about the efficacy of the services if the patient is not required to be present, while another commenter stated that there was insufficient scientific evidence proving that caregiver training improves patient outcomes. Additionally, one commenter was worried that CTS would cause medical care to be provided by caregivers as opposed to medical providers. Overall, many commenters who opposed CTS suggested direct payment be made to caregivers.

*Response:* The CTS codes, developed through the AMA CPT Editorial Panel's process, describe training services furnished by a practitioner to effectuate the practitioner's treatment plan to improve treatment outcomes for a patient. We believe there are circumstances where involving the caregiver in the treating practitioner's treatment plan through CTS would improve outcomes for the patient. We also believe that the treating practitioner who develops the

treatment plan is best situated to provide CTS to inform the caregiver on how to help effectuate the treatment plan they develop for the patient. The availability of these codes and the provision of these services should not prevent caregivers from seeking support, education, certifications, or assistance from other organizations. As with other established coding, we expect that the treating practitioner who furnishes and bills for CTS to furnish services as described by the codes.

Additionally, we note that the codes specify that the patient is not present during the service. We believe this is in recognition that both the practitioner's and the caregiver's undivided attention should be focused on the training that is being furnished to help the caregiver carry out an established treatment plan. In response to comments about the effects on patient eligibility to receive care under other programs or by medical providers, we clarify that the provision of CTS to a patient's caregiver does not affect patient eligibility for other Medicare services when reasonable and necessary. We clarify for commenters that under the statute, Medicare makes payments under the PFS only to enrolled physicians and other practitioners, not to caregivers. We continue to believe that CTS services have their place in a reasonable and necessary treatment plan for some patients and can serve as an important supplement to other caregiver training and other resources that might be available.

*Comment:* The majority of commenters supported our proposal to require the patient's (or representative's) consent for the caregiver to receive CTS. One commenter stated that the patient's consent for the initial plan of care is sufficient, so further consent is not needed for CTS. One commenter suggested using the terms "informed consent" or "supported decision making" instead of consent. Another commenter requested that in cases of an Alzheimer's or dementia diagnosis, patient consent be obtained early in diagnosis. A few commenters expressed that they did not want CTS to be required for the caregiver to participate in. One commenter was concerned about patient privacy if beneficiary consent was not required.

*Response:* We proposed to specifically require the patient's (or their representative's) consent for CTS because, unlike most services, the patient would not be present for the service.

We believed it would be important to make the patient aware, out of concern for patient privacy, that the service is furnished outside their presence and that any applicable cost-sharing would be their responsibility. We do not believe that the general consent to receive treatment would be sufficient to make a patient aware of the unique circumstances under which CTS are furnished. For these same reasons, we continue to believe it is appropriate to require a specific consent for CTS. We are using the term “consent” as opposed to other recommended terms to remain consistent across other codes with consent requirements across the PFS. In cases of an Alzheimer’s or dementia diagnosis, we encourage providers to obtain consent from the patient or their representative for CTS as early as possible in the diagnosis. We want to emphasize that CTS are not required services but services that the treating practitioner may choose to furnish, with a patient's consent, in consideration of a patient's diagnosis. If caregivers do not want to participate in caregiver training, they are not required to do so. We are finalizing, as proposed, that the patient's (or representative's) consent is required for the caregiver to receive CTS and that the consent must be documented in the patient’s medical record.

*Comment:* Commenters requested more guidance regarding CTS, including specifically asking for descriptions of training sessions, the requirement of post-training resources, materials, or referrals to social agencies to be provided to caregivers, and for CTS to be culturally competent (including being provided in languages other than English and at varying literacy levels). Commenters also requested caregiver assessments to assess burden, capacity, and understanding. Commenters also suggested that CMS require quality standards for CTS and suggested teaching methods. Additionally, one commenter requested that documentation of the caregiver's contact information be required in the patient's health record. Many commenters also provided input about the settings in which CTS are provided, suggesting that CTS could be furnished inside the beneficiary's home, or current residence. Commenters requested that CTS be provided upon discharge from hospitals, skilled nursing facilities, or home health outpatient

services. One commenter requested that CTS be included in the definition of primary care services for purposes of beneficiary assignment in the Medicare Shared Savings Program.

Commenters also requested additional coding to describe CTS furnished, for example, when the patient is present for part of all of the training, to recognize reduced time thresholds, to allow auxiliary personnel to perform CTS, or when training is included for additional tasks.

Commenters also requested that CTS be added to the Medicare telehealth services list.

*Response:* We appreciate all the information and considerations included in these comments, which will inform any policy development for CTS in future rulemaking. We will not be adding these codes to the telehealth list at this time. Additionally, concerns not addressed in this proposed rule, such as quality standards, teaching methods, and additional requirements may be considered for future rulemaking.

In the CY 2024 PFS proposed rule, we proposed a definition of "caregiver" for purposes of CTS and discussed the circumstances under which patients may benefit from care involving caregivers. We proposed that CTS may meet the conditions for Medicare payment when the treating practitioner identifies a need to involve and train caregivers to assist the patient in carrying out a treatment plan established by the treating practitioner. We also proposed values for each of the CTS codes.

#### (1) Definition of a Caregiver

In the CY 2024 PFS proposed rule, we proposed to define "caregiver" for purposes of CTS. We stated that in our ongoing education and outreach work on the use of caregivers in assisting patients, we have broadly defined a caregiver as a family member, friend, or neighbor who provides unpaid assistance to a person with a chronic illness or disabling condition

([https://www.cms.gov/outreach-and-](https://www.cms.gov/outreach-and-education/outreach/partnerships/caregiver#:~:text=Caregivers%20are%20broadly%20defined%20as,chronic%20illness%20or%20disabling%20condition)

[education/outreach/partnerships/caregiver#:~:text=Caregivers%20are%20broadly%20defined%20as,chronic%20illness%20or%20disabling%20condition](https://www.cms.gov/outreach-and-education/outreach/partnerships/caregiver#:~:text=Caregivers%20are%20broadly%20defined%20as,chronic%20illness%20or%20disabling%20condition)). Further, in the context of our proposals for CTS, we believe a caregiver is an individual who is assisting or acting as a proxy

for a patient with an illness or condition of short or long-term duration (not necessarily chronic or disabling); involved on an episodic, daily, or occasional basis in managing a patient's complex health care and assistive technology activities at home; and helping to navigate the patient's transitions between care settings. For purposes of CTS, we also include a guardian in this definition when warranted. For CTS, when we note "caregiver," we are also referring to guardians who for purposes of CTS, are the caregiver for minor children or other individuals who are not legally independent. In these circumstances, a caregiver is a layperson assisting the patient in carrying out a treatment plan that was established for the patient by the treating physician or practitioner and assisted the patient with aspects of their care, including interventions or other activities directly related to a treatment plan established for the patient to address a diagnosed illness or injury. In this context, caregivers would be trained by the treating practitioner in strategies and specific activities that improve symptoms, functioning, and adherence to treatment related to the patient's primary clinical diagnoses. Caregiver understanding and competence in assisting and implementing these interventions and activities from the treating practitioner is critical for patients with functional limitations resulting from various conditions.

The following is a summary of the comments we received and our responses.

*Comment:* Many commenters did not favor the proposal to define caregiver for purposes of CTS to include only unpaid individuals, stating that this would unfairly exclude nursing aides, direct service professionals, or individuals paid directly by the beneficiary.

An overwhelming number of commenters requested that CMS use the definition of "family caregiver" that was used in the Recognize, Assist, Include, Support, and Engage (RAISE) Family Caregivers Act (Pub. L. 115-119). The definition of family caregiver in the RAISE Act is "an adult family member or other individual who has a significant relationship with, and who provides a broad range of assistance to, an individual with a chronic or other health condition, disability, or functional limitation." The RAISE Family Caregivers Act directs

the Secretary of Health and Human Services to develop a national caregiving strategy to recognize and support family caregivers. Commenters requested the RAISE definition because it is more expansive and provides more detail about what a caregiver is than the CMS definition.

Commenters also requested that we remove the terms “layperson,” “proxy”, and/or “guardian” from our definition. One commenter requested that we use the term “care partner” as opposed to “caregiver.” Additionally, we note that commenters generally supported our proposal that CTS could be furnished to more than one caregiver representing the same beneficiary, as someone could have multiple caregivers, or the primary caregiver could change.

*Response:* We agree that the definition of caregiver matters. For that reason, we agree with commenters that the definition of “family caregiver” used in the RAISE Family Caregivers Act does support our CTS proposal as an adult family member or other individual who has a significant relationship with, and who provides a broad range of assistance to, an individual with a chronic or other health condition, disability, or functional limitation. We will use the RAISE definition and the CMS Outreach and Education definition (a family member, friend, or neighbor who provides unpaid assistance to a person with a chronic illness or disabling condition). Since the definitions do not contradict each other, we will adopt both definitions of caregiver.

We note that even as we refine our definition of caregiver, we maintain that the caregiver population receiving these services on behalf of the patient should not also receive concurrent CTS under another Medicare benefit category or Federal program (88 FR 52323).

After considering the public comments, we are finalizing a revised definition of caregiver to be “an adult family member or other individual who has a significant relationship with, and who provides a broad range of assistance to, an individual with a chronic or other health condition, disability, or functional limitation” and “a family member, friend, or neighbor who provides unpaid assistance to a person with a chronic illness or disabling condition”.

(2) Patients Who Benefit from Care Involving Caregivers

In the proposed rule, we discussed our expectation that a patient-centered treatment plan should appropriately account for clinical circumstances where the treating practitioner believes a caregiver's involvement is necessary to ensure a successful outcome for the patient and where, as appropriate, the patient agrees to caregiver involvement. There may be clinical circumstances when it might be appropriate for the physician or practitioner to directly involve the caregiver in developing and carrying out a treatment plan. Such clinical cases could include various physical and behavioral health conditions and circumstances under which CTS may be reasonable and necessary to train a caregiver who assists in carrying out a treatment plan. Conditions include, but are not limited to, stroke, traumatic brain injury (TBI), various forms of dementia, autism spectrum disorders, individuals with other intellectual or cognitive disabilities, physical mobility limitations, or necessary use of assisted devices or mobility aids. The previously mentioned clinical scenarios are circumstances under which CTS may be reasonable and necessary to train a caregiver who assists in carrying out a treatment plan. For example, patients with dementia, autism spectrum disorder, or individuals with other intellectual or cognitive disabilities may require assistance with challenging behaviors to carry out a treatment plan, patients with mobility issues may need help with safe transfers in the home to avoid post-operative complications, patients with persistent delirium may require guidance with medication management, patients with certain degenerative conditions or those recovering from stroke may need assistance with feeding or swallowing. Separate from medical circumstances noted previously, we also seek to avoid potentially duplicative payment. We would not expect the caregiver population receiving these services on behalf of the patient to also receive CTS on behalf of the patient under another Medicare benefit category or Federal program. Also, we note that when Medicare and Medicaid cover the same services for patients eligible for both programs, Medicare generally is the primary payer in accordance with section 1902(a)(25) of the Act. Based on the specificity of the coding for our proposal, we do not expect that CTS will neatly overlap with any other coverage for patients who are dually eligible for Medicare and Medicaid. However, we solicited public

comment regarding whether States typically cover services similar to CTS under their Medicaid programs, and whether such coverage would be duplicative of the CTS codes. We solicited comment on this issue and whether payment is currently available for CTS through other Federal or other programs.

The following is a summary of the comments we received and our responses.

*Comment:* Many commenters suggested various physical and behavioral health conditions and circumstances under which CTS may be reasonable and necessary to train a caregiver who assists in carrying out a treatment plan. The examples provided include traumatic injury, use of mobility devices, cell therapy, stem cell transplants, cancer, ESRD, lymphedema, rare diseases, and/or chronic conditions.

Additionally, many commenters detailed how these services could overlap with State-funded Medicaid consumer-directed programs and sometimes with our Innovation Center model tests. These commenters also noted that due to variations in Medicaid and other State programs, overlap in payment may be difficult to identify.

*Response:* The examples we provided in the proposed rule of physical and behavioral health conditions for which CTS might be appropriate were not intended to be exhaustive. We acknowledge that there are many circumstances under which CTS may be reasonable and necessary to train a caregiver who assists in carrying out a treatment plan. Also, we do not believe participation in Medicaid consumer-directed programs for dually eligible beneficiaries, or our demonstration models would be duplicative of the CTS codes, given how the services are designed and how the consumer-directed programs work. Through the CTS codes, Medicare will pay the treating practitioner to train caregivers. Currently, this is not duplicative of the Medicaid consumer- directed programs due to the limited scope of the CTS. Further, when designing Innovation Center models, we include overlap policies, billing policies, and other model parameters that are specifically designed to avoid duplication.

(3) Reasonable and Necessary CTS

In the CY 2024 PFS proposed rule, we proposed that CTS could be reasonable and necessary when furnished based on an established individualized, patient-centered treatment plan or therapy plan of care accounting for the patient's specific medical needs.

As provided in the code descriptors, treating practitioners may train caregivers in a group setting with other caregivers involved in care for patients with similar needs for assistance to carry out a treatment plan. Training for all the caregivers for the patient could occur simultaneously, and the applicable CTS codes (CPT code 96202, 96203, and 97552) would be billed once per beneficiary. We solicited comment on this issue. We also inquired about whether payment is currently available for CTS through other Federal or other programs. We considered whether CTS would be reasonable and necessary when furnished to caregivers in more than one single session, or to (presumably the same) caregivers by the same practitioner for the same patient more than once per year and solicited comment on this. We want to note that the treating physician or NPP may provide training to more than one caregiver for a single patient.

The following is a summary of the comments we received and our responses.

*Comment:* The majority of commenters stated that CTS would be reasonable and necessary, when furnished to (presumably the same) caregivers (by the same practitioner for the same patient) in more than one single session, more than once per year. Many commenters requested that payment be made per caregiver, not per beneficiary. A few commenters requested that CTS be limited to practitioners who have a longitudinal relationship with the patient.

*Response:* We agree that the number of CTS sessions furnished to caregivers, by the same practitioner and for the same patient, may be based on the treatment plan, as well as changes in patient condition, the treatment plan, the patient's diagnosis, or the patient's caregivers. In other words, the medical necessity of CTS for the patient should determine the volume and frequency of the training. CTS could be considered reasonable and necessary when the treating practitioner determines a caregiver needs more training to ensure a successful patient

treatment plan outcome. We require the treating practitioner to document the need for each occurrence of CTS in the medical record.

To bill for CTS, practitioners should select the appropriate group code (CPT code 96202, 96203, or 97552) if more than one caregiver is trained at the same time, or individual code (CPT code 97550, 97551) if one individual caregiver is trained. If caregivers are trained in a group, practitioners would not bill individually for each caregiver. More than one caregiver trained at the same time must be billed under the group code, as the treating practitioner's time and effort should not be counted multiple times.

After consideration of the public comments, for CY 2024, we are finalizing our proposal for CTS with the following clarifications: the volume and frequency of CTS sessions furnished to caregivers by the treating practitioner for the same patient may be based on the treatment plan, as well as changes in patient condition, the treatment plan, the patient's diagnosis, or the patient's caregivers.

#### (4) Service Coding and Valuation

Behavior management/modification training for guardians/caregivers of patients with a mental or physical health diagnosis (CPT Codes 96202 and 96203)

##### a. Coding

CPT code 96202 (*Multiple-family group behavior management/modification training for parent(s)/guardian(s)/caregiver(s) of patients with a mental or physical health diagnosis, administered by physician or other qualified health care professional (without the patient present), face-to-face with multiple sets of parent(s)/guardian(s)/caregiver(s); initial 60 minutes*) and its add-on code, CPT code 96203 (*Multiple-family group behavior management/modification training for parent(s)/guardian(s)/caregiver(s) of patients with a mental or physical health diagnosis, administered by physician or other qualified health care professional (without the patient present), face-to-face with multiple sets of parent(s)/guardian(s)/caregiver(s); each additional 15 minutes (List separately in addition to code for primary service)*), were two new

codes created by the CPT Editorial Panel during its February 2021 meeting. The two codes are to be used to report the total duration of face-to-face time spent by the physician or other qualified health professional providing group behavior management/modification training to guardians or caregivers of patients. Although the patient does not attend the group trainings, the goals and outcomes of the sessions focus on interventions aimed at effectuating the practitioner's treatment plan through addressing challenging behaviors and other behaviors that may pose a risk to the person, and/or others. According to the Summary of Recommendations (which was submitted by the AMA RUC with the valuation of this code), during the face-to-face service time, caregivers are taught how to structure the patient's environment to support and reinforce desired patient behaviors, to reduce the negative impacts of the patient's diagnosis on patient's daily life, and to develop highly structured technical skills to manage the patient's challenging behavior.

Behavior management/modification training for guardians/caregivers of patients with a mental or physical health diagnosis should be directly relevant to the person-centered treatment plan for the patient in order for the services to be considered reasonable and necessary under the Medicare program. Each behavior should be clearly identified and documented in the treatment plan, and the caregiver should be trained in positive behavior management strategies.

#### b. Valuation

The RUC recommended the survey median work value for both CPT codes 96202 and 96203. Three specialty societies sent surveys to a random sample of a subset of their members. Based on survey results and after discussion, the RUC recommended a work RVU of 0.43 for a specific patient who was represented in the group session being billed for CPT code 96202. The RUC noted that this recommendation was based upon a median group size of six caregivers and includes 10 minutes pre-time, 60 minutes intra-time, and 20 minutes post-time for a total time of 90 minutes. For CPT code 96203, the 15-minute add on code, the RUC recommended a work RVU of 0.12, which was also based upon a median group size of six. We proposed the RUC-

recommended work RVU of 0.43 for CPT code 96202 and the RUC-recommended work RVU of 0.12 for CPT code 96203. We also proposed the RUC-recommended direct PE inputs for these codes. We proposed requiring the full 60 minutes of time to be performed to report CPT code 96202. The add on code, CPT code 96203, may be reported once 75 minutes of total time is performed.

Finally, we note that the RUC recommendation included information suggesting that the RUC intends to review the valuation of these services again soon.

*Comment:* Commenters were generally supportive of the proposed valuations for these codes. A few commenters suggested that higher valuations would more accurately reflect the time and intensity of services provided. These commenters expressed concerns that the proposed values do not reflect the significant amount of planning and effort required by the practitioner who furnishes these services, and that undervaluation of CTS could lead to underutilization or access issues for patients who would benefit from these services.

*Response:* We believe that the RUC-recommended valuations that we have proposed to adopt reflect the typical inputs for the service. The RUC's recommendations were based on extensive surveys with psychologists, child and adolescent psychiatrists, and dieticians, and represent the best information that we have at present for these new codes. Additionally, the Caregiver Training Services CPT codes fall appropriately between the key reference services used by the RUC to compare the work RVU, total time, and related intensity of each service. We believe that this supports the recommended values as maintaining relativity with other similar services already listed on the PFS.

After consideration of the public comments, we are finalizing our proposed work RVUs and direct PE inputs for CPT codes 96202 and 96203.

Caregiver training in strategies and techniques to facilitate the patient's functional performance (CPT codes 97550, 97551, and 97552)

(a) Coding

CPT codes 97550 (*Caregiver training in strategies and techniques to facilitate the patient's functional performance in the home or community (eg, activities of daily living [ADLs], instrumental ADLs [IADLs], transfers, mobility, communication, swallowing, feeding, problem solving, safety practices) (without the patient present), face-to-face; initial 30 minutes*), and add-on code, CPT code 97551 (*each additional 15 minutes (List separately in addition to code for primary service) (Use 97551 in conjunction with 97550)*), and 97552 (*Group caregiver training in strategies and techniques to facilitate the patient's functional performance in the home or community (eg, activities of daily living [ADLs], instrumental ADLs [IADLs], transfers, mobility, communication, swallowing, feeding, problem solving, safety practices) (without the patient present), face-to-face with multiple sets of caregivers*) were new codes created by the CPT Editorial Panel during its October 2022 meeting. The three codes are to be used to report the total duration of face-to-face time spent by the physician or other qualified health professional providing individual or group training to caregivers of patients. Although the patient does not attend the trainings, the goals and outcomes of the sessions focus on interventions aimed at improving the patient's ability to successfully perform activities of daily living (ADL's). Activities of daily living generally include ambulating, feeding, dressing, personal hygiene, continence, and toileting.

During the face-to-face service time, caregivers are taught by the treating practitioner how to facilitate the patient's activities of daily living, transfers, mobility, communication, and problem-solving to reduce the negative impacts of the patient's diagnosis on the patient's daily life and assist the patient in carrying out a treatment plan. These specific services are reasonable and necessary when treating practitioners identify a need to involve and train caregivers to assist the patient in carrying out a treatment plan. As part of an individualized plan of care, the caregiver is trained in skills to assist the patient in completing daily life activities. These trainings to the caregiver include the development of skills such as safe activity completion,

problem solving, environmental adaptation, training in the use of equipment or assistive devices, or interventions focusing on motor, process, and communication skills.

(b) Valuation

The RUC recommended work values for CPT codes 97550, 97551, and 97552 based on the survey median values and the key reference CPT codes 97535 and 97130. The surveyed codes fall appropriately between these key reference services compared to the work RVU, total time, and related intensity of each service. Three specialty societies sent surveys to a random sample of a subset of their members. Based upon survey results and after discussion, the RUC recommended a work RVU 1.00 for CPT code 97550, a work RVU of 0.54 for 97551, and a work RVU of 0.23 per specific patient represented in the group service being billed for CPT code 97552.

We proposed the RUC-recommended work RVU 1.00 for CPT code 97550, the RUC-recommended work RVU of 0.54 for CPT code 97551, and the RUC-recommended work RVU of 0.23 per identified patient service for CPT code 97552. The RUC noted that the recommendation for 97552 is based on a median group size of five caregivers. We also proposed the RUC-recommended direct PE inputs for these codes.

Finally, we noted that the RUC recommendation included information suggesting that the RUC intends to review the valuation of these services again soon. We proposed to designate 97550, 97551, and 97552 as "sometimes therapy" services. This means that the services described by these codes are always furnished under a therapy plan of care when provided by PTs, OTs, and SLPs; but, in cases where they are appropriately furnished by physicians and NPPs outside a therapy plan of care, that is, where the services are not integral to a therapy plan of care, they can be furnished under a treatment plan by physicians and NPPs.

*Comment:* Commenters were generally supportive of the valuations of these codes. A few commenters expressed concerns that the proposed values do not reflect the significant amount of planning and effort required by the practitioner who furnishes these services, and that

undervaluation of CTS could lead to underutilization or access issues for patients who would benefit from these services. Commenters were also supportive of CMS designating CPT codes 97550, 97551, and 97552 as "sometimes therapy" services.

*Response:* We believe that the RUC-recommended valuations that we proposed reflect the typical inputs for the service. The RUC's recommendations were based on extensive surveys with occupational therapists, physical therapists, and speech language pathologists, and represent the best information that we have at present for these new codes. Additionally, the Caregiver Training Services CPT codes fall appropriately between the key reference services used by the RUC to compare the work RVU, total time, and related intensity of each service. We believe that this supports the recommended values as maintaining relativity with other similar services already listed on the PFS. We also understand that the RUC may intend to review the valuation of these services again soon – we will take potential updates from the RUC into consideration in the future.

After consideration of the public comments, we are finalizing our proposed work RVUs and direct PE inputs for CPT codes 97550, 97551, and 97552. We are also finalizing the designation of CPT codes 97550, 97551, and 97552 as "sometimes therapy" services.

(28) Services Addressing Health-Related Social Needs (Community Health Integration services, Social Determinants of Health Risk Assessment, and Principal Illness Navigation Services)

a. Background

In recent years, we have sought to recognize significant changes in health care practice and have been engaged in an ongoing, incremental effort to identify gaps in appropriate coding and payment for care management/coordination and primary care services under the PFS. See, for example, our CY 2013, 2015, and 2017 PFS final rules, where we finalized new coding to provide separate payment for transitional care management services, chronic care management services, and behavioral health care management services to improve payment accuracy to better recognize resources involved in care management and coordination for certain patient

populations (77 FR 68978, 79 FR 67715 and 82 FR 53163, respectively). To improve payment accuracy, we are exploring ways to better identify and value practitioners' work when they incur additional time and resources helping patients with serious illnesses navigate the healthcare system or removing health-related social barriers interfering with the practitioner's ability to execute a medically necessary plan of care. Practitioners and their staff of auxiliary personnel sometimes obtain information about and help address social determinants of health (SDOH) that significantly impact the practitioner's ability to diagnose or treat a patient. Additionally, practitioners and their staff of auxiliary personnel sometimes help newly diagnosed cancer patients and other patients with similarly serious, high-risk illnesses navigate their care, such as helping them understand and implement the plan of care and locate and reach the right practitioners and providers to access recommended treatments and diagnostic services, taking into account the personal circumstances of each patient. Payment for these activities, to the extent they are reasonable and necessary for the diagnosis and treatment of the patient's illness or injury, is currently included in payment for other services such as evaluation and management (E/M) visits and some care management services. Medical practice has evolved to increasingly recognize the importance of these activities, and we believe practitioners are performing them more often. However, this work is not explicitly identified in current coding, so we believe it is underutilized and undervalued. Accordingly, we proposed to create new coding to expressly identify and value these services for PFS payment, and distinguish them from current care management services. We expect that our new codes would also support the CMS pillars<sup>9</sup> for equity, inclusion, and access to care for the Medicare population and improve patient outcomes, including for underserved and low-income populations where there is a disparity in access to

---

<sup>9</sup> CMS Strategic Plan | CMS.

quality care. They would also support the White House's National Strategy on Hunger, Nutrition and Health, and the White House's Cancer Moonshot Initiative.<sup>10</sup>

As part of this effort, in the CY 2023 PFS final rule (87 FR 69551 through 69551), we issued a Request for Information (RFI) related to Medicare Part B Payment for services involving community health workers (CHWs). For CY 2024, we considered how we could better recognize, through coding and payment policies, when members of an interdisciplinary team, including CHWs, are involved in treatment of Medicare beneficiaries. Currently, no separately enumerated statutory Medicare benefit category provides direct payment to CHWs for their services. Additionally, current HCPCS coding does not specifically identify services provided by CHWs, even though CHWs may facilitate access to healthcare through community-based services that are necessary to alleviate barriers to care that are interfering with a practitioner's ability to diagnosis or treat an illness or injury. In rulemaking for the CY 2023 PFS, to gain a broader perspective on CHWs and how we could refine our coding and payment policies to better recognize their role in furnishing Medicare-covered services, we solicited comment through an RFI on how services involving CHWs are furnished in association with the specific Medicare benefits established by the statute.

Commenters were supportive overall of potential, separate coding and payment for services involving CHWs. The public comments indicated that many physicians, practitioners, group practices, and other entities currently utilize the services of CHWs to bridge gaps in the continuum of their medical and behavioral healthcare furnished to Medicare patients. In public comments on our RFI, interested parties provided testimonials and evidence about the effectiveness of CHWs and the services they provide to patients in the community by

---

<sup>10</sup> White-House-National-Strategy-on-Hunger-Nutrition-and-Health-FINAL.pdf ([whitehouse.gov](https://www.whitehouse.gov)); Fact Sheet: President Biden Reignites Cancer Moonshot to End Cancer as We Know It | The White House <https://www.whitehouse.gov/briefing-room/statements-releases/2022/02/02/fact-sheet-president-biden-reignites-cancer-moonshot-to-end-cancer-as-we-know-it/>.

monitoring, interpreting, clarifying, and supporting the plans of care that physicians and practitioners establish for delivering care to patients.

In addition, in 2021, the AMA CPT Editorial Panel recognized in the CPT E/M Guidelines that SDOH needs can increase complexity of a practitioner’s medical decision making (MDM) for an E/M visit and increase risk to the patient, when diagnosis or treatment is significantly limited by SDOH.<sup>11</sup> Specifically, the CPT Editorial Panel included as an example of moderate level MDM for E/M visit coding and level selection, a situation where diagnosis or treatment is significantly limited by SDOH. This situation is listed as an example of moderate risk of morbidity from additional diagnostic testing or treatment. The CPT E/M Guidelines defined SDOH as, “Economic and social conditions that influence the health of people and communities. Examples may include food or housing insecurity.”<sup>12</sup> We adopted these revised CPT guidelines for MDM in E/M visits through notice and comment rulemaking, effective January 1, 2021 (84 FR 62844 through 62860, 87 FR 69587 through 69614).

Physicians and NPPs are generally trained to obtain a patient’s social and family history, in support of patient-centered care, to aid in diagnosis, and to better understand and help address problem(s) addressed in a medical visit and associated risk factors.<sup>13</sup> For example, a practitioner who discovers that a patient’s living situation does not permit reliable access to electricity may need to prescribe an inhaler rather than a power-operated nebulizer to treat asthma. Some practices and facilities employ social workers or other ancillary staff to help address SDOH needs that impact the ability to provide medically necessary care, such as appropriate treatment or diagnostic services after an office visit or discharge from a facility.

<sup>11</sup> 2021 CPT Codebook, p. 16.

<sup>12</sup> 2021 CPT Codebook, p. 14.

<sup>13</sup> See for example Patient-Centered Communication: Basic Skills | AAFP; <https://www.aafp.org/about/policies/all/social-determinants-health-family-medicine-position-paper.html>; <https://doi.org/10.7326/M17-2441>; <https://nam.edu/social-determinants-of-health-201-for-health-care-plan-do-study-act/>; <https://www.ama-assn.org/system/files/2021-05/ama-equity-strategic-plan.pdf>; <https://edhub.ama-assn.org/steps-forward/module/2702762>. The Origins of the History and Physical Examination - Clinical Methods - NCBI Bookshelf (nih.gov) <https://www.ncbi.nlm.nih.gov/books/NBK458/>.

Practitioners are increasingly expending resources to obtain information from the patient about SDOH and risks and formulate diagnosis and treatment plans that consider these needs. We believe that social workers, CHWs, and other auxiliary personnel are currently performing some of these activities and that the resources involved in these activities are not consistently appropriately reflected in current coding and payment policies. As such, we believe it would be appropriate to create codes to separately identify and more accurately value this work. Accordingly, we proposed new coding to describe and separately value three types of services that may be provided by auxiliary personnel incident to the billing physician or practitioner's professional services, and under the billing practitioner's supervision, when reasonable and necessary to diagnose and treat the patient: community health integration services, SDOH risk assessment, and principal illness navigation. In our proposed rule, we discussed the proposed codes and their valuation. We described the circumstances under which we believe these services may be reasonable and necessary for the diagnosis or treatment of illness or injury such that Medicare payment may be made for them.

#### b. Community Health Integration (CHI) Services

In light of the feedback we received from our RFI regarding CHWs, and increased recognition within the medical community of the role that social needs can play in patients' health (specifically, interfering with ability to diagnose and treat patients), we proposed to establish separate coding and payment for community health integration (CHI) services. We proposed to create two new G codes describing CHI services performed by certified or trained auxiliary personnel, which may include a CHW, incident to the professional services, and under the general supervision of the billing practitioner. We proposed that CHI services could be furnished monthly, as medically necessary, following an initiating E/M visit (CHI initiating visit) in which the practitioner identifies the presence of SDOH need(s) that significantly limit the practitioner's ability to diagnose or treat the problem(s) addressed in the visit.

We proposed that the CHI initiating visit would be an E/M visit (other than a low-level E/M visit that can be performed by clinical staff) performed by the billing practitioner, who would also be furnishing the CHI services during the subsequent calendar month(s). The CHI initiating visit would be separately billed (if all requirements to do so are met), and would be a pre-requisite to billing for CHI services. We stated that certain types of E/M visits, such as inpatient/observation visits, ED visits, and SNF visits, would not typically serve as CHI initiating visits because the practitioners furnishing the E/M services in those settings would not typically be the ones to provide continuing care to the patient, including furnishing necessary CHI services in the subsequent month(s).

The CHI initiating visit would serve as a pre-requisite to billing for CHI services, during which the billing practitioner would assess and identify SDOH needs that significantly limit the practitioner's ability to diagnose or treat the patient's medical condition and establish an appropriate treatment plan. The subsequent CHI services would be performed by a CHW or other auxiliary personnel incident to the professional services of the practitioner who bills the CHI initiating visit. The same practitioner would furnish and bill for both the CHI initiating visit and the CHI services, and CHI services must be furnished in accordance with the "incident to" regulation at § 410.26. We would not require an initiating E/M visit every month that CHI services are billed, but only before commencing CHI services, to establish the treatment plan, specify how addressing the unmet SDOH need(s) would help accomplish that plan, and establish the CHI services as incident to the billing practitioner's service. This framework is similar to our current requirements for billing care management services, such as chronic care management services. It also comports with our longstanding policy in the Medicare Benefit Policy Manual, which provides, "where a physician supervises auxiliary personnel to assist them in rendering services to patients and includes the charges for their services in their bills, the services of such personnel are considered incident to the physician's service if there is a physician's service rendered to which the services of such personnel are an incidental part. This does not mean,

however, that to be considered incident to, each occasion of service by auxiliary personnel (or the furnishing of a supply) need also always be the occasion of the actual rendition of a personal, professional service by the physician. Such a service or supply could be considered to be incident to when furnished during a course of treatment where the physician performs an initial service and subsequent services of a frequency which reflect their active participation in and management of the course of treatment” (Chapter 15, Section 60.1.B of the Medicare Benefit Policy Manual (Pub. 100-02), available on our website at <https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/bp102c15.pdf> (cms.gov)).

We also solicited comment on whether we should consider any professional services other than an E/M visit performed by the billing practitioner as the prerequisite initiating visit for CHI services, including, for example, an annual wellness visit (AWV) that may or may not include the optional SDOH risk assessment. Under section 1861(hh)(3)(C) of the Act, the AWV can be furnished by a physician or practitioner or by other types of health professionals whose scope of practice does not include the diagnosis and treatment involved in E/M services, for example, a health educator. When the AWV is furnished by other types of health professionals, it is not necessarily furnished incident to the professional services of a physician or other practitioner. Therefore, if we allowed an AWV to be furnished by a health care practitioner other than a physician or practitioner to serve as the initiating visit for CHI services, the CHI services would not necessarily be furnished consistent with our proposed application of the “incident to” regulations as a condition of payment. Further, we believe that practitioners would normally bill an E/M visit in addition to the AWV when medical problems are addressed in the course of an AWV encounter, in accordance with our manual policy providing that a medically necessary E/M visit may be billed when furnished on the same occasion as an AWV in those circumstances (Chapter 12, Section 30.6.1.1.H of the Medicare Claims Processing Manual (Pub, 100-04).

The following is a summary of the comments we received and our responses.

*Comment:* Commenters were generally supportive of our proposal to establish CHI services, including allowing monthly furnishing of CHI services, as medically necessary, following an initiating E/M visit (CHI initiating visit).

*Response:* We thank the commenters for their feedback.

*Comment:* One commenter disagreed with the proposal to create new G codes for CHI services and stated these codes may be duplicative of both work and practice expenses already accounted for in existing CPT codes. The commenter noted that the CPT Editorial Panel revised the E/M visit coding and level selection to include an example of moderate level medical decision making (MDM), accounting for clinical scenarios when SDOH significantly limits diagnosis or treatment.

*Response:* We thank the commenter for noting the changes made by CPT. However, we believe the new G codes will describe and account for integrated services supported by certified or trained auxiliary personnel, including CHWs, who will assist the practitioner in connecting the patient with helpful resources. This is separate from the work being furnished as part of the medical decision-making in an E/M visit and want to reiterate that CHI services are separate and different from an E/M service. These new services, further described in the code descriptors below, consist of activities to address social determinants of health (SDOH) need(s) that are significantly limiting the practitioner's ability to diagnose or treat problem(s) addressed in an initiating CHI visit. These services include a person-centered assessment, practitioner, home-, and community-based care coordination, health education, building patient self-advocacy skills, health care access/health system navigation, facilitating and providing social and emotional support, and leveraging lived experience when applicable. We recognize that CPT recently revised its evaluation and management (E/M) code set to include language that pertains to diagnosis or treatment significantly limited by social determinants of health as an element of medical decision making, however the CHI services to address the SDOH limitations are not captured in the revised E/M codes. It is for this reason that we proposed new coding to account

for the services that are not accounted for in the E/M code set. We believe the services described by the CHI codes will help to resolve the patient's health related social needs that are impacting their care and the practitioner's ability to properly diagnose and treat the patient.

*Comment:* A few commenters requested that CMS clarify whether these services can be billed at safety-net clinics in academic medical centers. Commenters also raised concerns that academic medical centers and other facility-based providers could not furnish the services, given the reliance on incident to billing. Commenters requested that CMS clarify how such facilities may furnish these services to ensure that patients can benefit from the services regardless of where they receive their care.

*Response:* We thank the commenters for their feedback and acknowledge that there are aspects of the policy that we must consider further for possible future rulemaking. As proposed, these services can only be furnished and billed by physicians and practitioners who can bill for services performed by auxiliary personnel incident to their professional services.

*Comment:* Some commenters sought clarification on whether the full range of qualified health professionals permitted to bill E/M codes would also be permitted to bill HCPCS code G0019.

*Response:* Our final policy requires the individual billing for the initiating visit to be the same as the practitioner billing for CHI. In order to bill for these services, practitioners must have a statutory benefit and be able to enroll and bill Medicare as they would for other services on the fee schedule and specifically be able to bill an E/M service that would serve as the initiating visit.

*Comment:* Some commenters requested CMS allow CHWs to enroll in Medicare as a type of practitioner that can bill directly and be paid for their services, and that CBOs be able to bill Medicare directly for the CHI services if they have a NPI number.

*Response:* There is no statutory benefit category that would allow CBOs to bill the PFS directly. Therefore, we are not finalizing such a policy.

*Comment:* One commenter stated that CMS does not have the statutory authority to implement separate payment for CHW services as a new benefit category. Other commenters requested that CMS seek authority and funding from Congress before establishing a new Medicare social services benefit category.

*Response:* We note that CHI services will be furnished and billed incident to the professional services of the billing practitioner. As such, only physicians and other types of practitioners that are authorized by statute to enroll and bill the PFS directly will be included among those who can bill for CHI services. We clarify that our final policy will not create a new Medicare benefit category but instead allow CHI services to be furnished incident to the professional services of a billing practitioner. When diagnosis or treatment of a patient's medical condition is significantly limited by social determinants of health, we believe that these services are within the scope of medically necessary physicians' services, and that payment for them is permitted when the services are reasonable and necessary under section 1862(a)(1)(A) of the Act. We clarify that CHI services are consistent with the "incident to physicians' services" benefit category under section 1861(s)(2)(A) of the Act.

*Comment:* Some commenters expressed concern with the CHI initiating visit being limited only to E/M visits and asserted that doing so would restrict access to the service as proposed. Commenters requested that the following services that are not E/M visits, be allowed to serve as an initiating visit: AWV, CPT codes 90791 (Psychiatric diagnostic evaluation) and 96156 ((*Health behavior assessment, or re-assessment (i.e., health-focused clinical interview, behavioral observations, clinical decision making)*))

*Response:* Regarding whether the CHI initiating visit can be an AWV, we solicited comment on this topic and having considered the public comments, we are finalizing that the AWV can be a CHI initiating visit when the furnishing practitioner identifies an unmet SDOH need that will prevent the patient from carrying out the recommended personalized prevention plan. We believe that, in these cases, it could be reasonable and necessary for the practitioner

furnishing the AWW to furnish CHI services. There may be instances where the identification of SDOH needs through an SDOH risk assessment conducted with the AWW could identify and produce the conditions for reasonable and necessary CHI services, for example, when the practitioner furnishing the AWW is assuming ongoing “longitudinal” care for the patient. However, when the AWW is provided by a type of health care professional who does not have an “incident to” benefit for their services under the Medicare program, including, for example, a health educator, a registered dietitian, or nutrition professional, the AWW would not serve as an initiating visit for CHI because the furnishing professional could not then furnish and bill for CHI services incident to their professional services. Even if we allow AWW to be the initiating visit, the AWW would still need to be furnished by a physician or practitioner, consistent with the incident to rules so that services for CHI can be billed by a practitioner incident to their own professional services.

We continue to believe that when an AWW involves diagnosis or treatment of injury or illness to the degree that would warrant subsequent furnishing and billing of CHI to remove barriers significantly limiting the treatment plan, in most cases, an E/M visit would be separately billed.

While we considered adding services provided by clinical psychologists, specifically CPT codes 90791 and 96156 to the list of services that could serve as an initiating visit for CHI services based on feedback received from commenters, we are not including these services as services that can serve as an initiating visit for CHI. We believe that these services would be better captured under the PIN services discussed below and would better serve the needs being addressed with the PIN service elements. However, we will continue to analyze the uptake of CHI services and will consider these comments for future rulemaking.

*Comment:* Commenters wanted CMS to allow emergency department E/M visits, inpatient/observation E/M visits, and transitional care management services to serve as initiating visits for CHI.

*Response:* In response to the commenters, we note that inpatient/observation visits and ED visits could not serve as CHI initiating visits, as conceptualized in this final rule and the proposed rule, because the practitioners furnishing the E/M services in those settings would not typically provide continuing care to the patient, including furnishing necessary CHI services in the subsequent month(s) following a potential initiating visit. Additionally, under our regulations at § 410.26(b), Medicare payment is only made for services and supplies incident to the service of a physician or other practitioner (such as the proposed CHI services) when those services and supplies are furnished in a noninstitutional setting to noninstitutional patients (all settings other than a hospital or SNF). So, under our current regulations and the CHI policies that we are finalizing in this rule, an E/M service furnished in the ED or SNF setting would not serve as the initiating visit for CHI services.

ED visits, as well as inpatient and observation visits would not be an initiating visit since these practitioners would not be following the patient longitudinally in the community or furnishing the CHI services.

*Response:* As discussed above, ED visits would not typically serve as CHI initiating visits because the practitioners furnishing the E/M services in those settings would not typically provide continuing care to the patient, including furnishing necessary CHI services incident to their professional services in the month(s) subsequent to an ED visit. We agree with commenters that the E/M visit done as part of a Transitional Care Management (TCM) services could serve as an initiating visit for CHI services because it includes a high level office/outpatient E/M visit furnished by a physician or nonphysician practitioner managing the patient in the community after discharge.

*Comment:* Commenters also expressed concern with our proposal to allow only one practitioner to furnish a CHI initiating visit and requested that CMS allow more than one practitioner to furnish and bill the CHI initiating visit and services. Additionally, a few

commenters requested that CMS clarify whether more than one initiating visit would be required when a subsequent need for CHI is identified during the initiating visits.

*Response:* We continue to be concerned that CHI services would be too fragmented if the patient has more than individual addressing their unmet SDOH need(s). Therefore, we are finalizing that only one practitioner will bill CHI and therefore there will only be one initiating visit. We acknowledge that practitioners may identify additional SDOH that are significantly limiting their ability to diagnose or treat the problem(s) address addressed in the initiating visit. We provide additional discussion with regard to the service elements below.

After consideration of the public comments, we are finalizing our proposal to establish separate coding and payment for CHI services. We are finalizing that a CHI initiating visit can be an E/M visit (other than a low-level E/M visit that can be performed by clinical staff) performed by the billing practitioner who would also be furnishing the CHI services during the subsequent calendar month(s), including an E/M visit furnished as part of TCM, or an AWW. The CHI initiating visit would be separately billed (if all requirements to do so are met) and would be a pre-requisite to billing for CHI services.

In the proposed rule, for purposes of assigning a supervision level for these “incident to” services, we proposed to designate CHI services as care management services that may be furnished under the general supervision of the billing practitioner in accordance with § 410.26(b)(5). General supervision means the service is furnished under the physician's (or other practitioner's) overall direction and control, but the physician's (or other practitioner's) presence is not required during the performance of the service (§ 410.26(a)(3)).

In the proposal, we explained that the phrase or term “problem addressed” referred to the definition in the CPT E/M Guidelines that we adopted for E/M visits. Specifically, “[a] problem is a disease, condition, illness, injury, symptom, finding, complaint, or other matter addressed at the encounter, with or without a diagnosis being established at the time of the encounter. Problem addressed [means the following]: A problem is addressed or managed when it is

evaluated or treated at the encounter by the physician or other qualified healthcare professional reporting the service. This includes consideration of further testing or treatment that may not be elected by virtue of risk/benefit analysis or patient/parent/guardian/surrogate choice. Notation in patient's medical record that another professional is managing the problem without additional assessment or care coordination documented does not qualify as being addressed or managed by the physician or other qualified healthcare professional reporting the service. Referral without evaluation (by history, examination, or diagnostic study[ies]) or consideration of treatment does not qualify as being addressed or managed by the physician or other qualified healthcare professional reporting the service. For hospital inpatient and observation care services, the problem addressed is the problem status on the date of the encounter, which may be significantly different than on admission. It is the problem being managed or co-managed by the reporting physician or other qualified healthcare professional and may not be the cause of admission or continued stay" (2023 CPT Codebook, p. 6-8).

For purposes of CHI services (and PIN services outlined later in this section), we proposed that SDOH means economic and social condition(s) that influence the health of people and communities, as indicated in these same CPT E/M Guidelines (2023 CPT codebook, page 11). We proposed to adopt CPT's examples of SDOH, with additional examples. Specifically, we proposed that SDOH(s) may include but are not limited to food insecurity, transportation insecurity, housing insecurity, and unreliable access to public utilities, when they significantly limit the practitioner's ability to diagnose or treat the problem(s) addressed in the CHI initiating visit. Since Medicare payment is generally limited to items and services that are reasonable and necessary for the diagnosis or treatment of illness or injury, the focus of CHI services would need to be on addressing the particular SDOH need(s) that are interfering with, or presenting a barrier to, diagnosis or treatment of the patient's problem(s) addressed in the CHI initiating visit.

We proposed the following specific codes and descriptors:

**G0019** *Community health integration services performed by certified or trained auxiliary personnel, including a community health worker, under the direction of a physician or other practitioner; 60 minutes per calendar month, in the following activities to address social determinants of health (SDOH) need(s) that are significantly limiting ability to diagnose or treat problem(s) addressed in an initiating E/M visit:*

- *Person-centered assessment, performed to better understand the individualized context of the intersection between the SDOH need(s) and the problem(s) addressed in the initiating E/M visit.*

- ++ *Conducting a person-centered assessment to understand patient's life story, strengths, needs, goals, preferences and desired outcomes, including understanding cultural and linguistic factors.*

- ++ *Facilitating patient-driven goal-setting and establishing an action plan.*

- ++ *Providing tailored support to the patient as needed to accomplish the practitioner's treatment plan.*

- *Practitioner, Home-, and Community-Based Care Coordination*

- ++ *Coordinating receipt of needed services from healthcare practitioners, providers, and facilities; and from home- and community-based service providers, social service providers, and caregiver (if applicable).*

- ++ *Communication with practitioners, home- and community-based service providers, hospitals, and skilled nursing facilities (or other health care facilities) regarding the patient's psychosocial strengths and needs, functional deficits, goals, preferences, and desired outcomes, including cultural and linguistic factors.*

- ++ *Coordination of care transitions between and among health care practitioners and settings, including transitions involving referral to other clinicians; follow-up after an emergency department visit; or follow-up after discharges from hospitals, skilled nursing facilities or other health care facilities.*

++ *Facilitating access to community-based social services (e.g., housing, utilities, transportation, food assistance) to address the SDOH need(s).*

- *Health education- Helping the patient contextualize health education provided by the patient's treatment team with the patient's individual needs, goals, and preferences, in the context of the SDOH need(s), and educating the patient on how to best participate in medical decision-making.*

- *Building patient self-advocacy skills, so that the patient can interact with members of the health care team and related community-based services addressing the SDOH need(s), in ways that are more likely to promote personalized and effective diagnosis or treatment.*

- *Health care access / health system navigation*

++ *Helping the patient access healthcare, including identifying appropriate practitioners or providers for clinical care and helping secure appointments with them.*

- *Facilitating behavioral change as necessary for meeting diagnosis and treatment goals, including promoting patient motivation to participate in care and reach person-centered diagnosis or treatment goals.*

- *Facilitating and providing social and emotional support to help the patient cope with the problem(s) addressed in the initiating visit, the SDOH need(s), and adjust daily routines to better meet diagnosis and treatment goals.*

- *Leveraging lived experience when applicable to provide support, mentorship, or inspiration to meet treatment goals.*

**G0022** – *Community health integration services, each additional 30 minutes per calendar month (List separately in addition to G0019).*

By way of example, tailored support could be provided through CHI services to a patient experiencing homelessness with signs of potential cognitive impairment and a history of frequent ED admissions for uncontrolled diabetes. The patient's primary care practitioner (PCP) learns during a clinic visit after discharge from the ED, that the patient has been able to reliably fill

their prescriptions for diabetes medication, but frequently loses the medication (or access to it) while transitioning between homeless shelters and a local friend's home. In the medical record, the PCP documents SDOH need(s) of housing insecurity and transportation insecurity contributing to medication noncompliance, resulting in inadequate insulin control and a recent ED visit for hypoglycemia. The PCP's treatment plan is daily diabetes medication, with the goal of maintaining hemoglobin A1c within appropriate levels. To accomplish the treatment plan, the PCP orders CHI services to develop an individualized plan for daily medication adherence/access while applying for local housing assistance, and also orders a follow up visit for cognitive impairment assessment and care planning to further evaluate the potential contribution of cognitive impairment. The PCP's auxiliary personnel provide tailored support, comprised of facilitating communication between the patient, local shelters, and the friend, to help the patient identify a single location to reliably store their medication while applying for local housing assistance. The auxiliary personnel also help the patient identify a reliable means of transportation daily to that location for their medication and show the patient how to create a daily automated phone reminder to take the diabetes medication. The auxiliary personnel document these activities (including amount of time spent) in the medical record at the PCP's office, along with periodic updates regarding the status of the patient's housing assistance application.

To help inform whether our proposed descriptor times were appropriate and reflect typical service times, and whether a frequency limit is relevant for the add-on code, we solicited comment on the typical amount of time practitioners spend per month furnishing CHI services to address SDOH needs that pose barriers to diagnosis and treatment of problem(s) addressed in an E/M visit. We also solicited comment to better understand the typical duration of CHI services, in terms of the number of months for which practitioners furnish the services.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Most commenters supported our proposal to allow general supervision for CHI services. However, some commenters asked a related question about whether auxiliary personnel providing CHI services under general supervision can identify additional unmet SDOH needs to address. When CHI services are being furnished, sometimes a patient is receiving CHI services to address one unmet SDOH need, and in the course of auxiliary personnel providing CHI services during the month, the auxiliary personnel identify additional unmet SDOH need(s). These commenters recommended that if the auxiliary personnel are regularly updating the billing practitioner on CHI services they provide, we should not require another initiating visit in order for the auxiliary personnel to address the additional unmet SDOH needs.

*Response:* We thank the commenters support of our proposal for general supervision. It would not be in the scope of practice of the auxiliary personnel for them to make a determination that a given SDOH need(s) is impacting ability of the billing practitioner to diagnose or treat problems addressed in an initiating visit. In addition, general supervision requires the CHI services to be furnished under the billing practitioner's direction and control. While we do not believe another initiating visit is necessary, the auxiliary personnel must review all unmet SDOH need(s) they find in order for them to be addressed by the billing practitioners in the CHI services.

*Comment:* Some commenters also stated that general supervision could inadvertently lead to the consolidation and integration of CHWs and other auxiliary personnel currently employed by CBOs to instead be employed by billing practitioners, where payment may be more robust,

*Response:* There is no statutory benefit that can allow CBOs to directly bill the PFS. In accordance with this final rule, CHI services must be provided incident to the professional service of a physician or other statutorily qualified practitioner who must bill for those services. Auxiliary personnel who provide these services must be under the supervision of the physician

[or other practitioner] and the provided services must be reasonable and necessary for diagnosis and treatment of illness or injury. In the course of implementing our payment policy for chronic care management services, we became concerned about the number of care management companies that were contracted by the physician with potentially little oversight, clinical integration and communication with the billing practitioner, where the services might not be furnished under the direction and control of the billing practitioner. As discussed above, we were concerned that our incident to policy might not be met, which requires the billing practitioner to maintain active participation in and management of the course of treatment. We are allowing for the broadest level of supervision possible (general supervision) and contracting with third parties (such as CBOs) in accomplishing the furnishing of CHI services but this must be part of clinical care and treatment by the billing practitioner. Under our incident to regulations, we cannot prohibit physicians from directly hiring auxiliary personnel for furnishing CHI services.

*Comment:* Commenters were generally supportive of assigning general supervision for CHI services.

*Response:* We thank commenters for supporting our proposal to assign general supervision for the CHI codes. We believe that general supervision offers flexibility for the auxiliary personnel to provide the CHI services without the billing practitioner being physically present or immediately available, as would be required under direct or personal supervision (see § 410.26).

*Comment:* Another commenter recommended that the services provided by a CHW should be provided under the supervision of a qualified health professional providing care management activities, including, but not limited to registered nurses.

*Response:* No, our regulations require supervision by the practitioner who bills for the services.

*Comment:* Commenters were overall supportive of the valuation for HCPCS codes G0019 and G0022. Some commenters requested that CMS consider 20- or 30-minute increments

for HCPCS code G0019, or other shorter increments, that could be billed individually, or as multiple units during the same encounter, with a maximum per calendar month of no less than 60 minutes total. One commenter also requested that HCPCS code G0019 be extended to 120 minutes and HCPCS code G0022 be extended up to 60 minutes per calendar month. A few commenters stated 30 minutes was sufficient, but the majority of commenters stated they spend 60 minutes up to 120 minutes, especially during the first few months.

*Response:* We asked commenters what they believe is the typical amount of time practitioners spend per month furnishing CHI services to address SDOH needs that pose barriers to diagnosis and treatment of problem(s) addressed. Commenters suggested a broad range of the time they expected to spend furnishing CHI services over a month. We are not finalizing a frequency limitation for the add on HCPCS code G0022 to allow for flexibility when practitioners do spend more than 60 minutes on CHI services in the month. Commenters expressed that for CHI services, especially during the first month, more time may be spent on providing services. We believe it is difficult to adequately address a patient's social needs, consistent with the proposed elements of the CHI service, in less than an hour. As a result, we continue to believe that the 60 minutes of time spent by auxiliary personnel is most appropriate. For HCPCS code G0022, we continue to believe that 30 minutes of time spent by auxiliary personnel is most appropriate for the code descriptor. Therefore, we are finalizing 60 minutes for the base code and 30 minutes for the add-on code with no frequency limitation for the add-on code as long as the time spent is reasonable and necessary.

*Comment:* Several commenters requested that CMS include social workers and registered nurses in the code descriptors for HCPCS codes G0019 and G0022. Commenters also requested that these professionals be included as personnel who may conduct the initial CHI visit and oversee the provision of these services. Commenters also requested that CMS identify social workers, including a bachelor of social work (BSW), as eligible auxiliary workforce under CHI and PIN. Commenters expressed that including social workers is especially important as

auxiliary personnel are employed by community care hubs (CCHs) and/or individual community-based organizations (CBOs) that may be contracting with a Medicare billing provider, and BSWs make up a significant part of this workforce. Another commenter stated that social workers provide services aligned with these proposed codes day in and day out across the country, yet they are not identified among lists of providers recognized for offering these proposed services.

*Response:* We note that our HCPCS G-code descriptors specify that auxiliary personnel may provide these services under general supervision. These codes were specifically designed to capture services commonly performed by community health workers, which are a type of auxiliary personnel. But the codes do not limit the types of other health care professionals, such as registered nurses and social workers, that can perform CHI services (and PIN services, as we discuss in the next section) incident to the billing practitioner's professional services, so long as they meet the requirements to provide all elements of the service included in the code, consistent with the definition of auxiliary personnel at § 410.26(a)(1).

*Comment:* Some commenters supported our proposal to establish CHI services described by HCPCS code G0019 and stated the code should only be billed by one practitioner, to maintain longitudinal care. Other commenters did not agree with our proposed limitation for CHI and PIN services to one billing practitioner per patient per calendar month, and requested that we not impose such a limit. One commenter expressed that limiting CHI services to one practitioner per patient per month would impair the ability of auxiliary personnel to provide CHI services to the patient. Most commenters opposed our proposal that the add-on service, HCPCS code G0022, could be billed only once per month. Some commenters suggested that practitioners should be allowed to bill HCPCS code G0022 at least once a week. Another commenter expressed concern regarding frequency limits for the CHI add-on code and noted that spending adequate time with patients will be essential for high-quality CHI service provision. Another commenter requested not limiting the number of add-on services per month or the length of time a patient can continue

to receive CHI or PIN services and expressed that if a patient needs services beyond six months, for example, a new order from the billing practitioner could be submitted. Several commenters recommended that CHI services have one in person interaction per month and expressed it was critical to allow the add on service (HCPCS code G0022) to be billed weekly.

One commenter noted that most beneficiaries screened for SDOH had two to five SDOH needs and to address those identified needs, it was conceivable that the CHI services would occur over multiple months (when more than one need was identified). The commenter noted that they would anticipate more intensity/time spent with the patient during the first month, while subsequent months may not have the same intensity or time spent, and that time spent delivering CHI services would be aggregated to determine the total time spent, per calendar month. Some commenters asserted that they could typically spend up to 120 minutes providing CHI services in the first month.

*Response:* We thank the commenters for their suggestions regarding frequency limitations for the CHI codes, specifically the add-on code, HCPCS code G0022. We are not finalizing to establish a frequency limitation for HCPCS code G0022. Considering the feedback from the commenters, we understand that it may be typical for practitioners and auxiliary staff to spend significant time supporting the activities described by the CHI codes during the first month. We believe as long as the time spent by auxiliary personnel is reasonable and necessary for the diagnosis and treatment of injury or illness, we should allow it to be billed. We agree with commenters that there could be situations where a patient requires more intensive CHI services over a month that would warrant billing more than one unit of the add-on HCPCS code G0022, perhaps especially in the first month and where multiple health related social needs impact the practitioner's ability to diagnose and treat the patient. We will monitor utilization in the claims data of the add-on code for medical necessity.

*Comment:* Several commenters recommended that we create a separate HCPCS code for CHI services performed in a group setting. These commenters expressed that certain service

elements such as health education and facilitating behavior change, may be provided to patients as part of a group session with other patients. The commenter expressed that many patients benefit from services provided to a group of similar patients similar challenges.

*Response:* We did not propose a code describing services furnished to a group of patients. CHI services are highly individualized and focused on a person-centered assessment, performed to better understand the individualized context of the intersection between the SDOH need(s) and the problem(s) addressed in the initiating visit and subsequently by the CHW and/or auxiliary personnel in the community. Therefore, we continue to believe that the service should be tailored to address the individual patient's specific needs, and did not consider whether it would be appropriate for CHI services to be furnished in a group setting.

*Comment:* Many commenters asked whether the new G codes for CHI could be excluded from budget neutrality.

*Response:* We remind commenters that section 1848(c)(2)(B)(ii)(II) of the Act requires that increases or decreases in RVUs may not cause the amount of Medicare Part B expenditures for the year to differ by more than \$20 million from what expenditures would have been in the absence of these changes. If this threshold is exceeded, we make adjustments to preserve budget neutrality. There is no statutory exception available for CHI services, so the expected spending associated with these services must be included in the CY 2024 BN adjustment.

*Comment:* Several commenters expressed concern regarding the medical record documentation requirements for CHI services and requested that CMS clarify that services must be documented by the billing practitioner and not necessarily by the auxiliary staff delivering the services. This arrangement would allow a CBO to communicate with the billing practitioner about the services provided (including the time spent furnishing services and the social needs addressed), without requiring CBOs to have the technical capacity to directly input

documentation into medical records. Other commenters stated that the billing practitioner or the auxiliary personnel should be responsible for documenting CHI and PIN services in the Electronic Medical Record (EMR).

*Response:* We thank the commenters for requesting clarification regarding documentation in the medical record, including an EMR, by the auxiliary personnel. We refer commenters to the finalized policies about medical record documentation in the CY 2020 PFS final rule (84 FR 62681 through 62684) and our later clarifications in the CY2021 PFS final rule (85 FR 84594 through 84596), which state that any individual who is authorized under Medicare law to furnish and bill for their professional services, whether or not they are acting in a teaching role, may review and verify (sign and date) the medical record for the services they bill, rather than re-document notes in the medical record made by physicians, residents, nurses, and students (including students in therapy or other clinical disciplines), or other members of the medical team. Documentation, in the end, is the responsibility of the billing practitioner. CBOs may enter data following our general policy, as long as the biller reviews and verifies the documentation.

After consideration of the public comments, we are finalizing our proposal to designate CHI services as care management services that may be furnished under the general supervision of the billing practitioner in accordance with § 410.26(b)(5). We are also finalizing the proposed code descriptor for HCPCS code G0019, with a few minor changes. The final code descriptor for HCPCS code G0019, states that CHI services performed by certified or trained auxiliary personnel, including a community health worker, under the direction of a physician or other practitioner requires 60 minutes per calendar month to bill the service. We are also finalizing the valuation for HCPCS code G0019 as proposed. We are also finalizing the proposed code descriptor and 30 minutes per calendar month for HCPCS code G0022 as proposed. Additionally, we are not finalizing a frequency limitation for HCPCS code G0022. We will monitor utilization of the add-on HCPCS code G0022 and may re-evaluate these policies in future rulemaking.

With regard to changes in our final code descriptor, we are modifying the descriptor to reflect the policy we are finalizing in response to public comments received. We removed 'E/M' from the code descriptor since we are finalizing a policy to allow an E/M service, including an E/M service that is part of a TCM service, and an AWW service to serve as the initiating visit for CHI services. Additionally, we are adding a service element for the SDOH risk assessment to describe instances when a CHW or other auxiliary personnel performing CHI services identifies an SDOH need that the furnishing practitioner did not identify and needs to apprise the billing practitioner of that unmet SDOH need(s) they find for the need to be addressed by the billing practitioners and for the billing practitioner to identify if that need would impact the ability of the billing practitioner to diagnose and treat the problem addressed in the initiating visit .

We are finalizing the code descriptor for HCPCS code G0019 to read as follows:

Community health integration services performed by certified or trained auxiliary personnel, including a community health worker, under the direction of a physician or other practitioner; 60 minutes per calendar month, in the following activities to address social determinants of health (SDOH) need(s) that are significantly limiting the ability to diagnose or treat problem(s) addressed in an initiating visit:

- Person-centered assessment, performed to better understand the individualized context of the intersection between the SDOH need(s) and the problem(s) addressed in the initiating visit.

- ++ Conducting a person-centered assessment to understand patient's life story, strengths, needs, goals, preferences and desired outcomes, including understanding cultural and linguistic factors and including unmet SDOH needs (that are not separately billed).

- ++ Facilitating patient-driven goal-setting and establishing an action plan.

- ++ Providing tailored support to the patient as needed to accomplish the practitioner's treatment plan.

- Practitioner, Home-, and Community-Based Care Coordination

++ Coordinating receipt of needed services from healthcare practitioners, providers, and facilities; and from home- and community-based service providers, social service providers, and caregiver (if applicable).

++ Communication with practitioners, home- and community-based service providers, hospitals, and skilled nursing facilities (or other health care facilities) regarding the patient's psychosocial strengths and needs, functional deficits, goals, preferences, and desired outcomes, including cultural and linguistic factors.

++ Coordination of care transitions between and among health care practitioners and settings, including transitions involving referral to other clinicians; follow-up after an emergency department visit; or follow-up after discharges from hospitals, skilled nursing facilities or other health care facilities.

++ Facilitating access to community-based social services (e.g., housing, utilities, transportation, food assistance) to address the SDOH need(s).

- Health education- Helping the patient contextualize health education provided by the patient's treatment team with the patient's individual needs, goals, and preferences, in the context of the SDOH need(s), and educating the patient on how to best participate in medical decision-making.

- Building patient self-advocacy skills, so that the patient can interact with members of the health care team and related community-based services addressing the SDOH need(s), in ways that are more likely to promote personalized and effective diagnosis or treatment.

- Health care access / health system navigation

++ Helping the patient access healthcare, including identifying appropriate practitioners or providers for clinical care and helping secure appointments with them.

- Facilitating behavioral change as necessary for meeting diagnosis and treatment goals, including promoting patient motivation to participate in care and reach person-centered diagnosis or treatment goals.

- Facilitating and providing social and emotional support to help the patient cope with the problem(s) addressed in the initiating visit, the SDOH need(s), and adjust daily routines to better meet diagnosis and treatment goals.

- Leveraging lived experience when applicable to provide support, mentorship, or inspiration to meet treatment goals.

The commenters did not suggest any changes to the add-on code descriptor so for the add-on HCPCS code G0022 we are not finalizing any changes and the descriptor will read as follows: HCPCS code G0022 – *Community health integration services, each additional 30 minutes per calendar month (List separately in addition to G0019).*

In the proposed rule, we proposed that all auxiliary personnel who provide CHI services must be certified or trained to perform all included service elements and authorized to perform them under applicable State laws and regulations. Under § 410.26(a)(1) of our regulations, auxiliary personnel must meet any applicable requirements to provide the services performed incident to the billing practitioner’s professional services, including licensure, that are imposed by the State in which the services are being furnished. In States where there are no applicable licensure or other laws or regulations relating to individuals performing CHI services, we proposed to require auxiliary personnel providing CHI services to be trained to provide them. Training must include the competencies of patient and family communication, interpersonal and relationship-building skills, patient and family capacity-building, service coordination and system navigation, patient advocacy, facilitation, individual and community assessment, professionalism and ethical conduct, and the development of an appropriate knowledge base, including of local community-based resources. We proposed these competencies because they reflect professional consensus regarding appropriate core competencies for CHWs, applied to this context.<sup>14</sup> We solicited public comment on whether it would be appropriate to specify the

---

<sup>14</sup> <https://chwtraining.org/c3-project-chw-skills/>.

number of hours of required training, as well as the training content and who should provide the training.

The following is a summary of the comments we received and our responses.

*Comment:* Most commenters generally agreed with our proposal. Some commenters expressed that a minimum number of training hours is needed to ensure basic skills and understanding related to the CHW scope of work. Other commenters noted that training should be development-oriented and not be a one-time certification. Some commenters expressed that CHWs, and the associations that represent them, are best positioned to determine the appropriate training requirements to balance patient safety and access to care. Commenters also expressed that there should be flexibility in training and certification requirements to support the development of a diverse CHI services workforce.

Several commenters noted they utilize the Community Health Worker Core Competency (C3) project. A few commenters agreed that training should not focus on clinical topics as CHWs are not trained clinicians or health educators. Other commenters also suggested and agreed that when there are no applicable licensure or State laws related to individuals performing CHI, services should align with the C3 Project competencies.

*Response:* We continue to believe that our rules for all incident to services should apply such that applicable State rules and requirements must be met and that training/certification must meet any applicable requirements to provide the services performed incident to the billing practitioner's professional services, including licensure, that are imposed by the State.

*Comment:* Some commenters disagreed with our proposal to require auxiliary personnel providing CHI services to be trained. These commenters suggested that CMS offer a legacy certification option for CHWs with extensive lived experience.

*Response:* We thank commenters for their feedback. We do not understand what the commenters mean by legacy certification. We continue to believe that we should defer to States, as they have applicable standards for auxiliary personnel (as specified for all incident to services

under § 410.26). For States without a standard for training or certification, that we believe that we should adopt the professional consensus regarding appropriate core competencies for CHI services, applied to this context.

*Comment:* While some commenters stated that requiring a specific number of training hours may be a deterrent for some individuals to actually obtain the required training, others suggested auxiliary personnel providing CHI services should participate in training programs with anywhere from 7 to 10 hours, 30 to 40 hours, and up to 140 hours before beginning work. Other commenters recommended an annual training requirement of 2 to 3 hours.

*Response:* We thank the commenters for their thoughts and suggestions on whether it would be appropriate to specify the number of hours of required training, as well as the training content and who should provide the training to be obtained by CHWs. We did not propose and do not plan to finalize a specific number of hours of training for auxiliary personnel providing CHI services.

After consideration of the public comments, we are finalizing our proposal that all auxiliary personnel who provide CHI services must be certified or trained to perform all included service elements, and authorized to perform them under applicable State laws and regulations.

For CHI services, as with all incident to services, it is the billing practitioner's responsibility to ensure that all payment rules and applicable State requirements are met including licensure, certification, and/or training. This does not mean that the billing practitioners are required to provide the licensure, certification, and/or training themselves, but rather that they must ensure that the Medicare criteria for billing and payment of CHI services are met.

We continue to believe that the training required to provide CHI services must include the competencies of patient and family communication, interpersonal and relationship-building, patient and family capacity-building, service coordination and system navigation, patient advocacy, facilitation, individual and community assessment, professionalism and ethical

conduct, and the development of an appropriate knowledge base, including of local community-based resources.

Because we defer to applicable State rules, we are not requiring a set number of training hours or content in States that have applicable rules. For States that do not have applicable rules, we continue to believe that our proposed competencies as specified above are appropriate. Due to the wide range of training hours suggested by commenters, we are not specifying a required number of training hours that need to be obtained in States who do not have an applicable rule to specify the number of required hours.

*Comment:* One commenter suggested a national certification mechanism and to call these personnel certified Community Health Professionals (CCHPs). Some commenters expressed that there should be a program-level accreditation that recognizes community-based organizations that are employing community-health workers, and pointed to accrediting bodies that have plans in the works for such accreditations.

*Response:* We are not sure whether the commenter is recommending a national accreditation for CHI services, CHWs, or CBOs. PFS payment policy provides payment rules for services, in this case CHI services furnished by CHWs or other types of auxiliary personnel who may or may not be working in conjunction with a CBO. Above, we have finalized our policy for CHI services and if a national accreditation program trains or certifies and meets our requirements which includes applicable State requirements, then those auxiliary personnel would meet requirements to provide CHI services (assuming all other billing requirements are met).

In our proposed rule, we proposed to require that time spent furnishing CHI services for purposes of billing HCPCS codes G0019 and G0022 must be documented in the patient's medical record in its relationship to the SDOH need(s) they are intended to address and the clinical problem(s) they are intended to help resolve. The activities performed by the auxiliary personnel would be described in the medical record, just as all clinical care is documented in the medical record. We proposed to require the SDOH need(s) to be recorded in the patient's

medical record, and for data standardization purposes, stated that practitioners would be encouraged to record the associated ICD-10 Z-code (Z55-Z65) in the medical record and on the claim.

Since CHI services are community-based and involve connecting the patient with local resources in their community, and are highly personalized, for example, hearing and understanding a patient's life story and culture, we believe that most of the elements of CHI services would involve direct contact between the auxiliary personnel and the patient, and that a substantial portion would be in-person, but recognized that a portion might be performed via two-way audio. We sought to confirm our understanding of where and how these services would be typically provided (for example, in-person, audio-video, two-way audio).

We solicited public comment regarding whether we should require patient consent for CHI services. For care management services that could generally be performed without any direct patient contact, we require advance patient consent to receive the services as a prerequisite to furnishing and billing the services, to avoid patients receiving bills for cost sharing that they might not be expecting to receive. For example, a patient might receive chronic care management services comprised of practitioners coordinating care with each other and reviewing or exchanging medical records between visits in ways that do not require involving the patient directly. As we have frequently discussed in prior rulemaking for care management services (for example, at 81 FR 80240), we do not have statutory authority to waive cost sharing for care management or other services. Rather, cost sharing remains applicable except as specified by statute such as for certain preventive services. In recent years, we have required advance documented patient consent to receive most care management services as a condition of the practitioner billing those services, to avoid a situation where the patient is surprised to receive a bill for the associated cost sharing. These consent requirements include informing the patient about applicable cost sharing, the right to discontinue services, and, where applicable, the limitation that payment is made for the service to only one practitioner per month. We have

heard from interested parties over time that requiring advance patient consent is an administrative burden and may pose a barrier to receipt of needed services. We did not propose to require consent for CHI services, since we believe these services typically would involve direct patient contact, and largely be provided in-person. However, we stated that if we heard from public commenters that CHI services would frequently not involve direct contact with the patient, or could extend for periods of time for which the patient might not be expecting to incur cost sharing obligations (such as multiple months), we would consider requiring patient consent to receive CHI services. We solicited comment regarding whether we should require patient consent for CHI services. The following is a summary of the comments we received and our responses.

*Comment:* Commenters confirmed that CHI services would most likely occur both in-person and virtually (via audio-video or via two-way audio) but noted that evidence shows that all services should include some in-person interaction. As a result, a few commenters requested that CMS provide a higher payment for services when they are delivered in person to incentivize these types of interactions. Additionally, one commenter recommended at least one in-person interaction each month, unless the patient is in an area designated as rural, frontier, tribal, or a geographically isolated territory.

*Response:* We acknowledge the commenters' suggestion that CHI services would be available either in person, virtually, or a mix of both. However, we continue to believe that most of the elements of CHI services would involve direct contact between the auxiliary personnel and the patient. Thus, we do not plan to provide a higher payment for services when they are delivered in person, and we do not believe that we need to incentivize in-person interactions. We hope to engage with practitioners and other interested parties to inform any refinements to the services through future rulemaking, as our collective experience with these services grows.

*Comment:* Most commenters stated that patient consent should be obtained prior to initiating services for CHI, so the beneficiary can be counseled on the services being provided, in

addition to potential co-insurance and/or cost sharing requirements. A few commenters stated that a patient should be allowed to give their consent verbally, documented in the medical record, that the auxiliary personnel may obtain consent, or virtually. Lastly, another commenter stated that including the CHW in the CHI initiating visit with the practitioner as part of the patient care team would avoid complications with consent since the patient's approval would be provided during the initial visit. The commenters stated that, considering that a variety of factors may prevent a patient from returning to the clinic, it is imperative that the CHW is introduced during the initial visit.

*Comment:* A few commenters disagreed consent should be required for several reasons. One commenter expressed that consent should not be required for CHI services because often times, patients do not understand CHI services at the time presented, therefore discussing consent would be difficult especially when there may be a lack of understanding or if there are literacy, language, culture and learning difficulties. Requiring consent is especially challenging given the short time spent with the practitioner, especially during long appointments where there are interpreter needs. Commenters generally agreed that if consent will be required, they ask CMS to consider verbal consent or consent as part of the annual consent for treatment.

*Response:* Having reviewed the public comments, we are persuaded by the opinions of the commenters that we should require consent. CHI services may not necessarily be in person, could be provided over many months, and the patient would not necessarily expect to incur cost sharing.

*Comment:* We received comments recommending on how consent should be obtained. Commenters recommended that we not require consent to be obtained in person. Commenters stated that there may be circumstances where it may not be possible to obtain consent during the initiating visit. Commenters recommended that we not require written consent but rather allow the patient to provide a verbal consent.

*Response:* After considering public comments we agree with commenters that in order to reduce administrative burden that written or verbal consent may be obtained as long as it is documented in the medical record.

*Comment:* Several commenters asked about who would obtain consent. Commenters asked CMS if consent could be obtained by auxiliary personnel.

*Response:* While we believe it would be best for the billing practitioner to obtain consent, we agree with the commenters that we should allow auxiliary personnel to obtain the consent and that is what we are finalizing. As part of the consent process, it must be explained to the patient that cost sharing will apply and that only one practitioner per month can bill the services. Consent only has to be obtained once (rather than annually) and in cases where there is a change in the billing practitioner, a new patient consent would be required.

In summary, after consideration of public comments, we are finalizing that patient consent is required in advance of providing CHI services, but may be obtained either in writing or verbally, so long as the consent is documented in the patient's medical record. We are also finalizing that consent for CHI services may be obtained by auxiliary personnel and must be obtained if there is a change in the billing practitioner. The consent process must include explaining to the patient that cost sharing applies and that only one practitioner may furnish and bill the services in a given month.

In the proposed rule, we proposed that a billing practitioner may arrange to have CHI services provided by auxiliary personnel who are external to, and under contract with, the practitioner or their practice, such as through a community-based organization (CBO) that employs CHWs, if all of the "incident to" and other requirements and conditions for payment of CHI services are met. Although we proposed to allow CHI services to be performed by auxiliary personnel under a contract with a third party, we stated, as we have in our regulations for current care management services, that there must be sufficient clinical integration between the third party and the billing practitioner in order for the services to be fully provided, and the connection

between the patient, auxiliary personnel, and the billing practitioner must be maintained. As we discussed in a similar context for other care management services in the CY 2017 PFS final rule, if there was little oversight by the billing practitioner or a lack of clinical integration between a third party providing the services and the billing practitioner, we did not believe services, as we proposed to define them, could be fully performed; and therefore, in such cases, services should not be billed (see 81 FR 80249). We stated that we would expect the auxiliary personnel performing the CHI services to communicate regularly with the billing practitioner to ensure that CHI services are appropriately documented in the medical record, and to continue to involve the billing practitioner in evaluating the continuing need for CHI services to address the SDOH need(s) that limit the practitioner's ability to diagnose and treat the problem(s) addressed in the initiating visit.

As noted in the CY 2023 PFS final rule (87 FR 69790) and explained in the CY 2023 PFS proposed rule (87 FR 46102), when we refer to community-based organizations, we mean public or private not-for-profit entities that provide specific services to the community or targeted populations in the community to address the health and social needs of those populations. They may include community-action agencies, housing agencies, area agencies on aging, centers for independent living, aging and disability resource centers or other non-profits that apply for grants or contract with healthcare entities to perform social services. As described earlier in this section, they may receive grants from other agencies in the U.S. Department of Health and Human Services, including Federal grants administered by the Administration for Children and Families (ACF), Administration for Community Living (ACL), the Centers for Disease Control and Prevention (CDC), the Substance Abuse and Mental Health Services Administration (SAMHSA), or State-funded grants to provide social services. We stated that, generally, we believe such organizations know the populations and communities they serve, and may have the infrastructure or systems in place to assist practitioners to provide CHI services. We understood that many CBOs provide social services and do other work that is beyond the

scope of CHI services, but we believed they are well-positioned to develop relationships with practitioners for providing reasonable and necessary CHI services.

Because we were concerned about potential fragmentation that could occur in addressing specific SDOH, we proposed that only one practitioner per beneficiary per calendar month could bill for CHI services. This would allow the patient to have a single point of contact for all their CHI services during a given month.

We proposed that the practitioner could separately bill for other care management services during the same month as CHI services, if time and effort are not counted more than once, requirements to bill the other care management service are met, and the services are medically reasonable and necessary.

We proposed that CHI services could not be billed while the patient is under a home health plan of care under Medicare Part B, since we believed there would be significant overlap between services furnished under a home health plan of care and CHI services, particularly in the home health services referred to as “medical social services,” and in comprehensive care coordination. For example, medical social services can be furnished to the patient's family member or caregiver on a short-term basis when the home health agency (HHAs) can demonstrate that a brief intervention by a medical social worker is necessary to remove a clear and direct impediment to the effective treatment of the patient's medical condition or to the patient's rate of recovery. Additionally, the home health agency (HHA) conditions of participation require that HHAs coordinate all aspects of the beneficiary's care while under a home health plan of care, such as integrating services, whether provided directly or under arrangement, to assure the identification of patient needs and factors that could affect patient safety and treatment effectiveness and the coordination of care provided by all disciplines; and involvement of the patient, representative (if any), and caregiver(s), as appropriate, in the coordination of care activities.

Also, we noted that when Medicare and Medicaid cover the same services for patients eligible for both programs, Medicare generally is the primary payer in accordance with section 1902(a)(25) of the Act. Based on the specificity of the coding for our proposal, we do not expect that CHI services will neatly overlap with any other coverage for patients who are dually eligible for Medicare and Medicaid. However, we solicited public comment regarding whether States typically cover services similar to CHI under their Medicaid programs, and whether such coverage would be duplicative of the CHI service codes. We also solicited comment on whether there are other service elements not included in the proposed CHI service codes that should be included, or are important in addressing unmet SDOH need(s) that affect the diagnosis or treatment of medical problems, where CMS should consider coding and payment in the future.

The following is a summary of the comments we received and our responses.

*Comment:* Many commenters requested that CMS reconsider the exclusion of home health patients and urged CMS to allow for concurrent billing of CHI services and skilled home health plan of care because it is well established that the limited social work component of a home health plan of care is not adequate to address complex health related social needs and does not include the same intensity of support that is outlined in the CHI services benefit.

Commenters expressed that not allowing CHI services to be billed for patients who are receiving the home health benefit and have a home health plan of care could result in patients losing the services provided by CHWs to meet their needs related to social determinants of health, healthcare translation, and patient advocacy. Commenters noted that home health services typically extend for 60 days or more, and if the patient is currently receiving home health benefits it would put the patient in a position of choosing between two important services, potentially negatively impacting health outcomes.

*Response:* We acknowledge the commenter's assertions that a home health plan of care is inadequate to address complex health-related social needs and does not include the same intensity of support that is outlined in the CHI services benefit. However, we believe that policy

and payments accounted for under the home health prospective payment system already reflect much of the services described by the CHI codes, such that there would be significant overlap between CHI services and services furnished under a home health plan of care. Specifically, when a beneficiary is under a home health plan of care, medical social services are a covered home health service. Services of these professionals which may be covered include, but are not limited to: assessment of the social and emotional factors related to the patient's illness, need for care, response to treatment and adjustment to care; assessment of the relationship of the patient's medical and nursing requirements to the patient's home situation, financial resources and availability of community resources; appropriate action to obtain available community resources to assist in resolving the patient's problem; and counseling services that are required by the patient and medical social services for the patient's family member or caregiver on a short-term basis.

*Comment:* Some commenters stated that most State Medicaid programs do not directly cover CHI services at this time, and the States that do have Medicaid billing codes for CHW services have reimbursement rates that are insufficient and unsustainable. Other commenters stated that authorizing Medicare payments for the CHI services would be complementary to services currently provided under Medicaid. Additionally, commenters stated that the Medicare proposal takes a more effective holistic approach to identify and remedy all social determinants of health impacting a beneficiary's medical condition compared to Medicaid.

*Response:* We thank the commenters for their feedback. The CHI services are meant to resolve those specific concerns to facilitate the patient's medical care, which would distinguish CHI from other social services and programs that may be available through Medicaid State plans or other State or community programs.

After consideration of public comments, we are finalizing as proposed that a billing practitioner may arrange to have CHI services provided by auxiliary personnel who are external to, and under contract with, the practitioner or their practice, such as through a community-based

organization (CBO) that employs CHWs, if all of the “incident to” and other requirements and conditions for payment of CHI services are met, and that there must be sufficient clinical integration between the third party and the billing practitioner in order for the services to be fully provided. We are also finalizing as proposed that CHI services could not be billed while the patient is under a home health plan of care under Medicare Part B. We want to emphasize the idea that CHI is covered and paid under the Medicare program when there are SDOH needs that are interfering with the billing clinician’s diagnosis and treatment of the patient. These services are meant to resolve those specific concerns to facilitate the patient’s medical care, which would distinguish CHI from other social services and programs that may be available through Medicaid State plans or other State or community programs.

#### c. CHI Services Valuation

For HCPCS code G0019, we proposed a work RVU of 1.00 based on a crosswalk to CPT code 99490 (*Chronic care management services with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, comprehensive care plan established, implemented, revised, or monitored; first 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month*) as we believed these values most accurately reflected the resource costs incurred when the billing practitioner furnishes CHI services. CPT code 99490 has an intraservice time of 25 minutes and the work is of similar intensity to our proposed HCPCS code G0019. Therefore, we proposed a work time of 25 minutes for HCPCS code G0019, based on this same crosswalk to CPT code 99490. We also proposed to use this crosswalk to establish the direct PE inputs for HCPCS code G0019.

For HCPCS code G0022, we proposed a crosswalk to the work RVU and direct PE inputs associated with CPT code 99439 (*Chronic care management services with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until*

*the death of the patient, chronic conditions that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, comprehensive care plan established, implemented, revised, or monitored; each additional 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure))* as we believed these values reflected the resource costs incurred when the billing practitioner furnishes CHI services. Therefore, we proposed a work RVU of 0.70 and a work time of 20 minutes for HCPCS code G0022.

We received public comments on valuation. The following is a summary of the comments we received and our responses.

*Comment:* While most commenters were generally supportive of our proposed crosswalks and valuations for HCPCS codes G0019 and G0022, and our proposed work RVU of 1.00 and a work time of 25 minutes based on a crosswalk to CPT code 99490 for G0019 and proposed a work RVU of 0.70 and a work time of 20 minutes for HCPCS code G0022 based on a crosswalk to CPT code 99439. While some commenters agreed with HCPCS code G0019 and the crosswalk to CPT code 99490, they disagreed with the suggested time for the service and suggested that every subsequent 20 minutes of CHI services up to 60 minutes should have a separate HCPCS code that has an equivalent RVU crosswalk to CPT code 99490. Then, these commenters would agree with the RVU for HCPCS code G0022, as long as there is recognition that the first hour can be billed in 20-minute increments up to a total of 60 minutes.

Additionally, several commenters noted that the chronic care management services codes are billed in 20-minute increments and questioned whether every subsequent twenty minutes of CHI, up to 60 minutes, should have a separate HCPCS code that has an equivalent RVU crosswalk to CPT codes 99490 and 99439, up to 60 minutes per calendar month.

*Response:* We thank the commenters for their feedback. It is our understanding that appropriately addressing patient needs that require CHI services would take longer than 20 minutes per month, and so to promote the comprehensiveness and integrity of the service

elements we are finalizing as proposed for these services. We will monitor the utilization of CHI services and will consider changes over time for future rulemaking.

*Comment:* A few commenters were not in support of the proposed valuations and encouraged CMS to reevaluate as there is a significant amount of work the CHW provides to the patient, whether for SDOH support or coordination of care for chronic conditions, wellness, and prevention, educating the patient, and building patient self-advocacy skills. Another commenter requested the work RVU for HCPCS code G0019 be increased. An additional commenter suggested that the work RVU value of the 60-minute monthly CHI service should be equivalent to a CPT code 99214 E/M visit and the additional 30-minutes CHI service should be equivalent to a CPT code 99213 E/M visit.

Commenters recommended that CMS submit the CHI services codes and the PIN services codes to the RUC for their review.

*Response:* We thank commenters for their feedback and recommendation to have these new G codes for CHI services be reviewed by the RUC. While the RUC does not typically review G codes created by CMS, these codes could be potentially reviewed in a future rule cycle if the RUC chooses to do so. We remind readers that the RUC is an independent organization not administered by CMS that typically decides which codes will be reviewed based on its own internal criteria.

After consideration of public comments, we are finalizing the valuation of these codes as proposed. We will monitor the utilization of these new codes and consider any changes in possible future rulemaking.

d. Social Determinants of Health (SDOH) –Proposal to establish a stand-alone G code

i. Background

As previously discussed, there is increasing recognition within the health care system of the need to take SDOH into account when providing health care services, given that it is

estimated<sup>15</sup> that around 50 percent of an individual's health is directly related to SDOH. Healthy People 2030 define the broad groups of SDOH as: economic stability, education access and quality, healthcare access and quality, neighborhood and built environment, and social and community context, which include factors like housing, food and nutrition access, and transportation needs. Many Federal agencies are also developing policies to better address the impact SDOH have on patients, in support of HHS's Strategic Approach to Addressing Social Determinants of Health to Advance Health Equity<sup>16</sup>, as well as the CMS Framework for Health Equity<sup>17</sup>.

## ii. SDOH Risk Assessment Code

Over the past several years, we have worked to develop payment mechanisms under the PFS to improve the accuracy of valuation and payment for the services furnished by physicians and other health care professionals, especially in the context of evolving models of care. Section 1862(a)(1)(A) of the Act generally excludes from coverage services that are not reasonable and necessary for the diagnosis or treatment of illness or injury or to improve the functioning of a malformed body member. Practitioners across specialties have opined and recognized the importance of SDOH on the health care provided to their patients, including by recommending the assessment of SDOH through position or discussion papers<sup>18,19,20</sup>, organizational strategic plans<sup>21</sup>, and provider training modules.<sup>22</sup> In the proposed rule, we outlined how the practice of medicine currently includes assessment of SDOH in taking patient histories, assessing patient risk, and informing medical decision making, diagnosis, care and treatment. The taking of a social history is generally performed by physicians and practitioners in support of patient-

<sup>22</sup> <https://edhub.ama-assn.org/steps-forward/module/2702762>.

centered care to better understand and help address relevant problems that are impacting medically necessary care. We believe the resources involved in these activities are not appropriately reflected in current coding and payment policies. As such, we proposed to establish a code to separately identify and value a SDOH risk assessment that is furnished in conjunction with an E/M visit.

We proposed a new stand-alone G code, now assigned as HCPCS code G0136, *Administration of a standardized, evidence-based Social Determinants of Health Risk Assessment, 5-15 minutes, not more often than every 6 months*. SDOH risk assessment refers to a review of the individual's SDOH or identified social risk factors that influence the diagnosis and treatment of medical conditions. We proposed HCPCS code G0136 to identify and value the work involved in the administering a SDOH risk assessment as part of a comprehensive social history when medically reasonable and necessary in relation to an E/M visit. SDOH risk assessment through a standardized, evidence-based tool can more effectively and consistently identify unmet SDOH needs and enable comparisons across populations. For example, through administration of the SDOH risk assessment for a patient presenting for diabetes management, a practitioner might discover that a patient's living situation does not permit reliable access to electricity, impacting the patient's ability to keep insulin refrigerated. The practitioner may then prescribe a type of insulin that remains stable at room temperature or consider oral medication instead. In this example, the practitioner could furnish an SDOH risk assessment in conjunction with the E/M visit to gain a more thorough understanding of the patient's full social history and to determine whether other SDOH needs are also impacting medically necessary care.

We further proposed that the SDOH risk assessment must be furnished by the practitioner on the same date they furnish an E/M visit, as the SDOH assessment would be reasonable and necessary when used to inform the patient's diagnosis, and treatment plan established during the visit. Required elements would include:

- Administration of a standardized, evidence-based<sup>23</sup> SDOH risk assessment tool that has been tested and validated through research, and includes the domains of food insecurity, housing insecurity, transportation needs, and utility difficulties.

++ Billing practitioners may choose to assess for additional domains beyond those listed above if there are other prevalent or culturally salient social determinants in the community being treated by the practitioner.

Possible evidence-based tools include the CMS Accountable Health Communities (AHC)<sup>24</sup> tool, the Protocol for Responding to & Assessing Patients' Assets, Risks & Experiences (PRAPARE)<sup>25</sup> tool, and instruments identified for Medicare Advantage Special Needs Population Health Risk Assessment<sup>26</sup>.

Given the multifaceted nature of unmet SDOH needs appropriate follow-up is critical for mitigating the effects of the identified, unmet SDOH needs on a person's health. An SDOH risk assessment without appropriate follow-up for identified needs would serve little purpose. As such, CMS solicited comment on whether we should require as a condition of payment for SDOH risk assessment that the billing practitioner also have the capacity to furnish CHI, PIN, or other care management services, or have partnerships with community-based organizations (CBO) to address identified SDOH needs.

The SDOH needs identified through the risk assessment must be documented in the medical record and may be documented using a set of ICD-10-CM codes known as "Z codes"<sup>27</sup> (Z55-Z65) which are used to document SDOH data to facilitate high-quality communication between providers. We proposed a duration of 5-15 minutes for HCPCS code G0136 for the administration of an SDOH risk assessment tool, billed no more often than once every 6 months. We proposed to limit the SDOH assessment service to once every six months, as we believe

there are generally not significant, measurable changes to health outcomes impacted by a patient's SDOH in intervals shorter than 6 months.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Commenters were overall supportive of our definition of SDOH. We received several comments requesting that CMS change the name to social drivers of health, drivers of health, or health-related social needs. Many of these commenters noted that other CMS programs use the term social drivers of health and requested that CMS use consistent naming conventions. Many commenters agreed that our proposal aligns with ongoing efforts to improve health equity and applauded our proposal for a new code. Other commenters discussed work that is already occurring in performing SDOH risk assessments and cited the benefits of adding payment in the PFS for these services, as they are currently under- or unpaid. Several commenters from rural and underserved areas noted that funding is scarce for resources like community-based organizations, and they were hopeful this code would increase funding and therefore access to such services.

One commenter suggested that this service was duplicative as the E/M coding structure allows practitioners to report a higher code to capture increased intensity services, such as when SDOH considerations are present. A few commenters strongly opposed the proposal, expressing concern that our proposal would divert dollars from medical care and would impose surveillance data gathering, which they considered intrusive on patients. A few other commenters recommended that the proposal should not be finalized and should be further studied before implementation. Another commenter recommended that we delay implementation until a more detailed analysis is available on the use of SDOH to improve patient outcomes. Several commenters recommended this code be exempted from budget neutrality, and a few other commenters suggested that CMS waive cost-sharing for this service.

*Response:* We note that there are many definitions and names for similar assessments, and we share the desire to align naming conventions across programs, especially within CMS. However, we note that there is not yet a universally accepted term for these types of factors. Many definitions have slight differences in their intent or meaning, which complicates standardization. SDOH is defined by the Current Procedural Terms (CPT) coding guidelines, which is why we used this term in the proposal. We will consider whether there could be greater alignment in terminology across CMS in the future. We acknowledge that the E/M coding structure does allow for a higher level of Medical Decision-Making when taking things like SDOH into consideration. For this reason, we continue to believe that this code represents work that is currently not accounted for.

With respect to budget neutrality, we remind commenters that section 1848(c)(2)(B)(ii)(II) of the Act requires that increases or decreases in RVUs may not cause the amount of Medicare Part B expenditures for the year to differ by more than \$20 million from what expenditures would have been in the absence of these changes. If this threshold is exceeded, we must make adjustments to preserve budget neutrality. There is no statutory exception available for the SDOH risk assessment, so the expected spending associated with these services must be included in the CY 2024 BN adjustment. As we have frequently discussed in prior rulemaking for care management services (for example, at 81 FR 80240), we do not have authority to waive cost sharing for care management or other services except as specified in statute, such as for certain preventive services. Rather, cost sharing remains applicable for the proposed SDOH risk assessment and other care management services. We note that the beneficiaries likely to benefit the most from this risk assessment may qualify or already be enrolled in programs to reduce or eliminate cost sharing, such as Medicaid or other supplemental insurances. We do not agree with commenters who stated this type of information will impose surveillance data gathering in a way that is intrusive to patients. We acknowledge that the information collected as part of an SDOH risk assessment could be sensitive in nature, and we

understand that discussing SDOH-related topics may be perceived as intrusive to some beneficiaries. However, as we discussed in the introduction, this information is already being collected by practitioners in medical settings, as many across the medical community agree that this type of information is important to the health care patients receive. We are not proposing new forms of data collection, but rather are seeking to acknowledge this work through payment, which was supported by other commenters.

*Comment:* We received many comments related to the proposed requirement that SDOH risk assessment be furnished the same date as an E/M visit. Many commenters requested clarification on the same date requirement, citing operational difficulty in performing the assessment during the visit and requested that we allow for the risk assessment to be performed 7-10 days prior to the appointment, given that many practitioners utilize a “pre-check-in” system via an online portal. We also received many comments discussing the furnishing of the SDOH risk assessment in conjunction with E/M visits. Some commenters requested that clinical psychologists be allowed to furnish SDOH risk assessment and specified that the SDOH risk assessment should be billable with CPT code 90791 and HBAI codes in addition to E/M visits, noting that patients with mental health conditions often have unmet social needs and may not see another health care practitioner routinely beyond a clinical psychologist. We received many comments requesting clinical social workers be added explicitly to the list of practitioners able to furnish SDOH risk assessments, citing that assessment of SDOH needs falls within their competencies and training. Other commenters recommended including all practitioners who can bill Medicare directly, such as marriage and family therapists (MFTs), mental health counselors (MHCs), and physical and occupational therapists.

*Response:* We understand that many practitioners use online portals for the collection of demographic and insurance information prior to the visit for operational ease. However, we emphasize that this is a SDOH risk assessment, not a screening. The SDOH risk assessment is intended to be used when a practitioner has reason to believe there are unmet SDOH needs that

are interfering with the practitioner's diagnosis and treatment of a condition or illness. As such, there are limited scenarios in which we envision a practitioner would know ahead of a visit that an SDOH risk assessment would be appropriate, such as a patient who has a history of unmet SDOH needs, or the patient disclosed such information before the visit. Examples could include the patient requesting an appointment at a specific time or on a specific date due to the limited availability of transportation to or from the visit, or the patient requests a refill of refrigerated medication that went bad when the electricity was terminated at their home. Given this, we do not agree with commenters that it would be typically appropriate to have a patient fill out an SDOH risk assessment 7-10 days in advance of an appointment. We understand that in limited scenarios, such as described above, a clinician may wish to get an SDOH risk assessment during pre-check-in paperwork. We are also sensitive to commenters' feedback about the operational difficulties in getting an SDOH risk assessment during an associated appointment, especially in circumstances discussed by the commenters where it is already part of the check-in process practitioners have in place. We agree with commenters that SDOH risk assessment is relevant to the diagnosis and treatment of conditions furnished by practitioners such as clinical psychologists for patients with behavioral health conditions. We do not agree with commenters that all practitioners who can bill for Medicare should qualify to perform the SDOH risk assessment under statute as reasonable and necessary, as we believe that practitioners who can bill E/M or similar behavioral health visits such as CPT code 90791 and HBAI codes are best positioned to provide follow-up and ongoing assessment in a longitudinal way. These codes are used by clinical psychologists to diagnose and treat behavioral health conditions as analogous codes to E/M services given State law and scope of practice. We acknowledge that other practitioners such as clinical social workers may benefit from an understanding of the patient's SDOH considerations to furnish their services. However, we believe that this information should be shared when possible or applicable with the care team by the furnishing practitioner of the associated E/M or behavioral health visit.

After consideration of the public comments, we are finalizing the title, “Social Determinants of Health” (SDOH) risk assessment for HCPCS code G0136 as proposed. As discussed in response to public comments, this is to align with the language used by CPT. Given that we are focused on payment for physicians’ services, most of which are billed using CPT codes, we believe that aligning our terminology with CPT makes the most sense. We are not finalizing the requirement that the SDOH risk assessment must be performed on the same date as the associated E/M or behavioral health visit (such as CPT code 90791 or HBAI codes), for the operational ease of practitioners. This is also in alignment with when HCPCS code G0136 is performed in conjunction with an AWV, as the AWV may be split over two visits (see section III.S. of this final rule for this discussion). We continue to believe that in most cases, HCPCS code G0136 would not be performed in advance of the associated E/M or behavioral health visit. We reiterate that the SDOH risk assessment code, HCPCS code G0136, when performed in conjunction with an E/M or behavioral health visit is not designed to be a screening, but rather tied to one or more known or suspected SDOH needs that may interfere with the practitioners’ diagnosis or treatment of the patient.

Regarding the types of associated visits that can be performed with HCPCS code G0136, our aim is to allow behavioral health practitioners to furnish the SDOH risk assessment in conjunction with the behavioral health office visits they use to diagnose and treat mental illness and substance use disorders. We are finalizing that in addition to an outpatient E/M visit (other than a level 1 visit by clinical staff) as proposed, SDOH risk assessment can also be furnished with CPT code 90791 (*Psychiatric diagnostic evaluation*) and the Health Behavior Assessment and Intervention (HBAI) services, described by CPT codes 96156, 96158, 96159, 96164, 96165, 96167, and 96168. We are also finalizing that HCPCS code G0136 may also be performed in conjunction with an Annual Wellness Visit. This is discussed in more detail in section III.S. of this final rule.

*Comment:* We received several comments requesting clarification on the types of settings in which a SDOH risk assessment can occur, and several commenters asked whether this service could be furnished in the emergency department, observation unit, or during the perioperative period. These commenters noted that beneficiaries with unmet social needs are often seen more frequently in the emergency department setting, and these beneficiaries may lack access to primary care. Other commenters asked whether HCPCS code G0136 could be performed in conjunction with the E/M that is part of TCM. These commenters discussed that a patient's SDOH needs may have changed during the time of a hospitalization, citing examples such as new financial or housing instability due to being out of work for a prolonged time. Another commenter discussed that if a patient was going to be going home in a wheelchair for the first time, they may have new transportation issues if they do not have access to wheelchair-accessible transportation. Commenters also asked about the use of HCPCS code G0136 in conjunction with hospital discharge visits.

*Response:* We thank the commenters for their feedback. We recognize that unmet SDOH needs may be relevant to the care received in facility settings such as emergency departments and observation units, and it may be appropriate for practitioners to adjust the treatment plan in these settings based on known SDOH needs. When we created HCPCS code G0136, we envisioned it being used in outpatient office settings, in which a patient is interacting with a practitioner with whom they have a long-standing care relationship. We acknowledge that patients may have long-standing care relationships with practitioners they see in settings such as during the operative period, but we believe this to be atypical. Additionally, we are generally wary of paying for SDOH risk assessment upon every interaction with the health care system, since this could be burdensome for the patient and have less utility if the unmet SDOH needs are never addressed or followed up with in a longitudinal way. We agree with commenters that it makes sense to permit the use of HCPCS code G0136 in conjunction with hospital discharge visits. We note that this is consistent with other CMS policies since SDOH are present in the

Hospital Inpatient Quality Reporting Program measures, and that SDOH have been identified as key factors related to safe discharge planning. Even so, our expectation is that patients that have identified unmet SDOH needs will continue to follow up as an outpatient either through TCM or E/M visits.

We also believe that SDOH risk assessment is especially important during transitions in care, which was pointed out by commenters when asking if hospital discharges and TCM would count as an applicable associated visit. For TCM visits, we clarify that individuals who are discharged from a hospital, observation unit, or post-acute care, would also be able to receive the SDOH risk assessment during the TCM E/M visit, to ensure that SDOH needs have been taken into consideration as the patient transitioned back into the community. The use of HCPCS code G1036 in conjunction with the TCM E/M visit has the added benefit that it is likely that the practitioner furnishing TCM will be following the patient longitudinally in an outpatient setting and can assess for changes in unmet SDOH needs over time.

After consideration of public comments, we are finalizing that HCPCS code G0136 may be furnished with hospital discharge visits, to remain consistent with other CMS policies promoting assessment of SDOH as an indicator of quality care and to promote safe discharge planning. We are also finalizing that HCPCS code G0136 can be billed in outpatient settings. We are interested in learning more about the ideal settings for HCPCS code G0136 as we work with interested parties about how HCPCS code G0136 is used, and we will continue to examine this issue in future rulemaking.

*Comment:* Commenters were generally supportive of the proposed requirements for the use of a standardized, evidence-based SDOH risk assessment tool. Commenters generally appreciated the operational flexibility of CMS not requiring a specific tool, especially if they are already utilizing an SDOH risk assessment tool. A few commenters requested that CMS specify one specific tool or publish a list of approved tools to improve standardization and interoperability. Other commenters requested that CMS clarify that the list of tools is not

exhaustive, and tools beyond those listed can be used if they meet the criteria. A few commenters requested that CMS only accept tools that meet the Office of the National Coordinator (ONC) for Health Information IT's interoperability standards. Others recommended that CMS limit to a specific list of industry-approved tools. Several commenters also noted that some quality standards allow for practitioners to combine questions from validated instruments and suggested CMS adopt similar standards.

*Response:* We agree with commenters that interoperability and standardization are important, and we understand that specifying a list of tools or limiting to one tool would work towards those aims. As such, we note that in the proposed rule, we discussed that possible evidence-based tools include the CMS Accountable Health Communities tool, the Protocol for Responding to & Assessing Patients' Assets, Risks & Experiences (PRAPARE) tool, and instruments identified for Medicare Advantage Special Needs Population Health Risk Assessment. However, we are also interested in ensuring that practitioners are able to select tools and questions beyond the specified tools, that are relevant to the beneficiaries they serve. There is not a national consensus around one specific tool for the assessment of SDOH needs. Currently, practitioners and researchers choose the tool (or tools) that fit their needs, and we have no desire to limit or restrict this current work, so long as it meets the parameters specified in this rule. We remain committed to finding a balance between the benefits of allowing maximum operational flexibility and encouraging evidence-based standardization and interoperability.

*Comment:* Commenters were in favor of requiring the use of a tool which includes the specified domains of food insecurity, housing insecurity, transportation needs, and utility difficulties. Several commenters discussed food insecurity as a foundational or key domain to be assessed, citing the dietary aspects to the treatment of conditions such as diabetes and hypertension. A few commenters expressed appreciation for the option to add additional domains, as relevant to their patient population. Several commenters also requested that the tool

used be required to include the domain of interpersonal safety, citing CMS quality programs that require inclusion of interpersonal safety, and evidence that this is an important SDOH need. Another commenter recommended CMS explore including domains related to climate change.

*Response:* We agree with commenters who discussed the importance of food insecurity, and we believe the inclusion of this domain is in line with efforts across the government to tackle food insecurity, such as the White House Conference and Strategy on Hunger, Nutrition, and Health<sup>28</sup>. We agree that interpersonal safety is an important dimension of potential SDOH needs, and we also recognize the potential difficulty of collecting, storing, and acting on such sensitive information in a clinical setting. We note that practitioners may add additional domains if they believe those domains are relevant to their patient population, in which case they could utilize a tool that includes interpersonal safety.

After consideration of public comments, we are finalizing as proposed, that any standardized, evidence-based SDOH risk assessment tool that has been tested and validated through research, may be used to conduct the SDOH risk assessment. The tool must include the domains of food insecurity, housing insecurity, transportation needs, and utility difficulties.

We solicited comments regarding whether we should require as a condition of payment for SDOH risk assessment, that the billing practitioner also have the capacity to furnish CHI, PIN, or other care management services, or have partnerships with community-based organizations (CBO) to address identified SDOH needs.

*Comment:* Commenters were mixed on this potential required condition of payment. Most commenters agreed with our assessment that follow-up is critical to mitigating the impacts of unmet SDOH needs. However, commenters differed on how CMS should potentially handle this. Many commenters agreed that furnishing CHI, PIN, other care management services, or having partnerships with CBOs would address identified SDOH needs and was a reasonable requirement to furnish this service. Some commenters stated that we should only finalize this

---

<sup>28</sup> <https://health.gov/our-work/nutrition-physical-activity/white-house-conference-hunger-nutrition-and-health>.

proposal with some requirement for follow-up. A few commenters stated that there is no need to perform an SDOH risk assessment if the practitioner does not have the ability to provide adequate follow up in place. Some commenters agreed that ideally, a practitioner would have an established relationship with a CBO, but noted that in some areas, particularly those that are rural and underserved, there are a limited supply of CBOs to address SDOH needs. Other commenters asked us to clarify if we were expecting practitioners to solve long-standing barriers for patients, or if we were focused on immediate actions that practitioners could take based on a positive risk assessment. A few other commenters agreed with the importance of follow-up but noted that this requirement is too burdensome for practitioners to have in place before they understand the SDOH needs of their patients and the communities in which their patients live.

*Response:* We continue to believe that follow-up or referral is an important aspect of following up on findings from an SDOH risk assessment. We acknowledge that practitioners may not be ideally suited to solve long-standing SDOH concerns, but we also agree with commenters that follow up or referral after an SDOH risk assessment is an important element to addressing the issues that impact a patient's health and can help the patient connect with services and individuals that can address more of the patient's SDOH needs. We are clarifying that we are focused on SDOH risk assessment to identify issues that impact the practitioner's ability to diagnose and treat the patient. We thank the commenters for noting supply issues with CBOs in some places, and we understand that this will likely be an ongoing issue for some time, particularly in rural and underserved areas as many practitioners do not currently have relationships with CBOs. We are also sensitive to the operational needs of practitioners who do not yet have these resources in place, but who may wish to develop these relationships with the advent of this new coding. We are attempting to strike a balance between these two needs. We expect to monitor utilization of these codes, and we leave open the opportunity to reevaluate this decision on an ongoing basis.

*Comment:* Many commenters supported the use of the ICD-10-CM codes known as Z codes (Z55-Z65) for documentation of SDOH data. A few commenters recommended CMS require the use of Z codes for standardization and interoperability across platforms. Other commenters recommended CMS mention or require the utilization of other systems for documenting social needs. Commenters who discussed the duration of 5-15 minutes agreed that this seemed appropriate.

*Response:* As stated previously, we understand and recognize the importance of data standardization and interoperability. We are requiring that the SDOH needs identified through the risk assessment be documented in the medical record, and we are actively encouraging Z-code reporting to improve our data and understanding of how SDOH affect the patient populations enrolled in CMS programs. For example, recently CMS identified that when the Z code for homelessness was encoded during an inpatient admission, there is an increase in resource usage by the hospital, and as such, CMS underwent rulemaking to incorporate the Z code for homelessness as a comorbidity or complication that would increase the severity level in the MS-DRG<sup>29</sup> system.

*Comment:* Many commenters discussed the proposed frequency limitation of once per 6 months, requesting that CMS clarify if the limitation was per beneficiary, or per practitioner per beneficiary. Many commenters noted operational difficulty if the frequency limitation was per beneficiary, as beneficiaries often have practitioners across different health systems, and interoperability constraints with EHRs would make it difficult to verify if the patient had received an SDOH risk assessment in the last 6 months. Other commenters noted that a new diagnosis may cause a rapid shift in SDOH needs, with sudden onset of mobility and transportation difficulty, or a disability that limited a beneficiary's ability to work. Many commenters discussed alternative frequency limitations, understanding that 6 months may be appropriate for those without previous SDOH needs, but more frequent risk assessment may be

---

<sup>29</sup> 88 FR 58640.

necessary for those with a history of unmet SDOH needs. Commenters also noted that the SDOH risk assessment would be especially salient during care transitions such as discharge from a facility such as a hospital or SNF, or a beneficiary who was seen several times in the emergency department recently.

*Response:* We appreciate the commenters for their thoughtful and thorough comments. We agree that with new services, the appropriate frequency limitation is often difficult to ascertain. We also appreciate the operational difficulty of knowing when a beneficiary last received an SDOH risk assessment, given that many beneficiaries seek care with several practitioners or in different health systems. We acknowledge that SDOH needs may change quickly, especially in beneficiaries with a history of unmet social needs. We also agree with the comments discussing that care transitions are especially important moments for potential SDOH risk assessment and note that the Transitional Care Management (TCM) (CPT codes 99495 and 99496) are E/M visits and qualify as an associated visit. We aim to strike a balance between what is best for the patient and what is operationally best for the practitioner, as well as considering the patient's cost sharing responsibilities for each time HCPCS code G0136 is furnished separately from the AWW. We also note that if a patient requires frequent SDOH reassessments, this patient may benefit from CHI or PIN to manage these concerns on an ongoing basis. We will continue to engage with interested parties and may consider policy changes in future rulemaking cycles based on our review of claims data or feedback from interested parties.

In light of comments we received in response to the proposed rule, we are not finalizing the requirement that the practitioner who furnishes the SDOH risk assessment must also have the capacity to furnish CHI, PIN, other care management services, or have partnerships with CBOs. We do expect that the practitioner furnishing an SDOH risk assessment would, at a minimum, refer the patient to relevant resources and take into account the results of the assessment in their medical decision making, or diagnosis and treatment plan for the visit.

We are finalizing as proposed that any SDOH need identified during HCPCS code G0136 must be documented in the medical record. We are clarifying that we are not requiring the use of the Z code for documentation, though we are confirming that use of Z codes would be appropriate to document SDOH needs in the medical record. We encourage the use of Z codes across CMS programs to better understand the needs of our beneficiaries. We are finalizing a limitation on payment for the SDOH risk assessment service of once every 6 months per practitioner per beneficiary.

iii. Valuation for SDOH Risk Assessment (HCPCS Code G0136)

We proposed a direct crosswalk to HCPCS code G0444 (*Screening for depression in adults, 5-15 minutes*), with a work RVU of 0.18, as we believe this service reflects the resource costs associated when the billing practitioner performs HCPCS code G0136. HCPCS code G0444 has an intraservice time of 15 minutes, and the physician work is of similar intensity to our proposed HCPCS code G0136. Therefore, we proposed a work time of 15 minutes for HCPCS code G0136 based on this same crosswalk to HCPCS code G0444. We also proposed to use this crosswalk to establish the direct PE inputs for HCPCS code G0136.

We believe these services would largely involve direct patient contact between the billing practitioner or billing practitioner's auxiliary personnel and the patient through in-person interactions, which could be conducted via telecommunications as appropriate. Therefore, we proposed to add this code to the Medicare Telehealth Services List to accommodate a scenario in which the practitioner (or their auxiliary personnel incident to the practitioner's services) completes the risk assessment in an interview format, if appropriate. We believe it is important that when furnishing this service, all communication with the patient be appropriate for the patient's educational, developmental, and health literacy level, and be culturally and linguistically appropriate. We solicited comment on where and how these services would be typically provided, along with other aspects of the SDOH assessment service.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Commenters agreed with our proposed crosswalk to HCPCS code G0444 for similar time, intensity, and direct PE inputs. Commenters were overwhelmingly supportive of our proposal to add HCPCS code G0136 to the Medicare Telehealth Services List. Commenters also supported CMS' belief that all communication with the patient be appropriate for the patient's educational, developmental, and health literacy level, and be culturally and linguistically appropriate. A few commenters noted that SDOH risk assessments are typically provided in an outpatient setting on a tablet or paper document by auxiliary personnel. A few commenters noted that they are performing routine SDOH "screening" at standard intervals, with one commenter noting they screen patients at every visit. We also received a few comments requesting that CMS provide more clarity on the intersection between HCPCS code G0136 and PIN services. These commenters asked if HCPCS code G0136 should be used to reassess when SDOH needs are present while the patient is also receiving PIN services, or if SDOH reassessment can be counted towards time spent performing PIN services.

*Response:* We appreciate the comments providing more context around how similar services are currently being furnished. See section II.D. of this rule for more comments on the addition of the SDOH risk assessment service, HCPCS code G0136, to the Medicare Telehealth List. We reiterate that HCPCS code G0136 is not intended to be a routine screening for SDOH at standard intervals or every visit. We agree with commenters that SDOH risk assessment is related to CHI and PIN services, and we believe that time spent performing HCPCS code G0136 should count towards the 60 minutes per month spent in the performance of PIN services.

After consideration of public comments, we are finalizing, as proposed, a direct crosswalk for HCPCS code G0136 to HCPCS code G0444, with a work RVU of 0.18, intraservice time of 15 minutes, and matching direct PE inputs from HCPCS code G0444 to HCPCS code G0136.

## e. Principal Illness Navigation (PIN) Services

### i. Background

Experts on navigation of treatment for cancer and other high-risk, serious illnesses have demonstrated the benefits of navigation services for patients experiencing these conditions<sup>30</sup>. Experts have noted the importance of these services for all affected patients, but especially those with socioeconomic disadvantages or barriers to care. Navigation generally means the process or activity of ascertaining one's position and planning and following a route; the act of directing from one place to another; the skill or process of plotting a route and directing; the act, activity, or process of finding the way to get to a place you are traveling. In the context of healthcare, it refers to providing individualized help to the patient (and caregiver, if applicable) to identify appropriate practitioners and providers for care needs and support, and access necessary care timely, especially when the landscape is complex and delaying care can be deadly. It is often referred to in the context of patients diagnosed with cancer or another severe, debilitating illness, and includes identifying or referring to appropriate supportive services. It is perhaps most critical when a patient is first undergoing treatment for such conditions, due to the extensive need to access and coordinate care from a number of different specialties or service-providers for different aspects of the diagnosis or treatment, and in some cases, related social services (for example, surgery, imaging and radiation therapy, chemotherapy for cancer; psychiatry, psychology, vocational rehabilitation for severe mental illness; psychiatry, psychology, vocational rehabilitation, rehabilitation and recovery programs for substance use disorder; infectious disease, neurology and immunology for human immunodeficiency virus (HIV)-associated neurocognitive disorders). For some conditions, patients are best able to engage with the healthcare system and access care if they have assistance from a single, dedicated individual who has "lived experience" (meaning they have personally experienced the same illness or

---

<sup>30</sup> See for example, <https://view.ons.org/3hjHjc> and <https://www.accc-cancer.org/docs/projects/pdf/patient-navigation-guide>.

condition the patient is facing). Although we currently make separate payment under the PFS for a number of care management and other services that may include aspects of navigation services, those care management services are focused heavily on clinical aspects of care rather than social aspects and are generally performed by auxiliary personnel who may not have lived experience or training in the specific illness being addressed. We sought to better understand whether there are gaps in coding for patient navigation services for treatment of serious illness, that are not already included in current care management services such as advance care planning services (CPT codes 99497-99498), chronic care management services (CPT codes 99490, 99439, 99491, 99437, 99487 and 99489), general behavioral health integration care management services (CPT code 99484), home health and hospice supervision (HCPCS codes G0181-G0182), monthly ESRD-related services (CPT codes 90951-90970), principal care management services (CPT codes 99424-99427), psychiatric collaborative care management services (CPT codes 99492-99494), and transitional care management services (CPT codes 99495-99496). See additional information on our PFS Care Management Services webpage at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Care-Management>.

For CY 2024, we proposed to better recognize through coding and payment policies when certified or trained auxiliary personnel under the direction of a billing practitioner, which may include a patient navigator or certified peer specialist, are involved in the patient's health care navigation as part of the treatment plan for a serious, high-risk disease expected to last at least 3 months, that places the patient at significant risk of hospitalization or nursing home placement, acute exacerbation/decompensation, functional decline, or death. Examples of serious, high-risk diseases for which patient navigation services could be reasonable and necessary could include cancer, chronic obstructive pulmonary disease, congestive heart failure, dementia, HIV/AIDS, severe mental illness, and substance use disorder (SUD). We proposed new coding for Principal Illness Navigation (PIN) services. In considering the appropriate patient

population, we considered the patient population eligible for principal care management service codes (CPT codes 99424 through 99427), as well as clinical definitions of “serious illness.” For example, one peer-review study defined “serious illness” as a health condition that carries a high risk of mortality and either negatively impacts a person’s daily function or quality of life, or excessively strains their caregivers<sup>31</sup>. Another study describes a serious illness as a health condition that carries a high risk of mortality and commonly affects a patient for several years.<sup>32</sup> Some measure serious illness by the amount of urgent health care use (911 calls, emergency department visits, repeated hospitalizations) and polypharmacy.<sup>33</sup> The navigation services such patients need are similar to CHI services (as outlined previously in this section), but SDOH need(s) may be fewer or not present; and there are specific service elements that are more relevant for the subset of patients with serious illness. Accordingly, we proposed for PIN services a parallel set of services to the CHI services, but focused on patients with a serious, high-risk illness who may not necessarily have SDOH needs; and adding service elements to describe identifying or referring the patient to appropriate supportive services, providing information/resources to consider participation in clinical research/clinical trials, and inclusion of lived experience or training in the specific condition being addressed.

*Note about definitions:* we are finalizing an additional subset of PIN codes below. For purposes of this section, where we refer to PIN, we mean all associated PIN codes (HCPCS codes G0023, G0024, G0140, and G0146). If there are items that do not apply to all, that is noted.

## ii. Proposed Principal Illness Navigation (PIN) Service Definition

We proposed that PIN services could be furnished following an initiating E/M visit addressing a serious high-risk condition/illness/disease, with the following characteristics:

---

<sup>31</sup> <https://pubmed.ncbi.nlm.nih.gov/29125784/>.

<sup>32</sup> <https://www.ajmc.com/view/serious-illness-a-high-priority-for-accountable-care>.

<sup>33</sup> <https://www.ajmc.com/view/serious-illness-a-high-priority-for-accountable-care>.

- One serious, high-risk condition expected to last at least 3 months and that places the patient at significant risk of hospitalization, nursing home placement, acute exacerbation/decompensation, functional decline, or death;

- The condition requires development, monitoring, or revision of a disease-specific care plan, and may require frequent adjustment in the medication or treatment regimen, or substantial assistance from a caregiver.

Examples of a serious, high-risk condition/illness/disease include, but are not limited to, cancer, chronic obstructive pulmonary disease, congestive heart failure, dementia, HIV/AIDS, severe mental illness, and substance use disorder (SUD).

We proposed that the PIN initiating visit would be an E/M visit (other than a low-level E/M visit that can be performed by clinical staff) performed by the billing practitioner who will also be furnishing the PIN services during the subsequent calendar month(s). The PIN initiating visit would be separately billed (if all requirements to do so are met) and would be a pre-requisite to billing for PIN services. We believe that certain types of E/M visits, such as inpatient/observation visits, ED visits, and SNF visits would not typically serve as PIN initiating visits because the practitioners furnishing the E/M services in those settings would not typically be the ones to provide continuing care to the patient, including furnishing necessary PIN services in the subsequent month(s).

The PIN initiating visit would serve as a pre-requisite to billing for PIN services, during which the billing practitioner would identify the medical necessity of PIN services and establish an appropriate treatment plan. The subsequent PIN services would be performed by auxiliary personnel incident to the professional services of the practitioner who bills the PIN initiating visit. The same practitioner would furnish and bill for both the PIN initiating visit and the PIN services, and PIN services must be furnished in accordance with the “incident to” regulation at § 410.26. We would not require an initiating E/M visit every month that PIN services are billed, but only prior to commencing PIN services, to establish the treatment plan, specify how PIN

services would help accomplish that plan, and establish the PIN services as incident to the billing practitioner's service. This framework is similar to our current requirements for billing care management services, such as chronic care management services. It also comports with our longstanding policy in the Medicare Benefit Policy Manual which provides, "where a physician supervises auxiliary personnel to assist him/her in rendering services to patients and includes the charges for their services in his/her own bills, the services of such personnel are considered incident to the physician's service if there is a physician's service rendered to which the services of such personnel are an incidental part. This does not mean, however, that to be considered incident to, each occasion of service by auxiliary personnel (or the furnishing of a supply) need also always be the occasion of the actual rendition of a personal professional service by the physician. Such a service or supply could be considered to be incident to when furnished during a course of treatment where the physician performs an initial service and subsequent services of a frequency which reflect his/her active participation in and management of the course of treatment" (Chapter 15, Section 60.1.B of the Medicare Benefit Policy Manual (Pub. 100-02), available on our website at <https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/bp102c15.pdf>).

We also solicited comment on whether we should consider any professional services other than an E/M visit performed by the billing practitioner as the prerequisite initiating visit for PIN services, including, for example, an AWV that may or may not include the optional SDOH risk assessment. Under section 1861(hhh)(3)(C) of the Act, the AWV can be furnished by a physician or practitioner, or by other types of health professionals whose scope of practice does not include the diagnosis and treatment involved in E/M services, for example a health educator.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Commenters overwhelmingly supported this proposed code. Several commenters expressed support for PIN services but requested that CMS exempt PIN services

from budget neutrality. Many commenters discussed the wide range of benefits navigation services can have on a variety of conditions. Some commenters discussed the important health equity implications for such a proposal, citing research showing that members of historically disadvantaged communities and communities of color often receive lower rates of patient navigation, are often diagnosed with serious, high-risk illnesses like cancer at later stages, and have longer times between suspicion and definitive diagnosis for conditions like cancer. Many of these inequities are tied to access issues, and commenters suggested that PIN services would fill a critical gap in navigation services, noting that many navigation programs are currently grant-funded and unable to serve all patients that might benefit. Commenters also opined on the benefits of condition-specific navigation, discussing the value of navigators with targeted training or lived experience in the conditions for which they are providing navigation services.

We received many comments requesting that CMS clarify the definition of a serious, high-risk condition, the expected duration of the illness, and whether conditions beyond those we listed are appropriate. Commenters stated that CMS should not limit the timeframe to an expected duration of 3 months, discussing that there are many conditions that meet all requirements listed by CMS of a serious, high-risk condition, but that may be treated with the patient being cured or in remission within a 3-month period. Many commenters applauded our inclusion of severe mental illness and substance use disorder (SUD) as serious, high-risk conditions and noted that PIN services could be very impactful for these beneficiaries. Other commenters requested clarification on conditions such as chronic liver disease, chronic kidney disease, stroke, diabetes, and conditions with treatments that require stem cell transplantation.

*Response:* With respect to budget neutrality, we remind commenters that section 1848(c)(2)(B)(ii)(II) of the Act requires that increases or decreases in RVUs may not cause the amount of Medicare Part B expenditures for the year to differ by more than \$20 million from what expenditures would have been in the absence of these changes. If this threshold is exceeded, we must make adjustments to preserve budget neutrality. There is no statutory

exception available for PIN services, so the expected spending associated with these services must be included in the CY 2024 BN adjustment.

As we noted in the proposed rule, the definition of a serious, high-risk condition is dependent on clinical judgement. The list of conditions we provided is not exhaustive, and we will monitor utilization across beneficiaries and specialties to ascertain where and how PIN services are best utilized going forward. We agree with the commenters that additional conditions such as chronic liver disease, chronic kidney disease, stroke, and conditions that require stem cell transplantation could all meet the outlined definition depending on the specific severity of the illness in individuals with these conditions. We disagree with commenters who requested the inclusion of conditions that can be treated fully within the 3-month timeframe, as we do not believe a condition of this limited duration would require the extent of navigation services provided by PIN. We believe that an expected 3-month period is a reasonable benchmark for the use of PIN services, as we envision PIN services as necessary to treat serious, high-risk conditions that require navigation over the course of several months.

*Comment:* Many commenters recommended that CMS should not restrict PIN initiating visits to only E/M visits. Commenters noted that for many beneficiaries with severe mental illness or substance use disorder (SUD), a clinical psychologist may be the only health care practitioner they see regularly. Since clinical psychologists do not furnish E/M services, these beneficiaries would be unable to benefit from PIN services. Several commenters recommended including Behavioral Health Integration (BHI) and bundled office-based substance use disorder codes as initiating visits. Other commenters noted that inpatient/observation E/M visits and ED visits should count as initiating visits. Some commenters requested that CMS address whether TCM services would count as an initiating visit, further commenting that some serious, high-risk conditions are diagnosed in the hospital or similar setting, and PIN services would be beneficial upon discharge from such a facility. Many commenters also requested that the AWW count as an initiating visit for PIN. We received comments from dementia practitioners stating that the AWW

includes a cognitive decline assessment, and positive results would likely prompt a practitioner to order PIN services. Commenters also requested clarification regarding the requirement that the initiating visit be completed by the practitioner who will be furnishing PIN services during the subsequent calendar months, with commenters discussing the burden of supervision for ongoing PIN services if one practitioner was covering for another practitioner, had the initiating visit for PIN, and would then transition care back to the returning practitioner after PIN services had started.

*Response:* We appreciate the commenters' views and specific examples of how PIN services may be furnished. We thank the commenters for pointing out that clinical psychologists may be the practitioner type that primarily interfaces with beneficiaries with severe mental illness and SUD, and that they would be unable to furnish PIN given the proposed requirement for an E/M initiating visit. We agree with commenters that clinical psychologists should be able to bill PIN codes, especially for those with behavioral health conditions. We note that clinical psychologists have an incident to benefit under §410.26, and clinical psychologists most commonly use CPT code 90791 (*Psychiatric diagnostic evaluation*) and the Health Behavior Assessment and Intervention (HBAI) services described by CPT codes 96156, 96158, 96159, 96164, 96165, 96167, and 96168 to diagnose and treat behavioral health conditions as analogous codes to E/M, based on the services clinical psychologists are allowed to furnish under State law and scope of practice. We note that the BHI codes and office-based substance use disorder bundled codes also describe care management services. We believe considering those codes as an initiating visit for PIN would be duplicative, as they also require an initiating visit, but that is specified for those services. Therefore, we believe they would not serve the purpose of an initiating visit, which is meant to establish the beneficiary's relationship with the furnishing practitioner, ensure the practitioner assesses the beneficiary and identifies a clinical need for services prior to initiating care management, and provide an opportunity to inform the beneficiary about the services and obtain beneficiary consent (if applicable).

We agree with commenters that the E/M visit done as part of a Transitional Care Management (TCM) services could serve as an initiating visit for PIN services because it includes a high-level office/outpatient E/M visit furnished by a physician or nonphysician practitioner managing the patient in the community after discharge.

We appreciate the commenters' suggestions about including the AWV as a type of initiating visit, and the comments from dementia practitioners who discussed that the cognitive decline assessment in the AWV may be a flag for initiating PIN services. In these circumstances the personalized prevention plan services may include elements for further diagnosis and treatment of cognitive impairment and dementia, which may count as a high-risk condition in certain clinical scenarios based on clinical judgement. We acknowledge that an AWV may be provided by health care practitioners who do not have the authority to diagnose or treat medical conditions. To this end, we believe it would be inconsistent with our proposed application of the “incident to” regulations, as a condition of payment, to allow an AWV furnished by a health care practitioner, other than a physician or qualified health care practitioner, to serve as the initiating visit for PIN services. Given that the AWV is a preventative service, there may be instances where the patient sees a medical professional (including a health educator, a registered dietitian, or nutrition professional, or other licensed practitioner) or a team of such medical professionals, working under the direct supervision of a physician where an SDOH need may be identified. Additionally, the Personalized Prevention Plan that is part of AWV may also help a patient who has identified in the AWV a high-risk condition(s) that meets the standard for PIN, and the high-risk condition may be part of the focus of the recommended Personalized Prevention Plan.

There is no benefit under the PFS for facility settings in accordance with the “incident to” regulation at § 410.26. Since PIN services are provided under incident to regulations, inpatient/observation E/M visits and ED visits cannot serve as initiating visits for the purpose of PIN. We also continue to believe that the furnishing practitioner should have continuity from initiating visit through the supervision of PIN services, given the medical necessity of PIN

services, and the formation of the appropriate treatment plan specific to that patient. This framework is similar to the current requirements for billing care management services, and the requirements for billing CHI services that we are finalizing in this rule. PIN services are furnished over the course of a month, and we note that patients do not stay in inpatient, observation, or ED settings for one month, making practitioners in this setting unable to furnish PIN services for the duration of the month, as required under incident to requirements.

After consideration of public comments, we are finalizing CPT code 90791 (*Psychiatric diagnostic evaluation*) and the Health Behavior Assessment and Intervention (HBAI) services described by CPT codes 96156, 96158, 96159, 96164, 96165, 96167, and 96168 as initiating visits for PIN services, as we believe these are the most analogous codes to E/M codes that are utilized by clinical psychologists.

We are also finalizing that the AWV may serve as an initiating visit for PIN services when the AWV is furnished by a practitioner who has identified in the AWV a high-risk condition(s) that would qualify for PIN services under this rule.

For purposes of assigning a supervision level for payment, we proposed to designate PIN services as care management services that may be furnished under general supervision under § 410.26(b)(5). General supervision means the service is furnished under the physician's (or other practitioner's) overall direction and control, but the physician's (or other practitioner's) presence is not required during the performance of the service (§ 410.26(a)(3)).

We proposed the following codes for PIN services. As described previously, and in our proposed PIN code descriptors, the term “SDOH need(s)” means an SDOH need(s) that is identified by the billing practitioner as significantly limiting the practitioner’s ability to diagnose or treat the serious, high-risk condition/illness/disease addressed in the initiating visit. We note that SDOH needs are not required for use PIN services but may be applicable. “Addressed” means the definition in the CPT E/M Guidelines that we have adopted for E/M visits. Specifically, “[a] problem is a disease, condition, illness, injury, symptom, finding, complaint, or

other matter addressed at the encounter, with or without a diagnosis being established at the time of the encounter. Problem addressed [means the following]: A problem is addressed or managed when it is evaluated or treated at the encounter by the physician or other qualified healthcare professional reporting the service. This includes consideration of further testing or treatment that may not be elected by virtue of risk/benefit analysis or patient/parent/guardian/surrogate choice. Notation in patient's medical record that another professional is managing the problem without additional assessment or care coordination documented does not qualify as being addressed or managed by the physician or other qualified healthcare professional reporting the service. Referral without evaluation (by history, examination, or diagnostic study[ies]) or consideration of treatment does not qualify as being addressed or managed by the physician or other qualified healthcare professional reporting the service.

For purposes of PIN services, we proposed that SDOH means economic and social condition(s) that influence the health of people and communities, as indicated in these same CPT E/M Guidelines (2023 CPT codebook, page 11). We proposed to adopt CPT's examples of SDOH, with additional examples. Specifically, we proposed that SDOH(s) may include but are not limited to food insecurity, transportation insecurity, housing insecurity, and unreliable access to public utilities, when they significantly limit the practitioner's ability to diagnose or treat the serious, high-risk illness/condition/disease.

***G0023** Principal Illness Navigation services by certified or trained auxiliary personnel under the direction of a physician or other practitioner, including a patient navigator or certified peer specialist; 60 minutes per calendar month, in the following activities:*

- *Person-centered assessment, performed to better understand the individual context of the serious, high-risk condition.*

- ++ *Conducting a person-centered assessment to understand the patient's life story, strengths, needs, goals, preferences, and desired outcomes, including understanding cultural and linguistic factors.*

++ *Facilitating patient-driven goal setting and establishing an action plan.*

++ *Providing tailored support as needed to accomplish the practitioner's treatment plan.*

- *Identifying or referring patient (and caregiver or family, if applicable) to appropriate supportive services.*

- **Practitioner, Home, and Community-Based Care Coordination**

++ *Coordinating receipt of needed services from healthcare practitioners, providers, and facilities; home- and community-based service providers; and caregiver (if applicable).*

++ *Communication with practitioners, home-, and community-based service providers, hospitals, and skilled nursing facilities (or other health care facilities) regarding the patient's psychosocial strengths and needs, functional deficits, goals, preferences, and desired outcomes, including cultural and linguistic factors.*

++ *Coordination of care transitions between and among health care practitioners and settings, including transitions involving referral to other clinicians; follow-up after an emergency department visit; or follow-up after discharges from hospitals, skilled nursing facilities or other health care facilities.*

++ *Facilitating access to community-based social services (e.g., housing, utilities, transportation, food assistance) as needed to address SDOH need(s).*

- *Health education- Helping the patient contextualize health education provided by the patient's treatment team with the patient's individual needs, goals, preferences, and SDOH need(s), and educating the patient (and caregiver if applicable) on how to best participate in medical decision-making.*

- *Building patient self-advocacy skills, so that the patient can interact with members of the health care team and related community-based services (as needed), in ways that are more likely to promote personalized and effective treatment of their condition.*

- *Health care access / health system navigation.*

++ *Helping the patient access healthcare, including identifying appropriate practitioners or providers for clinical care, and helping secure appointments with them.*

++ *Providing the patient with information/resources to consider participation in clinical trials or clinical research as applicable.*

- *Facilitating behavioral change as necessary for meeting diagnosis and treatment goals, including promoting patient motivation to participate in care and reach person-centered diagnosis or treatment goals.*

- *Facilitating and providing social and emotional support to help the patient cope with the condition, SDOH need(s), and adjust daily routines to better meet diagnosis and treatment goals.*

- *Leverage knowledge of the serious, high-risk condition and/or lived experience when applicable to provide support, mentorship, or inspiration to meet treatment goals.*

**G0024** – *Principal Illness Navigation services, additional 30 minutes per calendar month (List separately in addition to G0023).*

To help inform whether our descriptor times are appropriate and reflect typical service times, and whether a frequency limit is relevant for the add-on code, we solicited comment on the typical amount of time practitioners spend per month furnishing PIN services. We also solicited comment to better understand the typical duration of PIN services, in terms of the number of months for which practitioners furnish PIN services following an initiating visit.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Commenters were very supportive of including PIN as a care management service that may be furnished under general supervision. Commenters were overwhelmingly supportive of our inclusion of patient navigators in the code description, with many comments focusing on the breadth of types of patient navigators in relation to the treatment of serious, high-risk conditions. These commenters were supportive of the required service element activities

outlined in the proposal. Commenters were generally not in favor of limiting the frequency of the add-on code, and many commenters stated that navigation time spent per month is greatly dependent on the condition or illness for which it is being provided and the needs of the beneficiary being served. A few commenters discussed that CMS could add flexibility in for those patients who require a lot of navigation time per month by not limiting the frequency of the add-on code. Commenters working in the cancer/oncology space estimated an average duration of 6 months of navigation, and commenters from the dementia care community suggested navigation of 3-6 months duration. Comments related to the amount of time per month varied widely, with many commenters in general discussing the difficulty and burden in trying to capture every minute of service time.

*Response:* We appreciate the varying nature of requirements for navigation across conditions. We strive to strike a balance, and we will monitor utilization and feedback from interested parties going forward to determine if changes need to be made. We appreciate the comments regarding a duration of 3-6 months across different conditions, as this aligns with our vision that PIN services will likely be needed for several months. We appreciate the difficulty named by commenters in estimating an “average” amount of time per month, as conditions and circumstances vary widely. We agree that the add-on code offers flexibility to provide more time if needed to patients, and we understand that if we limited the use of the add-on codes, we would be limiting the amount of time spent per month on navigation around an average that not every patient fits into.

*Comment:* Several commenters suggested that HCPCS code G0023 be broken into 20-minute increments, with 3 increments making up the first code, and HCPCS code G0024 describing an additional 30 minutes. One commenter suggested increasing HCPCS code G0023 to 120 minutes and another commenter suggested that months 1 and 2 of PIN services should be 120 minutes, then subsequent months decreased to 60 minutes per month as intensity of navigation decreases after the initial diagnosis and treatment period. A few commenters

suggested no limit on the duration of PIN services, while another commenter suggested that another initiating visit be required every 6 months. Some commenters suggested that a timed code was not the best for this type of service and suggested CMS adopt a per member per month flat fee. Lastly, several commenters requested clarification on whether PIN services could start before definitive diagnosis, noting that for some types of cancer, there is not a definitive diagnosis until a surgical intervention has been performed, but that there are many steps leading up to that, and current navigation programs often start with practitioner suspicion of such a diagnosis, for example after a positive screening test such as a mammogram. Commenters noted that this impacts the duration of expected PIN services, as it can often be a month or more between suspicion and definitive diagnosis. These commenters also cited research outlining health equity impacts, as many underserved communities have higher rates of late diagnosis due to delayed follow-up. These commenters stated that early navigation is currently being used to get patients, especially those in underserved communities, to a definitive diagnosis faster.

*Response:* We understand the variability in the time that can be spent providing navigation services, given the diverse nature of what we have defined as a “serious, high-risk illness.” We continue to believe that PIN services should reflect a substantial amount of time spent per month in the navigation of the principal illness. We believe that if a patient requires less than 60 minutes per month for PIN services, then their needs may be best suited to other types of care management services. We thank the commenters for discussing the expected duration of PIN services in the context of how frequently the initiating visit should be performed. We disagree that a new initiating visit should be required every 6 months, but we do believe that requiring one every year would be an appropriate middle ground between every 6 months and not requiring one as long as the serious, high-risk condition persists. We agree with commenters that the length of time between suspicion (such as a positive screening test) and definitive diagnosis can stretch into weeks for some conditions, and navigation services may be medically necessary to ensure full diagnosis and treatment of that condition. We note that our definition of

a “high risk condition” does not exclude conditions without a definitive diagnosis. For example, a patient may have a mass in the colon identified on a CT scan of the abdomen. Regardless of the definitive diagnosis of the mass, presence of a colonic mass for that patient may be a serious high-risk condition that could, for example, cause obstruction and lead the patient to present to the emergency department, as well as be potentially indicative of an underlying life-threatening illness such as colon cancer. As such, a practitioner could exercise clinical judgement and determine that the mass represents a serious high-risk condition for that patient, and that PIN services should be furnished as part of the early treatment plan. Therefore, we are clarifying that a definitive diagnosis is not required before the practitioner makes a clinical determination that the patient has a serious high-risk condition.

*Comment:* We received several comments about our proposals for PIN and the SDOH risk assessment requesting that CMS clarify the requirements surrounding the reassessment of unmet social needs and proposed frequency limitations. Commenters also noted that there was no defined activity within the proposed PIN elements of service to perform an SDOH risk assessment and sought clarification on the intersection between PIN and the SDOH risk assessment code.

*Response:* We agree with commenters that the reassessment of known SDOH needs is interrelated to PIN services, especially within the presence of a serious, high-risk condition. We also agree that this reassessment should not be confined to the frequency limitations described for HCPCS code G0136.

*Comment:* We received many comments from the peer support community applauding our inclusion of certified peer support specialists in the code descriptor for PIN services. Commenters were effusive in their support for the use and benefits of peer support specialists for beneficiaries with behavioral health conditions like severe mental illness and SUD. Peer support specialists also appreciated the inclusion of lived experience as a key element to PIN services and noted that this lived experience is a particular strength and benefit that peer support

specialists bring to their patients. These commenters discussed the fear and mistrust that commonly exists within the medical community regarding behavioral health conditions, and these commenters noted that peer support specialists help bridge that gap, as their lived experience enables them to be a trusted and safe member of the care team. Many of these commenters stated that, while they are certified and trained to perform many of the activities listed in the code descriptor, care coordination activities fall outside the scope of certified peer support specialists. We required in our proposal that auxiliary personnel performing PIN services be certified or trained to perform all activities, and these commenters stated that this requirement would effectively exclude peer support specialists from performing PIN services. These commenters discussed that beneficiaries with severe mental illness and SUD would benefit from the significant set of activities described for PIN services that peer specialists are qualified to perform and urged CMS to create unique coding for PIN performed by peer support specialists, removing the requirements that fall outside of peer support specialist expertise.

Several commenters discussed that, given low reimbursement rates throughout the health care industry for peer support services, many clinicians do not have experience working with peer support specialists, and misinformation about the role abounds. Commenters acknowledged that one way to include peer support specialists in HCPCS codes G0023 and G0024 would be to remove the requirement as proposed for all PIN auxiliary staff to be trained and certified in all service elements of PIN. However, these commenters described that peer support specialists are often asked to perform tasks outside of their competency and role. These commenters discussed the difficulty they face in clinical settings when the expectations placed on them by clinical practitioners do not align with what peer support specialists understand to be their scope and role on the treatment team. These commenters stated concern that having care management activities listed in the service descriptor but not required would further misunderstanding about the peer support specialist role and would lead to peer support specialists being asked to complete those tasks. Commenters also suggested that CMS remove the care coordination elements in the PIN

code descriptors altogether to align these services with peer support competencies. We also received many comments recommending that CMS should align the PIN activities with SAMHSA’s National Model Standards for Certification<sup>34</sup> for peer support workers.

Commenters were generally aligned on the specific items they noted were outside of the scope of peer support specialists but differed on how to handle these items. Below is a list of the items in the PIN descriptor on which we received comment.

One commenter recommended removing ● *Person-centered assessment, performed to better understand the individual context of the serious, high-risk condition*. The same commenter recommended changing ++ *Conducting a person-centered assessment to understand the patient’s life story, strengths, needs, goals, preferences, and desired outcomes, including understanding cultural and linguistic factors, and including unmet SDOH needs (that is not separately billed)* to ++ *Conducting a person-centered interview*. Most commenters recommended changing ++*Providing tailored support as needed to accomplish the practitioner’s treatment plan* to ++*Providing tailored support as needed to accomplish the person-centered goals in the practitioner’s treatment plan*, while another commenter removed this item.

*Response:* We thank the commenters for their feedback. The peer support community has told us through public comment that they have issues with scope of work, and they are frequently asked to perform tasks outside of their scope of practice. We defer to the peer support community with their suggestion of changing the word assessment to interview to make the language more consistent with peer support competencies and scope of practice. We also believe it is important to explicitly state items to be included in the interview. We agree with the commenters who suggested modifying this bullet to “person-centered goals” in the treatment plan, as this is in alignment with both peer support values as stated by the commenters and maintains the intention of the descriptor.

---

<sup>34</sup> <https://www.samhsa.gov/about-us/who-we-are/offices-centers/or/model-standards>.

*Comment:* All commenters recommended either renaming ● *Practitioner, Home, and Community-Based Care Coordination* to ● *Practitioner, Home, and Community-Based Care Communication* or removing this bullet. All commenters recommended removing ++ *Coordinating receipt of needed services from healthcare practitioners, providers, and facilities; home- and community-based service providers; and caregiver (if applicable).*

Commenters either recommended removing this bullet or renaming ++ *Communication with practitioners, home-, and community-based service providers, hospitals, and skilled nursing facilities (or other health care facilities) regarding the patient's psychosocial strengths and needs, functional deficits, goals, preferences, and desired outcomes, including cultural and linguistic factors* to ++ *Assisting the patient in communicating with their practitioners, home-, and community-based service providers, hospitals, and skilled nursing facilities (or other health care facilities) regarding the patient's psychosocial strengths and needs, functional deficits, goals, preferences, and desired outcomes, including cultural and linguistic factors.*

All commenters recommended removing ++ *Coordination of care transitions between and among health care practitioners and settings, including transitions involving referral to other clinicians; follow-up after an emergency department visit; or follow-up after discharges from hospitals, skilled nursing facilities or other health care facilities.*

*Response:* We largely defer to the commenters' judgements about these word choices, but we agree that "assisting the patient in communicating" with practitioners is largely analogous to communicating on behalf of patients, and we appreciate the intention to leave this important facet of all navigation services in the PIN code. Given that all commenters were in favor of removing some bullets, we again defer to the peer support community.

All commenters recommended removing ● *Health care access / health system navigation.*

++ *Helping the patient access healthcare, including identifying appropriate practitioners or providers for clinical care, and helping secure appointments with them.*

++ *Providing the patient with information/resources to consider participation in clinical trials or clinical research as applicable.*

*Response:* We thank the commenters for their feedback. Given that commenters were unanimous in removing these items from the descriptor, we support removing them from the PIN-PS descriptor.

*Comment:* Commenters were split on the descriptor • *Facilitating behavioral change as necessary for meeting diagnosis and treatment goals, including promoting patient motivation to participate in care and reach person-centered diagnosis or treatment goals.* Some commenters suggested removal of this bullet, whereas others recommended rewriting to • *Developing and proposing strategies to help meet person-centered treatment goals and supporting the patient in using chosen strategies to reach person-centered treatment goals.*

*Response:* We believe the inclusion of strategizing with a patient to help them meet their treatment goals is an important element of PIN services. We support the revision of this bullet to emphasize the person-centered approach to treatment goals and assisting the patient in using individualized strategies towards this aim.

*Comment:* Commenters also differed on • *Facilitating and providing social and emotional support to help the patient cope with the condition, SDOH need(s), and adjust daily routines to better meet diagnosis and treatment goals.* A few commenters suggested the addition of *person-centered* to meet the diagnosis and treatment goals, whereas others removed everything after *daily routines*. One commenter recommended editing • *Leverage knowledge of the serious, high-risk condition and/or lived experience when applicable to provide support, mentorship, or inspiration to meet treatment goals* to end after *inspiration*, removing mention of meeting treatment goals.

*Response:* We continue to believe that the intersection of the diagnosis and treatment goals with the support provided to the patient is essential to the success of PIN services. We also

support the revision throughout these code descriptors to emphasize the “person-centeredness” of diagnosis and treatment goals.

We are sympathetic to the nuances of the interactions between peer support specialists and clinicians, and we appreciate the peer support community for bringing these issues to our attention. We agree with the value and benefit of having peer support specialists as part of the treatment team for those with severe mental illness and SUD. We are clarifying that our intention in creating the PIN service elements was to include a navigation role for certified peer support specialists in the treatment of severe mental illness and SUD. We believe that it is important to preserve the care management elements of PIN that can be performed by other types of health care professionals, and which are important to PIN for many serious, high-risk conditions. We also recognize the role that peer support specialists can serve in providing navigation for patients with severe mental illness and SUD through PIN services. We thank the commenters for their efforts in specifically describing the items in the PIN service descriptor that they believe fall outside of the scope of a peer support specialist. We understand that, given the misalignment that can occur between clinical practitioners and peer support specialists regarding their role on the treatment team outlined in the peer support specialists’ comments, it is important to be as specific when possible to avoid misunderstanding about the types of auxiliary personnel we envision performing these services. We believe that further defining the role of peer support specialists within PIN codes will help alleviate this misalignment. We note that the comments were generally unified around the removal or modification of some items, and we believe that the overall nature and value PIN services provide to behavioral health patients is unchanged from the original PIN descriptor.

As described by the commenters, the conducting of a person-centered assessment or interview to understand the patient’s life remains critical to the medical benefit of navigation for serious, high-risk conditions including behavioral health conditions. Discussing goal setting, establishing an action plan, and identifying or referring the patient to appropriate supportive

services is important to ensuring behavioral health patients stay engaged in the treatment of their principal illness. As discussed previously, we heard from commenters that many patients with behavioral health conditions have unmet SDOH needs, and service elements such as facilitating access to community-based social services, health education, and building patient self-advocacy skills all help patients better understand their condition, contextualize their principal illness within their lives, and advocate for themselves both in and out of health care settings with the aim of improving their diagnosis and treatment of said condition.

After consideration of public comments, we are finalizing the service elements, descriptors, and time per month for HCPCS codes G0023 and G0024 generally as proposed, with the addition of “*and including unmet SDOH needs (that are not separately billed)*” as part of the person-centered assessment. This addition is in response to comments made in both the HCPCS code G0136 and PIN sections regarding the intersection of the SDOH risk assessment code. This service element describes the need to reassess SDOH needs within both CHI and PIN and allows for time spent performing SDOH reassessment that is not otherwise billed to count towards CHI and PIN services. We clarify that this time cannot be duplicated by HCPCS code G0136 or any other service. Below are the final code descriptors for HCPCS codes G0023 and G0024.

***G0023 Principal Illness Navigation services by certified or trained auxiliary personnel under the direction of a physician or other practitioner, including a patient navigator or certified peer specialist; 60 minutes per calendar month, in the following activities:***

- *Person-centered assessment, performed to better understand the individual context of the serious, high-risk condition.*

- ++ *Conducting a person-centered assessment to understand the patient’s life story, strengths, needs, goals, preferences, and desired outcomes, including understanding cultural and linguistic factors and including unmet SDOH needs (that are not separately billed).*

- ++ *Facilitating patient-driven goal setting and establishing an action plan.*

++ *Providing tailored support as needed to accomplish the practitioner's treatment plan.*

- *Identifying or referring patient (and caregiver or family, if applicable) to appropriate supportive services.*

- *Practitioner, Home, and Community-Based Care Coordination*

++ *Coordinating receipt of needed services from healthcare practitioners, providers, and facilities; home- and community-based service providers; and caregiver (if applicable).*

++ *Communication with practitioners, home-, and community-based service providers, hospitals, and skilled nursing facilities (or other health care facilities) regarding the patient's psychosocial strengths and needs, functional deficits, goals, preferences, and desired outcomes, including cultural and linguistic factors.*

++ *Coordination of care transitions between and among health care practitioners and settings, including transitions involving referral to other clinicians; follow-up after an emergency department visit; or follow-up after discharges from hospitals, skilled nursing facilities or other health care facilities.*

++ *Facilitating access to community-based social services (e.g., housing, utilities, transportation, food assistance) as needed to address SDOH need(s).*

- *Health education- Helping the patient contextualize health education provided by the patient's treatment team with the patient's individual needs, goals, preferences, and SDOH need(s), and educating the patient (and caregiver if applicable) on how to best participate in medical decision-making.*

- *Building patient self-advocacy skills, so that the patient can interact with members of the health care team and related community-based services (as needed), in ways that are more likely to promote personalized and effective treatment of their condition.*

- *Health care access / health system navigation.*

++ *Helping the patient access healthcare, including identifying appropriate practitioners or providers for clinical care, and helping secure appointments with them.*

++ *Providing the patient with information/resources to consider participation in clinical trials or clinical research as applicable.*

- *Facilitating behavioral change as necessary for meeting diagnosis and treatment goals, including promoting patient motivation to participate in care and reach person-centered diagnosis or treatment goals.*

- *Facilitating and providing social and emotional support to help the patient cope with the condition, SDOH need(s), and adjust daily routines to better meet diagnosis and treatment goals.*

- *Leverage knowledge of the serious, high-risk condition and/or lived experience when applicable to provide support, mentorship, or inspiration to meet treatment goals.*

**G0024** – *Principal Illness Navigation services, additional 30 minutes per calendar month (List separately in addition to G0023).*

For certified peer support specialists, we continue to believe the work provided by peer support specialists is crucial to the treatment of some patients with behavioral health conditions. We attempted to recognize this work with our proposed PIN code, but given the public comments we received, we are also finalizing two new codes, HCPCS code G0140 and HCPCS code G0146 for Principal Illness Navigation – Peer Support (PIN-PS). Given the nature of work typically performed by peer support specialists, we are limiting these codes to the treatment of behavioral health conditions that otherwise satisfy our definition of a high-risk condition(s). Patients with behavioral health conditions can still receive HCPCS code G0023 and HCPCS code G0024 services, so long as the auxiliary staff providing them is trained and certified in all parts of those code descriptors. We understand that behavioral health patients are not a monolith, and some patients may be best suited to traditional PIN services.

*G0140 – Principal Illness Navigation – Peer Support by certified or trained auxiliary personnel under the direction of a physician or other practitioner, including a certified peer specialist; 60 minutes per calendar month, in the following activities:*

- *Person-centered interview, performed to better understand the individual context of the serious, high-risk condition.*

- ++ *Conducting a person-centered interview to understand the patient's life story, strengths, needs, goals, preferences, and desired outcomes, including understanding cultural and linguistic factors, and including unmet SDOH needs (that are not billed separately).*

- ++ *Facilitating patient-driven goal setting and establishing an action plan.*

- ++ *Providing tailored support as needed to accomplish the person-centered goals in the practitioner's treatment plan.*

- *Identifying or referring patient (and caregiver or family, if applicable) to appropriate supportive services.*

- *Practitioner, Home, and Community-Based Care Communication*

- ++ *Assist the patient in communicating with their practitioners, home-, and community-based service providers, hospitals, and skilled nursing facilities (or other health care facilities) regarding the patient's psychosocial strengths and needs, goals, preferences, and desired outcomes, including cultural and linguistic factors.*

- ++ *Facilitating access to community-based social services (e.g., housing, utilities, transportation, food assistance) as needed to address SDOH need(s).*

- *Health education—Helping the patient contextualize health education provided by the patient's treatment team with the patient's individual needs, goals, preferences, and SDOH need(s), and educating the patient (and caregiver if applicable) on how to best participate in medical decision-making.*

- *Building patient self-advocacy skills, so that the patient can interact with members of the health care team and related community-based services (as needed), in ways that are more likely to promote personalized and effective treatment of their condition.*

- *Developing and proposing strategies to help meet person-centered treatment goals and supporting the patient in using chosen strategies to reach person-centered treatment goals.*

- *Facilitating and providing social and emotional support to help the patient cope with the condition, SDOH need(s), and adjust daily routines to better meet person-centered diagnosis and treatment goals.*

- *Leverage knowledge of the serious, high-risk condition and/or lived experience when applicable to provide support, mentorship, or inspiration to meet treatment goals.*

*G0146 – Principal Illness Navigation – Peer Support, additional 30 minutes per calendar month (List separately in addition to G0140).*

We are not finalizing a frequency limitation for the services described by HCPCS codes G0024 or G0146, and we will monitor utilization of these codes going forward to ascertain the time spent per month per PIN service. We are not limiting the duration PIN services, but we are finalizing a requirement that a new initiating visit be conducted once per year. We proposed that all auxiliary personnel who provide PIN services must be certified or trained to provide all elements in the corresponding service and be authorized to perform them under applicable State law and regulations. Under § 410.26(a)(1) of our regulations, auxiliary personnel must meet any applicable requirements to provide incident to services, including licensure, imposed by the State in which the services are being furnished. Many States have applicable rules and certifications, and there are existing certification programs for navigators working in certain settings of care or with specified conditions, such as cancer navigators, diabetes navigators, cardiovascular navigators, mental health navigators, geriatric care navigators, pediatric navigators, social worker

navigators, primary care navigators, general patient advocate navigators, and nurse navigators in ambulatory settings.<sup>35</sup>

For peer support specialists, approximately 48 States have professional certification programs for those providing services to patients with substance use or mental health conditions. States may include qualified peer support specialist in their Medicaid programs. In 2007, the Center for Medicaid and CHIP Services published guidance outlining minimum requirements for peer support specialist participating in Medicaid as follows: peer support specialists must be self-identified consumers who are in recovery from mental illness and/or substance use disorders, supervised by a competent mental health professional, and complete training that provides peer support specialists with a basic set of competencies necessary to perform the peer support function, including demonstrating the ability to support the recovery of others from mental illness and/or substance use disorders and ongoing continual educational requirements.<sup>36</sup> In States with professional certification programs, training and certification requirements vary, with an average of 40 and 46 hours of initial approved education, with almost all States requiring either a written or written and oral exam. A little less than half of States also require supervised work or volunteer hours to obtain certification.<sup>37</sup>

In States that do not have applicable licensure, certification, or other laws or regulations governing the certification or training of auxiliary personnel, we proposed to require auxiliary personnel providing PIN services be trained to provide all service elements. Training must include the competencies of patient and family communication, interpersonal and relationship-building, patient and family capacity building, service coordination and systems navigation, patient advocacy, facilitation, individual and community assessment, professionalism and ethical conduct, and the development of an appropriate knowledge base, including specific certification or training on the serious, high-risk condition/illness/disease addressed in the initiating visit. We

<sup>36</sup> <https://downloads.cms.gov/cmsgov/archived-downloads/smdl/downloads/smd081507a.pdf>.

<sup>37</sup> <https://peerrecoverynow.org/wp-content/uploads/2023-FEB-07-prcoe-comp-analysis.pdf>.

proposed these competencies because we believe they reflect professional consensus regarding appropriate core competencies, adjusted to this context.<sup>38</sup> We solicited public comment on the number of hours of training to require, as well as the training content and who should provide the training.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* We received a few comments, outside of the peer support specialist community, regarding training and certification for auxiliary personnel providing PIN service elements. One commenter emphasized the importance of training and/or lived experience with the relevant condition to the PIN services being provided, and this commenter suggested training for all auxiliary personnel should require case studies for each condition for which the auxiliary personnel will be providing navigation. Commenters were split on whether a standard amount of training hours should be required, with one commenter suggesting 8 hours per year, and another commenter suggesting a requirement of 225 hours for the initial training. Another commenter suggested all navigators be trained in oncology navigation, given the prevalence of cancer in many communities, regardless of what population they will primarily serve. Another commenter discussed the importance of providing training on how to help patients access clinical trials. One commenter recommended CMS require all auxiliary personnel performing PIN services to have a bachelor's degree. Another commenter recommended CMS require training in trauma-informed care, implicit bias, empathetic inquiry, and motivational interviewing.

*Response:* We appreciate the suggestion of case studies and condition-specific training, as we outlined in the proposed rule. While we agree that PIN services are well-suited for oncology navigation, we disagree with the idea that all auxiliary personnel providing PIN

---

<sup>38</sup> <https://view.ons.org/3hjHjc> and <https://www.accc-cancer.org/docs/projects/pdf/patient-navigation-guide;>  
[https://chwtraining.org/c3-project-chw-skills/;](https://chwtraining.org/c3-project-chw-skills/) and [https://peerrecoverynow.org/wp-content/uploads/Comparative-Analysis\\_Jan.31.2022-003.pdf;](https://peerrecoverynow.org/wp-content/uploads/Comparative-Analysis_Jan.31.2022-003.pdf) [https://www.samhsa.gov/sites/default/files/national-model-standards-for-peer-support-certification.pdf?utm\\_source=SAMHSA&utm\\_campaign=4b88ba3e51-EMAIL\\_CAMPAIGN\\_2023\\_06\\_05\\_02\\_41&utm\\_medium=email&utm\\_term=0\\_-4b88ba3e51-%5BLIST\\_EMAIL\\_ID%5D](https://www.samhsa.gov/sites/default/files/national-model-standards-for-peer-support-certification.pdf?utm_source=SAMHSA&utm_campaign=4b88ba3e51-EMAIL_CAMPAIGN_2023_06_05_02_41&utm_medium=email&utm_term=0_-4b88ba3e51-%5BLIST_EMAIL_ID%5D).

services should be trained in oncology navigation, given that we expect PIN services to be focused on the principal illness for which PIN services are being furnished. We note that since we are finalizing PIN services as “per condition,” rather than the patient only being able to have one PIN service at a time, this crossover in navigation is unnecessary, as a patient receiving PIN for one condition that gets diagnosed with cancer would likely qualify for a second, oncology-specific PIN navigator. Given the wide variety of suggestions we received from commenters regarding the number of specific hours to require, we believe that it is important for PIN services to allow for many types of auxiliary personnel to furnish PIN, making potential standardization of training and education requirements, such as a set number of hours of training, difficult.

After consideration of public comments, we are not finalizing a required number of hours of training for auxiliary personnel to provide PIN services. We defer to State requirements where applicable for all types of auxiliary personnel. For States with no applicable State requirements, we are finalizing as proposed that the training and certification for auxiliary personnel providing HCPCS codes G0023 and G0024 include the competencies of patient and family communication, interpersonal and relationship-building, patient and family capacity building, service coordination and systems navigation, patient advocacy, facilitation, individual and community assessment, professionalism and ethical conduct, and the development of an appropriate knowledge base, including specific certification or training on the serious, high-risk condition/illness/disease addressed in the initiating visit.

*Comment:* Regarding certified peer support specialists, we received many comments regarding their training and certification requirements. A few commenters stated that training and certification is required at the State level in 49 States and that these requirements are sufficient for Medicaid payment by states. Several commenters requested that CMS not require any additional training for peer support specialists beyond State certification, as that would be a burden on the workforce and the agencies that employ them. A few commenters recommended that CMS mandate training alignment with the SAMHSA National Model Standards for the

training of all peer support specialists, stating that these standards were developed with direct input and feedback from peer support workers themselves. These commenters discussed that it is important for those who are doing peer support work to have input into the training and certification standards for their profession.

*Response:* We note that a 2023 review of State requirements done in partnership with SAMHSA cited that two States remain without current peer support specialist certification or licensing requirements. One of the remaining States is currently working on developing a certification<sup>39</sup>. We thank the commenters for the mention of the National Model Standards, and we agree that we should aim to align across the Federal government where possible.

After consideration of public comments, for PIN-PS (HCPCS codes G0140 and G0146), if no applicable State requirements exist, we are finalizing that training must be consistent with the National Model Standards for Peer Support Certification published by SAMHSA. This is the most universally recognized standard for peer support specialists in the country and was developed and is maintained by SAMHSA, who has an expertise in this area.

We proposed that time spent furnishing PIN services for purposes of billing HCPCS codes G0023-4 must be documented in the medical record in its relationship to the serious, high-risk illness. The activities performed by the auxiliary personnel, and how they are related to the treatment plan for the serious, high-risk condition, would be described in the medical record, just as all clinical care is documented in the medical record. We would require identified SDOH need(s), if present, to be recorded in the medical record, and for data standardization, practitioners would be encouraged to record the associated ICD-10 Z-code (Z55-Z65) in the medical record and on the claim.

Similar to CHI services, we believe that many of the elements of PIN services would involve direct contact between the auxiliary personnel and the patient but may not necessarily be in-person and a portion might be performed via two-way audio. We sought to confirm our

---

<sup>39</sup> <https://peerrecoverynow.org/wp-content/uploads/2023-FEB-07-prcoe-comp-analysis.pdf>.

understanding of where and how PIN services would be typically provided (for example, with or without direct patient contact, in-person, using audio-video, using two-way audio; and whether navigators are typically local to the patient).

We solicited public comment regarding whether we should require patient consent for PIN services. For care management services that could generally be performed without any direct patient contact, we have required advance patient consent to receive the services as a prerequisite to furnishing and billing the services, to avoid patients receiving bills for cost sharing that they might not be expecting to receive. For example, a patient might receive chronic care management services comprised of practitioners coordinating care with each other and reviewing or exchanging medical records between visits, in ways that do not require involving the patient directly. As we have frequently discussed in prior rulemaking for care management services (for example, at 81 FR 80240), we do not have statutory authority to waive cost sharing for care management or other services. Rather, cost sharing remains applicable, except as specified by statute such as for certain preventive services. In recent years, we have required advance documented patient consent to receive most care management services as a condition of the practitioner billing those services, to avoid a situation where the patient is surprised to receive a bill for the associated cost sharing. These consent requirements include informing the patient about applicable cost sharing, the right to discontinue services, and, where applicable, the limitation that payment is made for the service to only one practitioner per month. We have heard from interested parties over time that requiring advance patient consent is an administrative burden and may unnecessarily prevent patient receipt of needed services. We did not propose to require consent for PIN services, since we believe these services typically would involve direct patient contact, and largely be provided in-person. However, in the proposed rule we stated that if we heard from public commenters that PIN services would frequently not involve direct contact with the patient, or could extend for periods of time for which the patient

might not be expecting to incur cost sharing obligations (such as several months), we would consider requiring patient consent to receive PIN services in our final rule.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* We received many comments regarding the use of two-way audio or audio-video technology in the current practice of navigation services. One commenter noted that the time required to provide navigation services for each patient had dropped during the pandemic when most of the communication switched to two-way audio or audio-visual. Other commenters discussed that for patients in rural areas, not requiring face-to-face contact in person reduced patient burden, given that the individuals providing navigation services may not be located in the exact community in which the patient live. This commenter noted that in rural areas, navigators often cover a large geographic area, but are still aware of community resources and all the appropriate services throughout their catchment area. Several commenters also discussed the importance of virtual communication for patients who are immunocompromised. A few commenters requested that PIN services be placed on the Medicare Telehealth Services List.

*Response:* We note that we did not receive comments directly discussing the current amount of time spent each month furnishing navigation services in person versus the amount of time spent using telecommunications. We did not receive comments discussing the amount of time navigators spend performing activities on behalf of the patient without the patient being present. We also did not receive much information regarding if there are elements of the navigation service that are best served face-to-face or pieces that are just as impactful if done via telecommunications technology. We agree with commenters generally that PIN services will likely benefit from the use of two-way audio or audio-visual technology as a key part of the service, but based on the comments received, we do not believe that we have a complete understanding of how technology is being used to furnish navigation services currently. We also acknowledge that PIN services (HCPCS codes G0023 and G0024) and PIN-Peer Support

(HCPCS codes G0140 and G0146) may look different when they are being furnished. For example, the wording on the service elements for PIN-PS is slightly different, discussing that the navigator in PIN-PS “assists the patient in communicating” with health care practitioners, rather than communicating with the practitioners on behalf of the patient through coordination activities. This may mean that the navigator for PIN-PS is in direct contact with the patient more, as they are assisting the patient in performing a task, rather than performing that task on behalf of the patient. Given these intricacies and the lack of specificity in the comments we received, we do not believe we can make a determination at this time regarding whether or not PIN services meet the standards of services that are inherently in-person services that are instead furnished using an interactive telecommunications system as described in § 410.78(a)(3). Given these factors, we are not finalizing the inclusion of PIN services (HCPCS codes G0023, G0024, G0140, G0146) on the Medicare Telehealth Services List at this time. We will continue to consider this issue for potential rulemaking in the future.

*Comment:* In response to our comment solicitation, commenters were overwhelmingly in favor of requiring patient consent for PIN services. Many commenters cited patient cost sharing obligations, discussing both the expected duration of PIN services over several months, as well as the fact that some parts of the service may be provided without the patient present. Several commenters encouraged CMS to require consent, but noted potential burdens depending on how the consent is obtained, especially when advance consent is required. Commenters urged CMS to allow verbal consent to be documented in the medical record and to allow auxiliary personnel to document it. One commenter that was not in favor of requiring consent was concerned that a patient might not have a clear understanding of their condition and expected course of treatment at the beginning of a principal illness and is likely to be overwhelmed with information. This commenter further clarified that without adequate information, as well as potentially having concerns regarding their financial responsibility for both their course of treatment and any

applicable cost-sharing for PIN, would decline PIN services without fully understanding the costs and benefits of navigation.

*Response:* We appreciate the commenters' thoughts about this issue. We acknowledge that beneficiaries are dealing with a lot at the time they are diagnosed with a principal illness, but we also acknowledge that navigation services are a key part of helping beneficiaries manage this difficult time. While we do not always require consent for all medically necessary services, we have required consent on occasion when services are being provided for a prolonged period of time and when some of the service may be performed without the patient's presence. In addition, the vast majority of commenters strongly supported the requirement of consent to provide improved patient awareness of cost-sharing responsibilities, especially given that these navigation services may be expected to last several months.

After consideration of public comments, we are finalizing that patient consent is required for PIN services, and that consent can be written or verbal, so long as it is documented in the patient's medical record. We believe that the commenters' feedback regarding the potential duration of PIN services over multiple months, in addition to the fact that PIN services may not be furnished with the patient present is convincing evidence that patients should be aware of their cost-sharing obligations over time for PIN services. We are finalizing that consent must be obtained annually and may be obtained by the auxiliary personnel either before or at the same time that they begin performing PIN services for the patient.

We proposed that a practitioner may arrange to have PIN services provided by auxiliary personnel who are external to, and under contract with, the practitioner or their practice, such as through a community-based organization (CBO) that employs CHWs or other auxiliary personnel, if all of the "incident to" and other requirements and conditions for payment of PIN services are met. Although we proposed to allow PIN services to be performed by auxiliary personnel under a contract with a third party, we clarify, as we have in our regulations for other care management services, that there must be sufficient clinical integration between the third

party and the billing practitioner in order for the services to be fully provided, and the connection between the patient, auxiliary personnel, and the billing practitioner must be maintained. As we discussed in a similar context for care management services the CY 2017 PFS final rule, if there is little oversight by the billing practitioner or a lack of clinical integration between a third party providing the services and the billing practitioner, we do not believe PIN services, as we proposed to define them, could be fully performed; and therefore, in such cases, PIN services should not be billed (81 FR 80249). We would expect the auxiliary personnel performing the PIN services to communicate regularly with the billing practitioner to ensure that PIN services are appropriately documented in the medical record, and to continue to involve the billing practitioner in evaluating the continuing need for PIN services to address the serious, high-risk condition.

In the CY 2023 PFS final rule (87 FR 69790) and as explained in the CY 2023 PFS proposed rule (87 FR 46102), where we refer to community-based organizations, we mean public or private not-for-profit entities that provide specific services to the community or targeted populations in the community to address the health and social needs of those populations. They may include community-action agencies, housing agencies, area agencies on aging, centers for independent living, aging and disability resource centers or other non-profits that apply for grants or contract with healthcare entities to perform social services. As described earlier, they may receive grants from other agencies in the U.S. Department of Health and Human Services, including Federal grants administered by the Administration for Children and Families (ACF), Administration for Community Living (ACL), the Centers for Disease Control and Prevention (CDC), the Substance Abuse and Mental Health Services Administration (SAMHSA), or State-funded grants to provide social services. Generally, we believe such organizations know the populations and communities they serve and may have the infrastructure or systems in place to assist practitioners to provide PIN services. We understand that many CBOs provide social services and do other work that is beyond the scope of PIN services, but we

believe they are well-positioned to develop relationships with practitioners for providing reasonable and necessary PIN services.

We proposed that only one practitioner per beneficiary per calendar month could bill for PIN services for a given serious, high-risk condition, because we are concerned about potential care fragmentation if the patient has more than one navigator for their condition during a given month. Our proposal would allow the patient to have a single point of contact for navigation of their condition.

We proposed that the practitioner could bill separately for other care management services during the same month as PIN, if time and effort are not counted more than once, requirements to bill the other care management services are met, and the services are medically reasonable and necessary.

Similar to CHI services discussed previously in this final rule, there are aspects of PIN services, or PIN services for certain conditions, that may be covered under a Medicaid State plan. When Medicare and Medicaid cover the same services for patients eligible for both programs, Medicare generally is the primary payer in accordance with section 1902(a)(25) of the Act. We sought public comment regarding whether States typically cover services similar to PIN under their Medicaid programs, and whether such coverage would be duplicative of the PIN service codes. We also solicited comment on whether there are other service elements not included in the PIN service codes that are part of associated care that should be included in the PIN service codes, or are important in navigation for high-risk conditions, where CMS should consider coding and payment in the future. For example, are there circumstances when clinical navigators, under the supervision of another professional, typically spend time face-to-face with patients that the PIN services codes, as currently described, may not fully account for?

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Many commenters appreciated our mention of CBOs, and these commenters outlined the benefits of external partnerships to increase the capacity of practitioners to furnish services such as PIN. A few commenters noted that there are geographic areas with a limited presence of CBOs, and they were hopeful that increased reimbursement opportunities through PIN would increase the supply of CBOs able to work in this space. A few commenters requested clarification on what “sufficient clinical integration” means in this context, while a few other commenters discussed that CBOs often lack the funding to be integrated with electronic health records that may be used by practitioners in their area.

*Response:* We reiterate that regular communication between the patient, auxiliary personnel, and billing practitioner is essential to ensure that everyone is involved in the patient’s ongoing care. Documentation of the PIN services furnished in relation to the serious, high-risk condition in the medical record is required to track a patient’s progress through the diagnosis and treatment of their principal illness, describe the interventions and PIN service elements performed, and to describe the medical necessity of PIN services to the principal illness. Documentation is also required to describe the ongoing need or changes to the treatment plan that allow for the cessation of PIN services; we appreciate that CBOs may not have access to the electronic health record in which the furnishing practitioner is documenting the patient’s care in the medical record. To reduce administrative burden, we are not requiring that all auxiliary personnel performing PIN services must document the services in the medical record themselves. Rather, the billing practitioner is responsible for ensuring appropriate documentation of the PIN services provided to the patient is included in the medical record.

*Comment:* Many commenters requested clarity on our proposed requirement that PIN services can be furnished by one practitioner per beneficiary per month for a serious, high-risk condition. These commenters asked if the limit was by practitioner, meaning beneficiaries could get one PIN service per practitioner or if each beneficiary could only get one PIN service for all conditions. Commenters noted that a patient may be receiving PIN for one condition and while

receiving PIN services, get diagnosed with another illness or condition that also meets PIN criteria. A few commenters discussed that some types of navigation services, like oncology navigation, are highly condition-specific, and suggested that if a patient could only get PIN services from one practitioner for one condition per month, oncology navigators may not believe it within their skills and training to provide PIN services for other conditions. Other commenters mentioned that the enhanced value of navigation services in which the auxiliary personnel have lived experience or training specific to the serious high-risk condition and suggested that having the same navigators perform PIN services for conditions other than those in which they have training or lived experience would likely be detrimental to the treatment of those conditions. Commenters also discussed the operational difficulties of knowing whether the patient is receiving PIN services for another condition.

Lastly, commenters were overwhelmingly in favor of our proposal to allow PIN services to be billed in conjunction with other care management codes. Commenters noted that patients who are likely to receive PIN may also have comorbidities that are best managed through care management codes, and practitioners should not have to choose between PIN and other care management activities.

*Response:* Our intention in the proposed rule was to limit PIN services to one per month per beneficiary, as we were concerned about care fragmentation. We do not believe that having multiple navigators for each condition is conducive to the patient's experience, and we believe that the patient should generally have a single point of contact when navigating a principal illness. However, we understand that patients can have multiple principal illnesses at a time. We also understand that some types of navigation, such as peer support and oncology navigation are very condition-specific, which we continue to believe is a benefit of PIN services. Also, as discussed previously in this rule, we are not requiring auxiliary personnel furnishing PIN services to be versed in every principal illness for which a patient needs PIN services. However, we are also concerned about the duplication of time and effort if the same practitioner bills two

kinds of PIN services for the same beneficiary. For example, a primary care physician might be providing PIN services to a patient for one serious, high-risk condition, and then the patient gets diagnosed with another high-risk condition that is also being managed by the same primary care physician. In this instance, the same navigator working incident to this primary care physician would be unable to fully perform the PIN service elements without duplicating time and effort, and therefore, the primary care physician can only provide PIN services once per month for this beneficiary.

We appreciate the commenters' support for our proposal to allow PIN services to be billed with other care management codes. We aimed to provide maximum flexibility to practitioners to choose the right type of service for each of their patient's needs, and we agree with commenters that if a patient has chronic or comorbid conditions that are well-managed with a care management code and is then diagnosed with a principal illness, it makes the most sense to provide that patient with care management plus PIN.

After consideration of public comments, we are finalizing that PIN services can be provided more than once per practitioner per month for any single serious high-risk condition, to avoid duplication of PIN service elements when utilizing the same navigator or billing practitioner. We are also clarifying that PIN and PIN-PS should not be billed concurrently for the same serious, high-risk condition. However, practitioners furnishing PIN services may bill care management services as appropriate for managing and treating a patient's illness. We remain concerned about care fragmentation should patients receive multiple PIN services for different high-risk conditions. We believe that PIN is best suited for situations in which the navigator can serve as a point of contact for the patient. Given this, we do not expect a patient to require multiple PIN services for a prolonged period of time, except in circumstances in which a patient is receiving PIN services for highly specialized navigation, such as behavioral health or oncology. Lastly, we are finalizing, as proposed, that PIN services can be furnished in addition to other care management services as long as time and effort are not counted more than once,

requirements to bill the other care management services are met, and the services are medically reasonable and necessary.

### iii. PIN Services Valuation

For HCPCS code G0023, we proposed a work RVU of 1.00 based on a crosswalk to CPT code 99490 (Chronic care management services with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, comprehensive care plan established, implemented, revised, or monitored; first 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month) as we believe these values most accurately reflect the resource costs associated when the billing practitioner performs PIN services. CPT code 99490 has an intraservice time of 25 minutes and the physician work is of similar intensity to our proposed HCPCS code G0023. Therefore, we proposed a work time of 25 minutes for HCPCS code G0023 based on this same crosswalk to CPT code 99490. We proposed using this crosswalk to establish the direct PE inputs for HCPCS code G0023.

For HCPCS code G0024, we proposed a crosswalk to the work RVU and direct PE inputs associated with CPT code 99439 (*Chronic care management services with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, comprehensive care plan established, implemented, revised, or monitored; each additional 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure)*) as we believe these values reflect the resource costs associated with the clinician's direction of clinical staff who are performing the PIN services. Therefore, we proposed a work RVU of 0.70 and a work time of 20 minutes for HCPCS code G0024.

*Comment:* Commenters generally supported the proposed crosswalk to the Chronic Care Management services and our proposed valuation. Commenters agreed that the RVU for HCPCS code G0023 should have a work RVU of 1.00 based on the crosswalk to CPT code 99490 but the RVU crosswalk should not be limited to the first 20 minutes of PIN services and each subsequent 20 minutes should have its own code. We did not receive any comments regarding the proposed crosswalk for HCPCS code G0024.

*Response:* We thank the commenters for their feedback. We believe the commenters have misunderstood our crosswalk. While CPT code 99490 is broken down into 20-minute blocks of time, we do not believe that 20 minutes is sufficient per month to be spent on PIN services, as discussed above. We clarify that the RVU crosswalk for 60 minutes per month of CPT code 99490 has an intraservice time of 25 minutes, and has a work RVU of 1.00, so the valuation for 60 minutes per month of time is equal between CPT codes 99490 and G0023.

After consideration of public comments, we are finalizing the crosswalks for HCPCS codes G0023 and G0024 as proposed, with HCPCS code G0023 being directly crosswalked with CPT code 99490 at work RVU of 1.00, 25 minutes of intraservice time and matching direct PE inputs. We are also finalizing a direct crosswalk between HCPCS code G0024 and CPT code 99439, with a work RVU of 0.70, a work time of 20 minutes, and matching direct PE inputs. While we note that PIN-PS does not contain all descriptor elements to the original PIN service, we believe that the core elements of PIN are preserved in PIN-PS, and that the activities and service elements described in PIN-PS represent equal time and intensity to the PIN codes and CPT codes 99490 and 99439, respectively. The PIN-PS codes are targeted for specific work performed by auxiliary staff such as peer support specialists, and since this is a timed code, we believe that 60 minutes of time spent per month by auxiliary staff, including 25 minutes of intraservice time for the physician or billing practitioner is unchanged, even if the code descriptors vary slightly. Therefore, we are finalizing the crosswalk to CPT code 99490 for HCPCS code G0140 and CPT code 99439 for HCPCS code G0146.

(29) Maternity Services (CPT codes 59400, 59410, 59425, 59426, 59430, 59510, 59515, 59610, 59614, 59618, 59622)

In the CY 2021 PFS final rule with comment period (85 FR 84554 and 84555), we finalized our proposal to revalue the bundled maternity codes used to bill for delivery, antepartum, and postpartum maternity care services to account for increases in the values of office/outpatient E/M services. These codes are all designated with a unique global period indicator “MMM.” There are 11 MMM codes that include E/M visits as part of their valuation.

For CY 2024, we proposed to update the work RVUs and work times of these MMM codes to reflect any relevant E/M updates associated with their global periods that were finalized in CY 2023. Table 13 contains a list of these codes and the proposed work RVUs for CY 2024. MMM codes are unique within the PFS in that they are the only global codes that provide a single payment for almost 12 months of services, which include a relatively large number of E/M visits performed along with delivery services and imaging; and were valued using a building-block methodology as opposed to the magnitude estimation method.

**TABLE 13: Current and Final Value for Each Maternity Services Code**

CPT code	Current Work RVU value	2023 E/M adjustment value	New Work RVU Value
59400	36.58	0.42	<b>37.00</b>
59410	18.34	0.42	<b>18.76</b>
59425	7.80	0.00	<b>7.80</b>
59426	14.30	0.00	<b>14.30</b>
59430	3.22	0.00	<b>3.22</b>
59510	40.39	0.66	<b>41.05</b>
59515	22.13	0.66	<b>22.79</b>
59610	38.29	0.42	<b>38.71</b>
59614	20.06	0.42	<b>20.48</b>
59618	40.91	0.66	<b>41.57</b>
59622	22.66	0.66	<b>23.32</b>

*Comment:* Several commenters stated that they supported CMS’ proposal to update the maternity codes to account for the increases in the office and hospital visits bundled into their global period and agreed that the work RVU increases were correct. However, the commenters stated that the total work times incorporating both the increases in office visits and hospital visits

into the global periods for these maternity services were not correct; the commenters recommended that CMS fix this technical error when calculating the time increases in the global periods for the maternity services and submitted a spreadsheet detailing the correct work times.

*Response:* We appreciate the support for our proposed policies from the commenters, as well as alerting us to this potential technical error in the updated work times for the maternity services codes. After reviewing the additional information provided by the commenters, we discovered that the incorrect work time values for the maternity services codes were used in calculating the payment rates due to a technical error. We will correct these codes with their updated work times for the final rule.

After consideration of the public comments, we are finalizing our proposal to update the work RVUs and work times of these MMM codes to reflect any relevant E/M updates associated with their global periods that were finalized in CY 2023, as detailed in Table 13.

**TABLE 14: CY 2024 Work RVUs for New, Revised, and Potentially Misvalued Codes**

HCPCS	Descriptor	Current work RVU	RUC work RVU	CMS work RVU	CMS time refinement
22836	Anterior thoracic vertebral body tethering, including thoracoscopy, when performed; up to 7 vertebral segments	NEW	32.00	32.00	No
22837	Anterior thoracic vertebral body tethering, including thoracoscopy, when performed; 8 or more vertebral segments	NEW	35.50	35.50	No
22838	Revision (eg, augmentation, division of tether), replacement, or removal of thoracic vertebral body tethering, including thoracoscopy, when performed	NEW	36.00	36.00	No
22857	Total disc arthroplasty (artificial disc), anterior approach, including discectomy to prepare interspace (other than for decompression); single interspace, lumbar	27.13	27.13	27.13	No
22860	Total disc arthroplasty (artificial disc), anterior approach, including discectomy to prepare interspace (other than for decompression); second interspace, lumbar (List separately in addition to code for primary procedure)	C	6.88	6.88	No
27278	Arthrodesis, sacroiliac joint, percutaneous, with image guidance, including placement of intra-articular implant(s) (eg, bone allograft[s], synthetic device[s]), without placement of transfixation device	NEW	7.86	7.86	No
30117	Excision or destruction (eg, laser), intranasal lesion; internal approach	3.26	3.91	3.91	No
30118	Excision or destruction (eg, laser), intranasal lesion; external approach (lateral rhinotomy)	9.92	7.75	7.75	No
31242	Nasal/sinus endoscopy, surgical; with destruction by radiofrequency ablation, posterior nasal nerve	NEW	2.70	2.70	No

## F. Evaluation and Management (E/M) Visits

### 1. Background

Over the past several years, we have engaged in a multi-year effort with the American Medical Association (AMA) and other interested parties to update coding and payment for evaluation and management (E/M) visits, so that they better reflect the current practice of medicine, are less administratively complex, and are paid more accurately under the PFS. This work is critical to improve payment accuracy and help reduce practitioner burnout.

E/M visits comprise approximately 40 percent of all allowed charges under the PFS. The office/outpatient (O/O) E/M visits comprise approximately half of these allowed charges (approximately 20 percent of total PFS allowed charges), and Other E/M visits (such as inpatient/observation visits, nursing facility visits and home/residence visits) comprise the other half (approximately 20 percent of total PFS allowed charges). As we have discussed in prior rules, within the E/M services represented in these percentages, there is wide variation in the volume and level of E/M visits billed by different specialties (84 FR 62844). According to Medicare claims data, E/M visits are furnished by nearly all specialties but represent a greater share of total allowed services for physicians and other practitioners who do not routinely furnish procedural interventions or diagnostic tests. Accordingly, our policies for revaluation of E/M visits have a significant impact on relative resource valuation under the PFS, which could potentially impact patient care more broadly.

In this section of our final rule, we continue our work to address two outstanding issues in E/M visit payment: implementing separate payment for the O/O E/M visit complexity add-on code for separate payment, and our definition of split (or shared) visits, which we delayed last year.

For CY 2018, we solicited public comment regarding how we could comprehensively reform the E/M documentation guidelines to reduce administrative and clinical burden, improve payment accuracy, and better align E/M coding and documentation with the current practice of

medicine (82 FR 34078 and 34079, 82 FR 53163). We believed that the documentation requirements for history and physical exam were particularly outdated clinically and that medical decision making (MDM) and time were the more significant factors in distinguishing visit levels (82 FR 53164). Public commenters recommended a transparent, iterative, and perhaps transitional approach, and some commenters suggested that CMS and the AMA should also undertake revision and reevaluation of the E/M visit code set itself, in addition to updating the documentation guidelines (82 FR 53165). Having reviewed the public comments, we noted they illustrated how difficult it is to utilize or rely upon such a relatively small set of codes to describe and pay for the work of a wide range of physicians and practitioners in many vastly different clinical contexts; that E/M documentation guidelines were not simply a matter of administrative burden, but were also clinically outdated and intimately related to the definition and description of E/M work as well as valuation; and that there were different opinions on potential redefinition and reevaluation of the E/M code set depending on practitioner specialty, and the type of work dominating the specialty (for example, primary care, so-called "cognitive" specialty work, or global procedures that have E/M visits bundled in rather than separately performed and documented) (82 FR 53165). We stated that we would continue working on these issues with interested parties in future years.

Because we agreed with commenters that we should take an incremental approach to these issues, the following year we proposed changes largely limited to the O/O E/M visit code family (83 FR 59628). In our CY 2019 PFS final rule, we finalized documentation changes, some of which took effect in CY 2019 (83 FR 59628 through 59535), while others (notably choice of MDM or time for supporting documentation) would be effective in CY 2021 in conjunction with finalized coding and payment changes for O/O E/M visits (83 FR 59636 through 59645). The coding and payment changes included a single payment rate for levels 2 through 4 O/O E/M visits (retaining separate payment for level 5 visits to account for the most complex patients and visits); two HCPCS add-on codes to provide separate, additional payments

for the resource costs involved in furnishing certain types of O/O E/M visit care, specifically visit complexity inherently associated with primary care and non-procedural specialty care; and a third HCPCS code for O/O E/M visits taking extended amounts of time (83 FR 59638).

In January and February 2019, we held listening sessions, and we learned that the AMA was convening an E/M Workgroup to develop an alternative solution to some of these issues (84 FR 40673). The AMA revised and resurveyed the O/O E/M visit code family (see 84 FR 62844 through 62847). Effective January 1, 2021, the CPT Editorial Panel redefined the codes for O/O E/M visits such that the furnishing practitioner may select the level of visit to bill based either on the amount of practitioner time spent performing the visit or the level of medical decision-making (MDM) involved. The CPT Editorial Panel redefined MDM in the CPT E/M Guidelines, which are an accompanying set of CPT interpretive guidelines delineating different levels of MDM and various other reporting parameters. Additionally, history of present illness (History) and a physical exam were no longer used to select the O/O E/M visit level. These service elements were updated to remove reliance on clinically outdated parameters to contribute to the selection of visit level, such as number of body systems reviewed, and to require a medically appropriate history and exam instead. Also, effective January 1, 2021, the CPT Editorial Panel revised the O/O E/M visit descriptor times. Previously, the CPT code descriptors included typical service times, but they were revised to specify new time ranges that must be furnished in order to select a given visit level using time. The AMA RUC resurveyed the O/O E/M visit CPT codes, and provided us with revaluation recommendations that we then addressed in our CY 2020 PFS proposed rule, a year in advance of when the revised codes would take effect in CY 2021 (84 FR 40675 through 40678).

In our CY 2020 PFS final rule, we generally adopted the revised O/O E/M code set and the related changes in the CPT E/M Guidelines, including the revised approach to visit level selection and documentation, for payment purposes under the PFS effective January 1, 2021 (84 FR 62844 through 62859). While we accepted the revised CPT codes and approach for the O/O

E/M visits, we finalized Medicare-specific coding for prolonged O/O service codes, because we were concerned that the CPT codes were administratively complex, and their use would have impacted our ability to tell how much total time was spent with the patient and could have resulted in inappropriately inflated payment (84 FR 62849 through 62850, and 85 FR 84572 through 84575).

In our CY 2020 PFS final rule, we generally accepted the RUC recommendations, which reflected increased service times (84 FR 62851 through 62854). This resulted in increased values for the O/O E/M visit codes beginning in CY 2021. However, since we believed these increased valuations still did not account for the resources involved in furnishing certain kinds of care included in the O/O E/M visit code set, in the CY 2021 PFS final rule, we retained our add-on codes for visit complexity inherently associated with primary care and non-procedural specialty care, though we refined and consolidated them into a single code, a HCPCS add-on code G2211 (*O/O E/M visit complexity*) that can be reported in conjunction with O/O E/M visits to better account for additional resources associated with primary care, or similarly ongoing medical care related to a patient's single, serious condition, or complex condition (84 FR 62854 through 62856, 85 FR 84571). (Hereafter in this rule, we refer to this code as the O/O E/M visit complexity add-on).

After we issued the CY 2021 PFS final rule, section 113 of Division CC of the Consolidated Appropriations Act, 2021 (Pub. L. 116-260, December 27, 2020) (CAA, 2021) imposed a moratorium on Medicare payment for this service by prohibiting CMS from making payment under the PFS for services described by HCPCS code G2211 (or any successor or substantially similar code) before January 1, 2024. Accordingly, the O/O E/M visit complexity add-on code can be reported, but it is currently assigned a bundled payment status indicator. See

our fact sheet available at Physician Fee Schedule (PFS) Payment for Office/Outpatient Evaluation and Management (E/M) Visits – Fact Sheet<sup>40</sup> (*cms.gov*).

In the CY 2022 PFS final rule, we established revised payment rules for split (or shared) visits (86 FR 65150 through 65159). The following year the CPT Editorial Panel defined a split (or shared) visit for the first time in the CPT E/M Guidelines for 2023. However, we did not adopt the CPT definition as it did not conform with our established final policy or address which practitioner should report a shared visit.

For CY 2023, the CPT Editorial Panel also revised the rest of the E/M visit code families (except critical care services) to match the general framework of the O/O E/M visits, including inpatient and observation visits, emergency department (ED) visits, nursing facility visits, domiciliary or rest home visits, home visits, and cognitive impairment assessment. We referred to these other E/M visit code families as "Other E/M" visits or CPT codes, as relevant. Effective January 1, 2023, the CPT Editorial Panel redefined the Other E/M visits so that they parallel the O/O E/M visits, where visit level is selected based on the amount of practitioner time spent with the patient or the level of MDM as redefined in the CPT E/M Guidelines. As for the O/O E/M visits, a medically appropriate history and/or physical exam is a required element of the services but no longer impacts the Other E/M visit level. The CPT Editorial Panel also revised the service times within the descriptors, the associated CPT prolonged service codes, and the CPT E/M Guidelines for the Other E/M CPT codes. The CPT Editorial Panel also consolidated many of the Other E/M CPT codes, with inpatient and observation visits combined into a single code set and home and domiciliary visits combined into a single code set. The CPT Editorial Panel created one new CPT code for prolonged inpatient services by physicians and other qualified healthcare professionals on the date of the E/M visit. Finally, the RUC resurveyed the Other

E/M visits and associated prolonged service codes and provided revaluation recommendations to CMS.

We addressed these changes to the Other E/M visit families in the CY 2023 PFS final rule (87 FR 69586 through 69616). In that final rule, we adopted the revised CPT codes and descriptors for Other E/M visits, except for prolonged services for which we finalized Medicare-specific coding. We also adopted the CPT E/M Guidelines for levels of MDM as revised for 2023. Regarding valuation, we adopted most of the RUC-recommended values for Other E/M visits, increasing their relative valuation in aggregate. However, we believe that certain types of O/O E/M visits remain undervalued, given the moratorium on separate payment for the O/O E/M visit complexity add-on (87 FR 69588). We expressed concern about assumptions made in the RUC recommendations for Other E/M visits that patient needs were inherently more complex, or work was more intense for E/M visits furnished in non-office settings (for example, inpatient, ED, and home settings) when compared to the office settings (87 FR 69587 through 69588). We stated that this direct comparison between Other E/M visits and the O/O E/M visit codes may not be appropriate or accurate, and laid out reasons why practitioners in office settings may expend more resources than practitioners in institutional and other settings. We noted that the survey times for O/O E/M visits increased significantly when resurveyed (85 FR 50123), while times for Other E/M visits generally decreased significantly or remained the same when resurveyed, despite the level of MDM remaining constant (87 FR 69598, 69605). To the extent we adopted the RUC-recommended values for Other E/M visits beginning in CY 2023, we expressed that we did not agree that the RUC-recommended relative values for E/M visits fully accounted for the complexity of certain kinds of visits, especially for those in the office setting, nor do they fully reflect appropriate relative values, since separate payment is not yet made for the O/O E/M visit complexity add-on (87 FR 69588).

During the CAA, 2021 moratorium on separate payment for the O/O E/M visit complexity add-on, interested parties have continued to engage CMS about the appropriate

valuation of O/O E/M visits relative to other PFS services, including through public comments on the proposed revaluation of Other E/M visits (87 FR 70218), as well as in meetings and letters submitted to CMS outside of the rulemaking process. Anticipating the end of the CAA, 2021 moratorium, interested parties, including the AMA, several medical associations, and others, recently approached CMS outside of the rulemaking process with recommendations regarding implementation and potential refinements to the service beginning in 2024 to ensure the appropriate relative valuation of O/O E/M visits. Interested parties have also continued to approach CMS and the CPT Editorial Panel with questions and recommendations about payment rules for split (or shared) visits.

## 2. Office/Outpatient (O/O) E/M Visit Complexity Add-on Implementation

### a. Background

As discussed above, in the CY 2021 PFS final rule, CMS refined the O/O E/M visit complexity add-on code, GPC1X (which was replaced by HCPCS code G2211), to describe intensity and complexity inherent to O/O E/M visits associated with medical care services that serve as the continuing focal point for all needed health care services and/or with medical care services that are part of ongoing care related to a patient's single, serious, or complex condition. (85 FR 84569 through 84571). While we adopted the AMA RUC recommendations for the revised O/O E/M CPT visit codes, those values did not fully account for the resource costs associated with primary care and other longitudinal care of complex patients. Under our final policy, which was delayed by the CAA, 2021 before it was implemented, the O/O E/M visit complexity add-on code could be reported with all O/O E/M visit levels. We disagreed with comments suggesting that billing of the O/O E/M visit complexity add-on code should be restricted to higher level office/outpatient E/M visits; and responded that, given the wide variety of visit types billable with the office/outpatient E/M visit code set, we did not believe that the value associated with the typical visit accounts for the additional resources associated with primary care or ongoing care related to a patient's single, serious, or complex chronic condition,

regardless of the visit level. The full descriptor for the O/O E/M visit complexity add-on code, as refined in the CY 2021 PFS final rule, is HCPCS code G2211 (*Visit complexity inherent to evaluation and management associated with medical care services that serve as the continuing focal point for all needed health care services and/or with medical care services that are part of ongoing care related to a patient's single, serious condition or a complex condition. (Add-on code, list separately in addition to office/outpatient evaluation and management visit, new or established)*) (85 FR 84571) We also estimated that the O/O E/M visit complexity add-on service would be reported by specialties that rely on office/outpatient E/M visits to report the majority of their services and would be billed in addition to those E/M visits. While we did not explicitly prohibit billing the O/O E/M visit complexity add-on in conjunction with visits that are reported with various modifiers, and did not exclude those from our utilization estimates, we stated we did not expect the add-on service to be reported for visits billed with a payment modifier, for example, to identify a separately billable E/M visit in conjunction with a minor procedure (85 FR 84571 through 84572). We stated that visits reported with payment modifiers are likely to involve resources distinct from the stand-alone O/O E/M visits for primary care and other longitudinal care of complex patients, and that we may consider this issue in future rulemaking. We further stated that we do not expect the O/O E/M visit complexity add-on code to be reported when the O/O E/M visit is reported with payment modifiers such as modifier -25 which describes separately billed visits on the same day as another visit or procedure (see our fact sheet, identifying additional modifiers, available at Physician Fee Schedule (PFS) Payment for Office/Outpatient Evaluation and Management (E/M) Visits – Fact Sheet ([cms.gov](https://www.cms.gov))).

Interested parties have continued to express uncertainty about when reporting the O/O E/M visit complexity add-on service would be appropriate. Some interested parties have expressed larger concerns about potential reductions to the PFS CF or redistributive impacts among specialties if we were to implement the O/O E/M visit complexity add-on code. In the CY 2021 PFS final rule, we clarified and refined the service definition to alleviate some of these

concerns and revised our utilization estimates (85 FR 84572). Conversely, some interested parties, specifically practitioners who rely on office/outpatient E/M visits to report the majority of their services, who could use the add-on code to better reflect the resources they use to furnish complex longitudinal services, expressed continued support for our policy. We reiterated our belief that the O/O E/M visit complexity add-on reflects the time, intensity, and PE resources involved when practitioners furnish the kinds of O/O E/M office visit services that enable them to build longitudinal relationships with all patients (that is, not only those patients who have a chronic condition or single high-risk disease) and to address the majority of a patient's health care needs with consistency and continuity over longer periods of time. In response to comments, we also made further refinements to the HCPCS code descriptor to clarify that the code applies to a serious condition rather than any single condition. We also acknowledged concerns that given the request by some medical societies for additional time to educate their members about the appropriate use of the O/O E/M visit complexity add-on code, ongoing implementation of the revisions to the O/O E/M visit code set, electronic health records integration, and the persistence of the COVID-19 pandemic, practitioners that rely on O/O E/M visits to report the majority of their services are not likely to report the complexity add-on code with every office visit. However, we disagreed with commenters who thought the O/O E/M visit complexity add-on code would be billed with only 10 to 25 percent of O/O E/M services. Because we had not implemented any additional policies that restricted the billing of this code, we estimated that the add-on code would be billed with 90 percent of O/O E/M visits billed by certain physician specialties (roughly 58 percent of all office/outpatient E/M visits).

b. O/O E/M Visit Complexity Add-on HCPCS code G2211

Interested parties have continued to engage with us and provide recommendations for implementing the O/O E/M visit complexity add-on. Some commenters recommended that CMS delay the implementation of HCPCS add-on code G2211, citing concerns about the expected budget neutrality adjustment necessitated by implementing the O/O E/M visit complexity add-on

and redistributive impact on PFS payment (85 FR 84572). Many commenters who rely upon O/O E/M visits to report most of their services continued to support HCPCS add-on code G2211 (85 FR 84570) and have recommended that we speedily implement it. Some commenters also suggested ways to clarify the intended use of the O/O E/M visit complexity add-on code, which could reduce redistributive impacts. Finally, as noted above, the values we established for the revised O/O E/M CPT codes in the CY 2021 PFS final rule were finalized in concert with a policy that would have provided separate payment for the new add-on code G2211 (87 FR 69588). To the extent we adopted the RUC-recommended values for Other E/M visits beginning in CY 2023, we expressed that we did not agree that the RUC-recommended relative values for E/M visits fully reflected appropriate relative values, since separate payment is not yet made for HCPCS code G2211.

The CAA, 2021 moratorium on Medicare payment under the PFS for HCPCS code G2211 will end on December 31, 2023. We proposed to change the status of HCPCS code G2211 to make it separately payable by assigning it an "active" status indicator, effective January 1, 2024. After considering the feedback from interested parties, both through the CY 2021 PFS rulemaking process and during the moratorium, we also proposed several policy refinements (with respect to HCPCS code G2211). We stated in the CY 2021 PFS final rule that we would not expect HCPCS add-on code G2211 to be reported when the O/O E/M service is reported with a payment modifier, such as the modifier -25, which denotes a separately billable E/M service by the same practitioner furnished on the same day of a procedure or other service (85 FR 84572). We continue to believe that separately identifiable O/O E/M visits occurring on the same day as minor procedures (such as zero-day global procedures) have resources that are sufficiently distinct from the costs associated with furnishing stand-alone O/O E/M visits to warrant different payment (85 FR 84572). As such we proposed that the O/O E/M visit complexity add-on code, HCPCS code G2211, would not be payable when the O/O E/M visit is reported with payment modifier-25.

Interested parties have also requested that we reconsider our previous utilization assumptions. In the CY 2021 PFS final rule, we had assumed that specialties that rely on O/O E/M visit codes to report the majority of their services would be most likely to report the O/O E/M visit complexity add-on code and that they would report the add-on code with every O/O E/M visit they report. We acknowledged commenters' concerns that, given the request by some medical societies to educate their members about appropriate use, and ongoing implementation of the revisions to the office/outpatient E/M visit code set and electronic health records integration, practitioners that rely on office/outpatient E/M visits to report the majority of their services would not be likely to report HCPCS code G2211 with every O/O E/M visit they report (85 FR 84572).

Interested parties have presented persuasive reasons that such practitioners would not be likely to report HCPCS code G2211 with every O/O E/M visit they report. They reasoned that many practitioners delivering care in settings specifically designed to address acute healthcare needs, without coordination or follow-up, will regularly have encounters with patients that are not part of continuous care.

Furthermore, in contrast to situations where the patient's overall, ongoing care is being managed, monitored, and/or observed by a specialist for a particular disease condition, we continue to believe that there are many visits with new or established patients where the O/O E/M visit complexity add-on code would not be appropriately reported, such as when the care furnished during the O/O E/M visit is provided by a professional whose relationship with the patient is of a discrete, routine, or time-limited nature; such as, but not limited to, a mole removal or referral to a physician for removal of a mole; for treatment of a simple virus; for counseling related to seasonal allergies, initial onset gastroesophageal reflux disease; treatment for a fracture; and where comorbidities are either not present or not addressed, and/or when the billing practitioner has not taken responsibility for ongoing medical care for that particular patient with consistency and continuity over time, or does not plan to take responsibility for subsequent,

ongoing medical care for that particular patient with consistency and continuity over time (85 FR 84570 and 84571).

These considerations taken together with our proposal that the O/O E/M visit complexity add-on code, HCPCS code G2211, would not be payable when the O/O E/M visit is reported with payment modifier -25 have informed our revised utilization assumptions. Considering the comments received by interested parties, and the reasons discussed above, we now estimate that HCPCS code G2211 will be billed with 38 percent of all O/O E/M visits initially. We calculated these revised utilization assumptions by considering the uptake of new codes in prior years and the O/O E/M billing patterns of all specialties. Specifically, we took into account the likelihood that primary care specialties will have a higher utilization of the add-on code than other specialties, surgical specialties will have the lowest utilization since they are less likely to establish longitudinal care relationships with patients, and other specialists are more likely to have longitudinal care relationships than surgical specialties but less likely than primary care specialists. We also revised our estimates by excluding (1) claims from practitioners participating in CMS capitated models and (2) claims for established patient visits performed by certain specialties that are unlikely to have a longitudinal care relationship with a beneficiary. We also accounted for the number of visits billed that were furnished as consults or to obtain a second clinical opinion and excluded these types of visits from our estimates. We estimated that HCPCS code G2211 could be billed with 54 percent of all O/O E/M visits when fully adopted. This fully adopted estimate was informed by considering the uptake of new codes after several years. We sought comment on these utilization assumptions and the application of this proposed policy for CY 2024.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* MedPAC appreciated our continued focus on ensuring that primary care clinicians and other clinicians who primarily furnish E/M services are accurately and

appropriately paid. MedPAC also stated that longstanding misvaluations in the fee schedule that have had a detrimental impact on accurate primary care valuation, focusing on the overvaluation of non-E/M services.

However, MedPAC did not support the agency's proposed approach to establish payment for the add-on code because, in their view (similar to some other commenters), there continues to be too much ambiguity regarding the code's use and the resource costs it is intended to reflect. MedPAC and other commenters expressed concern that without further clarification, the code would likely be misused and could potentially duplicate payments for other services. MedPAC noted that CMS had added several services that describe services related to the provision of longitudinal, comprehensive care, including care management or other non-face-to-face services (for example, chronic care management (CCM), principal care management (PCM), responding to patient portal messages, and remote patient monitoring (RPM)). Similarly, many commenters also questioned how the proposed complexity add-on code would reflect additional work intensity resulting from concurrently addressing multiple health complaints in a single visit, additional clinical staff time or supplies expended during a visit, or additional non-face-to-face activities associated with furnishing comprehensive, longitudinal care. Some commenters went further to assert that the code is duplicative and stated that the selection of visit level by medical decision making (MDM) and/or total time on the date of the encounter is flexible enough to address patient visit complexity requiring unusual resources.

*Response:* We appreciate the concerns raised by MedPAC and the other commenters. We strongly agree with MedPAC and others who state it is important to clarify what specific additional resources this code would better account for compared to the current available coding and associated valuations, including of care management services, prolonged services, and other non-face-to-face services. As proposed, the inherent complexity code would address what we believe are longstanding issues with coding and valuation of O/O E/M services that do not fully distinguish and account for resource costs for primary care and other longitudinal care for

complex patients, but specifically for visits associated with longitudinal, non-procedural care when compared to work RVUs for procedural services and visits furnished in association with procedural-based care. We believe that because E/M visit codes are intended to be used very broadly, the complexity of services required to provide this type of care is not fully incorporated as part of the valuation of the work RVUs when the E/M code itself is used as the primary way to report the work of the professional. In other words, while many medical professionals rely on procedural codes with work RVUs that account – appropriately -- for their particular expertise and the intensity associated with their overall costs in furnishing care, the expertise of those who rely predominantly on E/M services to report their services is left relatively underrecognized within the previous and current E/M coding and valuation structure. This is because E/M valuation is broad-based and the same E/M visit codes are routinely reported both alone and with many different procedural codes. We believe that this specific gap in appropriate valuation and coding is in addition to, and not overlapping with, the gaps in coding and valuation that led to the creation of care management coding, remote patient monitoring, etc. As we understand them, these latter codes describe services furnished and resource costs incurred in addition to the intensity and professional work within the visits themselves. Consequently, we do not believe the inherent complexity code would be duplicative of care management services since the inherent complexity better recognizes the professional work within the visit, while the care management codes recognize services that happen outside of the visit. This applies, of course, when the inherent complexity code is appropriately reported as a way to characterize E/M visits associated with medical care services that serve as the continuing focal point for all needed health care services and/or with medical care services that are part of ongoing care related to a patient's single, serious condition or a complex condition.

We recognize that many commenters, especially those concerned with budget neutrality-based payment reductions should the proposal be finalized and implemented, disagree with our assertion that there is historical (and ongoing) underrecognition in coding and valuation of

resources involved in primary and nonprocedural care are an inherent part of the coding and valuation system. Instead, we understand that they view the current disparities in overall payment amount as appropriately reflective of different resource costs in professional work between procedural care and primary and non-procedural care.

In contrast, MedPAC acknowledges the disparity as a significant problem but recommends the issue should be addressed outside of the assignment of RVUs and code definitions for primary care. We appreciate the commenters' perspectives and recognize that other payment mechanisms could be utilized (perhaps even less controversially) to address these problems, especially through the kinds of changes MedPAC has recommended to Congress. However, we believe that we have the obligation to value services as accurately as possible within the structure of the resource-based relative value system, and that until changes to coding and valuation are made to specifically address the underrecognition of the complexity inherent to these kinds of visits (either through this rule or another mechanism), the RVUs on the PFS would otherwise perpetuate the systemic undervaluation of primary and longitudinal, non-procedural care.

*Comment:* Other commenters supported the proposal and agreed that the O/O E/M visit complexity add-on code better accounts for the additional time, intensity, and practice expense inherent to longitudinal care. These commenters offered that the PCM codes account for care management and coordination over time as opposed to the additional complexity and resources involved in furnishing an office/outpatient E/M visit. They added that primary care physicians may provide care management and coordination services for a condition first addressed in an office/outpatient E/M visit that will not last as long as three months or would not reasonably be expected to result in a risk of hospitalization. These commenters highlighted COVID-19 cases, for instance, as clinical circumstances that generally do not last three months but may require significant acute management, care coordination, and follow-up within a given month, particularly for patients with comorbidities. They further stated that alternatively, physicians,

qualified health practitioners, or their staff may provide care coordination and management services for a condition that does meet these conditions, and the time may not reach the required 30-minute interval. Thus, care coordination for a month that includes 20 minutes of consulting with other physicians and modifying medications to address an acute exacerbation of hypertension would not meet the requirements for billing PCM. Despite the inability to bill for these services, ongoing coordination and medication management is a standard part of comprehensive primary care. The commenters stated that the distinctions and limitations of TCM, CCM, and CCCM are similar with specific time thresholds. With respect to prolonged services codes, these commenters noted that primary care physicians often provide complex office visits without requiring additional time given that their training enables them to address a significant number of diagnoses, risk factors, and symptoms in a short time. Commenters added further that when prolonged services codes are billed, they are not valued to include the additional intensity inherent to primary care.

The commenters stated that the complexity inherent in primary care includes evaluating how each condition and resulting treatment, new symptom or challenge, unmet social needs, and recommended preventive services interact and impact a person's overall wellbeing. The visits involve balancing clinical guidelines and recommendations from a multitude of sources including the United States Preventive Services Task Force, the AAFP, the American College of Physicians or the American Academy of Pediatrics (depending on the patient's age), the American Psychiatric Association, the American College of Obstetricians and Gynecologists (when relevant), the Advisory Committee on Immunization Practices, and other evidence such as that published by the CDC. They added that the primary care visit also involves evaluating biochemical processes and drug interactions across several medications, noting the extensive time counseling patients about new and upcoming vaccines, like those for COVID-19 or respiratory syncytial virus. The visit further involves the evaluation of lab and imaging results sent by various care team members, reports from home health aides or nurses, and immunization

registries. They added that primary care physicians and practitioners evaluate the persons' understanding of their diseases and treatments and discuss behaviors or habits that could impact their well-being. In the same encounter, primary care practitioners provide several preventive screenings, including for cancer, behavioral health, and substance use disorders. They provide counseling and brief referrals based on the results of those screenings, including help connecting patients to facilities providing mammograms, colonoscopies, or behavioral health diagnoses. The commenters asserted that most Medicare beneficiaries struggle to afford their health care services and medications, so many primary care physicians spend time on pharmacy discount websites alongside their patients to help them get lower prices on their medications. The commenters also stated that most orders for new screening or diagnostic tests will require prior authorization for patients with primary or secondary insurance through a plan administered by a health insurance company. All of these findings and processes require documentation in the medical record and updates to other health team members, such as an endocrinologist, cardiologist, or psychiatrist. Commenters offered clinical examples from primary care physicians.

*Response:* We appreciate the support from these commenters. After consideration of public comments, we are finalizing changing the status of HCPCS code G2211 to make it separately payable by assigning it an "active" status indicator, effective January 1, 2024, as proposed. In addition, in consideration of the many comments we received, we recognize that we should clarify when this code can be used. Specifically, this add-on code is intended to characterize the base service (that is, O/O E/M visits) based on the kind of care being furnished (medical care services that serve as the continuing focal point for all needed health care services and/or with medical care services that are part of ongoing care related to a patient's single, serious, or complex condition) to better account for the inherent complexity of these visits that would otherwise be unaccounted for. We note that the application of the add-on code is not based on the characteristics of particular patients (even though the rationale for valuing the code

is based on recognizing the typical complexity of patient needs) but rather the relationship between the patient and the practitioner. We agree with commenters who have pointed out that O/O E/M visit levels, care management codes, and prolonged service codes are intended to account for additional minutes of time or complexities for individual patients. This code should be used when furnishing O/O E/M visit associated with medical care services that serve as the continuing focal point for all needed health care services and/or with medical care services that are part of ongoing care related to a patient's single, serious condition or a complex condition.

We clarify that it is the *relationship* between the patient and the practitioner that is the determining factor of when the add-on code should be billed. First, the “continuing focal point for all needed health care services” describes a relationship between the patient and the practitioner, when the practitioner is the continuing focal point for all health care services that the patient needs. For example, a patient has a primary care practitioner that is the continuing focal point for all health care services, and the patient sees this practitioner to be evaluated for sinus congestion. The inherent complexity that this code (G2211) captures is not in the clinical condition itself— sinus congestion —but rather the cognitive load of the continued responsibility of being the focal point for all needed services for this patient. There is previously unrecognized but important cognitive effort of utilizing the longitudinal relationship itself in the diagnosis and treatment plan and weighing the factors that affect a longitudinal doctor patient relationship. In this example, the primary care practitioner could recommend conservative treatment or prescription of antibiotics. If the practitioner recommends conservative treatment and no new prescriptions, some patients may think that the doctor is not taking the patient’s concerns seriously and it could erode the trust placed in that practitioner. In turn, an eroded primary care practitioner/ patient relationship may make it less likely that the patient would follow that practitioner’s advice on a needed vaccination at the next visit. The primary care practitioner must decide—what course of action and choice of words in the visit itself, would lead to the best health outcome in this single visit, while simultaneously building up an effective, trusting

longitudinal relationship with this patient for all of their primary health care needs. Weighing these various factors, even for a seemingly simple condition like sinus congestion, makes the entire interaction inherently complex, and it is this complexity in the relationship between the doctor and patient that this code captures.

The second part of the add-on code also describes a *relationship* between the practitioner and patient, but for specific types of conditions. The add-on code describes “medical care services that are part of ongoing care related to a patient's single, serious condition or a complex condition.” Again, the “ongoing care” describes a longitudinal relationship between the practitioner and the patient. In comparison to the previous example, though, this is specifically in reference to a single, serious condition or a complex condition. For example, a patient with HIV has an office visit with their infectious disease physician, who is part of ongoing care. The patient with HIV admits to the infectious disease physician that there have been several missed doses of HIV medication in the last month. The infectious disease physician has to weigh their response during the visit—the intonation in their voice, the choice of words—to not only communicate clearly that it is important to not miss doses of HIV medication, but also to create a sense of safety for the patient in sharing information like this in the future. If the interaction goes poorly, it could erode the sense of trust built up over time, and the patient may be less likely to share their medication adherence shortcomings in the future. If the patient isn’t forthright about their medication adherence, it may lead to the infectious disease physician switching HIV medicines to another with greater side effects, even when there was no issue with the original medication. It is because the infectious disease physician is part of ongoing care, and has to weigh these types of factors, that the E/M visit becomes inherently more complex and the practitioner bills this code (G2211). Even though the infectious disease doctor may not be the focal point for all services, such as in the previous example, HIV is a single, serious condition, and/or a complex condition, and so as long as the relationship between the infectious disease physician and patient is ongoing, this E/M visit could be billed with the add-on.

We appreciate the clarifying questions raised by commenters on the appropriate usage of this add-on code. We will continue to engage with interested parties on the use of this code and will consider developing additional educational materials as needed.

*Comment:* Another commenter who supported our proposal offered clinical scenarios they thought were excellent examples of the complexity of care this code was intended to address:

*Example A:* A patient with sickle cell disease (SCD) visits the clinic to see her hematologist and has clearly deteriorated cognitively. The physician needs to understand if this is dementia or SCD-related. Most of the time during the patient's visit is spent ordering neurocognitive testing and consulting with psychiatry.

*Example B:* A patient with SCD needs to be prescribed oxycontin for their chronic pain. The provider also spends time during the patient's visit managing other medications and then seeking the appropriate pre-approval and prior authorization for oxycontin.

*Response:* We thank the commenter for providing these clinical scenarios. However, the most important information used to determine whether or not the add-on code could be billed is missing: the relationship between the practitioner and the patient. If the practitioner is the focal point for all needed services, such as a primary care practitioner, this add-on code could be billed in these examples. Or, if the practitioner is part of ongoing care for sickle cell disease (a single, serious and complex condition) then the add-on code could be billed. Otherwise, this add-on code could not be billed. Again, this add-on code captures the inherent complexity of the visit that is derived from the longitudinal nature of the practitioner and patient relationship.

We also note unequivocally that this code is not restricted to medical professionals based on particular specialties. Instead, it should be used by medical professionals, regardless of specialty, with O/O E/M visits (other than those reported with the -25 modifier) for care that serves as the continuing focal point for all needed health care services and/or with medical care services that are part of ongoing care related to a patient's single, serious condition or a complex

condition. We reiterate that when physicians and other practitioners provide care that serves as the continuing focal point for all needed healthcare services, they should report the inherent complexity add-on code along with all reasonable and necessary O/O E/M visits (not reported with the -25 modifier).

*Comment:* We received many comments on our proposal to not make payment for HCPCS G2211 when the underlying O/O E/M visit had been reported with modifier -25. Many commenters were supportive. Some commenters opposed our proposal excluding payment when there were underlying visits with modifier -25 because they believed some preventive services would be rescheduled to a later date. One of these commenters suggested that a more appropriate mechanism for addressing any distinction between a stand-alone O/O E/M service and one at which a physician elects to also perform a minor procedure is the National Correct Coding Initiative (NCCI) edits that could be revised to bundle code G2211 to codes for minor surgical procedures that are commonly performed in the primary care or other non-procedural specialty care setting. She further suggested a better option could be the creation of HCPCS codes that are not add-on codes but rather adequately valued codes representing visits for longitudinal care for all of a patient's health care needs and/or ongoing care related to a patient's single, serious, or complex condition which she believed might represent a significant reduction in the burden of the add-on code assignment, audit/overpayment risk, and stress until in her view a better health care system design can be established for delivering and funding these services.

Several commenters echoing the concern for preventive services requested that the annual wellness visit be excepted from the policy. Another commenter stated that modifier -25 is often used in cases where clinicians are treating complex patients since these patients are likely to receive multiple services on the same day. They stated that excluding these cases therefore may be counter to the ultimate goal of appropriately valuing complex O/O E/M services.

Another commenter wrote that patients often travel long distances to receive care at their

facilities requiring multiple visits with different specialists for a variety of medical management and interventions on the same day to treat a variety of disease co-morbidities related to their cancer care. They stated it would be appropriate for their primary treating physician to bill the G2211 add-on code for the on-going coordination effort related to these complex treatment plans regardless of the multiple visits occurring on the same day. Another commenter stated that urologists frequently manage multiple chronic conditions simultaneously and that certain diagnostic procedures are commonly performed as part of the ongoing management of a patient with chronic genitourinary disease. They recommended that CMS consider permitting the use of modifier -25 in those situations where the surgical code is associated with a 0-day global period and where the sites of service are any of the O/O settings. They also suggested that specific CPT codes 52000 and 51741 be exempt from our policy to not pay the inherent complexity add-on when modifier -25 is reported on the base O/O E/M code so that urologists could continue to perform these tests and be appropriately paid for providing longitudinal care for the multiple chronic conditions they manage simultaneously.

*Response:* We thank commenters for raising these concerns and offering suggestions on how we might refine the policy. First, we are clarifying that modifier -25 is reported in instances where the physician or practitioner billing the O/O E/M is the same one who is billing the significant separately identifiable procedure or other service on the same day. Commenters seemed to incorrectly suggest modifier -25 was reported with an O/O E/M visit if the patient had a visit or procedure with another physician or another practitioner on the same day as the physician or practitioner billing the O/O E/M visit. With respect to the concern that a physician or practitioner would not perform a preventive service on the same day as an O/O E/M visit merely to avoid our policy to not pay G2211 when the O/O E/M visit is reported with modifier -25, we intend to monitor the utilization of this code and continue engagement with interested parties as this policy is implemented. With respect to the suggestion for a new set of parallel codes for the kind of care captured by inherent complexity add-on code we believe such a set of

codes could increase administrative burden with minimal benefit gained and unnecessarily delay reactivation of the complexity add-on code and payment. Similarly, we believe relying on NCCI edits to single out unbundled procedures or services with which G2211 should not be billed would also increase administrative burden and delay reactivation. Finally, for future rulemaking and as discussed in the next section, we remain open to considering additional iterations in coding and valuation within the PFS that would meet the same goals regarding the appropriate valuation of these services.

*Comment:* Many commenters expressed concerns or disagreed with our utilization estimates for G2211. Many commenters were appreciative that we have revised our utilization estimates resulting in a smaller negative impact on the budget neutrality conversion factor. However, most commenters urged to further refine these assumptions to prevent reductions in the conversion factor that they noted might, in fact, not be warranted by actual usage. They suggested that there continues to be a lack of clarity surrounding the appropriate circumstances for reporting the inherent complexity add-on code and that combined with potential implications for patient cost-sharing, health care practitioners would experience ambiguity toward billing the code, which could result in our having overestimated utilization. Many other commenters asked that we align utilization estimates with the actual first year utilization of care management codes for transitional care management (TCM) and chronic care management (CCM). Some commenters asked us to make mid-year adjustments to the conversion factor if in our monitoring we find that we overestimated utilization of the code.

*Response:* We have considered the suggested factors but do not believe those care management codes are an apt comparison for G2211 utilization, given several limitations in their code descriptors and other requirements which are not applicable to the inherent complexity add-on code. We also believe that the documentation requirements specific to the care management codes may have contributed to the slower uptake in utilization than was estimated for the first year. Additionally, we believe the additional clarifications we are making in this final rule about

when it is appropriate to bill the inherent complexity add on code will give practitioners increased confidence to bill the inherent complexity add-on code appropriately. Finally, we note that we make budget neutrality calculations on a prospective annual basis and would not be able to make mid-year retrospective adjustments to the conversion factor as was suggested by some commenters. CMS uses claims data for the services as they become available in subsequent years, to inform budget neutrality adjustments that would apply for a given year.

c. Request for Comment About Evaluating E/M Services More Regularly and Comprehensively

Over the last several years, we have received suggestions/recommendations outside of the rulemaking process that CMS consider using a different approach for valuing services that rely on research and data other than the AMA RUC's specialty-specific valuation recommendations. These commenters have highlighted that the evolving practice of medicine looks significantly different than it did when the resource-based relative value scale (RBRVS) was established three decades ago. Disease prevention and health promotion have grown in practice, and patient expectations are higher for managing hypertension, diabetes, and hypercholesterolemia. Additionally, more pharmaceuticals and new biologics have expanded therapeutic options for non-procedural care. Commenters have suggested convening expert panels that might review pertinent research and recommend resource recalibrations to update relative values under the PFS. The commenters suggested that such independent assessments could support CMS and the broader health delivery and health finance community in addressing growing distortions in resource allocations under the PFS for certain types of services, including evaluation and management visits and other non-procedural/non-surgical services.

For many years, CMS has worked to address coding and payment deficiencies, explicitly focusing on instances where resources are not well accounted for in the inputs for certain services, including where significant differences in relative resources involved in furnishing care are not reflected in the coding distinctions, or where too-specific coding makes valuation at appropriate intervals impractical. As we continue ongoing work to establish resource-based

relative units for PFS services, we have sought and still seek public comment about the potential range of approaches CMS could take to improve the accuracy of valuing services. We continue to be interested in how we might improve the accuracy of valuation for services, and sought information about how we might evaluate E/M services with greater specificity, more regularly and comprehensively in the proposed rule.

As we consider how CMS can potentially move forward with reforms to the way we establish values for E/M and other services, we specifically sought comment in the proposed rule from the public on the following questions:

- a. Do the existing E/M HCPCS codes accurately define the full range of E/M services with appropriate gradations for intensity of services?
- b. Are the methods used by the RUC and CMS appropriate to accurately value E/M and other HCPCS codes?
- c. Are the current Non-E/M HCPCS codes accurately defined?
- d. Are the methods used by the RUC and CMS appropriate to accurately value the non-E/M codes?
- e. What are the consequences if services described by HCPCS codes are not accurately defined?
- f. What are the consequences if services described by HCPCS codes are not accurately valued?
- g. Should CMS consider valuation changes to other codes similar to the approach in section II.J.5. of this rule?

In the proposed rule, we stated that we are particularly interested in ways CMS could improve processes and methodologies. We requested that commenters provide specific recommendations on improving data collection and making better evidence-based and more accurate payments for E/M and other services. We expressed particular interest in ways that we can make more timely improvements to our methodologies to reflect changes in the Medicare

population, treatment guidelines, and new technologies that represent standards of care. We also asked for recommendations to ensure that data collection from and documentation requirements for physician practices are as least burdensome as possible while maintaining strong program integrity requirements. Finally, we also expressed interest in whether commenters believe that the current AMA RUC is the entity that is best positioned to provide -recommendations to CMS on resource inputs for work and PE valuations, as well as how to establish values for E/M and other physicians' services; or if another independent entity would better serve CMS and interested parties in providing these recommendations.

We received public comments on some or all of these questions from more than 50 commenters. The following is a summary of the comments we received and our responses.

*Comment:* In response to a., “Do the existing E/M HCPCS codes accurately define the full range of E/M services with appropriate gradations for intensity of services?” some commenters responded that recent revisions of the E/M services were extensive and specifically addressed the granularity of services by allowing for gradation in reporting through allowing use of medical decision making or time on the date of the encounter (straightforward, low, moderate, and high), further enhanced by the development of coding for prolonged services. They believe the prolonged services codes, non-face-to-face services codes, clinical staff services codes, screening codes, care management codes, and HCPCS Category II codes reported for the evaluation and management of a patient allow for reporting of many nuanced interactions with a patient both on the day of encounter and between encounters. They expressed concern that HCPCS codes that CMS has added have created an unbundled component coding system with significant overlap of codes billable for the evaluation and management of Medicare beneficiaries and believe that while E/M and care management services have a sufficient gradation of intensity of work, they do not comprehensively define typical work, resulting in duplicative payment that CMS has not audited.

Other commenters believed that the acuity between higher-level E/M codes is often quite

steep and inconsistent with the differential between lower-level codes. They believed that rapid implementation of G2211 is necessary in accounting for this higher acuity and complexity. Similarly, another commenter stated that O/O E/M encounters represent a broad and diverse range of diagnoses and that the full set of E/M codes is relatively small, given the wide variety of encounters they are meant to describe. They added that CPT is better at describing discrete procedures than E/M services, especially E/M services that represent continuous, comprehensive primary care. Another commenter stated that the RUC tends to value codes primarily based on the physical skill involved and that cognitive services (that is, critical thinking involved in data gathering and analysis, planning, management, decision making, and exercising judgment in ambiguous or uncertain situations) are routinely undervalued. Another commenter suggested that many primary care activities are not accounted for under fee-for-service (FFS) payment. They stated that over the past decade, CMS has expanded the range of E/M services separately billable under the PFS but are concerned this piecemeal, code-by-code approach within the PFS may never fully account for the resources used to furnish primary care. They do not see the PFS as it is currently configured to be a platform allowing Medicare to pay for a broad range of elements defining primary care. Another commenter stated that the current high-level O/O E/M service codes do not distinguish between managing a few concurrent conditions, many concurrent conditions, and a single highly intense condition effectively. They further asserted that the original gradations within the outpatient and inpatient E/M service code families were not based on clinical evidence but rather Medicare payment data, which was likely distorted, and there has been no attempt to address these gradations. Another commenter stated they did not believe that the current outpatient and other E/M service codes reflect the work and resources required to deliver non-procedural and cognitively intense care to Medicare beneficiaries. They stated that the most recent revisions of E/ M service code definitions and valuations have not remedied the original problems and failed to capture the intensity of E/M care, particularly the care provided to Medicare beneficiaries with one or more complex comorbid conditions.

*Response:* We appreciate commenters' assertion that the current E/M coding structure does not adequately capture certain types of primary care. Our established policy for the complexity add-on code, as finalized in the CY 2019 PFS final rule and proposed with modifications for CY 2024, is rooted in our long-standing assessment that there are certain complexities inherent in furnishing some kinds of E/M visits that the current E/M coding and visit levels do not fully recognize, similar to what the commenters have highlighted. We continue to believe about how best to address this issue within the framework of the PFS and welcome ongoing dialogue with all interested parties.

*Comment:* In response to b. "Are the methods used by the RUC and CMS appropriate to accurately value E/M and other HCPCS codes?" many commenters responded that they believed the methods used by the RUC and CMS are appropriate to value E/M and other HCPCS codes. They stated that standard packages for pre-service time, post-service time, practice expense direct input benchmarks, and pre-service clinical staff time packages were implemented, allowing for enhanced relativity and comparison among all services. They relayed that the median number of RUC survey respondents in recent years is 70, with surveys for high-volume services having more than 100 physician respondents. They added that the recent office visit RUC survey yielded the highest number of responses in the history of the RUC process, with 1,700 physicians completing the survey. They stated that the survey was the concerted effort of 51 specialty societies and other healthcare professional organizations that represented 95 percent of Medicare claims for E/M office visits. They further added that the RUC incorporates extant data when possible, such as data from the Society of Thoracic Surgeons, American College of Cardiology, and National Surgical Quality Improvement Program (NSQIP). These commenters requested that CMS make one methodological improvement to restore the Refinement Panel process, serving as an appeal process for those commenting on CMS's proposed relative values. Another commenter expressed concern that unlike the RUC's process, which they stated is based on statistics, CMS's methods to assign values to E/M and other HCPCS codes, especially G-

codes, are opaque and not scientifically sound. They stated in doing so, CMS undermines the relative nature of the PFS. Another commenter explained that to identify potentially misvalued services, the RUC identifies, maintains, and reviews a list of new services and services that use new technology, develops objective screens based on defined criteria, and examines all services in which utilization estimates are more than expected.

In their comment letter to the proposed rule, MedPAC highlighted their long-standing problems with the data and processes used to set different services' RVUs, which they concluded have led to certain services (for example, procedures, imaging, and tests) becoming overvalued relative to other services (for example, E/M services). They believe CMS relies heavily on RUC recommendations when setting RVUs, even though most of the RUC's members have a financial stake in setting payment rates, about which researchers have expressed RUC transparency and objectivity concerns. MedPAC further stated that as far back as 2006, they recommended that CMS augment the RUC with a standing panel of experts that could help the agency identify overvalued services and review recommendations from the RUC. They also recited some of their other past recommendations. They added that, in their view, a wide range of codes should be reviewed using new data and analyses, beginning with the 10- and 90-day global surgical codes. They noted that because of the evidence of the substantial overvaluation of 10- and 90-day surgical global codes, they have continued to support CMS's prior proposal to convert all 10- and 90-day global surgical codes to lower-priced 0-day global codes and allow practitioners to separately bill for postoperative visits on a FFS basis (that is, outside of the global package). Some commenters shared this view about global surgical codes, whereas others took an opposite view in response to the questions below.

Other commenters stated that the methods used by the RUC and CMS do not lead to accurate valuation and that the problems lie with the nature of E/M services and the PFS's budget neutrality adjustment. They stated that the resources used in furnishing the work portion of E/M services are primarily a function of the time the clinician spends with the patient and,

therefore, are not amenable to efficiency gains and that the valuation process is not responsive to efficiency gains, leading to passive devaluation of E/M services under the constraints of budget neutrality. They recommend a robust process, supported by an expert advisory panel, to review misvalued services, which would focus on replacing magnitude estimation with a building block approach to valuation. Other commenters stated that they believed there were several methodologic issues in the RBRVS initial work done by Bill Hsiao and Peter Braun, some of which were identified by the original investigators, undermining its ongoing value. They stated that clinically significant factors, such as the expertise needed to manage specific complex clinical conditions or multiple simultaneous clinical conditions, are not currently recognized. They stated low response rates and small sample sizes for the RUC surveys distinguished this feature from the original methodology employed by Hsiao et. al., whose validity depended critically on robust sample sizes. These commenters suggested additional data sources could result in more robust recommendations and recommend that CMS invest resources in other supplemental sources of information, especially physician time, rather than relying almost exclusively on the RUC. Another commenter stated that the current survey methodology has several limitations that impact both E/M and non-E/M services, including low response rates, an inability to determine if the responses received are accurate reflections of real-world clinical practice and substantial variations in modern-day clinical practice for the same HCPCS code across different specialties. They added that more direct methodologies might be more costly and burdensome. Still, they would reflect the actual time and effort inherent to a particular HCPCS code more accurately. They believe that time and motion studies could be used to determine the required resources for RBRVS. Another commenter stated that it is more difficult to quantify the physician work involved in E/M services than for more specific procedural service vignettes in the RUC survey process, given that the survey focuses on the “typical” patient and distributes surveys based on vignettes for E/M services that are much less specific. They added that the input of the primary care specialties that provide the most complex E/M services and do so most

commonly is undervalued when these broad E/M vignettes are surveyed across more than 50 specialty societies, many of which do relatively few and much more straight-forward E/M visits than primary care.

Another commenter stated that fundamental problems with the outpatient and other E/M codes would not be solved by the existing processes employed by the Current Procedural Terminology (CPT)<sup>®</sup> Editorial Panel and the American Medical Association (AMA) RUC. They stated there is an expertise bias on the RUC toward procedural care based on the panel's composition influencing how services are valued. They posited that a significant portion of the value of E/M and other non-procedural services lies in the physicians' skills and expertise in diagnosing and managing complex conditions, coordinating care, considering the patient's overall health and well-being, and making treatment decisions that consider various factors beyond just the face-to-face interaction between the physician and patient, which is harder to quantify in a survey.

*Response:* We appreciate the perspectives shared by commenters and recognize that there are opportunities to improve how all services are valued and better account for resource variation for different types of care under the PFS. Our policy for the complexity add-on code reflects several years of consideration and engagement with interested parties to address these long-standing issues. However, we view our implementation of the inherent complexity add-on code as an improvement in valuation and coding compared to the status quo, not necessarily an end in itself. We welcome engagement on this broader issue of recognizing costs for specific services as we have described, including through our usual review of coding and recommendations for PFS services from the AMA editorial panel, RUC, and other interested parties.

*Comment:* In response to c., "Are the current Non-E/M HCPCS codes accurately defined?" some commenters responded, yes, the current non-E/M HCPCS codes are accurately defined through the CPT Editorial Process and called the process a respected method that is best

suites to preserve accurately defined medical codes. They added that not only are HCPCS level I CPT codes generated and accurately defined, but the reporting guidelines and instructional parentheticals are also established to ensure proper usage and reporting of such codes. These commenters stated that, in contrast, descriptors for HCPCS level II codes developed by CMS through an application process twice per year or as C-codes and G-codes are often ill-defined because CMS does not differentiate them from existing HCPCS level I CPT codes, resulting in reporting confusion. Other commenters stated that the PFS has experienced a proliferation of non-E/M codes whose fine-tuning of time and intensity to distinguish minor variations in resource costs creates a false sense of accuracy because empirical times are subject to unavoidable measurement error and intensity estimations should be limited to a few clearly-defined intervals.

*Response:* We thank the commenters for their feedback. We recognize the role that certain interested parties play in establishing the HCPCS level I coding that healthcare practitioners use to bill for the services they furnish and note that we routinely rely on the CPT coding process as a critical part of our process for recognizing and paying for such services under the PFS. We also acknowledge that in some circumstances, when we must act to address beneficiary access or practitioner payment issues, we can establish HCPCS level II coding, and we do so in the public interest, reflecting our consideration of appropriate coding and provider administrative burden. We also recognize that there are intrinsic limitations in the level of specificity in time and intensity as reflected in the RBRVS, regardless of the origin of the service definition in coding or how many survey responses are considered in the valuation process.

*Comment:* In response to d., “Are the methods used by the RUC and CMS appropriate to accurately value the non-E/M codes?” commenters stated that it is important that all services be examined via the same resource-based relative value scale methodology to ensure fairness, consistency, and relativity. Another commenter stated that CMS has often discounted intensity and over-relied on time as a measure of value. They characterized intensity as based on requisite

education and training, dealing with complex patient cases that are physically challenging during treatment with a risk of unexpected intraoperative complications. They stated that managing these patients requires considerable mental effort and judgment, with the procedure's outcome more dependent on the surgeon's skill than the time necessary to accomplish it. Other commenters believed that the process used by CMS is typically a calculation made by a nonphysician practitioner (NPP) using math without physician validation. They stated that a glaring example of CMS inaccurately valuing non-E/M codes is the failure to incorporate the RUC-recommended work and time incremental increases for the revised office/outpatient visit E/M codes into global codes. They noted that CMS did finalize adjustments for other bundled services, such as maternity codes, in the CY 2021 PFS. They implored CMS to follow precedent and correct this issue. They also believed that recent decisions had been incorrectly made solely on time, without adequate consideration of the intensity involved, and that time should not be the deciding factor in code valuation. Some commenters stated that the methods used by the RUC are appropriate to value E/M and non-E/M codes. They believed the underlying RBRVS methodology remains relevant today and that the RUC valuation process continues to improve with the development of numerous standards/policies/conventions to improve relativity and ensure consistency. They remarked that standard packages for pre-service time, post-service time, practice expense direct input benchmarks, and pre-service clinical staff time packages have been implemented, allowing for enhanced relativity and comparison among all services. Another commenter voiced frustration at what they characterize as a lack of rationale provided for CMS' decisions when they differ from RUC recommendations. They stated that it is difficult to respond when CMS' rationale is only a "belief" that a crosswalk to another code is better than the RUC recommendation or the data from the survey. They added that, without additional substantive rationale, just because a CPT code has the same intra-service or total time, does not mean another code should share its exact physician work RVU. They and other commenters urged CMS to consider restoring the Refinement Panel process that served as an appeals process for

those commenting on CMS proposed relative values.

Other commenters stated that there is ample evidence that many non-E/M services are overvalued due to time over-estimations and payment for bundled post-operative visits that rarely occur. Additionally, they stated that unlike under the original Harvard study methodology, on which the RUC magnitude estimation process relies, RUC survey respondents are likely aware that a higher rating of time and work directly leads to a higher work RVU for the rated procedure. They added that this problem is illustrated in the CMS proposed rule section on the valuation of specific codes where estimates and work RVUs, originating with whom they termed self-interested participants in the process, are evaluated at the statistical median, whereas others, out of a concern about inadequate data, are evaluated at the 25th percentile. They stated that choosing statistics this way does not overcome the problem of inadequate data and invites conflicts of interest. Furthermore, they stated that many survey respondents have not performed the service in question, as there is no requirement for it, calling into question the validity of their assessments. They recommended: (1) Moving the estimation of work from subjective magnitude estimation to analysis relying primarily on a measured-time-data-informed building block approach; (2) Routinely and periodically observing and collecting measured, actual-time data for work (and direct PE) from a rotating panel of practices and other healthcare providers; and (3) Adoption of a criterion for the misvalued codes initiative to identify codes within BETOS families that have aberrant intensity values, what the RUC has termed “rank order anomalies.” They recommended that accurate data collection, particularly for code-specific time data from practices, should be central to this review. Another commenter, taking a similar approach, suggested that CMS develop an agency-based independent process parallel to the RUC for service valuation. They envisioned this parallel process would take a fundamentally different approach to valuation that would use empirical data and the building block approach to value services. CMS might use the RUC estimates to determine valuation in selected situations. They posited that a CMS process would not be bound by the inherent distortions in representation

between cognitively intense and procedural specialties currently found in the RUC.

*Response:* We thank the commenters for their feedback on this specific question. We share the same concerns about effectively valuing and accounting for resources involved in furnishing in the services paid under the PFS, especially when considering codes of dissimilar structures. We recognize that there are varying perspectives on how to best reflect the inputs for services paid under the PFS, which is why we are engaging in this dialogue and asking these questions. As part of our obligation to maintain the PFS and ensure access to services for Medicare beneficiaries, we thoroughly review and consider available information, including recommendations and supporting information from the RUC, the Health Care Professionals Advisory Committee (HCPAC), public commenters, medical literature, Medicare claims data, comparative databases, comparison with other codes within the PFS, as well as consultation with other physicians and healthcare professionals within CMS and the Federal Government as part of our process for establishing valuations. In response to the comments expressing concern about our valuation review process, we note that our approach does consider the expertise supporting the RUC process. We primarily use the RUC-recommended values as a starting reference for services under review and then apply one of these several methodologies, which we have discussed in detail in past rules to account for adjustments to specific inputs that we believe were not otherwise reflected in the RUC-recommended value. We note our current process of proposing the majority of code values in a proposed rule, allowing the public to comment on those proposed values, and then finalizing those values in a final rule offers greater transparency and accountability than the refinement panels which we established to assist us in reviewing the public comments on CPT codes with interim final work RVUs. Our process also offers greater transparency and accountability than the refinement panels in balancing the interests of the specialty societies who commented on the work RVUs with the budgetary and redistributive effects that could occur if we accepted extensive increases in work RVUs across a broad range of services. Further, we have established an annual process for the public nomination of potentially

misvalued codes, which allows those who believe that values for individual services are inaccurate and should be readdressed through notice and comment rulemaking, including possibly through the RUC process, to bring those codes to our attention. We disagree with the comments asserting that we discount intensity entirely and rely on time alone as a measure of value for certain services, though we acknowledge commenters for particular codes have sometimes urged us to give more weight to assertions regarding greater relative intensity, much like some interested parties have urged us to consider intensity as reflected in survey data overall. Following our statutory authority, we have consistently considered revisions to valuations based on the relative resources involved in furnishing the service, which include time and intensity. We have always stated in past discussions on this issue that we believe that changes in time and intensity must be accounted for when developing work RVUs. Thus, when our review of recommended values reveals that changes in time are not accounted for in a RUC-recommended work RVU, the obligation to account for that change when establishing proposed and final work RVUs remains. If we were to disregard intensity altogether, the work RVUs for all services would be developed based solely on time values, and that is not the case, as indicated by the many services that share the same time values but have different work RVUs. For example, among the codes reviewed in this CY 2024 PFS final rule, CPT codes 76987, 97550, and 99497 all share the same total work time of 40 minutes. However, these codes had very different proposed work RVUs of 1.62, 1.00 and 1.50, respectively. These examples demonstrate that we do not value services purely based on work time; instead, we incorporate time as one of multiple factors in our review process, and we anticipate continuing to engage in constructive dialogue with the community regarding the appropriate weighing of time and intensity in establishing work RVUs.

*Comment:* In response to e., “What are the consequences if services described by HCPCS codes are not accurately defined?” some commenters stated that the RUC’s Relativity Assessment Workgroup (RAW) process helps to identify a lack of clarity or the need for change

in descriptions due to changing technology. They believed that CMS's differing coding methodologies for reporting prolonged services deepen the administrative burden for healthcare professionals and increase the potential for improper coding. Many commenters expressed that it is imperative that physicians have one set of clear codes and guidelines to report medical procedures and services and that if other HCPCS level II codes are created that are not accurately defined, it could lead to improper reporting of medical services to Medicare and other insurers. Another commenter stated that inappropriate utilization, particularly if no health benefit is obtained for the patient or population, can lead to high healthcare costs. Another commenter stated that when HCPCS codes are poorly defined, clinicians and other healthcare professionals may be challenged with when and how to confidently adopt HCPCS codes in their clinical practice, which can lead clinicians, other healthcare professionals, and their administrative staff to inadvertently misuse or misapply a HCPCS code, leaving them vulnerable to program integrity audits.

*Response:* We recognize the role that certain interested parties play in establishing HCPCS level I coding that healthcare practitioners use to bill for the services they furnish and note that we routinely rely on the CPT coding process as a critical part of our process for recognizing and paying for services under the PFS. We also acknowledge that in some circumstances, when we must act to address beneficiary access or practitioner payment issues, we establish HCPCS level II coding, and we do so in the public interest, reflecting our consideration of Medicare policy goals, appropriate coding, and healthcare provider administrative burden.

*Comment:* In response to f., "What are the consequences if services described by HCPCS codes are not accurately valued?" some commenters stated that the intent of the RBRVS is to ensure that the payment of one service is relative to the payment of another when accounting for the resources consumed in the provision of the service. They furthermore stated that if the relativity of one service is undervalued, physicians may not be able to sustain the practice of

providing that service in an office setting. Likewise, a significant overvaluation of a service may provide a financial incentive to perform the service. They added that the RUC created the RAW to develop objective and fair screens to identify potentially misvalued services and address these issues. Another commenter stated that there may be services described by multiple overlapping codes, likely resulting in duplicative billing and overpayments for a single service. They urged CMS to research and audit utilization of the over 150 CPT codes and HCPCS G-codes for reporting unbundled, finite pieces of E/M services for which they stated a potential for overpayment may result in fraud, waste, and abuse under the Medicare program.

MedPAC commented that when subsets of services are overvalued, it causes the gap between the compensation of different clinical specialties to be more significant than it otherwise would be. They reported that in 2021, the median compensation for surgical specialties was \$441,000, well above the \$264,000 that primary care physicians earned. They added that this large compensation gap makes careers as primary care providers less financially attractive than careers as specialists and may be a factor in why the supply of primary care physicians in the U.S. has been declining in recent years. Other commenters expressed similar views, citing MedPAC and a National Academies of Science, Engineering, and Medicine (NASEM) 2021 consensus report that concluded that the current approach to FFS valuation has “resulted in systematically devaluing primary care services relative to other services and its population health benefit...”

*Response:* We agree that there may be distortions in the PFS that result from disparities in coding and valuation, which is at the core of the issue we have highlighted and are working to address by implementing the inherent complexity add-on code as discussed above.

*Comment:* In response to g., “Should CMS consider valuation changes to other codes similar to the approach in section II.J.5. of this rule?” some commenters stated that CMS should not consider valuation changes like the approach in section II.J.5. of the CY 2024 PFS proposed rule. They remarked that the calculation proposed for the increase in behavioral health services

is not resource-based and could potentially distort the RBRVS. They added that section 6102 of the Omnibus Budget Reconciliation Act of 1989 (Pub. L. 101-239) that created the RBRVS requires that the relative values are based on resource costs. They stated that CMS should not use arbitrary calculations to adjust specific services performed by one specialty to tackle issues outside of the scope of the RBRVS payment system and that access and shortage issues should be addressed through legislative solutions and funded by Congress.

*Response:* We do not agree that recognizing distortions in valuation and accounting for them within the RBRVS departs from basing valuation on resources. Instead, we believe that deliberate failure to account for systemic distortions in the methodologies, once recognized, would violate resource-based valuation. We look forward to continued engagement with interested parties so that more comprehensive and consensus-based solutions to address these distortions within the ratesetting methodologies can be implemented. We received public comments in response to our requests, following the items a. through g., for recommendations on a series of specific topics: improving data collection and making better evidence-based and more accurate payments for E/M and other services; making more timely improvements to our methodologies to reflect changes in the Medicare population, treatment guidelines, and new technologies that represent standards of care; ensuring that data collection from and documentation requirements for physician practices are as least burdensome as possible while maintaining strong program integrity requirements; and finally whether commenters believe that the current AMA RUC is the entity that is best positioned to provide -recommendations to CMS on resource inputs for work and PE valuations, as well as how to establish values for E/M and other physicians' services, or if another independent entity would better serve CMS and interested parties in providing these recommendations.

*Comment:* In response to the interest we expressed in hearing potential ways that we could improve processes and methodologies, and our request that commenters provide specific recommendations on ways that we can improve data collection and make better evidence-based

and more accurate payments for E/M and other services, some commenters stated that the RUC is continuously improving its processes to ensure it best utilizes reliable, extant data., as noted above, in response to “b.” Another commenter stated that while the RUC can recommend relative work RVUs and direct PE details, because adjustments for inflation have not been applied to such services via statute, CMS cannot pay providers at the appropriate rate for the work and PE measured. They stated that to make more accurate, evidence-based payment for E/M and other services, Congress must adjust the factors that impact reimbursement rates under the PFS, and they urged CMS to support such Congressional efforts. They also encouraged CMS to consider examining electronic health record (EHR) data as a credible source for provider work, not only for global codes but also for services provided by PCPs over a 30-to-90-day period to ensure there is no overlap in work. They added that services reported over the 10-day global period for E/M office visits should also be reviewed for duplicative work and that because many services can be reported using time, a time modifier could enhance the ability for EHR and other program integrity audits to identify overlapping services provided in person or via telehealth.

Another commenter recommended that CMS consider using a supplemental independent panel of experts to provide recommendations on evidence-based and accurate valuation of services under the PFS. They stated that a more formalized process for submitting data to CMS (including publicizing how, where, and by when to submit available data) could also be helpful to stakeholders who are not as regularly engaged with the staff who draft the PFS proposed and final rules to share any data they do have access to.

We also received public comments in response to our particular interest in recommendations on making more timely improvements to our methodologies to reflect changes in the Medicare population, treatment guidelines, and new technologies that represent standards of care.

*Response:* We appreciate the commenters’ concerns and acknowledge that there are

changes in treatment standards and new technologies that should be recognized better in the PFS. Moreover, we realize that aspects of the PFS methodology need to be revised to better account for these changes. Over the last several years, we have engaged in research to identify viable approaches to updating the data inputs we use to better set payment rates to reflect these changes. We thank the commenters for their thoughts, as your engagement is crucial to our ongoing efforts to understand critical variables in any attempt to reform the PFS, including identifying alternate data sources (like EHRs) to support the refinement of data inputs or, more broadly, identifying how to proceed within our existing statutory authority or when congressional may be required to facilitate necessary fundamental changes to calculating physician payment rates.

*Comment:* Many commenters suggested that CMS may improve methodologies by improving access to Medicare and Medicaid data. They added that disseminating Medicare utilization data earlier would be particularly helpful to immediately understand if the utilization of a service is as anticipated. They suggested that the first quarter of Medicare claims data should be available by July 1st of each year, and a full year of claims data should be available by April each year (for example, 2023 data should be publicly available by April 2024). They requested that CMS share recent Medicaid data and investigate mechanisms to collect and share Medicare Advantage encounter information.

One commenter stated that the RUC identifies, maintains, and reviews a list of new services and services that use new technology, develops objective screens to identify potentially misvalued services, and examines all services in which utilization estimates are more than expected. They stated that since its inception in 2006, the RAW and CMS have identified over 2,700 services through over 20 screening criteria for further review by the RUC. Another commenter stated that due to a lack of transparency, they do not know what methodologies CMS employs to be able to provide recommendations on more timely improvements for HCPCS G-codes. They stated that from their perspective, CMS often reacted to stakeholder requests by creating G-codes—sometimes for services that do not need to be urgently reportable—and often

based them on new technology that has not reached sufficient evidence for support.

*Response:* We appreciate the commenters' concerns and acknowledge that there are changes in treatment standards and new technologies that could be recognized better within the PFS. We thank the commenters for their thoughts, as their engagement is crucial to our ongoing efforts to understand critical variables in any attempt to reform the PFS, including identifying alternate data sources (like EHRs) to support the refinement of data inputs or, more broadly, identifying how to proceed within our existing statutory authority or when congressional action may be required to facilitate necessary fundamental changes to calculating physician payment rates.

We also received public comments in response to our interest in recommending that data collection and documentation requirements for physician practices are as least burdensome as possible while maintaining strong program integrity requirements.

*Comment:* Some commenters supported addressing the significant administrative burden plaguing physicians and other healthcare professionals. They added that physicians and other healthcare professionals have limited time and other resources to participate in data collection efforts. Another commenter stated documentation should be utilized for clinical purposes and should not burden physicians to satisfy administrative or billing requirements. They noted that supporting the national medical specialties and other health care professional organizations is imperative in obtaining adequate data on the resources required to provide services. Another commenter believed that modifiers (for example, a modifier when an E/M service is reported using time) would be very useful to assist with program integrity audits. They thought CMS should collect data (for example, service times, the number and types of services reported on any day by a given provider) from EHR vendors to evaluate billing patterns better. They believed that without this information from EHRs regarding times and visits, in some scenarios, patients may not receive the care they expect and deserve.

*Response:* We appreciate commenters' interests and will consider them both for future

rulemaking and as part of ongoing efforts to improve transparency.

Finally, we also received public comments in response to our interest in whether commenters believe that the current AMA RUC is the entity that is best positioned to provide recommendations to CMS on resource inputs for work and PE valuations, as well as how to establish values for E/M and other physicians' services; or if another independent entity would better serve CMS and interested parties in providing these recommendations.

*Comment:* Many commenters objected to the question and noted that any individual or entity, including the RUC, has a constitutional right to provide recommendations to CMS on resource inputs for work and practice expense valuation. One commenter stated that it is when CMS deviates from the RUC process, such as with creating the add-on code and providing no evidence of its time or relative intensity, that the entire RUC process' legitimacy becomes threatened, positing that if medical societies perceived that CMS would ignore their good-faith participation in a consensus-based process, there would be even more efforts to seek legislative action, thereby resulting in an even more inconsistent system. Several commenters stated that the RUC recommendations to CMS are based on extensive granular data to describe physician time, work relativity, and PE resources associated with providing procedures and other services. They stated that CMS is not required to accept RUC recommendations and that they will continue to support and advocate for the RUC process in maintaining Medicare relative values. Other commenters stated they played a significant role in valuing new or revised services within their specialty, supported the work of the AMA CPT® Editorial Panel to revise the entire E/M code set, with those revised services then valued by the AMA RUC, and believed that the processes used by the RUC provided an avenue for physician input that helped to maintain an appropriate resource-based payment system. They and other commenters noted that the RUC is best suited for valuing physician services. Another commenter expanded upon this view and noted that the AMA CPT Editorial Panel and the RUC are the best-situated entities to provide input to CMS on values, documentation, and coding as a part of the annual PFS rulemaking cycle, including for

E/M services. They stated the physician experts who provided input at all stages of defining codes and valuing services as part of the CPT and RUC continuum provided the essential clinical knowledge needed to conduct these functions. They stated it also involved members from across the medical community, not just the specialty that delivers the service under review, to serve as a sounding board and safety net in defining and valuing codes. This commenter expressed concern that CMS attempted to marginalize the input of CPT and RUC and another entity may serve as a mechanism to reverse-engineer some other policy goal beyond providing medical expertise about the resources and work that are provided when furnishing a well-defined set of services. They and other commenters noted that CMS is not bound by the recommendations of the RUC and posited that any stakeholder is free to establish the infrastructure to generate detailed, data-driven recommendations for the valuation of services. They also noted that CMS continues to consider RUC recommendations precisely because the RUC provides the best available information and offers an unmatched coherent, data-driven rationale to its recommendations. Another commenter stated that there is no need for another independent entity to provide recommendations regarding the valuation for services that are reported on the PFS. They noted the RUC process for valuing services is fair and balanced, as experts across all specialties engage in deeply informed discussions and must come to a consensus (a two-thirds vote) to approve any recommendations. They stated that having all major specialties at the table, within the budget neutrality confines of the PFS, ensured that any changes are evidence-based and justifiable. Another commenter believed CMS should defer to the RUC process, especially when CMS does not have the appropriate specialty representation to make informed decisions about the RUC recommendations. They further opined that CMS should communicate with the RUC and work to alter the process requirements so all interested parties can work together on a desired outcome.

In contrast, several commenters offered strong support and thoughts in response to CMS's request for information. These commenters opined that CMS should not view the RUC as the sole source of knowledge and expertise to ensure that physician services are valued

appropriately. They encouraged CMS to invest in additional adjunctive sources to ensure its recommendations are well-informed, balanced, and reflective of the evolving healthcare environment. One commenter supported CMS in considering another independent entity, including pharmacists and other clinical staff, that would serve CMS in providing recommendations on resource inputs for work and practice expense (PE) valuations and to more accurately establish values for E/M and other physician services that better reflect modern-day team-based health care delivery and the actual services provided by pharmacists and other clinical staff to provide E/M services. Other commenters greatly appreciated CMS posing this question, as they did not believe that the AMA RUC is the entity best positioned to provide recommendations to CMS on resource inputs for work and PE valuations and how to establish values for E/M and other physicians' services. They stated that the valuations established during this process no longer represent the valuation of services for 'physicians' but all healthcare providers who bill Medicare, advanced practice nurses, physician assistants, limited license practitioners, and allied health professionals. They noted the valuation process relegated them to be represented by the Health Care Professionals Advisory Committee (HCPAC), which only has one seat on the RUC. These commenters asserted that there are inherent conflicts in the valuation process, which led to a historical undervaluation of E/M services, a foundational aspect of the primary care system. They also raised concerns about the data from surveys conducted by specialty societies having low response rates and total number of responses, which they claim raises questions about the representativeness of the results. They added that the lack of public accessibility of this information is not addressed by CMS's fee schedule notice and comment process, as the fee schedule itself is often used the valuations determined by the RUC as the basis for CMS's rationale. They requested CMS develop an equitable, accessible, and accurate valuation process reflective of the modern healthcare system, ensuring that nurse practitioners and other providers directly billing Medicare can participate in the entirety of the valuation process, which must be transparent and accessible for all. Another commenter echoed concerns

that there are structural flaws with the RUC that undermine the accuracy of its recommendations, including inherent conflicts of interest among RUC members and a reliance on surveys from medical societies that lead to overvaluation of certain specialty services. They also stated that current CMS processes for valuing services lack external validation and do not leverage a diverse, evolving data set, which would be more accurate and comprehensive. They suggested that CMS supplement the RUC's recommendations with additional research and external data, positioning CMS to more actively lead the determination of relative values, with consultation from the RUC, consistent with expert recommendations. They recommended implementing accurate and ongoing data collection to independently validate RVUs, establish an empirical source of information on time and costs associated with services, and establish an expert advisory panel within CMS to provide crucial advice on improving valuation processes and ensure independence and transparency. Another commenter asserted that from the very first implementation of the PFS based on the RBRVS, there has been no CMS agency-level commitment to ensure that both the definition and valuation of physicians' services are based on the best evidence possible, that the determination of relativity has internal checks and balances, and that the entire process is publicly accountable. They and other commenters suggested that an expert panel will be best equipped to ensure these services are evaluated regularly, limiting the significant redistributive effects associated with major valuation and policy changes, as we recently saw when the outpatient E/M codes were revalued. They stated that a regular, independent assessment of available data and the resulting data-driven policy recommendations would stabilize an irregular process, significantly contributing to the declining primary care workforce.

Another commenter urged CMS to initiate the expert panel as part of the CY 2024 PFS final rule. They stated that the transition to more accurate, evidence-based, and accountable processes for defining services within the PFS and their relative pricing is long overdue and that the work to address the many distortions within the PFS should begin as quickly as possible.

*Response:* We recognize that there are varying perspectives on how to best reflect the inputs for services paid under the PFS. We appreciate the depth of consideration different interested parties have offered in their comments, and we will consider all the public comments regarding the potential range of approaches CMS could take to improve the accuracy of valuing services and how we might evaluate E/M services with greater specificity, more regularly, and comprehensively for future rulemaking.

### 3. Split (or Shared) Visits

The split (or shared) "substantive portion" policy for services furnished in facility settings was reflected in subregulatory guidance until it was withdrawn in May 2021 in response to a petition under the, since rescinded, Good Guidance regulation (see 87 FR 44002 (February 25, 2022)). In the CY 2022 PFS final rule (86 FR 65150 through 65159), we finalized a policy for evaluation and management (E/M) visits furnished in a facility setting to allow payment to a physician for a split (or shared) visit (including prolonged visits), where a physician and NPP in the same group practice provide the service together (not necessarily concurrently) and the billing physician personally performs a substantive portion of the visit. Commenters generally supported our CY 2022 proposals; however, there were divided comments regarding our proposed definition of "substantive portion." Some commenters preferred the use of medical decision making (MDM) or one of the three key visit components as opposed to time for purposes of defining the "substantive portion" of the service.

#### a. Background

A split (or shared) visit refers to an E/M visit performed by both a physician and an NPP in the same group practice. In the non-facility (for example, office) setting, the rules for "incident to" billing apply under this circumstance. However, "incident to" services are not available for services furnished in a facility setting. Longstanding CMS policy has been that, for split (or shared) visits in the facility (for example, hospital) setting, the physician can bill for the services if they perform a substantive portion of the encounter. Otherwise, the NPP would bill

for the service. Section 1833(a)(1)(N) of the Act specifies that payment is made for services furnished and billed by a physician at 100 percent of the PFS rate, while under section 1833(a)(1)(O)(i) of the Act, certain NPPs are paid for the services they furnish and bill for at a reduced PFS rate (for example, 85 percent of the PFS rate).

We defined "substantive portion" in the CY 2022 PFS final rule (86 FR 65152 through 65156) and provided for billing of split (or shared) visits in certain settings (86 FR 65156 through 65157) and for certain patient types (new and established) (86 FR 65156). After consideration of the public comments on the CY 2022 PFS proposed rule, we finalized a phased-in approach to this policy (86 FR 65153). For CY 2022, we finalized the definition of "substantive portion" as one of the following: either one of the three key E/M elements (that is, history, exam, or MDM) or more than half of total time. We also stated that we would delay the full implementation of the definition of "substantive portion" as more than half of total time until CY 2023 (86 FR 65152 and 65153).

Additionally, in the CY 2022 PFS final rule (86 FR 65158 through 65159), we finalized our proposal to create a payment modifier (modifier FS), to describe split (or shared) visits (see 86 FR 65158 through 65159 for this discussion). Over time, implementing and using this modifier will better enable us to quantify split (or shared) visits and better understand the billing patterns of practitioners that typically furnish them. Such information is helpful to CMS for program integrity purposes and may also inform us on whether we need to clarify or further revise the policy for these services in future rulemaking. We have roughly one year's worth of claims data from the time we implemented the modifier as part of our ongoing engagement with interested parties. We have continued to hear concerns about our intent to implement our policy to use more than half of the total time to define the "substantive portion" of a split or shared visit, and have received requests to continue to recognize MDM as the "substantive portion." Many of these concerns specifically reference disruptions to current team-based practice patterns, and the potential for significant adjustments to the practice's internal processes or information systems to

allow for tracking visits based on time, rather than MDM. With these concerns in mind, in the CY 2023 PFS final rule (87 FR 69614 through 69616), we finalized a policy to delay implementation of our definition of substantive portion as more than half of the total practitioner time until January 1, 2024.

After much consideration, we proposed to delay the implementation of our definition of the "substantive portion" as more than half of the total time through at least December 31, 2024, for the same reasons outlined in the CY 2023 PFS final rule (87 FR 69614 through 69616). We proposed maintaining the current definition of 'substantive portion' for CY 2024, which allows using any of the three key components (history, exam, or MDM) or more than half of the total time spent to determine who bills the visit. We stated that the additional delay would allow interested parties to have another opportunity to comment on this policy and would give CMS time to consider more recent feedback and evaluate whether there is a need for additional rulemaking on this aspect of our policy. We expressed interest in how facilities currently implement our split (or shared) services policy in their workflows and how facilities now account for billing practitioners' services that are performed split (or shared). We expressed interest in better accounting for the billing practitioner's services in team-based care clinical scenarios. We recognized that the AMA CPT Editorial Panel was considering revisions to aspects of split or shared visits for CY 2024 that may impact our policies, but those changes had not been finalized before our proposed rule was published. We stated we would review the AMA CPT Editorial Panel's changes to split or shared visits when and if available before the final rule and in the context of our policy proposal. We indicated that we would consider any changes that are made by CPT and their relationship to our previously finalized policies and whether a further implementation delay beyond CY 2024 or revision of the definition of "substantive portion" is warranted.

We proposed to amend §415.140 to delay implementation of the definition of "substantive portion" as more than half of the total time through CY 2024 in the interim while

we continued to analyze and collect information from interested parties and commenters as to whether we should permanently modify our current definition. We proposed that the current definition of "substantive portion" would apply for visits other than critical care visits furnished such that *substantive portion* means either one of the three key components (history, exam, or MDM) or more than half of the total time spent by the physician and NPP performing the split (or shared) visit for services furnished through the end of CY 2024.

We received public comments related to our proposal to delay the implementation of the definition of substantive portion, as more than half of the time spent by the physician and NPP through at least December 31, 2024.

Below is a summary of the comments we received and our responses.

*Comment:* Most commenters supported at least our proposed additional year delay in the implementation of time being used as the substantive portion. Additionally, one commenter expressed support for the overall goal of this policy, which is to require transparency.

*Response:* We thank commenters for their feedback.

*Comment:* While many commenters supported the delay, several asked that our permanent policy add the option to use time or MDM to determine who has furnished the substantive portion of the service, which is broadly consistent with the new set of E/M codes. Many commenters who supported using MDM stated that basing the policy solely on time could result in administrative burden and a possible disruption to team-based care. One commenter also noted that MDM would allow for the physician and NPP to decide which of them will bill for the services based on who furnished the substantive portion of the visit and assignment of the billing provider.

Other commenters stated that the physician should always bill for the shared visits because their level of expertise and efficiency was medically necessary, regardless of who spent more time with the patient. One commenter noted that if CMS is concerned that facility-based practices will take advantage of the E/M code changes that no longer utilize the examination

elements in code selection, CMS could still require face-to-face care by the physician to bill for the shared visit as a simplified way to determine and audit when the physician level of expertise was necessary and when an independent visit without the physician was more appropriate.

*Response:* These comments were consistent with the public comments that we received and addressed in our CY 2023 PFS final rule (87 FR 69614 through 87 FR 69616). We define a split (or shared) visit as an E/M visit in the facility setting that is performed in part by both a physician and an NPP who are in the same group practice, in accordance with applicable laws and regulations. We note that the policy is not about whether the physician's expertise is "necessary" for the visit but rather whether the physician or the NPP should bill for the service when each of them are performing part of an E/M visit.

*Comment:* Several commenters expressed that the policy to define "substantive portion" as more than half of the total time should never be fully implemented, other commenters asked CMS to permanently delay the implementation of this policy, while others urged CMS to withdraw the "substantive portion" policy altogether or continue the current policy to allow use of the three key components or time to determine who bills for the visit.

*Response:* We continue to believe that application of a substantive portion policy is appropriate for purposes of determining which clinician should bill for split (or shared) services as the higher PFS payment rate should apply only when a physician performs the substantive portion of the visit. Otherwise, the visit should be billed by the NPP who performs the substantive portion of the visit.

*Comment:* A couple of commenters expressed that this policy is troublesome for rural healthcare providers where the NPPs provide most of the care, and the practitioners receive less payment for split (or shared) visits as compared to physicians. The commenter stated this 'substantive portion' policy of more than half of total time by the physician and NPP performing the split (or shared) visit) would disenfranchise rural beneficiaries and providers. A few commenters urged CMS to withdraw the "substantive portion" policy and continue using its

current history, exam, or medical decision-making policy and do not believe that “over half” is an appropriate definition of “substantive portion” for the purpose of paying for split/shared services.

*Response:* We appreciate the commenters' concerns and will continue to consider the potential impact of our policy on rural or health professional shortage areas for future rulemaking.

*Comment:* A few commenters expressed general concerns with the proposed delay in implementing our revised definition of “substantive portion” for split (or shared) services. Specifically, commenters stated that each year CMS proposes a delay, the facilities and practices spend time and resources preparing for potential changes that never come to fruition. To mitigate this burden, commenters urged CMS to finalize the current rules for split (or shared) visits.

*Response:* We note that we previously delayed finalizing the split (or shared) policy to consider additional feedback from interested parties, especially regarding administrative burden on professionals and concerns about the policy potentially deterring appropriate team-based care. Commenters continue to echo those same concerns with requests that we continue to recognize MDM as the "substantive portion." We also acknowledge the commenters concerns surrounding the time and resources spent to prepare for changes in their practice patterns.

*Comment:* Several commenters noted that the AMA CPT Editorial Panel was in the process of strengthening their guidance for reporting split (or shared) visits using MDM, and this information would be included in the 2024 CPT publication. Other commenters asked CMS to adopt the new CPT guidance for split/shared visits and to delay its application until January 1, 2025. One commenter expressed that having two definitions of ‘substantive portion’ will create confusion, and stated that it is important for physicians to stick with one set of guidelines in reporting services.

*Response:* Over the past 2 years, CPT has reviewed and revised its guidelines involving

E/M visits, including split (or shared) services. CMS has been concurrently reviewing those additions, revisions, and changes made by CPT, and addressing and incorporating them as appropriate for Medicare billing through our rulemaking process to provide greater alignment between the CPT E/M Guidelines and PFS billing rules for E/M services, including the split (or shared) visits.

We note that the CPT Editorial Panel recently issued its revised guidelines for “split or shared visits” for CY 2024. Specifically, the Editorial Panel changed the definition of a "split or shared visit" to refer to the substantive portion of a service as either more than half of the total time spent by the physician and NPP performing the split (or shared) visit or a substantive part of the medical decision making, and to indicate that these guidelines should be applied to determine whether the physician or NPP may bill for the service. For CY 2024, the CPT E/M Guidelines for billing split or shared services now state that *"physician(s) and other QHP(s) may act as a team in providing care for the patient, working together during a single E/M service. The split or shared visits guidelines are applied to determine which professional may report the service. If the physician or other QHP performs a substantive portion of the encounter, the physician or other QHP may report the service. If code selection is based on total time on the date of the encounter, the service is reported by the professional who spent the majority of the face-to-face or non-face-to-face time performing the service. For the purpose of reporting E/M services within the context of team-based care, performance of a substantive part of the MDM requires that the physician(s) or other QHP(s) made or approved the management plan for the number and complexity of problems addressed at the encounter and takes responsibility for that plan with its inherent risk of complications and/or morbidity or mortality of patient management. By doing so, a physician or other QHP has performed two of the three elements used in the selection of the code level based on MDM. If the amount and/or complexity of data to be reviewed and analyzed is used by the physician or other QHP to determine the reported code level, assessing an independent historian's narrative and the ordering or review of tests or documents do not*

*have to be personally performed by the physician or other QHP, because the relevant items would be considered in formulating the management plan. Independent interpretation of tests and discussion of management plan or test interpretation must be personally performed by the physician or other QHP if these are used to determine the reported code level by the physician or other QHP"* (2024 CPT Codebook, pg. 6). We remind our readers that for CY 2023, the CPT E/M Guidelines define a shared or split visit as a visit in which a physician and other qualified health care professional(s) (QHP) both provide the face-to-face and non-face-to-face work related to the visit. In past discussions in rulemaking on this issue, we stated that MDM was not easily attributed to a single physician or NPP when the work is shared because MDM is not necessarily quantifiable and could vary depending on patient characteristics (for example, risk), in contrast to time, which we believe is a more precise factor than MDM to use as a basis for deciding which practitioner performs the “substantive portion of the visit.” However, given these recent changes in the CPT Guidelines for split (or shared) visits and our interest in reducing coding and billing administrative burden on health professionals through continued alignment with revised overarching guidelines for E/M visits, we are reconsidering our policy for defining ‘substantive portion’ as it applies to split or shared visits.

After reviewing the revisions made by the AMA CPT Editorial Panel that were included in the 2024 CPT codebook publication, specifically the Evaluation and Management (E/M) Services Guidelines language surrounding "substantive portion" for split (or shared) services, and in light of public comments on our policies, we agree that we should align our definition of substantive portion with the CPT E/M guidelines for this service. Although we continue to believe there can be instances where MDM is not easily attributed to a single physician or NPP when the work is shared, we expect that whoever performs the MDM and subsequently bills the visit would appropriately document the MDM in the medical record to support billing of the visit. Generally, commenters were in support of CMS delaying for an additional year the requirement to use total time to determine which practitioner performs the substantive portion of

the service. However, we also heard concerns about CMS implementing this definition of substantive portion at all, with many requests that we also recognize MDM as the substantive portion of the visit. In consideration of the changes made by the CPT Editorial Panel, we are revising our definition of “substantive portion” of a split (or shared) visit to reflect the revisions to the CPT E/M guidelines. Specifically, for CY 2024, for purposes of Medicare billing for split (or shared) services, the definition of “substantive portion” means more than half of the total time spent by the physician and NPP performing the split (or shared) visit, or a substantive part of the medical decision making as defined by CPT. We continue to note that for critical care visits which do not use MDM, “substantive portion” continues to mean more than half of the total time spent by the physician and NPP performing the split (or shared) visit (42 CFR 415.140). In summary, we are finalizing a policy that reflects a revised definition of “substantive portion” of a split (or shared) visit to reflect the revisions to the CPT E/M guidelines, such that for Medicare billing purposes, the “substantive portion” means more than half of the total time spent by the physician and NPP performing the split (or shared) visit, or a substantive part of the medical decision making except concerning critical care visits which do not use MDM and only use time, “substantive portion” continues to mean more than half of the total time spent by the physician and NPP performing the split (or shared) visit. We will revise our regulations at 42 CFR 415.140 to reflect this change for split (or shared) visits. We note that we are finalizing this policy for CY 2024, in part, to avoid the administrative burden, as described by commenters, that would otherwise be present for facilities and practices that spend time and resources preparing for potential policy changes that are delayed year after year. If warranted, we would address any subsequent change in policy through notice and comment rulemaking.

## G. Geographic Practice Cost Indices (GPCIs)

### 1. Background

Section 1848(e)(1)(A) of the Act requires CMS to develop separate Geographic Practice Cost Indices (GPCIs) to measure relative cost differences among localities compared to the national average for each of the three fee schedule components (that is, work, practice expense (PE), and malpractice (MP)). Section 1848(e)(1)(E) of the Act provides for a 1.0 floor for the work GPCIs for the purposes of payment for services furnished on or after January 1, 2004, and before January 1, 2024. Congress recently extended the 1.0 work GPCI floor only through December 31, 2023, in division CC, section 101 of the Consolidated Appropriations Act, 2021 (Pub. L. 116-260, enacted December 27, 2020). Therefore, the CY 2024 work GPCIs and summarized GAFs do not reflect the 1.0 work floor. See Addenda D and E to this final rule for the CY 2024 GPCIs and summarized GAFs. These Addenda are available on the CMS website under the supporting documents section of the CY 2024 PFS final rule at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html>.

### 2. Review of the California Fee Schedule Areas Used for Payment for CY 2024

Section 220(h) of the Protecting Access to Medicare Act (PAMA) (Pub. L. 113-93, April 1, 2014) added a new section 1848(e)(6) to the Act that modified the fee schedule areas used for payment purposes in California beginning in CY 2017. Prior to CY 2017, the fee schedule areas used for payment in California were based on the revised locality structure that was implemented in 1997 as previously discussed. Beginning in CY 2017, section 1848(e)(6)(A)(i) of the Act required that the fee schedule areas used for payment in California must be Metropolitan Statistical Areas (MSAs) as defined by the Office of Management and Budget (OMB) as of December 31 of the previous year; and section 1848(e)(6)(A)(ii) of the Act required that all areas not located in an MSA must be treated as a single rest-of-State fee schedule area. The resulting modifications to California's locality structure increased its number of fee schedule areas from 9

under the previous locality structure to 27 under the MSA-based locality structure; although for the purposes of payment, the actual number of fee schedule areas under the MSA-based locality structure is 32. We refer readers to the CY 2017 PFS final rule (81 FR 80267) for a detailed discussion of this operational decision.

Section 1848(e)(6)(D) of the Act defined transition areas as the counties in fee schedule areas for 2013 that were in the rest-of-State locality, and locality 3, which was comprised of Marin, Napa, and Solano counties. Section 1848(e)(6)(B) of the Act specified that the GPCI values used for payment in a transition area are to be phased in over 6 years, from 2017 through 2022, using a weighted sum of the GPICIs calculated under the new MSA-based locality structure and the GPICIs calculated under the PFS locality structure that was in place prior to CY 2017. That is, the GPCI values applicable for these areas during this transition period were a blend of what the GPCI values would have been for California under the locality structure that was in place prior to CY 2017, and what the GPCI values would be for California under the MSA-based locality structure. For example, in CY 2020, which represented the fourth year of the transition period, the applicable GPCI values for counties that were previously in the rest-of-State locality or locality 3 and are now in MSAs were a blend of 2/3 of the GPCI value calculated for the year under the MSA-based locality structure, and 1/3 of the GPCI value calculated for the year under the locality structure that was in place prior to CY 2017. The proportions continued to shift by 1/6 in each subsequent year so that, by CY 2021, the applicable GPCI values for counties within transition areas were a blend of 5/6 of the GPCI value for the year under the MSA-based locality structure, and 1/6 of the GPCI value for the year under the locality structure that was in place prior to CY 2017. Beginning in CY 2022, the applicable GPCI values for counties in transition areas were the values calculated solely under the new MSA-based locality structure; therefore, the phase-in for transition areas is complete. Additionally, section 1848(e)(6)(C) of the Act establishes a hold harmless requirement for transition areas beginning with CY 2017; whereby, the applicable GPCI values for a year under the new MSA-based locality structure may not be

less than what they would have been for the year under the locality structure that was in place prior to CY 2017. There are 58 counties in California, 50 of which were in transition areas as defined in section 1848(e)(6)(D) of the Act. The eight counties that were not within transition areas are: Orange; Los Angeles; Alameda; Contra Costa; San Francisco; San Mateo; Santa Clara; and Ventura counties. We noted that while the phase-in for transition areas is no longer applicable, the hold harmless requirement is not time-limited, and therefore, is still in effect.

For the purposes of calculating budget neutrality and consistent with the PFS budget neutrality requirements as specified under section 1848(c)(2)(B)(ii)(II) of the Act, in the CY 2017 PFS final rule (81 FR 80266), we finalized the policy to start by calculating the national GPCIs as if the fee schedule areas that were in place prior to CY 2017 are still applicable nationwide; then, for the purposes of payment in California, we override the GPCI values with the values that are applicable for California consistent with the requirements of section 1848(e)(6) of the Act. This approach to applying the hold harmless requirement is consistent with the implementation of the GPCI floor provisions that have previously been implemented—that is, as an after-the-fact adjustment that is made for purposes of payment after both the GPCIs and PFS budget neutrality have already been calculated.

Additionally, section 1848(e)(1)(C) of the Act requires that, if more than 1 year has elapsed since the date of the last GPCI adjustment, the adjustment to be applied in the first year of the next adjustment shall be 1/2 of the adjustment that otherwise would be made. For a comprehensive discussion of this provision, transition areas, and operational considerations, we refer readers to the CY 2017 PFS final rule (81 FR 80265 through 80268).

a. Refinement to number of unique fee schedule areas in California for CY 2024

In the CY 2020 final rule (84 FR 62622), a commenter indicated that some of the distinct fee schedule areas that were used during the period between CY 2017 and CY 2018 are no longer necessary. Specifically, with regard to the Los Angeles-Long Beach-Anaheim MSA, which contains 2 counties (across two unique locality numbers, 18 and 26) that are not transition

areas, we acknowledge that we only needed more than one unique locality number for that MSA for payment purposes in CY 2017, which was the first year of the implementation of the MSA-based payment locality structure. Neither of the counties in the Los Angeles-Long Beach-Anaheim MSA (Orange County and Los Angeles County) are transition areas under section 1848(e)(6)(D) of the Act. Therefore, the counties were not subject to the aforementioned GPCI value incremental phase-in (which is no longer applicable) or the hold-harmless provision at section 1848(e)(6)(C) of the Act. Similarly, the San Francisco-Oakland-Berkeley MSA contains four counties – San Francisco, San Mateo, Alameda, and Contra Costa counties – across three unique locality numbers, 05, 06, and 07. These counties are not transition areas and will receive the same GPCI values, for payment purposes, going forward. In response to the comment, we acknowledged that we did not propose any changes to the number of fee schedule areas in California, but would consider the feasibility of a technical refinement to consolidate into fewer unique locality numbers; and if we determined that consolidation was operationally feasible, we would propose the technical refinement in future rulemaking. This refinement would ultimately change the number of distinct fee schedule areas for payment purposes in California from 32 to 29. In the CY 2023 PFS proposed rule (87 FR 46008), we proposed to identify the Los Angeles-Long Beach-Anaheim MSA, containing Orange County and Los Angeles County, by one unique locality number, 18, as opposed to two, thus retiring locality number 26, as it is no longer needed. Similarly, we proposed to identify the San Francisco-Oakland-Berkeley MSA containing San Francisco, San Mateo, Alameda, and Contra Costa counties by one unique locality number, 05, as opposed to three, thus retiring locality numbers 06 and 07, as they are no longer needed. Additionally, we noted that we would modify the MSA names as follows: the San Francisco-Oakland-Berkeley (San Francisco Cnty) locality (locality 05) would become San Francisco-Oakland-Berkeley (San Francisco/San Mateo/Alameda/Contra Costa Cnty), and Los Angeles-Long Beach-Anaheim (Los Angeles Cnty) locality (locality 18) would become Los Angeles-Long Beach-Anaheim (Los Angeles/Orange Cnty). We noted that because Marin County is in a

transition area and subject to the hold harmless provision at section 1848(e)(6)(C) of the Act, we needed to retain a unique locality number for San Francisco-Oakland-Berkeley (Marin Cnty), locality 52. Based on support from commenters in the CY 2023 PFS final rule (87 FR 69621), we finalized to identify the Los Angeles-Long Beach-Anaheim MSA, containing Orange County and Los Angeles County, by one unique locality number, 18, and the San Francisco-Oakland-Berkeley MSA containing San Francisco, San Mateo, Alameda, and Contra Costa counties by one unique locality number, 05, as proposed. We noted that, while we believed these changes were appropriate to consolidate fee schedules areas that are no longer operationally necessary, we were unable to operationalize these changes for CY 2023 due to timing constraints relating to the actions and coordination with the various systems maintainers required to effectuate changes to claims processing (87 FR 69621). Therefore, for CY 2023, there were no changes to the existing locality numbers 05, 06, 08, 18, or 26. We noted in the CY 2023 PFS final rule that we would operationalize these finalized changes for CY 2024. We reiterate here that we are operationalizing these locality number changes for CY 2024 via instruction to the MACs, and therefore, locality numbers 06, 07, and 26 will no longer be used for the PFS starting January 1, 2024. We note that these changes, when operationalized, do not have any payment implications under the PFS because these counties are not transition areas and will receive the same GPCI values, for PFS payment purposes, going forward.

The following is a summary of the public comments received on the CY 2024 GPCIs and our responses:

*Comment:* We received several comments that were outside the scope of the proposed rule, and some are reiterations from last year's GPCI update.

*Response:* We appreciate the feedback from commenters. We note that we responded to these comments in the CY 2023 PFS final rule (87 FR 69630 through 69634) and will not be summarizing or responding to them in this final rule. Also, it is important to note that although

the comments did not relate to any proposals for CY 2024, we will take them into consideration for potential future rulemaking.

*Comment:* One commenter encouraged CMS to consider the potential effects of the COVID-19 pandemic on the malpractice GPCIs. The commenter asked that CMS withdraw the MP component update from the CY 2023 PFS final rule and reinstate the prior MP component in the CY 2024 PFS final rule.

*Response:* We appreciate the feedback from the commenter. We did not make any proposals associated with the MP GPCI or MP RVUs, but will take these comments into consideration for potential future rulemaking. We encourage commenters to submit comments on the next proposed MP GPCI and MP RVU update which is anticipated for CY 2026.

*Comment:* Some commenters highlighted the expiration of the work GPCI floor of 1.0 on December 31, 2023, and expressed concern with the CY 2024 work GPCIs that are calculated without the work GPCI floor in place. Commenters asked that CMS consider a two- or three-year phase in of the work GPCI floor expiration and recalculate the CY 2024 work GPCIs based on a transition period if the statutory floor is allowed to expire. Some commenters asked that CMS implement a permanent policy to set a work GPCI floor so statutory extensions would no longer be necessary. Some of the commenters stated an objection to any changes that could have a negative impact on rural areas, such as the expiration of the work GPCI floor.

*Response:* We appreciate the commenters' feedback. The 1.0 work GPCI floor is required by statute and set to expire on December 31, 2023. We do not have the authority to extend the 1.0 work GPCI floor beyond December 31, 2023, or to establish a permanent policy to establish the 1.0 work GPCI floor. We note that 34 States have statewide payment localities, which means that the same geographic adjustment applies to PFS payments throughout the State without any differential between rural and urban areas.

*Comment:* One commenter stated that there is a lack of transparency into the GPCI data and methodology used to derive the GPCIs. The commenter stated that they cannot accurately

validate CMS' GPCI calculations because there is little transparency and access to the data and methods used. The commenter stated that CMS provided these data prior to 2020 and that they used it to reproduce and validate the CMS methodology for calculating the GPICs each year.

*Response:* We direct the commenter to the step-by-step instructions provided in the final report entitled, "Final Report for the CY 2023 Update of GPICs and MP RVUs for the Medicare PFS," which is available on our website located under the supporting documents section for the CY 2023 PFS final rule at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html>. We also refer readers to Table 4.A.1: Summary of Elements Required for GPCI Calculation in the final report, and the discussion in the CY 2023 PFS final rule (87 FR 69621) for the data sources used for the work GPCI and each component of the practice expense GPICs noted in the CY 2023 PFS final rule, we discussed the years and timeframes of data used from each source and provided web links to the publicly-available data sources used in the CY 2023 GPCI update. Consistent with the information provided for previous GPCI updates, we also provided the methodological parameters, as well as an overview of how we develop each GPCI component in the final report. We also note that there is detailed information about the budget neutrality adjustment and statutory floors that are applied after the budget neutrality adjustment in the note, "CY 2023 GPCI Update Note\_County\_Data," on our website, also located under the supporting documents section for the CY 2023 PFS final rule at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html>.

We remind the commenter that, in response to commenters' concerns expressed in rulemaking for the CY 2020 GPCI update, we added more detailed descriptions of the steps in the final report entitled, "Final Report for the CY 2020 Update of GPICs and MP RVUs for the Medicare Phys Fee Sched\_v19Feb2020," which is available on the CMS website under the downloads section of the CY 2020 PFS final rule at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html>, to assist interested parties in navigating

these data. Additionally, as part of our ongoing commitment to transparency, we post the county-level data that we use to develop the proposed GPCIs, which allows interested parties to further examine and replicate our GPCI methodology. This file is available on the CMS website on our website under the Downloads section, titled “CY 2023 Proposed Rule GPCI County-Level Data File.”

We did not receive any comments about the announcement in the CY 2024 PFS proposed rule of our planned operationalization of the changes to the California localities that we finalized in the CY 2023 PFS final rule beginning for CY 2024. Therefore, we are proceeding with implementation as planned for CY 2024. We note that these changes to California localities, when operationalized, do not have any payment implications under the PFS. The final CY 2024 GPCIs and summarized GAFs in Addenda D and E to this final rule reflect the California locality changes, and locality numbers 06, 07, and 26 are not present in these Addenda for CY 2024.

## H. Payment for Skin Substitutes

### 1. Background

In the CY 2023 PFS proposed rule, CMS outlined several objectives related to refining skin substitute policies under Medicare, including: (1) ensuring a consistent payment approach for skin substitute products across the physician office and hospital outpatient department setting; (2) ensuring that appropriate HCPCS codes describe skin substitute products; (3) using a uniform benefit category across products within the physician office setting, regardless of whether the product is synthetic or comprised of human or animal-based material, to incorporate more consistent payment methodologies; and (4) maintaining clarity for interested parties on CMS skin substitutes policies and procedures. When considering potential changes to policies involving skin substitutes, we noted that we believe it would be appropriate to take a phased approach over multiple rulemaking cycles to examine how we could appropriately incorporate skin substitutes as supplies under the PFS ratesetting methodology. Generally, we determine the direct PE for a specific service by adding the costs of the direct resources (that is, the clinical staff, medical supplies, and medical equipment) typically involved with furnishing that service. For a detailed explanation of the direct PE methodology, including examples, we referred readers to the 5-year review of work RVUs under the PFS and proposed changes to the PE methodology CY 2007 PFS proposed notice (71 FR 37242) and the CY 2007 PFS final rule with comment period (71 FR 69629).

Similar to the way we assess costs for other incident to supplies, our approach to identifying appropriate PE direct costs for skin substitute products may include: reviewing various sources for price information, including performing market research, reviewing invoices submitted by interested parties, or reviewing cost information on Medicare claims. Further, we would assess how the incident to supplies are billed or represented while also considering the service with which it is typically furnished. For example, if the supply is billed separately, with the base service, or usually bundled and incident to the base service. Also, we would consider

whether there are different supply costs or other meaningful stratifications (for example, a unit of measure or product type) that should be accounted for as we develop direct PE costs, considering how the base service is furnished.

We solicited comments on these approaches under our PFS ratesetting methodology as potential methods to establish appropriate payment for skin substitute products under the PFS.

We received public comments on these potential approaches. The following is a summary of the comments we received and our responses.

*Comment:* The majority of commenters were in support of our efforts to achieve a consistent payment approach for skin substitute products across different settings of care. Additionally, many commenters stated that they appreciated the opportunity to further engage with CMS on skin substitute policies through the CMS Skin Substitutes Town Hall in January of 2023.

*Response:* We thank commenters for their support and for their participation in the CMS Skin Substitutes Town Hall, which was held virtually on January 18, 2023. More information regarding the CMS Skin Substitutes Town Hall such as links to recording and transcripts is available at [https://www.cms.gov/medicare/payment/fee-schedules/physician/skin-substitutes#:~:text=The%20CMS%20Skin%20Substitutes%20Town,Physician%20Fee%20Schedule%20\(PFS\).](https://www.cms.gov/medicare/payment/fee-schedules/physician/skin-substitutes#:~:text=The%20CMS%20Skin%20Substitutes%20Town,Physician%20Fee%20Schedule%20(PFS).)

*Comment:* Many commenters opposed the idea of packaging and paying for skin substitutes as supplies and recommended that CMS retain separate coding and payment for these products. The commenters did not view skin substitutes as supplies because the products are affixed to a wound, and their function is similar to a drug or biologic.

*Response:* CMS recognizes there are numerous factors to consider when establishing a consistent payment approach for all skin substitute products. Additionally, CMS will take into consideration concerns raised by interested parties to help inform how we might best achieve an appropriate payment approach for future rulemaking.

*Comment:* Many commenters opposed to treating skin substitute products as supplies recommended that CMS instead assign HCPCS Q codes to all skin substitute products and pay for all skin substitute products using the ASP+6% payment methodology. Some commenters expressed their support for separate payment under the ASP +6% payment methodology by citing an OIG report (OEI-BL-23-00010) that highlighted significant cost savings for Part B payment amounts if ASP data were to be reported by all skin substitute manufacturers. More information regarding this OIG report is available at <https://oig.hhs.gov/oei/reports/OEI-BL-23-00010.asp>.

*Response:* We appreciate the feedback from commenters. We maintain our commitment to establishing a consistent payment approach for all skin substitute products.

*Comment:* A few commenters noted that most skin substitute products in the physician office setting meet the statutory definition of a biological product and question whether this move is legal under the mandatory payment laws for drugs and biologicals. Another commenter noted that CMS must support the reversal of prior policy under the Administrative Procedure Act.

*Response:* The CY 2024 PFS proposed rule includes no proposals for skin substitute policies. Instead, CMS solicited comments from interested parties to help us consider an approach to pricing these products as supplies.

*Comment:* Some commenters noted that CMS did not provide enough information on these different pricing approaches in order to meaningfully comment.

*Response:* We remind commenters that, in response to concerns expressed by commenters in CY 2023 PFS rulemaking, we included more information in the CY 2024 PFS proposed rule on how CMS could incorporate skin substitutes as a supply under the PFS and solicited comments on the different approaches we could consider. Additionally, we refrained from making any proposal for CY 2024 to allow more opportunities for us to receive and

consider feedback from interested parties, including through the Skin Substitutes Town Hall and the CY 2024 PFS proposed rule.

*Comment:* A few commenters noted that as CMS reviews skin substitute policies, the terminology should not be changed to “wound care management products” and that skin substitutes is the appropriate term. Additionally, one commenter suggested creating a new taxonomy code for wound care specialists to acknowledge the providers delivering this specific type of enhanced care. Lastly, one commenter recommended that CMS require the physician applying the product to the wound cover the entire wound surface area in order to receive payment for the application procedure.

*Response:* We appreciate the commenters’ feedback.

## 2. Sources of Price Information

We have refined specific PE data inputs in recent years, using market research and publicly available data (for example, market research on medical supply and equipment items and BLS data to update clinical labor wages) to update the direct PE data inputs used in the PFS ratesetting process. Historically, the PFS uses a variety of sources to help inform payment for specific services that are then used to establish direct PE inputs. Direct PE inputs may derive from assessing the current value of products on the market, which may be achieved by utilizing Average Sales Price (ASP) data or Wholesale Acquisition Cost data (WAC). Since some manufacturers self-report ASP/WAC data at the end of every quarter, this may help to inform CMS of the current market value of these products.

We also review submitted invoices, which reflect the specific cost of products that practitioners are paying manufacturers for these products. We noted in the CY 2011 PFS final rule (75 FR 73205) that we update supply and equipment prices through an invoice submission process. In this process, we consider the invoice information and incorporate it into our direct costs database if the submitted pricing data indicates the typical market price of the supply or equipment item.

While performing market research and the invoice submission process are different methods to derive pricing for specific products, reviewing cost information on Medicare claims may also help us identify the variability in product costs. For example, assessing detailed cost information on claims with skin substitute products could inform how these products are priced and allow us to consider how the skin substitutes are typically furnished and where these services are performed. This information would enable us to refine our payment policies for these products across different care settings.

We solicited comment on the cost-gathering approaches we described in order to inform how we would establish direct PE inputs for skin substitute products and appropriately develop payment rates for physicians' services that involve furnishing skin substitute products. The following is a summary of the comments we received and our responses.

*Comment:* A few commenters noted that if CMS were to consider skin substitute products as direct PE inputs, then ASP data would be the best estimate of cost.

*Response:* We appreciate this feedback from commenters.

*Comment:* Some commenters mentioned that to capture supplies in the PE RVU methodology, CMS must consider the following: the single use supply item, unit of measurement, per unit price, and the quantity of the specified item. These commenters also believe the PE methodology relies on evaluation of a 'typical service' for a single-use supply item, but because skin substitute products may change based on patient-specific factors and can vary by application code, commenters state that no single skin substitute product stands out as "typical." Additionally, one commenter noted that claims data show variations in the number of product units reported per claim and the per unit payments for products.

*Response:* We thank these commenters for their feedback and will take this information into consideration.

### 3. Approaches to Billing

We acknowledged that there are various approaches that we could use to identify and establish direct cost inputs for the skin substitute products. We are also considering how to account for these products' variability and resource costs, especially as new products increasingly become available.

Similar to the way different sources of information can influence cost information for supplies, specifically considering variables such as different units of measurement, product type, product composition, or in what clinical circumstances the product is used, for example, would help us appropriately reflect costs in payment for the services that include the specific supply. We believe this to be pertinent to any proposal to pay for skin substitute products. For instance, grouping the direct costs for particular skin substitute products based on the typically associated application procedure could help us systematically incorporate the resource costs involved for different product billing scenarios. This approach can be seen in the Outpatient Prospective Payment System (OPPS), where a high-cost/low-cost system is used for skin substitute products billed with a specific procedure code based on their cost grouping.

Alternatively, when services and products are not performed frequently enough to be grouped, retaining separate procedure coding can help inform specificity and granularity for coding and payment of these services. Specifically, we could create separate procedure coding for specific product types, which could be billed with the appropriate skin substitute application services. We would account for cost variability for the different products (that is, establishing individual or group direct cost profiles and allocating direct cost inputs based on these groupings) under any combination of approaches discussed above. We could also review the unit of measurement for billed products, as available in our internal data or received in submissions, and create direct cost groupings for the products based on the reviewed/billed units of measurement. We could also establish direct cost inputs by employing our standard 'crosswalk' method using information from interested parties. Specifically, we would derive PE inputs by reviewing similarly resourced services to establish RVUs for a service that includes the cost of

the skin substitute products and other information to account for the physician's work in furnishing the skin substitute product. We would employ this method to establish payment for individual services that include specific skin substitute products or services that describe cost groupings of similarly priced skin substitute products. As we have discussed in prior rulemaking, we believe that the nature of the PFS relative value system is such that all services are appropriately subject to comparisons to one another. There is a long history of using crosswalk codes for this kind of valuation under the PFS, which is generally established through notice and comment rulemaking.

We solicited comment on how these methods may help reflect the resource costs involved with skin substitute products as furnished with different skin application procedures. The following is a summary of the comments we received and our responses.

*Comment:* The majority of commenters were concerned with the idea of incorporating skin substitute products into the PE as they believe this would exert pressure on all other PE RVUs, resulting in cuts to other areas of physician reimbursement due to budget neutrality. Commenters raised this concern to highlight that packaging skin substitute products in an office setting could lead to decreased patient access. One commenter suggested that if CMS were to incorporate skin substitute products in direct PE, we should ensure that it does not result in budget neutrality reductions.

*Response:* As stated in the CY 2024 PFS proposed rule, our goal is to achieve a consistent payment approach for skin substitute products that does not negatively impact beneficiary access. We recognize the budget neutrality concerns from interested parties and note that commenters raised similar concerns in the CY 2022 PFS final rule when we finalized the implementation of the clinical labor pricing update. In response, we noted that the PFS is a resource-based relative value payment system that necessarily relies on accuracy in the pricing of resource inputs. We also noted that for many services that involve proportionally more clinical labor, payment rates were reduced as a result of the prior market-based supply and equipment

pricing update, and payment rates will increase with the clinical labor pricing update, due to the same PFS budget neutrality requirements (86 FR 65025 through 65027). Therefore, any changes to the RVU does not necessarily result in negative consequences for other areas of physician reimbursement.

*Comment:* A few comments suggested that CMS should include additional Part B funding to account for the change in methodology, as well as work with the AMA CPT Editorial Panel/RVS Update Committee to address potential changes. A few commenters also recommended that CMS mirror the existing OPFS reimbursement methodology for skin substitutes, where payment is based on a high cost/lost cost model.

*Response:* We thank these commenters for their suggestions.

*Comment:* Some commenters offered alternative suggestions such as to pay for high-cost disposable supplies priced at more than \$500 using appropriate HCPCS codes, where pricing of these supplies is based on a transparent process that is annually reviewed and updated. Additionally, one commenter recommended that CMS replace application HCPCS codes 15271–15278 with newer, temporary codes to describe the more complex wound procedures and offer revisions to the sizing increments, for example: G5271-G5XXX Application of cellular and/or tissue-based product graft to trunk, arms, legs; G5275-G 5XXX Application of cellular and/or tissue-based product graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits.

*Response:* We thank these commenters for these suggestions.

*Comment:* Some commenters also stated that in order for interested parties to meaningfully comment on the different pricing methodologies for skin substitute products, CMS should: (1) explain specific direct inputs CMS proposes to incorporate into each HCPCS code that may include a skin substitute as a supply (HCPCS 15271-15278 or replacement codes if established); (2) provide information on estimates of proposed rates; (3) describe the valuation of the application procedure code and any redistribution effects on other PFS services with PE

RVUs; and (4) provide the impact that the proposal will have on vulnerable populations.

*Response:* We did not propose any policies for skin substitutes in the CY 2024 PFS proposed rule, so did not include specific proposed direct resource inputs or pricing information, or any impact analysis.

We will consider the suggestions and concerns raised by commenters to help inform future rulemaking. We will also continue our dialogue with interested parties, with our continued goal to achieve a consistent payment approach for skin substitute products across different sites of service.

I. Supervision of Outpatient Therapy Services, KX Modifier Thresholds, Diabetes Self-Management Training (DSMT) Services by Registered Dietitians and Nutrition Professionals, and DSMT Telehealth Services

1. Supervision of Outpatient Therapy Services in Private Practices

(a) Remote therapeutic monitoring for physical therapists and occupational therapists in private practice.

In the CY 2023 PFS final rule, we finalized new policies allowing Medicare payment for remote therapeutic monitoring (RTM) services, including allowing RTM services to be furnished under general supervision (87 FR 69649). RTM refers to the use of a device to monitor a patient's health or response to treatment using non-physiological data (please see a more detailed list of RTM services at section II.D. of this proposed rule). The current regulations, however, at §§ 410.59(a)(3)(ii) and 410.60(a)(3)(ii) specify that all occupational and physical therapy services are performed by, or under the direct supervision of, the occupational or physical therapist, respectively, in private practice. These regulations make it difficult for physical therapists in private practice (PTPPs) and occupational therapists in private practice (OTPPs) to bill for the RTM services performed by the physical therapist assistants (PTAs) and occupational therapy assistants (OTAs) they are supervising since the PTPP or OTTPP must remain immediately available when providing direct supervision of PTAs and OTAs (even though we noted in the CY 2022 PFS final rule that PTPPs and OTTPPs were intended to be among the primary billers of RTM services (86 FR 65116)). We designated the RTM codes as “sometimes therapy” codes (originally in the CY 2022 PFS final rule (86 FR 65116)), meaning that these services may be furnished outside a therapy plan of care when they are performed by physicians and certain NPPs where their State practice includes the provision of physical therapy, occupational therapy, and/or speech-language pathology services. Because we did not propose revisions to §§ 410.59 and 410.60 last year for OTTPPs and PTPPs, we proposed to establish an RTM-specific general supervision policy at §§ 410.59(a)(3)(ii) and (c)(2) and 410.60(a)(3)(ii)

and (c)(2) to allow OTPPs and PTPPs to provide general supervision only for RTM services furnished by their OTAs and PTAs, respectively.

We also noted that Medicare requires each therapist in private practice to meet the requirements specified in our current regulations at §§ 410.59(c) and 410.60(c) to qualify under Medicare as a supplier of outpatient occupational therapy or physical therapy services. Given that occupational therapists (OTs) and physical therapists (PTs) who are not enrolled and working as employees of OTPPs or PTPPs do not meet these requirements, we believe they should continue to function under direct supervision of the OTPP or PTPP. This is consistent with the Medicare Benefit Policy Manual, Pub. 100-02, Chapter 15, section 230.4.B, which states that in private practice, OTPPs and PTPPs must provide direct supervision of all services, including those furnished by OTs and PTs who are not yet enrolled in Medicare (even if they meet the other requirements for occupational therapists and physical therapists at 42 CFR part 484). As such, we proposed to retain the OTPP and PTPP direct supervision requirement for unenrolled PTs or OTs by clarifying that the RTM general supervision regulation at §§ 410.59(c)(2) and 410.60(c)(2) applies only to the OTA and PTA and does not include the unenrolled OT or PT. We solicited comment on this specific proposal as we want to know more about how this policy is now functioning with OTs and PTs who are not enrolled and our proposal to maintain this longstanding policy for direct supervision.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Many commenters supported our proposal to allow PTs and OTs in private practice to provide general supervision for RTM services. Many commenters urged us to finalize our proposal.

*Response:* We appreciate the support for our proposed policy from the commenters.

*Comment:* Some commenters reported that the current direct supervision requirement makes it challenging to use PTAs or OTAs to deliver RTM services and stated that allowing

general supervision of PTAs and OTAs in private practice settings provides a safe way for patients to receive RTM services.

*Response:* We appreciate the support for our proposed policy from the commenters.

*Comment:* Some commenters noted that our proposal aligns with the general supervision policy we finalized beginning in CY 2023 for RTM services furnished by physicians and other practitioners, while a few commenters noted that we did not propose to allow general supervision of PTAs and OTAs last year.

*Response:* We thank the commenters for their views and clarify that instead of the four proposed G-codes, two of which would encompass PTs, OTs, and SLPs in private practice, we finalized an alternate RTM general supervision policy to begin January 1, 2023. As such, we had not proposed a regulatory change for PTAs and OTAs employed in private practices of PTs and OTs.

*Comment:* One commenter supported our proposal to retain the OTPP and PTPP direct supervision requirement for unenrolled PTs or OTs. We did not receive any responses to our comment solicitation about how this policy now functions with OTs and PTs who are not enrolled.

*Response:* We appreciate the support for our proposed policy from the commenter.

After consideration of public comments, we are finalizing our proposal for RTM services to allow general supervision of OTAs and PTAs by OTs and PTs in private practice; and finalizing the proposal to continue the requirement for direct supervision of unenrolled PTs and OTs, including for RTM services. We are also finalizing the amendments to the corresponding regulation text at §§ 410.59 and 410.60 as proposed.

We believe this proposal will increase access to these remotely provided services performed by PTAs and OTAs under the general supervision furnished by PTPPs and OTPPs, and aligns the regulatory text at §§ 410.59 and 410.60 with the general supervision policy that we finalized for RTM services in the CY 2023 PFS final rule.

(b) General Supervision for PTs and OTs in Private Practice Comment Solicitation:

Sections 1861(p) and 1861(g) (by cross-reference to section 1861(p)) of the Act describe outpatient physical therapy and occupational therapy services furnished to individuals by physical and occupational therapists meeting licensing and other standards prescribed by the Secretary, including conditions relating to the health and safety of individuals who are furnished services on an outpatient basis. The second sentence of section 1861(p) of the Act describes outpatient therapy services that are provided to an individual by a physical therapist or occupational therapist (in their office or in such individual's home) who meets licensing and other standards prescribed by the Secretary in regulations and differentiates the therapists that furnish these outpatient therapy services from those working for an institutional provider of therapy services. In regulations, we have specifically addressed these therapists, previously referred to as PTPPs and OTPPs, since 1999 (63 FR 58868 through 58870). Because we wanted to create consistent requirements for therapists and therapy assistants, we clarified in the CY 2005 PFS final rule with comment period (69 FR 66236, 66351 through 66354) that the personnel qualifications applicable to home health agencies (HHAs) in 42 CFR part 484 are applicable to all outpatient physical therapy, occupational therapy, and speech-language pathology services. Also, in the CY 2005 PFS final rule, we cross-referenced the qualifications for OTs and their OTAs and PTs and their PTAs for all occupational therapy and physical therapy services, respectively, including those who work in private practices, to 42 CFR part 484 by adding a basic rule at §§ 410.59(a) and 410.60(a), respectively. Under Medicare Part B, outpatient therapy services are generally covered when reasonable and necessary and when provided by PTs and OTs meeting the qualifications set forth at 42 CFR part 484. Services provided by qualified therapy assistants, including PTAs and OTAs, may also be covered by Medicare when furnished under the specified level of therapist supervision that is required for the setting in which the services are provided (institutions, and private practice therapist offices and patient homes).

In accordance with various regulations, the minimum level of supervision for services performed by PTAs and OTAs by PTs and OTs working in institutional settings is a general level of supervision (see Table A in the Report to Congress titled Standards for Supervision of PTAs and the Effects of Eliminating the Personal PTA Supervision Requirement on the Financial Caps for Medicare Therapy Services at <https://www.cms.gov/Medicare/Billing/TherapyServices/Downloads/61004ptartc.pdf>). For example, 42 CFR 485.713 specifies that when an OTA or PTA provides services at a location that is off the premises of a clinic, rehabilitation agency, or public health agency, those services are supervised by a qualified occupational or physical therapist who makes an on-site supervisory visit at least once every 30 days. We noted that the Medicare Benefit Policy Manual, Pub. 100-02, chapter 8, section 30.2.1 defines skilled nursing and/or skilled rehabilitation services as those services, furnished pursuant to physician orders, that, among other requirements, “must be provided directly by or under the general supervision of these skilled nursing or skilled rehabilitation personnel to assure the safety of the patient and to achieve the medically desired result.” The same manual provision notes that in the SNF setting, skilled nursing or skilled rehabilitation personnel include PTs, OTs, and SLPs. However, since 2005 in the private practice setting, we have required direct supervision for physical and occupational therapy services furnished by PTAs and OTAs, requiring an OTPP or PTPP to be immediately available to furnish assistance and direction throughout the performance of the procedure(s). We finalized this direct supervision policy in the CY 2005 PFS final rule (69 FR 66354 through 66356) — changing it from personal supervision, which required the OTPP or PTPP to be in the same room as the therapy assistant when they were providing the therapy services. Under the current regulations §§ 410.59(c)(2) and 410.60(c)(2), all services not performed personally by the OTPP or PTPP, respectively, must be performed under the direct supervision of the therapist by employees of the practice. Subsequently, in the CY 2008 PFS

final rule (72 FR 66328 through 66332), we updated the qualification standards at 42 CFR part 484 for OTs, OTAs, PTs, PTAs, along with those for speech-language pathologists (SLPs).

Over the last several years, interested parties have requested that we revise our direct supervision policy for PTPPs and OTPPs to align with the general supervision policy for physical and occupational therapists working in Medicare institutional providers that provide therapy services (for example, outpatient hospitals, rehabilitation agencies, SNFs and CORFs), to allow for the general supervision of their therapy assistants. Additionally, the interested parties have informed us that all-but-one State allows for general supervision of OTAs and at least 44 States allow for the general supervision of PTAs, via their respective State laws and policies.

We were considering whether to revise the current direct supervision policy for PTPPs and OTPPs of their PTAs and OTAs, to general supervision for all physical therapy and occupational therapy services furnished in these private practices, and solicited comments from the public that we may consider for possible future rulemaking. We were particularly interested in receiving comments regarding the possibility of changing the PTA and OTA supervision policy from direct supervision to general supervision in the private practice setting, and whether a general supervision policy could have implications for situations or conditions raised below:

- Because we want to ensure quality of care for therapy patients, could the general supervision policy raise safety concerns for therapy patients if the PT or OT is not immediately available to assist if needed? Do State laws and policies allow a PTA or OTA to practice without a therapist in a therapy office or in a patient's home?
- Could any safety concerns be addressed by limiting the types of services permitted under a general supervision policy?
- Would a general supervision policy be enhanced with a periodic visit by the PT or OT to provide services to the patient? If so, what number of visits or time period should we consider?

- Would a general supervision policy potentially cause a change in utilization? Would such a change in the supervision policy cause a difference in hiring actions by the PT or OT with respect to therapy assistants?

Interested parties have been requesting that CMS reconsider its supervision policies for occupational therapy or physical therapy services, and in light of experiences during the PHE for COVID-19, we may consider proposing a general supervision policy for all services furnished by OTAs and PTAs employed by a PTPP or OTPP in the future after reviewing the comments and supporting data in response to this comment solicitation. Therefore, we solicited public comment, along with supporting data, about the questions and concerns we highlighted above, for our consideration for possible future rulemaking. We were further interested in public comment regarding changing §§ 410.59(a)(3)(ii), 410.59(c)(2), 410.60(a)(3)(ii), and 410.60(c)(2) to allow for general supervision of OTAs and PTAs by the OTPP and PTPP, respectively, when furnishing therapy services. Additionally, we solicited public comment for our consideration for possible future rulemaking regarding any appropriate exceptions to allowing general supervision in the furnishing of therapy services.

We received public comments on this comment solicitation. The following is a summary of the comments we received.

*Comment:* Many commenters stated they supported general supervision of PTAs and OTAs in the private practice setting, as it would align with the supervision requirement of all other Medicare therapy settings and nearly all state practice acts for physical and occupational therapy. Other commenters stated that making the supervision requirement consistent across outpatient settings will reduce administrative burden and confusion and ease compliance for therapy services providers who work and manage staff in more than one type of setting.

Collectively, many commenters suggested that changing the Medicare minimum required supervision level in private practice from direct to general, for example, would: (a) increase access to therapy services for more patients, especially those in rural and underserved

communities; (b) allow therapists and therapy assistants to work different or overlapping schedules to accommodate patient availability; (c) optimize resource allocation with more flexibility in scheduling time off for PTs/OTs when PTAs/OTAs are scheduled to work with Medicare patients; (d) remove the additional labor costs of onsite therapist staff during delivery of services by therapy assistants, and (e) eliminate the possibility of disruptions in patient care when the supervising therapist steps out of the practice office, even for a short period of time, as the therapy assistant must stop working, the commenter states that these disruptions can result in patient setbacks, delayed visits, and greater costs to Medicare.

Many commenters responded to our question as to whether a change to general supervision would raise safety concerns for therapy patients. Collectively, commenters did not believe there would be safety concerns with the change to general supervision; and many commenters also pointed out that they are unaware of safety concerns arising in the other Medicare settings where general supervision policies have been in place for many years, even though acuity levels were suggested by several commenters to be higher in SNFs and HHAs. Several other commenters stated that they were not aware of any *safety concerns* during the time PTAs/OTAs were treating patients while the PT/OT was off-site utilizing the direct virtual supervision flexibility through real-time audio and video technology during the COVID-19 PHE. One commenter also stated that they believe the existing structure of guidance from the House of Delegates of the American Physical Therapy Association, Medicare, and State law authorities on the PT-PTA relationship is sufficient to ensure patient safety under a general supervision policy.

Several commenters reported that State licensure practice acts include supervision policies for all settings, including when PTAs and OTAs treat patients in therapy offices or in patients' homes. Two commenters referred us to the Federation of State Boards of Physical Therapy for a comprehensive list of State supervision laws but listed out some of the latest trends in states' supervision requirements, including, for example — 44 States require general supervision in all settings, New York and the District of Columbia are the only jurisdictions that

require on-site supervision of PTAs in all settings, and five States expressly require a PT to be on-site when a PTA provides in-home care. These commenters noted that States are responsibly regulating supervision levels and that where a State has considered off-site supervision or in-home care as appropriate, CMS should not require additional standards.

Two commenters stated that Medicare regulations already limit the types of services permitted to be performed by PTAs and OTAs, for all settings not just private practice, that is, they may not provide evaluation services, make clinical judgments or decisions, or take responsibility for the service. One commenter stated that many States have added additional restrictions for PTAs and believes that State licensure and scope of practice requirements for PTAs determine what services can be safely provided by PTAs to patients, in and off the premises of each health care setting.

Commenters also noted that Medicare already requires the PT and OT to “actively” treat the patient at least once every 10 treatment days, per the progress note requirement. In addition, one commenter stated that many States also mandate that PTs provide periodic reevaluations or on-site or in-room supervisory visits of PTAs more frequently than Medicare does. Since Medicare and State laws already require periodic visits by the PT, one commenter asserted that additional requirements by CMS are not necessary.

In responding to our question as to whether a general supervision policy would cause a change in utilization of therapy services, Commenters mentioned a report by Dobson DaVanzo that they, along with several other rehabilitation organizations, commissioned to evaluate the financial impact of various provisions included in the Stabilizing Medicare Access to Rehabilitation and Therapy (SMART) Act, (H.R. 5536) in the 117 Congress.<sup>41</sup> As one issue, the report sought to predict whether the change to general supervision in the private practice setting would increase therapy utilization generally and whether a change in utilization of PTAs/OTAs

---

<sup>41</sup> Dobson DaVanzo & Associates LLC. Impact on Medicare Spending of the Stabilizing Medicare Access to Rehabilitation and Therapy Act Assumptions and Methodology Final Technical Report Data, 2022.

versus PTs/OTs will occur, as part of the legislation. Using the report's data, the commenters stated that by making the supervision policy change – which they indicate replaces utilization of therapists with therapy assistants – Medicare could save up to \$271.3 million (in 2021 dollars) over a 10-year period from 2022 to 2031. They stated this savings is due to the payment differential, the 15 percent reduction of the PFS amount – for services furnished in whole or in part by PTAs and OTAs that went into effect in CY 2022 per section 1834(v) of the Act.

*Response:* CMS will take these comments into consideration for possible future rulemaking.

After consideration of public comments in response to our comment solicitation for general supervision of PTAs and OTAs by PTs and OTs in private practice, we will take these comments into consideration for possible future rulemaking.

Additionally, we received public comments on issues that are considered out-of-scope of the proposals in this rule. As a result, CMS did not summarize or respond to those comments.

## 2. KX Modifier Thresholds

Formerly referred to as the therapy cap amounts, the KX modifier thresholds were established through section 50202 of the Bipartisan Budget Act (BBA) of 2018 (Pub. L. 115-123, February 9, 2018). These per-beneficiary amounts under section 1833(g) of the Act (as amended by section 4541 of the Balanced Budget Act of 1997) (Pub. L. 105–33, August 5, 1997) are updated each year based on the percentage increase in the Medicare Economic Index (MEI). In the CY 2023 PFS final rule (87 FR 69688 through 69710), we rebased and revised the MEI to a 2017 base year. Specifically, these amounts are calculated by updating the previous year's amount by the percentage increase in the MEI for the upcoming calendar year and rounding to the nearest \$10.00. Thus, for CY 2024, we proposed to increase the CY 2023 KX modifier threshold amount by the most recent forecast of the 2017-based MEI. For CY 2024, the proposed growth rate of the 2017-based MEI is estimated to be 4.5 percent, based on the IHS Global, Inc. (IGI) first quarter 2023 forecast with historical data through the fourth quarter of

2022.<sup>42</sup> Multiplying the CY 2023 KX modifier threshold amount of \$2,230 by the proposed CY 2024 percentage increase in the MEI of 4.5 percent ( $\$2,230 \times 1.045$ ), and rounding to the nearest \$10.00 results in a proposed CY 2024 KX modifier threshold amount of \$2,330 for physical therapy and speech-language pathology services combined and \$2,330 for occupational therapy services. We also proposed that if more recent data subsequently became available (for example, a more recent estimate of the CY 2024 2017-based MEI percentage increase), we would use such data, if appropriate, to determine the final CY 2024 MEI percentage increase and would apply that more recent MEI percentage increase to formulate the CY 2024 KX modifier threshold amounts in the CY 2024 PFS final rule. We received a more recent estimate of the CY 2024 2017-based MEI percentage increase of 4.6 percent which is greater than the MEI of 4.5 percent used for determining the proposed \$2,330 each for the CY 2024 KX modifier threshold amounts; however, the MEI of 4.6 percent was not enough to formulate a change to the proposed KX modifier threshold amounts for CY 2024. Therefore, we are finalizing the CY 2024 KX modifier threshold amounts of \$2,330 for physical therapy and speech-language pathology services combined and \$2,330 for occupational therapy services as proposed. Section 1833(g)(7)(B) of the Act describes the targeted medical review (MR) process for services of physical therapy, speech-language pathology, and occupational therapy services. The threshold for targeted MR is \$3,000 through CY 2027. Effective beginning with CY 2028, the MR threshold levels would be annually updated by the percentage increase in the MEI, per section 1833(g)(7)(B) of the Act. Consequently, for CY 2024, the MR threshold is \$3,000 for physical therapy and speech-language pathology services combined and \$3,000 for occupational therapy services. Section 1833(g)(5)(E) of the Act states that CMS shall identify and conduct targeted medical review using factors that may include the following:

---

<sup>42</sup> IGI is a nationally recognized economic and financial forecasting firm with which we contract to forecast the components of the MEI and other CMS market baskets.

(1) The therapy provider has had a high claims denial percentage for therapy services under this part or is less compliant with applicable requirements under this title.

(2) The therapy provider has a pattern of billing for therapy services under this part that is aberrant compared to peers or otherwise has questionable billing practices for such services, such as billing medically unlikely units of services in a day.

(3) The therapy provider is newly enrolled under this title or has not previously furnished therapy services under this part.

(4) The services are furnished to treat a type of medical condition.

(5) The therapy provider is part of a group that includes another therapy provider identified using the factors described previously in this section.

We track each beneficiary's incurred expenses for therapy services annually and count them towards the KX modifier and MR thresholds by applying the PFS rate for each service less any applicable MPPR amount for services of CMS-designated "always therapy" services (see the CY 2011 PFS final rule at 75 FR 73236). We also track therapy services furnished by critical access hospitals (CAHs), applying the same PFS-rate accrual process, even though they are not paid for their therapy services under the PFS and may be paid on a cost basis (effective January 1, 2014) (see the CY 2014 PFS final rule at 78 FR 74406 through 74410).

When the beneficiary's incurred expenses for the year for outpatient therapy services exceeds one or both of the KX modifier thresholds, therapy suppliers and providers use the KX modifier on claims for subsequent medically necessary services. Through the use of the KX modifier, the therapist and therapy provider attest that the services above the KX modifier thresholds are reasonable and necessary and that documentation of the medical necessity for the services is in the beneficiary's medical record. Claims for outpatient therapy services exceeding the KX modifier thresholds without the KX modifier included are denied. (See the CY 2023 PFS final rule at 87 FR 69650 through 69651))

*Comment:* One commenter supported the change in the KX modifier threshold amounts for CY 2024, and thanked us for the confirmation.

*Response:* We appreciate the supportive remarks from the commenter.

Using the updated MEI of 4.6 in determining the CY 2024 KX modifier amounts, we are finalizing the CY 2024 KX modifier threshold amounts as proposed: \$2,330 for physical therapy and speech-language pathology services combined and \$2,330 for occupational therapy services.

### 3. Diabetes Self-Management Training (DSMT) Services Furnished by Registered Dietitians (RDs) and Nutrition Professionals

During the CY 2022 PFS rulemaking, we adopted a regulation at § 410.72(d) that requires the services that RDs and nutrition professionals furnish to beneficiaries to be directly performed by them. This is based on the MNT regulations at subpart G, §§ 410.130 – 410.134. When developing this policy, we were only referring to MNT services. These MNT services are distinct from the DSMT services that RDs or nutrition professionals may furnish when they are or represent an accredited DSMT entity.

We note that the RD or nutrition professional, when named in or a sponsor of an accredited DSMT entity, may act as the DSMT certified provider, which is defined at section 1861(qq) of the Act as a physician or other individual or entity to which Medicare makes payment for other services. RDs and nutrition professionals may qualify as DSMT certified providers within the meaning of the statute since they provide and bill for MNT services. This is reinforced in our sub-regulatory manual provisions (Pub. 100-02, Chapter 15, section 300.2), which specifies that DSMT certified providers may bill and be paid for the entire DSMT program and further clarifies that the RD or nutrition professional is eligible to bill on behalf of an entire DSMT program (or entity) on or after January 1, 2002, after obtaining a Medicare provider number. In addition, section 1861(qq) of the Act requires that DSMT certified providers meet quality standards established by the Secretary, except that the physician or other individual or entity shall be deemed to have met such standards if the physician or other

individual or entity meets applicable standards originally established by the National Diabetes Advisory Board and subsequently revised by organizations who participated in the establishment of standards by such Board. DSMT entities are required to meet the National Standards for Diabetes Self-management Education Programs (NSDSMEP) set of quality standards at § 410.144(b). DSMT entities are also required to be recognized or accredited by CMS Accreditation Organizations (AOs). There are currently two national DSMT AOs— the American Diabetes Association (ADA) or the Association of Diabetes Care & Education Specialists (ADCES) (Medicare Program Integrity Manual, Pub. 100-08, chapter 10, section 10.2.4.B). The ADA and ADCES also review and approve the credentials of DSMT program instructors.

Interested parties have alerted us that the wording of § 410.72(d) has caused confusion for DSMT entities/suppliers and Part B Medicare Administrative Contractors (MACs) about whether RD or nutrition professionals must personally provide DSMT services. To alleviate any confusion, we believe a clarification is needed to distinguish between when a RD or nutritional professional is personally providing MNT services, in accordance with the MNT regulations, and when they are acting as or on behalf of an accredited DSMT entity and billing for DSMT services that may be provided by a group of other professionals working under an accredited DSMT entity, for example, registered nurses (RNs), pharmacists, or RDs other than the sponsoring RD. Under the NSDSMEP quality standards, the RD, RN, or pharmacist is permitted to provide the educational DSMT services on a solo basis, that is without a multi-disciplinary team; however, only the RD or nutrition professional, when enrolled as a Medicare supplier, in these accredited DSMT entities is authorized by section 1861(qq)(2)(A) of the Act to bill Medicare on behalf of the entire DSMT entity as the DSMT certified provider.

Consequently, we proposed to amend the regulation at § 410.72(d) to clarify that a RD or nutrition professional must personally perform MNT services. Additionally, we proposed to clarify that a RD or nutrition professional may bill for, or on behalf of, the entire DSMT entity as

the DSMT certified provider regardless of which professional furnishes the actual education services. We proposed to clarify § 410.72(d) to provide that, except for DSMT services furnished as, or on behalf of, an accredited DSMT entity, registered dietitians and nutrition professionals can be paid for their professional MNT services only when the services have been directly performed by them.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

*Comment:* Many commenters stated their support for the proposal to clarify and revise § 410.72(d) for the enrolled RD or nutrition professional, when acting as the DSMT certified provider, may bill for, or on behalf of, the entire DSMT entity, regardless of which professional personally delivers each aspect of the services. Some commenters also supported the proposed regulatory text. One of these commenters appreciated that the revised text would provide clarity when Registered Dietitian Nutritionists (RDNs) bill for DSMT services to make sure they are complying with regulatory guidelines. Although two commenters recommended that in addition to mentioning RNs and pharmacists as additional professionals for whom the RD may bill for in DSMT that we include paraprofessionals in the examples as a means of aligning our proposal with the accreditation requirements. The commenters reasoned that ADCES and ADA Accreditation requirements include the use the paraprofessionals to deliver elements of the DSMT under the supervision of the RD, noting that many of the trained professionals have lived experience with diabetes.

*Response:* We thank the commenters for their comments and suggestions. We purposely limited the professionals we named in the proposed clarification of our policy to DSMT team members that the National Standards quality standards recognizes to provide services independently, without the supervision of the RD, RN, or pharmacist. This way, by naming the RD, RN, and pharmacist, it would encompass the paraprofessionals or other individuals who are being supervised in accredited ADA or ADCES DSMT entities.

After consideration of public comments, we are finalizing our proposal to revise §410.72(d) to clarify that RDs and nutrition professionals can bill as or on behalf of a DSMT entity regardless of which professional furnished the actual services, but that they must directly provide the MNT services they bill for.

#### 4. DSMT Telehealth Issues

##### (a) Distant Site Practitioners:

Since 2006, RDs and nutrition professionals have been recognized as distant site practitioners for purposes of Medicare telehealth services under section 1834(m)(4)(E) of the Act. Section 1834(m)(4)(E) of the Act specifies that the practitioners listed at section 1842(b)(18)(C) of the Act, which include RDs and nutrition professionals as of 2006, can serve as distant site practitioners for Medicare telehealth services. Our regulations and sub-regulatory policies for Medicare telehealth services do not address scenarios involving the furnishing of DSMT services via telehealth when the actual services are personally furnished by individuals who provide them, for example, RNs, pharmacists, or other multidisciplinary team members, who are not recognized as telehealth distant site practitioners under the statutory definition. In keeping with the NSDSMEP quality standards, an RD is often part of a DSMT entity, and when they are, they can be considered a “certified provider” when they are enrolled in Medicare and intend to bill for the DSMT services, in accordance with the statutory provision at section 1861(qq)(2)(A) of the Act, which defines certified providers as physicians, or other individuals or entities designated by the Secretary, that, in addition to providing DSMT services, provides other items or services for which Medicare payment may be made. As we noted previously in this section of the final rule, there may be other RDs among the group or team of professionals, along with RNs and/or pharmacists, that are performing DSMT services in addition to the sponsoring or billing RD or nutrition professional functioning as the certified provider. Additionally, our Medicare Benefit Policy Manual, Pub. 100-02, Chapter 15, section 300.2 clarifies that these certified providers, including RDs or nutrition professionals, may bill for

services of the DSMT entity. Since we allow RDs and other DSMT certified providers to bill on behalf of the DSMT entity when other professionals personally furnish the service in face-to-face encounters, we believe that this should also be our policy when DSMT is furnished as a Medicare telehealth service. To increase access to DSMT telehealth services, we proposed to codify billing rules for DSMT services furnished as Medicare telehealth services at § 410.78(b)(2)(x) to allow distant site practitioners who can appropriately report DSMT services furnished in person by the DSMT entity, such as RDs and nutrition professionals, physicians, nurse practitioners (NPs), physician assistants (PAs), and clinical nurse specialists (CNSs), to also report DSMT services furnished via telehealth by the DSMT entity, including when the services are performed by others as part of the DSMT entity. This revision to our regulation will preserve access to DSMT services via telehealth for Medicare beneficiaries in cases where the DSMT service is provided in accordance with the NSDSMEP quality standards. We note that DSMT services are on the Medicare Telehealth Services List, and are subject to the requirements and conditions of payment under section 1834(m) of the Act and § 410.78 of our regulations, including originating site and geographic location requirements, when they are in effect. See section II.D. for a discussion of Medicare telehealth policies.

(b) Telehealth Injection Training for Insulin-Dependent Beneficiaries:

Currently, our manual instruction for Payment for Diabetes Self-Management Training (DSMT) in the Medicare Claims Processing Manual, Pub. 100-04, chapter 12, section 190.3.6, requires 1 hour of the 10-hour DSMT benefit's initial training and 1 hour of the 2-hour follow-up annual training to be furnished in-person to allow for effective injection training when injection training is applicable for insulin-dependent beneficiaries. This policy was clarified for 2019 to specify that in-person training only applies to a beneficiary for whom the injection training was applicable via CMS Transmittal 4173, available at <https://www.cms.gov/Regulations-and-Guidance/Guidance/Transmittals/2018Downloads/R4173CP.pdf>.

We believe that, with the expansion of the use of telehealth during the PHE for COVID-19, there have been significant changes in clinical standards, guidelines, and best practices regarding services furnished using interactive telecommunications technology, including for injection training for insulin-dependent patients. We do not want our policies to prevent injection training via telehealth when clinically appropriate. Consequently, we proposed to revise our policy at § 410.78(e) to allow the 1 hour of in-person training (for initial and/or follow-up training), when required for insulin-dependent beneficiaries, to be provided via telehealth. If finalized, we anticipate revising the Medicare Claims Processing Manual, Pub. 100-04, chapter 12, section 190.3.6 to reflect that flexibility.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Nearly half of the commenters submitting comments regarding our proposal for distant site practitioners expressed concerns about our proposed regulatory text for § 410.78(b)(2)(x) and the term distant site practitioner, not including outpatient hospitals, that bill on a UB-04 claim form using their NPI rather than a personal provider NPI, and pharmacies that enroll as suppliers of DSMT services. The commenters requested we include the term “approved entity” in the regulatory text and change the term “report” to “bill for.” Most of these commenters supported modifying the regulatory text to read as follows: Any distant site practitioner or approved entity who/that can bill for diabetes self-management training services may do so on behalf of others who personally furnish the services as part of the DSMT entity. One commenter stated ADA and ADCES accreditation data indicates that more than 1,200 – or approximately 56 percent – of all accredited DSMT programs, operate out of the outpatient hospital setting. Similarly, more than 200 – or approximately 11 percent – of all accredited DSMT programs are located within pharmacies, making up two-thirds of all DSMT programs. Five commenters expressed their support for including services for DSMT and MNT services furnished remotely by staff in outpatient hospitals to patients in their homes under section

1834(m) of the Act for payment of telehealth services see the provision in the Telehealth section at II.D. titled Payment for Outpatient Therapy Services, Diabetes Self-Management Training, and Medical Nutrition Therapy When Furnished by Institutional Staff to Beneficiaries in Their Homes Through Communication Technology. Another commenter asked that CMS clearly restate that accredited and recognized DSMT programs are eligible to bill Medicare Part B directly for DSMT services and may furnish and bill for DSMT services provided via telehealth, regardless of the provider type (RNs, pharmacists, registered dietitians, etc.) furnishing the service.

*Response:* Given that the pharmacy and outpatient hospital are recognized as certified providers of DSMT services per section 1861(qq) of the Act, they are recognized to bill for DSMT services they provide in-person, regardless of which professional furnishes the services. For purposes of telehealth, though, the current statute is clear at section 1834(m)(4)(E) of the Act, that only physicians and nonphysician practitioners listed at section 1842(b)(18)(C) of the Act qualify as distant site practitioners, so that area of Medicare law that does not include hospitals or pharmacies. However, we agree that the term “bill for” is more appropriate than “report” and will modify our proposed regulation text to reflect this change. We also want to clarify that CMS did not state that “accredited and recognized DSMT programs are eligible to bill Medicare Part B directly for DSMT services and may furnish and bill for DSMT services provided via telehealth, regardless of the provider type (RNs, pharmacists, registered dietitians, etc.) furnishing the service” since DSMT programs must qualify as a certified provider in accordance with the statute before they can bill for DSMT services. However, to the extent that the DSMT program qualifies as a certified provider of DSMT services and is a distant site practitioner specified in section 1834(m)(4) of the Act, that distant site physician or practitioner may bill for DSMT services furnished via telehealth and may do so on behalf of others who personally furnish the services as part of the DSMT entity.

*Comment:* Regarding our proposal on insulin injection-training to eliminate the regulatory prohibition on providing the full hours of DSMT via telehealth when clinically appropriate, all commenters were supportive. Although, a few commenters expressed concern about the definition of distant site practitioner that does not include all the DSMT multidisciplinary-team members that furnish injection-training in addition to RDs, including RNs and pharmacists. These commenters urged CMS to amend the proposed regulation text so as not to preclude certain practitioners from providing this important service via telehealth.

*Response:* We thank the many commenters for their support. Please refer to the previous response regarding distant site practitioners for DSMT furnished as Medicare telehealth services.

After consideration of public comments, we are doing the following: (a) finalizing our proposal on insulin injection-training that will allow the full initial 10-hours, or annual 2 hours, of DSMT services for insulin-dependent diabetics, via telehealth, when clinically appropriate, and we will reflect this change in our Medicare Claims Processing Manual, chapter 12, section 190.3.6 – Payment for Diabetes Self-Management Training (DSMT) as a Telehealth Service through our change management system; and, (b) finalizing our proposed regulatory text with a modification that replaces the term “report” with “bill for” so that the new text for §410.78(b)(2)(x) will provide that any distant site practitioner who can appropriately bill for diabetes self-management training services may do so on behalf of others who personally furnish the services as part of the DSMT entity.

## J. Advancing Access to Behavioral Health Services

### 1. Implementation of Section 4121(a) of the Consolidated Appropriations Act, 2023

#### a. Statutory Amendments

Section 4121(a) of Division FF, Title IV, Subtitle C of the Consolidated Appropriations Act, 2023 (CAA, 2023) (Pub. L. 117-328, December 29, 2022), Coverage of Marriage and Family Therapist Services and Mental Health Counselor Services under Part B of the Medicare Program, provides for Medicare coverage of and payment for the services of mental health care professionals who meet the qualifications for marriage and family therapists (MFTs) and mental health counselors (MHCs) when billed by these professionals.

Specifically, section 4121(a)(1) of the CAA, 2023 amended section 1861(s)(2) of the Act by adding a new benefit category under Medicare Part B in new subparagraph (II) to include marriage and family therapist services (as defined in an added section 1861(III)(1) of the Act) and mental health counselor services (as defined in an added section 1861(III)(3) of the Act).

Section 4121(a)(2) of the CAA, 2023 added a new subsection (III) to section 1861 of the Act, which defines marriage and family therapist services, marriage and family therapist (MFT), mental health counselor services, and mental health counselor (MHC). Section 1861(III)(1) of the Act defines “marriage and family therapist services” as services furnished by an MFT for the diagnosis and treatment of mental illnesses (other than services furnished to an inpatient of a hospital), which the MFT is legally authorized to perform under State law (or the State regulatory mechanism provided by State law) of the State in which such services are furnished, as would otherwise be covered if furnished by a physician or as an incident to a physician’s professional service. Section 1861(III)(2) of the Act defines the term MFT to mean an individual who:

- Possesses a master’s or doctor’s degree which qualifies for licensure or certification as a MFT pursuant to State law of the State in which such individual furnishes marriage and family therapist services;

- Is licensed or certified as a MFT by the State in which such individual furnishes such services;

- After obtaining such degree has performed at least 2 years of clinical supervised experience in marriage and family therapy; and

- Meets such other requirements as specified by the Secretary.

Section 1861(III)(3) of the Act defines “mental health counselor services” as services furnished by a mental health counselor (MHC) for the diagnosis and treatment of mental illnesses (other than services furnished to an inpatient of a hospital), which the MHC is legally authorized to perform under State law (or the State regulatory mechanism provided by the State law) of the State in which such services are furnished, as would otherwise be covered if furnished by a physician or as incident to a physician’s professional service. Section 1861(III)(4) of the Act defining MHC as an individual who:

- Possesses a master’s or doctor’s degree which qualifies for licensure or certification as a mental health counselor, clinical professional counselor, or professional counselor under State law of the State in which such individual furnishes MHC services;

- Is licensed or certified as a mental health counselor, clinical professional counselor, or professional counselor by the State in which the services are furnished;

- After obtaining such degree has performed at least 2 years of clinical supervised experience in mental health counseling; and

- Meets such other requirements as specified by the Secretary.

Section 4121(a)(3) of the CAA, 2023 amended section 1833(a)(1) of the Act to add a new subparagraph (FF), which provides that, with respect to MFT services and MHC services under section 1861(s)(2)(II) of the Act, the amounts paid shall be 80 percent of the lesser of the actual charge for the services or 75 percent of the amount determined for payment of a psychologist under subparagraph (L).

Section 1888(e)(2)(A)(ii) of the Act, as amended by section 4121(a)(4) of the CAA, 2023, excludes MFT and MHC services from consolidated billing requirements under the skilled nursing facility (SNF) prospective payment system. For further discussion about this exclusion of MFT and MHC services from SNF consolidated billing, see discussion in the FY 2024 SNF Prospective Payment System (PPS) proposed rule (88 FR 21316)<sup>43</sup>. Section 4121(a)(5) of the CAA, 2023 amended section 1842(b)(18)(C) of the Act to add MFTs and MHCs to the list of practitioners whose services can only be paid by Medicare on an assignment-related basis. MFTs, MHCs, and other practitioners described in section 1842(b)(18)(C) of the Act may not bill (or collect any amount from) the beneficiary or another person for any services for which Medicare makes payment, except for deductible and coinsurance amounts applicable under Part B. More information on assignment of claims can be found in the Medicare Claims Processing Manual, Pub. 100-04, Chapter 1, Section 30.3.1.

We also noted that section 1861(aa)(1)(B) of the Act was amended by section 4121(b)(1) of the CAA, 2023 to add services furnished by MFTs and MHCs to the definition of rural health clinic services. See section III.B. of this final rule for discussion related to MFT and MHC services furnished in RHCs and FQHCs.

Additionally, section 1861(dd)(2)(B)(i)(III) of the Act was amended by 4121(b)(2) of the CAA, 2023 to require a hospice program to have an interdisciplinary team that includes at least one social worker, MFT or MHC. For further discussion about this amended requirement for hospice program interdisciplinary teams, see section III.O. of this final rule.

#### b. Proposed Changes to Regulations

Consistent with the changes to the statute described above, we proposed to create two new regulation sections at § 410.53 and § 410.54 to codify the coverage provisions for MFTs and MHCs, respectively.

---

<sup>43</sup> <https://www.govinfo.gov/content/pkg/FR-2023-04-10/pdf/2023-07137.pdf>.

Specifically, we proposed to define a marriage and family therapist at § 410.53 as an individual who:

- Possesses a master's or doctor's degree which qualifies for licensure or certification as a marriage and family therapist pursuant to State law of the State in which such individual furnishes the services defined as marriage and family therapist services;
- After obtaining such degree, has performed at least 2 years or 3,000 hours of post master's degree clinical supervised experience in marriage and family therapy in an appropriate setting such as a hospital, SNF, private practice, or clinic; and
- Is licensed or certified as a marriage and family therapist by the State in which the services are performed.

We noted that we are aware that there may be some States that require a number of hours of clinical supervised experience for MFT licensure that may be inconsistent with the statutory requirement in section 1861(s)(2) of the Act that requires at least 2 years of clinical supervised experience. We believe it could be possible for an MFT to have completed the required number of clinical supervised hours required for licensure in their State, but to have accomplished this in less than two years. Therefore, we proposed a requirement for MFTs to have performed at least 2 years or 3,000 hours of post master's degree clinical supervised experience, if consistent with State licensure requirements. We stated in the proposed rule that we believe that 3,000 hours is roughly equivalent to the statutory requirement to have performed 2 years of clinical supervised experience and note that the regulatory requirements for clinical social workers (CSWs) at § 410.73(a)(3)(ii) allow 2 years or 3,000 hours of supervised experience. Additionally, the statutory benefit category for both MFTs and CSWs is defined as services for the diagnosis and treatment of mental illnesses. As such, we believe it would be appropriate to provide similar flexibility in the required amount of clinical supervised experience for MFTs and CSWs. We stated in the proposed rule that we were also interested in public comments regarding States that have a supervised clinical hour requirement for MFT licensure that is less than 2 years.

We proposed to define “Marriage and family therapist services” at § 410.53(b)(1) as services furnished by a marriage and family therapist for the diagnosis and treatment of mental illnesses (other than services furnished to an inpatient of a hospital), which the marriage and family therapist is legally authorized to perform under State law (or the State regulatory mechanism provided by State law) of the State in which such services are furnished. We also proposed at § 410.53(b)(1) that the services must be of a type that would be covered if they were furnished by a physician or as an incident to a physician’s professional service and must meet the requirements of this section.

Lastly, we proposed at § 410.53(b)(2) that the following services do not fall under the Medicare Part B benefit category for MFT services:

- Services furnished by a marriage and family therapist to an inpatient of a Medicare-participating hospital.

Similarly, we proposed to define a mental health counselor at § 410.54 as an individual who:

- Possesses a master's or doctor's degree which qualifies for licensure or certification as a mental health counselor, clinical professional counselor, or professional counselor under the State law of the State in which such individual furnishes the services defined as mental health counselor services;

- After obtaining such a degree, has performed at least 2 years or 3,000 hours of post master’s degree clinical supervised experience in mental health counseling in an appropriate setting such as a hospital, SNF, private practice, or clinic; and

- Is licensed or certified as a mental health counselor, clinical professional counselor, or professional counselor by the State in which the services are performed. As previously explained for MFTs, and for the same reasons, we proposed a requirement for MHCs to have performed at least 2 years or 3,000 hours of post master’s degree clinical supervised experience, if consistent with State licensure requirements. We believe that 3,000 hours is roughly

equivalent to the statutory requirement to have performed 2 years of clinical supervised experience and note that the regulatory requirements for clinical social workers at § 410.73(a)(3)(ii) allows 2 years or 3,000 hours. The MHC statutory benefit category authorizes MHCs to furnish services for the diagnosis and treatment of mental illnesses as it does for CSWs. We stated in the proposed rule that we were also interested in public comments regarding States that have a supervised clinical hour requirement for MHC licensure that is less than 2 years.

We proposed to define “mental health counselor services” at § 410.54(b)(1) as services furnished by a mental health counselor (as defined in paragraph (a) of this section) for the diagnosis and treatment of mental illnesses (other than services furnished to an inpatient of a hospital), which the mental health counselor is legally authorized to perform under State law (or the State regulatory mechanism provided by State law) of the State in which such services are furnished. We also proposed at § 410.54(b)(1) that the services must be of a type that would be covered if they were furnished by a physician or as an incident to a physician’s professional service.

We proposed at § 410.54(b)(2) that the following services do not fall under the Medicare Part B benefit category for MHC services:

- Services furnished by a mental health counselor to an inpatient of a Medicare-participating hospital.

We proposed to amend § 410.10 to add marriage and family therapist services and mental health counselor services to the list of included medical and other health services. We also proposed to amend § 410.150 to add marriage and family therapists and mental health counselors, to the list of individuals or entities to whom payment is made.

Currently, § 410.32(a)(2) lists the health care practitioners that may order diagnostic tests. Since this list currently includes CSWs and clinical psychologists (CPs), who are also authorized by statute to furnish services for the diagnosis and treatment of mental illnesses, we

proposed to amend § 410.32(a)(2) to add MFTs and MHCs to the list of practitioners who may order diagnostic tests, as for the other non-physician practitioners, to the extent that the MFT or MHC is legally authorized to perform the service under State law (or the State regulatory mechanism provided by State law) of the State in which such services are furnished.

We also proposed to codify in a new § 414.53 the payment amounts authorized under section 1833(a)(1)(FF) for MFT and MHC services. Additionally, we proposed to codify at § 414.53 the payment amount for clinical social worker (CSW) services as authorized under section 1833(a)(1)(FF) of the Act. As we reviewed our regulations to implement section 4121 of the CAA, 2023, we found that the payment amounts for CSWs are not yet codified under regulations. Specifically, we proposed to add that the payment amount for CSW, MFT, and MHC services is 80 percent of the lesser of the actual charge for the services or 75 percent of the amount determined for clinical psychologist services under the PFS.

We also proposed to add MFTs and MHCs to the list of practitioners who are eligible to furnish Medicare telehealth services at the distant site. See section II.D. of this final rule for a discussion of this proposal.

Additionally, we proposed to allow Addiction Counselors who meet all of the applicable requirements (possess a master's or doctor's degree which qualifies for licensure or certification as a mental health counselor; after obtaining such degree have performed at least 2 years (or, as proposed, 3,000 hours) of clinical supervised experience in mental health counseling; and licensed or certified as a MHC, clinical professional counselor, or professional counselor by the State in which the services are furnished) to enroll in Medicare as MHCs. That is, under this proposal, Addiction Counselors will be considered Mental Health Counselors and will be eligible to enroll and bill Medicare for MHC services if they meet these requirements. We understand there is variation in the terminology used for licensure across States for MHCs and MFTs and sought information pertaining to other types of professionals who may meet the applicable requirements for enrollment as mental health counselors. We noted that in past rulemaking, we

have discussed the term ‘mental health’ to be inclusive of diagnosis and treatment of substance use disorders. For example, in the CY 2022 PFS final rule (86 FR 65061), we stated that SUD services are considered mental health services for the purposes of the expanded definition of “interactive telecommunications system.” We proposed to apply that same interpretation for purposes of the mental health services included in the definition of MFT, MHC, and to clarify that the same interpretation applies for CSW, and CP services.

c. Coding Updates to Allow MFT and MHC Billing

In light of the new statutory benefits for MFTs and MHCs authorized by section 4121(a) of the CAA, 2023, we have considered whether updates to certain HCPCS codes are required in order to allow MFTs and MHCs to bill for the services described by those HCPCS codes. In the CY 2023 PFS final rule, we finalized new coding and payment for General Behavioral Health Integration services performed by CPs or CSWs to account for monthly care integration where the mental health services furnished by a CP or CSW serve as the focal point of care integration. In light of the new coverage under Medicare for MFT and MHC services for the diagnosis and treatment of mental illness, we proposed to revise the code descriptor for HCPCS code G0323 in order to allow MFTs and MHCs, as well as CPs and CSWs, to be able to bill for this monthly care integration service. We noted that MFTs and MHCs, like CSWs, are authorized by statute for the diagnosis and treatment of mental illnesses (other than services furnished to an inpatient of a hospital), which the MFT or MHC is legally authorized to perform under State law (or the State regulatory mechanism provided by State law) of the State in which such services are furnished, as would otherwise be covered if furnished by a physician or as an incident to a physician’s professional service. The code descriptor for HCPCS code G0323 is: *Care management services for behavioral health conditions, at least 20 minutes of clinical psychologist, clinical social worker, mental health counselor, or marriage and family therapist time, per calendar month. (These services include the following required elements: Initial assessment or follow-up monitoring, including the use of applicable validated rating scales;*

*behavioral health care planning in relation to behavioral/psychiatric health problems, including revision for patients who are not progressing or whose status changes; facilitating and coordinating treatment such as psychotherapy, coordination with and/or referral to physicians and practitioners who are authorized by Medicare to prescribe medications and furnish E/M services, counseling and/or psychiatric consultation; and continuity of care with a designated member of the care team.)*

Lastly, we noted that consistent with the changes to valuation of CPT code 99484 in the Valuation of Specific Codes section (section II.E. of this final rule), which describes General BHI and is the crosswalk code used for valuation of HCPCS code G0323, we also proposed conforming updates to the valuation for work and PE inputs for HCPCS code G0323. See section II.E. of this final rule for further discussion of changes to the valuation for HCPCS code G0323.

We welcomed comments regarding any other HCPCS codes that may require updating to allow MFTs and MHCs to bill for the services described in the HCPCS code descriptor.

We received many public comments on these proposals to implement section 4121 of the CAA, 2023. The following is a summary of the comments we received and our responses.

*Comment:* Many commenters expressed broad support for our proposals to implement section 4121 of the CAA, 2023, and expressed appreciation that CMS is working to expand access to behavioral health services by allowing for qualified professionals to provide this vital care while others noted that the increased workforce would help to address shortages and needs in their communities.

*Response:* We thank the commenters for their support of our proposals to implement section 4121 of the CAA, 2023.

*Comment:* Many commenters expressed support for our proposal to allow either 2 years or 3,000 hours of clinical supervised experience. Several commenters provided detailed feedback regarding the amount of required clinical supervised experience for state licensure for MFTs and

MHCs across States. A few commenters noted a small number of States that allow for licensure with less than 2 years and fewer than 3,000 hours. They stated that although most licensed and practicing MFTs and MHCs would meet the clinical supervised experience requirement as proposed, some would not and noted that those who obtained their supervised experience in a community mental health setting are more likely to accumulate the required number of hours of experience in less than 2 years. The commenters noted that some States differentiate between direct client contact versus other clinical activities and that some States require a specified number of direct contact hours. One commenter encouraged CMS to allow applicants who may not have performed at least 2 years or 3,000 hours of post master's degree clinical supervised experience before becoming licensed, but who instead provided an equivalent number of direct client contact hours to meet the supervised experience requirements and specified that they believed that 1,000 hours would be roughly equivalent to the proposed 2 years or 3,000 hours of clinical supervised experience. Other commenters expressed concern that ambiguity and discrepancies may exist in implementation across states as some states allow supervised clinical experience to count toward licensure requirements prior to completing their degree, and some states do not provide for clinical supervised experience requirements for licensure, and that licensure requirements can vary between clinicians with a master's or a doctoral degree. Some commenters requested that CMS allow for clinical supervised experience earned post-licensure to count toward the required amount for Medicare enrollment. A few commenters noted that "clinical supervised experience" was not defined and recommended that CMS be robust in its consideration of what constitutes such experience. Additionally, some commenters pointed out that California licensing laws for MFTs and MHCs consider some supervised clinical experience obtained during the progression toward academic degrees as supervised experience required for licensure and noted that while practicing MHCs and MFTs would generally meet the clinical supervised experience requirement as proposed, some individuals would not necessarily do so if CMS requires that all required supervised clinical experience occur following the granting of the

academic degree. Some commenters also expressed that MFTs and MHCs who have been in practice for an extended period of time may have difficulty providing documentation of clinical supervised experience that occurred years or even decades ago. Some commenters requested that CMS consider accepting an attestation as evidence of having met the requirement for clinical supervised experience and others made a similar request for MFTs and MHCs who have not graduated within the last 5 years.

*Response:* We note that sections 1861(III)(2) and 1861(III)(4) of the Act require that an MFT or MHC, after obtaining such degree has performed at least 2 years of clinical supervised experience in marriage and family therapy or mental health counseling. However, we wish to clarify that clinical supervised experience earned after earning the required degree and licensure can count toward the required amount of clinical supervised experience for Medicare enrollment purposes. Regarding comments pertaining to States that differentiate between direct client contact versus other clinical activities and States that require a specified number of direct contact hours, we note that a total of 2 years or 3,000 hours of clinical supervised experience is required and we defer to State law and licensure requirements regarding specifics related to how many of these hours must be direct client contact. Similarly, regarding commenters' requests for CMS to define the term "clinical supervised experience," we did not propose, and are not finalizing a definition of this term, but rather, defer to State law and licensure requirements regarding the nature of the 2 years or 3,000 hours of clinical supervised experience.

We thank the commenters for bringing the issue pertaining to clinical supervised experience for MFTs or MHCs in certain states, including California, to our attention. We note that sections 1861(III)(2) and 1861(III)(4) of the Act require that an MFT or MHC, after obtaining such degree has performed at least 2 years of clinical supervised experience in marriage and family therapy or mental health counseling. As such, any clinical supervised experience would need to have occurred after obtaining the applicable master's or doctor's degree which qualifies for licensure or certification as a MFT pursuant to State law of the State in which such individual

furnishes marriage and family therapist services, or the applicable master's or doctor's degree which qualifies for licensure or certification as a mental health counselor, clinical professional counselor, or professional counselor under State law of the State in which such individual furnishes MHC services, in order to count toward the required 2 years or 3,000 hours of clinical supervised experience. However, as noted above, clinical supervised experience earned after an individual obtains their licensure can count toward the required amount of clinical supervised experience for Medicare enrollment purposes.

Lastly, we note that the amount of clinical supervised experience required to be licensed as an MFT or MHC in certain states is the same as the required amount of clinical supervised experience that we are finalizing for Medicare enrollment purposes in this final rule (a total of 3,000 hours or 2 years). In a situation where an MFT or MHC is licensed in a state that requires a total of 3,000 hours or 2 years of clinical supervised experience after the completion of their degree as a requirement to be licensed as an MFT or MHC, no additional action is necessary for Medicare enrollment purposes and the Medicare Administrative Contractor (MAC) will validate the individual's license and clinical supervised experience during application processing.

*Comment:* Some commenters expressed concern regarding the statutory requirement that MFTs and MHCs be paid at 75 percent of the fee schedule rate and stated that the proposed regulations would prevent MFTs and MHCs from delivering services to hospital inpatients. A few commenters suggested that CMS consider add-on codes to more appropriately value the work, time, and effort of these practitioners, while others recommended that CMS consider further adjustments to the valuation of services used to treat mental health and SUDs under the PFS.

*Response:* The statutory benefit category for MFTs and MHCs does not prohibit MFTs and MHCs from delivering services to hospital inpatients. Rather, payment for MFT and MHC services furnished to hospital inpatients will be paid under the hospital inpatient prospective payment system as "hospital inpatient services," consistent with section 1861(b) of the Act,

instead of being paid as “MFT or MHC services” that are paid under the PFS. Additionally, the PFS payment amounts for MFT services and MHC services at 75 percent of the payment amount for a clinical psychologist is established in section 1833(a)(1)(FF) of the Act, which provides that, with respect to MFT services and MHC services under section 1861(s)(2)(II) of the Act, the amounts paid shall be 80 percent of the lesser of the actual charge for the services or 75 percent of the amount determined for payment of a psychologist. We did not consider changing the valuation of services furnished by MFTs and MHCs in the proposed rule, but we welcome additional information for our consideration in the future.

*Comment:* Many commenters expressed support for our proposal to allow addiction counselors who meet all the applicable requirements of a MHC to enroll in Medicare as MHCs and bill Medicare for MHC services, noting that if finalized, this proposal will increase access to needed care for Medicare beneficiaries with SUDs. Several commenters requested for CMS to explicitly codify this inclusion at § 410.54 to ensure that these practitioners and Medicare beneficiaries are aware of this policy. Several commenters noted that in the Medicaid Managed Care Access Proposed Rule, when amending its regulations to specify MH and SUD instead of behavioral health, CMS stated, “It is important to use clear, unambiguous terms in regulatory text.” As such, the commenters noted they believe it was necessary for CMS to include “addiction counselor or alcohol and drug counselor” at §§ 410.54(a)(1) and (3); “addiction counseling” at § 410.54(a)(2); and “substance use disorders” at § 410.54(b)(1) in the final rule. Other commenters similarly recommended that CMS develop new guidelines (both regulatory and subregulatory) that use the phrase “mental health” or “addiction” services, rather than the more global “behavioral health,” noting that this is especially important for States in which addiction counselors and mental health counselors have distinct roles.

*Response:* We are finalizing our proposal to allow addiction counselors who meet all the applicable requirements of a MHC to enroll in Medicare as MHCs and bill Medicare for MHC services. We understand that some States certify addiction counselors with a Bachelor’s degree;

however, these individuals would not meet the education requirements for MHCs in the Medicare context. For Medicare purposes, an individual must possess a master's or doctor's degree to meet the definition of an MHC as defined at section 1861(III)(4)(A) of the Act and § 410.54, which we are finalizing in this rule. While we are not finalizing changes to the regulation text at § 410.54 to reference addiction counselors, we note that for Medicare purposes, alcohol and drug counselors who furnish addiction counseling services for the diagnosis and treatment of mental illnesses, including substance use disorders, can enroll in Medicare and bill as MHCs, to the extent that they meet all of the statutory requirements regarding education, clinical supervised experience, and licensure. We are finalizing § 410.54 as proposed, and we refer readers to the discussion in our proposed rule on this topic (88 FR 52363).

*Comment:* One commenter noted that the requirements for MFTs and MHCs are not equivalent to the training that physicians must complete, noting that physicians complete 4 years of medical school plus 3 to 7 years of residency, including 10,000-16,000 hours of clinical training. The commenter stated that MFTs and MHCs are an essential part of a physician led patient care team; however, they believe that they lack the requisite medical education, medication management training, and clinical training that is critical for the diagnosis and treatment of certain mental illnesses. As such, though commenters applauded CMS for requiring adherence to State law, they requested that the definitions of MFTs and MHCs have a specific additional reference to the requirement that they must adhere to State scope of practice requirements. The commenter also stated that the MFT or MHC should be licensed in the State in which the patient is receiving care, as well as the State in which the practitioner is located, to ensure that the patient has clear access to remedies should malpractice occur, especially with the increased use of telehealth in this space.

*Response:* We note that for Medicare telehealth services, 42 CFR 410.78(b)(1) requires that the distant site practitioner be "licensed to furnish the [telehealth] service under State law." Therefore, any MHCs and MFTs who enroll in Medicare and furnish services would need to be

licensed to furnish the service under State law. Additionally, we note that sections 1861(III)(1) and (3) of the Act authorize MFTs and MHCs to furnish services for the diagnosis and treatment of mental illnesses which the MFT or MHC is legally authorized to perform under State law. We require that physicians and any practitioner who furnishes services under the Medicare program does so in accordance with their scope of practice. Therefore, MFTs and MHCs who furnish services under the Medicare program will also be required to adhere to the scope of practice in their respective State.

*Comment:* Several commenters requested clarification regarding variation in terminology used across States. Some commenters encouraged CMS to clarify that practitioners who meet the applicable requirements but are licensed by their State under a different title can also bill for these services and be recognized by Medicare for purposes of this policy. Other commenters recommended that CMS use the term Mental Health Professional (MHP) instead of Mental Health Counselor to be more inclusive of the types of professionals who may meet the applicable requirements for enrollment as a master's level mental health practitioner. They specifically requested that CMS recognize licensed psychological practitioners (Kentucky), licensed clinical psychotherapists (Kansas), licensed psychological associates (Texas), psychologist-masters (Vermont), and psychologists (West Virginia) as MHCs, or preferably as MHPs. Other commenters noted that Michigan has a licensure category for Licensed Professional Counselors (LPCs) and California uses the credential title Licensed Professional Clinical Counselor (LPCC) to describe the same or similar practitioner and noted that recognizing LPCs, LPCCs, and other functionally similar practitioners as MHCs for purposes of Medicare enrollment would increase access to these services. Another commenter advocated for psychologist associates or psychological associates to be included as mental health counselors. A few commenters expressed concern that the definitions of an MHC and MFT under the statute could open the door for master's level behavioral health professionals, who are not professional counselors, to qualify for Medicare reimbursement "as counselors." The commenters stated that while they understand

that it is not within CMS' authority to influence State occupational licensure requirements and the agency is beholden to the statute as passed by Congress, they are concerned with a growing trend of non-professional counselors, such as "masters level psychologists," being granted the privilege to practice as counselors in some States.

*Response:* We note that while section 1861(III)(4) of the Act uses the term "mental health counselor," the statute defines this term as a clinical professional counselor or a professional counselor. Section 1861(III)(4)(A) of the Act defines the term mental health counselor as an individual who possesses a master's or doctor's degree which qualifies for licensure or certification as a mental health counselor, clinical professional counselor, or professional counselor under the State law of the State in which such individual furnishes MHC services. Additionally, we proposed that addiction counselors who meet all applicable requirements for MHCs could enroll in Medicare as MHCs. In response to the comments received on the variation in nomenclature used across States for mental health counselors, we wish to make clear that individuals who meet all of the applicable statutory and regulatory qualifications for the mental health counselor benefit category for education and clinical supervised experience, but are licensed or certified by their State under a different title to furnish mental health counseling, are eligible to enroll in Medicare under the Part B "mental health counselor" statutory benefit category.

*Comment:* Commenters expressed support for our proposal to revise the code descriptor for HCPCS code G0323 to allow MFTs and MHCs, as well as CPs and CSWs, to be able to bill for this monthly care integration service.

*Response:* We are finalizing our proposal to update the code descriptor for HCPCS code G0323, as proposed. The updated code descriptor for HCPCS code G0323 is: *Care management services for behavioral health conditions, at least 20 minutes of clinical psychologist, clinical social worker, mental health counselor, or marriage and family therapist time, per calendar month. (These services include the following required elements: Initial assessment or follow-up*

*monitoring, including the use of applicable validated rating scales; behavioral health care planning in relation to behavioral/psychiatric health problems, including revision for patients who are not progressing or whose status changes; facilitating and coordinating treatment such as psychotherapy, coordination with and/or referral to physicians and practitioners who are authorized by Medicare to prescribe medications and furnish E/M services, counseling and/or psychiatric consultation; and continuity of care with a designated member of the care team.)*

*Comment:* One commenter urged CMS to update the code descriptors for all other HCPCS codes that are utilized by current Medicare behavioral health practitioners and requested that MFTs and MHCs be allowed to bill for services described in HCPCS code G0409 (*Social work and psychological services, directly relating to and/or furthering the patient's rehabilitation goals, each 15 minutes, face-to-face; individual (services provided by a CORF-qualified social worker or psychologist in a CORF)*) pertaining to services directly relating to and/or furthering a patient's rehabilitation goals. The commenter also encouraged CMS to ensure that MFTs and MHCs are able to provide services and bill for them using applicable HCPCS codes even if the code descriptors do not address the provider types eligible to bill for these services, such as the two new G-codes for psychotherapy for crisis services, GPFC1 and GPFC2.

*Response:* As to MFTs and MHCs providing services and billing for them using applicable HCPCS codes even if the code descriptors do not address the provider types eligible to bill for these services, we note that most HCPCS codes do not specify in the code descriptor which practitioners may furnish the service described, so CMS need not change code descriptors for most codes describing services for the diagnosis and treatment of mental illnesses in order for MFTs and MHCs to bill for them. As specified in sections 1861(III)(1) and (3) of the Act, MFT services and MHC services include any services that are furnished by the MFT or MHC for the diagnosis and treatment of mental illnesses, that they are legally authorized to furnish under State law. Regarding the comment about HCPCS code G0409, which describes services provided by a CORF-qualified social worker or psychologist in a CORF, we thank the commenters for bringing

this to our attention and note that this is something we may take into consideration for future rulemaking.

*Comment:* Several commenters urged CMS to use its authority to develop additional codes for substance use counseling that could be delivered by addiction counselors in office-based and community settings, similar to the services developed for community health workers, patient navigators, and peer support specialists in the proposed rule, and the services identified in the opioid treatment program regulations. A few commenters also suggested coding for psychoeducation activities for patients with SUD. Some commenters also urged CMS to work with Congress to authorize Medicare to cover addiction counselors who do not have master's degrees but have the appropriate training and supervision to deliver reasonable and necessary substance use disorder counseling services to Medicare beneficiaries. The commenters noted that allowing these additional substance use disorder counselors to serve Medicare beneficiaries, as many already do for Medicaid enrollees, aligns with CMS's objective to expand the workforce capacity to improve access to substance use disorder prevention, treatment, and recovery services, as outlined in its Behavioral Health Strategy.

*Response:* We thank the commenters for this feedback and the detailed suggestions about potential coding for substance use counseling and psychoeducation activities. We may consider this for future rulemaking. We thank the commenters for information regarding other types of professionals who furnish services for the treatment of SUDs, but who do not have a master's degree. We will keep this in mind as we consider ways to improve access to SUD treatment in the future. We note that the Medicare statute specifies the types of health care professionals that can enroll and bill the program directly for their services, and the services of the various recognized health care professionals are also defined in the statute. However, if a health care professional does not meet the statutory and regulatory requirements to enroll in Medicare, and bill and receive Medicare payment directly, they can instead explore whether they may work with a physician or other practitioner who is enrolled in the Medicare program to provide

services incident to the billing practitioner's professional services in accordance with our regulation at § 410.26. This is a way in which individuals who do not meet the requirements to enroll in Medicare as MFTs or MHC, for example, addiction counselors and other professionals who do not have a master's or doctor's degree, may be able to participate in care furnished to Medicare beneficiaries.

*Comment:* Several commenters requested that CMS amend the regulations at 42 CFR 419.22 to add the services of MFTs and MHCs to the list of Medicare Part B services that are not paid for under the Hospital Outpatient Prospective Payment System (OPPS) (except when packaged as part of a bundled payment) in order to clarify that MHC and MFT services are excluded from payment under the OPPS. The commenters stated that the regulation at § 419.22 lists those services that are authorized by Medicare statute to be paid under other payment systems outside of the OPPS, such as the PFS, the Skilled Nursing Facility Prospective Payment System (SNF PPS) and, the End-Stage Renal Disease (ESRD) composite rate.

*Response:* We thank the commenters for bringing this to our attention. We proposed a number of changes to our regulations (88 FR 52361 through 52364) to implement the amendments made by section 4121 of CAA, 2023. Generally, these amendments added MFTs and MHCs as types of non-physician practitioners who can enroll in Medicare and bill independently for their professional services to diagnose and treat mental illnesses, and specified that payment is made for these services at 80 percent of the lesser of the actual charges for the services or 75 percent of the amount determined under the PFS for services of a clinical psychologist (CP). In proposing to implement section 4121 of CAA, 2023, we inadvertently did not address whether MFT and MHC services are excluded from payment under the hospital OPPS. Services paid under fee schedules or other payment systems, including the professional services of physicians and nonphysician practitioners, are not paid under the OPPS (see 69 FR 65685). The regulation at § 419.22 lists the hospital services excluded from payment under the OPPS, and includes among them the services of qualified psychologists, as defined in section

1861(ii) of the Act. Because MHC and MFT services are professional services of nonphysician practitioners for which payment is made under the PFS at 75 percent of the amount of payment for services of a psychologist, we believe that in implementing the amendments to the Act made by section 4121 of the CAA, 2023, we must also exclude these services from payment under the OPPTS, effective January 1, 2024. Accordingly, we anticipate amending the regulation at § 419.22 to add the services of MFTs as defined in section 1861(III)(1) of the Act and the services of MHCs as defined in section 1861(III)(3) of the Act to the list of hospital services excluded from payment under the OPPTS, at new paragraphs (w) and (x), respectively. These amendments to the regulation text will be addressed in the CY 2024 OPPTS final rule which is expected to be issued on or around the same time as this final rule.

*Comment:* A few commenters requested that CMS update the definition of “practitioner” in the regulation text to enable MFTs and MHCs to opt out of the Medicare program and make use of private contracts with Medicare beneficiaries.

*Response:* We thank the commenter for bringing this to our attention. As noted above, we proposed a number of changes to our regulations (88 FR 52361 through 52364) to implement the amendments made by section 4121 of CAA, 2023. Generally, these amendments added MFTs and MHCs as types of non-physician practitioners who can enroll in Medicare and bill independently for their professional services to diagnose and treat mental illnesses, and specified that payment is made for these services at 80 percent of the lesser of the actual charges for the services or 75 percent of the amount determined under the PFS for services of a clinical psychologist (CP). In proposing to implement section 4121 of CAA, 2023, we inadvertently did not address the section of the regulation text pertaining to opting out of the Medicare program. We believe that in implementing the amendments to the Act made by section 4121 of the CAA, 2023, we must make a conforming change to § 405.400, which defines “practitioner” for opt-out purposes, to include MFTs and MHCs in the definition of “practitioner,” consistent with other practitioners listed in the regulation text who as authorized to furnish services for the diagnosis

and treatment of mental illnesses, such as clinical psychologists and clinical social workers. Accordingly, we are amending the regulation at § 405.400 to revise the definition of “practitioner” to include a marriage and family therapist and mental health counselor.

*Comment:* A few commenters requested that § 410.27, which permits certain hospital services to be furnished incident to a physician or nonphysician practitioner’s service, be updated to expand the definition of “nonphysician practitioner” to include MFTs and MHCs.

*Response:* We thank the commenters for bringing this to our attention. As noted above, we proposed a number of changes to our regulations (88 FR 52361 through 52364) to implement the amendments made by section 4121 of CAA, 2023. Generally, these amendments added MFTs and MHCs as types of non-physician practitioners who can enroll in Medicare and bill independently for their professional services to diagnose and treat mental illnesses, and specified that payment is made for these services at 80 percent of the lesser of the actual charges for the services or 75 percent of the amount determined under the PFS for services of a clinical psychologist (CP). In proposing to implement section 4121 of CAA, 2023, we inadvertently did not address the section of the regulation text pertaining to therapeutic outpatient hospital or CAH services and supplies incident to a physician's or nonphysician practitioner's service. We believe that in implementing the amendments to the Act made by section 4121 of the CAA, 2023, we must make a conforming change to § 410.27 to recognize MFTs and MHCs as a type of nonphysician practitioner. Accordingly, we are amending the regulation at § 410.27 to revise the definition of “nonphysician practitioner” to include MFTs and MHCs. This amendment to the regulation text at § 410.27 will be addressed in the CY 2024 OPSS final rule.

*Comment:* A few commenters stated that the regulatory exception to the physician self-referral law for assistance to compensate a nonphysician practitioner at § 411.357(x), defines “nonphysician practitioner” at § 411.357(x)(3) to include certain types of mental health practitioners, but the definition does not include marriage and family therapists or mental health counselors. The commenter asked that CMS expand the definition of “non-physician

practitioners” to include marriage and family therapists and mental health counselors, which would permit a hospital to provide assistance to a physician to compensate such practitioners.

*Response:* The proposed rule focused on implementing the new benefit category for MFT and MHC services that permits them to enroll and bill independently under the Medicare program. The proposed rule addressed certain enrollment, billing and payment policies for MFTs and MHCs and the services they furnish, but did not address physician self-referral policies. We did not propose any changes to § 411.357(x) or any other physician self-referral regulation in the proposed rule. The change the commenter suggested falls outside the scope of the proposed rule. We thank the commenter for bringing this point to our attention and will take it into consideration for possible future rulemaking.

*Comment:* We received other comments that were outside the scope of the proposed rule.

*Response:* While we are not responding to comments that were outside the scope of the proposed rule in this final rule, we will take them into consideration for possible future rulemaking.

After consideration of the public comments, we are finalizing our proposals to implement section 4121 of the CAA, with some clarifications and modifications, as described above. In this final rule, we are clarifying that to the extent that addiction counselors and alcohol and drug counselors who furnish services for the diagnosis and treatment of mental illnesses, including substance use disorders, can meet all of the statutory and regulatory requirements regarding education, clinical supervised experience, and State licensure for MHCs, such counselors can enroll in Medicare as MHCs. We are also finalizing a clarification that individuals who meet the statutory and regulatory requirements for education and clinical supervised experience for MHCs, but are licensed to furnish mental health counseling in their State under a title other than mental health counselor, clinical professional counselor, or professional counselor, are eligible to enroll in Medicare as MHCs. We are also finalizing an amendment to § 405.400 to include

MFTs and MHCs as practitioners who may opt out of Medicare; and will address amendments to §§ 419.22 and 410.27 in the CY 2024 OPSS final rule. We believe these policies to implement section 4121 of the CAA, 2023 will advance health equity by providing increased access to behavioral health services for Medicare beneficiaries.

#### d. Medicare Enrollment of MFTs and MHCs

Individuals who meet the applicable requirements as described in detail above in this section, and as finalized in this rule, will need to enroll in Medicare as MFTs and MHCs in order to submit claims for MFT services or MHC services, respectively, furnished to Medicare beneficiaries. Under § 424.510, a provider or supplier must complete, sign, and submit to the relevant MAC the appropriate Form CMS-855 (OMB Control No. 0938-0685) application in order to enroll in the Medicare program and obtain Medicare billing privileges. The Form CMS-855, which can be submitted via paper or electronically through the internet-based Provider Enrollment, Chain, and Ownership System (PECOS) process (SORN: 09-70-0532; 104 Provider Enrollment, Chain, and Ownership System), captures information about the provider or supplier that is needed for CMS or its MACs to determine whether the provider or supplier meets all Medicare requirements. We proposed, and are finalizing, that the MFT and MHC supplier types, like most nonphysician practitioner types, be subject to limited-risk screening under § 424.518.

Individuals who meet the MFT or MHC requirements in §§ 410.53 and 410.54 as finalized, would enroll in Medicare via the Form CMS-855I application (Medicare Enrollment Application – Physicians and Non-Physician Practitioners; OMB No. 0938-1355) and could begin submitting their enrollment applications after the publication of the CY 2024 PFS final rule. However, as the new benefit categories authorized by section 4121(a) of the CAA, 2023, do not take effect until January 1, 2024, MFT or MHC claims for MFT or MHC services furnished to Medicare beneficiaries with dates of service prior to January 1, 2024, will not be payable under Medicare Part B. MFTs and MHCs can visit

<https://www.cms.gov/medicare/provider-enrollment-and-certification> for basic information on the provider enrollment process.

## 2. Implementation of Section 4123 of the CAA, 2023

Section 4123(a)(1) of the CAA, 2023, Improving Mobile Crisis Care in Medicare, amended section 1848 of the Act by adding a new paragraph (b)(12) regarding payment for psychotherapy for crisis services furnished in an applicable site of service. New subparagraph (A) of section 1848(b)(12) of the Act requires the Secretary to establish new HCPCS codes under the PFS for services described in subparagraph (B) that are furnished on or after January 1, 2024. Subparagraph (B) of section 1848(b)(12) of the Act describes these services as psychotherapy for crisis services that are furnished in an applicable site of service. Section 1848(b)(12)(C) of the Act specifies that the payment amount for these psychotherapy for crisis services shall be equal to 150 percent of the fee schedule amount for non-facility sites of service for each year for the services identified (as of January 1, 2022) by HCPCS codes 90839 (*Psychotherapy for crisis; first 60 minutes*) and 90840 (*Psychotherapy for crisis; each additional 30 minutes (List separately in addition to code for primary service)*), and any succeeding codes.

For purposes of this provision, subparagraph (D)(i) of new section 1848(b)(12) of the Act defines an applicable site of service as a site of service other than a site where the facility rate under the PFS applies and other than an office setting, while subparagraph (D)(ii) requires that the code descriptors for these new psychotherapy for crisis services be the same as the services identified (as of January 1, 2022) by HCPCS codes 90838 and 90840, and any succeeding codes, except that the new codes shall be limited to services furnished in an applicable site of service.

Therefore, consistent with the requirements described in new paragraph (12) of section 1848(b) of the Act, we proposed to create two new G-codes describing psychotherapy for crisis services furnished in any place of service at which the non-facility rate for psychotherapy for crisis services applies, other than the office setting: HCPCS codes GPFC1 and GPFC2.

To identify the places of service that are assigned the non-facility rate, § 414.22(b)(5)(i) states that there are usually two levels of PE RVUs that correspond to each code paid under the PFS: facility PE RVUs and non-facility PE RVUs. Under § 414.22(b)(5)(i)(A), the facility PE RVUs apply to services furnished in a hospital, skilled nursing facility, community mental health center, hospice, ambulatory surgical center, or wholly owned or wholly operated entity providing preadmission services under § 412.2(c)(5), or for services furnished via telehealth under § 410.78 (though we note that special rules relating to the PHE for COVID-19 currently apply, and we include proposals regarding the place of service for telehealth services in section II.D. of this final rule). Under § 414.22(b)(5)(i)(B), the non-facility rate is paid in all other settings, including a physician's office, the patient's home, a nursing facility, or a comprehensive outpatient rehabilitation facility. We provided the full list of places of service that are assigned a non-facility rate on the CMS website at <https://www.cms.gov/Medicare/Coding/place-of-service-codes>. We proposed that the two new G-codes describing psychotherapy for crisis services can be billed when the services are furnished in any non-facility place of service other than the physician's office setting. We also noted that in the CY 2022 PFS final rule (86 FR 65059), in our discussion of Medicare telehealth services where the patient's home is a permissible originating site for services furnished for diagnosis, evaluation, or treatment of a mental health disorder, we indicated that we define the term "home" broadly to include temporary lodging, such as hotels and homeless shelters (86 FR 65059). We clarified that, for circumstances where the patient, for privacy or other personal reasons, chooses to travel a short distance from the exact home location during a telehealth service, that would qualify as the patient's home. For purposes of implementing section 1848(b)(12) of the Act, we proposed to use the same broad definition of the patient's home for purposes of these proposed G-codes describing psychotherapy for crisis services.

The new G-codes and their descriptors are:

- GPFC1 (*Psychotherapy for crisis furnished in an applicable site of service (any place of service at which the non-facility rate for psychotherapy for crisis services applies, other than the office setting); first 60 minutes*); and

- GPFC2 (*Psychotherapy for crisis furnished in an applicable site of service (any place of service at which the non-facility rate for psychotherapy for crisis services applies, other than the office setting); each additional 30 minutes (List separately in addition to code for primary service)*)).

As required by section 1848(b)(12)(C) of the Act, we proposed to establish a fee schedule amount for these two new G-codes that is 150 percent of the current PFS non-facility RVUs for CPT codes 90839 (*Psychotherapy for crisis; first 60 minutes*) and 90840 (*Psychotherapy for crisis; each additional 30 minutes (List separately in addition to code for primary service)*), respectively. Specifically, we proposed to calculate the work, PE, and MP RVUs for HCPCS codes GPFC1 and GPFC2 by multiplying the work, PE, and MP RVUs for CPT codes 90839 and 90840, respectively, by 1.5.

We noted that section 4123(a)(2) of the CAA, 2023 amends section 1848(c)(2)(B)(iv) of the Act to include a waiver of budget neutrality providing that paragraph (b)(12) shall not be taken into account in applying PFS budget neutrality requirements under section 1848(c)(2)(B)(ii)(II) of the Act for 2024. Accordingly, we proposed to exclude expected expenditures for HCPCS codes GPFC1 and GPFC2 from the budget neutrality calculation for CY 2024 PFS ratesetting.

Additionally, section 4123(d) of the CAA, 2023 requires that the Secretary use existing communication mechanisms to provide education and outreach to providers of services, physicians, and practitioners with respect to the ability of auxiliary personnel, including peer support specialists, to participate, consistent with applicable requirements for auxiliary personnel, in the furnishing of psychotherapy for crisis services billed under the PFS under section 1848 of the Act, behavioral health integration services, as well as other services that can

be furnished to a Medicare beneficiary experiencing a mental or behavioral crisis. We understand that there are varying definitions of the term “peer support specialist.” The Substance Abuse and Mental Health Services Administration (SAMHSA) defines a “peer support specialist” as a person who uses their lived experience of recovery from mental illness and/or addiction, plus skills learned in formal training, to deliver services to promote recovery and resiliency. The essential principles of peer support include shared personal experience and empathy, a focus on individual strengths, and supporting individuals as they work toward recovery pursuant to a person-centered plan of care. However, for Medicare payment purposes, we noted that the term auxiliary personnel is defined at § 410.26(a)(1) as any individual who is acting under the supervision of a physician (or other practitioner), regardless of whether the individual is an employee, leased employee, or independent contractor of the physician (or other practitioner) or of the same entity that employs or contracts with the physician (or other practitioner), has not been excluded from the Medicare, Medicaid, and all other Federally funded health care programs by the Office of Inspector General or had his or her Medicare enrollment revoked, and meets any applicable requirements to provide incident to services, including licensure, imposed by the State in which the services are being furnished. We do not include definitions of any specific types of personnel who could be included under the definition of auxiliary personnel in our regulations and did not propose to do so in the proposed rule. We anticipate conducting this outreach and education through existing communications mechanisms as required by the CAA, 2023.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Many commenters supported the proposals to implement section 4123 of the CAA, 2023. Some commenters noted that individuals who are in crisis should be able to access services wherever they are in need and commended CMS for enabling this flexibility through proposals included in the proposed rule. Other

commenters stated that in light of the implementation of the 988-crisis system, it is particularly important to increase access to behavioral health services that can respond to a crisis in homes and communities and avoid law enforcement involvement.

*Response:* We thank the commenters for their support of our proposals to implement section 4124 of the CAA, 2023.

*Comment:* We received several comments on the proposal related to peer support specialists. Many commenters stated that psychotherapy is not within the scope of practice for peer support specialists. They stated that peer support specialists do provide engagement services, including education, support, and sharing lived experience to facilitate an individual participating in crisis psychotherapy effectively. The commenters described that peer support specialists are analogous to emergency medical technicians (EMTs) who are not medical clinicians but are specially trained to respond in emergency situations. Other commenters encouraged CMS to provide guidance and support that meaningfully encourages incorporation of peer support services, such as by training clinic staff on the value and role of peer services and ensuring that peer services are utilized in alignment with state scopes of practice for peers. One commenter requested that CMS update the regulatory definition of auxiliary personnel to specifically state that this includes, but is not limited to, peer support specialists and suggested using language from SAMHSA's national model standards.

*Response:* We thank the commenters for highlighting that furnishing psychotherapy is not within the scope of practice for peer support specialists. We did not make any proposals specific to peer support specialists as it pertains to section 4123 of the CAA, 2023. The CAA requires CMS to provide education and outreach to peer support specialists, to the extent that they can serve as auxiliary personnel, regarding psychotherapy for crisis services. Additionally, we wish to clarify that peer support specialists participating in the furnishing of any service as auxiliary personnel, including

psychotherapy for crisis, must operate within their scope of the role of peer support specialists and meet any applicable requirements to provide incident to services, including licensure, imposed by the State in which the services are being furnished. We also note that we did not propose to specify any particular types of personnel in our regulatory definition of auxiliary personnel; the definition at § 410.26 currently references “any individual,” and we do not believe greater specificity is warranted at this time.

Comment: A few commenters urged CMS to consider paying for the existing code billed under Medicaid in many states, HCPCS code H2011 (*crisis intervention service per 15 minutes*), and to do so at rates that cover the cost of care, noting that there are limitations to the psychotherapy for crisis codes in that they require the services be provided by a licensed practitioner that can bill Medicare independently. Some of the commenters stated that much of this type of crisis work is done by a multidisciplinary team that does not always include someone who can independently bill under the Medicare program. They stated that the existing coding described by CPT codes 90839 and 90840, and the newly proposed codes which are based on the existing CPT codes, have the potential to create a barrier to care since they do not describe or include the resource costs of team-based care. Other commenters noted that SAMHSA’s National Guidelines for Behavioral Health Crisis include mobile crisis teams as an essential component of a crisis system and specify that, to fully align with best practice guidelines, teams must “incorporate peers within the mobile crisis team” and requested that CMS create a pathway for peer support specialists to be reimbursed when they work with clinicians on mobile crisis teams. Other commenters recommended CMS create a code for “Crisis Psychotherapy with engagement services” and increase the payment by 40 percent with a modifier to indicate when the service is furnished by a two-person mobile crisis team. Other commenters requested adjustments for services furnished in

rural areas, as well as additional payment for mileage, and some suggested that utilizing a Prospective Payment System (PPS) may be a more appropriate model for furnishing mobile crisis services. A few commenters requested that CMS consider whether it would be more appropriate to utilize a methodology similar to what it uses for establishing EMS/ambulance base rates and some commenters recommended that CMS consider expanding data collection and the testing of new payment and service delivery models for EMS providers to supplement mobile crisis response teams. Other commenters recommended that CMS create an add-on code for Mobile Crisis Services to bill up to two additional 30-minute blocks after the first 60 minutes of mobile crisis care, similar to the way HCPCS code 90839 (*Psychotherapy for crisis, first hour*) can be billed as the primary code with HCPCS code 90840 (*Psychotherapy for crisis, each additional 30 mins*). Some commenters noted that after 2 hours of Mobile Crisis Services, the patient should be transferred to the appropriate level of care.

*Response:* We note that the proposals for CY 2024 were specific to implementing section 4123 of the CAA, which focuses on payment for psychotherapy for crisis services furnished in an applicable site of service and specified that the payment amount for these psychotherapy for crisis services shall be equal to 150 percent of the fee schedule amount for non-facility sites of service for each year for the services identified (as of January 1, 2022) by HCPCS codes 90839 (*Psychotherapy for crisis; first 60 minutes*) and 90840 (*Psychotherapy for crisis; each additional 30 minutes (List separately in addition to code for primary service)*), and any succeeding codes. However, regarding requests that CMS consider paying for other types of crisis care that is more comprehensive or team-based, we agree with commenters regarding the importance of beneficiary access to crisis services and we may consider this feedback for future rulemaking. Regarding the comment about an add-on code, we note that the proposed G codes are based on CPT codes 90839 (*Psychotherapy for crisis, first hour*) and 90840 (*Psychotherapy for crisis, each additional 30 mins*), and therefore, HCPCS codes GPFC1 and GPFC2 do allow for billing

an add-on code for each additional 30 minutes beyond the first hour.

*Comment:* A few commenters requested that CMS clarify that “applicable sites of service” includes services administered outside of a clinical setting by a mobile crisis response team, and in a crisis stabilization unit.

*Response:* In the CY 2024 PFS proposed rule (88 FR 52364), we proposed that the two new G-codes describing psychotherapy for crisis services can be billed when the services are furnished in any non-facility place of service other than the physician’s office setting. We noted that the full list of places of service that are assigned a non-facility rate can be found on the CMS website at <https://www.cms.gov/Medicare/Coding/place-of-service-codes>.

*Comment:* One commenter requested that we clarify whether a co-pay would be applicable for these the newly proposed codes and noted that collecting a co-pay in this context would be difficult unless crisis psychotherapy is provided to a beneficiary with an existing professional relationship with the provider(s) furnishing the service.

Response: We note that the Part B coinsurance would apply for the new psychotherapy for crisis services, as mandated for Part B services by section 1833(a)(1) of the Act.

After consideration of public comments, we are finalizing our proposals to implement section 4123 of the CAA, 2023, as proposed. Specifically, we are finalizing two new G-codes to describe psychotherapy for crisis furnished in an applicable site of service (any place of service at which the non-facility rate for psychotherapy for crisis services applies, other than the office setting) and establishing a fee schedule amount for these two new G-codes that is 150 percent of the current PFS non-facility RVUs for CPT codes 90839 (*Psychotherapy for crisis; first 60 minutes*) and 90840 (*Psychotherapy for crisis; each additional 30 minutes (List separately in addition to code for primary service)*), respectively. As required by section 1848(b)(12)(C) of the Act, we proposed, and are finalizing, to establish a fee schedule amount for these two new G-codes that is 150 percent of the current PFS non-facility RVUs for CPT codes 90839

*(Psychotherapy for crisis; first 60 minutes)* and 90840 *(Psychotherapy for crisis; each additional 30 minutes (List separately in addition to code for primary service))*, respectively.

We note that the codes GPFC1 and GPFC2 were placeholder codes and that the final code numbers will be G0017 and G0018. The new G-codes and their descriptors are:

- G0017 *(Psychotherapy for crisis furnished in an applicable site of service (any place of service at which the non-facility rate for psychotherapy for crisis services applies, other than the office setting); first 60 minutes); and*

- G0018 *(Psychotherapy for crisis furnished in an applicable site of service (any place of service at which the non-facility rate for psychotherapy for crisis services applies, other than the office setting); each additional 30 minutes (List separately in addition to code for primary service)).*

### 3. Implementation of Section 4124 of the Consolidated Appropriations Act, 2023 (CAA, 2023)

Section 4124 of the CAA, 2023, Ensuring Adequate Coverage of Outpatient Mental Health Services under the Medicare Program, establishes Medicare coverage and payment for intensive outpatient services for individuals with mental health needs when furnished by hospital outpatient departments, community mental health centers, RHCs, and FQHCs, effective January 1, 2024. Please see the discussion of our implementation of section 4124 in the CY 2024 Outpatient Prospective Payment System (OPPS) final rule, section VIII. Payment for Partial Hospitalization and Intensive Outpatient Services.

### 4. Health Behavior Assessment and Intervention (HBAI) Services

The current Health and Behavior Assessment and Intervention codes (CPT codes 96156, 96158, 96159, 96164, 96165, 96167, 96168, 96170, and 96171) were created by the CPT Editorial Panel during its September 2018 meeting. The CPT Editorial Panel deleted the six previous HBAI CPT codes and replaced them with nine new CPT codes. As discussed in the CY 2023 PFS final rule (87 FR 69541), the HBAI range of CPT codes are intended to be used for psychological assessment and treatment, when the primary diagnosis is a medical condition. A

health behavior assessment under these HBAI services is conducted through health-focused clinical interviews, behavioral observation and clinical decision-making and includes evaluation of the person's responses to disease, illness or injury, outlook, coping strategies, motivation, and adherence to medical treatment. HBAI services are provided individually, to a group (two or more patients), and/or to the family, with or without the patient present, and include promotion of functional improvement, minimization of psychological and/or psychosocial barriers to recovery, and management of and improved coping with medical conditions. The HBAI codes apply to services that address psychological, behavioral, emotional, cognitive, and interpersonal factors in the treatment/management of people diagnosed with physical health issues. According to the CPT prefatory language in the CPT 2023 Professional Edition, the patient's primary diagnosis is physical in nature and the focus of the assessment and intervention is on factors complicating medical conditions and treatments. The HBAI codes capture services related to physical health, such as adherence to medical treatment, symptom management, health-promoting behaviors, health related risky behaviors, and adjustment to physical illness.

In light of the new benefit categories authorized by section 4121(a)(2) of the CAA, 2023, which authorize MFTs and MHCs to furnish services for the diagnosis and treatment of mental illness, this prompted us to consider whether MFTs and MHCs could furnish and bill for HBAI services. Additionally, we re-examined whether CSWs could furnish and bill these HBAI codes given that their statutory benefit category also authorizes them to furnish services for the diagnosis and treatment of mental illnesses. We noted that prior to the passage of the CAA, 2023, which authorized benefit categories for MFTs and MHCs, there was previously a National Coverage Determination (NCD) that stated, the CPT codes 96156, 96158, 96159, 96164, 96165, 96167 and 96168 may be used only by a Clinical Psychologist (CP), (Specialty Code 68). However, we noted that this NCD was retired on December 8, 2022.<sup>44</sup>

---

<sup>44</sup> <https://www.cms.gov/medicare-coverage-database/view/article.aspx?articleid=57754&ver=12&=>.

Like CPs, who can currently bill Medicare for HBAI services, CSWs, MFTs, and MHCs have the education and training to address psychosocial barriers to meet the needs of patients with physical health conditions. In accordance with State law and scope of practice, CSWs, MFTs, and MHCs can assess, diagnose, and treat psychological and/or psychosocial behaviors associated with physical health conditions. Interested parties have informed us that like CSWs, MHCs and MFTs can play a key role in a multidisciplinary team approach that leads to successful outcomes in patient care, including offering integrated care within hospitals and medical practices where patients are diagnosed with physical health conditions. For example, mental health professionals such as MHCs and MFTs facilitate “behavioral management and reinforcement, guided problem-solving, supporting patients in setting realistic and attainable goals, and teaching relaxation strategies for managing diabetes-related stressors.”<sup>45</sup> In this role, mental health professionals such as CSWs, MHCs, and MFTs help patients manage mental health symptoms associated with a physical health condition. Moreover, according to the National Cancer Institute at the National Institutes of Health, mental health professionals can also provide emotional and social support to assist cancer patients in reducing “levels of depression, anxiety, and disease and treatment-related symptoms among patients.”<sup>46</sup> Therefore, we proposed to allow the HBAI services described by CPT codes 96156, 96158, 96159, 96164, 96165, 96167, and 96168, and any successor codes, to be billed by CSWs, MFTs, and MHCs, in addition to CPs. We noted that in order for payment to be made under Medicare for HBAI services furnished to a beneficiary, the HBAI services must be reasonable and necessary for the diagnosis or treatment of illness or injury or to improve the functioning of a malformed body member, in accordance with section 1862(a)(1)(A) of the Act.

We received public comments on these proposals. The following is a summary of the

---

<sup>45</sup> Powell PW, Hilliard ME, Anderson BJ (2014). Motivational interviewing to promote adherence behaviors in pediatric type 1 diabetes. *Curr Diab Rep.* 2014;14(10):531. 10.1007/s11892-014-0531-z.

<sup>46</sup> National Cancer Institute at the National Institutes of Health, (nd). “Stress and Cancer” <https://www.cancer.gov/about-cancer/coping/feelings/stress-fact-sheet>.

comments we received and our responses.

*Comment:* All commenters supported our proposal to allow HBAI services and any successor codes, to be billed by CSWs, MFTs, and MHCs, in addition to CPs. One commenter requested that we allow HBAI services to be billed by occupational therapists during the mental health workforce shortage.

*Response:* We appreciate the support expressed in the comments. HBAI services have historically not been designated as therapy services, therefore occupational therapists cannot furnish these services. As such, we are not recognizing these codes as therapy services at this time.

After consideration of public comments, we are finalizing our proposal to allow the HBAI services described by CPT codes 96156, 96158, 96159, 96164, 96165, 96167, and 96168, and any successor codes, to be billed by CSWs, MFTs, and MHCs, in addition to CPs.

## 5. Adjustments to Payment for Timed Behavioral Health Services

There is an ongoing behavioral health crisis in the United States, which has been exacerbated by the COVID-19 pandemic, the overdose crisis,<sup>47</sup> and worsening behavioral healthcare workforce shortages.<sup>48</sup> Public comments received in response to the CY 2023 PFS proposed rule described practices that furnish treatment for behavioral health conditions experiencing difficulty recruiting and retaining behavioral health clinicians and expressed concern that people are experiencing unprecedented delays in receiving medically necessary services across care settings. Commenters described workforce shortages nationwide that, combined with increasing demand for behavioral health care services, have limited Medicare beneficiary access to these vital services. Prior to the pandemic, the Health Resources and Services Administration (HRSA) projected shortages of seven selected types of behavioral health

---

<sup>47</sup> <https://www.kff.org/coronavirus-covid-19/issue-brief/the-implications-of-covid-19-for-mental-health-and-substance-use/>.

<sup>48</sup> <https://bhwa.hrsa.gov/sites/default/files/bureau-health-workforce/data-research/behavioral-health-2013-2025.pdf>.

providers by 2025.<sup>49</sup> As of March 31, 2023, HRSA designated more than 6,635 health professional shortage areas for mental health, with more than one-third of Americans living in these shortage designations.<sup>50</sup> Additionally, according to SAMHSA's guide on *Addressing Burnout in the Behavioral Health Workforce Through Organizational Strategies*, staffing shortages, and high turnover rates place enormous demands on the workforce, jeopardizing the provision of care, especially to underserved individuals.<sup>51</sup> The behavioral health workforce experiences high levels of work-related stress, relatively low salaries, and full caseloads; these combined factors place individuals working in the behavioral health field at high risk for experiencing burnout.<sup>52</sup> Over 50 percent of behavioral health providers report experiencing burnout symptoms. The rate of burnout will likely increase, given the continued growth in the number of people seeking behavioral health care, behavioral health staffing, and retention challenges.<sup>53</sup>

In CY 2023 PFS rulemaking, we sought comment on how we can best help ensure beneficiary access to behavioral health services, including any potential adjustments to the PFS ratesetting methodology, for example, any adjustments to systematically address the impact on behavioral health services paid under the PFS. We described that as part of our review of our payment policies and systems, we understand that the PFS ratesetting methodology and application of budget neutrality may impact certain services more significantly than others based on factors such as how frequently codes are revalued and the ratio of physician work to PE. In the CY 2018 PFS final rule (82 FR 52999), we discussed feedback we received from some interested parties suggesting that, for codes with very low direct PE inputs, our methodology for allocating indirect PE does not produce a differential between facility and nonfacility PE RVUs

<sup>52</sup> Kelly, R.J., Hearld, L.R. Burnout and Leadership Style in Behavioral Health Care: a Literature Review. *J Behav Health Serv Res* 47, 581–600 (2020). <https://doi.org/10.1007/s11414-019-09679-z>.

<sup>53</sup> [https://store.samhsa.gov/sites/default/files/SAMHSA\\_Digital\\_Download/pep22-06-02-005.pdf](https://store.samhsa.gov/sites/default/files/SAMHSA_Digital_Download/pep22-06-02-005.pdf).

that accurately reflects the relative indirect costs involved in furnishing services in non-facility settings. We stated that primary therapy and counseling services available to Medicare beneficiaries for the treatment of behavioral health conditions, including substance use disorders, are among the services most affected by our methodology. For example, we stated at the time that, for the most commonly reported psychotherapy service (CPT code 90834), the difference between the nonfacility and facility PE RVUs was only 0.02 RVUs, which seemed unlikely to represent the difference in relative PE resource costs in terms of administrative labor, office expense, and all other expenses incurred by the billing practitioner for 45 minutes of psychotherapy services when furnished in the office setting versus the facility setting. We agreed with these interested parties that the site of service differential for these services produced by our PE methodology seems unlikely to reflect the relative resource costs for the practitioners furnishing these services in nonfacility settings. For example, we believe the 0.02 RVUs, which translated at the time to approximately \$0.72, was unlikely to reflect the relative administrative labor, office rent, and other overhead involved in furnishing the 45-minute psychotherapy service in a nonfacility setting. Consequently, we modified our PE methodology to establish a minimum nonfacility PE RVU for certain outlier codes with very low direct PE inputs as compared to work RVUs, most of which are primarily furnished by behavioral health professionals. We finalized a policy to implement only one quarter of the minimum value for nonfacility indirect PE for the identified outlier codes over a 4-year transition period, beginning with CY 2018. We stated that we recognized that this change in the PE methodology could significantly impact the allocation of indirect PE RVUs across all PFS services (82 FR 53000).

In light of increasing patient needs for behavioral health services and continued workforce shortages, we have been examining a number of dynamics in our processes for developing values for behavioral health services under the PFS. We continue to consider approaches to ensuring that the relative values we establish for these services accurately reflect the resources involved in furnishing them, especially since any potential systemic undervaluation

could serve as an economic deterrent to furnishing these kinds of services and be a contributing factor to the workforce shortage.

Interested parties have long raised concerns regarding the valuation of services that primarily involve person-to-person interactions with beneficiaries, particularly those services that are comprised of conversational interactions rather than physical interactions, because these services require minimal equipment and supplies compared to other services, and therefore, valuation is based almost entirely on the practitioner's work. Because the physician/practitioner work RVU is developed based on the time and intensity of the service, the issues regarding the valuation of these types of services are particularly pronounced for services that are billed in time units (like psychotherapy codes) that directly reflect the practitioner time inputs used in developing work RVUs, compared to other services that are not billed in time units in which work RVUs are based on estimates of typical time, usually based on survey data. For example, a 2016 report by the Urban Institute entitled *Collecting Empirical Physician Time Data*<sup>54</sup> (the Urban Institute report) reviewed empirical time estimates for 60 services paid under the PFS with relative values developed based on time estimates derived from survey data (as opposed to actual reported time). The Urban Institute report suggested that there may be systemic overestimations of times for these services within the PFS, which would lead to overvaluation of these services and, by implication, undervaluation of other services.

The dynamic described by the Urban Institute report can lead to systemic undervaluation for some kinds of time-based codes for several, interrelated reasons. First, overestimates of time for some kinds of codes compared to other kinds of codes results in "implied intensity" (that is the ratio of work RVU/per minute, sometimes referred to by the AMA RUC as intra-service work per unit of time, or IWPUT) that is artificially low. This is important since we understand that the implied intensity is used as part of the AMA RUC review of survey data to contextualize

---

<sup>54</sup> [https://www.urban.org/sites/default/files/publication/87771/2001123-collecting-empirical-physician-time-data-piloting-approach-for-validating-work-relative-value-units\\_0.pdf](https://www.urban.org/sites/default/files/publication/87771/2001123-collecting-empirical-physician-time-data-piloting-approach-for-validating-work-relative-value-units_0.pdf).

the credibility of data and the resulting recommended work RVUs compared to codes with similar times. CMS' review of the RUC recommendations similarly utilizes implied intensity as important contextual information in order to assess the relative values assigned to particular services.

The second reason this dynamic could result in potential undervaluation of certain services is that time-based codes that describe one-on-one time with the patient are highly unlikely to become more efficient over multiple years. In contrast, surgical procedures tend to become more efficient over the years as they become more common, professionals gain more experience with them, improved technology is deployed, and other general operational improvements are implemented. Meanwhile, 45 minutes of psychotherapy remains static in terms of efficiency since, by definition, it requires 45 minutes of time, personally spent by the billing professional, one-on-one with the patient. Moreover, even if there were efficiencies that reduced the time required to furnish therapy services, the services would then be reported with time-based codes with lower total values. Additionally, in contrast to services such as procedures that utilize clinical staff, no part of the one-on-one therapy service can be performed by clinical staff working with the billing professional. This means that any overestimations in the initial estimates of time used to establish work times and values, as discussed previously, are likely compounded over time as there are gains in efficiencies for some services in terms of time, clinical staff delegation, and improved technology, but no such gains for other services.

For many professionals who provide a heterogeneous range of services paid under the PFS, this phenomenon may not have a significant overall impact on their Medicare PFS payments. However, this phenomenon would have an outsized impact on Medicare PFS payments for professionals who predominantly furnish services involving person-to-person interactions with patients that are reported and valued in time-based units. It would not be logical to assume that the marketplace ignores this dynamic, since the opportunity for increased

revenue generation through efficiency for timed, one-on-one services is limited as compared to services for which there are multiple avenues to gain efficiencies.

We also recognized that, while this underlying valuation dynamic may create distortion of increasing magnitude over time, the quickly changing needs of Medicare beneficiaries relative to behavioral health also likely contribute to systemic distortion. This is especially the case as beneficiaries rely on behavioral health professionals for ongoing care of chronic and acute mental health needs. In other words, at the same time that the intensity of the work involved in furnishing services to Medicare beneficiaries increases, the work RVUs assigned to these services may be initially undervalued relative to other services that are valued based on potentially inflated time data, and therefore, may not accurately reflect the current relative resource costs associated with these services.

One approach to curb the impact of this dynamic would be to conduct more frequent revaluations of these kinds of services, including timed psychotherapy services. However, our current valuation process relies primarily, as noted, on times reported through survey data of professionals who furnish these services and assessment by the RUC of those survey data. We believe that survey results from the professionals that currently provide behavioral health services, including physicians, psychologists, and social workers could reflect the increased intensity of the work due to changes in the complexity of care for beneficiaries, but would be unlikely to address any relative undervaluation of work estimates. We are interested in working with the broader community, including the AMA RUC, to address these specific concerns over the long term.

However, given the emerging need for access to behavioral health care and the continuing difficulties in behavioral health workforce capacity, we believe it would be appropriate to take immediate steps to improve the accuracy of the valuation of these services until we can develop systemic solutions to longstanding process limitations. Consequently, we proposed to address the immediate need for improvement in valuation for timed psychotherapy

services in such a way that considers the policy we initially finalized in the CY 2020 PFS final rule (84 FR 62856) in order to address valuation distortions for primary and longitudinal care through implementation of an add-on code for office/outpatient E/M services that involve inherent complexity, and which we proposed to reestablish in this rule. Our implementation of that policy is discussed in section II.F. of this final rule. Like E/M visits that are furnished for primary and longitudinal care, we believe that the psychotherapy codes similarly describe treatment that is ongoing or longitudinal, and therefore, we believe it is appropriate to address the need for improvement in valuation for timed psychotherapy services based on the valuation for the inherent complexity add-on code for office/outpatient E/M services.

We proposed to apply an adjustment to the work RVUs for the psychotherapy codes payable under the PFS. We proposed to base this adjustment on the difference in total work RVUs for office/outpatient E/M visit codes (CPT codes 99202 through 99205 and 99211 through 99215) billed with the proposed inherent complexity add-on code (HCPCS code G2211) compared to the total work RVUs for visits that are not billed with the inherent complexity add-on code. This resulted in an approximate upward adjustment of 19.1 percent for work RVUs for these services, comparable to the relative difference in office/outpatient visits that are also systemically undervalued absent such an adjustment, which we proposed to implement over a 4-year transition. In making significant adjustments to RVUs in past rulemaking, we have implemented such changes using a 4-year transition, noting that a transition period allows for a more gradual adjustment for affected practitioners. We proposed to apply this adjustment to the following time-based psychotherapy codes that describe one-on-one time with the patient that are significantly unlikely to become more efficient over multiple years: CPT code 90832 (*Psychotherapy, 30 minutes with patient*); CPT code 90834 (*Psychotherapy, 45 minutes with patient*); CPT code 90837 (*Psychotherapy, 60 minutes with patient*); 90839 (*Psychotherapy for crisis; first 60 minutes*); CPT code 90840 (*Psychotherapy for crisis; each additional 30 minutes (List separately in addition to code for primary service)*); CPT code 90845 (*Psychoanalysis*);

90846 (*Family psychotherapy (without the patient present), 50 minutes*); CPT code 90847 (*Family psychotherapy (conjoint psychotherapy) (with patient present), 50 minutes*); CPT code 90849 (*Multiple-family group psychotherapy*); CPT code 90853 (*Group psychotherapy (other than of a multiple-family group)*) and newly proposed HCPCS codes GPFC1 and GPFC2 (*(Psychotherapy for crisis furnished in an applicable site of service (any place of service at which the non-facility rate for psychotherapy for crisis services applies, other than the office setting)*). We did not propose to include CPT codes 90833, 90836, and 90838 in this list of codes for which we would make the adjustment because these are add-on codes for psychotherapy that is performed with an E/M visit and under our proposal described at section II.F. of this final rule, E/M codes will be eligible to be billed with HCPCS code G2211. Therefore, the psychotherapy codes that are performed with an E/M visit will already be eligible for an adjustment to account for the resources costs involved in furnishing longitudinal care. We stated we believe that implementing an adjustment to the work RVUs for psychotherapy services concurrent with implementation of HCPCS code G2211 will help address distortions that may occur within our valuation process that may otherwise result in understated estimates of the relative resources involved in furnishing psychotherapy services. We recognized that many other services share some similarities with these psychotherapy services. For example, there are other services that are reported in time units. Likewise, there are other codes that primarily describe conversational interactions between medical professionals and beneficiaries. However, we believe that these services are unique because neither technology nor clinical staff can be utilized to increase efficiency, and because these services represent the significant majority of services furnished by certain types of professionals. We stated that if finalized, the implementation of this proposal for CY 2024, concurrent with the proposal to implement the inherent complexity add-on code, if finalized, would also mitigate any negative impact in valuation for psychotherapy services based on redistributive impacts if we were to finalize only the inherent complexity add-on code for E/M visits without proposing and finalizing any adjustments for psychotherapy. We welcomed

comments on this proposal, including and especially how the PFS valuation processes for these services and other services with similar characteristics can be improved in the future in order to mitigate the kinds of distortions previously described.

Additionally, as noted above in this section, in the CY 2018 PFS final rule (82 FR 52999), we identified a set of outlier codes for which we believed it would be appropriate to establish a minimum nonfacility indirect PE RVU that would be a better reflection of the resources involved in furnishing these services. For each of the outlier codes, we compared the ratio between indirect PE RVUs and work RVUs that result from the application of the standard methodology to the ratio for a marker code, which was CPT code 99213. The finalized change in the methodology then increased the allocation of indirect PE RVUs to the outlier codes to at least one quarter of the difference between the two ratios. We stated we believed this approach reflected a reasonable minimum allocation of indirect PE RVUs, but that we did not have empirical data that would be useful in establishing a more precise number. We finalized implementation of one quarter of the minimum value for nonfacility indirect PE for the identified outlier codes. We stated that we recognized that this change in the PE methodology could have a significant impact on the allocation of indirect PE RVUs across all PFS services and finalized that we would implement this change over a 4-year transition, beginning in CY 2018 and ending in CY 2021. We welcomed comments on whether we should consider further adjustments to the nonfacility indirect PE for the identified outlier codes. Specifically, we requested comment on whether this minimum value adjustment to the indirect PE for certain services sufficiently accounted for the resources involved in furnishing these services, or whether we should consider further adjustments, such as applying 50 percent of the calculated minimum value for nonfacility indirect PE values for these services, and whether we should consider implementing further changes using a similar 4-year transition.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Many commenters supported the proposed increase, and expressed appreciation that CMS recognized the limitations associated with the valuation of time-based services that must be performed directly by the clinician that offers no opportunity to become more efficient over time. Some commenters stated that the proposed changes will help close the access gap to behavioral health services by expanding the behavioral health workforce and paying more accurately for behavioral health services.

*Response:* We thank the commenters for their support of this proposal.

*Comment:* Many commenters requested that CMS also increase the values for other similar services. Some commenters stated they believe that the increase should also be applied to the psychotherapy codes that are billed as an add-on to an E/M visit (CPT codes 90833, 90836, and 90838), noting that not doing so would further exacerbate the lack of pay-parity and result in rank order anomalies. The commenters also stated that if finalized, this policy would have the unintended consequence of devaluing the work of psychiatrists when compared to psychologists, social workers, and other mental health professionals, thereby further discouraging psychiatrist participation in Medicare, while also reducing access for patients to what has been shown to be one of the most effective treatments, combined psychotherapy and medication management. These commenters also referenced our statement in the CY 2012 PFS rule final rule that, "...we believe that the work involved in furnishing the psychotherapy add-on CPT codes is very similar to the work of furnishing the stand-alone psychotherapy CPT codes" and that the work itself is the same regardless of the professional degree held by the clinician, with the same constraints due to the time-based nature of the codes and the fact that the clinician, and not their clinical staff, must provide the care. Many commenters requested that the increase also be applied to the HBAI services, as well as the psychological and neuropsychological testing services.

*Response:* We thank the commenters for this feedback. After consideration of the comments received, we are finalizing the 19.1 percent increase to the work RVUs for the

standalone psychotherapy codes, transitioned over the course of 4 years, as proposed.

Additionally, we are finalizing to apply the same increase to the work RVUs for the psychotherapy codes that are billed as an add-on to an E/M visit (CPT codes 90833, 90836, and 90838), as we agree with the commenters and our statement in past rulemaking that the work involved in furnishing the psychotherapy add-on CPT codes is very similar to the work of furnishing the stand-alone psychotherapy CPT codes, and therefore, agree that it is appropriate to apply the increase to the psychotherapy codes billed as an add-on to E/M visit in addition to the standalone psychotherapy codes. We do not wish to discourage psychiatrist participation in Medicare and believe that applying this increase to the work RVUs for all of the psychotherapy codes, whether billed with an E/M visit or as a standalone service, will avoid the relativity issues the commenters raised. In addition to finalizing the increase to the work RVUs for the standalone psychotherapy codes and the psychotherapy codes that are billed as an add-on to an E/M visit, we are also finalizing the proposed increase to the work RVUs of the codes describing HBAI services (CPT codes 96156, 96158, 96159, 96164, 96165, 96167, and 96168), as we believe that these codes are similar to the psychotherapy services in that these codes are also timed services and are generally provided person-to-person without support from clinical staff. Regarding the request to apply the proposed increase to the work RVUs of the codes describing psychological and neuropsychological testing services, we believe psychological and neuropsychological testing services are distinct from psychotherapy and HBAI services with regard to the nature of the work in that they are not necessarily timed services that are provided without assistance from clinical staff, and therefore, do not fit the same criteria as the services addressed in the proposed rule. We welcome additional feedback on the valuation of the psychological and neuropsychological testing services, and we may consider updates to the valuation of these services in future rulemaking.

*Comment:* The RUC acknowledged the emerging need for access to behavioral health care and the continuing difficulties in behavioral health workforce capacity, but stated they did

not believe that a systematic percentage increase to the psychotherapy services would appropriately address this issue and would negatively exacerbate the relativity to other services paid under the PFS. They stated that distortions and rank order anomalies would result if finalized as proposed. For example, they noted that if these increases are implemented for CPT code 90837 (*Psychotherapy, 60 minutes with patient*), the fully transitioned work RVU in 2028 will be higher than the work RVU for CPT code 90838 (*Psychotherapy, 60 minutes with patient when performed with an evaluation and management service*), when reported with a CPT code 99213 office visit.

*Response:* We welcome RUC review and recommendations on the valuation for these services, however, we reiterate our concerns described in the proposed rule that survey results from the professionals that currently provide behavioral health services, including physicians, psychologists, and social workers, could reflect the increased intensity of the work due to changes in the complexity of care for beneficiaries, but would be unlikely to address any relative undervaluation of work estimates due to the longstanding systematic undervaluation of this type of work. Additionally, as noted above, we are finalizing to apply the 19.1 percent increase to the work RVUs for the psychotherapy codes that are billed as an add-on to an E/M visit (CPT codes 90833, 90836, and 90838), transitioned over the course of 4 years, in order to avoid any rank order anomalies within the psychotherapy code family.

*Comment:* A few commenters suggested that as an alternative to the proposed increase, CMS create a separate G-code for psychiatry services with an RVU equivalent to the RVU for HCPCS code G2211 that could be used by qualified mental health professionals (that is, psychologists and social workers) as an add-on to stand-alone psychotherapy, similar to the way the CPT code 90785 (*Interactive Complexity*) is used.

*Response:* While an add-on G-code could serve to address the issues we cited in the proposed rule, we believe that building the proposed increase into the valuation of these services would more directly address the systematic undervaluation of these services. Unlike HCPCS

code G2211 and CPT code 90785, which are meant to be billed only in certain specified circumstances, we believe that the issues we describe in the proposed rule apply the psychotherapy services uniformly.

*Comment:* A few commenters expressed concern that the proposed increase is insufficient, especially recognizing that many of the practitioners who bill these codes, including Clinical Social Workers, and as of January 1, 2024, Marriage and Family Therapists and Mental Health Counselors, are only reimbursed at 75 percent of the PFS rate. The commenters recommended that CMS consider further adjustments to the ratesetting methodology, pending legislative change. The commenters noted that a more substantial increase would further the goal of bringing more mental health and SUD practitioners into the Medicare program. One commenter recommended that CMS consider ways to either mitigate the impact of behavioral health payment increases on other services by spreading budget neutrality adjustment over longer time horizons, or suggested that Congress should appropriate additional, permanent funding for behavioral health services within the PFS.

*Response:* We will continue to evaluate how we can ensure that these services are valued accurately, but we believe that the final increase of 19.1 percent to the work RVUs for psychotherapy services and psychotherapy codes that are billed as an add-on to an E/M visit (CPT codes 90833, 90836, and 90838) is sufficient. We based this adjustment on the valuation for the inherent complexity add-on code that will be used with office/outpatient E/M services to address valuation distortions for primary and longitudinal care, and since the psychotherapy codes similarly describe treatment that is ongoing or longitudinal, we believe that it is appropriate to address the need for improvement in valuation for timed psychotherapy services based on the valuation for the inherent complexity add-on code for office/outpatient E/M services.

Regarding ways to mitigate the impact of these increases on other services, we note that we are implementing these changes over a 4-year transition, as we have done when making

significant adjustments to RVUs in past rulemaking. We believe that this transition period will allow for a more gradual budget neutrality adjustment for affected practitioners. Regarding practitioners such as CSWs, MFTs, and MHCs being paid at 75 percent of the PFS rate for services of a clinical psychologist, we note that this is a requirement specified in section 1833(a)(1)(FF) of the Act.

*Comment:* Some commenters supported finalizing the proposal but recommended that CMS view the adjustment as a temporary stopgap and consider long-term solutions to code valuation moving forward. Another commenter urged CMS to implement RVU accuracy assessments annually, or at least more frequently.

*Response:* We reiterate that we are interested in working with the broader community, including the AMA RUC, to address these specific concerns regarding valuation and RVU accuracy over the long term.

*Comment:* One commenter stated that the market rate for out-of-network mental health care far exceeds Medicare rates and suggested that CMS should conduct a review and issue a report comparing out-of-network billing rates to Medicare rates and determine if the current code valuation process reflects the market. The commenter went on to suggest that accordingly, CMS should make changes to the RUC/RVU system so it more closely values behavioral healthcare at market rates. The commenter also noted that CMS should recognize that it has historically undervalued these rates for decades and it will take time and incentives to grow the workforce.

*Response:* We thank the commenter for this feedback. We note that we are trying to address potential historical undervaluation of certain mental health services in this rule. We will continue to evaluate how we can make sure that these services are valued accurately and may consider these comments regarding market rates for future rulemaking.

After consideration of the public comments, we are finalizing our proposal to apply an upward adjustment of 19.1 percent to the work RVUs for the standalone psychotherapy services, in addition to the psychotherapy codes that are billed as an add-on to an E/M visit (CPT codes

90833, 90836, and 90838) and the codes describing HBAI services (CPT codes 96156, 96158, 96159, 96164, 96165, 96167, and 96168), and we are finalizing our proposal to implement this adjustment over a 4-year transition.

6. Updates to the Payment Rate for the PFS Substance Use Disorder (SUD) bundle (HCPCS codes G2086-G2088)

In the CY 2023 PFS final rule (87 FR 69772 through 69774), we finalized a modification to the payment rate for the non-drug component of the bundled payment for episodes of care under the Opioid Treatment Program (OTP) benefit to base the rate for individual therapy on a crosswalk to CPT code 90834 (*Psychotherapy, 45 minutes with patient*), which reflects a 45-minute psychotherapy session, instead of a crosswalk to CPT code 90832 (*Psychotherapy, 30 minutes with patient*), as was our current policy at the time. We received public comments urging us to consider adopting this modification for other bundled payments for SUD under the PFS, such as the bundled rate for office-based SUD treatment, to reflect the complexity of treating these patients and ensure that there is consistent and sufficient access to counseling for SUD across settings of treatment. The commenters noted that some patients who are prescribed buprenorphine in non-OTP settings will have similarly complex care needs requiring more intensive therapeutic care, and that by recognizing the appropriate complexity and intensity of the services in setting the rates, CMS can incentivize more office-based practices to offer these services and build out the treatment teams that deliver this care.

In the CY 2020 PFS final rule (84 FR 62673 through 62677), we finalized the establishment of bundled payments for the overall treatment of OUD, including management, care coordination, psychotherapy, and counseling activities. We stated that for the purposes of valuation of HCPCS codes G2086 (*Office-based treatment for a substance use disorder, including development of the treatment plan, care coordination, individual therapy and group therapy and counseling; at least 70 minutes in the first calendar month*) and G2087 (*Office-based treatment for a substance use disorder, including care coordination, individual therapy*

*and group therapy and counseling; at least 60 minutes in a subsequent calendar month*), we assumed two individual psychotherapy sessions per month and four group psychotherapy sessions per month, and noted that we understand that the number of therapy and counseling sessions furnished per month will vary among patients and also fluctuate over time based on the individual patient's needs. We were persuaded by the public comments received in response to the CY 2023 PFS proposed rule requesting that these codes be priced consistent with the crosswalk codes used to value the bundled payments made for OUD treatment services furnished at OTPs, as beneficiaries receiving buprenorphine in settings outside of OTPs may have similarly complex care needs as compared to beneficiaries receiving OUD treatment services at OTPs. In order to update the valuation for HCPCS codes G2086 and G2087, we proposed to increase the current payment rate to reflect two individual psychotherapy sessions per month, based on a crosswalk to the work RVUs assigned to CPT code 90834 (*Psychotherapy, 45 minutes with patient*), rather than CPT code 90832 (*Psychotherapy, 30 minutes with patient*). The current work RVU assigned to CPT code 90834 is 2.24, compared to the work RVU assigned to CPT code 90832, which is 1.70, which results in a difference of 0.54 work RVUs. Because the bundled payments described by HCPCS codes G2086 and G2087 include two individual psychotherapy sessions per month, we proposed to add 1.08 RVUs to the work value assigned to HCPCS codes G2086 and G2087, which results in a new work RVU of 8.14 for HCPCS code G2086 and 7.97 for HCPCS code G2087. We noted that as described above, we also proposed to update the work RVUs assigned to CPT code 90834. We noted in the proposed rule that if our proposal to update the work RVUs for the standalone psychotherapy codes were finalized, CPT code 90834 would be assigned a work RVU of 2.35. We stated that in that case, our update to HCPCS codes G2086 and G2087 would also reflect the updated work RVUs for 90834 and would result in a work RVU of 8.36 for HCPCS code G2086 and a work RVU of 8.19 for HCPCS code G2087.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Many commenters expressed support for this proposal. Commenters stated that they agreed that the proposed increase more accurately reflects the cost, time, and effort of delivering these services. Commenters stated that by making the proposed adjustment, CMS will help to increase access to office-based SUD treatment and meet beneficiaries where they are and noted that the proposed increased payment rate will also enable more auxiliary personnel to participate in interdisciplinary teams, further ensuring that beneficiaries have the full range of services and supports they need. Some commenters stated that the proposed payment increase will help ensure that the complex care needs of patients receiving in-office treatment for SUDs are addressed and that the complexity of delivering office-based SUD treatment is accurately reflected.

Other commenters expressed support for actions to facilitate access to substance use disorder treatment, including medications for Opioid Use Disorder, like buprenorphine, noting that the U.S. is in the midst of a drug overdose epidemic and that according to the Centers for Disease Control and Prevention, 106,699 people died from a drug overdose in 2021, a 14 percent increase from 2020.<sup>55</sup> The commenters described that in-office treatment for SUDs can also enable patients to receive care for co-occurring conditions.

*Response:* We thank the commenters for their support of this proposal. We agree that the proposed increase more accurately reflects the cost, time, and effort of delivering office-based SUD services. We aim to ensure that beneficiaries have access to the full range of services needed, especially in light of the drug overdose epidemic referenced in the comments. After consideration of the public comments, we are finalizing as proposed to increase the payment rate for HCPCS codes G2086 and G2087 to reflect two individual psychotherapy sessions per month,

---

<sup>55</sup> <https://www.cdc.gov/drugoverdose/deaths/index.html>.

based on a crosswalk to the work RVUs assigned to CPT code 90834 (*Psychotherapy, 45 minutes with patient*), rather than CPT code 90832 (*Psychotherapy, 30 minutes with patient*).

## 7. Comment Solicitation on Expanding Access to Behavioral Health Services

In recent years, we have made efforts to undertake rulemaking and establish policies to expand access to behavioral health services, consistent with the CMS Behavioral Health Strategy, which aims to strengthen quality and equity in behavioral health care; improve access to substance use disorders prevention, treatment, and recovery services; ensure effective pain treatment and management; improve mental health care and services; and utilize data for effective actions and impact<sup>56</sup>. We continue to be interested in hearing feedback regarding ways we can continue to expand access to behavioral health services. For example, we welcomed feedback regarding ways to increase access to behavioral health integration (BHI) services, including the psychiatric collaborative care model; whether we could consider new coding to allow interprofessional consultation to be billed by practitioners who are authorized by statute for the diagnosis and treatment of mental illness; intensive outpatient (IOP) services furnished in settings other than those addressed in the CY 2024 OPSS proposed rule; and how to increase psychiatrist participation in Medicare given their low rate of participation relative to other physician specialties. Additionally, we solicited comment on whether there is a need for potential separate coding and payment for interventions initiated or furnished in the emergency department or other crisis setting for patients with suicidality or at risk of suicide, such as safety planning interventions and/or telephonic post-discharge follow-up contacts after an emergency department visit or crisis encounter, or whether existing payment mechanisms are sufficient to support furnishing such interventions when indicated.

We welcomed comments from the public on these topics as well as any other ways we might consider expanding access to behavioral health services for Medicare beneficiaries.

We received public comments in response to these comment solicitations. The following

---

<sup>56</sup> <https://www.cms.gov/cms-behavioral-health-strategy>.

is a summary of the comments we received and our responses.

*Comment:* We received many detailed comments on these topics. Commenters provided feedback regarding potential ways to expand implementation of the psychiatric collaborative care model (CoCM) and suggestions to support technical assistance and increased payments for CoCM.

In response to our comment solicitation regarding whether there is a need for potential separate coding and payment for interventions initiated or furnished in the emergency department or other crisis setting for patients with suicidality or at risk of suicide, such as safety planning interventions and/or telephonic post-discharge follow-up contacts after an emergency department visit or crisis encounter, several commenters encouraged CMS to enable wider implementation under Medicare of the Safety Planning Intervention (SPI) and the Post-Discharge Telephonic Follow-up Contacts Intervention (FCI) and expressed that the current payment mechanisms are not sufficient, noting that the lack of adequate payment mechanisms and suitable billing codes for these interventions are barriers that are essential to address. The commenters noted that EDs are not the only care setting where there is need and opportunity to enhance suicide prevention, but that elevated suicide risk is particularly prevalent among ED patients. One commenter noted that a designated code for SPI would make it significantly easier to document that SPI was furnished, including in quality reporting and value-based payment programs. Commenters also cited that multiple trials have found FCI to reduce improve outcomes and specifically, to reduce suicide attempts and deaths, but noted that despite the effectiveness of these interventions, they are underutilized.

Regarding settings of care where IOP services are furnished, commenters described that IOP services are most commonly delivered in freestanding community-based SUD treatment facilities and suggested that CMS create coding that would enable IOP to be delivered in these settings.

Commenters also suggested a variety of ways to improve psychiatrist participation in

Medicare and many cited low and disparate reimbursement rates as a significant barrier.

*Response:* We thank the commenters for the many detailed comments received on these topics and note that we may consider this input for potential policy proposals through future rulemaking.

#### 8. Request for Information on Digital Therapies, such as, but not limited to, digital Cognitive Behavioral Therapy

The widespread adoption and use of software technologies, including, but not limited to digital therapeutics, is creating new ways to treat patients. In recent years, the Food and Drug Administration (FDA) has reviewed and cleared several mobile medical applications (“apps”) that have been shown to demonstrate a reasonable assurance of safety and effectiveness for addressing a variety of health conditions including sleep disorders disturbances and substance use disorders. These breakthrough devices include apps for depression and anxiety. Our understanding is that these mobile medical apps generally require a prescription or referral from a clinician and are used for specific medical purposes rather than general wellness and education.

As technologies have evolved, we have sought public comment and expanded Medicare payment under Part B for use of technologies in remote monitoring of treatment and physical health. Beginning in 2018, CMS began making separate payment for the services described by CPT code 99091, which paid for collection and interpretation of physiologic data digitally stored and/or transmitted to the practitioner. Beginning in 2019, we began paying for additional new remote physiologic monitoring (RPM) codes.

We have continued to improve and expand payment for remote treatment and monitoring in subsequent years. In 2022, we began paying for a new class of CPT codes (98975, 98980, and 98981) for Remote Therapeutic Monitoring (RTM) in addition to RPM, which enabled reimbursement of monitoring of non-physiologic data, to help ensure Medicare beneficiaries have access to these services. RTM is currently limited to monitoring respiratory system status,

musculoskeletal status, and therapy adherence, or therapy response (87 FR 69647). However, we continue to add, clarify, and refine payment for RTM codes.

In the CY 2023 PFS final rule (87 FR 69645), we finalized a new RTM code for supply of a device for cognitive behavioral therapy monitoring (CPT Code 989X6 *Remote therapeutic monitoring (e.g., therapy adherence, therapy response); device(s) supply with scheduled (e.g., daily)) recording(s) and/or programmed alert(s) transmission to monitor cognitive behavior therapy, each 30 days*). In that rule, we noted specialty societies indicated the technologies for this service are still evolving, and as a result, there were no invoices for devices specific to the cognitive behavioral therapy monitoring services described by the code that could be shared. We accepted the RUC recommendation to contractor price CPT code 989X6, a PE-only device code. We stated we would work with Medicare Administrative Contractors (MACs) to better understand the devices and device costs they encounter as they review claims for payment for the new cognitive behavioral monitoring code.

For both RPM and RTM codes, the device used must meet the FDA definition of a device as described in section 201(h) of the Federal Food, Drug and Cosmetic Act (FFDCA). As we continue to gather information on how remote monitoring services are used in clinical practice and experience with coding and payment policies for these codes, we requested information on the following areas to improve our understanding of the opportunities and challenges related to our coverage and payment policies, as well as claims processing, as we consider the need for further practitioner education, program instructions, and guidance, or potential future rulemaking regarding these services.

- How do practitioners determine which patients might be best served by digital therapeutics? How do practitioners monitor the effectiveness of prescribed interventions, such as, but not limited to, for their patients on an ongoing basis once the intervention has begun?
- We sought comment and real-life examples where digital cognitive behavioral therapy or other digital enabled therapy services are used by clinicians, and how the technology is

imbedded in various practice models. For example, how is the patient evaluated and/or how is the treating clinician involved in the services received when the patient participates in digital cognitive behavioral therapy?

- What standards have interested parties developed or consulted to ensure the physical safety and privacy of beneficiaries utilizing digital cognitive behavioral therapy (CBT) and/or other digital therapeutics for behavioral health?

- What are effective models for distribution/delivery of digital therapeutics, such as prescription digital mental health therapy products to patients? What best practices exist to ensure that patients have the necessary support and training to use applications effectively?

- What practitioners and auxiliary staff are involved in furnishing RPM and RTM services, including training patients on its use, and to what extent is additional training or supervision of auxiliary staff necessary to provide an appropriate for and/or recommended standard of care in the delivery of these services?

- How are data that are collected by the technology maintained for recordkeeping and care coordination?

- What information exists about how an episode of care should be defined, particularly in circumstances when a patient may receive concurrent RTM or digital CBT services from two different clinicians engaged in separate episodes of care?

- We noted in previous rulemaking that even when multiple medical devices are provided to a patient, the services associated with all the medical devices can be billed by only one practitioner, only once per patient, per 30-day period, and only when at least 16 days of data have been collected. We sought information on the type and frequency of circumstances that involve multiple medical devices and multiple clinicians. How might allowing multiple, concurrent RTM services for an individual beneficiary affect access to health care, patient out-of-pocket costs, the quality of care, health equity, and program integrity?

- Do interested parties believe digital CBT could be billed using the existing remote therapeutic monitoring codes described by CPT codes 98975, 98980, and 98981? What impediments may exist to using these codes for digital CBT?

- In the past, commenters generally supported the concept of a generic RTM device code, and offered a wide variety of possible use cases, including where FDA approved devices and devices that have gone through other premarket pathways exist for the purpose of monitoring various conditions that do not meet the current scope of the existing RTM codes.

- ++ What are the advantages and disadvantages of a generic RTM device code, versus specific RTM codes?

- ++ Would generic device codes undermine or stall progress toward a wider set of specific codes that would provide less ambiguity on reimbursement?

- ++ How might generic RTM codes for supply of a device be valued given the broad array of pricing models?

- What scientific and clinical evidence of effectiveness should CMS consider when determining whether digital therapeutics for behavioral health are reasonable and necessary?

- What aspects of digital therapeutics for behavioral health should CMS consider when determining whether it fits into a Medicare benefit category, and which category should be used?

- If CMS determines the services fit within an existing Medicare benefit category or if other coverage requirements are met, what aspects of delivering digital cognitive based therapy services should be considered when determining potential Medicare payment? Under current practice models, are these products used as incident-to supplies or are they used independent of a patient visit with a practitioner? If used independently of a clinic visit, does a practitioner issue an order for the services?

- Are there barriers to digital CBT reaching underserved populations, and would a supervision requirement impact access to digital CBT for underserved populations?

- What strategies, if any, within the digital therapeutics for behavioral health support disadvantaged/hard to reach populations in advancing equity in health care services?
- What are some potential considerations for protecting the privacy and confidentiality of the patient population in digital therapeutics, including compliance with State behavioral health privacy requirements?

We received public comments in response to our request for information on Digital Therapies, such as, but not limited to, digital Cognitive Behavioral Therapy. The following is a summary of the comments we received and our responses.

*Comment:* We received many detailed comments in response to our Request for Information on digital therapies, such as, but not limited to, digital Cognitive Behavioral Therapy. Some commenters stated that CMS has existing authority to pay for two types of digital therapeutics: those that meet the definitions of durable medical equipment (DME) and those that are used incident to a physician service, assuming other relevant criteria are met. The commenters suggested that CMS should continue to use their authority to code and pay for digital therapeutics that are cleared by the FDA consistent with other prescription medical devices that fall under these existing benefit categories, and that are reasonable and necessary for the treatment of illness or injury. Additionally, the commenters stated that regarding coding and payment under the PFS for digital therapeutics that are furnished incident-to a physician's service, they noted that there are new coding proposals shown in the public agenda for the September 2023 CPT Editorial Panel meeting to allow for reporting of digital CBT (dCBT) and remote therapeutic treatment and other digital therapeutics as incident-to services. These commenters stated that such coding would provide an appropriate mechanism to facilitate coverage when furnished incident-to a healthcare practitioner's service and stated that if such coding is not adopted, they would encourage CMS to use its authority to adopt such coding under the HCPCS system where CMS would establish a separate set of G-codes to account for

when digital therapeutic devices are acquired by a Medicare enrolled practitioner, and that practitioner then furnishes that device to a patient and manages their treatment.

*Response:* We thank the commenters for their detailed feedback on this topic. In the CY 2023 PFS final rule (87 FR 69645 through 69649), we accepted the RUC's recommendation to contractor price CPT code 98978, a PE-only code that describes provision of a monitoring device for CBT and noted that we would work with our Medicare Administrative Contractors (MACs) to better understand the kinds of devices and device costs they are encountering as they review claims for payment for the services described by this code. Additionally, we note that the existing codes described by CPT codes 98978, 98980, and 98981 allow for the billing of remote therapeutic monitoring services, including monitoring patient adherence and therapy response for use with cognitive behavioral therapy. In response to the commenters' statement that there are new coding proposals shown in the public agenda for the September 2023 CPT Editorial Panel meeting to allow for reporting of digital CBT (dCBT) and remote therapeutic treatment and other digital therapeutics as incident-to services, we note that we routinely rely on the CPT coding process as a critical part of how services, including those involving emerging technologies, that might be paid under the PFS are understood and provided by medical professionals. While we do not always rely on CPT exclusively, we look forward to reviewing any forthcoming codes and potential recommendations for the valuation of such codes through our standard annual processes. Additionally, we continue to be interested in any feedback from interested parties on this topic, including feedback from interested parties about any potential codes that we would review under those processes and considerations we might need to take into account for future rulemaking to improve the accuracy of coding and payment under the Medicare PFS. For example, we welcome nominations for potentially misvalued codes and refer to the public nomination process outlined in section II.C. of this final rule, which can be used to help us identify codes that should be prioritized for review through the RUC process as well as resource costs involved in furnishing reasonable and necessary care to Medicare beneficiaries that are not

accurately reflected under existing coding and payment policies. In some specific cases, of course, we have identified the need to develop G-codes as part of proposals to improve accuracy of payment for services paid under the PFS.

In response to the comments regarding DME, we note that for a digital therapeutic item to be designated as DME it must meet the Medicare definition of DME. DME is defined in section 1861(n) of the Act and Medicare regulations at 42 CFR 414.202, and means equipment furnished by a supplier or a home health agency that meets the following conditions: (1) Can withstand repeated use; (2) Effective with respect to items classified as DME after January 1, 2012, has an expected life of at least 3 years; (3) Is primarily and customarily used to serve a medical purpose; (4) Generally is not useful to an individual in the absence of an illness or injury; and (5) Is appropriate for use in the home. All five of these conditions must be met in order for equipment to be classified as DME.

K. Provisions on Medicare Parts A and B Payment for Dental Services Inextricably Linked to Specific Covered Services

1. Medicare Payment for Dental Services

a. Overview

Section 1862(a)(12) of the Act generally precludes payment under Medicare Parts A or B for any expenses incurred for services in connection with the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth. (Collectively here, we will refer to “the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth” as “dental services.”) In the CY 2023 PFS final rule (87 FR 69663 through 69688), we identified certain clinical scenarios where payment is permitted under both Medicare Parts A and B for certain dental services in circumstances where the services are not considered to be in connection with dental services within the meaning of section 1862(a)(12) of the Act.

The regulation at § 411.15(i)(3)(i) includes examples of services for which payment can be made under Medicare Parts A and B for dental services, furnished in an inpatient or outpatient setting, that are inextricably linked to, and substantially related to the clinical success of, certain other covered services (hereafter in this section, “inextricably linked to other covered services”).

Recognizing that there may be other instances where covered services necessary to diagnose and treat the individual’s underlying medical condition and clinical status may require the performance of certain dental services, in the CY 2024 PFS proposed rule we proposed to codify other instances where dental services are inextricably linked to other covered services such that they are not in connection with dental services within the meaning of section 1862(a)(12) of the Act (88 FR 52371 through 52384). At the same time, we continue to recognize that there are dental services that are not, or currently not evidenced to be, inextricably linked to other covered services. In these instances, we continue to believe that Medicare payment is precluded by section 1862(a)(12) of the Act, except when, due to the patient’s underlying medical condition and clinical status or the severity of the dental procedure,

hospitalization is required; and that in those instances, the Medicare Part A exception provided under section 1862(a)(12) of the Act will apply.

In the CY 2023 PFS final rule (87 FR 69682, 69685, 69687), we also established a process for the public to submit additional dental services that may be inextricably linked to other covered services for our consideration and review and finalized a policy to permit payment for certain dental services, such as dental examinations and necessary treatment, prior to or contemporaneously with the treatment of head and neck cancers, beginning in CY 2024. The process for the public to submit comments is discussed below.

In the CY 2024 PFS proposed rule, we proposed to codify in section § 411.15(i)(3)(i)(A) additional policies to permit payment for certain dental services that are inextricably linked to other covered services. We also proposed to make non-substantive technical changes to improve the clarity of the regulation text (88 FR 52740).

#### b. Other Medical Services for which Dental Services may be Inextricably Linked

In the CY 2023 PFS final rule, we discussed whether we should specify that payment can be made under Medicare Parts A and B for certain dental services prior to the initiation of immunosuppressant therapy, joint replacement procedures, or other surgical procedures. We stated that we remain committed to exploring the inextricable link between dental and covered services associated with immunosuppressant therapy, joint replacement surgeries, and other surgical procedures and that we welcomed continued engagement with the public to review the clinical evidence to determine whether certain dental services were inextricably linked to other covered services (87 FR 69668 and 69680 through 69686).

We partnered with researchers at the Agency for Healthcare Research and Quality (AHRQ) to consider the relationship between dental services and specific covered services and reviewed available clinical evidence regarding the relationship between dental services and medical services in the treatment of cancer using chemotherapeutic agents, which may lead to

more clinically severe infections and often involve immunosuppression in patients.<sup>57 58</sup> The AHRQ report<sup>59</sup> regarding dental services and the link between medical services is available at [https://effectivehealthcare.ahrq.gov/sites/default/files/related\\_files/rapid-response-chemotherapy-dental.pdf](https://effectivehealthcare.ahrq.gov/sites/default/files/related_files/rapid-response-chemotherapy-dental.pdf). For example, it is generally understood that many chemotherapeutic agents used in the treatment of cancer target rapidly proliferating cells (which include those cells found in healthy tissue, like the oral mucosa). This targeting of rapidly reproducing cells in the oral mucosa can lead to the development of oral mucositis, which can negatively affect individuals with periodontitis and other dental conditions more severely, especially when exposed to higher doses/duration of chemotherapy.<sup>60</sup> Another example of a dental-related issue resulting from covered services that are immunosuppressive in nature is medication-related osteonecrosis of the jaw (MRONJ). MRONJ may occur as an adverse effect when patients with cancer receive specific covered services, such as high-dose antiresorptive and/or antiangiogenic drug therapy (for example, high doses of bisphosphonates or drugs like denosumab used to treat osteoporosis) or bone-modifying therapy in conjunction with their chemotherapy regimen. Patients with existing dental disease are most at risk for developing MRONJ secondary to bone-modifying therapy. MRONJ complicates the cancer treatment and can reduce survival rates up to 3 years post-treatment.<sup>61</sup> Dental services to identify and treat oral complications/comorbidities prior to and, sometimes, throughout chemotherapy treatment have been associated with improved outcomes for the patient receiving medical services in the

treatment of cancer.<sup>62</sup> Further, AHRQ noted that there is abundant worldwide experience and related standards of care in the management of patients whose medical conditions require chemotherapy regimens that induce immunosuppression and that this experience has led to an understanding of how improved dental care potentially can reduce the incidence of serious infections and improve overall patient outcomes.

The AHRQ examined the effects of dental care prior to treatment on the success of medical services for patients receiving chemotherapy regimens (primary medical service) in the treatment of cancer (primary medical illness). As part of this analysis, AHRQ identified 26 primary research studies, seven systematic reviews, and five practice guidelines that outline the benefits and harms of pre-treatment dental services and their effects on cancer chemotherapy regimens. The studies were selected using specific inclusion criteria: a sample of patients beginning cancer treatment within 2 months; targeted dental services occurring prior to cancer treatment; outcomes data, such as rates of serious adverse events, quality of life, cancer relapse rates, mortality, or adherence to cancer treatment; and a minimum sample size of 10 patients.

The 26 primary research studies identified by AHRQ included prospective cohort studies, retrospective cohort studies, randomized controlled trials, and registry-based studies. From this group of studies, AHRQ found evidence to support that dental evaluation/treatment prior to cancer treatment led to decreased incidence and/or less severity of serious oral infections and complications (such as, oral mucositis and osteonecrosis) with the covered services, as well as requiring fewer emergency treatments.<sup>63 64</sup> There was further evidence found in systematic reviews that showed a possible increased incidence of oral mucositis when dental treatment is

not administered at least 2-3 weeks prior to initiation of cancer treatment, further complicating the totality of services a patient received to treat their cancer.<sup>65</sup> They note that treatment of a broad range of malignancies often requires the use of chemotherapeutic agents that suppress the body's production of white blood cells, thereby impairing the body's ability to resist serious (often life-threatening) bacterial and fungal infections, and that the route of entry of these offending bacteria can be the mouth. AHRQ also analyzed several clinical practice guidelines that supported a dental evaluation/treatment before initiating chemotherapy so that any oral complications could be mitigated prior to initiating care to treat the cancer.<sup>66 67 68</sup>

### c. Submissions Received Through Public Submission Process

In the CY 2023 PFS final rule, we stated that we believed there may be additional clinical scenarios we have not yet identified under which Medicare payment could be made for certain dental services on the basis that dental services are inextricably linked to other covered services (87 FR 69686). In order to ensure we are appropriately considering other potential clinical scenarios that may involve such dental services, we finalized an annual public process, including notice and comment rulemaking, whereby interested parties can submit recommendations for other clinical scenarios for potential inclusion on the list of dental services for which payment can be made under § 411.15(i)(3)(i).

Through this process, we stated that we would review clinical evidence to assess whether there is an inextricable link between certain dental and covered services because the standard of care for that medical service is such that one would not proceed with the medical procedure or service without performing the dental service(s) because the covered services would or could be

<sup>68</sup> Butterworth C, McCaul L, Barclay C. Restorative dentistry and oral rehabilitation: United Kingdom National Multidisciplinary Guidelines. *J Laryngol Otol.* 2016 May;130(S2):S41-S4. PMID: 27841112.

significantly and materially compromised absent the provision of the inextricably-linked dental services, or where dental services are a clinical prerequisite to proceeding with the primary medical procedure and/or treatment (87 FR 69685). We also stated that, section 1862(a)(12) of the Act does not apply only when dental services are inextricably linked to other covered services, such that the standard of care for that medical service would be compromised or require the dental services to be performed in conjunction with the covered services (87 FR 69666). As such, we requested that documentation accompanying recommendations should include medical evidence to support that certain dental services are inextricably linked to other covered services. Specifically, we requested that the medical evidence should:

(1) Provide support that the provision of certain dental services leads to improved healing, improved quality of surgery outcomes, and the reduced likelihood of readmission and/or surgical revisions because an infection has interfered with the integration of the medical implant and/or interfered with the medical implant to the skeletal structure;

(2) Be clinically meaningful and demonstrate that the dental services result in a material difference in terms of the clinical outcomes and success of the procedure such that the dental services are inextricably linked to other covered services; and

(3) Be compelling to support that certain dental services would result in clinically significant improvements in quality and safety outcomes (for example, fewer revisions, fewer readmissions, more rapid healing, quicker discharge, and quicker rehabilitation for the patient) (87 FR 69686).

We stated that interested parties should submit medical evidence to support, for the recommended clinical scenario, the inextricable link between certain dental services and other covered services by providing any of the following:

(1) Relevant peer-reviewed medical literature and research/studies regarding the medical scenarios requiring medically necessary dental care;

(2) Evidence of clinical guidelines or generally accepted standards of care for the suggested clinical scenario;

(3) Other ancillary services that may be integral to the covered services; and/or

(4) Other supporting documentation to justify the inclusion of the proposed medical clinical scenario requiring dental services (87 FR 69686, 69687).

We stated that we intended to use the PFS annual rulemaking process to discuss public submissions when considering whether the recommended dental services associated with certain clinical scenarios should be considered outside the scope of the general preclusion on payment for dental services under section 1862(a)(12) of the Act because they are inextricably linked to other covered services. We believe that public feedback is important, especially when considering Medicare payment for dental services that may benefit the clinical outcomes for certain covered services. We believe that using our annual notice and comment rulemaking process to discuss submitted recommendations will allow the public to comment and submit further medical evidence to assist us in evaluating whether certain dental services furnished in certain clinical scenarios would meet the standard to permit Medicare payment for the dental services. Under the public process established in the CY 2023 PFS final rule, recommendations received by February 10th of a calendar year would be reviewed for consideration and potential inclusion within the PFS proposed rule for the subsequent calendar year. The deadline for submissions for potential consideration for CY 2024 rulemaking was February 10, 2023. We received eight submissions from various organizations on or before February 10, 2023. We received one submission after the deadline that presented nominations for covered services that have already been addressed by this payment policy.

Submissions included recommendations for payment under Medicare Parts A and B of dental services prior to covered services associated with the treatment of cancer (chemotherapy, chimeric antigen receptor (CAR) T-cell therapy, bone-modifying agents or antiresorptive therapy), total joint arthroplasty, all cardiovascular procedures, diabetes treatment, treatment for

sickle-cell anemia and hemophilia, and systemic autoimmune diseases. Additionally, many submissions recommended that CMS refine certain terminology surrounding previously finalized policies, specifically around whether payment can be made for dental services furnished during and after the performance of certain covered services.

Several submissions recommended that Medicare make payment under Parts A and B for dental services prior to covered services associated with the treatment of patients with leukemia and lymphoma, as well as other cancers. Most submitting organizations stated that, by examining and addressing the oral health of the patient prior to the initiation of chemotherapy in the treatment of cancer, with or without radiation, oral complications could be appropriately addressed or prevented that would improve the clinical success of the overall cancer treatment. Submissions also recommended Medicare payment under Parts A and B for dental services before, during, and after CAR T-cell therapy and other lymphodepleting covered services (lymphodepleting therapy involves a short course of chemotherapy that targets T-cells, preconditioning the body prior to enhance treatments like CAR T-cell therapy). These submissions stressed the need to detect and monitor dental issues early to avoid the increased risk of related infections and complications.

Most submissions stated that medication-related osteonecrosis of the jaw (MRONJ) is a serious complication of antiresorptive and/or antiangiogenic drug therapy used to help manage the treatment of cancer. Several recommended that Medicare make payment under Parts A and B for dental services for patients where high-dose bisphosphonate therapy for cancers is indicated, such as blood and solid tumor cancers and metastatic cancers associated with the risk of osteonecrosis of the jaw. These submissions recommended payment of dental services prior to and during antiresorptive therapy or prior to, during, and after the use of bone-modifying drugs. One provided references that support the provision of dental services to prevent, or as part of treatment for MRONJ. Another submission stated that the risk of MRONJ is significantly greater in patients receiving antiresorptive therapy in connection with cancer treatment compared to

patients receiving antiresorptive therapy for osteoporosis.<sup>69</sup> However, the submitter stated that the combination of poly-pharmaceutical management of cancer patients and related immunosuppression are risk factors for MRONJ without exposure to antiresorptive agents and that it would be difficult to identify a single medication as the etiologic agent for MRONJ in case reports or mini-case series. The submitter stated that prevention of MRONJ would be the clinical gold standard.

One submission also recommended that Medicare make payment under Parts A and B for dental services prior to all cardiovascular procedures. In their view, the provision of dental services to reduce the risk of perioperative and postoperative infection and complications is critical to ensure optimal surgical outcomes for all patients requiring invasive and/or interventional cardiac procedures. They cited a literature review supporting the need for screening and treatment for oral/dental infections before cardiac surgery. This submission did not recommend dental services prior to a specific cardiovascular procedure; rather, it recommended dental services prior to all cardiovascular procedures. The literature review they cited (which we discuss in section II.K.3. of this final rule) noted that there was a mixture of medical literature to support the performance of dental services prior to all cardiac procedures in part because such cardiovascular procedures are more urgent or emergent than elective.

One submission recommended that Medicare make payment under Medicare Parts A and B for dental services prior to joint replacement surgeries, specifically total knee and hip

---

<sup>69</sup> We note that antiresorptive therapy for cancer is the parenteral administration of bisphosphonates and denosumab, also called osteoclast inhibitors, for the purpose of reducing the frequency of skeletal complications (for example, fractures) in patients with multiple myeloma and in those with bone metastases from solid tumors. Per FDA label, they are administered parenterally and in doses that exceed those typically used for patients with osteoporosis. (Only two bisphosphonates, pamidronate and zoledronic acid, and the single monoclonal antibody, denosumab, have the cancer indication).

Antiresorptive therapy for osteoporosis is typically for the postmenopausal female patient, for the purpose of reducing the risk of skeletal fracture (for example, vertebral, hip) in those patients who have a high fracture risk. They are typically dosed orally, at dosages that have significant supportive efficacy and safety data. Parenteral administration of bisphosphonates is available for osteoporosis for patients that are unable to take an oral preparation, at significantly lower dosages.

For example, the dosage difference for zoledronic acid between the two indications would be as follows: cancer (for example, multiple myeloma, bone metastases) at 4 mg IV every 3 to 4 weeks compared with osteoporosis at 5 mg every 12 months.

arthroplasty. The submitting organization stated that providing dental services prior to or contemporaneously with joint replacement surgeries may result in more rapid healing and quicker rehabilitation, especially if a known dental infection could be addressed and potentially prevent surgical and rehabilitation complications for the patient. However, the submission acknowledged that there is no consensus on whether performing dental services prior to joint replacement surgeries improves the clinical outcomes of the medical service or whether it is typical in practice to furnish dental services before joint replacement procedures.

Other submissions recommended Medicare make payment for dental services for patients diagnosed with a specific condition(s), such as patients with poorly controlled diabetes mellitus or individuals living with sickle cell disease (SCD) or hemophilia.

Submissions also recommended Medicare payment for dental services for persons affected by systemic autoimmune disease. They argued that dental services are essential for medical treatment for individuals at much higher risk of advanced dental decay, dental loss, and/or gum disease. They stated that reducing oral infection of the mucosa, teeth, and gums; oral inflammation; and tooth loss through consistent oral management reduces the systemic impact that these dental conditions have on a patient's systemic autoimmune disease. One submission stated that oral health disparities disproportionately affect members of racial or ethnic minority groups, which they offered is most pronounced in populations aged 65 and older. Another presented their proposal to bridge the gap in health equity and to improve the health outcomes for those ages 65 and older living with autoimmune diseases.

We thanked all those who submitted recommendations for clinical scenarios for which they believe Medicare payment for dental services will be consistent with the policies we codified and clarified in the CY 2023 PFS final rule at § 411.15(i)(3)(i), under which Medicare payment may be made for dental services when they are inextricably linked to, and substantially related and integral to the clinical success of, certain covered medical services (hereafter in this section, "inextricably linked to other covered services"). We continued to encourage interested

parties to engage with us regularly and to submit recommendations for our consideration of additional clinical scenarios where dental services may be inextricably linked to other covered services. As stated earlier, interested parties should provide evidence to support or refute that at least one of the three criteria listed above for submissions is met. Furthermore, submissions should focus on the inextricably linked relationship between dental services and other medical services necessary to diagnose and treat the individual's underlying medical condition and clinical status, and whether it is not clinically advisable to move forward with the primary medical service without performing certain dental services. We remind readers once again that, to be considered for purposes of CY 2025 PFS rulemaking, submissions through our public process for recommendations on payment for dental services should be received by February 10, 2024, via email at [MedicarePhysicianFeeSchedule@cms.hhs.gov](mailto:MedicarePhysicianFeeSchedule@cms.hhs.gov). Interested parties should include the words "dental recommendations for CY 2025 review" in the subject line of their email submission to facilitate processing. We continue to stress to submitters that recommendations must include at least one of the types of evidence listed earlier when submitting documentation to support the inextricable link between specified dental services and other covered services. We further note that we may also consider recommendations that are submitted as public comments during the comment period following the publication of the PFS proposed rule.

## 2. Additions to Current Policies Permitting Payment for Dental Services Inextricably Linked to Other Covered Services

Under our current policy, we have identified several clinical scenarios where dental services are inextricably linked to other covered services that is covered by Medicare, such that Medicare payment for the dental services is not precluded by section 1862(a)(12) of the Act. After further review of current medical practice, and through internal and external consultations and consideration of the submissions received through the public process established in the CY 2023 PFS final rule (87 FR 69669), we believe there are additional circumstances that are

clinically similar to the scenarios we codified in our regulation at § 411.15(i)(3)(i) as examples of clinical scenarios under which Medicare payment may be made for certain dental services because they are inextricably linked to other covered medical services.

As described in the CY 2024 PFS proposed rule, in the case of the proposed primary-covered services, we believe that dental services are inextricably linked to, and substantially related and integral to the clinical success of, the proposed covered services because such dental services serve to mitigate the substantial risk to the success of the medical services, due to the occurrence and severity of complications caused by the primary medical services, including infection (88 FR 52374 through 52380). Additionally, section 1862(a)(12) of the Act does not apply only when dental services are inextricably linked to, and substantially related and integral to the clinical success of, certain other covered services, such that the standard of care for that medical service would be compromised or require the dental services to be performed in conjunction with the covered services or if the dental services are considered to be a critical clinical precondition to proceeding with the primary medical procedure and/or treatment. As such, we believed the certain dental services are not in connection with the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth, but instead are inextricably linked to, and substantially related and integral to the clinical success of, the following medical services, and we proposed that the statutory dental exclusion would not apply:

- (1) Chemotherapy when used in the treatment of cancer;
- (2) CAR T-Cell therapy, when used in the treatment of cancer; and
- (3) Administration of high-dose bone-modifying agents (antiresorptive therapy) when used in the treatment of cancer.

As such, we proposed to revise our regulation at § 411.15(i)(3)(i)(A) by adding to the list of clinical scenarios in which Medicare Part A and B payment is permitted for dental or oral examinations performed as part of a comprehensive workup prior to, and medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or

contemporaneously with, the following Medicare-covered services: chemotherapy, chimeric antigen receptor (CAR) T-cell therapy, and the administration of high-dose bone-modifying agents (antiresorptive therapy) when used in the treatment of cancer.

a. Dental services inextricably linked to chemotherapy services when used in the treatment of cancer

In the CY 2024 PFS proposed rule, we discussed clinical practice guidelines, recommendations provided by the public, and our analyses of the studies and research available regarding the connection between dental services and the clinical success of chemotherapy services. We stated that there is an inextricable link between certain dental and chemotherapy services when used in the treatment of cancer because the standard of care is such that one would not proceed with the medical procedure or service without performing the dental service(s) because the covered medical services would or could be significantly and materially compromised absent the provision of the inextricably-linked dental services and that dental services are a clinical prerequisite to proceeding with the chemotherapy services when used in the treatment of cancer (88 FR 52377). Chemotherapy services, when used in the treatment of cancer, cause immunosuppression which may lead to significant oral complications and adverse events, including the possibility of an oral or dental infection, which in turn leads to serious and imminent risks to the success of the primary medical procedures and treatments. The complications, including possible infection, may prevent the ability to both initiate and proceed with the primary, covered medical service (that is, lead to delays in treatment and/or cause inability of the patient to complete the course of treatment, thereby potentially reducing the effectiveness of the therapy) such that the standard of care would be to not proceed with the covered medical procedure until a dental or oral exam is performed to address the oral complications and/or clear the patient of an oral or dental infection. In the case of chemotherapy services when used in the treatment of cancer, dental services serve to mitigate the likelihood of occurrence and severity of complications caused by the primary medical services, including

infection, and consequently the dental services facilitate the successful completion of the prescribed course of treatment. Therefore, we believed the dental services are integral and inextricably linked to the chemotherapy when used in the treatment of cancer, and the statutory dental exclusion under section 1862(a)(12) of the Act would not apply.

We proposed to add this clinical scenario to the examples of clinical scenarios under which payment can be made for certain dental services in our regulation at § 411.15(i)(3)(i)(A). Specifically, we proposed to amend the regulation to include dental or oral examination performed as part of a comprehensive workup in either the inpatient or outpatient setting prior to Medicare-covered chemotherapy when used in the treatment of cancer; and, medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with chemotherapy when used in the treatment of cancer. We solicited comments on all aspects of this proposal.

Additionally, we noted that we proposed that payment is permitted for dental services that are inextricably linked to chemotherapy used in the treatment of cancer with or without the use of other therapy types, including radiation therapy in the treatment of cancer. That is, this provision is not meant to be limited to cases where chemotherapy in the treatment of cancer is provided without the use of other therapies. We solicited comment on this aspect of the proposal.

As discussed in section II.K.2. of this final rule, we received submissions through the public process and comments on the CY 2023 PFS proposed rule requesting that Medicare payment should be permitted under Parts A and B for dental services when medical services that cause immunosuppression are being provided to treat a variety of medical conditions.

Commenters asserted that immunocompromised patients are at an increased risk of serious infection that can lead to severe conditions (87 FR 69683). We stated that we agreed with commenters that individuals who are immunocompromised may be prone to serious infection, and that we will continue to consider feedback and the clinical literature provided by

interested parties to determine whether there are other clinical scenarios, such as the initiation of immunosuppressive therapies, where Medicare payment should not be excluded for dental services under section 1862(a)(12) of the Act, because the services are inextricably linked to other covered services.

In the CY 2023 PFS final rule (87 FR 69681) and as discussed in section II.K.2. of this final rule, we stated that we were finalizing a policy for CY 2024 that Medicare Parts A and B payment may be made for dental or oral examination performed as part of a comprehensive workup in either the inpatient or outpatient setting, as well as medically necessary diagnostic and treatment services to eliminate an oral or dental infection, prior to or contemporaneously with Medicare-covered treatments for head and neck cancer. We stated that removing infections in the oral cavity is necessary to prepare patients for treatment and is inextricably linked to the clinical success of treatment for cancers of the head and neck. There is significant and abundant worldwide experience and research regarding the care of patients whose medical conditions require chemotherapy regimens that induce acute immunosuppression.<sup>70,71</sup> The treatment of a broad range of malignancies often requires chemotherapeutic agents that, in turn, suppress the body's production of white blood cells, thereby impairing the body's ability to resist serious (potentially life-threatening) infections. The route of entry of the offending pathogens can be the mouth.<sup>72,73,74</sup> Therefore, individuals receiving chemotherapy treatment for cancer who become immunosuppressed may be more susceptible to infection and other adverse events with serious consequences for the patient. We understand that medical services used in cancer treatment, such as chemotherapy, induce immunosuppression. As such, we believe that cancer patients

<sup>73</sup> Greenberg MS, Cohen SG, McKittrick JC, et al. The oral flora as a source of septicemia in patients with acute leukemia. *Oral Surg Oral Med Oral Pathol.* 1982 Jan;53(1):32-6. PMID: 6948251.

<sup>74</sup> King A, Irvine S, McFadyen A, et al. Do we overtreat patients with presumed neutropenic sepsis? *Postgrad Med J.* 2022 Nov;98(1165):825-9. doi: <https://dx.doi.org/10.1136/postgradmedj-2021-140675>. PMID: 34611037.

being treated with chemotherapy represent an acutely impacted, immunocompromised patient population due to the nature of the effects of such chemotherapy treatment. If dental or oral infections are left undetected or untreated in these patients, serious complications may occur, negatively impacting the clinical success of the medical services and outcomes for the patients. Moreover, the immunosuppression induced by the chemotherapy medical services in cancer treatment increases the likelihood and intensity of complications for the patient that could potentially jeopardize or impact the ability to complete the totality of the treatment across a normal course of treatment.<sup>75,76</sup> If an oral or dental infection is not properly diagnosed and treated prior to and/or during the chemotherapy in the treatment of cancer, which suppresses the immune system, there may be an increased risk for local and systemic infections from odontogenic sources. Furthermore, the successful completion of that treatment could be compromised. Additionally, if such an infection is not treated, then there is an increased likelihood of morbidity and mortality resulting from the spreading of the local infection to sepsis.<sup>77 78</sup>

Individuals undergoing chemotherapy services used in the treatment of cancer who become immunosuppressed by the treatment may also experience oral mucositis, which often facilitates the entry of oral bacteria into the body, potentially increasing the risk of infection for the patient and compromising the chemotherapy regimen. The risk of mucositis and potential complications to the clinical success of medical services for cancer treatment is similar to the risk for patients receiving Hematopoietic Stem Cell Transplants (HSCT) and bone marrow

transplants<sup>79 80</sup>, for which we finalized payment for certain dental services prior to these medical services (87 FR 69677). These potential complications, resulting from the combined immunosuppression and mucositis caused by the chemotherapy services, present a risk to the patient and the success of the medical chemotherapy regimen unless mitigated by the provision of dental services. Additionally, as described previously, evidence found in systematic reviews showed a possible increased incidence of oral mucositis when dental treatment is not administered at least 2-3 weeks prior to initiation of cancer treatment, further complicating the totality of services a patient received to treat their cancer.<sup>81</sup>

Moreover, as described in section II.K.2. of this final rule, dental services to identify and treat oral complications/comorbidities prior to and, sometimes, throughout chemotherapy treatment have been associated with improved outcomes for the patient receiving medical services in the treatment of cancer.<sup>82</sup> Additionally, as discussed in section II.K.2. of this final rule, research studies support that dental evaluation/treatment prior to cancer treatment led to decreased incidence and/or less severity of serious oral infections and complications (such as, oral mucositis and osteonecrosis) with the medical services, as well as requiring fewer emergency treatments.<sup>83 84</sup>

Consequently, we believe that the evidence supports that the standard of care is such that one would not proceed with the chemotherapy when used in the treatment of cancer without

performing the dental services because the covered services would or could be significantly and materially compromised, such that clinical outcomes of the chemotherapy treatment could be compromised absent the provision of the inextricably linked dental services.

As described in the CY 2023 PFS final rule (87 FR 69685), we noted that evidence to support the linkage between the dental and covered services could include information demonstrating that the standard of care would be to not proceed with the covered medical procedure until a dental or oral exam is performed to clear the patient of an oral or dental infection; or, in instances where a known oral or dental infection is present, the standard is such that the medical professional would not proceed with the medical service until the patient received the necessary treatment to eradicate the infection. Our review of relevant clinical practice guidelines demonstrated that multiple professional societies recommend the performance of dental services prior to the initiation of or during chemotherapy.<sup>85 86</sup> For instance, the United Kingdom published a guideline for dental evaluation and treatment before and after treatments for head and neck cancer (5th edition of the UK Multi-Disciplinary Guidelines for Head and Neck Cancer), based on guidance from the National Institute for Health and Care Excellence (NICE) and expert recommendations: “Preventive oral care must be delivered to patients whose cancer treatment will affect the oral cavity, jaws, salivary glands and oral accessibility.”<sup>87</sup> Additionally, as described in the CY 2023 PFS final rule (87 FR 69680), several commenters provided data regarding the treatment of head and neck cancer that illustrated that conditions such as oral mucositis or osteonecrosis of the jaw that occur during the treatment may compromise the clinical success of the primary medical service (chemotherapy for the treatment of head and neck cancer), potentially leading to multiple hospitalizations, including systemic infections or fatal sepsis, if dental infections remained untreated.

<sup>87</sup> Butterworth C, McCaul L, Barclay C. Restorative dentistry and oral rehabilitation: United Kingdom National Multidisciplinary Guidelines. *J Laryngol Otol.* 2016 May;130(S2):S41-S4. PMID: 27841112.

We believe chemotherapy used in the treatment of cancer causes acute immunosuppression, causing significant oral complications and adverse events, including the possibility of an oral or dental infection, which in turn may lead to serious and imminent risks to the success of the primary medical procedures and treatments. These treatment-induced complications, including possible infection, prevent the ability to proceed with the primary, covered medical service (that is, lead to delays in treatment and/or cause the inability of the patient to complete the course of treatment, thereby potentially reducing the effectiveness of the therapy) and the standard of care would be to not proceed with the covered medical procedure until a dental or oral exam is performed to address the oral complications and/or clear the patient of an oral or dental infection. In the case of the Medicare covered chemotherapy, when used in the treatment of cancer, dental services serve to mitigate the likelihood of occurrence and severity of complications caused by the primary medical services, including infection, and consequently, the dental services facilitate the successful completion of the prescribed course of treatment, and therefore, the dental services are integral and inextricably linked to these medical services, and the statutory dental exclusion would not apply.

We believe that proceeding without a dental or oral exam and necessary diagnosis and treatment of any presenting infection of the mouth prior to chemotherapy when used in the treatment of cancer could lead to systemic infection or sepsis, as well as other complications for the patient. We also believe that an oral or dental infection could present substantial risk to the success of chemotherapy when used in the treatment of cancer, such that the standard of care would be to not proceed with the procedure when there is a known oral or dental infection present. We believe dental services furnished to identify, diagnose, and treat oral or dental infections prior to and medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with chemotherapy when used in the treatment of cancer are not in connection with the care, treatment, filling, removal, or replacement of teeth

or structures directly supporting teeth, but instead are inextricably linked to these other covered services.

In the CY 2024 PFS proposed rule, we also solicited comment on whether we should consider radiation therapy in the treatment of cancer more broadly (not in conjunction with chemotherapy, and not in relation to head and neck cancer treatment) as medical services that may be inextricably linked to dental services (88 FR 52377). We stated that we do not believe that radiation therapy alone necessarily leads to the same level of treatment-induced immunosuppression as for cancer patients receiving chemotherapy since radiation specifically targets malignant cells and has more targeted and localized effects on the body as compared to system-wide immunosuppression effects of chemotherapy for cancer treatment. However, we solicited comment on whether dental services prior to radiation therapy in the treatment of cancer, when furnished without chemotherapy, such as second line therapy for metastasized cancer in the head and neck, would be inextricably linked to the radiation therapy services, and therefore, payable under Medicare Parts A and B.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

*Comment:* Commenters supported the proposal that Medicare Parts A and B payment may be made for dental services, such as dental or oral examination performed as part of a comprehensive workup prior to, and medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with Medicare-covered chemotherapy when used in the treatment of cancer and urged CMS to finalize this policy as proposed. Commenters included individuals, patient advocacy organizations, hospitals and hospital associations, medical and dental associations representing several different specialties and specialty societies, health centers, and health insurance companies, among others. Many commenters expressed the view that payment for dental services in the proposed additional circumstances could improve patient outcomes and quality of life and reduce Medicare

expenditures overall by avoiding the need to cover medical complications arising from untreated dental conditions. Commenters also stated that they believe that these updates will have a direct and meaningful impact on the lives of many Medicare beneficiaries. Many commenters also stated that they believe that these revisions would serve to promote health equity and increase access to medically necessary services for vulnerable members of the Medicare population. The commenters asserted that underserved populations generally do not have access to the necessary oral health services required for successful outcomes and will help address persistent inequities in cancer outcomes. Commenters also stated that they believed payment for dental services in these circumstances may ensure that poor oral health in these circumstances does not further complicate the treatment of these covered medical conditions, may generate cost savings for vulnerable patients, and may also help with their candidacy for further interventions such as allogeneic stem cell transplant.

Commenters stated that standard of care in many cancer centers includes a comprehensive oral exam prior to starting therapy.<sup>88</sup> Commenters also noted that the National Cancer Institute recommends that cancer patients receiving high-dose chemotherapy, stem cell transplants, or radiation therapy should have an oral care plan in place before treatment begins to mitigate the risk of oral complications<sup>89</sup> that administering chemotherapy before providing dental treatment when an identifiable oral or dental infection is present does not align with the established standard of care. Commenters also supported the proposed clarification that payment may be made for dental and oral health treatments and ancillary services prior to or during cancer treatment regardless of the cancer's primary or metastatic status, site of origin, or initial treatment modality. Several commenters expressed support and appreciation for proposing to permit Medicare payment for dental services in scenarios where patients are receiving chemotherapy as a single modality, regardless of whether chemotherapy is used in combination

<sup>89</sup> <https://www.cancer.gov/about-cancer/treatment/side-effects/mouth-throat/oral-complications-hp-pdq>.

with other cancer therapies. Commenters noted that if the policy were to only apply in cases where chemotherapy is the only treatment, they were concerned that such an application of the policy would increase health disparities between cancer treatments.

*Response:* We agree with commenters that there is evidence to support that certain dental services serve to mitigate the substantial risk to the clinical success of the medical services due to the severity of complications that can be caused by the dental infection. We also agree that administering chemotherapy before providing dental treatment when an identifiable oral or dental infection is present does not align with the established standard of care, and that the dental services are considered to be an essential clinical requirement before moving forward with the primary medical procedure.

We further agree with commenters that Medicare payment for dental services should not be limited to cases where chemotherapy in the treatment of cancer is provided without the use of other therapies, as chemotherapy services when used in the treatment of cancer, either as a single modality or in conjunction with other therapy types, can cause immunosuppression which may lead to significant oral complications and adverse events, including the possibility of an oral or dental infection, which in turn lead to serious and imminent risks to the success of the primary medical procedures and treatments. The complications, including possible infection, may prevent the ability to both initiate and proceed with the primary, covered medical service (that is, lead to delays in treatment and/or cause inability of the patient to complete the course of treatment, thereby potentially reducing effectiveness of the therapy) such that the standard of care would be to not proceed with the covered medical procedure until a dental or oral exam is performed to address the oral complications and/or clear the patient of an oral or dental infection. In the case of chemotherapy services when used in the treatment of cancer, dental services serve to mitigate the likelihood of occurrence and severity of complications caused by the primary medical services, including infection, and consequently, the dental services facilitate the successful completion of the prescribed course of treatment. As such, we believe the dental

services are integral and inextricably linked to the chemotherapy when used in the treatment of cancer, and the statutory dental exclusion under section 1862(a)(12) of the Act would not apply and are finalizing this aspect of the proposal.

*Comment:* Several commenters requested that Medicare provide payment for dental and oral examinations performed as part of a comprehensive workup for Medicare beneficiaries with cancer prior to the administration of single modality radiation therapy, outside of usage in the treatment of head and neck cancer. Commenters suggested that radiation, although usually not systemic, also has a powerful cytotoxic effect, though commenters noted that radiation may have a less damaging impact on the immune system because it is not systemic and does not cause immunosuppression. Commenters stated that radiation does have to travel through areas of healthy cells to treat the tumor, so healthy cells through which the radiation travels and nearby cells can be affected. Commenters also stated that the radiation may directly damage the immune system, the skeletal system, or bone marrow, causing neutropenia. Commenters stated that, for example, radiation near the axilla following treatment of a solid breast cancer tumor, can damage lymph nodes which are part of the immune system, leading to risk of infection in the arm and lymphedema.

Commenters further suggested that patients with a diagnosis of leukemia, lymphoma, or multiple myeloma scheduled for a stem cell or, bone marrow transplant receive total body radiation (TBI) prior to the transplant (conditioning process), which then causes neutropenia and related immunosuppression. The commenters noted that because the radiation conditioning process kills stem cells, patients are temporarily unable to replace the neutrophils that fight infection, potentially leaving the patients at higher risk for oral and systemic infections such as dental infections.

*Response:* We appreciate the suggestion that single modality radiation therapy should be included in the list of covered medical services. However, we do not believe that the evidence submitted by commenters is sufficient to demonstrate an inextricable linkage between dental

services and the success of single modality radiation therapy during the treatment of certain cancers (other than head and neck cancer). In cases of single modality radiation (other than when utilized for treatment of head and neck cancer), we are not convinced that the radiation treatment necessary to treat the individual's underlying medical condition requires the performance of certain dental services and that those dental services would serve to mitigate the substantial risk to the success of the medical services, due to the occurrence and severity of complications caused by the primary medical services. While single modality radiation may create medical complications for the patient, we do not believe that dental services would serve to mitigate the substantial risk to the success of the radiation or is an essential clinical requirement before moving forward with the primary medical procedure, and therefore, that an inextricable linkage between the covered medical services and the provision of dental services can be established. However, we note that in instances, for example, where patients with a diagnosis of leukemia, lymphoma, or multiple myeloma scheduled for a stem cell or, bone marrow transplant receiving total body radiation (TBI) prior to the transplant (conditioning process) pretreatment for transplantation, Medicare Parts A and B payment may be made for dental services, such as dental or oral examination performed as part of a comprehensive workup prior to, and medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with, an organ transplant, including hematopoietic stem cell transplant, are currently included in the examples listed at § 411.15(i)(3)(i).

However, we continue to encourage additional public discussions and engagement on issues relating to Medicare payment for certain dental services that do not fall within the exclusion under section 1862(a)(12) of the Act through the finalized public process as described in section described in section II.K.1.c. above in this final rule and welcome additional public submissions regarding single modality radiation. We continue to seek medical evidence that certain dental services are so integral to medically necessary services that they are not in connection with the care, treatment, filling, removal, or replacement of teeth or structures

directly supporting teeth within the meaning of section 1862(a)(12) of the Act and that such dental services are inextricably linked to other covered services.

Moreover, we note that MACs retain the flexibility to determine on a claim-by-claim basis whether a patient's circumstances do or do not fit within the terms of the preclusion or exception specified in section 1862(a)(12) of the Act and § 411.15(i)(3). We further note that the finalized policies outlined in this section of the final rule would not prevent a MAC from making a determination that payment can be made for dental services in accordance with the regulation at § 411.15(i)(3)(i) in other circumstances not specifically addressed within this final rule and the finalized amendments to that regulation.

After consideration of the public comments, clinical practice guidelines, recommendations provided by the public, and our analyses of the studies and research, we are finalizing amendments to our regulation at § 411.15(i)(3)(i) to add chemotherapy in the treatment of cancer as an additional example of a clinical scenario under which payment can be made under Medicare Parts A and B, under the applicable payment system, for certain dental services that occur within the inpatient hospital and outpatient setting, as clinically appropriate. We are finalizing, with modifications, an amendment to § 411.15(i)(3)(i) to add dental or oral examination performed as part of a comprehensive workup prior to, and medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with, chemotherapy in the treatment of cancer to the list of examples of dental services that are not subject to the exclusion under section 1862(a)(12) of the Act and for which payment can be made under Medicare Parts A and B for dental services.

b. Dental services inextricably linked to CAR T-Cell therapy, when used in the treatment of cancer

After consideration of clinical practice guidelines, recommendations provided by the public, and our analyses of the studies and research available regarding the connection between dental services and the clinical success of CAR T-cell therapy, in the CY 2024 PFS proposed

rule we proposed that dental services to diagnose and treat infection prior to CAR T-cell therapy are inextricably linked to the clinical success of CAR T-cell therapy, and that these services also represent a clinically analogous scenario to dental services for which Medicare payment under Parts A and B is currently permitted when furnished in the inpatient or outpatient setting, such as prior to organ transplant, cardiac valve replacement, or valvuloplasty procedures (88 FR 52377 to 52379). We stated that we believe there is an inextricable link between dental and CAR T-cell therapy when used in the treatment of cancer because the standard of care is such that one would not proceed with the medical procedure or service without performing the dental service because the covered medical services would or could be significantly and materially compromised absent the provision of the inextricably-linked dental services and that dental services are a clinical prerequisite to proceeding with the CAR T-cell therapy when used in the treatment of cancer.

We believe that proceeding without a dental or oral exam and necessary diagnosis and treatment of any presenting infection of the mouth prior to (CAR) T-cell therapy when used in the treatment of cancer could lead to systemic infection or sepsis, as well as other complications for the patient. We also believe that an oral or dental infection could present a substantial risk to the success of the (CAR) T-cell therapy when used in the treatment of cancer, such that the standard of care would be to not proceed with the procedure when there is a known oral or dental infection present. We believe dental services furnished to identify, diagnose, and treat oral or dental infections prior to and medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with (CAR) T-cell therapy when used in the treatment of cancer are not in connection with the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth, but instead are inextricably linked to these other covered medical services. As such, in the CY 2024 PFS proposed rule, we proposed to add this clinical scenario to the examples of clinical scenarios under which payment can be made for certain dental services in our regulation at § 411.15(i)(3)(i)(A) (88 FR 52379). Specifically, we proposed to amend the regulation to include a dental or oral examination

performed as part of a comprehensive workup in either the inpatient or outpatient setting prior to Medicare-covered CAR T-cell therapy when used in the treatment of cancer; and medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with, CAR T-cell therapy when used in the treatment of cancer. We solicited comments on all aspects of this proposal.

We also solicited comment on whether we should add as an example of dental services for which payment may be made under Medicare Parts A and B other types of lymphodepleting medical services used for cancer treatment, in addition to those used in conjunction with CAR T-cell therapy for cancer treatment. Commenters submitting through the public process for consideration in CY 2024 rulemaking specifically stated that CAR T-Cell therapies constituted lymphodepleting therapies, and we believe there may be other immunotherapies that may have a similar lymphodepletion component, but we received no specific information regarding such therapies. Evidence submitted by the public through the finalized public submission process indicates that treatment-induced immunosuppression may also occur with lymphodepleting medical services, and that complications caused by the treatment-induced immunosuppression, including possible infection, may prevent the ability to proceed with the primary, covered medical service (that is, lead to delays in treatment and/or cause inability of the patient to complete the course of treatment, thereby potentially reducing the effectiveness of the therapy) and the standard of care would be to not proceed with the covered medical procedure until a dental or oral exam is performed to address the oral complications and/or clear the patient of an oral or dental infection. However, we requested comment on what specific medical services also involve lymphodepletion and should be considered in addition to CAR T-cell therapy. We also requested additional information regarding how dental infections/conditions might impact those specific services. We noted that if we receive compelling clinical evidence, we may finalize in the CY 2024 PFS final rule additional clinical scenarios, such as dental services prior to other types of specific lymphodepleting medical services where the treatment may induce

immunosuppression for patients with cancer and the standard of care would be to not proceed with the medical services without having first complete the dental services, where payment could be made under Medicare Part A or Part B. We solicited comment on whether there is a significant quality of care detriment if certain dental services are not provided prior to these other types of lymphodepleting medical services, and if so, we requested a description of that systematic evidence. We received public comments on this proposal. The following is a summary of the comments we received and our responses.

*Comment:* Commenters supported the proposal that Medicare Parts A and B payment may be made for dental services, such as dental or oral examination performed as part of a comprehensive workup prior to, and medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with Medicare-covered CAR-T cell therapies when used in the treatment of cancer and urged CMS to finalize this policy as proposed. Commenters included individuals, patient advocacy organizations, hospitals and hospital associations, medical and dental associations representing several different specialties and specialty societies, health centers, and health insurance companies, among others.

Many commenters expressed that payment for dental services in the proposed additional circumstances could improve patient outcomes and quality of life and reduce Medicare expenditures overall by avoiding the need to cover medical complications arising from untreated dental conditions. Commenters also stated that they believe that these updates will have a direct and meaningful impact on the lives of many of Medicare beneficiaries. Many commenters also stated that they believe that these revisions would serve to promote health equity and increase access to medically necessary services for vulnerable members of the Medicare population. The commenters asserted that underserved populations generally do not have access to the necessary oral health services required for successful outcomes and will help address persistent inequities in cancer outcomes. Commenters also stated that they believed payment for dental services in these circumstances may ensure that poor oral health in these circumstances does not further

complicate the treatment of these covered medical conditions, may generate cost savings for vulnerable patients, and may also help with their candidacy for further interventions such as allogeneic stem cell transplant.

Commenters stated that standard care in many cancer centers includes a comprehensive oral exam, which is a requirement prior to starting CAR T-cell therapy. Commenters noted that proceeding with CAR T-cell prior to dental treatment services when a known oral or dental infection is present is not the accepted standard of care, as the presence of the infection could jeopardize the outcome of the treatment. Commenters further stated that CAR T-cell medical services cause a patient to be immunosuppressed, such that an untreated oral or dental infection could complicate or compromise the clinical outcome of the CAR T-cell medical service. For those reasons, the commenters supported CMS' proposal and urged finalization of the proposed policy.

Response: We agree with commenters that there is evidence to support that dental services serve to mitigate the substantial risk to the success of the medical services due to the severity of complications caused by the primary medical services, including increased risk of infection and potential sepsis. We also agree that the standard of care for chemotherapy, when used in the treatment of cancer, would be compromised absent the provision of certain dental services and that the dental services are considered to be an essential clinical requirement before moving forward with the primary medical procedure.

Additionally, we agree with commenters that CAR T-cell therapy causes immunosuppression, which may lead to significant oral complications and adverse events, including the possibility of an oral or dental infection, which in turn leads to serious and imminent risks to the success of the primary medical procedures and treatments. The complications, including possible infection, may prevent the ability to both initiate and proceed with the primary, covered medical service (that is, lead to delays in treatment and/or cause inability of the patient to complete the course of treatment, thereby potentially reducing

effectiveness of the therapy) such that the standard of care would be to not proceed with the covered medical procedure until a dental or oral exam is performed to address the oral complications and/or clear the patient of an oral or dental infection. In the case of CAR T-cell therapy services when used in the treatment of cancer, dental services serve to mitigate the likelihood of occurrence and severity of complications caused by the primary medical services, including infection, and consequently the dental services facilitate the successful completion of the prescribed course of treatment. Therefore, we believe that the dental services that are inextricably linked to, and substantially related and integral to the clinical success of, CAR T-cell in the treatment of cancer are not subject to the exclusion under section 1862(a)(12) of the Act and that payment can be made under Medicare Parts A and B, under the applicable payment system, for such dental services that occur within the inpatient hospital and outpatient setting, as clinically appropriate. We are finalizing, with modifications, an amendment to § 411.15(i)(3)(i) to add dental or oral examination performed as part of a comprehensive workup prior to, and medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with CAR T-cell therapy in the treatment of cancer to the list of examples of services that are not subject to the exclusion under section 1862(a)(12) of the Act and for which payment can be made under Medicare Parts A and B. We are finalizing this aspect of the proposal.

*Comment:* A few commenters provided feedback and requested that CMS evaluate whether dental services may be inextricably linked to the clinical success of other immunotherapies that may have a similar lymphodepleting component as CAR T-cell therapies. However, the commenters noted that at this time they were unable to supply medical or clinical evidence to support this potential addition to this policy. The commenters encouraged CMS to continue to consider whether dental services may be inextricably linked to the clinical success of other immunotherapies that may have a similar lymphodepleting component as CAR T-cell therapies. One commenter submitted research related to the usage of rituximab as a first-line

treatment for non-Hodgkin's lymphoma and discussed the impacts the advent of rituximab had on treatment outcomes for patients with diffuse large B cell lymphoma (DLBCL) compared with the pre-rituximab era.<sup>90</sup>

*Response:* We thank the commenters for their suggestion and submission of studies related to the connection between the clinical success of other immunotherapies that may have a lymphodepleting component and the provision of dental services. While the clinical trials appeared to show a positive impact of rituximab on survival outcomes when treating aggressive B-cell lymphomas, the research did not provide concrete evidence regarding the connection between the provision of dental or oral services and outcomes for immunotherapies such as Rituximab. We continue to welcome further evidence on the impact of dental services on clinical scenarios involving monoclonal antibodies. Additionally, while some commenters noted that there is limited evidence to establish that dental services may be inextricably linked to the clinical success of other lymphodepleting therapies, we will continue to consider this and other suggestions as we consider potential future rulemaking through research of clinical studies and related materials. We reiterate that as described in section II.K.1.c. of this final rule, documentation submitted for the purposes of this payment policy should include medical evidence to support that certain dental services are inextricably linked to other covered services. Materials submitted should demonstrate that dental services are so integral to other medically necessary services that they are not in connection with the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth within the meaning of section 1862(a)(12) of the Act but rather that such dental services are inextricably linked to other covered services, and therefore, are instead substantially related and integral to that primary medical service. Details regarding the public submission process are available in the CY 2023 PFS final rule (87 FR 69669 through 69670).

---

<sup>90</sup> Mohammed R, Milne A, Kayani K, Ojha U. How the discovery of rituximab impacted the treatment of B-cell non-Hodgkin's lymphomas. *J Blood Med.* 2019 Feb 27;10:71-84. doi: [10.2147/JBM.S190784](https://doi.org/10.2147/JBM.S190784). PMID: 30881167; PMCID: PMC6398399.

Moreover, we reiterate that MACs have the flexibility to determine on a claim-by-claim basis whether certain dental services for beneficiaries receiving other immunotherapies that may involve a lymphodepleting component are subject to the exclusion on payment for dental services under section 1862(a)(12) of the Act and § 411.15(i). We further note that the finalized policies outlined in this section of this final rule would not prevent a MAC from determining on a case-by-case basis that payment can be made for certain dental services in other circumstances not specifically addressed within this final rule and § 411.15(i)(3)(i), including as that regulation is amended by this final rule.

c. Dental services inextricably linked to administration of high-dose bone-modifying agents (antiresorptive therapy) when used in the treatment of cancer

In the CY 2024 PFS proposed rule, after consideration of clinical practice guidelines, recommendations provided by the public, and our analyses of the studies and research available regarding the connection between dental services and the clinical success of the administration of high-dose bone-modifying agents (antiresorptive therapy) when used in the treatment of cancer, we proposed to add this clinical scenario to the examples of clinical scenarios under which payment can be made for certain dental services in our regulation at § 411.15(i)(3)(i)(A) (88 FR 52379). We stated that we believe that there is an inextricable link between dental and administration of high-dose bone-modifying agents (antiresorptive therapy) when used in the treatment of cancer because the standard of care is such that one would not proceed with the medical procedure or service without performing the dental service because the covered medical services would or could be significantly and materially compromised absent the provision of the inextricably-linked dental services and that dental services are a clinical prerequisite to proceeding with the administration of high-dose bone-modifying agents (antiresorptive therapy) when used in the treatment of cancer. Specifically, we proposed to amend the regulation to include dental or oral examination performed as part of a comprehensive workup in either the inpatient or outpatient setting prior to Medicare-covered the administration of Medicare-covered

high-dose bone-modifying agents (antiresorptive therapy), when used in the treatment of cancer; and medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with, administration of high-dose bone-modifying agents (antiresorptive therapy), when used in the treatment of cancer. We solicited comments on all aspects of this proposal.

We note that in the CY 2023 PFS final rule (87 FR 70225) and now codified in our regulation at § 411.15(i)(3)(i), we finalized that for dental services that are inextricably linked to, and substantially related and integral to the clinical success of, a certain covered medical service, payment may be made under Medicare Parts A and B for services when furnished in either the inpatient or outpatient setting; therefore, we proposed that these provisions would apply to the proposed amendments to regulation at § 411.15(i)(3)(i) to allow for payment under Medicare Parts A and Part B in either the inpatient or outpatient setting. We further proposed that payment under the applicable payment system could also be made for services that are ancillary to these dental services, such as x-rays, administration of anesthesia, and use of the operating room as described in our regulation at § 411.15(i)(3)(ii).

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

*Comment:* Commenters supported Medicare payment for dental services, such as dental or oral examination performed as part of a comprehensive workup prior to, and medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with the administration of high-dose bone-modifying agents (antiresorptive therapy) when used in the treatment of cancer. Commenters included individuals, patient advocacy organizations, hospitals and hospital associations, medical and dental associations representing several different specialties and specialty societies, health centers, and health insurance companies, among others. Many commenters expressed the view that payment for dental services in the proposed additional circumstances could improve patient outcomes and

quality of life and reduce Medicare expenditures overall by avoiding the need to cover medical complications arising from untreated dental conditions. Commenters also stated that they believe that these updates will have a direct and meaningful impact on the lives of many of Medicare beneficiaries. Many commenters also stated that they believe that these revisions would serve to promote health equity and increase access to medically necessary services for vulnerable members of the Medicare population. The commenters asserted that underserved populations generally do not have access to the necessary oral health services required for successful outcomes and will help address persistent inequities in cancer outcomes. Commenters also stated that they believed payment for dental services in these circumstances may ensure that poor oral health in these circumstances does not further complicate the treatment of these covered medical conditions and may generate cost savings for vulnerable patients.

Commenters recommended that Medicare provide payment for dental exams and related preventative services before initiating bone directed therapy using bisphosphonates and denosumab and urged CMS to finalize this policy as proposed. Commenters noted that there is no effective treatment for bisphosphonate-induced osteonecrosis, but preventative dental exams and management decrease risk of osteonecrosis of the jaw in cancer patients receiving these therapies, which can in turn jeopardize the successful completion of the treatment for cancer. Commenters stated that research shows that osteonecrosis of the jaw is a preventable condition, and that care coordination and preventative services can result in improved outcomes and in lower incidence of osteonecrosis of the jaw for cancer patients receiving bisphosphonate therapy. Commenters expressed appreciation for the inclusion of clinical guidelines as the rationale for coverage in the proposed rule, which state that cancer patients should receive an oral care assessment (including a comprehensive dental, periodontal, and oral radiographic exam, when feasible) prior to initiating the administration of high-dose bone modifying agents (antiresorptive therapy) when used in the treatment of cancer to reduce complications and manage modifiable risk factors. Commenters stated that the dental-related complication to certain

immunosuppressive cancer treatments, such as high-dose antiresorptive and/or antiangiogenic drug therapy can be serious, particularly medication-related osteonecrosis of the jaw (MRONJ), which can complicate cancer treatment and lead to reduced survival rates post-treatment.

Commenters noted that patients with existing dental disease pose the greatest risk for developing MRONJ secondary to bone-modifying therapy and recommended that the dental infection be addressed prior to the start of care, so as to facilitate the successful completion of the treatment.

Commenters further stated that from a clinical standpoint, prevention of MRONJ is the gold standard and emphasized the importance of a multidisciplinary, coordinated approach that includes pretreatment dental management in minimizing the risk of MRONJ and supported CMS's proposal to expand Medicare coverage and payment for dental examinations prior to, as well as diagnostic and treatment services to eliminate an oral or dental infection prior to or at the same time as, the administration of high-dose bone modifying agents.

*Response:* We agree with commenters that there is evidence to support that dental services serve to mitigate the substantial risk to the success of the medical services due to the severity of complications caused by the primary medical services as well as minimize the risk of infection and therefore the dental services are so integral to other medically necessary services that they are not in connection with the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth within the meaning of section 1862(a)(12) of the Act. Rather, such dental services are inextricably linked to the clinical success of the medical service and are substantially related and integral to the covered medical service of administration of high-dose bone modifying agents in the treatment of cancer. As such, we are finalizing our proposal that Medicare Part A and Part B payment can be made for certain dental services such as dental or oral examination performed as part of a comprehensive workup prior to, and medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with, the administration of high-dose bone-modifying agents (antiresorptive therapy) when used in the treatment of cancer. We believe that the standard of

care for that medical service would be compromised absent the provision of dental services, and that the dental services are considered to be an essential clinical requirement before moving forward with the primary medical procedure.

*Comment:* A few commenters asked that we clarify the term “high-dose” bisphosphonate therapy and provide guidance regarding what this phrase means so as to minimize potential confusion with respect to this policy.

*Response:* For the purposes of Medicare payment for dental services inextricably linked to other covered services, the term “high-dose” bisphosphonate therapy refers to the usage of bisphosphonate therapy when used in the treatment of cancer. In general, for patients undergoing treatment for cancer, currently, intravenous formulations have FDA label indication for patients with multiple myeloma or bone metastases from solid tumors. We believe that the particular dosage may be adjusted for various clinical situations, so setting a defined high-dose dosage at a particular level may inadvertently exclude certain patient populations (such as renal-impaired patients who are receiving a particular dose). We also recognize that there may also be variation in dosage interval for the bisphosphonates varying between three, four, and perhaps twelve weeks of therapy. As such, we believe that “high-dose” bisphosphonate therapy to which dental care may be inextricably linked would be defined as intravenous bisphosphonate therapy for the treatment of multiple myeloma and bone metastases of solid tumors. For example, ICD-10 codes for related conditions could include those that reflect multiple myeloma and bone metastases from a primary solid tumor (for example, breast, prostate), such as C90 Multiple myeloma and malignant plasma cell neoplasms, C90.0 Multiple myeloma, C90.00 Multiple myeloma not having achieved remission, C90.01 Multiple myeloma in remission, C90.02 Multiple myeloma in relapse, C79.5 Secondary malignant neoplasm of bone and bone marrow, C79.51 Secondary malignant neoplasm of bone or C79.52 Secondary malignant neoplasm of bone marrow.

From the evidence provided and reviewed, we note there are FDA approved defined intravenous dosages and intervals (with adjustment for renal impairment) for the use of some bisphosphonates for metastatic bone lesions and multiple myeloma, and we would not expect that oral regimens of these or other bisphosphonates would be commonly prescribed for these purposes.<sup>91,92</sup> However, other dosage forms, when used for these purposes, possibly in an off-label manner, could be considered by the MACs on a case-by-case basis. Additionally, we would be open to reviewing evidence in the future of other applicable dosage forms. Currently, oral regimens have indications for osteoporosis and Paget's disease, which are not included in the list of clinical examples at § 411.15(i).

After consideration of the public comments, clinical practice guidelines, recommendations provided by the public, and our analyses of the studies and research, we are finalizing amendments to our regulation at § 411.15(i)(3)(i) to provide that dental services that are inextricably linked to, and substantially related and integral to the clinical success of, the administration of high-dose bone-modifying agents (antiresorptive therapy) in the treatment of cancer are not subject to the exclusion under section 1862(a)(12) of the Act; and that payment can be made under Medicare Parts A and B, under the applicable payment system, for such dental services that occur within the inpatient hospital and outpatient setting, as clinically appropriate. We are also finalizing an amendment to § 411.15(i)(3)(i) to add dental or oral examination performed as part of a comprehensive workup prior to, and medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with the administration of high-dose bone-modifying agents (antiresorptive therapy) in the treatment of cancer to the list of examples of services that are not subject to the exclusion under section 1862(a)(12) of the Act and for which payment can be made under Medicare Parts A and B.

<sup>92</sup> [https://www.accessdata.fda.gov/drugsatfda\\_docs/label/2014/021223s028lbl.pdf](https://www.accessdata.fda.gov/drugsatfda_docs/label/2014/021223s028lbl.pdf).

d. Amendments to regulations regarding dental services inextricably linked to treatment for head and neck cancer

In the CY 2024 PFS proposed rule, we proposed to clarify and codify that Medicare Parts A and B payment may be made for dental or oral examination performed as part of a comprehensive workup in either the inpatient or outpatient setting, as well as for the medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to the initiation of, or during, treatments for head and neck cancer, whether primary or metastatic, regardless of site of origin, and regardless of initial modality of treatment (88 FR 52380).

Specifically, we proposed to amend our regulation at § 411.15(i)(3)(i)(A) to allow for payment under Medicare Parts A and Part B for:

(1) Dental or oral examination in either the inpatient or outpatient setting prior to the initiation of, or during, Medicare-covered treatments for head and neck cancer; and

(2) Medically necessary diagnostic and treatment services to eliminate an oral or dental infection in either the inpatient or outpatient setting prior to the initiation of, or during, Medicare-covered treatments for head and neck cancer.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

*Comment:* Commenters supported Medicare payment for dental services, such as dental or oral examination performed as part of a comprehensive workup prior to, and medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with treatments for head and neck cancers. Commenters included individuals, patient advocacy organizations, hospitals and hospital associations, medical and dental associations representing several different specialties and specialty societies, health centers, and health insurance companies, among others. Many commenters expressed the view that payment for dental services in the proposed additional circumstances could improve patient outcomes and quality of life and reduce Medicare expenditures overall by avoiding the need to

cover medical complications arising from untreated dental conditions. Commenters also stated that they believe that these updates will have a direct and meaningful impact on the lives of many of Medicare beneficiaries. Many commenters also stated that they believe that these revisions would serve to promote health equity and increase access to medically necessary services for vulnerable members of the Medicare population. The commenters asserted that underserved populations generally do not have access to the necessary oral health services required for successful outcomes and will help address persistent inequities in cancer outcomes. Commenters also stated that they believed payment for dental services in these circumstances may ensure that poor oral health in these circumstances does not further complicate the treatment of these covered medical conditions and may generate cost savings for vulnerable patients.

Commenters described that treatment for head and neck cancer generally refers to a group of cancers that originate in or metastasize to various areas of the head and neck, with the mucosal surfaces of the oral cavity, pharynx and larynx being most common and stated that these cancers are often grouped together because they share common risk factors, symptoms, and treatment approaches.

Commenters noted, particularly for patients undergoing radiation therapy for any head and neck cancer, the importance of thorough initial dental evaluation, including dental x-rays, with special attention to any teeth that may require timely procedures, such as root canals and extractions, prior to radiation therapy. The commenters stated that cleaning and preparation work for radiation therapy is critical to the clinical success of radiation therapy. Commenters provided evidence that described the connection between the provision of dental services prior to, during, and after the treatment for head and neck cancer and the reduction of risk of complications that may jeopardize the success of the treatments and simultaneously result in improved outcomes for the patient.

*Response:* We thank the commenters for their support. We agree that head and neck cancer generally refers to a group of cancers that originate in or metastasize to areas of the head

and neck, which could include the mucosal surfaces of the oral cavity, pharynx and larynx and acknowledge that these cancers are often grouped together because they share common risk factors, symptoms, and treatment approaches. We also agree that the medical services necessary to diagnose and treat the underlying head and neck cancer may require the performance of certain dental services, which in turn serve to mitigate the substantial risk to the success of the medical services because of the risk of infection and of the occurrence and severity of complications that are caused by the primary medical services. Additionally, we agree that the standard of care for treatment for head and neck cancer would be compromised absent the performance of certain dental services, and that dental services are considered to be an essential clinical requirement before moving forward with the primary medical procedure. As such, we are finalizing our proposal that Medicare Part A and Part B payment can be made for certain dental services when furnished prior to or contemporaneously with the treatment of head and neck cancer.

*Comment:* Several commenters requested that Medicare payment be permitted for patients undergoing single modality radiation therapy for any head and neck cancer, as the commenters note that it is important that those patients receive a thorough initial dental evaluation, including dental x-rays, with special attention to any teeth that may require timely procedures, such as root canals and extractions, prior to radiation therapy. Commenters provided evidence and stated that cleaning and preparation work for radiation therapy is also critical to the clinical success of radiation therapy, including the preparation of a fluoride carrier to protect teeth in an ongoing fashion. Commenters supplied research and further stated that due to the chronic dental side effects of head and neck radiotherapy and the risk of osteoradionecrosis with dental extractions after treatment, curative treatment for the underlying cancer may be delayed until dental care can be completed and that those delays would be eliminated if dental care could be addressed prior to the initiation of radiation treatment. Commenters also noted that in some radiation oncology treatments, masks utilized for treatment must fit on patients' faces correctly

when receiving radiology and suggested that if the mask fits improperly due to issues related to dental care, treatment for the underlying cancer is delayed until dental care can be completed. Commenters asserted that dental care to address these issues would facilitate the successful completion of the radiology treatment for head and neck cancer.

Response: We agree that in the case of head and neck cancers, single modality radiation therapy uniquely impacts the dental and oral tissues such that the provision of certain dental services before or during the single modality treatment are linked to improved outcomes, including the reduction of the risk of infection. As such, we are finalizing our proposal that Medicare Part A and Part B payment can be made for certain dental services furnished before or during single modality radiation therapy when used in the treatment of head and neck cancer even when used as the single treatment modality and not in combination with any other therapy types.

*Comment:* Many commenters requested that Medicare payment be permitted after direct treatment is completed for patients undergoing treatment for head and neck cancer. The commenters suggested that dental evaluations to identify, address, and rectify potential oral complications are necessary to ensure the success of the treatments and to improve quality outcomes for the patient in the period after the direct treatment for head and neck cancer. Commenters supplied clinical studies and research that demonstrate that the side effects encountered by patients undergoing treatment, such as radiotherapy, chemotherapy or combination treatment with concurrent systemic agents, for head and neck cancers, can include, but are not limited to: infection, mucositis, hyposalivation, dysphagia, osteoradionecrosis, and

radiation-related caries.<sup>93,94,95,96,97,98,99</sup> Commenters noted that these oral toxicities may be acute (developing during active treatment) or late onset (manifesting several months after treatment is complete) with some latent complications of radiotherapy linked to permanent tissue damage, as well as damage to bony structures, tissues, and salivary glands. Commenters noted that current data show approximately 30 percent of head and neck cancer patients develop radiation caries within 12 months following completion of radiotherapy.<sup>100</sup>

Commenters also stated that the oral health of cancer patients undergoing radiation therapy in the treatment of head and neck cancer are uniquely impacted by the primary medical services intended to treat the underlying cancer. Commenters stated that patients undergoing radiotherapy experience an overall deterioration of dental and periodontal health, as well as chronic effects of radiotherapy, such as mucosal pain and recurrent infection, salivary gland dysfunction, and osteoradionecrosis, all of which are caused by the primary treatments for

cancer. Commenters noted that these oral complications caused by the treatment for head and neck cancer can be either acute or chronic and can manifest within months of the final treatments and potentially persist through the end of life. Commenters stated that managing oral complications of head and neck cancer therapy can be very costly and create a financial burden for patients, offering that ongoing treatment for complications caused by treatment can range from approximately \$4,000-\$35,000 for osteoradionecrosis and between \$5,000-\$30,000 for management of oral mucositis in cancer patients undergoing radiotherapy, stating that some researchers attribute this high cost both to the resource-intensive settings in which management of oral complications typically takes place and the complex needs of cancer patients including enteral and parenteral feedings, febrile neutropenia, and frequency of hospitalizations<sup>101,102</sup>.

Additional commenters stated that, in general, medical standards of cancer care include routine follow-up, supplemental, or secondary treatments for symptom management and long-term management of overall health for head and neck cancer patients, and that oral and dental care should be incorporated into clinical cancer care protocols for pre-, intra- and post-treatment, especially for diagnoses or therapies known to cause oral complications. The commenters asserted that access to medically necessary dental services post-radiation positively impact patient quality of life and mitigate some of the resource-intensive treatment of advanced oral sequelae of head and neck cancer and its treatment. These commenters requested that CMS expand Medicare payment to include medically necessary dental services occurring postradiotherapy for beneficiaries with a diagnosis of head and neck cancer.

Several commenters asked CMS to adopt a definition of “during” or “contemporaneously with” in the treatment of head and neck cancer that recognizes the patient-specific clinical

decisions that occur in this specific patient population. The commenters suggested that the definition of “during” or “contemporaneously with” for head and neck cancer should encompass a clinically recognized recovery phase for targeted head and neck cancer treatment, which the commenters noted they believe would advance the goals of the Medicare program without violating the statutory dental exclusion.

*Response:* We appreciate the commenters’ thoughtful and evidence-based feedback regarding the link between medically necessary diagnostic and treatment services for head and neck cancer and the unique circumstances surrounding the ongoing oral complications that following treatment for head and neck cancer. While we did not propose to add to our regulation that Medicare Parts A and B payment is permitted for medically necessary diagnostic and treatment services to address dental or oral complications after radiation, chemotherapy, and/or surgery when used in the treatment of head and neck cancer, we are persuaded by evidence provided by commenters that treatment for head and neck cancer uniquely causes additional significant and acute (developing during active treatment) dental and/or oral complications for the patient, including increased risk of infection even after the direct treatment for head and neck cancer has ended. The research submitted by commenters indicates that radiation therapy causes an increased occurrence of caries, mucositis, osteoradionecrosis, and other severe complications. Commenters provided persuasive arguments, clinical guidelines, and research to substantiate that the provision of dental services with the treatment for head and neck cancer leads to improved healing and improved quality outcomes for the treatments, including the reduction of incidence of infection, and without the provision of dental services, the final outcome of the treatment for head and neck cancer may be jeopardized. We are also convinced that the standard of care for the treatments for head and neck cancer would be compromised absent the provision of dental services to address the oral complications caused by the primary treatment. Additionally, we are convinced by the evidence submitted by commenters that the provision of certain dental services

after direct treatments for head and neck cancers supports that certain dental services would result in clinically significant improvements in quality and safety outcomes for the patient.

The research submitted by commenters demonstrates varying post-treatment dental needs for individuals receiving treatment for head and neck cancer (HNC), stemming from the acute (developing during active treatment) and chronic complications caused by the treatment for the HNC. For example, mucositis may be caused by either radiation therapy or chemotherapy. According to the National Cancer Institute, mucositis caused by chemotherapy will heal by itself, usually within 2 to 4 weeks if there is no infection. Mucositis caused by radiation therapy usually lasts 6 to 8 weeks, depending on the duration of treatment<sup>103</sup>. Additionally, complications such as dropped head syndrome (DHS) can occur from 3 months to 30 years after radiation therapy for HNC patients.<sup>104</sup> Current research highlights the long-term dental service needs for individuals treated for HNC. Patients who underwent radiation therapy reported oral complications and challenges within six months after treatment, such as dry mouth, sticky saliva, difficulty swallowing solid foods, and changes in taste.<sup>105</sup> A systematic review revealed that certain treatment-related issues persisted beyond 12 months, including dry mouth, sticky saliva, difficulties with social eating, fatigue, and physical functioning,<sup>106</sup> all of which may benefit from ongoing monitoring and dental support in the first year following treatment and beyond. Moreover, access to expert oral healthcare is critical for both HNC patients and survivors, as issues related to mobility and sensory disturbances can persist permanently.<sup>107</sup> A systematic

<sup>107</sup> Sroussi HY, Epstein JB, Bensadoun RJ, Saunders DP, Lalla RV, Migliorati CA, Heavilin N, Zumsteg ZS. Common oral complications of head and neck cancer radiation therapy: mucositis, infections, saliva change,

review indicated that dental caries occurs in approximately 29 percent of post-radiotherapy HNC patients. Furthermore, the risk of developing dental caries within two years of head and neck radiotherapy is approximately 37 percent; studies with a higher proportion of patients treated with chemotherapy, in addition to radiotherapy, had an increased incidence of dental caries.<sup>108</sup> Based on the evidence provided by commenters, we believe that most oral complications may arise within 24 months of the completion of direct treatment. However, we recognize that some oral complications may persist beyond such a window. We continue to seek feedback from the public and interested parties on our continued interest in understanding how the timing of medical treatment and oral health care might illustrate an inextricable linkage.

For example, we believe that dental services may be warranted in the case of a patient with locoregionally advanced head and neck cancers treated with surgery followed by radiation therapy, or definitive radiation therapy, with or without adjuvant chemotherapy, and the oral cavity is within the radiation treatment field. We considered the clinical scenario of a 75-year-old patient who is a non-smoker, that presents with a single enlarged 2 cm level 2 [upper lateral neck] right lymph node. The ensuing work-up discovers human papilloma virus (HPV) positive squamous cell carcinoma in the neck node with a right base of tongue primary tumor. The patient has intact dentition. The patient is treated with definitive chemoradiation for both the primary tumor and the regional metastatic neck disease. The patient is followed regularly by the dentist during and after treatment to assist with management of the oral mucositis and xerostomia [dry mouth] and to monitor the dentition. The oral services provided after the direct treatment for head and neck cancer serve to address any complications that may arise from the primary treatment itself. In this scenario, we believe that Medicare Parts A and B payment may be made for dental services inextricably linked to the treatment for head and neck cancer, such as dental

<sup>108</sup> Moore C, McLister C, Cardwell C, O'Neill C, Donnelly M, McKenna G. Dental caries following radiotherapy for head and neck cancer: A systematic review. *Oral Oncol.* 2020 Jan;100:104484. doi: 10.1016/j.oraloncology.2019.104484. Epub 2019 Nov 28. PMID: 31786391.

or oral examination to monitor for oral and dental complications such as oral mucositis and xerostomia, as well as evaluate for changes in dentition and identification and the elimination of an oral or dental infection. We note that additional dental services, such as a dental implant or crown, may not be considered immediately necessary to address oral complications caused by the treatment for head and neck cancer. Therefore, we believe that such additional services would not be inextricably linked to, and substantially related and integral to, the clinical success of, the treatment for head and neck cancer. As such, no Medicare payment would be made for the additional services that are not immediately necessary prior to addressing the oral complications caused by the treatments for head and neck cancer.

We also considered another case in which a 65-year-old patient, who is a long-term smoker, presents with multiple level 2 and 3 [upper and mid lateral neck] enlarged left lymph nodes. The ensuing work-up discovers human papilloma virus (HPV) negative squamous cell carcinoma in the neck nodes, but no defined primary origin of tumor, and no distant metastases. The patient has generally poor dentition and undergoes extraction of several vulnerable teeth by an oral surgeon prior to beginning the cancer treatment. The patient is treated with a left modified radical neck dissection [surgery to remove the cancerous lymph nodes in the neck with some of the surrounding tissue] followed by radiation therapy to the neck and the aerodigestive mucosa [nose, mouth and throat lining] from the nasopharynx [back of the nose] to the larynx [voice box]. The patient declined adjuvant chemotherapy. The patient is followed by the dentist during and after treatment to assist with management of the oral mucositis and xerostomia [dry mouth] and to monitor the remaining dentition. Again, the oral services provided after the direct treatment for head and neck cancer serve to address the unique oral complications that were a result of the primary treatment itself. In this scenario, we believe that Medicare Parts A and B payment may be made for dental services inextricably linked to the treatment for head and neck cancer, such as medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to the initiation of treatment, and, after direct treatment, dental or oral

examination to monitor for oral and dental complications such as oral mucositis and xerostomia, as well as evaluate for changes in dentition and identification and the elimination of an oral or dental infection resulting from the treatment for head and neck cancers. We note that additional dental services, such as a dental implant or crown, may not be considered immediately necessary to address oral complications caused by the treatment for head and neck cancer. Therefore, we believe that such additional services would not be inextricably linked to, and substantially related and integral to the clinical success of, the treatment for head and neck cancer. As such, no Medicare payment would be made for the additional services that are not immediately necessary prior to address the oral complications caused by the treatments for head and neck cancer.

As described by evidence submitted by the commenters, the treatment of head and neck cancer causes oral complications caused by the primary medical treatment itself and increases the risk of infection after the direct treatment. Treatments for head and neck cancers are demonstrated to cause infection, caries, mucositis, and osteoradionecrosis, among other complications and jeopardize successful outcomes for the treatments. We are convinced that the provision of dental services in the context of treatments for head and neck cancers for the complications of the medical treatment is inextricably linked to the primary medical treatment. This is not only because such services lead to improved healing and improved quality outcomes, and because without the provision of dental services, the final outcome of the treatment for head and neck cancer may be jeopardized, but especially because the treatment itself is the direct cause of the acute oral/dental complications requiring the dental intervention. As demonstrated by evidence submitted by commenters, these complications may occur after some passage of time following the primary medical treatment. In other words, the treatment of head and neck cancer directly causes the oral complications, which may emerge after the treatment is completed. Treatments for head and neck cancers may cause infection, caries, mucositis, and osteoradionecrosis, among other complications, that may occur over months post-treatment. Based on persuasive information presented by commenters, we believe addressing and rectifying

these direct consequences of the primary medical treatment for head and neck cancer aligns with the standard of care for treatment of head and neck cancers, would result in improved clinical outcomes for the patient, and is inextricably linked to the treatment.

Therefore, we believe that there is a direct connection between the primary treatment and the dental and oral complications caused by the treatment for head and neck cancer itself, including those that occur after the direct treatments for cancer. As such, we believe that these dental services should be considered not subject to the general preclusion on payment for dental services under section 1862(a)(12) of the Act because they are inextricably linked to, and substantially related and integral to the clinical success of, the treatment for head and neck cancer, because the dental services serve to mitigate the substantial risk to the success of the medical services due to the severity of complications caused by the primary medical services and the standard of care for the medical service would be compromised. Consequently, we are clarifying that for the purposes of treatment for head and neck cancer, treatment may include dental services required in the period following direct treatment for the head and neck cancer.

#### *Final Action Statement*

As described in the sections above, we are revising § 411.15(i)(3)(i) to add to the list of clinical scenarios under which Medicare Part A and B payment is permitted for dental or oral examinations performed as part of a comprehensive workup prior to, and medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with, the following Medicare-covered services: chemotherapy, chimeric antigen receptor (CAR) T-cell therapy, and the administration of high-dose bone-modifying agents (antiresorptive therapy) when used in the treatment of cancer. We are also adding a new § 411.15(i)(3)(i)(E) to permit Part A and B payment for dental or oral examination performed as part of a comprehensive workup prior to, medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with, and medically necessary diagnostic and treatment services to address dental or oral complications after,

radiation, chemotherapy, and/or surgery when used in the treatment of head and neck cancer.

The policies we are finalizing take into account commenters' feedback and information provided in clinical literature, such as peer reviewed publications or clinical guidelines supported by clinical evidence, supporting the inextricable link between dental services and certain covered medical services. We anticipate making conforming changes to the Medicare Benefit Policy Manual (IOM Pub. 100-02) to reflect the final changes. Additionally, we intend to issue educational and outreach materials to inform billing and payment for any policies finalized in the final rule. Moreover, we believe that the process we finalized for CY 2023, as described above in section II.K.1.c. of this final rule, to engage with interested parties and review their recommendations regarding the inextricable link between dental services and certain covered medical services will continue to serve the need expressed by commenters for continued engagement on these issues. Additionally, we intend to continue to engage in discussions with the public on a wide spectrum of issues relating to Medicare payment for certain dental services that do not fall within the preclusion or exclusion under section 1862(a)(12) of the Act and related topics. We also continue to partner with researchers at the Agency for Healthcare Research and Quality (AHRQ) and other entities to consider and study the relationship between dental services and specific covered medical services, to review available clinical evidence regarding the relationship between dental services and specific covered medical services, and to identify other potential instances in which dental services are inextricably linked to other covered services. Furthermore, we remain open to adjusting and revising these finalized policies through future rulemaking and/or additional guidance as necessary. We appreciate the thoughtful questions raised by commenters and remain committed to continued engagement.

### 3. Dental Services Integral to Covered Cardiac Interventions

In the CY 2023 PFS final rule, we finalized a policy to permit payment for dental or oral examination performed as part of a comprehensive workup in either the inpatient or outpatient setting prior to Medicare-covered cardiac valve replacement or valvuloplasty procedures; and

medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with, the cardiac valve replacement or valvuloplasty procedure (87 FR 69675).

We recognized that, without a dental or oral exam and necessary diagnosis and treatment of any presenting infection of the mouth prior to a cardiac valve replacement or valvuloplasty procedure, an undetected, non-eradicated oral or dental infection could lead to bacteria seeding the valves and the surrounding cardiac muscle tissues involved with the surgical site and conceivably leading to systemic infection or sepsis, all of which increase the likelihood of unnecessary and preventable acute and chronic complications for the patient (87 FR 69667).<sup>109</sup> Specifically, we noted that the replaced valve is also at risk of being a seeding source for future endocarditis. Endocarditis can carry a high risk of mortality for these patients and eliminating an infection prior to or contemporaneously with the procedure would be important for preventing future endocarditis related to the new valve (87 FR 69678).

We also concluded that an oral or dental infection could present a substantial risk to the success of organ transplants, such that the standard of care would be to not proceed with the procedure when there is a known oral or dental infection present. We stated that we believe dental services furnished to identify, diagnose, and treat oral or dental infections prior to organ transplant, cardiac valve replacement, or valvuloplasty procedures are not in connection with the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth, but instead are inextricably linked to these other covered medical services (89 FR 69667).

We encouraged the public to use the public submission process finalized in the CY 2023 PFS final rule to identify additional clinical scenarios and related medical evidence to support an inextricable link between specified dental services and other covered medical services.

Through the submission process, an interested party has encouraged CMS to consider extending Medicare payment to include dental services to eliminate infection prior to all cardiovascular procedures, as the mitigation of risks of perioperative and postoperative infection and complications is critical to ensure optimal surgical outcomes for all patients requiring invasive and/or interventional cardiac procedures. This submission noted that the current standard of care does not conclusively require dental evaluation, diagnosis, or treatment services prior to certain cardiac procedures, perhaps in part because such cardiac procedures are often performed on a more urgent or emergent basis where there is not an opportunity to consider the possible presence of dental infection. Moreover, the submission noted that much of the scientific literature is inconclusive as to whether pre-operative dental treatments impact postoperative surgical outcomes in cardiovascular surgery, including cardiac valve procedures.<sup>110</sup> A systematic literature review by Cotti *et al.* found that, based upon expert opinion, there is general agreement on the need for screening and treatment of oral/dental infections in patients who are to undergo cardiac surgery (although no standardized clinical guidelines or protocols exist to outline the screening process, in terms of either dental treatment options and/or timing of such procedures in relation to the planned cardiac intervention).<sup>111</sup> The authors convened an expert panel from six Italian scientific societies (including cardiologists, cardiac surgeons, and dental specialists) to establish a consensus on early screening and resolution of dental or periodontal infections prior to cardiac surgery, that they intended would result in a standardized protocol for evaluating oral infections and dental treatments for cardiac patients to be used in the interventional preparation phase by both dental and cardiac teams.<sup>112</sup> The authors noted, however, the lack of scientific

<sup>112</sup> *Ibid.*

evidence on the risk-to-benefit ratio for perioperative dental treatment in patients undergoing cardiovascular surgery.

We believe, after further review of current medical practice, through consultations with interested parties (including commenters on last year's final rule and those commenting on current topics) and our medical officers, and through evidence submitted through the public submission process we established in the CY 2023 PFS final rule, that there may be additional circumstances that are clinically similar to examples we codified in our regulation at § 411.15(i)(3)(i) where Medicare payment for dental services could be made under other clinical circumstances where the dental services are inextricably linked to a covered cardiac medical service(s).

To gain further understanding of any potential relationship between dental services and specific covered cardiac medical services, we again partnered with researchers at the AHRQ to review available clinical evidence regarding the relationship between dental services and covered cardiac medical services, including implantation of ventricular assist devices, artificial pacemakers, implantable defibrillators, synthetic vascular grafts and patches, and coronary and vascular stents. This AHRQ report<sup>113</sup> is available at [https://effectivehealthcare.ahrq.gov/sites/default/files/related\\_files/rapid-response-cardio-dental.pdf](https://effectivehealthcare.ahrq.gov/sites/default/files/related_files/rapid-response-cardio-dental.pdf).

As stated in their report, the available evidence does not permit conclusions regarding the effect of pre-treatment dental care for preventing downstream infections related to any of these devices. They noted that professional society guidelines endorse the provision of patient education on routine oral hygiene practices but have not recommended other pre-treatment dental care prior to insertion of these devices. They also noted that professional society guidelines

---

<sup>113</sup> Hickam DH, Gordon CJ, Armstrong CE, Paynter R. The Efficacy of Dental Services for Reducing Adverse Events in Those Undergoing Insertion of Implantable Cardiovascular Devices. Rapid Response. (Prepared by the Scientific Resource Center under Contract No. 75Q80122C00002.) AHRQ Publication No. 23-EHC020. Rockville, MD: Agency for Healthcare Research and Quality; June 2023. DOI: <https://doi.org/10.23970/AHRQEPCRAPIDDENTALCARDIO>.

recommend ongoing routine dental examinations for some patients treated with cardiovascular devices.

Nonetheless we solicited comment to identify additional cardiac interventions (that is, specific medical services) where the risk of infection posed to beneficiaries is similar to that associated with cardiac valve replacement or valvuloplasty. We note that, in order to consider whether certain dental services are inextricably linked to other covered services, we need to identify specific medical services for which there is clinical evidence that certain dental services are so integral to the clinical success that they are inextricably linked to other covered service(s). We encourage interested parties to use the public submission process to submit recommendations and relevant clinical evidence for establishing this connection. In section II.K. of this final rule, we have described the various types of documentation to support recommendations through this process. We considered, and solicited comment on, whether the following cardiac interventions are examples of specific medical services for which dental services are inextricably linked to clinical success: implantation of electronic devices in the heart, such as pacemakers, cardioverter defibrillators, and monitors. We also considered, and solicited comment on, whether the following procedures would be considered examples of specific medical services for which dental services are inextricably linked to their clinical success: the placement of intracardiac or intravascular foreign material, such as a stent or for hemodialysis, or for a vascular access graft, whereas you would not proceed with the medical service without having first completed a dental evaluation and/or treatment as determined necessary. We solicited comment on whether preoperative and perioperative dental services are inextricably linked to any other covered cardiac interventions as supported by clinical evidence.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Some commenters urged us to permit payment for dental screenings and, when clinically justified, medically necessary dental treatment that a patient may need in order to

undergo, or to avoid complicating or compromising certain covered cardiac procedures, that is, pacemaker insertion or replacement, insertion or replacement of implantable cardioverter defibrillator, transcatheter aortic valve replacement, aortic valve surgical procedure, mitral valve replacement, endovascular stent repair or replacement, cardiac assist procedures, and other cardiac valve procedures. These commenters asserted that a large number of epidemiological investigations describe an association between periodontal disease (PD) and cardiovascular diseases (CVD). They reasoned that as CVD is clearly influenced by inflammation, and as treatment of PD would reduce both oral and systemic inflammation, it is logical to assume that treatment of PD would reduce overall inflammatory burden and hence the risk of CVD. As such they drew a parallel with our payment policy finalized last year for cardiac valve replacement and valvuloplasty where they stated the risk of infection posed to beneficiaries is similar. Other commenters stated that dental services should be covered for interventional cardiovascular procedures, another for device closure of intracardiac defects and stent implants, other commenters stated generally that dental services should be covered for cardiovascular disease patients, one commenter wrote to say they were not opposed to coverage of dental services to find and eradicate infection prior to the additional cardiac procedures about which we requested information.

Response: As we described above, based on clinical evidence for cardiac valve replacement and valvuloplasty, we believed that without a dental or oral exam and necessary diagnosis and treatment of any presenting infection of the mouth prior to or contemporaneous with the procedure, an undetected, non-eradicated oral or dental infection could lead to bacteria seeding the valves and the surrounding cardiac muscle tissues involved with the surgical site and conceivably leading to systemic infection or sepsis, all of which increase the likelihood of unnecessary and preventable acute and chronic complications for the patient. Commenters did not assert an inextricable linkage between dental services and any covered cardiovascular service. They did cite studies for the proposition that CVD and stroke are influenced by

inflammation and that as treatment of periodontal disease would reduce both oral and systemic inflammation, then it is logical to assume that treatment of periodontal disease would reduce overall inflammatory burden and hence the risk of cardiovascular disease and ischemic stroke. One study cited suggested that there may be associations between periodontal disease and cardiovascular issues.<sup>114</sup> Another study cited found that periodontitis treatment can improve surrogate measurements of cardiovascular health.<sup>115</sup> Commenters did not offer clinical evidence to support that dentally sourced infections can cause serious complications at the site of intracardiac or intravascular stents and devices, or that dental services to eradicate such dentally sourced infections is so integral to clinical success of the intracardiac or intravascular stents and devices that they are inextricably linked.

Comment: One commenter stated that most clinical guidelines do not recommend prophylactic dental procedures before undergoing subsequent cardiovascular procedures or device implantations. In contrast, the commenter continued, other guidelines counsel the value of optimal oral health hygiene and antibiotic prophylaxis to avoid infective endocarditis in patients with congenital heart disease and/or prior prosthetic valve implant. They summarized that current evidence might not support a role for pre-treatment dental care for preventing downstream infections related to the implantation of ventricular assist devices, artificial pacemakers, implantable cardioverter defibrillators, synthetic grafts, and patches, or coronary and vascular stents. However, the commenters noted that as evidence and guidelines continue to evolve—especially as increasing emphasis is placed on both health equity and high-quality outcomes that conserve scarce health care resources—it may prove appropriate for CMS to determine dental services are inextricably linked to certain cardiovascular therapies in the future.

Periodontitis and Cardiovascular Diseases. Consensus Report. *Glob Heart.* 2020 Feb 3;15(1):1. doi: 10.5334/gh.400. PMID: 32489774; PMCID: PMC7218770.

*Response:* We will continue to monitor the evolution of guidelines and the production of evidence showing specific cardiovascular services for which dental services are inextricably linked to their clinical success.

*Comment:* Another commenter stated that they do not believe that dental evaluation and treatment are absolutely necessary prior to performing stents and vascular access grafts for hemodialysis. They relayed that clinicians report that while completing dental care before such a procedure is a laudable goal, they would proceed with placing the stent or graft without having this completed and do not believe dental services are inextricably linked to the procedures.

*Response:* We thank the commenter for their perspective and sharing of clinical insight. After consideration of public comments, we are not expanding the examples in the regulation at § 411.14(i)(3)(i) to include additional cardiac procedures at this time but will continue to consider public submissions through the public process discussed above in section II.K.1.c. of the final rule, of specific medical services in the future. Submissions should include clinical evidence that certain dental services are so integral to their clinical success that the standard of care for that cardiovascular intervention would be compromised or require the dental services to be performed in conjunction with the covered cardiovascular intervention services.

#### 4. Request for Comment on Dental Services Integral to Specific Covered Services to Treat Sickle Cell Disease (SCD) and Hemophilia

##### *Payment for dental services for individuals living with SCD*

Interested parties using the public submission process we finalized in the CY 2023 PFS final rule urged us to propose to provide that payment can be made for dental services for individuals living with SCD.

These submissions provided information and references supporting prevention of dental infection among individuals with SCD to reduce need for more extensive procedures that may result in bleeding complications and require hospitalization. They also provided information

detailing increased dental caries and periodontal disease in people with SCD,<sup>116</sup> many of whom lose a number of teeth, which greatly limits nutrition, general well-being, and overall quality of life.

We note that the decisions we make through the public submissions and the rulemaking process regarding whether payment is permitted for certain dental services are not in terms of a coverage decision. Rather, we are considering whether payment can be made for certain dental services in a particular clinical scenario because, in accordance with § 411.15(i)(3)(i), the dental services would be “inextricably linked to, and substantially related and integral to the clinical success of a certain covered medical service” such that they are not subject to the statutory preclusion on payment for most dental services under section 1862(a)(12). If we determine that certain dental services provided in a specific clinical scenario do meet the criterion in § 411.15(i)(3)(i), then payment can be made for the dental services.

We solicited comment on whether certain dental services are inextricably linked to other covered services used in the treatment of SCD, such as, but not limited to, hydroxyurea therapy. We solicited comment identifying such covered services for SCD and whether an inextricable link is supported by clinical evidence as described in section II.K.1.c. of this final rule.

We received public comments on these requests for comment. The following is a summary of the comments we received and our responses.

*Comment:* Several commenters supported coverage for dental services as inextricably linked to covered services used in the treatment of SCD, such as, but not limited to, hydroxyurea therapy. The commenters also recommended that we extend coverage for dental services to patients living with SCD or hemophilia for 2024. Other commenters urged us to add SCD as a covered indication for treatment of dental services that are integral to the outcomes for Medicare beneficiaries with SCD.

---

<sup>116</sup> Kakkar M, Holderle K, ShethM, Arany S, Schiff L, Planerova A. Orofacial Manifestation and Dental Management of Sickle Cell Disease: A Scoping Review. *Anemia*. 2021 Oct22; 2021:5556708. Doi: 10.1155/2021/5556708. PMID: 34721900; PMCID: PMC8556080.

Another commenter urged us to expand coverage and payment of dental services for individuals with SCD presenting with pain crises in the jaw, mouth, or face and in the case of a dental abscess stated that better access to dental services will help to improve quality of life for individuals with SCD and reduce overall costs to the healthcare system by allowing for more appropriate treatment options and a reduction in length of hospital stay. This commenter provided references<sup>117, 118, 119, 120, 121</sup>. One commenter questioned the clinical basis for adding SCD, and hemophilia, as predicates for medically necessary dental benefits since there are relatively few cases of SCD and hemophilia in the Medicare population.

*Response:* We thank commenters for their feedback. After consideration of public comments, we are not expanding the examples under § 411.15(i)(3)(i) to include additional covered medical services for SCD or hemophilia at this time but will continue to consider public submissions through the public process discussed above at section II.K.1.c. of the final rule, of specific medical services in the future. The information commenters provided did not support finding that dental services are inextricably linked to a covered medical service for SCD or that the standard of SCD care would be compromised or require dental services to be performed in conjunction with hydroxyurea therapy or other treatment for SCD. One reference cited concluded in part that good access to oral health care might be as important for SCD as it is for diabetes mellitus, but more research is needed.<sup>122</sup> In order for us to find that dental services are inextricably linked to, and substantially related and integral to the clinical success of hydroxyurea therapy or other treatments for SCD, we would need clinical evidence to

demonstrate that the standard of care would be not to proceed with the other covered services without providing the dental services in conjunction with the hydroxyurea therapy or other treatment for SCD. We welcome additional public submissions by the February 10 deadline for consideration in PFS rulemaking for CY 2025. Submissions should include medical evidence and supporting literature addressing why dental services are inextricably linked to hydroxyurea therapy or other covered treatment for SCD. Specifically, we request that the medical evidence should support the inextricable link between certain dental services and other covered services by providing any of the following:

- (1) Relevant peer-reviewed medical literature and research/studies regarding the medical scenarios requiring medically necessary dental care;
- (2) Evidence of clinical guidelines or generally accepted standards of care for the suggested clinical scenario; and/or
- (3) Other supporting documentation to justify the inclusion of the proposed medical clinical scenario requiring dental services (87 FR 69686, 69687).

*Payment for dental services for individuals living with hemophilia*

Interested parties also urged us to propose a policy to permit payment for dental services for individuals living with hemophilia. They noted that periodic dental care reduces the risks of dental complications requiring haemostatic therapy (such as tooth extractions that may require clotting factor treatment) or oral surgeries requiring clotting factor replacement therapy.<sup>123 124 125</sup>

We noted that many submitters, using the public submission process we finalized in the CY 2023 PFS final rule, stated that good dental and oral health benefits a patient's overall health

generally. Several commenters on the CY 2023 PFS proposed rule also expressed that good oral hygiene, along with routine dental services, contributes to better outcomes for patients. We recognized in the CY 2023 PFS final rule in response to those comments that there is a great deal of evidence suggesting that dental health is generally an important component of overall health; however, we are interested in comments on whether certain dental services are considered so integral to the primary covered services that the necessary dental interventions are inextricably linked to, and substantially related and integral to clinical success of, the primary covered services such that they are not subject to the statutory preclusion on Medicare payment for dental services under section 1862(a)(12) of the Act.

We received public comments on these requests for comment. The following is a summary of the comments we received and our responses.

*Comment:* One commenter urged us to permit payment under Medicare Part A and Part B for preventive dental services for individuals with hemophilia. They noted that Hemophilia Treatment Centers (HTCs) are a federally supported network of care, and that the Centers for Disease Control and Prevention (CDC) lists dentists as a specialist who should be available by referral by an HTC and find it appropriate that the Medicare would provide coverage and payment for these services. They also reference World Federation of Hemophilia (WFH) Guidelines for the Management of Hemophilia. These guidelines provide that maintaining good oral health and preventing dental problems is greatly important in the prevention of oral diseases and conditions such as gingivitis, dental caries, and periodontal diseases which may cause serious gum bleeding, especially in those with severe/moderate hemophilia, and to avoid the need for major dental surgery. They noted they will submit additional comments by the February 10, deadline with information and supporting literature for why dental services are needed for bleeding disorders beyond hemophilia. Another commenter agreed that periodic dental care reduces the risks of dental complications requiring haemostatic therapy (such as tooth extractions that may require clotting factor treatment) or oral surgeries requiring clotting factor replacement

therapy. Other commenters urged that we consider finalizing payment for hemophilia as one of the clinical scenarios for which medically necessary dental care could be covered.

*Response:* In the case of dental services for individuals living with hemophilia, we would need to identify one or more specific clinical scenarios where there is clinical evidence that certain dental services are so integral to the clinical success of the medical services to manage or treat hemophilia or complications resulting from the condition that they are inextricably linked to the other covered service(s). We thank the commenters for their perspectives, and while we agree that maintaining good oral health and preventing dental problems is greatly important in the prevention of oral diseases that can lead to serious gum bleeding, which is particularly problematic for individuals with hemophilia, we are seeking specific evidence supporting specific medical services for which dental services are inextricably linked to their clinical success. We welcome additional submissions by the February 10, deadline with information and clinical evidence, discussed above at section II.K.1.c. of this final rule, supporting the conclusion that certain dental services are integral and inextricably linked to other covered services related to hemophilia and any other bleeding disorders.

#### 5. Request for Comment Regarding Dental Services Possibly Inextricably Linked to Other Medicare-Covered Services

Commenters, submitters, and other interested parties have urged us to consider the importance of access to oral health care for people with chronic auto-immune conditions and other chronic disease conditions, such as, but not limited to, diabetes. They have also suggested that we consider making payment for dental services associated with other conditions such as chronic kidney disease and end stage renal disease, and procedures such as joint replacement, and services such as inpatient substance use disorder treatment and long-term use of immunosuppressants for the treatment of colitis, Crohn's, lupus, multiple sclerosis, rheumatoid arthritis, and Sjögren's disease. After consideration of public comments, we are not expanding the examples under § 411.15(i)(3)(i) to include dental services associated with additional

covered medical services related to the conditions and procedures suggested in comments. We understand and appreciate the interest in such requests. However, the information generally provided by commenters did not establish an inextricable link between dental services and a covered medical service such that dental services would not be in connection with the care, treatment, filling, removal, or replacement of the teeth or structures supporting the teeth. Because the Medicare statute generally prohibits payment for dental services, payment may be made in limited situations such as when the dental services are inextricably linked to, and substantially related and integral to the clinical success of certain other covered services as provided by our regulations at § 411.15(i)(3), or under the exceptions provided by section 1862(a)(12) of the Act and codified at § 411.15(i)(2). We urge interested parties to consider the circumstances under which dental services are inextricably linked to other covered services (not diagnoses) used to treat patients with auto-immune conditions or other chronic conditions and support their submissions with clinical evidence or other documentation as described in section II.K.1.c. of this final rule. Details regarding the public submission process are available in the CY 2023 PFS final rule (87 FR 69669 through 69670).

As summarized above in section II.K.1.c. of this final rule, through the public submission process we finalized in the CY 2023 PFS final rule, interested parties should submit medical evidence to support an inextricable link between certain dental services and covered services by providing any of the following:

- (1) Relevant peer-reviewed medical literature and research/studies regarding the medical scenarios requiring medically necessary dental care;
- (2) Evidence of clinical guidelines or generally accepted standards of care for the suggested clinical scenario;
- (3) Other ancillary services that may be integral to the covered services; and/or
- (4) Other supporting documentation to justify the inclusion of the proposed medical clinical scenario requiring dental services.

As discussed previously in section II.K.1.c. of this final rule, in order to consider whether certain dental services are inextricably linked to the clinical success of other covered services, we need to identify specific medical services for which there is medical evidence that certain dental services are so integral to the clinical success that they are inextricably linked to the covered service. The medical evidence should support that in the case of surgery, the provision of certain dental services leads to improved healing, improved quality of surgery, and the reduced likelihood of readmission and/or surgical revisions, because an infection has interfered with the integration of the medical implant and/or interfered with the medical implant to the skeletal structure. Medical evidence should be clinically meaningful and demonstrate that the dental services result in a material difference in terms of the clinical outcomes and success of the primary medical procedure such that the dental services are inextricably linked to, and substantially related and integral to, the clinical success of the covered services. Medical evidence should support that the dental services would result in clinically significant improvements in quality and safety outcomes (for example, fewer revisions, fewer readmissions, more rapid healing, quicker discharge, and quicker rehabilitation for the patient), or, medical evidence should demonstrate that the standard of care would be to not proceed with the covered medical procedure until a dental or oral exam is performed to address the oral complications and/or clear the patient of an oral or dental infection.

*Comment:* Some commenters recited the sequelae and the oral manifestations of diabetes mellitus. They relayed that for patients with diabetes mellitus and periodontitis, the provision of preventive dental care/conservative periodontal treatment leads to a statistically and clinically significant reduction in glycated hemoglobin (HbA1c), a key measure of metabolic control, and an established risk marker for clinical complications of diabetes mellitus. The commenters also stated that conservative periodontal treatment is associated with improved health outcomes and reduced healthcare costs. They stated preventive and restorative dental care fosters a healthy diet that is key to diabetes treatment. They shared that they are in the process of exploring specific

diabetes-related covered services for which the provision of inextricably linked dental care is associated with improved outcomes and reduced cost and intend to submit their findings by February 10, 2024, in nominations through the public process we have established.

*Response:* We thank the commenters for the information they have submitted and welcome submissions of further information through the public process we have established. Based on the information we received from commenters who indicated that they are still in the process of exploring specific diabetes-related covered services for which the provision of inextricably linked dental care associated with improved outcomes, we are not adding an additional example in § 411.15(i) related to covered medical services for diabetes at this time. We would consider information about specific diabetes-related covered services we receive under the public process by February 10, 2024, for CY 2025 rulemaking.

*Comment:* One commenter stated that our interpretation of section 1862(a)(12) of the Act is too restrictive to meaningfully expand coverage to those with systemic autoimmune diseases. Nevertheless, they stated that they were encouraged by our commitment to continue exploring the inextricable link between dental and covered services associated with immunosuppressant therapy. The commenters stated that because dental caries and periodontal diseases are bacterial infections, they can seed complications such as sepsis, dissecting facial space abscesses, Ludwig's angina, and cellulitis—especially when individuals are immunocompromised. They reported that physicians across the medical specialties involved in treating colitis, Crohn's, lupus, multiple sclerosis, rheumatoid arthritis, and Sjögren's disease have acknowledged that dental treatment to resolve dental infections can be integral to improving outcomes among patients requiring long-term use of immunosuppressive medications. The commenters supported us in continuing to study the relationship between dental care and medical services that cause immunosuppression in patients and urge us to adopt a more expansive view of our authorities. Other commenters wrote that while dental services are not inextricably linked to the successful treatment of severe chronic obstructive pulmonary disease

(COPD), uncontrolled diabetes, epilepsy, Sjogren's disease, lupus, rheumatoid arthritis, chronic kidney disease, Ludwig's angina (and similar space infections), and/or retroperitoneal fibrosis in every case, for many Medicare beneficiaries, oral pathologies must be addressed when they are clinically determined to be a causal or highly exacerbating factor in the progression and treatment of their medical conditions.

*Response:* We thank the commenters for their support, perspectives, and recommendations. We agree that additional information would be necessary to demonstrate that dental services are inextricably linked to covered services for autoimmune diseases and other chronic diseases before we could add those clinical scenarios as examples in § 411.15(i)(3)(i). We note that finalized policies do not prevent a MAC from determining on a case-by-case basis that payment can be made for certain dental services in other circumstances not specifically addressed within § 411.15(i)(3)(i), as amended by this final rule. We will continue to engage with interested parties on ways to improve care for Medicare beneficiaries with autoimmune diseases.

*Comment:* Other commenters stated that oral health services are inextricably linked to the success of inpatient treatment for substance use disorders. Other commenters supported the coverage of dental services for joint replacement surgeries to lessen the infection risk. Other commenters supported the coverage of annual dental examinations, and treatment as clinically indicated, for individuals with chronic kidney disease and end-stage renal disease. They stated that chronic immunosuppression increases the risk of dental infections leading to potentially deadly complications including bloodstream infections, peritoneal dialysis-associated peritonitis, and the exacerbation of chronic cardiovascular conditions. They also stated that when established by patient-specific medical and dental parameters, dental services can be unquestionably integral to the outcome of covered medical procedures.

*Response:* We thank the commenters for the information they submitted about joint replacement surgeries, chronic kidney disease, end-stage renal disease, and inpatient treatment

for substance use disorders. However, commenters did not provide medical evidence to support an inextricable link between certain dental services and covered medical services for these conditions or medical services. After consideration of public comments, we are not expanding the examples under § 411.15(i)(3)(i) to include dental services associated with additional covered medical services for the conditions and treatment suggested by commenters and would welcome submissions of medical evidence through the public process we have established.

*Comment:* Another commenter requested that we consider covering dental services when linked to significant facial trauma, for example, from a vehicle accident, presuming Medicare coverage instead of vehicle liability coverage.

*Response:* In the CY 2023 PFS final rule (87 FR 69663 through 69664), we clarified that the statute includes an exception to allow payment to be made under Medicare Part A for inpatient hospital services in connection with the provision of dental services if the individual, because of their underlying medical condition and clinical status or because of the severity of the dental procedure, requires hospitalization in connection with the provision of such services. Our regulation at § 411.15(i)(2) similarly excludes payment for dental services except for inpatient hospital services in connection with dental services when hospitalization is required because of: (i) the individual's underlying medical condition and clinical status; or (ii) the severity of the dental procedure. It is possible that dental services for patients with facial trauma could fall within this exception, depending on the severity of the dental procedures. It is also possible that a jaw fracture or dislocation resulting from the scenario would be within the example in the regulation at § 411.15(i)(3)(i)(C) permitting payment under Parts A and B for certain dental services. The MAC could make a determination that payment is permitted for certain dental services that are inextricably linked to the clinical success of the services to treat the facial trauma. We note that this is a clinical scenario where there is wide variability in the nature of traumatic facial injury, so evidence is not likely to demonstrate that dental services are routinely inextricably linked to services to treat facial trauma.

*Comment:* One commenter stated that they oppose the inclusion of dental benefits into Medicare specifying that CMS does not possess legislative authority for the expansion of dental applications relating to chronic disease conditions. They believed that “this type of proposal is unconscionable in our current regulatory and federal budgetary environment,” as it would have “significant financial costs for the federal government and the American public”, citing the federal budget deficit, announced on August 8, 2023, in the Congressional Budget Office, Monthly Budget Review: July 2023.

*Response:* We thank the commenter for their comments. In the CY 2023 final rule (87 FR 69404, 69664) we explained that if a dental service is performed as incident to and as an integral part of a covered procedure or service performed by a dentist, the total service performed by the dentist is covered, and payment can be made under Medicare Parts A and B as appropriate. This policy is based on the idea that some dental services that would ordinarily be excluded by statute from payment are inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services. We believe that when that is the case those dental services are not in connection with dental services within the meaning of section 1862(a)(12) of the Act, but are instead inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services. As such, we finalized our interpretation of the statute under section 1862(a)(12) of the Act to permit Medicare payment under Parts A and B for dental services where the dental service is inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services and allowed payment to be made, regardless of whether the services are furnished in an inpatient or outpatient setting. Under these circumstances, we finalized that the exclusion under section 1862(a)(12) of the Act would not apply, because the service is not in connection with the care, treatment, filling, removal, or replacement of the teeth or structures supporting the teeth, but instead is inextricably linked to, and substantially related and integral to the clinical success of, certain other covered medical services.

## 6. Implementation of Payment for Dental Services Inextricably Linked to Other Specific Covered Services

We continue to consider improvements to our payment policies for dental services as finalized in the CY 2023 PFS final rule (87 FR 69663 through 69688). As such, we indicated that we were interested in receiving comments from interested parties on our proposed rule on ways to continue to implement these payment policies. Additionally, we wanted to clarify the policies we finalized in the CY 2023 PFS final rule. Therefore, we requested comments on several policies related to the implementation of policies for dental services for which Medicare payment can be made.

In the CY 2023 PFS final rule, we clarified and codified our policy on payment for dental services and added in § 411.15(i)(3)(i) of our regulation examples of circumstances where payment can be made for certain dental services, including a dental exam and services to diagnose and eliminate an oral or dental infection prior to organ transplant, cardiac valve replacement, or valvuloplasty procedures (87 FR 69664 through 69667).

We provided as examples of dental services that could be furnished to eradicate infection services such as, but not limited to, diagnostic services, evaluations and exams (for example, CDT codes payable with D0120, D0140 or D0150), extractions (for example, CDT codes payable with D7140, D7210), restorations (removal of the infection from tooth/actual structure, such as filling procedures - for example, CDT codes payable with D2000-2999), periodontal therapy (removal of the infection that is surrounding the tooth, such as scaling and root planing - for example, CDT codes payable with D4000-4999, more specifically D4341, D4342, D4335 and D4910), or endodontic therapy (removal of infection from the inside of the tooth and surrounding structures, such as root canal - for example, CDT codes payable with D3000-3999). However, we continued to believe that additional dental services, such as a dental implant or crown, may not be considered immediately necessary to eliminate or eradicate the infection or its source. Therefore, we reiterated that such additional services would not be inextricably linked to

the specific covered services. As such, no Medicare payment is made for the additional services that are not immediately necessary to eliminate or eradicate the infection. We further clarified that we did not propose in CY 2023, nor did we propose in CY 2024, to adjust any payment policy for services involving the preparation for or placement of dentures, and maintained that these services are not payable under Medicare Parts A and B. We also reiterated our policy, as finalized in the CY 2023 PFS final rule, that Medicare could make payment for dental services occurring over multiple visits as clinically appropriate. We refer readers to 87 FR 69678 for a comprehensive discussion of this policy.

We continue to recognize that many Medicare beneficiaries have separate or supplemental dental coverage, such as through a Medigap plan, another private insurance plan offering commercial dental coverage, or for those individuals dually eligible for Medicare and Medicaid, through a state Medicaid program. As a result, we solicited comment on the coordination of multiple dental benefits that Medicare beneficiaries may have, whether and if so, how other plans currently cover and pay for dental services, and what type of guidance CMS should provide about the dental payment policies we have established and their relationship to other separate or supplemental dental coverages.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Many commenters stated CMS should issue clear guidance on the type of dental payment policies we have established and how that relates to any supplemental dental coverage in order to ensure access to oral and dental health care. Some commenters also noted it would be helpful to have more information on how Medicaid, Medicare Advantage, and other plans interact with Medicare coverage to coordinate dental services.

*Response:* We appreciate the commenters' thoughtful feedback and questions regarding the operational aspects of this proposal, specifically regarding supplemental dental coverage and coordination of benefits, and we agree that these are necessary topics to address. We

acknowledge the need to address and clarify certain operational issues, and we are working to address these issues and provide education and guidance. We will continue to work with our MACs and encourage continued feedback from interested parties to help identify concerns or questions regarding the submission and processing of dental claims in order to assist with the coordination of benefits amongst dentists and issuers. We also plan to provide guidance and engage in further rulemaking, as necessary, as operational strategies and plans are refined and implemented. We appreciate the questions raised by commenters and plan to take them into consideration as we continue to advance operational issues relating to this policy, and make any necessary changes or refinements.

*Comment:* Most commenters recommended that CMS develop educational and outreach materials regarding billing and claims for any payment policies we finalize. Additionally, some commenters stated that dentists and transplant providers are interested in obtaining a roadmap on matters related to submitting claims, expecting reimbursement, and referring patients to local Medicare-participating dentists.

*Response:* We appreciate the questions raised by commenters and plan to take them into consideration as we continue to refine operational issues relating to this policy and make any necessary refinements. We have started to create educational materials, including information regarding enrollment, through products such as Change Request 13190, *Educational Instructions for the Implementation of the Medicare Payment Provisions for Dental Services as Finalized in the Calendar Year (CY) 2023 Physician Fee Schedule (PFS) Final Rule*, available at <https://www.cms.gov/files/document/r12047bp.pdf> and have provided content as well as information regarding dental claims form (837D) via the CMS website at <https://www.cms.gov/medicare/coverage/dental>. We encourage MACs to utilize information provided in the CR to develop their own educational and billing materials. We intend to make additional modifications to our informational and guidance materials, including the Medicare Claims Processing Manual, and create educational materials to reflect refinements to payment

policy for dental services, as well as describe updates to operational and implementation aspects of this policy. We appreciate the ongoing interest and engagement from interested parties on all aspects of this policy.

We also solicited comment on approaches utilized by other health plans to mitigate issues with third party payment, including when Medicare is secondary payer and when coordinating with state Medicaid programs. In addition, we noted there is an informal practice whereby dental professionals may submit a dental claim to Medicare for the purposes of producing a denial so that Medicaid or another third-party payer can make primary payment.

Given the complexity of dental professionals submitting claims for purposes of denial, we solicited comment on the impact of third-party payers, including state Medicaid programs, requiring a Medicare denial as a prerequisite for adjudication of primary payment for dental services that are not inextricably linked to another specific covered service. In these cases where the dental services are not inextricably linked to another specific covered service, dental professionals must include the appropriate HCPCS modifier on the respective dental claim form, which serves as a certification that the professionals believe that Medicare should not pay the claim.

We also solicited comment regarding an informal process on claims denials for the purposes of supporting payment by other payers is currently achieved in practice when using the dental claim form 837D. We note that the submission of a claim without one or more of the HCPCS modifier(s) meant to produce a denial shows belief by the enrolled billing practitioner that Medicare, not another payer, should be the primary payer in accordance with all applicable payment policies. As such, submission of a claim for dental services without such a modifier would mean that the billing practitioner believes the dental service is inextricably linked to another Medicare-covered service, or that payment for the service is otherwise permitted under our regulation at § 411.15(i).

We solicited comment on the practices of other payers related to submission of claims in order to generate a denial and how these practices impact claim submission and claim adjudication with third party payers, including state Medicaid programs.

Additionally, we solicited comment on types of guidance, such as best practices or criteria, that are needed for purposes of coordinating payment for dental services under the policies specified in the rule.

The following is a summary of the comments we received and our responses.

*Comment:* Many commenters stated that CMS should provide clear guidance for when Medicare is a primary or secondary payer. Additionally, these commenters stated that they believe that Medicare coverage of medically necessary dental services should be in addition to any third-party dental plans.

*Response:* We appreciate the feedback from commenters as we work towards coordinating efforts with any third-party payers, including state Medicaid programs.

*Comment:* Many commenters supported CMS pursuing the adoption of the 837D dental claim form and believe implementing this form will provide efficiency when processing dental claims. However, one commenter did not support the idea of adopting the dental claim form because the commenter stated they believe both the dental claim form and medical claim form are significantly different and that the dental claim form does not allow for modifiers, which would provide a barrier when determining which services qualify as Medicare basic benefit. Instead, this commenter suggested creating two new modifiers to make a distinction for inextricable linkage, for example, one modifier that attests to a particular dental service being inextricably linked and a second modifier that attests to a particular dental service not inextricably linked.

*Response:* We continue to work to address issues raised by commenters, including questions related to claims processing and efforts to accommodate the dental claim form within our claims processing systems, effective 2024. As efforts advance to address the implementation

and functionality of claims processing systems for the dental claim form, we intend to provide appropriate guidance and education to interested parties. Additionally, we continue to explore options for addressing the need to identify claims confirming inextricable linkage between the covered medical and dental services. These options include utilizing a HCPCS, CPT, or CDT modifier that may allow dentists to attest to a particular dental service being inextricably linked and/or a second HCPCS, CPT, CDT modifier to attest that a particular dental service is not inextricably linked. We believe that the possible implementation and usage of distinct modifiers or codes for the purposes of confirming inextricable linkage will better enable us to quantify dental services and better understand the billing patterns of practitioners that typically furnish them. This information is helpful to CMS for program integrity purposes and may also inform us on whether we need to revise the policies for these services in future rulemaking. We intend to provide additional guidance and education around the possible usage of situationally appropriate HCPCS, CPT, and CDT modifiers that may be utilized in order to document inextricable linkage in claims processing. Additionally, we note that we intend to make conforming changes to the Internet Only Manual (IOM) Publication 100-04, Medicare Claims Processing Manual, to reflect any modifications to the guidance on the submission of claims for the purpose of denials from CMS so third-party payers can pay as primary and intend to provide education regarding these operational aspects of this policy.

*Comment:* Some commenters stated they oppose the informal practice of dental professionals submitting a dental claim to Medicare to produce a denial because they believe that it creates an administrative burden for health care providers. These commenters noted it also causes significant delays with reimbursement and can be confusing to patients as well. A few commenters questioned the legality and validity of the practice of submitting claims to elicit a denial. Many commenters highlighted that the current version of the American Dental Association dental claim form has no box for HCPCS modifiers and the commenters are not aware of any medical carriers that currently accept the 837D dental claim form. These

commenters stated that the CMS-1500 form is typically used when a medical denial is needed for a dental service. However, a few commenters supported the possibility of using HCPCS modifiers on the 837D dental claim form for the purpose of Medicare denial and coordination benefits.

*Response:* We note that dentists may continue submitting claims using the 837P and 837I claims types with existing Healthcare Common Procedure Coding System (HCPCS) modifiers when third-party payers need a Medicare claim denial. We continue to explore options for addressing the need to submit a dental claim to Medicare for the purpose of obtaining a denial so that another carrier or third-party payer may issue primary payment via the 837D dental claims format. In addition, we will take into consideration the potential usage of situationally appropriate modifiers or other codes that may be utilized in making clear that claims have been submitted expressly for the purpose of eliciting a denial. Additionally, we note that we will make conforming changes to the Internet Only Manual (IOM) Publication 100-04, Medicare Claims Processing Manual, to reflect any modifications to the guidance on the submission of claims for the purpose of denials from CMS so third-party payers can pay as primary, including the 837D dental claim format and provide education to the public regarding these efforts.

As described in the CY 2023 PFS final rule (87 FR 69663 through 69688), Medicare payment under Parts A and B may be made for dental services that are inextricably linked to other covered services. We believe the dental services and the other covered services would most often be furnished by different professionals and that in order for the dental services to be inextricably linked to other covered services such that Medicare payment can be made, there must be coordination between these professionals. This coordination should occur between the practitioners furnishing the dental and covered services regardless of whether both individuals are affiliated with or employed by the same entity. This coordination can occur in various forms, such as, but not limited to, a referral or exchange of information between the practitioners furnishing the dental and covered services. Additionally, any evidence of coordination between

the professionals furnishing the primary medical service and dental services should be documented. If there is no evidence to support the exchange of information, or integration, between the professionals furnishing the primary medical service and the dental services, then there would not be an inextricable link between the dental and other covered services within the meaning of our regulation at § 411.15(i)(3)(i). As such, Medicare payment for the dental services would be excluded under section 1862(a)(12) of the Act (though payment for the dental services might be available through supplemental health or dental coverage). Additionally, we sought information regarding the potential impact of these payment policies in settings other than inpatient and outpatient facilities, such as Federally qualified health centers (FQHCs), rural health clinics (RHCs), etc. We understand that some Medicare beneficiaries may access dental services in these settings and seek to understand what, if any, impact may potentially occur within the context of this payment policy.

As stated in the CY 2023 PFS final rule, we note that to be eligible to bill and receive direct payment for professional services under Medicare Part B, a dentist must be enrolled in Medicare and meet all other requirements for billing under the PFS. Alternatively, a dentist not enrolled in Medicare could perform services incident to the professional services of a Medicare enrolled physician or other practitioner. In that case, the services would need to meet the requirements for incident to services under § 410.26, including the appropriate level of supervision, and payment would be made to the enrolled physician or practitioner who would bill for the services (87 FR 69673). In the CY 2023 PFS final rule (87 FR 69687), we finalized that we would continue to contractor price the dental services for which payment is made under § 411.15(i). We will maintain this policy and continue to contractor price the dental services for which payment is made under § 411.15(i) for CY 2024. Additionally, in the CY 2023 PFS final rule, we agreed with the suggestions made by commenters that there may be publicly available data sources that could aid MACs in determining these payment rates in order to account for

geographic variation. We solicited comment on what specific information could help inform appropriate payment for these dental services (87 FR 69679).

The following is a summary of the comments we received and our responses.

*Comment:* Majority of commenters supported the idea that coordination between medical and dental professionals must be properly documented. However, one commenter mentioned that requiring MACs to document coordination is difficult since any coordination will vary between different MACs. Therefore, these MACs requested that CMS to provide guidance that ensures compliance with the coordination requirement will be clear and simple. A few commenters requested clarification on how practitioners should demonstrate the exchange of information between medical and dental professionals to support Medicare payment for dental services as inextricably linked to other covered services and suggested the potential usage of existing CDT or CPT codes or modifiers as a mechanism to establish the inextricable link between the dental and covered medical service.

*Response:* We appreciate the commenters' feedback regarding documentation of the coordination and exchange of information between the medical and dental professionals. In the CY 2023 PFS final rule, we stated that we would make payment when a doctor of dental medicine or dental surgery (referred to as a dentist) furnishes dental services that are an integral part of the covered primary procedure or service furnished by another physician, or nonphysician practitioner, treating the primary medical illness. However, we explained that if there is no exchange of information, or integration, between the medical professional (physician or other non-physician practitioner) about the primary medical service and the dentist regarding the dental services, then there would not be an inextricable link between the dental and covered medical service within the meaning of our regulation at § 411.15(i)(3) (88 FR 69673). We continue to investigate operational mechanisms to demonstrate that the exchange of information between the Medicare enrolled medical and dental professional, such as the usage of the CPT or CDT modifiers or codes, including the KX HCPCS modifier, the CDT code D9311

(consultations with a medical health care professional), CPT code for interprofessional consultation (such as CPT 99452), or other modifiers/codes. As these operational aspects are implemented, we intend to provide educational materials regarding documentation of the exchange of information, or integration, between the medical professional (physician or other non-physician practitioner) in regard to the primary medical service and the dentist in regard to the dental services.

*Comment:* One commenter opposed the requirement that only dentists enrolled in Medicare are eligible to receive direct payment from Part B because the commenter stated they believe this would limit Medicare beneficiary access to medically necessary dental benefits.

*Response:* As explained in the CY 2023 PFS final rule, dentists not enrolled in Medicare may provide services incident-to the professional services of a Medicare enrolled physician or other practitioner who would bill for the services as long as the requirements under § 410.26 for incident-to services are met (87 FR 69673). Additionally, dentists not enrolled in Medicare must coordinate payment with the Medicare enrolled physician or other practitioner to receive payment from Medicare.

*Comment:* Many commenters expressed their support for our current policy to contractor price dental services and believe using claims data will help inform appropriate payment for these services. However, a few commenters were opposed to contractor pricing of dental services and instead recommended that we should price the CDT codes in PFS RVU files to ensure consistent payment for each code while still accounting for geographic resource cost variations through the application of the PFS GPCIs. Additionally, several commenters expressed concerns regarding existing constraints on PFS funds due to the significant amount of other physician services currently included in the PE RVU Methodology. Therefore, these commenters noted that they believe that any expansion of Medicare to include dental services should be paid through a separate program independent of the physician fee schedule.

*Response:* We continue to believe that MACs are appropriately situated to establish

contractor prices for these services, given that the MACs currently establish contractor pricing for the dental services for which payment is currently made. We believe it is appropriate to continue contractor pricing for dental services for which payment is made in the additional clinical scenario examples we are finalizing in this final rule, until we have additional pricing data that could enable national pricing. We encourage MACs to continue to engage with interested parties by providing information on how they price these services. As such, we will continue to contractor price these services based on the applicable payment system for services furnished. We intend to continue engaging with interested parties regarding establishing national payment rates for these applicable dental services. Regarding the comment that Medicare payment for dental services should be made through a separate program independent of the PFS, we appreciate the commenters' feedback and note that we have clarified our interpretation of section 1862(a)(12) of the Act, and subsequently codified certain aspects of our current Medicare PFS payment policies for dental services. Additionally, while we recognize that the impact of access to these services to individual beneficiaries may be very significant, we still do not anticipate a significant impact in the context of overall spending and utilization under the PFS. We intend to closely study the trends in utilization and payment for these services and make refinements to the payment policy as needed in future rulemaking.

*Comment:* Many commenters requested that we provide payment for inextricably linked dental services in the FQHC setting. Commenters stated that it is critical that CMS consider FQHCs' unique Medicare payment structure and that CMS ensure that policy changes for FQHCs are analogous to any changes made under the PFS. Commenters noted that many FQHCs provide dental services on-site, and health center patients could benefit from the payment policies for dental services inextricably linked to other covered services and suggested that the FQHC billing codes should be edited in tandem. Commenters further noted that "physicians' services" component of the Medicare FQHC benefit includes services furnished by dentists. Several commenters urged that the list of billable visit codes modified in the proposed

rule be included in the dental bundle for FQHCs or otherwise added to the list of codes that may be billed in the FQHC setting and also requested that any expansion in codes recognized under the PFS for dental-related services also be applied to FQHCs.

*Response:* We appreciate the thoughtful feedback from commenters. We note that we intend to continue to refine the policy's operational aspects to ensure that the updates to this PFS payment policy are implemented in various applicable settings, including FQHCs. We acknowledge that the updates to the PFS payment policies for the purposes of this policy may be appropriate in other settings that provide PFS physician services, and we intend to make necessary modifications to operational procedures to reflect the expansion of this PFS payment policy, including potential updates to billable code lists and other relevant policies in the FQHC setting. We also note that we intend to provide additional guidance and education around the possible usage of situationally appropriate HCPCS or other modifiers or other CPT and/or CDT codes that may be utilized on FQHC claims in order to document inextricable linkage in claims processing or to elicit a denial for the purposes of payment by another payor, including Medicaid. We continue to seek engagement with interested parties on the appropriate application of this payment policy in other settings and encourage the public to continue to provide additional information regarding settings that may require special consideration in the context of this payment policy.

In the CY 2023 PFS final rule (87 FR 69682), we stated that we would update our payment files so that these dental services could be billed appropriately under the applicable payment system for services furnished in the inpatient or outpatient setting. We have revised the HCPCS and PFS payment and coding files to include payment indicators for Current Dental Terminology (CDT) codes, such as bilateralism, multiple procedures, and other indicators that are included in the files (posted at our website at <https://www.cms.gov/medicare/medicare-fee-for-service-payment/physicianfeesched/pfs-relative-value-files>) for CDT codes. We solicited

comment on whether payment indicators, as outlined in the PFS RVU files, appropriately align with existing dental billing and coding conventions or whether edits are necessary.

Although we proposed to continue contractor pricing services billed using CDT codes, we solicited comment on whether the current payment indicators included for these CDT codes follow existing dental billing conventions, for example, for payment adjustment for multiple procedures, and whether there is a need for additional guidance regarding the submission of claims for services for which payment is permitted under the regulation at § 411.15(i)(3). In the CY 2023 PFS final rule (87 FR 69679), we acknowledged the need to address and clarify certain operational issues, and we are continuing to work to address these operational issues, including efforts to adopt the dental claim form. These efforts include continuing to work with our MACs and encouraging continued feedback from interested parties to help identify concerns or questions regarding submitting and processing dental claims.

Finally, to promote the correct coding and processing of Medicare claims, we solicited comment on whether additional specialty codes besides specialty codes, specialty 19 (oral surgery—dentists only) or specialty 85 (maxillofacial surgery), should be considered for use in Medicare.

We also solicited comment on whether these specialty codes may impact the coordination of benefits with a third-party payer.

Finally, we acknowledged that issues could occur related to the coordination of benefits for dual eligible beneficiaries, for example, beneficiaries with hemophilia, and we solicited comment on how to best coordinate a potential payment policy in this area with respect to state Medicaid plans or private insurance.

We also solicited comment on other coordination of benefits issues, or implementation topics that would be helpful for CMS to address in relation to continuing to implement these PFS payment policies, and we received public comments. The following is a summary of the comments we received and our responses.

*Comment:* Many commenters stated that multiple procedure reductions and payment indicators should be removed from the PFS payment files because they do not align with existing dental billing and coding conventions.

*Response:* We note that the multi-procedure payment reductions are a standard payment indicator used for any service priced on the PFS payment file. However, given feedback from interested parties, CMS has recently removed multi-procedure payment reductions payment indicators for dental services (described by current dental terminology(T) codes in the July 2023 release of the PFS RVU files. Additionally, we will continue to study and refine the payment files for dental services, including the applicability of other payment indicators. We also intend to identify appropriate modifications to the dental services code set on the PFS payment files to better align with clinical practice and implement edits in the practitioner claims processing systems to reflect that codes for some procedures would not likely be appropriate for usage in situations where medical services are inextricably linked dental services, such as procedures that are solely cosmetic in nature. We will also update appropriate Medicare payment data files to ensure that covered dental services can be billed and paid based on the applicable payment system for services furnished. For more information regarding dental codes that are available for payment under Medicare, we refer readers to the PFS RVU Files posted on our website at <https://www.cms.gov/medicare/medicare-fee-for-service-payment/physicianfeesched/pfs-relative-value-files>.

As we consider refinements to the payment file in the context of how dentists furnish these services, we would be interested in obtaining information regarding certain dental codes that would not be covered in the context of the policies we describe. This information, as well as additional comments or considerations, can be submitted through the public submissions process described in section II.K.1.c. of this rule.

*Comment:* A few commenters supported CMS creating new dental specialty codes for use by dentists enrolling in the Medicare program to promote the correct coding and processing of Medicare claims for dental services.

*Response:* We appreciate the commenters' suggestion that CMS create new dental specialty codes to advance accurate coding and claims processing. We note that CMS issued guidance on August 31, 2023 via Change Request 13323, *New Dental Specialty Codes for Medicare*, announcing new dental specialty codes that dentists may use beginning on January 2, 2024. These new specialty codes include: E3 – Dental Anesthesiology, E4 – Dental Public Health, E5 – Endodontics, E6 – Oral and Maxillofacial Pathology, E7 – Oral and Maxillofacial Radiology, E9 – Oral Medicine, F1 – Orofacial Pain, F2 – Orthodontics and Dentofacial Orthopedics, F3 – Pediatric Dentistry, F4 – Periodontics, F5 – Prosthodontics. More details regarding this change request are available at <https://www.cms.gov/files/document/r12231cp.pdf>.

We thank the public for their comments regarding the implementation considerations for these dental policies, and we will continue to work with MACs and other interested parties to address issues raised by the commenters. We continue to encourage feedback from interested parties to help identify concerns or questions regarding submission and processing of dental claims and other operational and implementation concerns. We plan to provide guidance and engage in further rulemaking, as necessary, as operational strategies and plans are refined and implemented. We will also monitor service utilization to identify any concerns about consistency of claims processing and adequacy of access across the country. We appreciate the questions raised by commenters and plan to take them into consideration as we continue to refine operational issues relating to this policy and make any necessary refinements.

In conclusion, after consideration of the public comments, clinical practice guidelines, recommendations provided by the public, and our analyses of the studies and research, we are finalizing additions to our regulation at § 411.15(i)(3)(i) to add dental or oral examination performed as part of a comprehensive workup prior to, and medically necessary diagnostic and

treatment services to eliminate an oral or dental infection prior to, or contemporaneously with chemotherapy, chimeric antigen receptor (CAR) T-cell therapy, and the administration of high-dose bone-modifying agents (antiresorptive therapy) in the treatment of cancer to the list of examples of services that are not subject to the exclusion under section 1862(a)(12) of the Act and for which payment can be made under Medicare Parts A and B. We are also finalizing, with modifications, the addition of § 411.15(i)(3)(i)(E) to add dental or oral examination performed as part of a comprehensive workup prior to, medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with, and medically necessary diagnostic and treatment services to address dental or oral complications after, treatment of head and neck cancer using radiation, chemotherapy, surgery, or any combination of these, to the list of examples of clinical scenarios that are not subject to the exclusion under section 1862(a)(12) of the Act and for which payment can be made under Medicare Parts A and B.

Additionally, we reiterate that MACs have the flexibility to determine on a claim-by-claim basis whether a patient's circumstances do or do not fit within the terms of the preclusion or exception specified in section 1862(a)(12) of the Act and § 411.15(i). We further note that the finalized policies outlined in this section of this final rule would not prevent a MAC from making a determination that payment can be made for dental services in other circumstances not specifically addressed within this final rule and the finalized amendments to § 411.15(i). We remind readers once again that, to be considered for purposes of CY 2025 PFS rulemaking, submissions through our public process for recommendations on payment for dental services should be received by February 10, 2024, via email at [MedicarePhysicianFeeSchedule@cms.hhs.gov](mailto:MedicarePhysicianFeeSchedule@cms.hhs.gov). Interested parties should include the words "dental recommendations for CY 2025 review" in the subject line of their email submission to facilitate processing. We continue to stress to submitters that recommendations must include at least one of the types of evidence listed earlier when submitting documentation to support the

inextricable link between specified dental services and other covered services. We further note that we may also consider recommendations that are submitted as public comments during the comment period following the publication of the PFS proposed rule.

### **III. Other Provisions of the Proposed Rule**

#### **A. Drugs and Biological Products Paid Under Medicare Part B**

##### **1. Provisions from the Inflation Reduction Act Relating to Drugs and Biologicals Payable Under Medicare Part B (§§ 410.152, 414.902, 414.904, 489.30)**

Drugs and biologicals (for the purposes of the discussion in this section III.A., “drugs”) payable under Medicare Part B fall into three general categories: those furnished incident to a physician’s service (hereinafter referred to as “incident to”) (section 1861(s)(2) of the Act), those administered via a covered item of durable medical equipment (DME) (section 1861(n) of the Act), and others as specified by statute (for example, certain vaccines described in sections 1861(s)(10)(A) and (B) of the Act). Payment amounts for most drugs separately payable under Medicare Part B are determined using the methodology in section 1847A of the Act, and in many cases, payment is based on the average sales price (ASP) plus a statutorily mandated 6 percent add-on.

The Inflation Reduction Act (Pub. L. 117-169, August 16, 2022) (hereinafter referred to as “IRA”) contains several provisions that affect payment limits or beneficiary out-of-pocket costs for certain drugs payable under Part B. Among those provisions, two affect payment limits for biosimilar biological products (hereinafter referred to as “biosimilars”):

- Section 11402 of the IRA amends the payment limit for new biosimilars furnished on or after July 1, 2024 during the initial period when ASP data is not available. We proposed to codify this provision in regulation.

- Section 11403 of the IRA increased the payment limit for certain biosimilars with an ASP that is not more than the ASP of the reference biological for a period of 5 years. We implemented section 11403 of the IRA under program instruction,<sup>126,127</sup> as permitted under section 1847A(c)(5)(C) of the Act. We proposed conforming changes to regulatory text to reflect

---

<sup>126</sup> <https://www.cms.gov/files/document/r11496cp.pdf>.

<sup>127</sup> <https://www.cms.gov/medicare/medicare-fee-for-service-part-b-drugs/mcrpartbdrugavggsalesprice>.

these provisions.

In addition, two provisions (among others in the IRA) make statutory changes that affect beneficiary out-of-pocket costs for certain drugs payable under Medicare Part B:

- Section 11101 of the IRA requires that beneficiary coinsurance for a Part B rebatable drug is to be based on the inflation-adjusted payment amount if the Medicare payment amount for a calendar quarter exceeds the inflation-adjusted payment amount, beginning on April 1, 2023. We issued initial guidance implementing this provision, as permitted under section 1847A(c)(5)(C) of the Act, on February 9, 2023.<sup>128</sup> We proposed conforming changes to regulatory text.

- Section 11407 of the IRA provides that for insulin furnished through an item of DME on or after July 1, 2023, the deductible is waived and coinsurance is limited to \$35 for a month's supply of insulin furnished through a covered item of DME. We have implemented this provision under program instruction for 2023, as permitted under section 11407(c) of the IRA.<sup>129</sup> We proposed to codify this provision in a manner that is consistent with the program instruction for 2023.

#### a. Payment for Drugs under Medicare Part B During an Initial Period

In the CY 2024 PFS proposed rule (88 FR 52385), we explained that section 1847A of the Act provides for certain circumstances in which the payment limit of a drug is based on its wholesale acquisition cost (WAC). For a single source drug or biological (as defined in section 1847A(c)(6)(D) of the Act), the Medicare payment could be determined based on WAC under the methodology specified in section 1847A(b)(4) of the Act and described at § 414.904(d)(1), which requires that payment limits for such drugs are determined using the lesser of ASP plus 6 percent or WAC plus 6 percent. Typically, the ASP-based payment limit is the lesser of the two. Under section 1847A(c) of the Act, payments for new drugs during an initial period for which

---

<sup>128</sup> <https://www.cms.gov/files/document/medicare-part-b-inflation-rebate-program-initial-guidance.pdf>.

<sup>129</sup> <https://www.congress.gov/bill/117th-congress/house-bill/5376/text>.

ASP data is not sufficiently available are based on WAC or the Medicare Part B drug payment methodology in effect on November 1, 2003. Historically, WAC-based payment under section 1847A(c)(4) of the Act was up to 106 percent of WAC, but in the CY 2019 PFS final rule (83 FR 59661 through 59666), we adopted a policy of paying up to 103 percent of WAC in this instance. Subsequently, section 6 of the Sustaining Excellence in Medicaid Act of 2019 (Pub. L. 116-39, enacted August 6, 2019), amended section 1847A(c)(4) of the Act to specify, effective January 1, 2019, a payment limit not to exceed 103 percent of the WAC or based on the Part B drug payment methodology in effect on November 1, 2003 during an initial period when ASP data is not sufficiently available. There were no regulatory changes at that time. Therefore, we proposed to amend § 414.904(e)(4) to reflect this statutory change.

In the CY 2024 PFS proposed rule (88 FR 52385), we explained that more recently, section 11402 of the IRA amended section 1847A(c)(4) of the Act by adding subparagraph (B), which limits the payment amount for biosimilars during the initial period described in section 1847A(c)(4)(A) of the Act. The provision requires that for new biosimilars furnished on or after July 1, 2024, during the initial period when ASP data is not sufficiently available, the payment limit for the biosimilar is the lesser of (1) an amount not to exceed 103 percent of the WAC of the biosimilar or the Medicare Part B drug payment methodology in effect on November 1, 2003, or (2) 106 percent of the lesser of the WAC or ASP of the reference biological, or in the case of a selected drug during a price applicability period, 106 percent of the maximum fair price of the reference biological.

We proposed to codify these changes to section 1847A(c)(4) of the Act at § 414.904. Specifically, we proposed to revise paragraph (e)(4) at § 414.904 by adding paragraphs (e)(4)(i)(A) and (B) to conform the regulatory text for WAC-based payment limits before January 1, 2019 and for such payment limits on or after January 1, 2019 with the requirements established in section 6 of the Sustaining Excellence in Medicaid Act of 2019. We also proposed to add paragraphs (A) and (B) to § 414.904(e)(4)(ii) to codify the payment limit for new

biosimilars furnished on or after July 1, 2024 during the initial period as required by section 1847A(c)(4)(B) of the Act.

We received public comments on these proposals. The following is a summary of the comments we received regarding implementation of the IRA provisions in general and our responses.

*Comment:* Several commenters expressed general support for proposed regulatory changes that will reduce out-of-pocket costs for prescription drugs.

*Response:* We thank the commenters for their support.

*Comment:* Two commenters expressed support for CMS's ongoing efforts to implement the IRA by codifying provisions relating to Medicare Part B payments for certain biosimilar products, and one commenter stated that they support the proposal as a straightforward implementation of the statute. One commenter stated that these changes will help support the availability and use of biosimilar products and ensure that Medicare beneficiaries benefit from the savings that were intended by the passage of the new law.

*Response:* We thank these commenters for their support.

*Comment:* One commenter expressed concern about the financial impact the implementation of the IRA's provisions related to the payment of drugs will have on physician practices and requested we consider taking steps to offset revenue losses.

*Response:* We appreciate the commenter's concern. In limited circumstances, the implementation of the new lesser-than methodology for the add-on payment for biosimilar products established under section 11402 of the IRA may reduce provider payments, but this reduction lasts only during the period of marketing before ASP data is available. The temporary add-on payment for certain biosimilars with an ASP that is not more than the ASP of the reference biological established under section 11403 of the IRA, on the other hand, increases payments to providers.

The following is a summary of the comments we received regarding implementation of

section 11402 of the IRA and our responses.

*Comment:* Regarding payment for drugs under Part B during an initial period, one commenter stated that based on the statutory language in section 11402 of the IRA that CMS proposes to implement, it appears that CMS has the authority to eliminate the 3 percent add-on payment for new drugs paid based on WAC. Therefore, the commenter urged the Secretary to reduce the payment rate for new drugs lacking ASP data from 103 percent to 100 percent of WAC. Because WAC is generally a higher price than ASP and does not reflect discounts, eliminating the WAC add-on would reduce excess payments, increase affordability for beneficiaries and taxpayers, and improve financial incentives. The commenter noted that in its June 2023 report to Congress<sup>130</sup>, the Medicare Payment Advisory Commission (MedPAC) recommended eliminating add-on payments for drugs lacking ASP data that are paid based on WAC to improve Medicare's Part B drug payment system.

*Response:* We thank commenters for these policy suggestions, and we may consider these policies in future rulemaking. We note that under the proposed policy, Medicare Administrative Contractors (MACs) are not required to pay an amount equal to 103 percent of the WAC. In the common circumstance that a WAC-based payment limit is not published on the ASP Drug Pricing File during the initial period, MACs will be given instruction to price drugs during the initial period in a manner consistent with these provisions, including language stating that the WAC-based payment limit under these policies is not to exceed 103 percent of the WAC. These instructions would not preclude MACs from making payments that are less than 103 percent of the WAC, but rather set a ceiling payment limit amount.

*Comment:* One commenter requested that we clarify whether and how CMS determines Medicare payment and patient cost-sharing responsibility for covered drugs assigned a temporary, unspecified billing and payment code. The commenter suggested having temporary

---

<sup>130</sup> Medicare Payment Advisory Commission. 2023. Report to the Congress: Medicare and the health care delivery system. Washington, DC: MedPAC.

HCPCS codes to facilitate drug payment during the initial period.

*Response:* Generally, new drugs in the initial period for which ASP data is not sufficiently available are not included on the ASP Drug Pricing File or the Not Otherwise Classified (NOC) Pricing File. Policies regarding WAC-based pricing during the initial period were finalized in the 2019 PFS final rule (83 FR 59661 through 59666) as discussed above in this section. These policies are currently reflected in section 20.1.3, Chapter 17 of the Medicare Claims Processing Manual<sup>131</sup>, which provides instruction for MACs to price new drugs and biologicals that are not included on the ASP Drug Pricing File or NOC Pricing File. The manual currently states that, for claims with dates of service on or after January 1, 2019, the add-on percentage is up to 3 percent for WAC-based payments determined by MACs for new drugs before an ASP-based payment limit is available. Similarly, Chapter 17 of the Medicare Claims Processing Manual will be updated following the publication of this final rule to reflect policies finalized in this final rule regarding payment in the initial period for new drugs. In these circumstances, when the drug is billed using a NOC code, the MAC will instruct the provider on how to submit a claim using a NOC code and will determine the payment amount consistent with CMS policies. Therefore, we disagree that a temporary billing and payment code is necessary to facilitate these payments.

*Comment:* One commenter encouraged CMS to conduct additional outreach to providers so that they can better understand the reimbursement policy for biosimilars.

*Response:* The Medicare Claims Processing Manual is typically updated with finalized policies following the publication of a final rule. Near the time this CY 2024 PFS final rule is issued, these updates will be accompanied by other CMS communications, such as an MLN Matters® article, to the provider community.

*Comment:* One commenter requested CMS clarify how the payment limits for new

---

<sup>131</sup> <https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c17.pdf>, accessed September 20, 2023.

biosimilars as amended by section 11402 of the IRA will be implemented should legal challenges prevent or delay implementation of the drug price negotiation program, specifically regarding the maximum fair price (MFP) and encouraged CMS to provide education to providers regarding the potential impacts of this policy for reimbursement purposes, given changes related to the MFP.

*Response:* This comment is outside of the scope of the proposals for payment of drugs and biologicals during the initial period. While we appreciate the commenter's request, we cannot speak to future legal matters, nor can we give future policy guidance with respect to these matters.

After consideration of public comments, we are finalizing as proposed that we will codify requirements established in section 6 of the Sustaining Excellence in Medicaid Act of 2019 and section 11402 of the IRA. Specifically, we are revising paragraph (e)(4) at § 414.904 by adding paragraphs (e)(4)(i)(A) and (B) to conform the regulatory text for WAC-based payment limits before January 1, 2019 and for such payment limits on or after January 1, 2019 to the requirement that the payment amount for a drug (except as provided in paragraph (e)(4)(ii)) is an amount not to exceed 103 percent of the wholesale acquisition cost or based on the Medicare Part B drug payment methodologies in effect on November 1, 2003. We are also finalizing as proposed the addition of paragraphs (A) and (B) to § 414.904(e)(4)(ii) to codify the payment limit for new biosimilars furnished on or after July 1, 2024, during the initial period as required by section 1847A(c)(4)(B) of the Act.

b. Temporary Increase in Medicare Part B Payment for Certain Biosimilar Biological Products

In the CY 2024 PFS proposed rule (88 FR 52385 through 52386), we stated that, consistent with section 1847A(b)(8) of the Act, the Medicare Part B payment limit for a biosimilar is its ASP plus 6 percent of the reference biological product's ASP. We noted that in the CY 2016 PFS final rule (80 FR 71096 through 71101), we clarified that the payment limit for a biosimilar biological product is based on the ASP of all National Drug Codes (NDCs) assigned

to the biosimilar biological products included within the same billing and payment code and amended § 414.904(j) to reflect this policy. We also noted that in the CY 2018 PFS final rule (82 FR 53182 through 53186), we finalized a policy to separately assign individual biosimilar biological products to separate billing and payment codes and pay for biosimilar biological products accordingly. However, we did not change the regulation text at § 414.904(j) at that time.

In the CY 2024 PFS proposed rule, we explained that section 11403 of the IRA amended section 1847A(b)(8) of the Act by establishing a temporary payment limit increase for qualifying biosimilar biological products furnished during the applicable 5-year period. Section 1847A(b)(8)(B)(iii) of the Act defines a “qualifying biosimilar biological product” (hereinafter referred to as a “qualifying biosimilar”) as a biosimilar biological product (as described in section 1847A(b)(1)(C) of the Act) with an ASP (as described in section 1847A(b)(8)(A)(i) of the Act) less than the ASP of the reference biological for a calendar quarter during the applicable 5-year period. Section 11403 of the IRA requires that a qualifying biosimilar be paid at ASP plus 8 percent of the reference biological’s ASP rather than 6 percent during the applicable 5-year period. Section 1847A(b)(8)(B)(ii)(I) of the Act defines the applicable 5-year period for a qualifying biosimilar for which payment has been made under section 1847A(b)(8) of the Act (that is, payment of ASP plus 6 percent of the reference product’s ASP) as of September 30, 2022, as the 5-year period beginning on October 1, 2022. For a qualifying biosimilar for which payment is first made under section 1847A(b)(8) of the Act during the period beginning October 1, 2022, and ending December 31, 2027, the statute defines the applicable 5-year period as the 5-year period beginning on the first day of such calendar quarter of such payment.<sup>132</sup>

In the CY 2024 PFS proposed rule, we proposed to add definitions of “applicable 5-year period” and “qualifying biosimilar biological product” at § 414.902 to reflect the definitions in

---

<sup>132</sup> In accordance with these provisions, the ASP Drug Pricing File reflects the temporary increased payment limit for qualifying biosimilars beginning with the October 2022 file available at <https://www.cms.gov/medicare/medicare-fee-for-service-part-b-drugs/mcrpartbdrugavgsalesprice>.

statute. In addition, we proposed to make conforming changes to regulatory text to reflect the requirements mandated under section 1847A(b)(8)(B) of the Act for the temporary payment limit increase for qualifying biosimilar biological products at § 414.904 (j) by adding paragraphs (j)(1) and (2).

We received public comments on our proposals related to the temporary increase in Medicare Part B payment for certain biosimilar biological products. The following is a summary of the comments we received and our responses.

*Comment:* Two commenters supported CMS’s ongoing efforts to implement the IRA by codifying provisions relating to Medicare Part B payments for certain biosimilar drugs. One commenter stated that these changes will help support the availability and use of biosimilar products and ensure that Medicare beneficiaries benefit from the savings that were intended by the passage of the new law.

*Response:* We thank these commenters for their support.

*Comment:* One commenter encouraged CMS to conduct additional outreach to providers so that they can better understand the reimbursement policy for biosimilars.

*Response:* We appreciate the commenter’s recommendations related to outreach and education. CMS has included information on our website related to section 11403<sup>133</sup> and following the publication of this final rule, the Medicare Claims Processing Manual will be updated with the finalized policies regarding payment of biosimilars. These updates will be accompanied by other CMS communications, such as an MLN Matters® article, to the provider community. Overall, CMS shares the commenter’s interest in ensuring providers have the educational resources needed to understand payment policies.

After consideration of public comments, we are finalizing as proposed the definitions of “applicable 5-year period” and “qualifying biosimilar biological product” at § 414.902 to reflect

---

<sup>133</sup> <https://www.cms.gov/medicare/payment/fee-for-service-providers/part-b-drugs/average-drug-sales-price/asp-reporting#WhatstheTemporaryIncreaseinPaymentforBiosimilarBiologicals>.

the definitions in statute. In addition, we are finalizing as proposed making conforming changes to regulatory text to reflect the requirements mandated under section 1847A(b)(8)(B) of the Act for the temporary payment limit increase for qualifying biosimilar biological products at § 414.904(j) by adding paragraphs (j)(1) and (2).

### c. Inflation-adjusted Beneficiary Coinsurance and Medicare Payment for Medicare Part B Rebatable Drugs

As discussed in the CY 2024 PFS proposed rule (88 FR 52386), section 11101(a) of the IRA amended section 1847A of the Act by adding a new subsection (i), which requires the payment of rebates into the Supplementary Medical Insurance Trust Fund for Part B rebatable drugs if the payment limit amount exceeds the inflation-adjusted payment amount, which is calculated as set forth in section 1847A(i)(3)(C) of the Act. The provisions of section 11101 of the IRA are currently being implemented through program instruction, as directed under section 1847A(c)(5)(C) of the Act. As such, we issued guidance for the computation of inflation-adjusted beneficiary coinsurance under section 1847A(i)(5) of the Act and amounts paid under section 1833(a)(1)(EE) of the Act on February 9, 2023.<sup>134,135</sup> For additional information regarding implementation of section 11101 of the IRA, please see the inflation rebates resources page at <https://www.cms.gov/inflation-reduction-act-and-medicare/inflation-rebates-medicare>.

Section 1847A(i)(5) of the Act requires that for Part B rebatable drugs, as defined in section 1847A(i)(2)(A) of the Act, furnished on or after April 1, 2023, in quarters in which the amount specified in section 1847A(i)(3)(A)(ii)(I) of the Act (or, in the case of selected drugs described under section 1192(c) of the Act, the amount specified in section 1847A(b)(1)(B) of the Act), exceeds the inflation-adjusted payment amount determined in accordance with section 1847A(i)(3)(C) of the Act, the coinsurance will be 20 percent of the inflation-adjusted payment

---

<sup>134</sup> <https://www.cms.gov/files/document/medicare-part-b-inflation-rebate-program-initial-guidance.pdf>.

<sup>135</sup> In addition, beginning with the April 2023 ASP Drug Pricing file, the file includes the coinsurance percentage for each drug and specifies “inflation-adjusted coinsurance” in the “Notes” column if the coinsurance for a drug is less than 20 percent of the Medicare Part B payment amount. Drug pricing files are available at <https://www.cms.gov/medicare/medicare-fee-for-service-part-b-drugs/mcrpartbdrugavgsalesprice>.

amount for such quarter (hereafter, the inflation-adjusted coinsurance amount). This inflation-adjusted coinsurance amount is applied as a percent, as determined by the Secretary, to the payment amount that would otherwise apply for such calendar quarter in accordance with section 1847A(b)(1)(B) or (C) of the Act, as applicable, including in the case of a selected drug. We proposed to codify the coinsurance amount for Part B rebatable drugs as required by section 1847A(i)(5) of the Act in § 489.30, specifically by adding a new paragraph (b)(6).

Section 11101(b) of the IRA amended section 1833(a)(1) of the Act by adding a new subparagraph (EE), which requires that if the payment amount described in section 1847A(i)(3)(A)(ii)(I) of the Act (or, in the case of a selected drug, the payment amount described in section 1847A(b)(1)(B) of the Act) exceeds the inflation-adjusted payment amount of a Part B rebatable drug, the Part B payment will, subject to the deductible and sequestration, equal the difference between such payment amount and the inflation-adjusted coinsurance amount. In the proposed rule, we proposed to codify the Medicare payment for Part B rebatable drugs in § 410.152, specifically by adding new paragraph (m).

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Several commenters expressed support for our proposed codification of section 11101 of the IRA, including one that cited that it would reduce Medicare beneficiaries' out-of-pocket costs.

*Response:* We thank the commenters for their support.

*Comment:* One commenter pointed out that we inverted text in the preamble of the proposed rule at 88 FR 52386 describing the amendment section 11101(b) of the IRA made to section 1833(a)(1) of the Act and identified a typographical error in the text of proposed new paragraph (b)(6) at 42 CFR 489.30.

Response: We thank the commenter for identifying our errors in the preamble and proposed regulatory text. We are correcting both errors in this final rule.

Comment: One commenter requested that we clarify whether a reduction or waiver of an inflation rebate due to shortage would affect the reduced beneficiary coinsurance for that drug. The commenter stated that the section relating to the reduction or waiver of the rebate for shortages and severe supply chain disruptions, section 1847A(i)(3)(G) of the Act, makes no cross-references to the application of the inflation-adjusted beneficiary coinsurance, which is implemented in section 1847A(i)(5) of the Act.

Another commenter advocated against of the inclusion of Medicare Advantage units in the calculation of Part B drug inflation rebates. The commenter stated the statutory definition of a Part B rebatable drug in section 1847A(i)(2)(A) of the Act precludes counting payments for drugs under Part C.

*Response:* We note that since we did not make any proposals in this rulemaking related to the calculation of the inflation-adjusted payment amount described in section 1847A(i)(3)(C) of the Act, the calculation of the rebate amount in section 1847(i)(3)(A) of the Act, or the reduction or waiver for shortages and severe supply chain disruptions described in section 1847A(i)(3)(G) of the Act, these comments are out of scope. We note that these issues were addressed in the Medicare Part B Drug Inflation Rebates Paid by Manufacturers: Initial Memorandum, Implementation of Section 1847A(i) of the Social Security Act, and Solicitation of Comments dated February 9, 2023 (the “initial Part B inflation rebate guidance”), and we gave interested parties the opportunity to comment on the initial Part B inflation rebate guidance. We will consider the comments we received in response to the initial Part B inflation rebate guidance when developing future guidance on the Medicare Prescription Drug Inflation Rebate Program.

After consideration of public comments, we are finalizing the codification of the coinsurance amount and the Medicare payment for Part B rebatable drugs at § 489.30 and § 410.152, respectively, as proposed, except insofar as correcting the typographical error in new paragraph (b)(6) at § 489.30.

d. Limitations on Monthly Coinsurance and Adjustments to Supplier Payment Under Medicare

## Part B for Insulin Furnished Through Durable Medical Equipment

In the CY 2024 PFS proposed rule (88 FR 52386), we stated that drugs furnished through a covered item of DME are covered under Medicare Part B as provided in sections 1861(n) and (s)(6) of the Act. Insulin administered through covered DME, such as a durable insulin pump, is covered under this benefit. As required by section 1842(o)(1)(C) and (D) of the Act, effective January 1, 2017, infusion drugs furnished through DME, including insulin, are paid under section 1847A of the Act (see 82 FR 53180 through 53181), which is typically ASP plus 6 percent. Prior to July 1, 2023, beneficiaries are responsible for coinsurance of 20 percent of the payment amount of such insulin, subject to the Part B deductible.

In the CY 2024 PFS proposed rule we explained that section 11407 of the IRA made three changes to the way beneficiaries pay for insulin furnished through covered DME. First, section 11407(a) of the IRA amended section 1833(b) of the Act to waive the Part B deductible for insulin furnished through covered DME on or after July 1, 2023. Second, section 11407(b)(2) of the IRA amended section 1833(a) of the Act to establish a limit of \$35 on the beneficiary coinsurance amount for a month's supply of such insulin furnished on or after July 1, 2023. This statutory change means that the beneficiary coinsurance responsibility, which is limited to \$35 for a month's supply of insulin, could equal less than 20 percent if the Part B payment amount of a month's supply of insulin is greater than \$175. Third, section 11407(b)(2) of the IRA also added a new sentence to section 1833(a) of the Act to require the Secretary to increase to the Medicare Part B payment to above 80 percent in the case the coinsurance amount for insulin furnished through covered DME equals less than 20 percent of the payment amount to pay for the full difference between the payment amount and coinsurance. The adjustment specified in paragraph (b)(2) ensures the supplier is not responsible for the reduction in the beneficiary coinsurance amount.

The above provisions were implemented through program instruction,<sup>136</sup> as required by

---

<sup>136</sup> <https://www.cms.gov/files/document/r11917cp.pdf>.

section 11407(c) of the IRA, for CY 2023. Section 80 in Chapter 17<sup>137</sup> and section 140 in Chapter 20<sup>138</sup> of the Medicare Claims Processing Manual will be updated to reflect these changes, effective July 1, 2023. To operationalize this provision, we stated that the \$35 coinsurance limit applies to the duration of the calendar month in which the date of service occurs. As stated in the section 110.5, Chapter 15 of the Medicare Benefit Policy Manual,<sup>139</sup> the date of service on the claim must be the date that the beneficiary or authorized representative receives the insulin or, for mail order, the date the insulin is shipped. A new \$35 coinsurance limit for a month's supply applies to each calendar month. It follows that, as stated in the program instruction, when a 3-month supply (that is, the amount of such insulin that is required for treatment for up to 3 calendar months) is billed for insulin furnished through covered DME, a coinsurance limit of \$105 would apply for that 3-calendar month period (\$35 coinsurance limit for each month's supply of insulin). The program instruction also states that the MACs will ensure that coinsurance does not exceed \$35 for a 1-month supply or \$105 for a 3-month supply for claims billing insulin administered through covered DME.

In the CY 2024 PFS proposed rule, we proposed to codify these elements (that are currently in program instruction) for CY 2024 and future years in regulation text, because section 11407(c) of the IRA states that only implementation for CY 2023 may be through program instruction or other forms of guidance. Specifically, we proposed to codify the new statutory monthly coinsurance limits of \$35 for a 1-month supply and \$105 for a 3-month supply at § 489.30 by adding paragraph (b)(7) and the adjustment to the supplier payment at § 410.152 by adding paragraph (n). In addition, we proposed to codify at § 489.30 that the \$35 coinsurance limit for a month's supply of insulin furnished through covered DME will apply to the duration of the calendar month in which the date of service (or services) occurs. In other words, the \$35 coinsurance limit will apply for a month's supply of insulin each calendar month. Similarly, we

---

<sup>137</sup> <https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/clm104c17.pdf>.

<sup>138</sup> [https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/clm104c20\\_dmemay23\\_r2.pdf](https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/clm104c20_dmemay23_r2.pdf).

<sup>139</sup> <https://www.hhs.gov/guidance/sites/default/files/hhs-guidance-documents/bp102c15.pdf>.

proposed to codify that the \$105 coinsurance limit for 3 months' supply of insulin furnished through covered DME will apply to the duration of the calendar month in which the date of service (or services) occurs and the 2 following calendar months.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* One commenter expressed support for our proposed regulatory codification of section 11407 of the IRA.

*Response:* We thank the commenter for their support.

*Comment:* One commenter requested clarification that compounded insulin is exempt from the Part B insulin coinsurance limitation consistent with how compounded insulin is treated for purposes of the Medicare Part D Coverage Gap Discount Program (CGDC) and the Manufacturer Discount Program. The commenter requested that we clarify that several forms of compounded insulin are exempt from the coinsurance limitation, including insulin transferred from vials to a cartridge for insertion into a pump, pre-drawn syringes for patients who cannot prepare their own medication, insulin drips, and insulin added to total parenteral nutrition (TPN) or intradialytic parenteral nutrition (IDPN).

*Response:* We thank the commenter for their question. Products that the commenter refers to as "compounded insulin" that are furnished through a covered item of DME are subject to the monthly coinsurance limitation. The coinsurance limitation of \$35 for a month's supply would apply to insulin that is transferred from vials into a cartridge for insertion into an insulin pump given that the pump is a covered item of DME. However, insulin that is not administered through a covered item of DME and is instead administered through, for example, pre-drawn syringes, would not be subject to the monthly coinsurance limitation. For information on the applicability of the coinsurance limitation to insulin administered through syringes, see the Part D Inflation Reduction Act (IRA) Cost Sharing Maximum Reports for Part D Sponsors

memorandum<sup>140</sup> and Frequently Asked Questions about Medicare Insulin Cost-Sharing Changes in the Prescription Drug Law<sup>141</sup>.

We note that intravenous (IV) insulin drips are not commonly administered in physician offices and coverage for outpatient IV insulin therapy (OIVIT) was rescinded in 2010 for claims with dates of service on and after December 23, 2009, pursuant to Change Request 6775<sup>142</sup>, after CMS determined from a review of evidence that OIVIT does not improve health outcomes in Medicare beneficiaries. Typically, IV insulin drips would not occur in a patient's home because of the inability for a patient or a patient's caregiver to safely supervise the administration. Therefore, we do not anticipate administration of IV insulin drips outside of a hospital setting under close monitoring, not covered under DME. Regarding parenteral nutrition, we note that parenteral nutrition is covered under the Medicare Part B benefit for prosthetic devices. Insulin that is not administered through a covered item of DME and is instead administered through, for example, a prosthetic device, would not be subject to the monthly coinsurance limitation.

After consideration of public comments, we are finalizing as proposed the new paragraph (b)(7) at § 489.30 for the limitations on monthly coinsurance for insulin furnished through a covered item of DME. We are also finalizing as proposed the new paragraph (n) at § 410.152 for the adjustment to the supplier payment under Medicare Part B.

#### e. Indexing the Part B Deductible to Inflation

Prior to the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108–173), the Part B deductible was set in statute. After setting the 2005 deductible amount at \$110.00, section 629 of the MMA (amending section 1833(b) of the Act) required that the Part B deductible be indexed beginning in 2006. The inflation factor to be used each year is the annual percentage increase in the Part B actuarial rate for enrollees aged 65 and

---

<sup>140</sup> [https://www.hhs.gov/guidance/sites/default/files/hhs-guidance-documents/IRA\\_Cost\\_Sharing\\_Maximum\\_Reports\\_508\\_G.pdf](https://www.hhs.gov/guidance/sites/default/files/hhs-guidance-documents/IRA_Cost_Sharing_Maximum_Reports_508_G.pdf).

<sup>141</sup> <https://www.cms.gov/files/document/frequently-asked-questions-medicare-part-d-insulin-benefit.pdf>.

<sup>142</sup> <https://www.cms.gov/regulations-and-guidance/guidance/transmittals/downloads/r1930cp.pdf>.

over. Specifically, the 2024 Part B deductible is calculated by multiplying the 2023 deductible by the ratio of the 2024 aged actuarial rate to the 2023 aged actuarial rate. The amount determined under this formula is then rounded to the nearest \$1.00. Although § 410.160 was amended to reflect the statutory change, we did not make the corresponding revision in § 489.30. Earlier in this section, we finalized additional changes to the regulatory text for allowable charges under Part B for rebatable drugs and insulin furnished on or after July 1, 2023, through an item of durable medical equipment covered under section 1861(n) of the Act in § 489.30(b)(6) and (7), respectively. Therefore, we are finalizing the revision to § 489.30(b)(1) to conform the regulatory text for the Part B deductible with the statutory change made by section 629 of the MMA and the IRA provisions that make statutory changes that affect beneficiary out-of-pocket costs for certain drugs payable under Medicare Part B.

## 2. Request for Information (RFI): Drugs and Biologicals which are Not Usually Self-Administered by the Patient, and Complex Drug Administration Coding

Section 1861(s)(2)(A) of the Act allows Medicare to pay for services and supplies, including drugs and biologicals (hereafter, drugs) that are not usually self-administered by the patient, which are furnished as “incident to” a physician’s professional service. Section 112 of the Benefits, Improvements & Protection Act of 2000 (BIPA) (Pub. L. 106-554, December 21, 2000) amended the above-referenced sections 1861(s)(2)(A) and 1861(s)(2)(B) of the Act, which formerly referred to drugs “which cannot be self-administered,” to read, “which are not usually self-administered.” Drugs that are “usually self-administered” are thus statutorily excluded from coverage and payment under Part B under the “incident to” benefit.

We have provided definitions and other guidance for MACs regarding determinations on drugs that are “not usually self-administered by the patient” in Chapter 15, Section 50.2 of the Medicare Benefit Policy Manual<sup>143</sup>. Chapter 15 also describes the evidentiary criteria that MACs should use in determining whether a drug is usually self-administered. The guidance directs

---

<sup>143</sup> Ibid.

MACs to publish a description of the process they use to make that determination, and to publish a list of the drugs that are subject to the self-administered exclusion on their website<sup>144</sup>. The guidance also requires that this list include the data and rationale that led to the determinations. This list is referred to as the “self-administered drug (SAD) list,” and each MAC maintains their own version of the list, which is applicable to that MAC’s area of jurisdiction. While the lists are often similar between MACs, they are not identical. Drugs that are put on a SAD list are excluded from Part B coverage, but in those situations, they are almost always covered by Medicare Part D prescription drug coverage. For several years, interested parties have requested that we update and clarify this SAD list guidance. These parties believe that the current guidance may not adequately address circumstances posed by newly approved drugs.

In a similar vein, we have received concerns from interested parties that non-chemotherapeutic complex drug administration payment has become increasingly inadequate due to existing coding and Medicare billing guidelines that do not accurately reflect the resources used to furnish these infusion services. Interested parties have asserted that these infusion services are similar to complex and clinically intensive Chemotherapy and Other Highly Complex Biological Agent Administration (“Chemotherapy Administration”) services that are billed using CPT code series 96401-96549, as opposed to Therapeutic, Prophylactic, and Diagnostic Injections and Infusion services billed using CPT code series 96360-96379. We note that we discuss our policies for these services in Pub. 100-04 Medicare Claims Processing Manual, Chapter 12, Section 30.5D<sup>145</sup>.

In the CY 2024 PFS proposed rule (88 FR 52387), we solicited comments on the above two policy areas, since they both involve Part B drug payment policies that have been impacted by new developments in the field. In an effort to promote coding and payment consistency and patient access to infusion services, we solicited comments and information from interested

---

<sup>144</sup> <https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/bp102c15.pdf>.

<sup>145</sup> <https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/clm104c12.pdf>.

parties regarding the relevant resources involved, as well as inputs and payment guidelines and/or considerations, that could be used in determining appropriate coding and payment for complex non-chemotherapeutic drug administration. We solicited comments on whether or not we should revise our policy guidelines as discussed to better reflect how these specific infusion services are furnished and should be billed.

We also solicited comments regarding our policies on the exclusion of coverage for certain drugs under Part B which are usually self-administered by the patient. Specifically, we solicited comments regarding our policies for the following items:

- Definitions of the following terms, as referenced in this section:
  - ++ “Administered.”
  - ++ “Self-Administered.”
  - ++ “Usually.”
  - ++ “By the patient.”
- The process for determining which drugs are classified as those “not usually self-administered by the patient.”
- The process for issuing decisions on which drugs are classified as those “not usually self-administered by the patient,” and the process for issuing any changes to those classifications.
- The relevant resources involved, as well as inputs and payment guidelines and/or considerations, that could be used in determining appropriate coding and payment for complex non-chemotherapeutic drug administration.
- Whether or not CMS should revise policy guidelines to better reflect how complex non-chemotherapeutic drug administration infusion services are furnished and billed.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* We received many comments regarding our policies on self-administered drugs. The comments addressed several critical issues in this space, including appeals, FDA

labeling, and accommodating patients who are under caregivers' care and/or patients who do not have the ability self-administer drugs. Commenters provided robust feedback on the self-administered drug issues listed above, and on related issues as well.

*Response:* We thank commenters for their attention to these policies and for sharing our desire to improve health equity and healthcare access for Medicare enrollees. We plan to consider all comments, and we look forward to continued discussions with interested parties as we work towards potentially developing changes to these policies in future rulemaking.

*Comment:* We received a number of comments in response to our Request for Information (RFI) regarding appropriate reimbursement for non-chemotherapeutic complex drug administration coding. Commenters urged CMS to provide additional guidance clarifying the conditions under which infusion drugs can be considered complex and may be appropriately reported using the chemotherapy administration CPT codes 96401-96549. Commenters expressed concern with the MAC guidance currently in effect for complex drug administration services. Commenters asserted that the current reimbursement rates and billing considerations for non-chemotherapeutic complex infusion services provided by the MACs are inconsistent, inadequate, and in conflict with CMS billing policies.

*Response:* We appreciate commenters' concerns regarding the complex drug administration payment policy. Our current guidance regarding coding rules for chemotherapy administration and nonchemotherapy injections and infusion services, as documented in 100-4 Chapter 12, section 30.5 of our Internet Only Manual (IOM), outlines the categories under which payment is made for both types of injections and infusions and the considerations for determining what drugs may be considered chemotherapy under Medicare<sup>146</sup>. There, we state that "Chemotherapy administration codes (CPT codes 96401-96549) apply to parenteral administration of non-radionuclide anti-neoplastic drugs; and also, to anti-neoplastic agents provided for treatment of noncancer diagnoses (for example, cyclophosphamide for auto-

---

<sup>146</sup> <https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/clm104c12.pdf>.

immune conditions) or to substances such as monoclonal antibody agents, and other biologic response modifiers." We also provide examples of specific drugs, including monoclonal antibody drugs, but we also clarify that the examples discussed do not represent an exhaustive list of drugs that may be administered using complex administration services. We further state that "A/B MACs (B) may provide additional guidance as to which drugs may be considered to be chemotherapy drugs under Medicare."

We acknowledge the commenters' position that the clinical work and expense for some complex drug infusion services are not adequately accounted for as currently reimbursed by Medicare. However, we note that Medicare payment for the chemotherapy administration CPT code series (96401-96549) accounts for clinical staff and supply costs as part of physician practice expenses for the administration service. The practice expense costs include preservice preparation activities, intra-service constant monitoring, and post-service period activities performed by registered nurses or oncology-certified nurses. The supply items also include equipment such as a biohazard hood. Medicare payment for the therapeutic, prophylactic, and diagnostic injections and infusion CPT code series (96360-96379) also accounts for clinical staff activities and supply equipment as part of the practice expense for the administration service with less clinical staff service time and fewer equipment items. However, we understand and acknowledge the constantly evolving practice of medicine and advancements in complex drug administration that may need to be considered relative to our existing payment policies. We are interested in future discussions with interested parties to work towards developing policies that accurately account for the costs involved in complex drug administration services.

### 3. Requiring Manufacturers of Certain Single-Dose Container or Single-Use Package Drugs to Provide Refunds With Respect to Discarded Amounts (§§ 414.902 and 414.940)

#### a. Background

Section 90004 of the Infrastructure Investment and Jobs Act (Pub. L. 117-58, November 15, 2021) (hereinafter is referred to as “the Infrastructure Act”) amended section 1847A of the Act to redesignate subsection (h) as subsection (i) and insert a new subsection (h), which requires manufacturers to provide a refund to CMS for certain discarded amounts from a refundable single-dose container or single-use package drug (hereafter referred to as “refundable drug”). The refund amount is the amount of discarded drug that exceeds an applicable percentage, which is required to be at least 10 percent, of total charges for the drug in a given calendar quarter.

In the CY 2023 PFS final rule (87 FR 69710 through 69734), we adopted many policies to implement section 90004 of the Infrastructure Act. We finalized the requirement that billing providers and suppliers report the JW modifier for all separately payable drugs with discarded drug amounts from single use vials or single use packages payable under Part B, beginning January 1, 2023. We also finalized the requirement that billing providers and suppliers report the JZ modifier for all such drugs with no discarded amounts beginning no later than July 1, 2023, and we stated that we would begin claims edits for both the JW and JZ modifiers beginning October 1, 2023 (87 FR 69718 through 69719). Subsequent to the issuance of the CY 2023 PFS final rule, CMS published the JW Modifier and JZ Modifier Policy Frequently Asked Questions (FAQ) document<sup>147</sup> addressing the correct use of these modifiers. We adopted a definition of “refundable single-dose container or single-use package drug” at § 414.902, which also specifies exclusions from this definition (87 FR 69724). These three exclusions are: radiopharmaceutical or imaging agents, certain drugs requiring filtration, and drugs approved by FDA on or after November 15, 2021, and for which payment has been made under Part B for fewer than 18

---

<sup>147</sup> <https://www.cms.gov/medicare/medicare-fee-for-service-payment/hospitaloutpatientpps/downloads/jw-modifier-faqs.pdf>.

months. Regarding reports to manufacturers, we specified that we would send reports (including information described in section 1847A(h)(1) of the Act) for each calendar quarter on an annual basis to all manufacturers of refundable drugs (87 FR 69726). We finalized how the refund amount will be calculated at § 414.940 (87 FR 69731). Regarding drugs with unique circumstances for which we can increase the applicable percentage otherwise applicable for determining the refund, we adopted an increased applicable percentage of 35 percent for drugs reconstituted with a hydrogel and with variable dosing based on patient-specific characteristics (87 FR 69731). Lastly, we adopted a dispute resolution process through which manufacturers can challenge refund calculations, and we established enforcement provisions (including manufacturer audits, provider audits, and civil money penalties required by statute) (87 FR 69732 through 69734).

As noted in the CY 2023 PFS final rule (87 FR 69711), sections 11101 and 11102 of the Inflation Reduction Act (Pub. L. 117–169, August 16, 2022) (IRA) established new requirements under which manufacturers must pay inflation rebates if they raise their prices for certain Part B and Part D drugs faster than the rate of inflation. Drug manufacturers are required to pay rebates to Medicare if prices for certain Part B drugs increase faster than the rate of inflation for quarters beginning with the first quarter of 2023; drug manufacturers are required to pay rebates to Medicare if prices for certain Part D drugs increase faster than the rate of inflation over 12-month periods, starting with the 12-month period that began October 1, 2022.

We explained that we believe implementation of the Part B and Part D inflation rebate programs established under the IRA should be considered together with the operational implications of the discarded drug refunds, because the refunds and rebates both require CMS to accept from drug manufacturers payments that must be deposited into the Federal Supplementary Medical Insurance (SMI) Trust Fund.

Therefore, to align the operation of these programs and minimize burden, we declined to finalize some aspects of the invoicing and collection of discarded drug refunds. Specifically, we

declined to finalize the timing of the initial reports and which quarters' information will be included in each report. We also declined to finalize specific dates by which manufacturer refund obligations are due and those associated with the dispute resolution process, as those are scheduled in tandem with the reporting dates. Lastly, we stated our intent to address these aspects in future rulemaking.

In the CY 2024 PFS proposed rule (88 FR 52388 through 52395), we proposed the date of the initial report to manufacturers, the date for subsequent reports, method of calculating refunds for discarded amounts in lagged claims data, method of calculating refunds when there are multiple manufacturers for a refundable drug, increased applicable percentages for certain drugs with unique circumstances, and a future application process by which manufacturers may apply for an increased applicable percentage for a drug, which would precede proposals to increase applicable percentages in rulemaking. We also proposed modification to the JW and JZ modifier policy for drugs payable under Part B from single-dose containers that are furnished by a supplier who is not administering the drug.

#### b. Provision of Information to Manufacturers

In the CY 2023 PFS final rule (87 FR 69724 through 69726), we discussed our proposals related to meeting the requirements under section 1847A(h)(1) of the Act related to the timing and contents of the report to manufacturers, including what types of information to include, which quarters' data we would include in the initial report, the amount of lagged claims data we would include, whether to send reports quarterly or annually, and the definition of a manufacturer. However, we explained that due to the enactment of the IRA and our efforts to align the operations of the refunds with the inflation rebate programs and minimize burden, we did not finalize certain aspects of the discarded drug refund provision. Specifically, we did not finalize the date that we would send the first report to manufacturers or which quarters' information would be included in each report.

Although we did not finalize the noted aspects related to timing, we adopted regulations at § 414.940(a)(3) providing that we will send reports to manufacturers on an annual basis and indicated in the preamble text that reports will contain discard information (described in section 1847A(h)(1)(A) of the Act) for each calendar quarter (87 FR 69724 through 69726). We also finalized that we would send reports to all manufacturers of refundable drugs. In addition, in response to commenters suggesting that we provide manufacturers an opportunity to engage with us on discard amount data in the first year of this provision's implementation, we stated that we would issue, no later than December 31, 2023, a preliminary report on estimated discarded amounts based on available claims data from the first two quarters of CY 2023.

In the CY 2024 PFS proposed rule (88 FR 52388 through 52389), we discussed implementing the discarded drug refund in a timely manner. We proposed to issue the initial refund report to manufacturers, to include all calendar quarters for 2023, no later than December 31, 2024. (Note that this report, which we refer to as the “initial refund report” in this final rule, will be separate and distinct from the preliminary report that we will issue by December 31, 2023, which will include estimated discarded amounts based on available claims data for the first 2 quarters of CY 2023.)

With respect to subsequent annual reports, that is, reports for quarters in CY 2024 and thereafter, we stated our intent to align delivery of the refund reports with the delivery of Part B and Part D inflation rebate reports to the extent practicable. We noted that in the initial guidance for Part B inflation rebates<sup>148</sup>, it states that inflation rebate reports will be sent on a quarterly basis, each no later than 6 months after the end of the calendar quarter as required in section 1847A(i)(1)(A) of the Act. We also noted that the guidance states, consistent with section 1847A(i)(1)(C) of the Act, that we may delay reporting Part B inflation rebate information for calendar quarters in CY 2023 and CY 2024 until not later than September 30, 2025.<sup>149</sup>

<sup>148</sup> <https://www.cms.gov/files/document/medicare-part-b-inflation-rebate-program-initial-guidance.pdf>.

<sup>149</sup> <https://www.cms.gov/files/document/medicare-part-b-inflation-rebate-program-initial-guidance.pdf>.

To align these reports, we proposed that, other than for the initial refund report, (which we are finalizing that we will issue no later than December 31, 2024, as described in section III.A.3.b of this final rule), we would send annual refund reports for discarded drug refunds for the 4 quarters of a calendar year at or around the time we plan to send Part B inflation rebate reports for the first quarter of the following year. Thus, for example, we would send the second refund report for the calendar quarters in 2024 when we plan to send the inflation rebate report for Q1 2025, which is required to be sent no later than September 30, 2025, as required in section 1847A(i)(1)(C) of the Act. We note that the timeframe for Part B inflation rebate reports has not yet been finalized; the final timing will be addressed in the revised Part B inflation rebate guidance.

We noted in the CY 2023 PFS final rule (87 FR 69725), because providers and suppliers have a 12-month period to submit Medicare Part B claims, including claims for drugs payable under Part B, there can be a lag between the date of service when a drug is administered and when the claim is submitted and adjudicated. Therefore, there is a lag in available JW modifier data for any given date of service quarter. We provided our evaluation of July 2010 Medicare Part B claims in the Physician/Supplier-Carrier setting that showed 91.68, 96.84, and 98.32, and 99.13 percent of claims were final at 3, 6, 9, and 12 months, respectively, following the date of service. At 24 and 48 months after the date of service, 99.83 and 100 percent of the claims, respectively, were final.

In the CY 2024 PFS proposed rule, we explained that based on our evaluation of the 2010 claims data, a small percentage of lagged claims data from a calendar quarter likely would not be available when the quarter is first included on a report, and therefore we proposed that annual reports (subsequent to the initial report) include lagged claims data (that is, true-up information) for quarters from 2 calendar years prior. In other words, we proposed that each report would include information for 8 calendar quarters: 4 quarters from the previous calendar year (hereafter, referred to as new refund quarters) and 4 quarters from 2 calendar years prior

(hereafter, referred to as updated refund quarters). See Table 20, which shows which refund quarters will be in each refund report. We proposed all reports (except the initial refund report) would include the following information for updated refund quarters to address lagged claims data:

- The updated total number of units of the billing and payment code of such drug, if any, that were discarded during such updated refund quarter, as determined using a mechanism such as the JW modifier used as of the date of enactment of this subsection (or any such successor modifier that includes such data as determined appropriate by the Secretary).

- The updated refund amount that the manufacturer is liable for with respect to such updated quarter that was not previously accounted for in the prior year’s report.

For example, as discussed above, the second annual report (sent no later than September 30, 2025) would include: (1) the total number of units of the billing and payment code of such drug, if any, that were discarded during new refund quarters (all calendar quarters in 2024), (2) the refund amount for which the manufacturer is liable under section 1847A(h)(3) of the Act for all calendar quarters in 2024, (3) the updated total number of units of the billing and payment code of such drug, if any, that were discarded during the updated refund quarters (all calendar quarters in 2023), and (4) the refund amount that the manufacturer is liable for or the amount CMS owes the manufacturer under section 1847A(h)(3) of the Act for all calendar quarters in 2023 that were not accounted for in the previous year’s report.

**TABLE 20: Timing of Refund Reports and Which Calendar Quarters are Included in Each Report**

<b>Timing of Report</b>	<b>New Refund Quarters Included</b>	<b>Updated Refund Quarters Included</b>
<b>Not later than December 31, 2024 (Initial Refund Report)</b>	Calendar quarters in 2023	None
<b>Not later than September 30, 2025</b>	Calendar quarters in 2024	Calendar quarters in 2023
<b>Not later than September 30, 2026</b>	Calendar quarters in 2025	Calendar quarters in 2024
<b>Not later than September 30, 2027</b>	Calendar quarters in 2026	Calendar quarters in 2025
<b>Not later than September 30, XXXX</b>	Calendar quarters in the year prior to XXXX	Calendar quarters in the year 2 years prior to XXXX

We proposed to define “new refund quarter” and “updated refund quarter” at § 414.902 and to revise § 414.940(a)(1)(iii) to reflect the inclusion of lagged data in reports subsequent to the initial refund report. We solicited comments on these proposals (88 FR 52389). See section III.A.3.d. of this final rule for the discussion regarding calculation of refund amounts and for updated refund quarters.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Several commenters expressed support for the proposal to align timing of discarded drug refund reports, beginning with the second refund report, with inflation rebate reports.

*Response:* We thank the commenters for their support.

*Comment:* Two commenters opposed inclusion of more than one quarter of lagged claims data for which manufacturers would be liable. One commenter stated that since manufacturers are not responsible for delays in claims submission, they should not bear the burden of refunds on lagged claims. The other commenter stated that limiting lagged data to one quarter would provide a better balance of administrative burden and the accuracy of discarded amount assessments.

*Response:* We thank the commenters for their feedback. We disagree that discarded amounts of refundable drugs for claims properly submitted to Medicare contractors should not be considered for the calculation of discarded drug refund obligations. Under 42 CFR 424.44, providers and suppliers generally have one calendar year after the date of service to submit claims, and the process by which contractors review and finalize claims can sometimes take several additional months.<sup>150</sup> To accurately determine the number of discarded units in a given quarter, the reconciliation of discard amounts for each quarter one year after discard amount information is initially reported provides an operational process that more accurately determines

---

<sup>150</sup> <https://www.ecfr.gov/current/title-42/section-424.44>

discarded amounts and refunds for each quarter as compared to the accuracy of such information if updated refund quarters were not included in the reports.

After considering the comments, we are finalizing the definitions of “new refund quarter” and “updated refund quarter” at § 414.902, as proposed. We are also finalizing the inclusion of four updated refund quarters (one calendar year) in reports subsequent to the initial refund report at § 414.940(a)(1)(iii) as proposed. With respect to timing of refund reports, we reiterate our intent to provide refund reports as follows:

- As discussed in the 2023 PFS final rule at 87 FR 69726, we intend to send a preliminary refund report to manufacturers no later than December 31, 2023 to provide estimated discarded amounts based on available claims data from the first 2 quarters of CY 2023;
- We intend to send the initial refund report to manufacturers not later than December 31, 2024, which will contain information for all calendar quarters of 2023; and
- For subsequent years, we intend to send annual refund reports for discarded drug refunds for the 4 quarters from the previous calendar year (new refund quarters) and 4 quarters from 2 calendar years prior (updated refund quarters) prior to or around the time we plan to send Part B inflation rebate reports for the first quarter of the following year (not later than September 30).

#### c. Manufacturer Provision of Refund

In the CY 2023 PFS final rule (87 FR 69726 through 69727) we adopted § 414.940(b), which requires manufacturers to pay refunds in 12-month intervals in a form and manner specified by CMS. In the CY 2023 PFS final rule (87 FR 69727), we also discussed our proposal for the timing of both the initial refund report and manufacturers’ corresponding refund obligations. That is, we proposed to issue reports to manufacturers by October 1 and require refund obligations to be paid by December 31, except in circumstances where a dispute is pending. Regulations at § 414.940(b)(2) specify that in the case that a disputed report results in a

refund amount due, that amount must be paid no later than 30 days after resolution of the dispute.

However, we did not finalize the deadlines by which manufacturer refund obligations are due and those associated with the dispute resolution process in the CY 2023 PFS final rule, because those deadlines correspond with the dates of the annual refund reports, which we declined to finalize in order to align the operation of the discarded drug refunds with the inflation rebate programs. In the CY 2023 PFS final rule (87 FR 69727), we stated our intent to revisit the process and timeline for manufacturers' provisions of refunds in future rulemaking.

In the CY 2024 PFS proposed rule (88 FR 52389), we proposed to issue the initial refund report to manufacturers no later than December 31, 2024. As discussed above, we are finalizing this policy. We explained that a payment deadline that is 2 calendar months after the issuance of the report may provide adequate time for manufacturers to review the reports and submit a dispute if needed prior to the refund payment deadline. Accordingly, we proposed to require that the refund amounts specified in the initial refund report be paid no later than February 28, 2025, except in circumstances where a report is under dispute.

We also noted the proposal regarding issuance of the second annual refund report to manufacturers be no later than September 30, 2025, and once annually thereafter no later than September 30 for every year thereafter. We contemplated this deadline along with our belief that a payment deadline that is 2 calendar months after the issuance of the report provides adequate time for manufacturers to review the reports and submit a dispute if needed prior to the refund payment deadline. Accordingly, we proposed to require manufacturers to pay refunds specified in each report (beginning with the second report) no later than December 31 of the year in which the report is sent, except in circumstances where a report is under dispute. In cases in which a manufacturer disputes a report, we proposed that beginning with the initial refund report, any manufacturer liability determined upon the resolution of the dispute would be due by the above

stated due date or 30 days following the resolution, whichever is later. We proposed to revise § 414.940(b)(1) and (2) to reflect these dates.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Two commenters expressed support for the payment timeline of liabilities for circumstances in which there is no dispute, as well as circumstances where there is a dispute with the extended deadline.

*Response:* We thank the commenters for their support.

*Comment:* One commenter stated that CMS's implementation of section 1847A(h) of the Act violates the due process principle of fair notice because it attaches new legal consequences to decisions made in compliance with applicable laws and regulations, such as the determination of vial sizes, prior to enactment of the Infrastructure Act. The commenter asserted their belief that neither Congress nor agencies may impose retroactive penalties unless there is express legislative authorization, which they stated does not appear in the statutory provision for the discarded drug refund policy.

*Response:* Legislative recommendations for Congress are outside of the scope of this rulemaking. As these policies affect refunds that will be paid in the future after the promulgation of the rule, we disagree that our proposed implementation of section 1847A(h) of the Act violates the due process principle of fair notice. There are no retroactive effects on payments that have already been made.

After consideration of public comments, we are finalizing revisions to § 414.940(b)(1) as proposed. That is, refund amounts specified in the initial refund report for calendar quarters in CY 2023 must be paid no later than February 28, 2025, and for calendar quarters in each subsequent calendar year, no later than December 31 of the year in which the report is sent, except in circumstances where a report is under dispute. Regarding cases in which a manufacturer disputes a refund report, we are finalizing revisions to § 414.940(b)(2) as proposed

to reflect that any refund amounts determined upon the resolution of the dispute will be due by the due date specified in § 414.940(b)(1) or 30 days following the resolution, whichever is later.

#### d. Refund Amount

##### (1) Calculation of Refund Amounts for Updated Quarters

In the CY 2024 PFS proposed rule (88 FR 52389 through 52390) we explained how we would calculate the refund amount for updated quarters since we need to contemplate lagged claims data in all reports other than the initial refund report. That is, we proposed that such additional lagged JW modifier data, if any, will be used to calculate revisions to the manufacturer refund amount. Specifically, we proposed to calculate the refund with updated data in the same manner as was finalized in the 2023 PFS final rule (87 FR 69727) and subtract the refund amount that already paid for such refundable drug for such quarter to determine the updated quarter refund amount. We proposed that the refund amount owed by a manufacturer, with respect to a refundable drug assigned to a billing and payment code for an updated refund quarter is the amount equal to the estimated amount (if any) by which:

- The product of:

- ++ The total number of units of the billing and payment code for such drug that were discarded during such quarter; and

- ++ The amount of payment determined for such drug or biological under section 1847A(b)(1)(B) or (C) of the Act, as applicable, for such quarter.

- Exceeds the difference of:

- ++ An amount equal to the applicable percentage of the estimated total allowed charges for such a drug (less the amount paid for packaged drugs) during the quarter; and

- ++ The refund amount previously paid for such refundable drug for the given quarter.

We proposed that if the resulting refund calculation for an updated quarter is a negative number, then it will be netted out of the any refund owed for other updated quarters or new quarters.

We proposed to revise § 414.940 by adding new paragraphs (c)(2) and (3) to reflect the proposed method of calculation of revisions to the refund amount owed for quarters in the year that is 2 calendar years prior.

We received one public comment on these proposals. The following is a summary of the comment we received and our response.

*Comment:* One commenter expressed support for our proposal to use the same refund calculation methodology for new and updated quarters' claims data. The commenter stated the use of a consistent methodology will provide manufacturers predictability.

*Response:* We appreciate the commenter's feedback.

After consideration of public comments, we are finalizing revision of § 414.940 by adding paragraphs (c)(2) and (3), as proposed, to reflect the method of calculation of revisions to the refund amount owed for quarters in the year that is 2 calendar years prior. That is, we will calculate the refund with updated data in the same manner as described above and subtract the refund amount already paid for such refundable drug, for such quarter, to determine the updated quarter refund amount owed by the manufacturer.

## (2) Calculation of Refund for a Drug when there are Multiple Manufacturers

In the CY 2023 PFS final rule (87 FR 69727 through 69731), consistent with section 1847A(h)(3) of the Act, we adopted regulations at § 414.940(c) specifying the manner in which the refund amount will be calculated with respect to a refundable drug of a manufacturer assigned to a billing and payment code for a calendar quarter beginning on or after January 1, 2023. The refund for which the manufacturer is liable is the amount equal to the estimated amount (if any) by which:

- The product of:

++ The total number of units of the billing and payment code for such drug that were discarded during such quarter; and

++ The amount of payment determined for such drug or biological under section 1847A(b)(1)(B) or (C) of the Act, as applicable, for such quarter;

- Exceeds an amount equal to the applicable percentage of the estimated total allowed charges for such a drug (less the amount paid for packaged drugs) during the quarter.

In the CY 2023 PFS final rule, we proposed a policy to estimate the total allowed charges during the quarter by multiplying the drug's payment amount for the quarter by the total number of units of the billing and payment code of such drug that were subject to JW modifier reporting including those for which the JZ modifier would be required if no units were discarded. As specified in section 1847A(h)(1)(C) of the Act, the total number of units of the billing and payment code of a refundable drug furnished during a calendar quarter for purposes of subparagraph (A)(i), and the determination of the estimated total allowed charges for the drug in the quarter for purposes of paragraph (3)(A)(ii), exclude such units that are packaged into the payment amount for an item or service and are not separately payable.

In the CY 2024 PFS proposed rule (88 FR 52390 through 52391) we discussed situations where single source drugs or biologicals have multiple manufacturers. We explained that because refundable drugs are single source drugs or biologicals, they typically will have one manufacturer. However, a refundable drug could have more than one manufacturer, for example, in the circumstance where a refundable drug is produced by one manufacturer, and also by one or more manufacturer(s) that is a repackager or relabeler. Multiple manufacturers of a refundable drug could also occur in the case of one or more authorized generic products that are marketed under the same FDA-approval as the original FDA applicant. In such cases, the National Drug Codes (NDCs) for the drug typically are assigned to the same billing and payment code, and each manufacturer is responsible for reporting ASP data to CMS, which includes sales volume.

In the CY 2023 PFS final rule (87 FR 69724 through 69726), we stated that we would identify the manufacturer responsible for the provision of refunds by the labeler code of the refundable drug. Therefore, in the CY 2024 PFS proposed rule, we discussed our proposal to

establish a method for apportioning billing units of a refundable drug sold during a calendar quarter in situations where there are multiple manufacturers of a refundable drug. When calculating the refund amount owed by manufacturers for a refundable drug that has more than one manufacturer, we proposed to identify such refundable drugs using the ASP sales data reported for the calendar quarter for which a refund amount is calculated. Furthermore, we proposed to apportion financial responsibility for the refund amount among each manufacturer in the following manner: by dividing the sum of the individual manufacturer's billing units sold during the refund quarter for all the manufacturer's NDCs assigned to the billing and payment code (as reported in the ASP data submissions), by the sum of all manufacturers' billing units sold during the refund quarter for all NDCs of the refundable drug assigned to the billing and payment code (as reported in the ASP data submissions).

We explained that this calculation approach is consistent with the approach for apportioning inflation rebate obligations discussed in section 50.13 of the Medicare Part B Drug Inflation Rebates Paid by Manufacturers: Initial Memorandum, Implementation of Section 1847A(i) of the Social Security Act, and Solicitation of Comments<sup>151</sup>, released on February 9, 2023.

In addition, we proposed to apportion the discarded drug refund when there is more than one manufacturer for a refundable drug, using the proportion of billing unit sales, expressed as a percentage, attributed to each NDC (at the NDC-11 level) assigned to the billing and payment code for such refund quarter. The number of billing unit sales for each NDC would be the reported number of NDCs sold (as submitted in the ASP report to CMS each quarter) multiplied by the billing units per package for such NDC. We proposed that the refund amount attributed to such NDCs for which the manufacturer is liable would be the amount equal to the estimated amount (if any) by which:

- The product of:

---

<sup>151</sup> <https://www.cms.gov/files/document/medicare-part-b-inflation-rebate-program-initial-guidance.pdf>.

++ The total number of units of the billing and payment code for such drug that were discarded during such quarter;

++ The percentage of billing unit sales of the applicable code attributed to the NDC; and

++ The amount of payment determined for such drug or biological under section 1847A(b)(1)(B) or (C) of the Act, as applicable, for such quarter;

- Exceeds an amount equal to the product of:

++ The applicable percentage of the estimated total allowed charges for such a drug (less the amount paid for packaged drugs) during the quarter; and

++ The percentage of billing unit sales of the applicable code attributed to the NDC.

For example, if a billing and payment code for a refundable drug includes three NDCs, each from a different manufacturer as shown in Table 21, there were 3,000 units discarded during the refund quarter out of 21,000 total billing units of a billing and payment code administered, the payment limit amount for the refundable drug was \$50.00 per billing unit, the applicable percentage was 10 percent, and the estimated total allowed charges for the refundable drug during the refund quarter was \$1.05 million, the proposed calculation for the refund amount owed by Manufacturer 1, which reported 23.81% of billing unit sales for the billing and payment code for the refund quarter, would be as follows:  $(3,000)(23.81\%)(\$50) - (21,000)(10\%)(23.81\%)(\$50) = \text{refund amount of } \$10,714.50$ .

**TABLE 21: Example of Proportion of Sales Calculation when there are Multiple Manufacturers for a Refundable Drug**

NDC	Manufacturer	Refund Quarter Sales (billing units)	Proportion of Sales (percent)
12345-6789-01	Manufacturer 1	5,000	23.81%
23456-7890-01	Manufacturer 2	6,000	28.57%
34567-8901-01	Manufacturer 3	10,000	47.62%
	<b>TOTAL:</b>	21,000	100%

Using this example and following the proposed calculation, the report to manufacturers, discussed above in section III.A.3.b of this final rule, would include: (1) the total number units of the billing and payment code of such drug attributed to the manufacturer's NDC assigned to the

billing and payment code of the refundable drug that were discarded during such quarter, if any; and (2) the refund amount for which the manufacturer of that NDC is liable under section 1847A(h)(3) of the Act. We proposed that this method of calculation apply beginning with calendar quarters in CY 2023 included in the initial refund report, which, as described in section III.A.3.b in this final rule, we are finalizing be sent no later than December 31, 2024. We proposed that this method of calculation will be done for new refund quarters and updated refund quarters.

We proposed to revise § 414.940 by adding a new paragraph (c)(4) to reflect the above proposed method of calculation of the refund amount attributed to a NDC when there are multiple manufacturers.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Two commenters expressed support of the proposed methodology for calculating the refund for drugs with multiple manufacturers.

*Response:* We thank the commenters for their support.

*Comment:* Two commenters opposed the proposed methodology because they claim that the calculation could result in a manufacturer owing a discarded drug refund even if the amounts discarded from the manufacturer's refundable drugs did not exceed the applicable percentage. One commenter urged CMS to ensure that Part B claims data correctly indicate the specific products prescribed and administered to patients. Commenters stated that each manufacturer's refund liability should only be determined based on that manufacturer's product. The commenters also stated that the statute precludes our methodology, as it states that "a refund...[shall be] equal to the amount specified in paragraph (3) for such drug for such quarter." The commenters state that the discarded drug refund should be calculated at the NDC-11 level if a refund is due for a refundable drug when there are multiple manufacturers of such drug. One commenter states that the plain language of section 1847A(h) of the Act requires CMS to

implement a process that precisely identifies refund liability based on each manufacturer's refundable drug. In such a case, CMS should develop a process to require reporting of NDC-11s on the CMS-1500 and 837P claim forms and reject as incomplete any forms without required NDC-11s. Another commenter urged CMS to assure that refund reports are accurate with respect to manufacturers that owe them.

*Response:* We thank commenters for their input. In considering the issues raised by commenters about manufacturers owing refunds that they assert should be the responsibility of other manufacturers, we considered the proposed methodology for calculating the refund using actual data. To that end, we identified 12 refundable drugs with multiple manufacturers and found that in a vast majority of these cases, each manufacturer is packaging the product in the same sized container(s). We found one instance where a repackager manufactures two of the four package sizes available from the other manufacturer of the refundable drug, but the repackager did not produce any product sizes that were not also produced by the other manufacturer.

Based on this analysis showing that the available product size(s) are typically the same or very similar between manufacturers (when there is more than one manufacturer for a refundable drug), it is unlikely that the discarded amounts from such package sizes would be significantly different. In addition, we do not have data that certain NDCs of a refundable drug from one manufacturer would be furnished to Medicare beneficiaries more often than another manufacturer when such a drug has more than one manufacturer. Therefore, we are not convinced that the proposed methodology for calculating the refund would result in one manufacturer owing any significant amount of refund that would have been owed by the other manufacturer because we expect discarded amounts to be the same in nearly all instances in which a product is used from the same size containers (with same labeled amount of drug) regardless of who is manufacturing the product. For example, we would expect a vial containing 1 mg of a drug to have, on average, the same discarded amount as another vial containing 1 mg

of the same drug (under the same approval, such as an NDA or BLA), even if it is from a different manufacturer. As this policy is operationalized, CMS will monitor report information for refundable drugs with multiple manufacturers. We welcome input and data from manufacturers and may address this issue further in future rulemaking, if appropriate.

We thank the commenter for suggesting the requirement that NDC-11 should be required on claims forms to facilitate accurate calculation of the refund, however, this is out of the scope of this proposal.

After reviewing public comments, we are finalizing the revision to § 414.940 by adding (c)(4), as proposed, to reflect the method of calculation of the refund amount attributed to a NDC when there are multiple manufacturers of a refundable drug. We clarify that the sales quarter of the ASP data used for this method of calculation will align with the dates of service for a new refund quarter or updated refund quarter. For example, calculation of refunds for the first calendar quarter of 2023 will use ASP data that reflect sales from that quarter. This data is reflected in the July ASP Drug Pricing File because of the two-quarter lag between the sales quarter and when that data is reflected in the ASP Drug Pricing File.

### (3) Increased Applicable Percentage for Drugs with Unique Circumstances

Section 1847A(h)(3)(B)(ii) of the Act provides that, in the case of a refundable drug that has unique circumstances involving similar loss of product as that described in section 1847A(h)(8)(B)(ii) of the Act, the Secretary may increase the applicable percentage otherwise applicable as determined appropriate by the Secretary. In the CY 2023 PFS final rule (87 FR 69727 through 69731), we adopted an increased applicable percentage of 35 percent for drugs reconstituted with a hydrogel and with variable dosing based on patient-specific characteristics (§ 414.490(d)(1)). We have identified only one drug, Jelmyto<sup>®</sup> (mitomycin for pyelocalyceal solution), with such unique circumstances. We stated in that final rule that we recognize that there are drug products that may indeed have other unique circumstances, and that an increased applicable percentage for these products would have to be determined through future notice and

comment rulemaking, as required by the statutory provision. We stated that we planned to collect additional information about drugs that may have unique circumstances along with potential increased applicable percentages that might be appropriate for such drugs, and to collect additional information about a process to identify unique circumstances based on manufacturer input. We explained that we would revisit additional increased applicable percentages for drugs that have unique circumstances, and a process to identify such circumstances, through future notice and comment rulemaking. To that end, we hosted a town hall meeting on February 1, 2023 to discuss what criteria would be appropriate to determine whether a refundable drug has unique circumstances, and whether a categorical approach (that is, unique circumstances that apply to more than one drug), drug-by-drug approach, or a hybrid of these two approaches should be used for determining drugs for which an increased applicable percentage is appropriate.

In the CY 2024 PFS proposed rule (88 FR 52391 through 52395) we explained that after considering input from interested parties provided at the town hall and in subsequent meetings, we proposed a hybrid approach to determining when it is appropriate to increase the applicable percentage for a drug with unique circumstances. First, we proposed two unique circumstances along with proposed increased applicable percentages and, secondly, we proposed an application process so manufacturers may request that CMS consider whether an increased applicable percentage would be appropriate for a particular drug in light of its unique circumstances (and if an increased applicable percentage is considered appropriate it would then be proposed in future notice-and-comment rulemaking).

We noted that we discussed in the CY 2023 PFS final rule and further at the town hall, the many requests from interested parties for CMS to increase applicable percentages (defined at § 414.940(c)(3) as 10 percent, except where an increased applicable percentage is applied in paragraph (d) of that section) for drugs packaged with small vial fill amounts or low-volume products (generally, those with a fill amount less than 1 mL). These parties stated that, for certain

drugs, the small volume of drug contained in the vial (as identified on the package or FDA labeling) often represents the minimum volume necessary to safely and effectively prepare and administer the prescribed dose. Certain labeled amounts that are unused and discarded include amounts remaining in the syringe hub, amounts remaining in the syringe that are not part of the prescribed dose, amounts left in the vial that cannot be removed (such as drug adhering to the side of the vial or pooling around the vial stopper), and amounts left in the vial when it contains enough drug for two administration attempts.

We agreed that such drugs have unique circumstances, because certain FDA-labeled amounts on the vial or package are unused and discarded after administration of the labeled dose and these amounts are not available to be administered. The unique circumstances described for such drugs are similar to loss of product from filtration described in section 1847A(h)(8)(B)(ii) of the Act because in both circumstances, such amounts lost are amounts that are not part of the recommended dose and are not available to be administered to the patient (one being loss due to labeled amounts remaining in the filter and the other due to labeled amounts remaining in other areas such as the vial or syringe).

Since not all drugs with small fill volumes have certain labeled amounts that are unused and discarded, we believed more specific criteria are required to identify certain drugs with unique circumstances in this case. For example, if a drug is available as 0.8 mL in a prefilled syringe, the total volume in the presentation is small, however, the entire labeled amount in the syringe may be administered to the patient as part of a labeled dose; the unique circumstances described above only occur when the volume of the labeled dose that is withdrawn from a vial or container is very small and there is a labeled amount that is unused and discarded and not available for administration (based on drugs currently available in the market, we have observed this to occur with doses contained within less than 0.4 mL). Therefore, we proposed an increased applicable percentage for drugs with a “low volume dose.” We considered a low volume dose to be a dose of a drug for which the volume removed from the vial containing the

labeled dose does not exceed 0.4 mL (which is about 8 drops of liquid). We proposed to revise § 414.902 and define a low volume dose to be a labeled dose (based on FDA-approved labeling) that is contained within no more than 0.4 mL when removed from the vial or container. For example, if a labeled dose is 4 mg and a vial contains a suspension with a concentration of 40 mg/mL, the labeled dose will be contained in 0.1 mL, which will not exceed 0.4 mL and will, therefore, be considered a low volume dose. We proposed that this definition of low volume dose apply even if the drug is further diluted after removal from the vial and prior to administration because, even if the dose is further diluted, a dose withdrawn from the vial and diluted would still have the same physical constraints as a dose that was not diluted, and those constraints would necessitate the loss of product as described in the previous paragraph. In addition, we proposed that for a drug to meet these unique circumstances, all labeled doses of the drug would be low volume doses. We explained, as proposed, this definition would not affect the determination of units as defined at section 1847A(b)(2)(B) of the Act and codified at § 414.802, and we note that the statutory definition of unit is exclusive of any diluent without reference to volume measures pertaining to liquids. We also explained that the proposed definition of low volume dose would only be applied for the determination of whether a higher applicable percentage is warranted for a drug.

We proposed a two-tiered increased applicable percentage for drugs with low volume doses, because the percentage that is unused and discarded for these drugs decreases as the volume of the dose increases. We proposed that, for drugs with labeled doses contained within 0.1 mL or less when removed from the vial or container, the applicable percentage be increased to 90 percent. We proposed 90 percent applicable percentage for this tier because certain drugs with low volume doses of 0.1 mL or less have up to 90 percent of the labeled amount that is unused and discarded and not part of the labeled dose available to be administered.<sup>152,153</sup> We

<sup>152</sup> [https://www.accessdata.fda.gov/drugsatfda\\_docs/label/2021/211950Orig1s000correctedlbl.pdf](https://www.accessdata.fda.gov/drugsatfda_docs/label/2021/211950Orig1s000correctedlbl.pdf).

<sup>153</sup> [https://www.accessdata.fda.gov/drugsatfda\\_docs/label/2007/022223,022048lbl.pdf](https://www.accessdata.fda.gov/drugsatfda_docs/label/2007/022223,022048lbl.pdf).

explained that we did not propose to add an additional 10 percent to this number as we did in the case of hydrogel, as discussed in the CY 2023 final rule (see 87 FR 69729), because, generally, we do not believe it would be appropriate for any product to have an applicable percentage of 100 percent. Such an applicable percentage would, in effect, exclude drugs from the refund liability altogether. We believe it would be inappropriate to effectively expand the list of exclusions described in section 1847A(h)(8)(B) of the Act by proposing an increased applicable percentage of 100 percent to drugs not expressly excluded in statute. However, we considered whether some additional percentage might be appropriate in this case. We solicited comment on whether an additional percentage above 90 percent (but less than 100 percent) is warranted for drugs with low volume doses of 0.1 mL or less.

As we discussed in the CY 2024 PFS proposed rule (88 FR 52392), in the second tier of the low volume dose unique circumstances, we proposed that for drugs with labeled doses contained within 0.11 – 0.4 mL, the applicable percentage be increased to 45 percent. Certain drugs currently marketed that fall into this category have up to 35.6 percent of the labeled amount that is unused and discarded and not part of the labeled dose to be administered. In the same manner as the applicable percentage for the hydrogel finalized in the CY 2023 PFS final rule, we proposed to add the discarded amount percentage to the applicable percentage of 10 percent that is used for drugs without unique circumstances (that is, 35.6 percent plus 10 percent), and we proposed to round that number to an applicable percentage of 45 percent for this tier.

In summary, we proposed to increase the applicable percentages for drugs with a low volume dose (a dose of a drug for which the volume removed from the vial or container containing the labeled dose does not exceed 0.4 mL). Specifically, we proposed that:

- Refundable drugs with labeled doses that are contained within 0.1 mL or less when removed from the vial or container have an increased applicable percentage of 90 percent and;

- Refundable drugs with labeled doses that are contained within 0.11 – 0.4 mL when removed from the vial or container have an increased applicable percentage of 45 percent.

To date, we have identified certain drugs that would meet the proposed criteria for such unique circumstances and would have a proposed increased applicable percentage of 90 percent, including Triesence® (triamcinolone acetonide injection, suspension) and Xipere® (triamcinolone acetonide injection, suspension), along with some other ophthalmic drugs with such low volume doses that do not include all of the target fill volume in the labeled amount (that is, those that are labeled such that the low volume dose is equal to the labeled amount). We also noted that, although Susvimo™ (ranibizumab injection, solution) would qualify for the proposed 90 percent applicable percentage, it is excluded from the definition of refundable drug due to filtration requirements as discussed in the CY 2023 PFS final rule (87 FR 69723 through 69724). To date, we have identified certain drugs that would meet the proposed criteria for such unique circumstances and would have a proposed increased applicable percentage of 45 percent, including Xiaflex® (collagenase clostridium histolyticum) and Kimmtrak® (tebentafusp injection, solution, concentrate).

In the CY 2023 PFS proposed rule (88 FR 52392 through 52393), we discussed that the second proposed unique circumstances is for orphan drugs administered to a low volume of unique beneficiaries, which we proposed to be fewer than 100 unique Medicare fee-for-service beneficiaries per calendar year (hereafter referred to as rarely utilized orphan drugs); we proposed an increased applicable percentage of 26 percent for drugs with these unique circumstances. We explained that there is a higher probability that the percentage of discarded amounts for rarely utilized orphan drugs may not have a normal statistical distribution from quarter to quarter, which could disproportionately affect manufacturers of such drugs by resulting in highly variable refund amounts as compared with the variability of drugs administered to a higher number of beneficiaries. This is evidenced by our analysis of quarterly discarded drug data reported using the JW modifier of 30 refundable drugs identified in the 2021

Medicare Part B Discarded Drug Units data with greater than 10 percent units discarded<sup>154</sup>, three of which were orphan drugs furnished to a patient population of less than 100 unique fee-for-service Medicare beneficiaries in CY 2021: J9262 (*omacetaxine mepesuccinate*); J9269 (*tagraxofusp-erzs*); and J0223 (*givosiran*). For these drugs identified in the 2021 Medicare Part B Discarded Drug Units data, we analyzed JW modifier data for quarters in 2021 and 2022, which showed that the average standard deviation of the percentage of units discarded across quarters for the rarely utilized orphan drugs is 6.21 percent, compared with an average standard deviation for all other refundable drugs (with a percentage of discarded units over 10 percent in 2021) of 2.35 percent. In other words, the standard deviation from the mean discarded drug percentage for rarely utilized orphan drugs is 2.64 times greater than that of the group of refundable drugs with larger patient populations and claims volume. In addition, of the three aforementioned drugs, the most public data is associated with J9262, which shows that the percent discarded units for J9262 was 23.65 percent, 19.96 percent, and 30.98 percent in 2019, 2020, and 2021, respectively. Because of this substantial statistical variation from quarter to quarter for such drugs, we believe it would be difficult to optimize the presentation of the drug to consistently minimize the discarded amounts to less than 10 percent given the small number of patients receiving the drug. We considered the higher percentage of unused and discarded amounts from such drugs as unavoidable loss due to both the low volume of unique beneficiaries receiving the drug contributing statistically higher variability in discarded amounts. Also, due to the low numbers of patients available to study for rare disease, it may be more difficult to determine the most efficient vial size for the patient population who receive the drug post-marketing. We stated this is similar to the loss of product due to filtration described in section 1847A(8)(B)(ii) of the Act because the loss is unavoidable in both circumstances. In the case of filtration described in statute, the loss is unavoidable because certain amounts of product will be

---

<sup>154</sup> <https://data.cms.gov/summary-statistics-on-use-and-payments/medicare-medicaid-spending-by-drug/medicare-part-b-discarded-drug-units>

left within the filter and unavailable for administration; in the case of rarely utilized orphan drugs, the loss is unavoidable because of the variability of potential doses (and low number of patients receiving the drug) leading to an inability to develop a package size that will result in a consistent average percentage of discarded units (as evidenced in the analysis above in this section). In contrast, drugs administered to a larger number of beneficiaries per year have a more consistent average percentage discarded from quarter to quarter, as evidenced by the lower standard deviation in our analysis, and we believe manufacturers are able to develop availability of the drug accordingly to minimize discarded amounts.

We proposed that unique circumstances of rarely utilized orphan drugs have the following characteristics: (1) a drug designated under section 526 of the Federal Food, Drug, and Cosmetic Act (FD&C Act) as a drug for a rare disease or condition; and (2) that is furnished to fewer than 100 unique Medicare fee-for-service beneficiaries per calendar year. We proposed that the number of beneficiaries receiving such drug in the calendar year would correspond with the refund quarter. For example, for refund quarters in 2023, we would use the number of beneficiaries receiving the drug in the 2023 calendar year to determine if the unique circumstances and increased applicable percentage would apply. Data of number of beneficiaries would be analyzed at the same time as the JW modifier data for the given calendar quarters. To meet these unique circumstances, we proposed that the drug be designated an orphan-drug under section 526 of the FD&C Act for a rare disease or condition (or diseases or conditions) and be approved by the FDA only for a designated rare disease or condition (or diseases or conditions). That is, all FDA-labeled indications for the drug must be orphan indications, and if the drug has one or more indications that are for conditions that are not designated by the FDA to be a rare disease or condition, the drug would not be considered to have unique circumstances of rarely utilized orphan drugs. In addition, we proposed that the drug would meet these unique circumstances and that the increased applicable percentage would

apply for as long as the drug meets these conditions, even after any orphan drug exclusivity end date.

The increased applicable percentage of 26 percent that we proposed is appropriate because the standard deviation from the mean discarded drug percentage for rarely utilized orphan drugs is 2.64 times greater than that of the larger group of refundable drugs, and multiplying the applicable percentage referenced in paragraph (h)(3)(B)(i)(II) by how many times greater the variance is (in other words, 10 percent times 2.64) equals 26.4 percent, which we proposed to round to the nearest percentage.

We proposed that we will identify drugs that have unique circumstances of low volume doses and rarely utilized orphan drugs in the report sent to manufacturers and apply the proposed increased applicable percentages based on these unique circumstances proposals. If a manufacturer believes that the incorrect applicable percentage was applied to the refund calculation, the manufacturer may submit a dispute regarding the calculation by submitting an error report (see § 414.940(e)).

We proposed to codify these applicable percentages at § 414.940(d). Specifically, we proposed to add applicable percentages for low volume doses by creating new paragraphs (d)(3) and (4); and we proposed to add applicable percentage for orphan drugs administered to fewer than 100 unique beneficiaries per calendar year in new paragraph (d)(5). We proposed that these applicable percentages apply beginning with the initial refund report that we proposed to be sent no later than December 31, 2024.

We solicited comments on the proposed unique circumstances. Specifically, we solicited comment on the proposed volume (mL) tiers for drugs with low volume doses along with the proposed increased applicable percentages and whether an additional percentage above 90 percent (but less than 100 percent) is warranted for drugs with low volume doses of 0.1 mL or less. We also solicited comment on the increased applicable percentage of 26 percent for rarely utilized orphan drugs.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Several commenters supported the proposed unique circumstances and increased applicable percentages. One commenter expressed general support for the expansion of the scope of drugs that may be considered to have unique circumstances and be considered for an increased applicable percentage.

Several commenters expressed support for the proposed unique circumstances and increased applicable percentage for small volume drugs, some specifically supporting the increase applicable percentage of 90 percent for drugs with low volume doses of 0.1 mL or less and others specifically supporting the increased applicable percentage of 45 percent for drugs with low volume doses of 0.11—0.4 mL. One commenter stated that low volume dose drugs are particularly susceptible to having unusable product that remains after the product is administered. This commenter also expressed support of the tiered increased applicable percentage and agreed that the percentage of unusable amounts decreases as product volume increases. Another commenter added that without an increased applicable percentage for small volume drugs, as proposed, the discarded drug refund policy would lead to underdosing of anti-vascular endothelial growth factor (anti-VEGF) therapies used to treat age-related macular degeneration (AMD), diabetic retinopathy, and other vision-threatening retinal diseases. One commenter expressed support for the clarification that Susvimo™ (ranibizumab injection for intravitreal use via ocular implant) would have a proposed applicable percentage of 90 percent if it were not already excluded due to filtration requirements.

Several commenters support the proposed increased applicable percentage for rarely utilized orphan drugs. Other commenters stated they generally support the proposal regarding orphan drugs and the increased flexibility of the proposal. Two commenters expressed support for the proposed increased applicable percentage of 26 percent and agree that rarely utilized orphan drugs possibly have high discarded amounts due to limited manufacturing capability.

*Response:* We thank these commenters for their support of these proposals.

*Comment:* One commenter stated that drug low volume doses with 0.1 mL or less should have an increased applicable percentage of 100 percent, which would effectively exempt such drugs from liability for any discarded drug refund. The commenter stated, to the extent that the purpose of this provision is to encourage manufacturers to adopt packaging that is appropriately sized to the dose, drugs with low volume doses of 0.1 mL or less have already met the objective to minimize discarded amounts. Another commenter requested an increased applicable percentage of 100 percent for drugs with a volume of 1 mL or less. This commenter stated that discarded drug modifiers add administrative burden for intravitreal, single-use drugs.

*Response:* As discussed above in this section, we do not believe it would be appropriate for any product to have an applicable percentage of 100 percent. Such an applicable percentage would, in effect, exclude drugs from the refund liability altogether. We believe it would be inappropriate to effectively expand the list of exclusions described in section 1847A(h)(8)(B) of the Act by proposing an increased applicable percentage of 100 percent to drugs not excluded in statute. With regard to the burden of the JW and JZ modifiers, we stated in the CY 2023 PFS final rule (87 FR 69724) that even if a drug is excluded from the definition of refundable drug (and not subject to refunds), for example, multiple source drugs, claims for such drugs furnished from a single-dose container are still required to use the JW and JZ modifiers in accordance with the policy. Therefore, even if CMS were to increase the applicable percentage of a drug to 100 percent, the drug would still be subject to the JW and JZ modifier policy and the increased applicable percentage would not relieve administrative burden.

*Comment:* Several commenters requested CMS clarify how we determined the 100-beneficiary cutoff for rarely utilized orphan drugs and an increased applicable percentage of 26 percent for drugs with these unique circumstances. One commenter stated that the qualifying criteria for rarely utilized orphan drugs is flawed and lacking details. Another commenter stated that the rationale used for establishing unique circumstances for rarely utilized orphan drugs

could be applied to orphan drugs that treat more than 100 Medicare fee-for-service beneficiaries. One commenter noted that our initial proposal was limited to the 30 drugs that had discarded drug amounts exceeding 10 percent in each of 2019, 2020 and 2021. One commenter explained that the ten billing and payment codes for drugs with less than 100 beneficiaries are primarily prescribed to treat diseases for patients under the age of 65. Further, the commenter pointed out two of the three rarely utilized orphan drugs referenced in the proposed rule had a majority of patients who were non-elderly in their studies.

Three commenters asked that CMS consider increasing the less than 100-beneficiary cutoff for a drug to qualify for the unique circumstance. One commenter requested that we increase the beneficiary threshold to 500 beneficiaries a year while another commenter suggested increasing the threshold to 1,000 beneficiaries. One commenter supports a more holistic orphan disease unique circumstances and thresholds in line with current definitions of rare and ultra-rare diseases.

Some commenters ask that we consider if an increase that is higher than the proposed 26 percent in the applicable percentage for rarely utilized orphan drugs may be necessary. One commenter suggested CMS exempt orphan drugs with a single indication from discarded drug refund liability. The commenter explained that in 2022, these drugs accounted for 1 percent of total Medicare FFS, an amount that doesn't justify the high proportion of the total discarded refund liabilities that will be imposed on orphan drugmakers. This commenter also proposed that, alternatively, CMS could increase the applicable percentage to 35 percent (along with a beneficiary increase to 1,000 beneficiaries as described above in this section).

*Response:* For unique circumstances of rarely utilized orphan drugs, the 100-beneficiary threshold was a result of an analysis of quarterly discarded drug data from 2021 and 2022. We explained in the proposed rule that this analysis showed that there is a higher probability that the percentage of discarded amounts for rarely utilized orphan drugs may not have a normal statistical distribution from quarter to quarter, which could disproportionately affect

manufacturers of such drugs by resulting in highly variable refund amounts as compared with the variability of drugs administered to a higher number of beneficiaries. The increased variability of the percentage of discarded amounts from quarter to quarter was not observed for orphan drugs administered to more than 100 unique beneficiaries per year. We explained that the average standard deviation of the percentage of units discarded across quarters for rarely utilized orphan drugs is 6.21 percent, compared with an average standard deviation for all other refundable drugs (with a percentage of discarded units over 10 percent in 2021) of 2.35 percent.

The justification for the unique circumstances in rarely utilized orphan drugs hinges on the variability of percentage of discarded amounts from quarter to quarter (not the actual percentage discarded itself). The threshold of 100 beneficiaries per year for the unique circumstances of rarely utilized orphan drugs is supported by this sharp decrease in variability of discarded percentages when the drug is administered to more than 100 unique beneficiaries. Such variability from quarter to quarter is not observed when the number of beneficiaries receiving the drug exceeds 100 per year. For example, the percentage of discarded amounts for available quarters through the end of CY 2022 for Elzonris® (tagraxofusp-erzs), which was administered to 19 unique beneficiaries in 2021, ranges from a low of 6.55 percent to a high of 34.52 percent per quarter (a spread of 27.97 percent). In contrast, the percentage of discarded amounts for Folutyn® (pralatrexate), which was administered to 155 unique beneficiaries in 2021, ranges from a low of 9.04 percent to a high of 14.87 percent per quarter (spread of 5.83 percent). We evaluated several other orphan drugs furnished to more than 100 beneficiaries and all had low variability of the percentage discarded from quarter to quarter.

The statutory provision requires that unique circumstances be similar to the loss of product due to filtration described in section 1847A(8)(B)(ii) of the Act. We stated in the proposed rule that rarely utilized orphan drugs have unique circumstances similar to filtration described in section 1847A(8)(B)(ii) of the Act because the loss is unavoidable in both circumstances. We stated that in the case of rarely utilized orphan drugs, the loss is unavoidable

because of the variability of potential doses (and low number of patients receiving the drug) leading to an inability to develop a package size that will result in a consistent average percentage of discarded units. We are not convinced by commenters that an alternative threshold of 500 or 1,000 beneficiaries more closely ties the unique circumstances to filtration described in section 1847A(8)(B)(ii) of the Act.

For justification of increased applicable percentage of 26 percent, we explained in the proposed rule that the standard deviation from the mean discarded drug percentage for rarely utilized orphan drugs is 2.64 times greater than that of the group of refundable drugs with larger patient populations and claims volume. We multiplied the mean discarded drug percentage by the applicable percentage of drugs without unique circumstances (that is, 10 percent) to arrive at an increased applicable percentage of 26 percent. Commenters did not provide additional justification for their suggestions for an alternative increased applicable percentage, and we are not convinced by these comments that an alternative increased applicable percentage different than the proposed 26 percent is appropriate for these unique circumstances.

*Comment:* One commenter stated that there is a risk that basing eligibility for being considered a rarely utilized orphan drug on a single year could create unwarranted volatility as to whether the unique circumstances apply in any given calendar year. The commenter requested that the 100-beneficiary cutoff for the qualification of a drug to be considered to have unique circumstances of a rarely utilized orphan drug be determined using a 3-year rolling average.

*Response:* We agree with the commenter that a 3-year rolling average is reasonable to determine eligibility for having the unique circumstances of rarely utilized orphan drugs along with the increased applicable percentage for these unique circumstances because this would prevent volatility for determining whether these unique circumstances apply to an orphan drug that is nearing the 100-beneficiary threshold. Therefore, in this final rule, we are finalizing a modification to our proposal such that for the purposes of determining whether a drug is a rarely utilized orphan drug for which the applicable percentage would be 26 percent, the drug will have

met the condition of being furnished to fewer than 100 unique Medicare fee-for-service beneficiaries per calendar year if it meets one of the two conditions below:

(1) the number of unique beneficiaries to whom the drug is furnished is less than 100 during the calendar year in which the refund quarter occurs; or

(2) the average number of unique beneficiaries per year for the calendar year in which the refund quarter occurs and the 2 previous calendar years (3-year average) is less than 100. In the case that a drug for which at least 2 but less than 3 years of data available, we will calculate the average to determine whether the 100-beneficiary threshold is met.

*Comment:* One commenter asked that we allow manufacturers to provide feedback for potential future amendments to the criteria for these unique circumstances for orphan drugs. The commenter stated that there are manufacturers of orphan drugs with low patient volume that have similar circumstances to those of the three rarely utilized orphan drugs identified in the proposed rule. Specifically, the commenter stated that manufacturers of other orphan drugs have difficulty financially justifying creation of new vial sizes. One commenter requested that we continue to periodically reassess whether the 100 unique beneficiary threshold is appropriate as new rare disease therapies are developed.

*Response:* We welcome additional engagement on future policy development regarding unique circumstances of rarely utilized orphan drugs and their associated increased applicable percentage. We plan to continue monitoring JW and JZ modifier data and variability of the percentage discarded from quarter to quarter for orphan drugs to inform potential future policy development.

*Comment:* One commenter recommended that CMS clarify how we determine whether a particular drug is a low volume dose. The commenter stated that clinicians administering drugs may not know the precise amount of product contained in the vial or other container, in part because the FDA label often does not indicate such amount. Therefore, the commenter urged CMS not to depend on the clinician's own interpretation to determine if a drug has a low volume

dose. Instead, the commenter suggested that CMS should maintain a list of drug products with low-volume doses, and CMS should allow manufacturers to submit information to CMS—including information not contained in the FDA label, when necessary—to demonstrate that the low-volume threshold is met. Another commenter requested we establish a process for manufacturers to request and receive confirmation before a calendar year begins whether their product has unique circumstances with an increased applicable percentage. The commenter stated that such a process would give manufacturers necessary notice whether a product was considered to have unique circumstances.

*Response:* We agree with commenters that CMS should communicate which drugs have been identified as meeting criteria for low volume dose unique circumstances. In the proposed rule, we stated that we would consider a low volume dose to be a dose of a drug for which the volume removed from the vial containing the labeled dose does not exceed 0.4 mL. In addition, we proposed that for a drug to meet these unique circumstances, all labeled doses of the drug must be low volume doses. Although all the necessary information is available in the FDA-approved labeling to determine if a drug has a low volume dose, we agree that this information may not be explicitly stated in FDA-approved labeling, and we agree that maintaining a list of drugs identified as having low volume doses will help provide clear communication of which drugs have these unique circumstances. Therefore, we intend to publish a list of drugs CMS has identified as having low volume doses and will have an increased applicable percentage no later than December 31, 2023, and intend to update the list no later than December 31 of each subsequent year. This would allow adequate time for manufacturers to evaluate the list prior to the deadline of February 1 for the application process for increased applicable percentage.

Similarly, we considered providing similar advance notice for rarely utilized orphan drug unique circumstances. However, the number of beneficiaries receiving the drug in the calendar year in which the refund quarter occurs (or the 3-year or 2-year average as discussed above in this section) will not be known until data is analyzed for the report. To provide information in

advance, CMS intends to communicate a list of drugs that would have met conditions for having unique circumstances of rarely utilized orphan drugs for CY 2022 no later than December 31, 2023. This list would be provided as informational only and may not necessarily reflect the same list of drugs that have unique circumstances of rarely utilized orphan drugs when the data is analyzed for the initial refund report. Each year, CMS will update the list of drugs that have unique circumstances of rarely utilized orphan drugs with those that met such conditions on the previous year's report. For example, CMS will provide the list of drugs with such unique circumstances for the initial report (containing calendar quarters in 2023) no later than December 31, 2024.

Finally, in the proposed rule, we stated that we will identify drugs that have unique circumstances of low volume doses and rarely utilized orphan drugs in the report sent to manufacturers and apply the increased applicable percentages based on these unique circumstances. If a manufacturer believes that the incorrect applicable percentage was applied to the refund calculation, the manufacturer may submit a dispute regarding the calculation by submitting an error report (see § 414.940(e)).

After consideration of public comments, we are finalizing revisions to § 414.902 to add the definition "low volume dose" and § 414.940(d) to add the increased applicable percentage of 90 percent for drugs with a low volume dose contained within 0.1 mL or less and 45 percent for a drug with a low volume dose contained within 0.11 mL up to 0.4 mL, as proposed. We also are finalizing as proposed at § 414.940(d) the increased applicable percentage of 26 percent for a drug designated an orphan drug under section 526 of the FD&C Act for a rare disease or condition (or diseases or conditions), approved by the FDA only for one or more indications within such designated rare disease or condition (or diseases or conditions) and furnished to fewer than 100 unique beneficiaries per calendar year. We are adding that an average of fewer than 100 beneficiaries per calendar year for the most recent 3 years (or 2 years, in certain circumstances) as discussed above in this section would be considered to have such unique

circumstances.

#### (4) Application Process for Increased Applicable Percentages

In the CY 2024 PFS proposed rule (88 FR 52393 through 52395), we discussed our proposal to establish an application process through which manufacturers may request that we consider an individual drug to have unique circumstances for which an increased applicable percentage is appropriate. We explained that manufacturers could benefit from a formal process through which they can provide information, including that which may not be publicly available, and therefore, not known to us, in order to request an increase in their refundable drug's applicable percentage and provide justification for why the drug has unique circumstances for which such an increase is appropriate, including in the case of a drug with an applicable percentage that has already been increased by virtue of its unique circumstances.

We proposed that, to request CMS consider increasing the applicable percentage of a particular refundable drug, a manufacturer must submit the following: (1) a written request that a drug be considered for an increased applicable percentage based on its unique circumstances; (2) FDA-approved labeling for the drug; (3) justification for the consideration of an increased applicable percentage based on such unique circumstances; and (4) justification for the requested increase in the applicable percentage. Such justification could include documents, such as (but not limited to) a minimum vial fill volume study or a dose preparation study. We proposed that in evaluating requests for increased applicable percentages, we would review the documentation referenced above for evidence that amounts of drug identified in the FDA-approved package or labeling has similar loss of product as that described in paragraph section 1847A(8)(B)(ii) of the Act.

We stated that section 1847(h)(3)(B)(ii) of the Act requires that any increase to applicable percentages for refundable drugs is to be made through notice-and-comment rulemaking. Therefore, we proposed that applications for individual applicable percentage increases be submitted in a form and manner specified by CMS by February 1 of the calendar

year prior to the year the increased applicable percentage would apply (for example, applications for increased applicable percentages effective January 1, 2025, will be due to CMS by February 1, 2024). We proposed to discuss our analyses of applications in the PFS rulemaking immediately following the application period, and to communicate in the rule whether we consider the drug to have unique circumstances that warrant an increased applicable percentage. We would include proposals, if any, for increased applicable percentages, along with a summary of any applications for which we determined not to propose an increase in the applicable percentage. We proposed to codify this application process for increased applicable percentages in new paragraph § 414.940(e).

We stated that we do not consider the following to be unique circumstances warranting an increased applicable percentage at this time: weight-based doses, body surface area (BSA)-based doses, varying surface area of a wound, loading doses, escalation or titration doses, tapering doses, and dose adjustments for toxicity because we believe manufacturers can optimize the availability of products for these circumstances to limit the percentage of discarded units for a drug, unlike the circumstances of manufacturers of drugs that require filtration during the preparation process, as described in section 1847A(h)(8)(B)(ii) of the Act. FDA draft guidance, titled “Optimizing the Dosage of Human Prescription Drugs and Biological Products for the Treatment of Oncologic Diseases”<sup>155</sup>, states: “Various dose strengths should be available to allow multiple dosages to be evaluated in clinical trials. Perceived difficulty in manufacturing multiple dose strengths is an insufficient rationale for not comparing multiple dosages in clinical trials.” Although optimization of dosage and available product formulations most often occurs prior to marketing a drug, we also observed several instances where the drug formulation availability has been changed and subsequently resulted in a decreased percentage of discarded amounts. For example, Kyprolis<sup>®</sup> (carfilzomib), which is cross-walked to the billing and

---

<sup>155</sup> <https://www.fda.gov/regulatory-information/search-fda-guidance-documents/optimizing-dosage-human-prescription-drugs-and-biological-products-treatment-oncologic-diseases>.

payment code J9047, was available in only one 60-mg single-dose vial size when first approved in 2012<sup>156</sup>. Subsequently, a second 30-mg vial size was approved in 2016<sup>157</sup>, and a third 10-mg vial size was approved in June of 2018<sup>158</sup>. We observed in discarded drug data, based on the JW modifier, that the percentage of discarded units for J9047 was 14.27, 12.68, 5.95, 4, and 3.09 percent in 2017, 2018, 2019, 2020, and 2021, respectively. There is a sharp drop in the percent of discarded units after 2018, which correlates with the introduction of the 10-mg vial. The labeled dose of Kyprolis® is based on the patient’s BSA, there is a dose escalation, there are two different dosage schedules (once weekly and twice weekly) each with differing doses, there are dosage modifications for toxicity that involve dose reductions, and there is a dose reduction for patients with hepatic impairment. With these dose variations taken into consideration, the available vial sizes of the drug allow for the percentage of discarded units to remain well below 10 percent after the introduction of the third vial size.

In addition, we observed that, based on the 2021 discarded drug data<sup>159</sup>, as the number of available package sizes increases, the percent discarded decreases (see Table 22). This example is indicative of ways in which manufacturers can optimize package sizes to reduce the percentage of discarded units in the circumstances listed above.

**TABLE 22: 2021 Discarded Drug Data for Refundable Drugs and Number of Available Package Sizes**

Percent Units Discarded	Number of Refundable Drugs	Percentage of Refundable Drugs with Only One Package Size
> 20%	7	100%
15—19.99%	6	83.33%

<sup>159</sup> <https://data.cms.gov/summary-statistics-on-use-and-payments/medicare-medicaid-spending-by-drug/medicare-part-b-discarded-drug-units>

We solicited comments from interested parties on the application process for increased applicable percentage. Specifically, we solicited comment on what factors we should use in a framework for considering these applications, what factors we should use to assess appropriate increases to applicable percentages, and what types of additional or alternative documentation may help us analyze justifications for increased applicable percentages.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Several commenters expressed approval of the proposed application process for increased applicable percentage, with several adding that the process, if finalized, would provide manufacturers transparency and predictability. One commenter specifically expressed support for the proposal to use minimum vial fill studies or dose preparation studies in CMS' evaluation of whether an increased applicable percentage is appropriate for a refundable drug because such studies examine whether a product contains a greater amount than is necessary to accurately and consistently deliver the labeled therapeutic dose. One commenter expressed support for CMS' engagement with manufacturers in the development of the application process.

*Response:* We thank the commenters for their support.

*Comment:* Several commenters requested CMS maintain flexibility in our approach to reviewing applications for increased applicable percentage and work closely with the medical community as new therapeutics and packaging practices develop. One commenter added that dialogue between CMS and interested parties is important because novel treatments may be ill-suited to the policy design of the discarded drug refund program. One commenter requested that CMS conduct outreach to manufacturers to ensure they are aware of the application process. One commenter requested additional flexibility in the application process by allowing manufacturers to request unique circumstance consideration more frequently than once a year and outside the annual rulemaking process.

*Response:* We thank the commenters for their feedback. We agree that working with the

medical community and other interested parties is important to the implementation of the discarded drug refund program. As the discarded drug refund policy develops, we will continue to rely on feedback from the provider and manufacturer communities. Public input gathered in the CY 2023 PFS rulemaking process, the Discarded Drug Refund Policy Town Hall we hosted on February 1, 2023, and meetings with interested parties provided the basis of the two proposed unique circumstances and the framework for the application process for increased applicable percentages. We plan to issue additional guidance and communications to providers and suppliers prior to the application window for increased applicable percentages taking effect in CY 2025.

*Comment:* One commenter expressed concern that the February 1 deadline for supporting documentation would create a significant lag for consideration and approval of an increased applicable percentage if a drug is approved on or after the deadline. The commenter requested that companies whose drugs are nearing approval prior to the deadline be allowed a fixed supplemental period to submit the FDA-approved label after the deadline. The commenter cited precedent for this with new technology add-on payments (NTAP) applications and the prior annual Healthcare Common Procedure Coding System (HCPCS) coding process before it was transitioned to a quarterly process.

*Response:* We appreciate the commenter's feedback. We are persuaded by the commenter's suggestion that manufacturers whose products have not yet been approved by the FDA should have additional flexibility in completing their application submissions in anticipation of approval prior to the calendar year following the application deadline. To strike a balance between providing maximum flexibility to manufacturers seeking consideration for increased applicable percentages and the necessity that manufacturers possess sufficient information about the dosing and packaging of their product to explain and provide evidence for an unavoidable loss of product that meets the criterion for an increased applicable percentage, we will allow manufacturers to submit applications for increased applicable percentage prior to FDA

approval if the product's application for FDA approval has been accepted by the FDA for review and such documentation of FDA acceptance can be provided to CMS at the time of application for increased applicable percentage prior to the application deadline. Similar to the NTAP submission requirements for technologies that are not already FDA-market authorized during the NTAP application period, we will require manufacturers of drugs that are not FDA-approved to provide documentation to demonstrate that an application has been accepted for review by the FDA (for example, a filing letter) at the time of submission of its application for an increased applicable percentage to CMS. We believe it is important that applicants applying for an increased applicable percentage have an accepted application for FDA review of the product because it increases the likelihood they have sufficiently studied issues related to vial size optimization and minimization of unavoidable drug loss and reduces the risk of using resources to review applications for drugs that will not be sold in the calendar year for which we are considering applicable percentage increases. Additionally, we believe documentation of FDA acceptance of review, such as a filing letter, will provide the clearest and most effective means of documenting that the applicant has submitted a complete request to FDA and therefore we intend to require one such document by February 1 for drugs that are not yet approved. Under the final policy, drugs that do not yet have FDA approval at the time of application for an increased applicable percentage will have three deadlines for their application:

- February 1 for all required documentation other than the FDA-approved label, including documentation of FDA acceptance of the product's application for review;
- August 1 for FDA approval; and
- September 1 for applicants to notify CMS of the product's FDA approval and submit the approved label.

Therefore, we are modifying our proposed policy and finalizing a policy that applicants must submit the following by February 1 of the calendar year prior to the year the increased applicable percentage would apply: (1) a written request that a drug be considered for an

increased applicable percentage based on its unique circumstances; (2) FDA-approved labeling for the drug, or, if the drug is not yet approved, documentation of the FDA acceptance of the application for review; (3) justification for the consideration of an increased applicable percentage based on such unique circumstances; and (4) justification for the requested increase in the applicable percentage. We are also finalizing that a manufacturer that does not have FDA approval for its product by February 1 must receive FDA approval by August 1 and submit the FDA-approved label to CMS by September 1 for its application to be complete and eligible for consideration for an increased applicable percentage based on unique circumstances. This additional 6-month window for FDA marketing authorization is similar to the extended deadline CMS currently allows applicants for NTAP that have not received FDA marketing authorization prior to the NTAP application deadline, generally in mid-October, of the year prior to the beginning of the fiscal year for which the application is being considered. Additionally, a drug that is approved on August 1 or later will not have 18 months or more of claims paid under Part B before the beginning of the calendar year 2 years following the application period, and therefore, manufacturers will have an opportunity to apply for increased applicable percentage and for that increased applicable percentage to be effective prior the end of the 18-month exclusion from the definition of refundable drug (as described in section 1847A(h)(8)(B)(iii) of the Act).

We note that for applicants that do not yet have FDA approval, once the FDA approves a label for the product, certain aspects regarding, for example, vial fill, labeled therapeutic dose, or estimated discarded amounts may change after the time the application for increased applicable percentage was submitted and when the product is FDA-approved. As stated above, we are requiring that applicants notify CMS by September 1 when the product is FDA-approved. At that time, CMS will evaluate the FDA-approved label and compare it with the application for determination of the increased applicable percentage. In the case the approved label is no longer in accord with the submitted justifications, we will consider the submitted justifications as

invalid and the application as both incomplete and ineligible for consideration for a proposed increased applicable percentage. The manufacturer will have an opportunity to apply for an increased applicable percentage for the following year's application cycle.

*Comment:* Several commenters disagreed with the proposed exclusion of weight-based doses, BSA-based doses, varying surface area of a wound, loading doses, escalation or titration doses, tapering doses, and dose adjustments for toxicity as bases for a unique circumstance. Commenters described the challenges involved in achieving consistency of vial sizes for individual patients, such as step-in doses that will vary for a patient as they adjust to treatment, and the identification of optimal vial sizes for these types of drugs. One commenter requested an applicable percentage increase of 10 percent for drugs that are indicated as loading doses as vial sizes are typically selected for subsequent maintenance doses. Commenters added that the introduction of additional vial sizes to limit discarded amounts may be impractical due to great variance in patient needs, and for some manufacturers, economically infeasible. In addition, one commenter stated that example of Kyprolis vial sizes in the proposed rule confirms how long it can take manufacturers to mitigate discarded drug refund liability, as its two additional vial sizes were approved 4 and 6 years after the product's initial approval.

*Response:* We thank the commenters for their comments on the difficulties of reconciling highly varied patient characteristics into a limited set of vial or container sizes, as well as those for drugs with loading doses. While we acknowledge these challenges posed by these circumstances, we do not consider them to be similar to products that require filtration during preparation as described in section 1847A(8)(B)(ii) of the Act because the drug loss in the former cases is not unavoidable. In each case, we believe manufacturers can, with vial size optimization studies, identify a set of container sizes for which less than ten percent of the labeled amount is usable and not necessary for the reliable and safe delivery of the labeled therapeutic dose for all patients, on average. Regarding the economic feasibility of introducing a new vial size or multiple new sizes, we do not have sufficient information about individual

manufacturers' circumstances to address whether introducing new vial sizes or optimizing vial sizes would be economically feasible in each circumstance.

As shown in Table 22 and generally during our analysis of drugs from single-dose containers, a vast majority of single-dose drugs are manufactured in package sizes that are efficient enough to keep the percentage of discarded amounts to less than 10 percent. In the case of Kyprolis, we are not aware of the specific circumstances under which the manufacturer chose to increase the number of vial sizes. Without additional information about the specific circumstances, we cannot speculate on particular business decisions of the manufacturer, when the development of each vial size began, or how long it took for a new vial size to be approved and marketed.

*Comment:* One commenter requested that CMS clarify how long increased applicable percentages apply when increased through the individual drug application process and subsequent rulemaking. The commenter noted that a drug's unique circumstance on which an applicable percentage increase is based is unlikely to change year to year, and therefore requiring annual applications for the same drug should not be required.

*Response:* We thank the commenter for their request for clarification of the duration of the unique circumstances and increased applicable percentages. We clarify that an increased applicable percentage, once finalized through rulemaking, continues to apply until modified through subsequent rulemaking. We note that drugs meeting the criteria for unique circumstances of low volume doses or rarely utilized orphan drugs could fluctuate, and we discuss communications of which drugs meet such criteria above in this section.

*Comment:* Two commenters requested clarification regarding what kinds of justifications, including supporting evidence, CMS will consider bases of unique circumstances for which increased applicable percentages are appropriate. The commenter also requested examples of each.

*Response:* We thank the commenter for their request for clarification of appropriate bases

for unique circumstances and increased applicable percentages. While we cannot anticipate future drug development or what unique circumstances might arise, we can offer our analysis of the unique circumstances we consider involving similar loss of product as that described in section 1847A(h)(8)(B)(ii) of the Act for drugs that are reconstituted in hydrogel and with variable dosing based on patient-specific characteristics (87 FR 69727 through 69731), drugs with low volume doses, and rarely utilized orphan drugs (both discussed in section III.A.3.d.(3) of this final rule). Regarding examples of evidence, we noted minimum vial fill studies and dose preparation studies in the proposed rule, both of which are suitable for justifying increased applicable percentages because they can establish that certain unusable amounts of a product are necessarily included in a container to safely and consistently administered the labeled therapeutic dose to a patient.

After consideration of public comments, we are finalizing our proposal regarding the application process for increased applicable percentages, including the application deadline of February 1 and, in addition, we are finalizing a modification of our proposal by adopting a deadline for the FDA-approved labeling of August 1 and the deadline for notifying and submitting the FDA-approved label to CMS of September 1 of the year before the year in which the increased applicable percentages would apply, in new § 414.940(e).

#### e. Clarification for the Definition of Refundable Drug

As discussed in the CY 2023 PFS final rule (87 FR 69650 through 69655), we aim to create a consistent coding and payment approach for the suite of products currently referred to as skin substitutes. In the CY 2024 PFS proposed rule (88 FR 52395), we noted CMS anticipates addressing coding and payment for skin substitutes in future rulemaking. We explained that while we considered making changes to the Medicare Part B payment policies for such products, we proposed that billing and payment codes that describe products currently referred to as skin substitutes are not counted for purposes of identifying refundable drugs for calendar quarters during 2023 and 2024.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Several commenters agreed with the proposal to not consider skin substitutes as refundable drugs for 2023 and 2024. One commenter added that the exclusion is appropriate because payment for skin substitutes is inconsistent across settings and because claims edits for appropriate JW and JZ modifier use were not in place for the first three quarters of calendar year 2023 to ensure accurate accounting of discarded amounts. Two commenters that agreed with the proposal disagreed with CMS' assertion that CMS had discretion to count these products in the first place, as they fall outside the statutory definition of a refundable drug in section 1847A(h)(8)(A) of the Act, which applies to products that are either a single-source drug or biological (as defined in subsection (c)(6)(D)) or a biosimilar biological product (as defined in subsection (c)(6)(H)), neither of which describe skin substitutes. The commenters requested that CMS acknowledge that skin substitutes are statutorily precluded from the policy.

*Response:* We thank commenters for their feedback as we continue to consider refinements to skin substitute policies. The comment solicitation in the CY 2024 PFS proposed rule will inform future policy development for the payment of skin substitutes.

Regarding the lack of enforcement of JW and JZ modifier use through the first three quarters of 2023, section 1847A of the Act only speaks to the use of JW data for the calculation of reporting discarded amounts and assessing refund obligations. In the CY 2023 PFS final rule (87 FR 69712 through 69728) we established the JZ modifier and finalized plans to edit for JW and JZ modifier use, which are described more fully in program instruction<sup>160</sup>, to improve the quality of discarded amount data. Although we proposed in the CY 2023 PFS proposed rule to require the JZ modifier beginning January 1, 2023, we delayed the requirement in the final rule to October 1, 2023, in response to comments to allow a transition period for providers, billing software vendors, and MACs to adjust billing and claims review processes (87 FR 69717). For

---

<sup>160</sup> <https://www.cms.gov/files/document/r12067cp.pdf>

these reasons, we disagree that this delay prevents us from using JW modifier data to calculate discarded drug refunds for the first three quarters of 2023.

*Comment:* One commenter requested that we clarify how CMS will handle claims for skin substitutes reported with the JW modifier in a future payment methodology.

*Response:* In the CY 2024 PFS proposed rule (88 FR 52357 through 52358), we solicited comment on potential approaches to billing but did not propose any revisions to the payment approach for skin substitutes under Part B for CY 2024. Therefore, we cannot comment on how claims for skin substitutes that report JW data, or the reported JW data, will be processed under a future payment approach.

Further discussion of a potential future billing approach for skin substitute products is in section II.H of this final rule. For this final rule, for CY 2023 and 2024, we are finalizing that JW units of skin substitutes will not be used for the discarded drug refund calculations and we will not issue reports to manufacturers with respect to skin substitutes.

*Comment:* One commenter requested that CMS explicitly confirm the statutory exclusion for imaging agents in section 1847A(h)(8)(B)(i) of the Act includes contrast agents.

*Response:* We point the commenter to the discussion in CY 2023 PFS final rule (87 FR 69724). In response to two commenters requesting the same confirmation, we stated that we recognize contrast agents as a category of imaging agents as described in FDA's Guidance for Industry. Therefore, we clarified that contrast agents are excluded from the definition of refundable single-dose container or single-use package drug.

*Comment:* Two commenters requested that we treat drugs or biologicals that are regarded as multiple source drugs under section 1847A(c)(6)(C)(ii) of the Act as multiple source drugs for purposes of the discarded drug refund.

*Response:* The definition of refundable drug under section 1847A(h)(8)(A) of the Act requires that such drugs are single source drugs or biologicals (as defined in subsection (c)(6)(D)) or a biosimilar biological product (as defined in subsection (c)(6)(H)). The definition

of single source drug or biological requires that the drug is not a multiple source drug, which is defined at section 1847A(c)(6)(C) of the Act. Therefore, we agree with the commenter and clarify that, under section 1847A(c)(6)(C)(ii) of the Act, single source drugs or biologicals that were within the same billing and payment code as of October 1, 2003, will be treated as multiple source drugs for the purposes of the discarded drug refund.

f. Clarification for the Determination of Discarded Amounts and Refund Amounts

Section 1847A(h) of the Act specifies that discarded amounts of refundable drugs are to be determined using a mechanism such as the JW modifier used as of the date of enactment of the Infrastructure Act or any successor modifier that includes such data as determined appropriate by the Secretary. In the CY 2023 PFS final rule (87 FR 69718 through 69719), we finalized our previously existing policy that required billing providers report the JW modifier for all separately payable drugs with discarded drug amounts from single use vials or single use packages payable under Part B, beginning January 1, 2023.

In the CY 2024 PFS proposed rule (88 FR 52395), we discussed the applicability of the JW modifier in Medicare Advantage claims. We stated that since the JW modifier, the mechanism described in section 1847A(h) of the Act, is not required in Medicare Advantage claims for drugs payable under Medicare Part B and there is not a similar mechanism to identify discarded units of such drugs that are billed to Medicare Advantage plans, we proposed to clarify that the JW modifier requirement does not apply to units billed to Medicare Advantage plans and that the refund amount calculations under section 1847A(h)(3) of the Act will not include units billed to Medicare Advantage plans.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Several commenters expressed support for our proposal to exclude units for refundable drugs billed to Medicare Advantage plans from the calculation of refund amounts.

*Response:* We thank the commenters for their support.

*Comment:* While agreeing that the JW modifier is not required for units billed to Medicare Advantage plans, one commenter requested that we clarify that the definition of a refundable drug as described in section 1847A(h)(8) limits the scope of the provision to Part B fee-for-service claims.

*Response:* We thank the commenter for their feedback. As finalized in the 2023 PFS final rule (87 FR 69710 through 69734), our policy is to determine the total number of discarded units using the JW modifier (or any successor modifier that includes the same data). This policy results in the exclusion of units billed to Medicare Advantage plans. We do not believe it is necessary to evaluate additional arguments for excluding units billed to MA plans in this final rule.

*Comment:* One commenter requested clarification regarding whether Medicare Advantage plans are permitted to require the reporting of the JW modifier. The commenter cited Chapter 4, Section 10.2 of the Medicare Managed Care Manual, which states that Medicare Advantage plans have discretion to establish their own billing and payment procedures, both for contracted and uncontracted providers, and such discretion extends to the option to adopt fee-for-service billing modifiers.

*Response:* We thank the commenter for their request for clarification. We are clarifying that since the JW modifier, the mechanism described in section 1847A(h)(1) of the Act, is not necessarily required by all Medicare Advantage plans, we cannot ensure that any JW modifier data gathered by Medicare Advantage plans is consistently done so in accordance with our JW and JZ modifier use policy, the refund amount calculations under section 1847A(h)(3) of the Act will not include units billed to Medicare Advantage plans.

After reviewing all comments, we are finalizing the clarification that we will not include units billed to Medicare Advantage plans in calculations under section 1847A(h)(3) of the Act because we cannot ensure data for refundable drugs billed to plans is consistently collected in accordance with the same reporting requirements. We are finalizing the additional clarification

that Medicare Advantage plans are not required, but are permitted, to adopt the Medicare fee-for-service JW and JZ modifier requirements for single-dose container drugs that are separately payable under Part B; however, those units will not be included in the refund amount calculations.

g. Technical Changes

In the CY 2023 PFS final rule (87 FR 70227) we finalized the regulation text for the calculation of the manufacturer refund requirement. That text contained an error in two places, § 414.940(c)(3) and (d), which incorrectly referenced paragraph (c)(1)(ii) of that section in reference to the applicable percentage, rather than paragraph (c)(2). In the CY 2024 PFS proposed rule (88 FR 52395), we proposed to correct the textual reference in both paragraphs and make additional technical changes to streamline the text.

We did not receive any comments on these proposed technical corrections and are finalizing as proposed.

h. Use of the JW Modifier and JZ Modifier Policy

In the CY 2023 PFS final rule (87 FR 69723), we discussed the applicability of the JW and JZ modifier policy to drugs that are not administered by the billing supplier, including drugs furnished through a covered item of DME that may be administered by the beneficiary. In such cases, suppliers who dispense drugs payable under Medicare Part B do not actually administer the drug, as the claim is typically submitted prior to the administration of the drug, and the billing provider or supplier is not at the site of administration to measure discarded amounts. We stated that since we do not believe it would be appropriate to collect data about discarded amounts from beneficiaries, the reporting requirement does not apply to drugs that are self-administered by a patient or caregiver in the patient's home. In the updated FAQ for the JW/JZ

modifier policy<sup>161</sup> released on January 5, 2023, we reiterated that suppliers who dispense but do not actually administer a separately payable drug are not expected to report the JW modifier.

In the CY 2024 PFS proposed rule (88 FR 52395) we discussed that beginning October 1, 2023, we will begin editing for correct use of both the JW and JZ modifiers for billing and payment codes for drugs from single-dose containers (87 FR 69719). However, because currently there is no claims modifier to designate that a drug was dispensed, but not administered, by the billing supplier, we were concerned that the policy finalized last year exempting self-administered drugs from the JW/JZ modifier policy may result in claims rejections absent a modification. Therefore, we proposed to require that drugs separately payable under Part B from single-dose containers that are furnished by a supplier who is not administering the drug be billed with the JZ modifier, since we continued to believe it is unreasonable to collect discarded drug data from beneficiaries.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Two commenters expressed support for the proposal to not to apply the discarded drug refund to units of single-dose container drugs that are furnished but not administered by the billing supplier. The commenters echoed our position that it is not feasible for Medicare beneficiaries to track and accurately report discarded amounts.

*Response:* We thank the commenters for their support.

*Comment:* Two commenters stated they oppose the requirement to report the JZ modifier for drugs furnished but not administered by the biller. One commenter recommended that instead of requiring the use of the JZ modifier, CMS instead improve compliance with the JW modifier policy by enhancing provider and supplier education efforts. Two commenters suggested another alternative in which CMS develops a new modifier to be reported on claims for these drugs to

---

<sup>161</sup> <https://www.cms.gov/medicare/medicare-fee-for-service-payment/hospitaloutpatientpps/downloads/jw-modifier-faqs.pdf>.

separate them from the calculation of discarded drug refund amounts. One commenter added that a new modifier would be more appropriate because the supplier cannot in fact determine that there were no discarded amounts when the patient self-administers the drug for which the supplier is submitting a claim, as the reporting of the JZ modifier suggests; rather, the JZ modifier's use in this instance in fact means that the discard drug refund policy does not apply to these drugs.

*Response:* As we noted in the CY 2023 PFS final rule (87 FR 69716 through 69717), the Committee on Implications of Discarded Weight-Based Drugs found compliance with the JW modifier requirement not only varied among providers and suppliers, but even providers and suppliers who use the modifier do not do so consistently and vary in their reporting from one drug to another and across claims for the same patient and drug.<sup>162</sup> We do not believe that provider and supplier education alone can obtain the consistent reporting of JW modifier data needed for the implementation of this provision.

Regarding the establishment of a new modifier for drugs covered under the DMEPOS benefit, we agree this approach would accomplish the same objective in avoiding the rejection of claims for which we do not expect to receive JW modifier data. We do not, however, see how the requirement that suppliers of drugs covered under the DMEPOS benefit report a new modifier rather than the JZ modifier would reduce administrative burden on the supplier. One potential benefit to the program would be, rather, that billing units of such drugs are not automatically counted as administered with zero discarded amounts, but we do not have any reason, at this time, to believe this would result in additional refund obligations. We may revisit this suggestion in future rulemaking.

*Comment:* One commenter requested that CMS take efforts to minimize the discarded

---

<sup>162</sup> National Academies of Sciences, Engineering, and Medicine. 2021. Medications in single-dose vials: Implications of discarded drugs. Washington, DC: The National Academies Press. <https://doi.org/10.17226/25911>. National Academies of Sciences, Engineering, and Medicine. 2021. Medications in Single-Dose Vials: Implications of Discarded Drugs. Washington, DC: The National Academies Press. <https://doi.org/10.17226/25911>.

drug refund policy's compliance burden on providers and suppliers. One commenter stated that because discarded amounts for drugs covered under the DMEPOS benefit are consistently far below 10 percent, the JZ modifier requirement for these drugs does not provide a program benefit that justifies the administrative burden it would place on suppliers.

One commenter described the issuance of contradictory guidance by DME MACs that has created confusion about whether providers and suppliers are required to report the JZ modifier for single-dose container drugs that are dispensed but not administered to patients beginning July 1, 2023 or October 1, 2023, or not at all. The commenter requested that CMS direct DME MACs to update their external fusion pump local coverage articles to clarify the JW and JZ modifier policy for single-dose drugs that are dispensed, but not administered to patients for dates of service between July 1 and October 1, 2023 and for dates of service after October 1, 2023, regardless of whether the local coverage article is updated in time to reflect the new billing requirement.

*Response:* As we stated in the CY 2023 PFS final rule discussion on provider burden (87 FR 69716), we believe that in most cases the JW and JZ modifier requirements impose no new burdens on providers beyond the requirement of measuring and reporting discarded amounts by use of the JW modifier that predates the enactment of the discarded drug refund policy under section 1847A(h) of the Act. Providers and suppliers who have been complying with the JW modifier requirement effective January 1, 2017 have already been assessing and documenting what is needed for the JZ modifier, and the new requirement of reporting the JZ modifier is minimal and justifiable for the purposes of obtaining more complete discarded amount data.

Regarding the confusion about the billing requirements for suppliers who dispense, but do not administer a single-dose drug to patients, since we did not finalize the requirement to report the JZ modifier in this situation in the CY 2023 PFS final rule, we cannot require it to be reported for dates of service in CY 2023. On October 16, 2023, we updated the JW and JZ

Modifier FAQ<sup>163</sup> to provide additional clarity and resolve concerns about processing claims for single-dose drugs that are self-administered by a patient or caregiver in the patient's home before CY 2024 billing requirement updates take effect. The updated FAQ provides reference to a published list of specific billing and payment codes to which only single-dose containers are assigned, and thus, may require use of the JW or JZ modifiers depending on the setting of use. The identified codes should not be considered an all-inclusive list of codes that are subject to the JW and JZ modifier policy. The list is available on the ASP Billing Resources website<sup>164</sup>.

*Comment:* One commenter stated that CMS has long stated that it expects providers and suppliers to use drugs in a clinically appropriate manner and has consistently advised that all procedures for drug reconstitution and administration should conform to applicable FDA guidelines, one of which states that any extra amount of the drug remaining after the dose is administered must be discarded. Another commenter requested clarification of correct JZ modifier use when drugs from a single-dose containers are used for multiple patients.

*Response:* The JW Modifier and JZ Modifier Policy Frequently Asked Questions document<sup>165</sup> reiterates language in Chapter 17 of the Medicare Claims Processing Manual<sup>166</sup>, which states that CMS encourages physicians, hospitals and other providers and suppliers to care for and administer drugs and biologicals to patients in such a way that they can use drugs or biologicals most efficiently, in a clinically appropriate manner. In the resources section of the FAQ document, there is a link to a memorandum from the Survey and Certification Group at CMS regarding entitled *Safe Use of Single Dose/Single Use Medications to Prevent Healthcare-associated Infections*<sup>167</sup>. In this memorandum CMS clarified guidance regarding the various

---

<sup>163</sup> <https://www.cms.gov/medicare/medicare-fee-for-service-payment/hospitaloutpatientpps/downloads/jw-modifier-faqs.pdf>.

<sup>164</sup> <https://www.cms.gov/medicare/payment/all-fee-service-providers/medicare-part-b-drug-average-sales-price/asp-billing-resources>.

<sup>165</sup> <https://www.cms.gov/medicare/medicare-fee-for-service-payment/hospitaloutpatientpps/downloads/jw-modifier-faqs.pdf>.

<sup>166</sup> <https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/clm104c17.pdf>.

<sup>167</sup> <https://www.cms.gov/medicare/provider-enrollment-and-certification/surveycertificationgeninfo/downloads/survey-and-cert-letter-12-35.pdf>.

infection control regulatory requirements to indicate that when previously unopened single-dose vials are repackaged consistent with aseptic conditions under the requirements of USP <797>, and subsequently stored consistent with USP <797> and the manufacturer's package insert, it is permissible for healthcare personnel to administer repackaged doses derived from single-dose vials to multiple patients, provided that each repackaged dose is used for a single patient in accordance with applicable storage and handling requirements. We reiterate the JZ modifier policy that the modifier is used to attest that no amount of drug was discarded from single-dose container drugs. To align with the JW modifier policy, the JZ modifier is required when there are no discarded amounts of a single-dose container drug for which the JW modifier would be required if there were discarded amounts. In addition, we clarify that JZ modifier policy does not require that the claim line with the JZ modifier account for only whole vials of the drug and the JW modifier policy does not require that the two claim lines (as described in the modifier FAQ document<sup>168</sup>) account for only whole vials of the drug.

*Comment:* One commenter requested clarification regarding the JW/JZ reporting requirements for drugs that are excluded from the definition of "refundable drug" and are therefore exempt from refunds for discarded amounts. The commenter requested that such drugs that do not meet the definition of a refundable drug be billed with the JZ modifier, similar to those that are furnished but not administered by a supplier.

*Response:* As stated in the CY 2023 PFS final rule (87 FR 69724), even if a drug is excluded from the definition of refundable single-dose container or single-use package drug (and not subject to refunds), for example, multiple source drugs, claims for such drugs furnished from a single-dose container are still required to use the JW and JZ modifiers in accordance with the policy.

After reviewing all comments, we are finalizing as proposed the requirement that drugs

---

<sup>168</sup> <https://www.cms.gov/medicare/medicare-fee-for-service-payment/hospitaloutpatientpps/downloads/jw-modifier-faqs.pdf>.

separately payable under Part B from single-dose containers that are furnished by a supplier who is not administering the drug be billed with the JZ modifier.

i. General Comments

We received several public comments on these proposals, generally. The following is a summary of the comments we received and our responses.

*Comment:* One commenter expressed support for CMS' ongoing efforts to implement section 90004 of the Infrastructure Act by continuing to refine the process for manufacturers to provide a refund to CMS for certain discarded amounts from refundable drugs. The commenter stated that implementation of the discarded drug refund will help reduce waste and spending within the Medicare program by discouraging drug manufacturers from overfilling single-dose containers.

*Response:* We thank the commenter for their support.

*Comment:* One commenter states that the discarded drug refund exacts financial penalties due to a drug's FDA-approved labeling and efficacy and safety profile, and administration of the product by healthcare providers, over which a manufacturer exerts no control.

*Response:* Section 1847A(h)(3) of the Act requires that the refund calculation use the total number of units of the billing and payment code of such drug, if any, that were discarded for a given calendar quarter for which a refund is due, as determined using a mechanism such as the JW modifier. CMS is implementing the law.

*Comment:* One commenter noted that for biosimilar biological products (hereafter, biosimilars), introducing new vial sizes would not be feasible, because manufacturers of biosimilars must offer the same vial sizes as the reference product.

*Response:* To date, we have not observed any biosimilars that have discarded amounts exceeding 10 percent. However, we will continue to monitor discarded drug data for biosimilars. We also note that section 90004 of the Infrastructure Investment and Jobs Act requires the Office of Inspector General (OIG), after consultation with CMS and FDA, to submit a report to

Congress on any reported impact that section 90004 may have on the licensure, market entry, market retention, or marketing of biosimilars. The OIG is expected to issue a report to Congress in fiscal year (FY) 2024.<sup>169</sup>

*Comment:* One commenter expressed concern that the discarded drug refunds will impact provider reimbursement.

*Response:* Since Medicare pays for units of single-dose drugs that are administered to the patient as well as units that are discarded (and billed using the JW modifier), we do not expect the refund to affect reimbursement to providers.

#### j. Out of Scope Comments

*Comment:* We received comments on several topics that were outside the scope of the proposed rule. Those topics included the following: the contents of the preliminary report (87 FR 69725) and the annual refund report described in § 414.940(a)(1) and manufacturers' ability to use them to identify potential calculation errors; a request that the window for submitting an error report be extended to 60 days; several requests for the establishment of an appeals process including for calculated refund amounts and for unique circumstance applications; support for our reaffirmation of the exclusion of radiopharmaceuticals and imaging agents from the definition of refundable drugs; requests that all non-refundable drugs or just radiopharmaceuticals and imaging agents be excluded from the JW and JZ modifier reporting policy; a request that we clarify that all non-refundable drugs single-dose container drugs be reported with the JZ modifier; a request for clarification on correct JZ modifier use when drugs from a single dose vial are used for multiple patients; a request that CMS develop a mechanism to automate the reporting of discard amounts in claims systems; a request that Medicare compensate provider and suppliers for the discarded amount reporting burden; support for the JW and JZ modifier edits; offers to collaborate with CMS on provider education for the JW and JZ modifier requirements; a statement of concern about complications for reporting JW and JZ

---

<sup>169</sup> <https://oig.hhs.gov/reports-and-publications/workplan/summary/wp-summary-0000743.asp>.

modifier data in systems in which EHR recording for single-dose container drugs is automated; a request for a delay in the beginning of edits for correct JW and JZ modifier use; a request for additional provider education on the discarded drug refund policy; a request for a requirement that all skin substitute products report ASP data; a request that CMS affirm the 18-month exclusionary period for Leqembi begins on October 1, 2023; a request for drugs whose use is required by an unrelated manufacturer over which the product's manufacturer has no control and the establishment of new HCPCS codes for products based on alternative utilization methods to be considered to have unique circumstances; a request for newly approved drugs when the manufacturer is actively carrying out post-market optimization activities to be considered to have unique circumstances; two requests that we confirm that certain drugs meet the definition of the rarely utilized orphan drugs for which we proposed a unique circumstances; a request from several commenters that we extend through rulemaking the 18-month exclusion period for newly marketed drugs, as described in section 1847A(h)(8)(B)(iii) of the Act, to 36 months; a request from several commenters for cell and gene therapies and other personalized therapies to be considered to have a unique circumstance and have an increased applicable percentage, as well as a request that in considering future HCPCS applications for these therapies we consider the implications of any decision on its potential discarded drug refund obligations; and a request for drugs that treat multiple indications across unique patient types and characteristics to be considered to have unique circumstances.

*Response:* While these comments are out of scope for this final rule because they do not relate to the specific proposals included in the proposed rule, we appreciate the feedback and may consider these recommendations for future rulemaking.

## B. Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

### 1. Background

#### a. RHC and FQHC Payment Methodologies

As provided in 42 CFR part 405, subpart X of our regulations, RHC and FQHC visits generally are defined as face-to-face encounters between a patient and one or more RHC or FQHC practitioners during which one or more RHC or FQHC qualifying services are furnished. RHC and FQHC practitioners are physicians, NPs, PAs, CNMs, clinical psychologists (CPs), and clinical social workers, and under certain conditions, a registered nurse or licensed practical nurse furnishing care to a homebound RHC or FQHC patient in an area verified as having shortage of home health agencies. We note, as discussed in section III.B.2.b. of this final rule, effective January 1, 2024 RHC and FQHC practitioners can also be licensed marriage and family therapists or mental health counselors. Transitional Care Management (TCM) services can also be paid by Medicare as an RHC or FQHC visit. In addition, Diabetes Self-Management Training (DSMT) or Medical Nutrition Therapy (MNT) sessions furnished by a certified DSMT or MNT program may also be considered FQHC visits for Medicare payment purposes. Only medically necessary medical, mental health, or qualified preventive health services that require the skill level of an RHC or FQHC practitioner are RHC or FQHC billable visits. Services furnished by auxiliary personnel (for example, nurses, medical assistants, or other clinical personnel acting under the supervision of the RHC or FQHC practitioner) are considered incident to the visit and are included in the per-visit payment.

RHCs generally are paid an all-inclusive rate (AIR) for all medically necessary medical and mental health services and qualified preventive health services furnished on the same day (with some exceptions). The AIR is subject to a payment limit, meaning that an RHC will not receive any payment beyond the specified limit amount. As of April 1, 2021, all RHCs are subject to new payment limits on the AIR, and this limit will be determined for each RHC in accordance with section 1833(f) of the Act.

FQHCs were paid under the same AIR methodology until October 1, 2014. Beginning on that date, in accordance with section 1834(o) of the Act (as added by section 10501(i)(3) of the Patient Protection and Affordable Care Act (Pub. L. 111-148), FQHCs began to transition to the FQHC PPS system, in which they are paid based on the lesser of the FQHC PPS rate or their actual charges. The FQHC PPS rate is adjusted for geographic differences in the cost of services by the FQHC PPS geographic adjustment factor (GAF). The rate is increased by 34 percent when an FQHC furnishes care to a patient that is new to the FQHC, or to a beneficiary receiving an initial preventive physical examination (IPPE) or has an annual wellness visit (AWV).

Both the RHC AIR and FQHC PPS payment rates were designed to reflect the cost of all services and supplies that an RHC or FQHC furnishes to a patient in a single day. The rates are not adjusted at the individual level for the complexity of individual patient health care needs, the length of an individual visit, or the number or type of practitioners involved in the patient's care. Instead for RHCs, all costs for the facility over the course of the year are aggregated and an AIR is derived from these aggregate expenditures. The FQHC PPS base rate is updated annually by the percentage increase in the FQHC market basket reduced by a productivity adjustment.

## 2. Implementation of the Consolidated Appropriations Act (CAA), 2023

### a. Section 4113 of the Consolidated Appropriations Act, 2023

In the CY 2022 PFS final rule with comment (86 FR 65211), we revised the regulatory requirement that an RHC or FQHC mental health visit must be a face-to-face (that is, in person) encounter between an RHC or FQHC patient and an RHC or FQHC practitioner. We revised the regulations under § 405.2463 to state that an RHC or FQHC mental health visit can also include encounters furnished through interactive, real-time, audio/video telecommunications technology or audio-only interactions in cases where beneficiaries are not capable of, or do not consent to, the use of devices that permit a two-way, audio/video interaction for the purposes of diagnosis, evaluation or treatment of a mental health disorder. We noted that these changes aligned with similar mental health services furnished under the PFS. We also noted that this change allows

RHCs and FQHCs to report and be paid for mental health visits furnished via real-time, telecommunication technology in the same way they currently do when these services are furnished in-person. In addition, we revised the regulation under § 405.2463 to state that there must be an in-person mental health service furnished within 6 months prior to the furnishing of the telecommunications service and that an in-person mental health service (without the use of telecommunications technology) must be provided at least every 12 months while the beneficiary is receiving services furnished via telecommunications technology for diagnosis, evaluation, or treatment of mental health disorders, unless, for a particular 12-month period, the physician or practitioner and patient agree that the risks and burdens outweigh the benefits associated with furnishing the in-person item or service, and the practitioner documents the reasons for this decision in the patient's medical record (86 FR 65210 and 65211).

We also revised the regulation under § 405.2469, FQHC supplemental payments, to state that a supplemental payment required under this section is made to the FQHC when a covered face-to-face (that is, in-person) encounter or an encounter where services are furnished using interactive, real-time, telecommunications technology or audio-only interactions in cases where beneficiaries do not wish to use or do not have access to devices that permit a two-way, audio/video interaction for the purposes of diagnosis, evaluation or treatment of a mental health disorder occurs between a MA enrollee and a practitioner as set forth in § 405.2463. At § 405.2469, we also revised paragraph (d) to describe the same in-person visit requirement referenced in § 405.2463.

As discussed in the CY 2023 PFS final rule (87 FR 69738), the Consolidated Appropriations Act, 2022 (CAA, 2022) (Pub. L. 117-103, March 15, 2022) included the extension of a number of Medicare telehealth flexibilities established during the public health emergency (PHE) for COVID-19 for a limited 151-day period beginning on the first day after the end of the PHE for COVID-19. Specifically, Division P, Title III, section 304 of the CAA, 2022, delayed the in-person requirements under Medicare for mental health services furnished through

telehealth under the PFS and for mental health visits furnished by RHCs and FQHCs via telecommunications technology until the 152nd day after the end of the PHE for COVID–19. Therefore, in the CY 2023 PFS final rule (87 FR 69737), we revised the regulations under §§ 405.2463 and 405.2469 again to reflect these provisions.

As discussed in the CY 2024 PFS proposed rule (88 FR 52396 through 52397), the CAA, 2023 (Pub. L. 117-328, December 29, 2022) extends the Medicare telehealth flexibilities enacted in the CAA, 2022 for a period beginning on the first day after the end of the PHE for COVID-19 and ending on December 31, 2024, if the PHE ends prior to that date. Specifically related to RHCs and FQHCs, section 4113(c) of the CAA, 2023 amends section 1834(m)(8) of the Act to extend payment for telehealth services furnished by FQHCs and RHCs for the period beginning on the first day after the end of the COVID-19 PHE and ending on December 31, 2024, if the PHE ends prior to that date. We noted that payment continued to be made under the methodology established for telehealth services furnished by FQHCs and RHCs during the PHE, which is based on payment rates that are similar to the national average payment rates for comparable telehealth services under the PFS. We also noted that we did not believe it necessary to conform the regulation to this temporary provision. Rather, we used our authority in section 4113(h) of the CAA, 2023 to issue program instructions or other subregulatory guidance to effectuate this provision to ensure a smooth transition after the PHE<sup>170</sup>.

We explained that section 4113(d) of the CAA, 2023 continues to delay the in-person requirements under Medicare for mental health services furnished through telehealth under the PFS and for mental health visits furnished by RHCs and FQHCs via telecommunications technology. That is, for RHCs and FQHCs, in-person visits will not be required until January 1, 2025 or, if later, the first day after the end of the PHE for COVID-19. Therefore, we stated that we will continue to apply the delay of the in-person requirements under Medicare for mental

---

<sup>170</sup> <https://www.cms.gov/files/document/rural-health-clinics-and-federally-qualified-health-centers-cms-flexibilities-fight-covid-19.pdf>.

health services furnished by RHCs and FQHCs. We noted, the Department of Health and Human Services declared an end to the Federal PHE for COVID-19 under section 319 of the Public Health Service Act on May 11, 2023.<sup>171</sup>

Accordingly, we proposed to make conforming regulatory text changes based on CAA, 2023 to the applicable RHC and FQHC regulations in 42 CFR part 405, subpart X, specifically, at § 405.2463, “What constitutes a visit,” we proposed to amend paragraph (b)(3) and, at § 405.2469 “FQHC supplemental payments,” we proposed to amend paragraph (d) to include the delay of the in-person requirements for mental health visits furnished by RHCs and FQHCs through telecommunication technology under Medicare beginning January 1, 2025. We noted that we are not revising the regulation text to reflect “or, if later, the first day after the end of the PHE for COVID-19” as the legislation states since the end of the PHE was May 11, 2023.

We noted that in the CY 2023 PFS final rule (87 FR 69738), we listed the several other provisions of the CAA, 2022 that apply to telehealth services (those that are not mental health visits) furnished by RHCs and FQHCs. For details on the other Medicare telehealth provisions in the CAA, 2022, see section II.D. of this final rule. We also noted that the CAA, 2023 extended the telehealth policies mentioned above and enacted in the CAA, 2022 through December 31, 2024.

We received many comments on the extension of telehealth flexibilities under section 4113 of CAA, 2023. The following is a summary of the public comments received and our responses:

*Comment:* Many commenters generally supported the extension of telehealth flexibilities for RHCs and FQHCs and the delay of the in-person requirements for mental health services, as required under section 4113 of CAA, 2023.

*Response:* We thank commenters for their support.

---

<sup>171</sup> <https://www.hhs.gov/coronavirus/covid-19-public-health-emergency/index.html>.

*Comment:* We received several comments requesting that the COVID-19 telehealth flexibilities be made permanent. Although one commenter acknowledged that CMS does not have the authority to make the changes related to payment of FQHCs and RHCs for telehealth services beyond December 31, 2024, several commenters requested that CMS work with Congress to ensure the telehealth flexibilities remain in place indefinitely. One commenter explained that this would include telehealth flexibilities related to continuing payment for telehealth services, removing the in-person visit requirements for mental health visits, expanding the originating site requirements to include any site in the U.S. the beneficiary is located (for example, the individual's home) and extending coverage and payment of telehealth services that are furnished via audio-only communications. Commenters explained that they believe if FQHCs and RHCs are no longer able to furnish telehealth services to patients after December 31, 2024, this will limit access to care and may negatively impact patient health.

*Response:* We thank commenters for their input. The CAA, 2023 does not extend these policies beyond December 31, 2024. We do not have the authority to make these flexibilities permanent.

*Comment:* We received comments from the RHC and FQHC community requesting CMS revise the definition of a medical visit so that these services can be furnished via telecommunication technologies similar to what CMS finalized in the CY 2022 PFS final rule (86 FR 65208 through 65211) for mental health visits furnished via telecommunication technologies. A few commenters urged CMS to revise the "medical visit" definition before January 1, 2025, stating that they believe that this action would avoid significant gaps in care for some of the most vulnerable Medicare patients. The commenter suggested that CMS consider these consequences if Medicare patients cannot receive virtual medical services due to a lapse in coverage and payment. The same commenters stated that they believe CMS has the authority to revise § 405.2463(b)(1) to define a medical visit as a face-to-face encounter or encounter where services are furnished using interactive, real-time, audio and video telecommunications

technology or audio-only interactions in cases where beneficiaries are not capable of or do not consent to, the use of devices that permit a two-way audio/video interaction for the purposes of diagnosis, evaluation or treatment of services under § 405.2463(b)(2). Commenters further stated that if CMS were to revise the definition of a “medical visit” so that these services can be furnished via telecommunication technologies, CMS should also amend cost reporting instructions to ensure the costs associated with these services are included as “FQHC services” on the cost report.

*Response:* Since we did not make any proposals in this rulemaking related to revising the regulatory definition of a “medical visit” to permit these services be furnished via telecommunication technologies, these comments are out of scope. However, we anticipate that the extension of payment for distant site telehealth services furnished by RHCs and FQHCs through December 31, 2024, as established in the CAA, 2023, would mitigate concerns regarding gaps in care since it could provide time for patients transitioning from virtual to in-person services to come into the RHC or FQHC.

*Comment:* A commenter stated that given the extension of current RHC medical telehealth policy through December 31, 2024, and they requested that CMS permit normal coding instead of billing G2025 for all allowable Medicare telehealth services. The commenter believes that the payment can be achieved through appending the modifier code (95) to these services which could better facilitate data collection of RHC services performed via telehealth, including proper counting of Annual Wellness Visits and other preventive services.

*Response:* We thank the commenter for bringing this to our attention. We agree that transparency in the services furnished can improve data collection and inform payment policies and can explore options that may provide RHCs and FQHCs the ability to report the HCPCS code that describes the service furnished instead reporting G2025. If we were to implement such changes in the claims processing systems, we do not believe that it would change the payment policy, that is, overall payment would be the same. Therefore, changes in the way RHCs and

FQHCs would report these services and how CMS pays would be effectuated through sub-regulatory guidance.

*Comment:* A commenter requested guidance from CMS to clarify for the RHC community if distant site telehealth services may be provided outside of the RHC's hours of operations. The commenter stated that RHCs should not be limited to only offering telehealth during the physical RHC's hours of operation. The commenter further explained that they believe this policy limits access to care for safety-net patients.

*Response:* Currently, RHCs and FQHCs are required to furnish services during their hours of operation and if services are furnished at times other than the RHC's or FQHC's posted hours of operation, they may not be billed to Medicare Part B if the practitioner's compensation for these services is included in the RHC/FQHC cost report. This policy is discussed in Pub. 100-02 Medicare Benefit Policy Manual, Chapter 13, section 40.2 "Hours of Operation."<sup>172</sup> We appreciate the commenter bringing this concern to our attention and we can consider for future rulemaking.

*Comment:* One commenter encouraged CMS to not impose requirements for in-person services beyond what is statutorily required. The commenter stated that for patients seeking mental health treatment, the issues which prevent them from accessing care existed prior to the pandemic and will continue to exist beyond its duration. The commenter further stated that it is important to ensure the provisions intended to maintain program integrity do not inhibit patient access to care. The commenter also stated that providers can utilize their clinical judgment to assess if a patient requires an in-person visit.

*Response:* We appreciate the feedback from commenters regarding how requirements for in-person service when mental health visits are furnished by RHCs and FQHCs through telecommunication technology may have on access to care. In the CY 2022 PFS final rule (86 FR 65210) we finalized a policy that an RHC or FQHC patient must have an in-person mental

---

<sup>172</sup> <https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/bp102c13.pdf>.

health service furnished within 6 months prior to the furnishing of the telecommunications service and that in general, there must be an in-person mental health service (without the use of telecommunications technology) must be provided at least every 12 months while the beneficiary is receiving services furnished via telecommunications technology for diagnosis, evaluation, or treatment of mental health disorders. We stated that this is consistent with policies finalized for mental health services furnished via telehealth under the PFS, and that the in-person service requirements apply only to telehealth services furnished to a patient receiving the service at home.

Regarding concerns that the in-person requirements would pose a challenge for some beneficiaries, we would like to direct you to § 405.2463(b)(3) that describes the exceptions to the in-person visit requirements. That is, if the patient and practitioner consider the risks and burdens of an in-person service and agree that, on balance, these outweigh the benefits, and the practitioner documents the basis for that decision in the patient's medical record, then the in-person visit requirement is not applicable for that 12-month period. Situations in which the risks and burdens associated with an in-person service may outweigh the benefit could include, but are not limited to, instances when an in-person service is likely to cause disruption in service delivery or has the potential to worsen the patient's condition(s) (86 FR 65211).

After consideration of public comments, we are finalizing our proposal to make conforming regulatory text changes based on CAA, 2023 to the applicable RHC and FQHC regulations in 42 CFR part 405, subpart X, specifically, at § 405.2463, "What constitutes a visit," we are finalizing revisions to paragraph (b)(3) and, at § 405.2469 "FQHC supplemental payments," we are finalizing revisions to paragraph (d) to include the delay of the in-person requirements for mental health visits furnished by RHCs and FQHCs through telecommunication technology under Medicare beginning January 1, 2025, as proposed.

b. Direct Supervision via Use of Two-way Audio/Video Communications Technology

In the CY 2024 PFS proposed rule (88 FR 52397), we discussed direct supervision. Under Medicare Part B, certain types of services are required to be furnished under specific minimum levels of supervision by a physician or practitioner. See section II.D.2.a. for the discussion regarding direct supervision for services under the PFS. For RHCs and FQHCs, services and supplies furnished incident to physician's services are limited to situations in which there is direct physician supervision of the person performing the service, except for certain care management services which may be furnished under general supervision (§ 405.2415(a)(5)). The "incident to" policy for RHCs and FQHCs is discussed in Pub. 100-02, chapter 13, section 120.1. Similar to physician services paid under the PFS, outside the circumstances of the PHE, direct supervision of RHC and FQHC services does not require the physician to be present in the same room. However, the physician must be in the RHC or FQHC and immediately available to provide assistance and direction throughout the time the incident to service or supply is being furnished to a beneficiary.

In the CY 2024 PFS proposed rule, we explained that during the COVID-19 PHE, the modifications that we made to the regulatory definition of direct supervision for services paid under the PFS were also applicable to RHCs and FQHCs. We explained in the April 6, 2020 IFC that given the circumstances of the PHE for the COVID-19 pandemic, we recognized that in some cases, the physical proximity of the physician or practitioner might present additional exposure risks, especially for high risk patients isolated for their own protection or cases where the practitioner has been exposed to the virus but could otherwise safely supervise from another location using telecommunications technology. We believed that the same concerns existed for RHCs and FQHCs. In the April 6, 2020 IFC, we allowed the supervising professional to be immediately available through virtual presence using two-way, real time audio-visual technology, instead of requiring their physical presence (85 FR 19245 and 19246).<sup>173</sup> When discussing direct supervision in RHCs and FQHCs, we noted that in general, we have modified

---

<sup>173</sup> <https://www.govinfo.gov/content/pkg/FR-2020-04-06/pdf/2020-06990.pdf>.

the requirements for direct supervision to include the use of a virtual supervisory presence through the use of interactive audio and video telecommunications technology.<sup>174</sup>

We also explained that we believed that extending this definition of direct supervision for RHCs and FQHCs through December 31, 2024, would align the timeframe of this policy with many of the previously discussed PHE-related telehealth policies that were extended under provisions of the CAA, 2023 and we were concerned about an abrupt transition to the pre-PHE policy of requiring the physical presence of the supervising practitioner beginning after December 31, 2023, given that RHCs and FQHCs have established new patterns of practice during the PHE for COVID-19. We also believed that RHCs and FQHCs will need time to reorganize their practices established during the PHE to reimplement the pre-PHE approach to direct supervision without the use of audio/video technology. For RHCs and FQHCs, we proposed to continue to define “immediate availability” as including real-time audio and visual interactive telecommunications through December 31, 2024.

In the absence of evidence that patient safety is compromised by virtual direct supervision, we stated that we believe that an immediate reversion to the pre-PHE definition of direct supervision may present a barrier to access services, such as those furnished incident-to a physician’s service. Therefore, we solicited comments on whether we should consider extending the definition of “direct supervision” to permit virtual presence beyond December 31, 2024. We explained that when compared to professionals paid under the PFS, RHCs and FQHCs have a different model of care and payment structure. Therefore, we solicited comments from interested parties on potential patient safety or quality concerns when direct supervision occurs virtually in RHCs and FQHCs; for instance, if certain types of services are more or less likely to present patient safety concerns, or if this flexibility would be more appropriate when certain types of auxiliary personnel are performing the supervised service. We were also interested in potential

---

<sup>174</sup> <https://www.cms.gov/files/document/03092020-covid-19-faqs-508.pdf>.

program integrity concerns such as overutilization or fraud and abuse that interested parties may have in regard to this policy.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* All commenters supported extending the definition of direct supervision to permit virtual presence beyond December 31, 2024. Commenters noted that they believe direct supervision has become increasingly challenging and the option to provide virtual direct supervision has enhanced the quality and provision of healthcare services beneficiaries have received in medically underserved, rural communities. They also noted using audio-visual technology for supervision during the COVID-19 PHE did not create significant clinical safety concerns and subsequent formal assessments will confirm the safety of virtual direct supervision. As workforce challenges exist and are pronounced in some of their rural communities, commenters believe this allows RHCs and FQHCs to have a larger community presence, including longer hours or more days, and stated that they may not be able to maintain these schedules if a physical presence for direct supervision is required. Commenters stated that virtual direct supervision facilitates timely access to services that on-site personnel could effectively deliver.

*Response:* We appreciate the commenters' support of extending the definition of direct supervision to permit virtual presence in RHCs and FQHCs through December 31, 2024. With regard to extending this flexibility past December 31, 2024, we may address in future rulemaking. We also appreciate the positive feedback received from commenters regarding any potential patient safety, quality, or program integrity concerns when direct supervision occurs virtually in RHCs and FQHCs.

After consideration of public comments, we are finalizing our proposal to extend the definition of direct supervision to permit virtual presence in RHCs and FQHCs through December 31, 2024.

c. Section 4121 of the CAA, 2023

Section 1861(aa) of the Act provides authority under Medicare Part B to cover and pay for RHC and FQHC services. Section 1861(aa)(1) of the Act defines these services as those furnished by physicians, physician assistants, nurse practitioners, nurse-midwives, qualified clinical psychologists, clinical social workers, and services and supplies furnished incident to professional services of these practitioners. The conforming regulation text to these provisions are provided in 42 CFR part 405, subpart X where we define RHC and FQHC visits as face-to-face encounters between a patient and one or more RHC or FQHC practitioners during which one or more RHC or FQHC qualifying services are furnished.

Before passage of CAA, 2023, there was no separate benefit category under the statute that recognized the professional services of licensed marriage and family therapists (MFTs) or mental health counselors (MHCs). As discussed in the CY 2023 PFS final rule (87 FR 69546), payment for MFTs was only made under the PFS indirectly when an MFT or MHC performed services as auxiliary personnel incident to the services of a physician or other practitioner and under general supervision. This was also true for RHCs and FQHCs, in that MFTs and MHCs were considered auxiliary personnel and the services they provided were considered incident to the services of the RHC or FQHC practitioner (§ 405.2413).

Section 4121 of Division FF, Title IV, Subtitle C of the CAA, 2023, entitled “Coverage of Marriage and Family Therapist Services and Mental Health Counselor Services under Part B of the Medicare Program”, amended section 1861(s)(2) of the Act to establish coverage of MFT and MHC services (section 1861(s)(2)(II) of the Act). We noted that section II.J. of this final rule provides a detailed discussion of the provisions in section 4121(a) of CAA, 2023 including the authority for coverage of MFT and MHC services, definitions of these professionals and their services, and payment under the PFS. Section 4121(b) of CAA, 2023 amended section 1861(aa)(1)(B) of the Act by extending the scope of RHC services to include those furnished by MFTs and MHCs as eligible for payment, which is incorporated into FQHC services through

section 1861(aa)(3)(A) of the Act. We proposed to codify payment provisions for MFTs and MHCs under 42 CFR part 405, subpart X beginning January 1, 2024. That is, RHC and FQHCs will be paid under the RHC AIR and FQHC prospective payment system (PPS), respectively, when MFTs and MHCs furnished RHC and FQHC services defined in §§ 405.2411 and 405.2446. As eligible RHC and FQHC practitioners, MFTs and MHCs will follow the same policies and supervision requirements as a PA, NP, CNM, CP, and CSW.

In addition, as discussed in section II.J. of this final rule, we proposed to allow addiction counselors that meet all of the applicable requirements to enroll in Medicare as MHCs. Therefore, to remain consistent with payment policies for professionals billing Medicare under the PFS, we proposed that the definitions established for MFTs and MHCs under the PFS would also apply for RHCs and FQHCs. In the CY 2023 PFS final rule (87 FR 69735 through 69737), we discussed the coding and payment for HCPCS code G0323 which describes general BHI services performed by CPs and CSWs under the PFS. We noted CPs and CSWs are statutorily authorized to furnish services in RHCs and FQHCs under sections 1861(aa)(1) and (3) of the Act, respectively, and as described by § 405.2411(a)(6). We also explained, the payment rate for HCPCS code G0323 is based on the payment rate for the current general BHI code, 99484. Therefore, in the CY 2023 PFS final rule (87 FR 69737) we clarified that when CPs and CSWs provide the services described in HCPCS code G0323 in an RHC or FQHC, the RHC or FQHC can bill HCPCS code G0511. We further stated RHCs and FQHCs that furnish general BHI services are able to bill for this service using HCPCS code G0511, either alone or with other payable services on an RHC or FQHC claim for dates of service on or after January 1, 2023.

We noted that in section II.J. of this final rule, we proposed to revise the code descriptor for HCPCS code G0323 in order to allow MFTs and MHCs, as well as CPs and CSWs, to be able to bill for this monthly care integration service. Since MFTs and MHCs are statutorily authorized to furnish services in RHCs and FQHCs effective January 1, 2024, we proposed to clarify that when MFTs and MHCs provide the services described in HCPCS code G0323 in an

RHC or FQHC, the RHC or FQHC can bill for this service using HCPCS code G0511. We believe that this policy aligns with our efforts to be consistent with new services that are proposed for practitioners billing under the PFS.

We proposed to make several conforming regulatory changes to applicable RHC and FQHC regulations in 42 CFR part 405, subpart X, specifically:

- At § 405.2401, Scope and definitions, we proposed to amend the section to add definitions for MFT and MHC;
- At § 405.2411, Scope of benefits, we proposed to amend the section to include MFT and MHC where other RHC and FQHC practitioners are stated;
- At § 405.2415, Incident to services and direct supervision, we proposed to amend the section to include MFT and MHC where other RHC and FQHC practitioners are stated;
- At § 405.2446, Scope of services, we proposed to amend the section to include MFT and MHC services to the scope of services;
- At § 405.2448, Preventive primary services, we proposed to amend the section to include MFT and MHC where other RHC and FQHC practitioners are stated;
- At § 405.2450, Clinical psychologist and clinical social worker services, we proposed to amend the section title to add MFT and MHC and include MFT and MHC where other RHC and FQHC practitioners are stated;
- At § 405.2452, Services and supplies incident to clinical psychologist and clinical social worker services, we proposed to amend the section title to add MFT and MHC and include MFT and MHC where other RHC and FQHC practitioners are stated;
- At § 405.2463, What constitutes a visit, we proposed to amend the section to add MFT and MHC to the list of eligible practitioners; and
- At § 405.2468, Allowable costs, we proposed to amend the section to add MFTs and MHCs where other RHC and FQHC practitioners are listed.

We received many comments on section 4121 of the CAA, 2023. The following is a

summary of the comments we received and our responses.

*Comment:* Overall, commenters supported the proposals related to MFTs and MHCs. Commenters stated that health centers commonly employ LMHCs and LMFTs to expand their behavioral health services and that the proposed regulatory changes will enable health centers to maximize their workforce to meet their patients' needs. Another commenter suggested that CMS use the definition of MHC that would include all appropriately trained and qualified health professionals currently licensed by States or recognized by the National Health Services Corps (NHSC).

*Response:* We thank the commenters for their support. Regarding licensure, we note that while section 1861(III)(4) of the Act establishes the term "Mental Health Counselor," this statutory benefit category also includes those who are licensed or certified as a clinical professional counselor or, as a professional counselor by the State in which the services are furnished to qualify as a mental health counselor along with the individuals who are licensed or certified by the State as a mental health counselor. Additionally, we proposed and are finalizing our provisions to allow addiction counselors who meet all applicable requirements to enroll as MHCs. In response to the comments received on the variation in nomenclature used across States for mental health counselors, we clarify that mental health practitioners who meet all of the applicable statutory qualifications for the mental health counselor benefit category but are licensed by their State under a different title, are eligible to enroll in Medicare under the Part B "Mental Health Counselor" statutory benefit category. We refer to the discussion in section II.J of this final rule for more information.

*Comment:* One commenter requested that CMS confirm that MFTs and MHCs will not be subjected to a productivity standard as is required for physicians, NPs, PAs, and CNMs in the RHC setting.

*Response:* We thank the commenter for raising this issue. As described in the Medicare Benefit Policy Manual, Chapter 13, Section 80.4, "RHC Productivity Standards", "productivity

standards are used to help determine the average cost per patient for Medicare reimbursement in RHCs. The current productivity standards require 4,200 visits per full-time equivalent physician and 2,100 visits per full-time equivalent non-physician practitioner (NP, PA, or CNM)”.

Additionally, in the Form CMS 222-17, Worksheet B, Part I of the Independent RHC Cost Report, and Form CMS-2552-10, Hospital and Hospital Care Complex Cost Report, Worksheet M-3, productivity standard information is entered for physician, PA, NP, and CNM. Productivity standards are not in place for RN, LPN, CP, or CSWs. As discussed in this rule, MFTs and MHCs are mental health practitioners and more closely aligned with CPs and CSWs and as such we believe that the productivity standards also do not apply to MFTs and MHCs.

*Comment:* Some commenters requested that CMS consider the inclusion of Certified Community Behavioral Health Centers (CCBHCs) in the Medicare program, which they stated would offer incredible value to beneficiaries. While CCBHCs are not a specific provider type in Medicare, CCBHCs are required to establish care coordination with entities such as with FQHCs and RHCs. Given this pre-existing relationship, the overlap for MFT and MHC services that could be furnished in either location, and because behavioral health services are optional at FQHCs, advancing a relationship and partnership through these entities in the Medicare program could be a point for CMS’ further exploration as efforts to improve behavioral health care for beneficiaries’ advance.

*Response:* New provider types must be authorized by statute; CMS does not have the authority to create new provider types. We did not propose adding CCBHCs as a provider type for Medicare, and therefore, this comment is out of scope.

*Comment:* Some commenters recommended CMS consider broadening the FQHC mental health visit by adding health and behavior assessment and intervention services (HBAI) codes to the Medicare FQHC mental health visit.

*Response:* Currently, HBAI services are covered services and can be furnished in an FQHC, but they do not qualify as stand-alone billable visits in a FQHC. That is, if an HBAI

service is furnished during a FQHC qualifying visit, the service(s) are included in the visit. Since we did not make any proposals related to updates to the FQHC qualifying visit list and we note that there are recent coding changes for HBAI services, we wish to consider this topic further.

After consideration of public comments, we are finalizing our proposal as proposed to codify payment provisions for MFTs and MHCs under 42 CFR part 405, subpart X beginning January 1, 2024. That is, RHC and FQHCs will be paid under the RHC AIR and FQHC PPS, respectively, when MFTs and MHCs furnish RHC and FQHC services defined in §§ 405.2411 and 405.2446. As eligible RHC and FQHC practitioners, MFTs and MHCs should follow the same policies and supervision requirements as a PA, NP, CNM, CP, and CSW.

In addition, we are finalizing as proposed a provision to allow addiction counselors that meet all of the applicable requirements of clinical supervised experience in mental health counseling, and that are licensed or certified as MHCs, clinical professional counselors, or professional counselors by the State in which the services are furnished) to enroll in Medicare as MHCs. In remaining consistent with payment policies for professionals billing Medicare under the PFS, we are also finalizing as proposed a provision applying the definitions established for MFTs and MHCs under the PFS to RHCs and FQHCs. Since MFTs and MHCs are statutorily authorized to furnish services in RHCs and FQHCs effective January 1, 2024, we are finalizing as proposed the clarification that when MFTs and MHCs provide the services described in HCPCS code G0323 in an RHC or FQHC, the RHC or FQHC can bill HCPCS code G0511. Finally, we are finalizing as proposed several conforming regulatory changes to applicable RHC and FQHC regulations in 42 CFR part 405, subpart X, specifically, §§ 405.2401, 405.2411, 405.2415, 405.2446, 405.2448, 405.2450, 405.2452, 405.2463, and 405.2468.

d. Section 4124 of the Consolidated Appropriations Act, 2023

Section 4124 of Division FF of the CAA, 2023 establishes coverage and payment under Medicare for the Intensive Outpatient Program (IOP) benefit, effective January 1, 2024. IOP may be furnished by hospitals, Community Mental Health Centers (CMHCs), FQHCs and RHCs.

Payment for IOP services furnished by RHCs and FQHCs is to be made at the same payment rate as if it were furnished by a hospital.

In addition to existing mental health services furnished by RHCs and FQHCs, this new provision establishes coverage for IOP services furnished in RHCs and FQHCs and includes occupational therapy, family counseling, beneficiary education, diagnostic services and individual and group therapy.

Please see section VIII.F. of the CY 2024 Hospital Outpatient Prospective Payment System and the Ambulatory Surgical Center payment system final rule with comment for discussion of the new IOP scope of benefits, requirements, physician certification, and payment policies.

### 3. Updates to Supervision Requirements for Behavioral Health Services furnished at RHCs and FQHCs

In the CY 2023 PFS final rule (87 FR 69545 through 69548), we amended the direct supervision requirement under the “incident to” regulations for services payable under the PFS to allow behavioral health services to be furnished under the general supervision of a physician or non-physician practitioner (NPP) when these services or supplies are provided by auxiliary personnel incident to the services of a physician or NPP. Several commenters expressed support for CMS allowing behavioral health services to be furnished under general supervision in the RHC and FQHC settings in addition to services paid under the PFS. In response to the public comments, we noted that for CY 2023, the proposed change to the level of supervision for “incident to” behavioral health services from direct to general was applicable only to services payable under the PFS, as services furnished in the RHC and FQHC settings were not addressed in the relevant proposal in the CY 2023 PFS proposed rule (87 FR 46062 through 46068). We stated we may consider changes to the regulations regarding services furnished at RHCs and FQHCs in the future.

Currently, behavioral health services furnished in the RHC and FQHC settings require direct supervision. However, in order to be more consistent with applicable policies under the PFS, for CY 2024, we proposed to change the required level of supervision for behavioral health services furnished “incident to” a physician or NPP’s services at RHCs and FQHCs to allow general supervision, rather than direct supervision, consistent with the policies finalized under the PFS for CY 2023. Accordingly, we proposed to revise the regulations at §§ 405.2413 and 405.2415 to reflect that behavioral health services can be furnished under general supervision of the physician (or other practitioner) when these services or supplies are provided by auxiliary personnel incident to the services of a physician (or another practitioner). Additionally, as discussed in the CY 2023 PFS final rule (87 FR 69547), we noted that at § 410.26(a)(1) we define “auxiliary personnel” as any individual who is acting under the supervision of a physician (or other practitioner), regardless of whether the individual is an employee, leased employee, or independent contractor of the physician (or other practitioner) or of the same entity that employs or contracts with the physician (or other practitioner), has not been excluded from the Medicare, Medicaid and all other Federally-funded health care programs by the Office of Inspector General or had his or her Medicare enrollment revoked, and meets any applicable requirements to provide incident to services, including licensure, imposed by the State in which the services are being furnished.

We received a few comments on our proposal to update the supervision requirements for behavioral health services furnished in RHCs and FQHCs. The following is a summary of the comments we received and our responses.

*Comment:* Commenters were overwhelmingly supportive of our proposal to change the required level of supervision for behavioral health services furnished in RHCs and FQHCs “incident to” a physician or NPP’s services to general supervision rather than direct supervision. Commenters stated that these revisions are necessary to ensure FQHCs can bill “incident to”

services furnished by auxiliary personnel on the cost report and that the provision will help better meet the health needs of vulnerable patient populations.

*Response:* We appreciate the commenters' support of our proposal.

After consideration of public comments, we are finalizing our proposal to revise the regulations at §§405.2413 and 405.2415 to reflect that behavioral health services can be furnished under general supervision of the physician (or other practitioner) when these services or supplies are provided by auxiliary personnel incident to the services of a physician (or another practitioner), as proposed.

#### 4. General Care Management Services in RHCs and FQHCs

##### a. Background

We have been engaged in a multi-year examination of coordinated and collaborative care services in professional settings, and as a result established codes and separate payment in the PFS to independently recognize and pay for these important services. The care coordination included in services, such as office visits, do not always adequately describe the non-face-to-face care management work involved in primary care. Payment for office visits may not reflect all the services and resources required to furnish comprehensive, coordinated care management for certain categories of beneficiaries, such as those who are returning to a community setting following discharge from a hospital or skilled nursing facility (SNF) stay.

As we discussed in the CY 2016 PFS final rule (80 FR 71081 through 71088), to address the concern that the non-face-to-face care management work involved in furnishing comprehensive, coordinated care management for certain categories of beneficiaries is not adequately paid for as part of an office visit, beginning on January 1, 2015, practitioners billing under the PFS are paid separately for CCM services when CCM service requirements are met. We explained that RHCs and FQHCs cannot bill under the PFS for RHC or FQHC services and individual practitioners working at RHCs and FQHCs cannot bill under the PFS for RHC or FQHC services while working at the RHC or FQHC. Although many RHCs and FQHCs pay for

coordination of services within their own facilities and may sometimes help to coordinate services outside their facilities, the type of structured care management services that are now payable under the PFS for patients with multiple chronic conditions, particularly for those who are transitioning from a hospital or SNF back into their communities, are generally not included in the RHC or FQHC payment. Therefore, separate payment was established in the CY 2016 PFS final rule (80 FR 71080 through 71088) for RHCs and FQHCs that furnish CCM services. We believe the non-face-to-face time required to coordinate care is not captured in the RHC AIR or the FQHC PPS payment, particularly for the rural and/or low-income populations served by RHCs and FQHCs. Allowing separate payment for CCM services in RHCs and FQHCs is intended to reflect the additional resources necessary for the unique components of CCM services.

In the CY 2018 PFS final rule (82 FR 53169 and 53180), we finalized revisions to the payment methodology for CCM services furnished by RHCs and FQHCs and established requirements for general Behavioral Health Integration (BHI) and psychiatric Collaborative Care Management (CoCM) services furnished in RHCs and FQHCs, beginning on January 1, 2018. We also initiated the use of HCPCS code G0511, a General Care Management code for use by RHCs or FQHCs when at least 20 minutes of qualified CCM or general BHI services are furnished to a patient in a calendar month. In the CY 2019 PFS final rule (83 FR 59683), we explained for CY 2018 the payment amount for HCPCS code G0511 was set at the average of the 3 national non-facility PFS payment rates for the CCM and general BHI codes and updated annually based on the PFS amounts. That is, for CY 2018 the 3 codes that comprised HCPCS code G0511 were CPT code 99490 (*20 minutes or more of CCM services*), CPT code 99487 (*60 minutes or more of complex CCM services*), and CPT code 99484 (*20 minutes or more of BHI services*).

We also explained that another CCM code was introduced for practitioners billing under the PFS, CPT code 99491, which would correspond to 30 minutes or more of CCM furnished by

a physician or other qualified health care professional and is similar to CPT codes 99490 and 99487 (83 FR 56983). Therefore, for RHCs and FQHCs, we added CPT code 99491 as a general care management service and included it in the calculation of HCPCS code G0511. Starting on January 1, 2019, RHCs and FQHCs were paid for HCPCS code G0511 based on the average of the national non-facility PFS payment rates for CPT codes 99490, 99487, 99484, and 99491 (83 FR 59687).

In the CY 2021 PFS final rule (85 FR 84697 through 84699), we explained that the requirements described by the codes for Principal Care Management (PCM) services were similar to the requirements for the services described by HCPCS code G0511; therefore, we added HCPCS codes G2064 and G2065 to HCPCS code G0511 as general care management services for RHCs and FQHCs. Consequently, effective January 1, 2021, RHCs and FQHCs are paid when a minimum of 30 minutes of qualifying PCM services are furnished during a calendar month. The payment rate for HCPCS code G0511 for CY 2021 was the average of the national non-facility PFS payment rate for the RHC and FQHC care management and general behavioral health codes (CPT codes 99490, 99487, 99484, and 99491), and PCM codes (HCPCS codes G2064 and G2065). We noted that in the CY 2022 PFS final rule (86 FR 65118), HCPCS codes G2064 and G2065 were replaced by CPT codes 99424 and 99435. Therefore, for CY 2022 the payment rate for HCPCS code G0511 was the average of the national non-facility PFS payment rate for CPT codes 99490, 99487, 99484, 99491, 99424, and 99425).

Most recently, in the CY 2023 PFS final rule (87 FR 69735 through 69737), we included Chronic Pain Management (CPM) services described by HCPCS code G3002 in the general care management HCPCS code G0511 when at least 30 minutes of qualifying non-face-to-face CPM services are furnished during a calendar month. We explained since HCPCS code G3002 is valued using a crosswalk to the PCM CPT code 99424, which is currently one of the CPT codes that comprise HCPCS code G0511, there was no change made to the average used to calculate the HCPCS code G0511 payment rate to reflect CPM services.

Additional information on care management requirements is available on the CMS Care Management Web page at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Care-Management.html> and on the CMS RHC and FQHC Web pages at <https://www.cms.gov/Center/Provider-Type/Rural-Health-Clinics-Center.html> and <https://www.cms.gov/Center/Provider-Type/Federally-Qualified-Health-Centers-FQHC-Center.html>.

b. Remote Physiologic Monitoring (RPM) and Remote Therapeutic Monitoring (RTM) Services Furnished in RHCs and FQHCs

In recent years under the PFS, we have finalized payment for five CPT codes in the RPM code family. RPM services include the collection, analysis, and interpretation of digitally collected physiologic data, followed by the development of a treatment plan, and the managing of a patient under the treatment plan (84 FR 62697). Within the suite of services that comprise RPM, there is a CPT code that describes the initial set-up and patient education on use of the equipment that stores the physiologic data.

After analyzing and interpreting a patient's remotely collected physiologic data, we noted that the next step in the process of RPM is the development of a treatment plan that is informed by the analysis and interpretation of the patient's data. It is at this point that the physician or other practitioner develops a treatment plan with the patient and/or caregiver (that is, develops a patient-centered plan of care) and then manages the plan until the targeted goals of the treatment plan are attained, which signals the end of the episode of care.

**TABLE 23: RPM HCPCS Codes and Descriptors**

HCPCS code	Short Description	Official Long Description
99453	Rem mntr physiologic param setup	Remote monitoring of physiologic parameter(s) (e.g. Weight, blood pressure, pulse oximetry, respiratory flow rate) initial set-up and patient education on use of equipment
99454	Rem mntr physiologic param dev	Remote monitoring of physiologic parameter(s) (e.g. Weight, blood pressure, pulse oximetry, respiratory flow rate) initial device(s) supply with daily recording(s) or programmed alert(s) transmission, each 30 days
99457	Rem physiologic mntr 1 <sup>st</sup> 20 min	Remote physiologic monitoring treatment services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; first 20 minutes
99458	Rem physiologic mntr ea addl 20	Remote physiologic monitoring treatment services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; each additional 20 minutes (list separately in addition to code for primary procedure)
99091	Collj & interpj data ea 30 d	Collection and interpretation of physiologic data (e.g. Blood pressure, glucose monitoring) digitally stored and/or transmitted by the patient and/or caregiver to the physician or other qualified health professional, qualified by education, training, licensure/regulation (when applicable) requiring a minimum of 30 minutes of time, each 30 days

Remote Therapeutic Monitoring (RTM) is a family of five codes finalized for Medicare payment in the CY 2022 PFS final rule (86 FR 65114 through 65117). RTM services involve remote monitoring of respiratory system status, musculoskeletal status, therapy adherence, or therapy response. There is also a CPT code that describes the initial set-up and patient education on use of the equipment that stores the physiologic data within the suite of services that comprise RTM.

**TABLE 24: RTM HCPCS Codes and Descriptors**

HCPCS code	Short Description	Official Long Description
98975	Rem ther mntr 1st setup&edu	Remote therapeutic monitoring (e.g. therapy adherence, therapy response); initial set-up and patient education on use of equipment
98976	Rem ther mntr dev sply resp	Remote therapeutic monitoring (e.g. therapy adherence, therapy response); device(s) supply with scheduled (e.g. daily) recording(s) and/or programmed alert(s) transmission to monitor respiratory system, each 30 days
98977	Rem ther mntr dv sply mscskl	Remote therapeutic monitoring (e.g. therapy adherence, therapy response); device(s) supply with scheduled (e.g. daily) recording(s) and/or programmed alert(s) transmission to monitor musculoskeletal system, each 30 days
98980	Rem ther mntr 1st 20 min	Remote therapeutic monitoring treatment management services, physician or other qualified health care professional time in a calendar month requiring at least one interactive communication with the patient or caregiver during the calendar month; first 20 minutes
98981	Rem ther mntr ea addl 20 min	Remote therapeutic monitoring treatment management services, physician or other qualified health care professional time in a calendar month requiring at least one interactive communication with the patient or caregiver during the calendar month; each additional 20 minutes (list separately in addition to code for primary procedure)

As discussed in the CY 2024 PFS proposed rule (88 FR 52401), RPM and RTM services are not stand-alone billable visits in RHCs and FQHCs. When these services are furnished incident to an RHC or FQHC visit, payment is included in the RHC's AIR subject to a payment-limit or the per visit payment under the FQHC PPS which is the lesser of the PPS rate or the FQHC's actual charges.

In recent years, we have updated RHC and FQHC policies to improve payment for care management and coordination. We have provided a separate payment to RHCs and FQHCs in addition to the billable visit in part for monthly care management and behavioral health integration codes, as described in the general care management code, HCPCS code G0511, because these are inherently non-face-to-face services that may not be accounted for in the per-visit payment for an in-person encounter.

RHCs and FQHCs have inquired about receiving a separate payment for RTM and RPM services. They have stated that CMS should expand HCPCS code G0511 to include RPM treatment management services to provide Medicare beneficiaries in rural and underserved areas access to these services or establish G-codes to reimburse RHCs and FQHCs for RPM set-up and patient education on use of equipment (CPT code 99453) and monthly data transmission (CPT code 99554) and do not believe that these services are captured in the RHC AIR or FQHC PPS and as such are impeding access to these services.

Therefore, upon further review and in line with our thinking about non-face-to-face services previously, we proposed to include the CPT codes that are associated with the suite of services that comprise RPM and RTM in the general care management HCPCS code G0511 when these services are furnished by RHCs and FQHCs since the requirements for RPM and RTM services are similar to the non-face-to-face requirements for the general care management services furnished in RHCs and FQHCs. We explained that allowing a separate payment for RPM and RTM services in RHCs and FQHCs is intended to reflect the additional resources necessary for the unique components of these services.

We explained in the CY 2024 proposed rule, that the care coordination included in services, such as office visits, does not always adequately describe the non-face-to-face care management work involved in primary care. Payment for in-person encounters may not reflect all the services and resources required to furnish comprehensive, coordinated care management. As RPM and RTM services are described, particularly, collection and transmission of data and then further analysis and interpretation of the data are happening outside of the face-to-face visit. RPM and RTM also have principles which are consistent with other care management principles, such as, an established patient-physician relationship is required, patient consent is required at the time that RPM services are furnished, and services allow the monitoring of acute conditions and chronic conditions. We noted that under the proposal, RPM and RTM services must be medically reasonable and necessary, meet all requirements, and not be duplicative of services paid to RHCs and FQHCs under the general care management code for an episode of care in a given calendar month. As such, we proposed that RHCs and FQHCs that furnish RPM and RTM services would be able to bill these services using HCPCS code G0511, either alone or with other payable services on an RHC or FQHC claim for dates of service on or after January 1, 2024.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* All commenters expressed support for our proposal to allow RHCs and FQHCs to bill separately for RPM and RTM services. Commenters noted they believe allowing RHCs and FQHCs to bill RPM and RTM codes outside of the all-inclusive rate or prospective payment systems would prevent disparities in care. Commenters also noted the ability to bill separately for RPM and RTM services will empower RHCs and FQHCs to leverage remote monitoring technologies effectively, ensuring better patient outcomes and more efficient healthcare delivery, expanding access to innovative care models and improving patient engagement and self-management.

*Response:* We appreciate the commenters' support of allowing RHCs and FQHCs to bill separately for RPM and RTM services.

*Comment:* Some commenters stated that adding RPM and RTM services to the general care management code is not sustainable or equitable and would like CMS to create a separate code(s) for RPM and RTM services that can be billed outside of the RHC AIR or FQHC PPS. Commenters noted the proposed payment methodology for HCPCS code G0511 does not fully reflect the costs of providing RPM and RTM services in the RHC and FQHC settings and requested that CMS modify the reimbursement rate to match the national average payment rates for comparable RPM and RTM services under the PFS, which would better reflect the complexity of delivering RPM and RTM services.

*Response:* As we discuss in more detail later, in the CY 2024 proposed rule, we proposed a revised methodology for the calculation of HCPCS code G0511 by analyzing the actual utilization of the services using a weighted average of the services that comprise HCPCS code G0511. Regarding separate coding and a separate calculation of RPM and RTM services, we note that the non-facility rates of the codes describing RPM and RTM range from \$43.04 to \$133.18. As shown in Table 27, the utilization of the CPT codes with the higher reimbursement rates tend to be much lower than the CPT codes with the lower reimbursement rates. When we take into account the utilization of all the services that comprise HCPCS code G0511, the weighted average is \$72.98. We believe RPM and RTM services fall squarely into the rate for G0511.

We believe allowing a separate payment for these services along with our revised methodology for calculating the rate for G0511 will provide adequate payment and support access to these services; however, we plan to continue to monitor and explore other options for future rulemaking to address any sustainability and efficiencies of these policies.

After consideration of public comments, we are finalizing as proposed to add the suite of services that comprise RPM and RTM services to the general care management code, G0511

beginning January 1, 2024 as the requirements for RPM and RTM services are similar to the non-face-to-face requirements for the general care management services furnished in RHCs and FQHCs.

c. Services Addressing Health-Related Social Needs: Community Health Integration Services and Principal Illness Navigation Services

(1) Background

As discussed in the CY 2024 PFS proposed rule (88 FR 52401), in recent years, we have sought to recognize significant changes in health care practice and have been engaged in an ongoing, incremental effort to identify gaps in appropriate coding and payment for care management/coordination and primary care services under the PFS (see section II.E.4.(27) for the discussion regarding these services under the PFS). In congruence with services paid under the PFS, we have similarly provided separate payment for transitional care management services, chronic care management services, and behavioral health care management services to improve payment accuracy to better recognize resources involved in care management and coordination for certain patient populations. In this effort to improve payment accuracy for care coordination in RHCs and FQHCs, in the CY 2024 PFS proposed rule we stated we are exploring ways to better identify the resources for helping patients with serious illnesses navigate the healthcare system or removing health-related social barriers that are interfering with their ability to execute a medically necessary plan of care. RHCs and FQHCs sometimes obtain information about and help address, social determinants of health (SDOH) that significantly impact their ability to diagnose or treat a patient. The CPT E/M Guidelines defined SDOH as, “Economic and social conditions that influence the health of people and communities. Examples may include food or housing insecurity. Additionally, RHCs and FQHCs sometimes help newly diagnosed cancer patients and other patients with similarly serious, high-risk illnesses navigate their care, such as helping them understand and implement the plan of care, locate and reach the right practitioners and providers to access recommended treatments and diagnostic services, considering the

personal circumstances of each patient. Payment for these activities, to the extent they are reasonable and necessary for the diagnosis and treatment of the patient's illness or injury, is currently included in the RHC AIR or under the FQHC PPS payment amount for visits and some care management services. Medical practice has evolved to increasingly recognize the importance of these activities, and we believe RHCs and FQHCs are performing them more often.

However, this work is not explicitly identified in current coding, and as such, we believe it is underutilized and undervalued. Accordingly, we proposed to create new coding to expressly identify and value these services for PFS payment and distinguish them from current care management services. Therefore, we considered the new coding for purposes of payment to RHCs and FQHCs.

## (2) Payment for Community Health Integration (CHI) Services in RHCs and FQHCs

As discussed in the CY 2024 PFS proposed rule (88 FR 52402), there were two new HCPCS codes proposed to describe CHI services performed by certified or trained auxiliary personnel, which may include a Community Health Worker (CHW), incident to the professional services and under the general supervision of the billing practitioner for services paid under the PFS. We stated that the requirements for the proposed CHI services are similar to the requirements for the general care management services furnished by RHCs and FQHCs. As such, we explained that we believe the level of care coordination resources required in addressing the particular SDOH need(s) that are interfering with, or presenting a barrier to, diagnosis or treatment of the patient's problem(s) addressed in the CHI initiating visit were not captured in the RHC AIR or the FQHC PPS payment, particularly for the rural and/or low-income populations served by RHCs and FQHCs. Payment for office visits may not reflect all the services and resources involved with CHI as described in the proposed HCPCS code below, for example, coordination of care, facilitation of access to services, communication between settings.

**GXXXI** *Community health integration services performed by certified or trained auxiliary personnel, including a community health worker, under the direction of a physician or other practitioner; 60 minutes per calendar month, in the following activities to address social determinants of health (SDOH) need(s) that are significantly limiting ability to diagnose or treat problem(s) addressed in an initiating E/M visit:*

- *Person-centered assessment, performed to better understand the individualized context of the intersection between the SDOH need(s) and the problem(s) addressed in the initiating E/M visit.*

- ++ *Conducting a person-centered assessment to understand patient's life story, strengths, needs, goals, preferences and desired outcomes, including understanding cultural and linguistic factors.*

- ++ *Facilitating patient-driven goal-setting and establishing an action plan.*

- ++ *Providing tailored support to the patient as needed to accomplish the practitioner's treatment plan.*

- *Practitioner, Home-, and Community-Based Care Coordination*

- ++ *Coordinating receipt of needed services from healthcare practitioners, providers, and facilities; and from home- and community-based service providers, social service providers, and caregiver (if applicable).*

- ++ *Communication with practitioners, home- and community-based service providers, hospitals, and skilled nursing facilities (or other health care facilities) regarding the patient's psychosocial strengths and needs, functional deficits, goals, preferences, and desired outcomes, including cultural and linguistic factors.*

- ++ *Coordination of care transitions between and among health care practitioners and settings, including transitions involving referral to other clinicians; follow-up after an emergency department visit; or follow-up after discharges from hospitals, skilled nursing facilities or other health care facilities.*

++ *Facilitating access to community-based social services (e.g., housing, utilities, transportation, food assistance) to address the SDOH need(s).*

- *Health education- Helping the patient contextualize health education provided by the patient's treatment team with the patient's individual needs, goals, and preferences, in the context of the SDOH need(s), and educating the patient on how to best participate in medical decision-making.*

- *Building patient self-advocacy skills, so that the patient can interact with members of the health care team and related community-based services addressing the SDOH need(s), in ways that are more likely to promote personalized and effective diagnosis or treatment.*

- *Health care access / health system navigation*

++ *Helping the patient access healthcare, including identifying appropriate practitioners or providers for clinical care and helping secure appointments with them.*

- *Facilitating behavioral change as necessary for meeting diagnosis and treatment goals, including promoting patient motivation to participate in care and reach person-centered diagnosis or treatment goals.*

- *Facilitating and providing social and emotional support to help the patient cope with the problem(s) addressed in the initiating visit, the SDOH need(s), and adjust daily routines to better meet diagnosis and treatment goals.*

- *Leveraging lived experience when applicable to provide support, mentorship, or inspiration to meet treatment goals.*

**GXXX2** – *Community health integration services, each additional 30 minutes per calendar month (List separately in addition to GXXX1).*

### (3) Payment for Principal Illness Navigation (PIN) Services in RHCs and FQHCs

As discussed in the CY 2024 PFS proposed rule (88 FR 52403), there were two new HCPCS codes proposed to describe PIN services for services paid under the PFS. These services describe when certified or trained auxiliary personnel under the direction of a billing practitioner,

which may include a patient navigator or certified peer specialist, are involved in the patient's health care navigation as part of the treatment plan for a serious, high-risk disease expected to last at least 3 months, that places the patient at significant risk of hospitalization or nursing home placement, acute exacerbation/decompensation, functional decline, or death. We explained that the requirements for the proposed PIN services were also similar to the requirements for the general care management services furnished by RHCs and FQHCs.

As such, we explained that we believe the resources required to provide the level of care coordination needed for individualized help to the patient (and caregiver, if applicable) to identify appropriate practitioners and providers for care needs and support, and access necessary care timely are not captured in the RHC AIR or the FQHC PPS payment, particularly for the rural and/or low-income populations served by RHCs and FQHCs. Payment for office visits may not reflect all the services and resources involved with PIN as described in the proposed HCPCS code below.

***GXXX3** Principal Illness Navigation services by certified or trained auxiliary personnel under the direction of a physician or other practitioner, including a patient navigator or certified peer specialist; 60 minutes per calendar month, in the following activities:*

- *Person-centered assessment, performed to better understand the individual context of the serious, high-risk condition.*

- ++ *Conducting a person-centered assessment to understand the patient's life story, strengths, needs, goals, preferences, and desired outcomes, including understanding cultural and linguistic factors.*

- ++ *Facilitating patient-driven goal setting and establishing an action plan.*

- ++ *Providing tailored support as needed to accomplish the practitioner's treatment plan.*

- *Identifying or referring patient (and caregiver or family, if applicable) to appropriate supportive services.*

- *Practitioner, Home, and Community-Based Care Coordination*

- ++ *Coordinating receipt of needed services from healthcare practitioners, providers, and facilities; home- and community-based service providers; and caregiver (if applicable).*

- ++ *Communication with practitioners, home-, and community-based service providers, hospitals, and skilled nursing facilities (or other health care facilities) regarding the patient's psychosocial strengths and needs, functional deficits, goals, preferences, and desired outcomes, including cultural and linguistic factors.*

- ++ *Coordination of care transitions between and among health care practitioners and settings, including transitions involving referral to other clinicians; follow-up after an emergency department visit; or follow-up after discharges from hospitals, skilled nursing facilities or other health care facilities.*

- ++ *Facilitating access to community-based social services (e.g., housing, utilities, transportation, food assistance) as needed to address SDOH need(s).*

- *Health education- Helping the patient contextualize health education provided by the patient's treatment team with the patient's individual needs, goals, preferences, and SDOH need(s), and educating the patient (and caregiver if applicable) on how to best participate in medical decision-making.*

- *Building patient self-advocacy skills, so that the patient can interact with members of the health care team and related community-based services (as needed), in ways that are more likely to promote personalized and effective treatment of their condition.*

- *Health care access / health system navigation.*

- ++ *Helping the patient access healthcare, including identifying appropriate practitioners or providers for clinical care, and helping secure appointments with them.*

- ++ *Providing the patient with information/resources to consider participation in clinical trials or clinical research as applicable.*

- *Facilitating behavioral change as necessary for meeting diagnosis and treatment goals, including promoting patient motivation to participate in care and reach person-centered diagnosis or treatment goals.*

- *Facilitating and providing social and emotional support to help the patient cope with the condition, SDOH need(s), and adjust daily routines to better meet diagnosis and treatment goals.*

- *Leverage knowledge of the serious, high-risk condition and/or lived experience when applicable to provide support, mentorship, or inspiration to meet treatment goals.*

**GXXX4** – *Principal Illness Navigation services, additional 30 minutes per calendar month (List separately in addition to GXXX3).*

We explained that allowing a separate payment for CHI and PIN services in RHCs and FQHCs is intended to reflect the additional time and resources necessary for the unique components of care coordination services. Therefore, in an effort to have consistency with the new services that were being proposed for practitioners billing under the PFS, we proposed to include PIN services in the general care management HCPCS code G0511 when these services are provided by RHCs and FQHCs.

We noted that under the proposals to expand the billable services under HCPCS code G0511 to include CHI and PIN, each of these services must be medically reasonable and necessary, meet all requirements, and not be duplicative of services paid to RHCs and FQHCs under the general care management code for an episode of care in a given calendar month. We expected that our proposal to add the new codes for CHI and PIN to the general care management code would also support the CMS pillars<sup>175</sup> for equity, inclusion, and access to care for the Medicare population, and improve patient outcomes, including for underserved and low-income populations where there is a disparity in access to quality care.

---

<sup>175</sup> CMS Strategic Plan. <https://www.cms.gov/cms-strategic-plan>.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Commenters supported our proposal to allow RHCs and FQHCs to bill separately for CHI and PIN services. Commenters noted this will allow auxiliary personnel like CHWs to furnish key SDOH interventions after an evaluation/management visit and allow RHCs and FQHCs to bill for specific care services to patients with high-risk conditions.

*Response:* We appreciate the commenters' support of allowing RHCs and FQHCs to bill separately for CHI and PIN services.

*Comment:* Commenters recommended that CMS consider a standalone HCPCS code for CHI and PIN services in RHCs and FQHCs because of the potential for increased claim denials for duplicate billing when numerous care management services are included in HCPCS code G0511 that would potentially require RHCs and FQHCs to bill for more than one care management service on the same day for the same beneficiary or duplicate claims denied when multiple care management services are filed on successive days for the same beneficiary.

*Response:* We appreciate the commenter's concerns regarding the ability of RHCs and FQHCs to bill for more than one care management service per month for the same beneficiary. As we stated in the CY 2024 PFS proposed rule (88 FR 52403), each of the services included in the general care management code must be medically reasonable and necessary, meet all requirements, and not be duplicative of services paid to RHCs and FQHCs under the general care management code for an episode of care in a given calendar month. That is, an RHC or FQHC may bill HCPCS code G0511 multiple times in a calendar month as long as all requirements are met and there is not double counting. For example, RHCs and FQHCs can bill HCPCS code G0511 twice for 20 minutes of qualifying CCM services and 30 minutes of qualifying PCM services, as long as, the clinical staff minutes do not overlap. Regarding separate coding, we believe allowing a separate payment for these services along with our revised methodology for calculating the rate for HCPCS code G0511 will provide adequate payment and support access to

these services; however, we plan to continue to monitor and explore other options for future rulemaking to address any sustainability and efficiencies of these policies.

*Comment:* Some commenters stated there should be a provision for RHCs and FQHCs to receive additional compensation based on actual time spent because CHWs are compensated based on time and not encounters.

*Response:* RHCs and FQHCs are paid a per visit amount. We believe the commenters concern is being addressed in the revised methodology of the calculation for the RHC and FQHC general care management HCPCS code G0511 which takes into account the additional time spent in care coordination by incorporating all of the applicable add-on codes for these services.

After consideration of public comments and in an effort to be consistent with the new services finalized in section II.E.4. of this final rule for practitioners billing under the PFS, we are finalizing as proposed to include CHI and PIN services in the general care management HCPCS code G0511 when these services are provided by RHCs and FQHCs. We are also clarifying that RHCs and FQHCs may bill HCPCS code G0511 multiple times in a calendar month, as long as all of the requirements for each service are met. Finally, we note that the placeholder HCPCS codes GXXX1 through GXXX4 that describe CHI and PIN services are replaced with HCPCS codes G0019, G0022, G0023, and G0024 respectively.

In section II.E.4. of this final rule, we discuss the proposals and final policies under the PFS for the SDoH Risk Assessment. In section III.S. of this final rule, we discuss proposals and final policies for a SDOH Risk Assessment as an optional, additional element of the AWW. We received comments from interested parties on how the SDOH Risk Assessment will be paid in the RHC and FQHC settings.

*Comment:* Commenters supported CMS' proposal to reimburse for an SDOH Risk Assessment as part of the Annual Wellness Visit (AWV). Many commenters requested clarification on the payment mechanics for the SDOH Risk Assessment as an additional element of the AWW in relation to the FQHC and RHC bundled payment mechanisms. Commenters also

requested that we revise § 405.2463(c)(1)(iii) and add the AWV along with the initial preventive physical exam as an exception to the FQHC and RHC single visit payment when a separate medical or mental health visit is made by the patient on the same day. Another commenter also supported CMS' proposal to reimburse for the SDOH through the creation of a standalone G code under the PFS, but urged CMS to clarify language to ensure FQHCs can benefit from this proposal.

*Response:* FQHCs and RHCs are currently eligible to furnish the AWV and as such, they will also be eligible to furnish a SDOH Risk Assessment as an additional element of the AWV. As stated in section III.S of this final rule, Medicare will pay 100 percent of the fee schedule amount for the SDOH Risk Assessment service (beneficiary cost sharing would not be applicable) when this risk assessment is furnished to a Medicare beneficiary as an optional element within an AWV (as part of the same visit with the same date of service as the AWV). This is analogous to the current approach to the ACP service, which is an optional service for which beneficiary cost sharing is not applicable when furnished as part of the same visit and on the same date of service as the AWV. Beneficiary cost sharing is not applicable to the AWV and, because the SDOH Risk Assessment will be an optional element within the AWV, there will not be any beneficiary cost sharing for the SDOH Risk Assessment either when furnished as part of the same visit and on the same date of service as the AWV. When ACP is furnished as an element of the annual wellness visit (AWV) in an RHC or FQHC, only one visit is paid. Maintaining consistency, therefore, when SDOH is furnished as an optional element of the AWV, only one visit is paid, that is, it will be paid under the AIR or the lesser of charges or the PPS rate with the AWV adjustment.

Consequently, when the SDOH Risk Assessment is furnished with a billable visit (other than an AWV) on the same day in an RHC, only the visit will be paid under the AIR and coinsurance and deductible will be applied. For FQHCs, the SDOH Risk Assessment is not considered a qualifying visit. When the assessment is furnished in conjunction with a qualifying

visit (other than an AWV) on the same day in a FQHC, only the visit will be paid under the FQHC PPS and coinsurance will be applicable. Additional information on RHC and FQHC billing of the SDoH Risk Assessment will be available in subregulatory guidance.

Regarding the public comments that recommend that § 405.2463(c)(1)(iii) be revised to add the AWV along with the initial preventive physical exam as an exception to the FQHC and RHC single visit payment when the patient has a separate medical or mental health visit on the same day is out of scope for this rule, this recommendation has been informative and we will take it into consideration for possible future rulemaking.

d. Proposed Revision to the Calculation of the Payment Amount for the General Care Management HCPCS Code G0511

Currently, HCPCS code G0511 is based on the PFS national average non-facility payment rate for each of the services identified as billable general care management services. We then add each payment rate and divide by the total number of codes to arrive at the payment amount for HCPCS code G0511. This payment amount is a flat rate that is not subsequently adjusted for locality. As we noted in the CY 2023 PFS final rule (87 FR 69735), when determining which services are billable under HCPCS code G0511, we do not include the add-on HCPCS codes payable under the PFS because RHCs and FQHCs do not pay their practitioners based on additional minutes spent by practitioners. Instead, we generally include the base codes.

In the CY 2023 PFS final rule (87 FR 69736), we mentioned that we may consider other approaches for calculating the payment rate for HCPCS code G0511 as the number of services included in the general care management code is growing each year and provided examples. We thought to consider in the future valuing HCPCS code G0511 using a weighted average of the services that comprise HCPCS code G0511 or using the national average of the top three services comprising HCPCS code G0511. We welcomed comments on potential methodologies, but noted we did not receive any comments.

As we discussed in the CY 2024 PFS proposed rule (88 FR 52403 through 52406), we have been engaged in a multi-year examination of coordinated and collaborative care services in professional settings, and as a result established codes and separate payment in the PFS to separately recognize and pay for these important services. The care coordination included in services, such as office visits, do not always adequately describe the non-face-to-face care management work involved in primary care. Payment for in-person encounters may not reflect all the services and resources required to furnish comprehensive, coordinated care management. Through the last few payment rules, we have expanded the general care management services billable using the HCPCS code G0511 to be consistent with the policies implemented under the PFS.

In the CY 2024 PFS proposed rule, we noted our proposal to expand the billable services under HCPCS code G0511 to include RPM, RTM, CHI, and PIN. We explained that if we continue to calculate HCPCS code G0511 using our current approach, we believed that the value may no longer be appropriate payment for those services since we are simply dividing by the number of codes that comprise HCPCS code G0511 and as that number of services with lower payment rates increases, the value diminishes. Therefore, we proposed to revise our method for calculating HCPCS code G0511 so that payment for general care management is more appropriate. We provided a comparison of our current method to the proposed revised approach in the proposed rule and below for ease of reference.

Based on the current methodology for HCPCS code G0511 as shown in Table 25, general care management services are paid at the average of the national non-facility PFS payment rates for CPT codes 99490, 99487, 99484, 99491, 99424 and 99426.

**TABLE 25: CY 2023 National Non-Facility PFS Payment Rate for G0511**

CPT Code	National Non-Facility PFS Payment Rate
99424	\$81.33
99426	\$61.34
99484	\$43.04
99487	\$133.18
99490	\$62.69
99491	\$85.06
<b>G0511</b>	<b>\$77.94<sup>1</sup></b>

<sup>1</sup> Noting when averaging the six codes, the total RVU for HCPCS code G0511 is 2.295. Multiplying that by the conversion factor of 33.8872 results in \$77.77. However, RVUs on the PFS file are expressed in two decimal places. Thus, we round the 2.295 average to 2.30 which yields  $2.30 * 33.8872$ , resulting in \$77.94, the current payment rate for HCPCS code G0511.

As shown in Table 26, when we include RPM and RTM services in the national non-facility average as discussed above, the payment rate for HCPCS code G0511 is reduced to \$64.13 based on the national non-facility PFS payment rates for CY 2023.

**TABLE 26: CY 2023 National Non-Facility PFS Payment Rate for G0511 with RPM and RTM Base Codes**

CPT Code	National Non-Facility PFS Payment Rate
99454	\$50.15
99457	\$48.80
99091	\$54.22
98976	\$50.15
98977	\$50.15
98980	\$49.48
99424	\$81.33
99426	\$61.34
99484	\$43.04
99487	\$133.18
99490	\$62.69
99491	\$85.06
<b>G0511</b>	<b>\$64.13*</b>

\*Noting when averaging the 12 codes, the total RVU for HCPCS code G0511 is 2.30. Multiplying that by the conversion factor of 33.8872 results in \$64.13.

As demonstrated by comparing Table 25 to Table 26, using the current method of calculating the average of the non-facility rates but adding in RPM and RTM services base codes would result in a lower payment amount for HCPCS code G0511 compared to the current payment amount. We noted our belief that while the policy may address providing a payment for furnishing non-face-to-face services, the magnitude of the value may not appropriately account for the costs. Therefore, we considered and proposed a revised methodology for the calculation by looking at the actual utilization of the services. That is, we proposed to use a

weighted average of the services that comprise HCPCS code G0511. In order to use a weighted average, there needed to be data on the utilization of the services. We stated we did not have data on utilization of the services that comprise HCPCS code G0511 for RHCs and FQHCs since HCPCS code G0511 accounts for a variety of services. Therefore, we would use the most recently available utilization data from the services paid under the PFS, that is, in the physician office setting. We explained that we believed that the physician office setting provides an appropriate proxy for utilization of these services in the absence of actual data because this setting most closely aligns with the types of services furnished in RHCs and FQHCs since they typically furnish primary care.

In order to analyze utilization for services paid under the PFS and to ensure we accounted for payments accurately, we used CY 2021 claims data to look at utilization of the base code for the service and any applicable add-on codes used in the same month as well as any base codes reported alone in a month for all of the services encompassing general care management (that is, the array of services that made up HCPCS code G0511). We believed we needed to account for the payment associated with the base code along with an applicable add-on code in our calculation as this demonstrates a complete encounter. Until actual utilization becomes available, RHCs and FQHCs that furnish CPM, GBHI, CHI and PIN services would report HCPCS code G0511 when those services are furnished; however, they would not be included in the weighted average at this time. We stated that once more data is available, we will revisit the valuation of HCPCS code G0511 to include CPM, GBHI, CHI, and PIN as necessary.

Table 27 shows the payment amount using the proposed calculation. We explained in the proposed rule that the national non-facility payment rate associated with each code that comprises HCPCS code G0511 could be found in Addendum B of the proposed rule. We noted that the revised methodology reduces the payment rate for HCPCS code G0511 from its current rate for CY 2023, although not significantly.

**TABLE 27: Weighted Average Payment Rate for G0511 with RPM, RTM, CHI, and PIN Services Using CY 2023 Rates and Conversion Factor**

<b>CPT Code</b>	<b>2021 NF Utilization</b>	<b>Weighted Average</b>
99454	931,411	46,710,262
99457	492,286	24,023,557
99457+99458	398,209	35,221,586
99474	1,581	24,110
99091	55,435	3,005,686
98976	93,141	4,671,028
98977	93,141	4,671,028
98980	14,112	698,243
98980+98981	119,463	10,647,711
99424	13,719	1,115,766
99424+99425	4,573	638,482
99426	28,858	1,770,134
99426+99427	9,619	1,046,382
99484	151,808	6,533,816
99487	26,441	3,521,412
99487+99489	229,004	46,641,245
99490	3,436,429	215,429,734
99490+99439	802,656	88,396,505
99491	29,665	2,523,322
99491+99437	118,661	17,210,562
<b>G0511</b>		<b>\$72.98</b>

Therefore, we proposed to take the weighted average of the base code and add-on code pairs, in addition to the individual base codes for all of the services that comprise HCPCS code G0511 by using the CY 2021 PFS utilization to calculate the payment rate for the general care management services furnished in RHCs and FQHCs on or after January 1, 2024. The number on the right side of Table 27 is a weighted average which grants more relative weight to the codes in proportion to their utilization in 2021 claims data. To calculate the weighted average, we multiple the non-facility payment rate times the non-facility utilization for each code, sum this total, then divide by the summed non-facility utilization for the codes included in the average. In an effort to be consistent with practitioners billing under the PFS and to account for the additional time spent in care coordination, we determined that this approach was a more accurate representation of the payment. We stated that we would update HCPCS code G0511 annually based on current data available in the PFS.

We proposed revisions at § 405.2464(c) to reflect the revised methodology for calculating the payment amount for general care management services beginning January 1,

2024 which would be based on a weighted average of the services that comprise HCPCS code G0511 using the most recently available PFS utilization data. We welcomed comments on this proposed methodology.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Most commenters supported the proposed methodology for calculating the payment amount for general care management services, as long as the utilization data was pulled from traditional fee-for-service for physician offices.

*Response:* We appreciate the commenters' support of the proposed revision methodology for calculating the payment amount for general care management services and confirm we will be utilizing the data from the PFS for updates.

*Comment:* A few commenters expressed concerns that, since the code can only be billed once per calendar month, the increased payment rate may not sufficiently account for the resources required to provide chronic care management, CHI and/or PIN, as well as remote monitoring when several of these services are provided in the same month. One commenter stated that they believed that CMS does not allow RHCs to bill more than one care management service per month for the same beneficiary. The commenter stated that fee-for-service providers are able to bill for all of these services for one beneficiary during the same month, yet RHCs can only provide one of these suites of services and bill G0511 once per month per beneficiary. Some commenters requested that CMS increase the payment rate for HCPCS code G0511 to account for these circumstances when a beneficiary receives multiple care management services in a month but they are only able to bill the code once per month.

*Response:* We appreciate the commenters' raising these concerns. As we clarified above, RHCs and FQHCs may bill HCPCS code G0511 multiple times in a calendar month, as long as all of the requirements are met and resource costs are not counted more than once. We will continue to review these services for consideration in future rulemaking.

*Comment:* One commenter suggested various approaches to billing for multiple iterations of HCPCS code G0511 during a calendar month. Suggestions included: using modifiers to identify the service; creating a more comprehensive set of HCPCS codes separated by service type or by time; or allowing RHCs and FQHCs to bill the full suite of care management codes the same way traditional fee-for-service providers or hospital outpatient departments bill for care management services.

*Response:* We appreciate the commenter's recommendations on how to operationalize and track HCPCS code G0511 when billed multiple times in a calendar month. We did not propose these options in the CY 2024 PFS proposed rule; however, we will take these options into consideration for future rulemaking.

*Comment:* Some commenters requested that CMS add the General Behavioral Health Integration (GBHI) code and the Chronic Pain Management (CPM) codes into the weighted average for the calculation of HCPCS code G0511.

*Response:* As we stated in the CY 2024 PFS proposed rule, until actual utilization becomes available, RHCs and FQHCs that furnish CPM, GBHI, CHI and PIN services would report HCPCS code G0511 when those services are furnished. Once more data is available, we will revisit the valuation of HCPCS code G0511 to include CPM, GBHI, CHI, and PIN as necessary.

After consideration of public comments, we are finalizing the proposal to revise our method for calculating HCPCS code G0511, as proposed. That is, on an annual basis we will obtain actual utilization of the services that comprise HCPCS code G0511 using the most recently available data for the services paid under the PFS. Next, we will take the utilization of the base code for the service and any applicable add-on codes used in the same month, as well as any base codes reported alone in a month, for use in calculating the weighted average. To calculate the weighted average, we multiple the non-facility payment rate times the non-facility utilization for each code, sum this total, then divide by the summed non-facility utilization for

the codes included in the average. This results in the payment amount for HCPCS code G0511. We will continue to publicly post the updated payment rate for G0511 on the RHC and FQHC center webpages.

For CY 2024, and as we demonstrated in the proposed rule, we obtained actual utilization of the base code and add-on code pairs, in addition to the individual base codes for CCM, PCM, RPM, and RTM by using the CY 2021 PFS utilization to calculate the weighted average and determine the payment rate for HCPCS code G0511. We will post the final CY 2024 payment rate for the general care management HCPCS code G0511 on the RHC and FQHC center webpages.<sup>176</sup>

e. Chronic Care Management Services and Virtual Communication Services Requirement for Obtaining Beneficiary Consent

(1) Chronic Care Management Services

RHCs and FQHCs have been authorized to bill for Chronic Care Management (CCM) services since January 1, 2016. The RHC and FQHC requirements for billing CCM services have generally followed the requirements for practitioners billing under the PFS, with some adaptations based on the RHC and FQHC payment methodologies. In fact, in the CY 2017 PFS final rule (81 FR 80256-80257) to assure that CCM requirements for RHCs and FQHCs were not more burdensome than those for practitioners billing under the PFS, we finalized revisions to the requirements for CCM services furnished by RHCs and FQHCs similar to revisions to the requirements for CCM services finalized under the PFS (81 FR 80243 through 80251).

Information regarding CCM services is available on the CMS Care Management Site.<sup>177</sup>

In the CY 2022 PFS proposed rule (86 FR 39175), we solicited public comment on the standard practice used by practitioners to obtain beneficiary consent for CCM services. We stated that we have received questions from interested parties regarding the consent requirements

---

<sup>176</sup> [https://www.cms.gov/Center/Provider-Type/Rural-Health-Clinics-Center and](https://www.cms.gov/Center/Provider-Type/Rural-Health-Clinics-Center-and)

<https://www.cms.gov/medicare/payment/prospective-payment-systems/federally-qualified-health-centers-fqhc-center>

<sup>177</sup> <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Care-Management>.

for CCM services. We explained that these questions may have arisen because of the many flexibilities allowed in response to the PHE for COVID–19. In particular, during the PHE for COVID–19, we allowed interested parties to obtain beneficiary consent for certain services under general supervision (85 FR 19230, April 6, 2020). We noted that before the PHE for COVID–19, we required that beneficiary consent be obtained either by a primary care practitioner or a staff member or contract employee under the direct supervision of such primary care practitioner. We noted that this requirement was consistent with the conditions of payment for this service under the PFS. We stated that as we consider what policies implemented during the PHE for COVID–19 should remain in effect beyond the PHE, we were interested in understanding how billing practitioners furnishing CCM at different service sites (for example, physician office settings, RHCs, FQHCs) have been obtaining beneficiary consent over the past year and how different levels of supervision impact this activity. We welcomed public comment on the issue, specifically on what levels of supervision of employees or third party contractors are necessary to obtain beneficiary consent when furnishing CCM services and said that we will consider such comments in future rulemaking.

We received 52 comments regarding the standard practice used by practitioners to obtain beneficiary consent for CCM services from a variety of interested parties including but not limited to individuals, hospitals, physicians, RHCs, FQHCs, software companies, and care management companies.

*Comment:* All commenters supported obtaining consent for care management under general supervision. Many commenters requested that CMS make this supervision level permanent after the expiration of the COVID-19 PHE. They stated that their practice would be unable to maintain its current CCM program without the assistance of a third-party partner. CCM vendors have trained enrollment staff which are vital to obtaining proper consent from their patients. Their staff are able to educate and inform our patients regarding the CCM program as they have been specifically trained to explain the benefits of CCM. They explained that vendors

have the capacity to call patients and receive calls when it is convenient for the patient. They expressed concern that they could not replicate these services using only their employed staff and that allowing a third party to obtain consent from their patients for CCM under general supervision is vital to their CCM program.

One commenter explained that CCM programs are a challenging and heavy lift for all providers, regardless of size and available resources, and the providers that offer CCM services to their patient populations do so because they recognize and value CCM's capacity to improve patient outcomes. The commenter stated that they have seen the administrative burdens of successful and compliant CCM programs fall hardest upon RHCs and FQHCs and noted if CMS were to establish general supervision as the guideline for beneficiary consent, this would ease those burdens. The commenter noted that CCM codes describing clinical staff activities are assigned general supervision and if CMS were to carve out beneficiary consent from the rest of CCM and impose a heightened administrative burden by imposing direct supervisions, RHCs and FQHCs that service the most vulnerable and underserved patient populations, would encounter challenges that could have negative consequence for their existing CCM programs.

Several commenters stated that they believed an efficient Medicare system requires CCM services to leverage the potential of non-face-to-face modalities, such as EHR systems, patient portals, texting/SMS services, chatbot technologies, interactive mobile medical apps, and direct patient calls. The commenters explained that while they understood CMS' concerns, it is long past due that CMS do away with the requirement for a provider to directly obtain consent. Virtual modalities more than adequately enable a patient to gain an understanding of what they are consenting to at the same level or better than an in-person consent process, making the direct consent requirement outdated and overburdensome. The commenters encouraged CMS to permanently allow providers to obtain beneficiary consent under general supervision.

*Response:* As discussed in the CY 2024 PFS proposed rule (88 FR 52406), for the purposes of CCM services furnished under the PFS, we require that practitioners obtain informed

consent before furnishing a beneficiary with CCM services. During the COVID-19 PHE, we clarified existing policy about how practitioners could obtain beneficiary consent. We explained that practitioners could obtain beneficiary consent either at the required initiating visit for CCM (many of which Medicare allows to be furnished virtually), or at the same time that the CCM service is initiated by auxiliary staff (often independent third-party entities) who work to furnish the CCM services. When the beneficiary's consent is separately obtained, it may be obtained under the general supervision of the billing practitioner and may be verbal as long as it is documented in the medical record and includes notification of the required information. We noted that now that the COVID-19 PHE has ended, we expect that practitioners will continue to appropriately obtain informed consent before they start furnishing CCM services to a beneficiary.

In the CY 2024 PFS proposed rule, for purposes of CCM services furnished by RHCs and FQHCs, we proposed to clarify the policy of how RHC and FQHC practitioners could obtain beneficiary consent. That is, while we have stated our intent since allowing RHCs and FQHCs to furnish CCM services, is to assure that CCM requirements for RHCs and FQHCs were not more burdensome than those for practitioners billing under the PFS, we believed our guidance could be clearer. After a review of commenters' concerns, we proposed to clarify when, how and by whom beneficiary consent for CCM services could be obtained. We explained, informed consent to receive CCM services must be obtained prior to the start of CCM services. Consent does not have to be obtained at the required initiating visit for CCM that must be performed by the RHC or FQHC practitioner, but it can be obtained at that time. Since the RHC or FQHC practitioner discusses CCM with the beneficiary during the initiating visit, if consent is separately obtained, it may be obtained under general supervision, and can be verbal as long as it is documented in the medical record and includes notification of the required information. That is, beneficiary consent can be obtained at the same time that the CCM service is initiated by auxiliary staff who work to furnish the CCM services. Further, there need not be an employment

relationship between the person obtaining the consent and the RHC or FQHC practitioner. That is, the clinical staff obtaining the verbal or written consent can be under contract with the RHC or FQHC.

We noted, it was important to reiterate that the importance of obtaining advance beneficiary consent to receive CCM services was to ensure the beneficiary is informed, educated about CCM services, and is aware of applicable cost sharing. In addition, querying the beneficiary about whether another practitioner is already providing CCM services helps to reduce the potential for duplicate provision or billing of the services. We stated CMS requires the beneficiary be informed on the availability of CCM services; that only one practitioner can furnish and be paid for these services during a calendar month; and of the right to stop the CCM services at any time (effective at the end of the calendar month). Again, we believed that it is important that the beneficiary grant the consent at the onset of CCM services to have the opportunity to understand what services are being billed and note it is important for CMS to take a balanced approach between administrative burden and potential program integrity concerns. That being said, we clarified that we understand that the sequencing and mode of consent can take various forms since the beneficiary is given notice and verbally consents.

## (2) Virtual Communication Services

In the April 6, 2020 IFC (85 FR 19253 through 19254), we implemented on an interim final basis the expansion of services that can be included in the payment for virtual communications in RHCs and FQHCs. We explained that in order to minimize risks associated with exposure to COVID-19, and to provide the best care possible during the PHE for the COVID-19 pandemic, we believed that RHCs and FQHC practitioners, like many other health care providers, should explore the use of interactive communications technology in the place of services that would have otherwise been furnished in person and reported and paid under the established methodologies.

To ensure these services would be available to beneficiaries who otherwise would not have access to clinically appropriate in-person treatment, we placed in our interim final rule a provision stating that all virtual communication services billed by HCPCS code G0071 would be available to new patients not seen by the RHC or FQHC within the previous months and modified requirements regarding when patient consent was required for these services, in order to promote timely provision of care. Specifically, we allowed consent to be obtained when the services were furnished instead of prior to the service being furnished and before the services were billed. Consent could also be acquired by staff under the general supervision of the RHC or FQHC practitioner for the virtual communication codes during the PHE for COVID-19.

We received several comments on these policies and subsequently finalized the provisions of the April 6, 2020, IFC without modification. However, we stated that when the PHE for COVID-19 ended, beneficiary consent for these services would revert back to direct supervision and clarified this in the CY 2023 PFS final rule with comment period (87 FR 70127 through 70128).

As discussed in the CY 2024 PFS proposed rule (88 FR 52407), we believe the same philosophy applies to consent for virtual communications as it does for CCM. In an effort to continue promoting access to timely, quality care for Medicare beneficiaries and to align with the PFS, we proposed to clarify that the consent from the beneficiary to receive virtual communication services can be documented by auxiliary staff under general supervision, as well as by the billing practitioner. While we continue to believe that beneficiary consent is necessary so that the beneficiary is notified of cost sharing when receiving these services, we do not believe that the timing or manner in which beneficiary consent is acquired should interfere with the provision of one of these services.

We received a few comments on our proposal to clarify beneficiary consent for CCM and virtual communications services. The following is a summary of the comments we received and our responses.

*Comment:* Commenters supported our proposal to clarify obtaining beneficiary consent related to CCM and virtual communications services. Commenters stated that this flexibility will continue to allow health centers to enhance their efficiency by tailoring their operational processes and workflows to continue focusing on patient care. Commenters also appreciated CMS permitting third-party vendors to obtain consent from patients, stating that utilizing technological third-party vendors helps decrease administrative burden, allowing health center personnel more time to focus on patient care while ensuring patients understand the services rendered.

*Response:* We appreciate commenters' support of our clarification of the policy for obtaining beneficiary consent for CCM and virtual communications services

After consideration of public comments, we are finalizing our clarification as proposed.

### C. Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

#### Conditions for Certification or Coverage (CfCs)

##### 1. Background and Statutory Authority

This section of the final rule sets out changes to the RHC and FQHC CfCs as required by section 4121 of division FF of the Consolidated Appropriations Act (Pub. L. 117-328, December 29, 2022) (CAA 2023). Specifically, we are implementing provisions that modify the existing RHC and FQHC CfCs at § 491.8(a)(3) to include marriage and family therapists (MFTs) and mental health counselors (MHCs) as part of the collaborative team approach to provide services under Medicare Part B. We also proposed to include definitions of other healthcare professionals who are already eligible to provide services at RHCs and FQHCs. Lastly, we proposed to update the definition of “nurse practitioner” to align with current standards of professional practice.

Section 1861(aa) of the Act establishes requirements that RHCs and FQHCs must meet to participate in the Medicare Program. These requirements are codified in regulations at 42 CFR part 491. For an RHC and FQHC to receive Medicare payment for services, it must meet the

requirements at part 491, which are intended to promote the health and safety of care provided to RHC and FQHC patients.

## 2. Summary of the RHC and FQHC CfCs Proposed Provisions, Public Comments, and Responses to Comments

We proposed to revise the “Definitions” section and “Staffing and staff responsibilities” requirements that RHCs and FQHCs must meet to participate in the Medicare program. Commenters included individuals, health care professionals, national and State associations, patient advocacy organizations, and individual facilities that will be impacted by the rule.

### a. Definitions (§ 491.2)

At § 491.2, we proposed to define certain terms that are used in the RHC and FQHC CfCs. We proposed to define the terms “clinical psychologist (CP),” “clinical social worker,” and “certified nurse midwife (CNM)” in the CfCs and cross-reference the definitions established in the payment requirements at §§ 410.77(a), 410.71(d), and 410.73(a) respectively. This rule also finalizes changes to the CfCs to define MFT and MHC services as proposed in section II.J of this final rule to indicate that RHC and FQHCs can offer these services under their Medicare certification by cross-referencing the definitions proposed at §§ 410.53 and 410.54.

Additionally, we proposed revising the existing “nurse practitioner” (NP) definition at § 491.2 to accurately reflect current professional standards by removing the reference to specific certifying bodies as they are now outdated. This revision will ensure the requirement reflects the breadth of currently available certifications. We proposed adding education requirements to paragraph (1) of the definition because the American Nurses Association has stated that for someone to become an NP, one must be a registered nurse or have a bachelor of science in nursing (BSN), complete an NP-focused master’s or doctoral nursing program, and pass the National NP Certification Board Exam.<sup>178</sup> We proposed to retain paragraphs (2) and (3) of the

---

<sup>178</sup> *American Association of Nurse Practitioners (2020). The Path to Becoming a Nurse Practitioner (NP).* <https://www.aanp.org/news-feed/explore-the-variety-of-career-paths-for-nurse->

definition, which provides alternative certification and education requirements an NP can meet to furnish services in an RHC or FQHC if the education requirements in paragraph (1) are not met.

We explicitly solicited comments in the proposed rule (88 FR 52408) on whether CMS should revise the NP definition for RHCs and FQHCs. Specifically, we were interested in whether the definition of NP should specify that an NP's certification be in the area of primary care, or whether this distinction should be removed. Approximately 3,200 RHCs employ 1.25 full-time NPs per RHC, and each NP provides care for nearly 3,000 visits annually. For a total of 12,000,000 RHC visits nationally.<sup>179</sup> Likewise, there are 12,609 NPs in health centers funded and designated by the Health Resources and Services Administration that provided more than 30 million clinical and virtual visits in 2022.<sup>180,181</sup> Removing the certification requirement for NPs would allow approximately 60,000 additional NPs to be eligible to provide care in RHCs and FQHCs.<sup>182</sup> NPs are instrumental in providing high-quality services to rural and underserved communities. Their services are essential in ensuring that individuals have access to the care they need, and work alongside physicians to provide comprehensive care.

The latest report from the American Association of Nurse Practitioners (AANP) indicates 88 percent of licensed NPs are educated and prepared in primary care.<sup>183</sup> NP students choose their patient populations at the time of entry into an NP program.<sup>184</sup> Doing so allows NP education to match the knowledge and skills to the needs of patients focusing their academics and clinical study on the patient population they will be working with. While NP programs have core studies everyone attends (pathology, pharmacology, and physical assessment), having a population focus-based education ensures ample education to build knowledge and skills in the

---

<sup>179</sup> <https://digitalcommons.usm.maine.edu/cgi/viewcontent.cgi?article=1016&context=clinics>.

<sup>180</sup> <https://data.hrsa.gov/tools/data-reporting/program-data/national/table?tableName=5&year=2022>.

<sup>181</sup> <https://data.hrsa.gov/tools/data-reporting/program-data/national-lookalikes/table?tableName=5&year=2022>.

<sup>182</sup> <https://www.aanp.org/about/all-about-nps/np-fact-sheet>.

<sup>183</sup> <https://www.aanp.org/advocacy/advocacy-resource/position-statements/nurse-practitioners-in-primary-care#:~:text=Millions%20of%20Americans%20choose%20a>.

<sup>184</sup> <https://www.aanp.org/news-feed/explore-the-variety-of-career-paths-for-nurse-practitioners>.

area where the NP will be practicing. NP population foci include adult-gerontology acute care, adult-gerontology primary care, family, neonatal, pediatric, psychiatric mental health, and women's health.<sup>182</sup> Of those population foci, NPs specialized in adult-gerontology acute care, neonatal, pediatric acute care, and psychiatric mental health would not be able to furnish services in an RHC and FQHC if the primary care certification requirement remained for NPs.

We sought comments on whether the specific requirement for NPs to be certified in primary care should remain in the definition at § 491.2.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Commenters supported the proposed revision of the NP definition at § 491.2 to remove naming specific certifying boards for NPs and adding education requirements. Commenters also responded to the proposal supporting a broad definition of a nurse practitioner at § 491.2(1). The commenters recommend removing the primary care certification specification to allow health centers to employ the most qualified candidates who could best serve the clinic or center's patient population. One commenter supported the removal of the primary care certification requirement, with the understanding that NPs would continue to provide services only within their scope of practice. Another commenter recommended we amend the proposed definition from "...and possesses a Master's degree in nursing or a Doctor of Nursing Practice (DNP) doctoral degree," to a definition that is inclusive of all NP graduate degrees. We did not receive any comments opposing our proposal.

*Response:* We are appreciative of these comments. Approximately 100 million individuals lack sufficient access to primary healthcare, with 65 percent of such access problems happening in rural areas.<sup>185</sup> Our belief is that eliminating the need for primary care certification for NPs could aid in resolving staffing shortages that healthcare facilities are experiencing in underserved and rural communities.

---

<sup>185</sup> <https://data.hrsa.gov/topics/health-workforce/shortage-areas>.

When hiring NPs for employment, it is important for RHCs and FQHCs to consider the specific patient population they serve, as well as the individual education, skills, and training of the NP. NPs have the ability to offer comprehensive, patient-centered care in various settings, and may have specialized expertise in fields such as addiction, psychiatric care, or cardiovascular care.<sup>186</sup> For new NPs providing care in FQHCs, there are opportunities to pursue fellowship, training, and residency programs to ensure they have the necessary skills to provide quality care.<sup>187</sup> To further ensure patient safety, states may have additional licensure requirements in place. Therefore, we are updating the standard at paragraph (1) of the NP definition at § 491.2 to require that NPs be certified by a recognized national certifying body and possess a master's or doctoral degree in nursing.

After consideration of the public comments we received, we are finalizing this provision with modification by removing language specifying that NPs must be certified in primary care. We are finalizing the requirement that NPs must be certified by a recognized certifying body and possess a master's or doctoral degree in nursing. We note that section 1861(aa)(5)(A) of the Act continues to require that NPs and PAs only provide such services as they are “legally authorized to perform (in the State in which the individual performs such services) in accordance with State law (or the State regulatory mechanism provided by State law).”

b. Staffing and staff responsibilities (§ 491.8)

Section 4121(b)(1) of the CAA, 2023, *Coverage of Certain Mental Health Services Provided in Certain Settings Rural Health Clinics and Federally Qualified Health Centers* amends section 1861(aa)(1)(B) of the Act by including MFTs and MHCs to the list of other practitioners whose services, when provided in RHCs and FQHCs, are entitled to payment under the Medicare program. We proposed to revise the RHC and FQHC CfCs to include MFTs and

---

<sup>186</sup> [https://www.abn.alabama.gov/wp-content/uploads/2019/03/NP-Specialty-Certifications\\_03202019.pdf](https://www.abn.alabama.gov/wp-content/uploads/2019/03/NP-Specialty-Certifications_03202019.pdf).

<sup>187</sup> <https://www.chc1.com/what-we-do/training-the-next-generation/residency-training-programs/>.

MHCs as recognized staff alongside other practitioners such as NPs, PAs, CPs, CSWs, and CNMs, where appropriate and as required by the statute.

At § 491.8(a)(3), we proposed to add MFT and MHC to the list of practitioners who may be the owner, employee, or furnish services under contract to the clinic or center. Section 1861(aa)(2) and (4) of the Act requires that RHC and FQHC staff include one or more physicians, and RHCs are also required to employ at least one PA or NP. There are no requirements for an RHC or FQHC to employ a CNM, CSW, CP, MHC, or MFT. To comply with this requirement, we would expect clinics and centers ensure that the needs of the patient population they serve are met. As rural areas are increasingly diverse, have significant strengths and unique challenges, RHCs and FQHCs play a key role in identifying the needs of their patients. A team of diverse professionals can take a patient-centered approach to addressing a patient's physical and mental health through counseling, case management, and provide resources and information to address social determinants of health.<sup>188</sup>

Additionally, we proposed to add MFTs and MHCs to § 491.8(a)(6), which determines which practitioners are required to be available to furnish patient care services at all times the clinic or center operates. This provision allows MFTs and MHCs to furnish services within their scope of practice while helping meet the needs of the clinic or center's patient population. The intent of this requirement is to ease the burden of staffing shortages in RHCs and FQHCs, which is a barrier that prevents individuals from accessing physical and mental health services.<sup>189</sup> MFTs and MHCs can expand the pool of mental health professionals available to address practitioner shortages in rural communities by providing reimbursable services under the Medicare program. We note the statutory provision that defines the term "rural health clinic" in section 1861(aa)(2)(K)(iv) of the Act states that an RHC is not a facility which is primarily for the care and treatment of mental diseases.

---

<sup>188</sup>[https://www.jstor.org/stable/pdf/26554276.pdf?refreqid=excelsior%3A3437750e2633ee53aa5c0afe8caae6ea&ab\\_segments=&origin=&initiator=&acceptTC=1](https://www.jstor.org/stable/pdf/26554276.pdf?refreqid=excelsior%3A3437750e2633ee53aa5c0afe8caae6ea&ab_segments=&origin=&initiator=&acceptTC=1).

<sup>189</sup> <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC1851736/>.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Many commenters supported expanding Medicare coverage to include MFT and MHC services in RHCs and FQHCs. Commenters expressed their appreciation for the discussion of the specific barriers to accessing mental health and substance use disorder services for people living in rural areas and areas where there are shortages of healthcare professionals.

*Response:* We thank the commenters for their support. We are committed to advancing health equity and increasing access to physical and mental health services. We aim to increase the number of covered behavioral health providers, bridging the gap in the accessibility of services to ensure that patients receive comprehensive care.

*Comment:* One commenter encouraged CMS to finalize the COVID-19 Public Health Emergency waiver, which modified the requirement at § 491.8(b)(1) that physicians must provide medical direction for the clinics or center's health care activities and consultation for, and medical supervision of, the health care staff with respect to medical supervision of NPs to the extent permitted by State law.<sup>190</sup>

*Response:* This comment pertains to physician supervision of NPs in RHCs and FQHCs rather than to any specific proposed changes to the policy proposals set forth in the proposed rule. Therefore, this comment is outside the scope of this final rule.

*Comment:* One commenter suggested that CMS propose a more permanent policy to determine RHC rural location eligibility.

*Response:* We did not propose any provisions related to the location requirements of RHCs or FQHCs, and therefore this comment is outside the scope of this final rule.

After consideration of the public comments we received, we are finalizing these provisions as proposed.

<sup>190</sup> <https://www.cms.gov/files/document/rural-health-clinics-and-federally-qualified-health-centers-cms-flexibilities-fight-covid-19.pdf>.

## D. Clinical Laboratory Fee Schedule: Revised Data Reporting Period and Phase-in of Payment

### Reductions

#### 1. Background on the Clinical Laboratory Fee Schedule

Prior to January 1, 2018, Medicare paid for clinical diagnostic laboratory tests (CDLTs) on the Clinical Laboratory Fee Schedule (CLFS) under section 1833(a), (b), and (h) of the Act. Under the previous payment system, CDLTs were paid based on the lesser of: (1) the amount billed; (2) the local fee schedule amount established by the Medicare Administrative Contractor (MAC); or (3) a national limitation amount (NLA), which is a percentage of the median of all the local fee schedule amounts (or 100 percent of the median for new tests furnished on or after January 1, 2001). In practice, most tests were paid at the NLA. Under the previous payment system, the CLFS amounts were updated for inflation based on the percentage change in the Consumer Price Index for All Urban Consumers (CPI-U) and reduced by a productivity adjustment and other statutory adjustments but were not otherwise updated or changed. Coinsurance and deductibles generally do not apply to CDLTs paid under the CLFS.

Section 1834A of the Act, as established by section 216(a) of the Protecting Access to Medicare Act of 2014 (PAMA), required significant changes to how Medicare pays for CDLTs under the CLFS. A final rule entitled Medicare Clinical Diagnostic Laboratory Tests Payment System (CLFS final rule), which appeared in the **Federal Register** on June 23, 2016 (81 FR 41036), implemented section 1834A of the Act at 42 CFR part 414, subpart G.

Under the CLFS final rule, “reporting entities” must report to CMS during a “data reporting period” “applicable information” collected during a “data collection period” for their component “applicable laboratories.” The first data collection period occurred from January 1, 2016, through June 30, 2016. The first data reporting period occurred from January 1, 2017, through March 31, 2017. On March 30, 2017, we announced a 60-day period of enforcement

discretion for the application of the Secretary’s potential assessment of civil monetary penalties for failure to report applicable information with respect to the initial data reporting period.<sup>191</sup>

In the CY 2018 PFS proposed rule (82 FR 34089 through 34090), we solicited public comments from applicable laboratories and reporting entities to better understand the applicable laboratories’ experiences with data reporting, data collection, and other compliance requirements for the first data collection and reporting periods. We discussed these comments in the CY 2018 PFS final rule (82 FR 53181 through 53182) and stated that we would consider the comments for potential future rulemaking or guidance.

As part of the CY 2019 Medicare PFS rulemaking, we finalized two changes to the definition of “applicable laboratory” at § 414.502 (see 83 FR 59667 through 59681, 60074; 83 FR 35849 through 35850, 35855 through 35862). First, we excluded Medicare Advantage plan payments under Part C from the denominator of the Medicare revenues threshold calculation to broaden the types of laboratories qualifying as an applicable laboratory. Second, consistent with our goal of obtaining a broader representation of laboratories that could potentially qualify as an applicable laboratory and report data, we also amended the definition of applicable laboratory to include hospital outreach laboratories that bill Medicare Part B using the CMS-1450 14x Type of Bill.

## 2. Payment Requirements for Clinical Diagnostic Laboratory Tests

In general, under section 1834A of the Act, the payment amount for each CDLT on the CLFS furnished beginning January 1, 2018, is based on the applicable information collected during the data collection period and reported to CMS during the data reporting period and is equal to the weighted median of the private payor rates for the test. The weighted median is calculated by arraying the distribution of all private payor rates, weighted by the volume for each payor and each laboratory. The payment amounts established under the CLFS are not subject to

---

<sup>191</sup> <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ClinicalLabFeeSched/Downloads/2017-March-Announcement.pdf>.

any other adjustment, such as geographic, budget neutrality, or annual update, as required by section 1834A(b)(4)(B) of the Act. Additionally, section 1834A(b)(3) of the Act, implemented at § 414.507(d), provides for a phase-in of payment reductions, limiting the amounts the CLFS rates for each CDLT (that is not a new advanced diagnostic laboratory test (ADLT) or new CDLT) can be reduced as compared to the payment rates for the preceding year. Under the original provisions enacted by section 216(a) of PAMA, for the first 3 years after implementation (CY 2018 through CY 2020), the reduction could not be more than 10 percent per year. For the next 3 years after implementation (CY 2021 through CY 2023), section 216(a) of PAMA stated that the reduction could not be more than 15 percent per year. Under sections 1834A(a)(1) and (b) of the Act, as enacted by PAMA, for CDLTs that are not ADLTs, the data collection period, data reporting period, and payment rate update were to occur every 3 years. As such, the second data collection period for CDLTs that are not ADLTs occurred from January 1, 2019, through June 30, 2019, and the next data reporting period was originally scheduled to take place from January 1, 2020, through March 31, 2020, with the next update to the Medicare payment rates for those tests based on that reported applicable information scheduled to take effect on January 1, 2021.

Section 216(a) of PAMA established a new subcategory of CDLTs known as ADLTs, with separate reporting and payment requirements under section 1834A of the Act. The definition of an ADLT is set forth in section 1834A(d)(5) of the Act and implemented at § 414.502. Generally, under section 1834A(d) of the Act, the Medicare payment rate for a new ADLT is equal to its actual list charge during an initial period of 3 calendar quarters. After the new ADLT initial period, ADLTs are paid using the same methodology based on the weighted median of private payor rates as other CDLTs. However, under section 1834A(d)(3) of the Act, updates to the Medicare payment rates for ADLTs occur annually instead of every 3 years.

Additional information on the private payor rate-based CLFS is detailed in the CLFS final rule, which implemented section 1834A of the Act as required by PAMA (81 FR 41036 through 41101) and this information is also available on the CMS website.<sup>192</sup>

### 3. Previous Statutory Revisions to the Data Reporting Period and Phase-In of Payment Reductions

Beginning in 2019, Congress passed a series of legislation to modify the statutory requirements for the data reporting period and phase-in of payment reductions under the CLFS. First, section 105(a)(1) of the Further Consolidated Appropriations Act, 2020 (FCAA) (Pub. L. 116-94, December 20, 2019) amended the data reporting requirements in section 1834A(a) of the Act to delay the next data reporting period for CDLTs that are not ADLTs by 1 year so that data reporting would be required during the period of January 1, 2021, through March 31, 2021, instead of January 1, 2020, through March 30, 2020. The 3-year data reporting cycle for CDLTs that are not ADLTs would resume after that data reporting period. Section 105(a)(1) of the FCAA also specified that the data collection period that applied to the data reporting period of January 1, 2021, through March 30, 2021, would be the period of January 1, 2019, through June 30, 2019, which was the same data collection period that would have applied absent the amendments. In addition, section 105(a)(2) of the FCAA amended section 1834A(b)(3) of the Act regarding the phase-in of payment reductions to provide that payments may not be reduced by more than 10 percent as compared to the amount established for the preceding year through CY 2020, and for CYs 2021 through 2023, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year. These statutory changes were consistent with our regulations implementing the private payor rate-based CLFS at § 414.507(d) (81 FR 41036).

---

<sup>192</sup> <https://www.cms.gov/medicare/payment/fee-schedules/clinical-laboratory-fee-schedule-clfs/pama-educational-resources>.

Subsequently, section 3718 of the Coronavirus Aid, Relief, and Economic Security Act, 2020 (CARES Act) (Pub. L. 116-136, March 27, 2020) further amended the data reporting requirements for CDLTs that are not ADLTs and the phase-in of payment reductions under the CLFS. Specifically, section 3718(a) of the CARES Act amended section 1834A(a)(1)(B) of the Act to delay the next data reporting period for CDLTs that are not ADLTs by one additional year, to require data reporting during the period of January 1, 2022, through March 31, 2022. The CARES Act did not modify the data collection period that applied to the next data reporting period for these tests. Thus, under section 1834A(a)(4)(B) of the Act, as amended by section 105(a)(1) of the FCAA, the next data reporting period for CDLTs that are not ADLTs would have been based on the data collection period of January 1, 2019, through June 30, 2019.

Section 3718(b) of the CARES Act further amended the provisions in section 1834A(b)(3) of the Act regarding the phase-in of payment reductions under the CLFS. First, it extended the statutory phase-in of payment reductions resulting from private payor rate implementation by an additional year, that is, through CY 2024 instead of CY 2023. It further amended section 1834A(b)(3)(B)(ii) of the Act to specify that the applicable percent for CY 2021 is 0 percent, meaning that the payment amount determined for a CDLT for CY 2021 shall not result in any reduction in payment as compared to the payment amount for that test for CY 2020. Section 3718(b) of the CARES Act further amended section 1834A(b)(3)(B)(iii) of the Act to state that the applicable percent of 15 percent would apply for CYs 2022 through 2024, instead of CYs 2021 through 2023. In the CY 2021 PFS rulemaking (85 FR 50210 through 50211; 85 FR 84693 through 84694), in accordance with section 105(a) of the FCAA and section 3718 of the CARES Act, we proposed and finalized conforming changes to the data reporting and payment requirements at 42 CFR part 414, subpart G.

Section 4 of the Protecting Medicare and American Farmers from Sequester Cuts Act (PMAFSCA) (Pub. L. 117-71, December 10, 2021) made additional revisions to the CLFS requirements for the next data reporting period for CDLTs that are not ADLTs and to the phase-

in of payment reductions under section 1834A of the Act. Specifically, section 4(b) of PMAFSCA amended the data reporting requirements in section 1834A(a) of the Act to delay the next data reporting period for CDLTs that are not ADLTs by 1 year, so that data reporting would be required during the period of January 1, 2023, through March 31, 2023. The 3-year data reporting cycle for CDLTs that are not ADLTs would resume after that data reporting period. As amended by section 4 of PMAFSCA, section 1834A(a)(1)(B) of the Act provided that in the case of reporting with respect to CDLTs that are not ADLTs, the Secretary shall revise the reporting period under subparagraph (A) such that—(i) no reporting is required during the period beginning January 1, 2020, and ending December 31, 2022; (ii) reporting is required during the period beginning January 1, 2023, and ending March 31, 2023; and (iii) reporting is required every 3 years after the period described in clause (ii).

Section 4 of PMAFSCA did not modify the data collection period that applies to the next data reporting period for these tests. Thus, under section 1834A(a)(4)(B) of the Act, as amended by section 105(a)(1) of the FCAA, the next data reporting period for CDLTs that are not ADLTs (January 1, 2023, through March 31, 2023) would continue to be based on the data collection period of January 1, 2019, through June 30, 2019, as defined in § 414.502.

Section 4 of PMAFSCA further amended the provisions in section 1834A(b)(3) of the Act regarding the phase-in of payment reductions under the CLFS. First, it extended the statutory phase-in of payment reductions resulting from private payor rate implementation by an additional year, that is, through CY 2025. It further amended section 1834A(b)(3)(B)(ii) of the Act to specify that the applicable percent for each of CY 2021 and 2022 is 0 percent, meaning that the payment amount determined for a CDLT for CY 2021 and 2022 shall not result in any reduction in payment as compared to the payment amount for that test for CY 2020. Section 4(a) of PMAFSCA further amended section 1834A(b)(3)(B)(iii) of the Act to state that the applicable percent of 15 percent would apply for CYs 2023 through 2025, instead of CYs 2022 through 2024.

In the CY 2023 PFS rulemaking (87 FR 46068 through 46070; 87 FR 69741 through 69744, 70225), in accordance with section 4 of PMAFSCA, we proposed and finalized conforming changes to the data reporting and payment requirements at 42 CFR part 414, subpart G. Specifically, we finalized revisions to § 414.502 to update the definitions of both the data collection period and data reporting period, specifying that for the data reporting period of January 1, 2023, through March 31, 2023, the data collection period is January 1, 2019, through June 30, 2019. We also revised § 414.504(a)(1) to indicate that initially, data reporting begins January 1, 2017, and is required every 3 years beginning January 1, 2023. In addition, we finalized conforming changes to our requirements for the phase-in of payment reductions to reflect the PMAFSCA amendments. Specifically, we finalized revisions to § 414.507(d) to indicate that for CY 2022, payment may not be reduced by more than 0.0 percent as compared to the amount established for CY 2021, and for CYs 2023 through 2025, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year.

As a result of the statutory revisions under the FCAA, CARES Act, and PMAFSCA, there have only been two data collection periods for CDLTs that are not ADLTs to date. The first data collection period for these tests occurred from January 1, 2016, through June 30, 2016, and the second occurred from January 1, 2019, through June 30, 2019. Thus far, there has been only one data reporting period for these tests, which took place from January 1, 2017, through March 31, 2017. We have established CLFS payment rates for these tests using the methodology established in PAMA only one time, effective January 1, 2018, based on the applicable information collected by applicable laboratories during the 2016 data collection period and reported to CMS during the 2017 data reporting period.

Additionally, we have applied the phase-in of payment reductions for the first 3 years of PAMA implementation, CY 2018 through CY 2020, whereby reduction of payment rates could not be more than 10 percent per year as compared to the amount established the prior year. However, the phase-in of payment reductions set forth in PAMA for years 4 through 6 of PAMA

implementation, whereby payment cannot exceed 15 percent per year as compared to the amount established the prior year, has not yet occurred.

#### 4. Additional Statutory Revisions to the Data Reporting Period and Phase-In of Payment Reductions

Section 4114 of the Consolidated Appropriations Act of 2023 (CAA, 2023) (Pub. L. 117-328, December 29, 2022) made further revisions to the CLFS requirements for the next data reporting period for CDLTs that are not ADLTs and to the phase-in of payment reductions under section 1834A of the Act. Specifically, section 4114(b) of the CAA, 2023 amended the data reporting requirements in section 1834A(a)(1)(B) of the Act to delay the next data reporting period for CDLTs that are not ADLTs by 1 year, so that data reporting would be required during the period of January 1, 2024, through March 31, 2024, instead of the data reporting period of January 1, 2023, through March 31, 2023, established under the PMAFSCA. The 3-year data reporting cycle for CDLTs that are not ADLTs would resume after that data reporting period. As amended by section 4114(b) of the CAA, 2023, section 1834A(a)(1)(B) of the Act now provides that in the case of reporting with respect to CDLTs that are not ADLTs, the Secretary shall revise the reporting period under subparagraph (A) such that—(i) no reporting is required during the period beginning January 1, 2020, and ending December 31, 2023; (ii) reporting is required during the period beginning January 1, 2024, and ending March 31, 2024; and (iii) reporting is required every 3 years after the period described in clause (ii).

Section 4114 of the CAA, 2023 does not modify the data collection period that applies to the next data reporting period for these tests. Thus, under section 1834A(a)(4)(B) of the Act, as amended by section 105(a)(1) of the FCAA, the next data reporting period for CDLTs that are not ADLTs (January 1, 2024, through March 31, 2024) will continue to be based on the data collection period of January 1, 2019, through June 30, 2019, as defined in § 414.502.

Section 4114(a) of the CAA, 2023 further amends the provisions in section 1834A(b)(3) of the Act regarding the phase-in of payment reductions under the CLFS. First, it extends the

statutory phase-in of payment reductions resulting from private payor rate implementation by an additional year, that is, through CY 2026. It further amends section 1834A(b)(3)(B)(ii) of the Act to specify that the applicable percent for CY 2023 is 0 percent, meaning that the payment amount determined for a CDLT for CY 2023 shall not result in any reduction in payment as compared to the payment amount for that test for CY 2022. Section 4114(a) of the CAA, 2023 further amends section 1834A(b)(3)(B)(iii) of the Act to state that the applicable percent of 15 percent will apply for CYs 2024 through 2026.

#### 5. Conforming Regulatory Changes

In accordance with section 4114 of the CAA, 2023, in the CY 2024 PFS proposed rule (88 FR 52410 through 52412), we proposed certain conforming changes to the data reporting and payment requirements at 42 CFR part 414, subpart G. Specifically, we proposed to revise § 414.502 to update the definitions of both the “data collection period” and the “data reporting period,” specifying that for the data reporting period of January 1, 2024, through March 31, 2024, the data collection period is January 1, 2019, through June 30, 2019. We also proposed to revise § 414.504(a)(1) to indicate that initially, data reporting begins January 1, 2017, and is required every 3 years beginning January 2024. In addition, we proposed conforming changes to our requirements for the phase-in of payment reductions to reflect the amendments in section 4114(a) of the CAA, 2023. Specifically, we proposed to revise § 414.507(d) to indicate that for CY 2023, payment may not be reduced by more than 0.0 percent as compared to the payment amount established for that test in CY 2022, and for CYs 2024 through 2026, payment may not be reduced by more than 15 percent as compared to the payment amount established for that test the preceding year.

We noted that the CYs 2023 and 2024 CLFS payment rates for CDLTs that are not ADLTs are based on applicable information collected in the data collection period of January 1, 2016, through June 30, 2016. Under current law, the CLFS payment rates for CY 2025 through CY 2027 will be based on applicable information collected during the data collection period of

January 1, 2019, through June 30, 2019, and reported to CMS during the data reporting period of January 1, 2024, through March 31, 2024.

The following is a summary of the public comments received on the proposed conforming regulatory changes and our responses:

*Comment:* Several commenters supported our proposal to revise §§ 414.502, 414.504, and 414.507 to conform with the current statutory provisions governing data reporting and payment for CDLTs on the CLFS.

*Response:* We appreciate the commenters' support for these regulatory changes that reflect the recent statutory revisions required by section 4114 of the CAA, 2023.

*Comment:* Multiple commenters expressed concerns over the period of data collection (January 1, 2019, through June 30, 2019) that would be utilized for the next data reporting period (January 1, 2024, through March 31, 2024). Commenters noted that private payer rate data from CY 2019 would be several years old and not reflect data on newer CDLTs that were released after this data collection period. Commenters also noted that this data collection period preceded the COVID-19 pandemic and recent trends of rising medical inflation, which has led to supply and labor challenges. Thus, commenters were concerned that private payor rates during this data collection period would be incongruent with the current economic environment and negatively impact subsequent payment under the CLFS.

*Response:* We note that section 4114 of the CAA, 2023 did not modify the data collection period that applies to the next data reporting period for CDLTs that are not ADLTs. Therefore, under section 1834A(a)(4)(B) of the Act, as amended by section 105(a)(1) of the FCAA, the next data reporting period for CDLTs that are not ADLTs (January 1, 2024, through March 31, 2024) will continue to be based on the data collection period of January 1, 2019, through June 30, 2019, as defined in § 414.502. Because this requirement is statutory, we are unable to modify the data collection period.

*Comment:* A few commenters submitted recommendations to CMS related to outreach and education activities for data reporting purposes if these proposed policies become finalized. One commenter urged CMS to notify applicable laboratories as soon as possible if there are any future changes to the timeline for data reporting, since significant time and resources are required for entities to properly collect and report data. Another commenter suggested that CMS implement assertive outreach approaches to all applicable laboratories that need information and assistance to comply with section 216(a) of PAMA. They recommended that CMS make multi-media materials readily available to assist applicable laboratories who must fulfill data reporting obligations and should partner with national member organizations on presentations to inform applicable laboratories on the importance of reporting applicable information. They also recommended that CMS use its authority to impose civil monetary penalties (CMPs) and state publicly its intention to audit applicable laboratories and to impose penalties where warranted, in order to signal to all applicable laboratories that reporting is not voluntary, but mandatory.

*Response:* We appreciate commenters' recommendations related to outreach and education for data reporting. Obtaining applicable information from applicable laboratories as required under PAMA is necessary to establish payment rates for CDLTs, and outreach and education activities for applicable laboratories play an important role in achieving this objective. Accordingly, we regularly update our website and have leveraged different media platforms to disseminate various educational materials and other resources to prepare these applicable laboratories for data reporting and inform them of changes to reporting requirements. For example, we recently created a video on how to determine if a laboratory is an applicable laboratory.<sup>193</sup> Overall, CMS shares the commenters' interest in ensuring all applicable laboratories have the educational resources needed to report accurate and complete data to inform payment rates under the CLFS, and we may consider the submitted recommendations for upcoming data reporting periods.

---

<sup>193</sup> [https://youtu.be/c3eiPYeRA\\_U](https://youtu.be/c3eiPYeRA_U).

Additionally, regarding the comments on CMPs, we note that section 1834A(a)(9)(A) of the Act authorizes the Secretary to apply a CMP in cases where the Secretary determines that an applicable laboratory has failed to report or made a misrepresentation or omission in reporting applicable information under section 1834A(a) of the Act for a CDLT. In these cases, the Secretary may apply a CMP in an amount of up to \$10,000 per day for each failure to report or each such misrepresentation or omission. We codified this provision in our regulations at § 414.504(e). As we previously stated in the CLFS final rule, which implemented section 216(a) of PAMA (81 FR 41069), in situations where our review reveals that the data submitted is incomplete or incorrect, we will work with the Office of Inspector General at the U.S Department of Health and Human Services (HHS OIG) to assess whether a CMP should be applied, and if so, the appropriate amount based on the specific circumstances.

*Comment:* Multiple commenters conveyed concerns over the proposal for the phase-in of payment reductions to CLFS payment amounts that would be required to resume in CY 2024. Commenters raised that potential payment cuts to CDLTs of up to 15 percent could affect access to laboratory tests that guide medical decisions and might impact laboratories who already face resource constraints to conduct these tests. One commenter suggested capping the maximum payment reduction at 5 percent instead of 15 percent or implementing a more gradual approach to payment reductions. Another commenter noted that the CY 2016 base year that CMS intends to use for CY 2024 CDLT payment amounts under the CLFS is outdated and not representative of all applicable laboratories.

*Response:* We thank commenters for expressing their concerns regarding potential effects due to the phase-in of payment reductions. Nevertheless, we note that the phase-in of payment reductions to the CLFS is statutory; therefore, we are unable to alter implementation of the payment reductions or the maximum percentage by which payment can be reduced compared to the amount established for that test the preceding year. Section 1834A(b)(3)(B) of the Act explicitly states that there will be a 0 percent payment reduction for CY 2023 and, for CYs 2024

through 2026, payment may not be reduced by more than 15 percent of the amount of payment for the test for the preceding year. Additionally, the CY 2016 base year on which the CLFS payment amounts will be based for CY 2024 is also statutory. Under sections 1834A(a)(1) and (b) of the Act, as enacted by PAMA, for CDLTs that are not ADLTs, the data collection period, data reporting period, and payment rate update are to occur every 3 years. The second data collection period for CDLTs that are not ADLTs occurred from January 1, 2019, through June 30, 2019, but a second data reporting period has not yet taken place due to the series of legislative delays passed since 2019 that modified the statutory data reporting period for such tests. Therefore, the only data collection period available for which data has been reported for CDLTs that are not ADLTs was the data collection period that occurred from January 1, 2016, through June 30, 2016, which will inform CY 2024 payment rate amounts for CDLTs that are not ADLTs under the CLFS. Lastly, promoting access to medically reasonable and necessary CDLTs for Medicare beneficiaries continues to be an important priority for CMS. Thus, we will continue to monitor cost and utilization data for CDLTs under the CLFS.

*Comment:* While commenters agreed with our proposal to make conforming regulatory changes to the data reporting period and phase-in of payment reductions as mandated by section 4114 of the CAA, 2023, they also stated that they would support different types of new legislation that would modify these statutory requirements for the CLFS. For example, one commenter stated that they are supporting legislation that would give CMS new authority to collect private market data through statistically valid sampling from all laboratory segments for the widely available test services where previous data collection was inadequate. Another commenter mentioned that they would support legislation to eliminate the data reporting requirements or to prohibit the use of laboratory-reported information for rate-setting. Commenters also indicated they would support legislation to stabilize payment rates for CDLTs. Many commenters also urged CMS to work with Congress to address these issues.

*Response:* We appreciate these comments and value efforts to promote access to care to high quality laboratory services for Medicare beneficiaries. We also note that any legislative changes would require Congressional action.

*Comment:* We received a few comments that were out of scope for this proposal. A few of these comments included ways to improve the CLFS annual payment determination process, expansions to the laboratory date of service policy, and/or a request to reconsider requiring hospital outreach laboratories to determine their applicable laboratory status.

*Response:* We appreciate hearing from commenters on these issues. However, these comments are out of scope for this final rule as we did not make any proposals on these processes or policies. We could consider these requests for future rulemaking or CLFS annual payment determination processes as applicable and within our authorities under the statute.

In consideration of these public comments and in accordance with section 4114 of the CAA, 2023, we are finalizing the proposed conforming changes to the data reporting and phase-in of payment reductions at 42 CFR part 414, subpart G, as proposed.

#### E. Pulmonary Rehabilitation, Cardiac Rehabilitation and Intensive Cardiac Rehabilitation Expansion of Supervising Practitioners

Conditions of coverage for pulmonary rehabilitation (PR), cardiac rehabilitation (CR) and intensive cardiac rehabilitation (ICR) are codified at 42 CFR 410.47 and 410.49. We proposed revisions to the PR and CR/ICR regulations to codify the statutory changes made in section 51008 of the Bipartisan Budget Act of 2018 (Pub. L. 115-123, February 9, 2018) (BBA of 2018) which permit other specific practitioners to supervise the items and services effective January 1, 2024.

##### 1. Statutory Authority

Section 144(a) of the Medicare Improvements for Patients and Providers Act of 2008 (Pub. L. 110-275, July 15, 2008) (MIPPA) amended title XVIII to add new section 1861(eee) of the Act to provide coverage of CR and ICR under Medicare part B, as well as new section

1861(fff) of the Act to provide coverage of PR under Medicare part B. The statute specified certain conditions for coverage of these services and an effective date of January 1, 2010. Conditions of coverage for PR, CR and ICR consistent with the statutory provisions of section 144(a) of the MIPPA were codified in §§ 410.47 and 410.49 respectively through the CY 2010 PFS final rule with comment period (74 FR 61872 through 61886 and 62002 through 62003 (PR) 62004 through 62005 (CR/ICR)). Section 51008 of the BBA of 2018, entitled “Allowing Physician Assistants, Nurse Practitioners, and Clinical Nurse Specialists to Supervise Cardiac, Intensive Cardiac and Pulmonary Rehabilitation Programs,” amended sections 1861(eee) and (fff) of the Act, effective January 1, 2024. The amendment directs us to add to the types of practitioners who may supervise PR, CR and ICR programs to also include a physician assistant (PA), nurse practitioner (NP), or clinical nurse specialist (CNS).

## 2. Background

Under § 410.47(b), Medicare part B covers PR for beneficiaries with moderate to very severe chronic obstructive pulmonary disease (COPD) (defined as GOLD classification II, III and IV), when referred by the physician treating the chronic respiratory disease and allows additional medical indications to be established through a national coverage determination (NCD). We have not added additional medical indications for PR using the NCD process; however, we used notice and comment rulemaking through the CY 2022 PFS final rule (86 FR 64996) to establish coverage of PR for beneficiaries who have had confirmed or suspected COVID-19 and experience persistent symptoms that include respiratory dysfunction for at least 4 weeks. In the same final rule, we also updated language to improve consistency and accuracy across PR and CR/ICR conditions of coverage and removed a PR requirement for direct physician-patient contact.

Under § 410.49(b), Medicare part B covers CR and ICR for beneficiaries who have experienced one or more of the following: (1) an acute myocardial infarction within the preceding 12 months; (2) a coronary artery bypass surgery; (3) current stable angina pectoris; (4)

heart valve repair or replacement; (5) percutaneous transluminal coronary angioplasty (PTCA) or coronary stenting; (6) a heart or heart-lung transplant; (7) stable, chronic heart failure defined as patients with left ventricular ejection fraction of 35 percent or less and New York Heart Association (NYHA) class II to IV symptoms despite being on optimal heart failure therapy for at least 6 weeks, on or after February 18, 2014, for cardiac rehabilitation and on or after February 9, 2018, for intensive cardiac rehabilitation; or (8) other cardiac conditions as specified through an NCD. The NCD process may also be used to specify non-coverage of a cardiac condition for ICR if coverage is not supported by clinical evidence.

In 2014, we established coverage of CR through the NCD process (NCD 20.10.1, Cardiac Rehabilitation Programs for Chronic Heart Failure (Pub. 100-03)) to beneficiaries with stable, chronic heart failure. Section 51004 of the BBA of 2018 amended section 1861(eee)(4)(B) of the Act to expand coverage of ICR to include patients with stable, chronic heart failure. Section 410.49 was updated to codify this expansion through the CY 2020 PFS final rule (84 FR 62897 through 62899 and 63188). The CY 2022 PFS final rule (86 FR 64996) updated language in § 410.49 to improve consistency and accuracy across PR and CR/ICR conditions of coverage.

### 3. Summary of Proposals for Implementation

Consistent with the amendments made by section 51008 of the BBA of 2018 to section 1861(eee) and (fff) of the Act, we proposed additions and revisions to language in §§ 410.47 and 410.49 as described below.

#### a. Definitions

We proposed to add a new term, nonphysician practitioner (NPP), to §§ 410.47(a) and 410.49(a), defined as a PA, NP, CNS as those terms are defined in section 1861(aa)(5)(A) of the Act.

We proposed to amend the term supervising physician at §§ 410.47(a) and 410.49(a) to supervising practitioner and amend the definition to mean a physician or NPP.

Finally, we proposed to amend the definition for pulmonary rehabilitation at § 410.47(a) and the definitions for cardiac rehabilitation and intensive cardiac rehabilitation (ICR) program at § 410.49(a) to specify that these are physician- or NPP-supervised programs.

b. Setting

We proposed to amend §§ 410.47(b)(3)(ii)(A) and 410.49(b)(3)(ii) to specify that all settings must have a physician or NPP immediately available and accessible for medical consultations and emergencies at all times when items and services are being furnished under the programs.

c. Supervising Practitioner Standards

We proposed to amend language at §§ 410.47(d) and 410.49(e) by specifying that these sections include supervising practitioner standards, rather than just supervising physician standards. We also removed the third standard in each section (§§ 410.47(d)(3) and 410.49(e)(3)) because specifying that a physician or NPP is licensed to practice medicine in the state where a PR/CR/ICR program is offered, or any corresponding reference to a NPP being licensed or authorized to practice, is redundant to the definition for each practitioner type in the Act. Since the physicians and NPPs that may supervise PR/CR/ICR are defined at §§ 410.47(a) and 410.49(a) by cross-reference to the Act, we believe repeating part of that definition in these sections is unnecessary.

4. Summary

We proposed additions and revisions that are necessary to implement the amendments to section 1861(eee) and (fff) of the Act set forth in section 51008 of the BBA of 2018, which expand the types of practitioners that may supervise PR, CR and ICR. This includes changes to the regulatory language in the definitions, settings, and supervising practitioner standards sections under §§ 410.47 and 410.49. After considering the public comments on our proposed rule (discussed below), we continue to believe these amendments to §§ 410.47 and 410.49 serve to implement the provisions in the BBA of 2018 regarding the types of practitioners that may

supervise PR, CR and ICR beginning January 1, 2024. As such, we are finalizing these additions and revisions as proposed. All other provisions of these regulations remain unchanged.

We received public comments on our proposals with several supporting the proposed amendments to expand the types of practitioners that may supervise PR, CR and ICR and two opposing allowing supervision by NPPs.

*Comment:* Of the commenters that supported expanding the types of practitioners who may supervise these programs, one commenter, who supported the allowing NPPs to supervise PR and CR, stated support specifically for the definition change and conforming revisions to the regulations to expand supervision of PR to NPPs. Another commenter supported the proposed definitions and standards. One commenter agreed with broadening the definition from supervising physician to supervising practitioner to account for additional providers. Several commenters stated that the expansion will help to expand access to these programs with a few noting that this is especially true in rural areas. Several commenters noted workforce shortages and the aging workforce to further support the proposals to expand practitioners that may supervise these programs.

*Response:* We appreciate these supportive comments and are finalizing the additions and revisions to §§ 410.47 and 410.49 as proposed.

*Comment:* One commenter supported the proposals stating that NPP supervision will continue to ensure safety and quality. One commenter asserted that advanced practice registered nurses, which include NPs and CNSs as explained by this commenter, are highly-trained and their education and licensure requirements prepare them to supervise CR and PR. Another agreed that advanced practitioners are highly experienced with complex patient populations and are fully embedded in the clinical practice making the proposed expansion an appropriate extension of their skill set in accordance with State licensure laws. One commenter stated that NPPs are highly trained to respond if emergencies arise and others noted that the ability to supervise is within PAs level of expertise. One commenter asserted that allowing NPPs to supervise these

programs will help promote team-based provision of services and another stated that allowing advanced practice nurses to supervise rehabilitation services enables the overall healthcare team to function more efficiently and leads to better care coordination and patient outcomes, thus PAs, NPs and CNSs enhance the continuum of care.

*Response:* We appreciate these supportive comments and are finalizing the additions and revisions to §§ 410.47 and 410.49 as proposed.

*Comment:* One commenter requested that CMS revise the “physician prescribed exercise” language to include PAs. Citing the 2014 final decision memorandum for Cardiac Rehabilitation (CR) Programs – Chronic Heart Failure<sup>194</sup>, this commenter stated that CMS previously declined to modify language in this manner because the statute specifies that the program is under the supervision of a physician. This commenter stated that since this section of the statute has been revised to allow PAs to supervise these programs, CMS should now modify this language accordingly to “provider prescribed exercise.” This commenter further requested that if the exact wording cannot be modified due to statutory constraints, CMS should reinterpret the intent of this section to indicate that health professionals authorized to supervise may also prescribe exercise. Additionally, this commenter urged CMS to work with Congress to modify physician-centric language in the U.S. Code that prohibits PAs and other health professionals from ordering PR, CR and ICR.

*Response:* Physician-prescribed exercise continues to be a specific element of PR, CR and ICR based on the language in sections 1861(eee)(3) and 1861(fff)(2)(A) of the Act. While the BBA of 2018 expanded the types of practitioners that may supervise PR in section 1861(fff)(1) of the Act and CR/ICR in section 1861(eee)(1) of the Act, Congress did not change the items and services that these programs must furnish, so we are not adopting the commenters suggested change. Interested parties may wish to consider working with Congress to pursue statutory changes to support those requests.

---

<sup>194</sup> <https://www.cms.gov/medicare-coverage-database/view/ncacal-decision-memo.aspx?proposed=N&NCAId=270>.

*Comment:* Another commenter noted that under the ACO REACH model, NPs are allowed to establish, review, and sign a written care plan for PR and CR and requested that this waiver be standardized across all relevant payment models and CMS should explore regulatory avenues to remove the barrier for patients to be seen by NPs to increase PR and CR participation.

*Response:* We understand the commenters' request to expand the role for NPPs in prescribing, ordering PR, CR, and ICR services and establishing, reviewing and signing plans of care for these services outside of a payment model; however, we do not believe the current statutory language would support the requested changes. Interested parties may wish to consider working with Congress to pursue statutory changes to support those requests.

*Comment:* Some commenters disagreed with the proposed additions and revisions to our regulations because they opposed removing the requirement that physicians must supervise PR, CR and ICR services, and disagreed with expanding supervision requirements to include PAs, NPs and CNSs. One of these commenters further explained that the skillsets for physicians and NPPs are not interchangeable considering their differences in education and training, and NPPs do not have the education and training needed to be the head of a care team. This commenter asserted that when NPPs practice without supervision the result is lower quality, higher cost care with strong evidence that increasing scope of practice of NPs and PAs has increased healthcare costs. This commenter further stated that the proposals are counter to patient preferences as patients believe it is important for a physician to be involved in the diagnosis and treatment decisions and expect the most qualified person to supervise care to patients with severe cardiac conditions. This commenter further requested that if CMS proceeds with expanding the types of practitioners that may supervise PR, CR and ICR, CMS should not use the overarching term "nonphysician practitioner" and instead directly reference the specific practitioners because the term can lead to confusion. Additionally, this commenter asserted that the regulatory language should specify that NPPs must be licensed to practice medicine in the State where the PR, CR or

ICR program is located and where the patient is located when receiving care, and that NPPs must adhere to State scope of practice laws.

*Response:* We understand that some commenters may not support the statutory changes that Congress has enacted but CMS may not simply ignore the statute. Our proposed and final rules are consistent with the statute and were supported by the majority of public commenters. Those commenters suggest that the changes will help to expand access to PR, CR, and ICR services for Medicare beneficiaries. We also disagree with the commenter's suggestion that using the overarching term "nonphysician practitioner" could be confusing as our proposals clearly define the term for use under §§ 410.47 and 410.49 and include a reference to the statutory definition for those practitioners as defined in section 1861(aa)(5)(A) of the Act. Furthermore, and as noted above in this final rule, we have determined that specifying that NPPs are licensed to practice medicine in the State where a PR/CR/ICR program is offered, or any corresponding reference to a NPP being licensed or authorized to practice, is unnecessary and would be redundant given the definition for each practitioner type in the statute. Since the physicians and NPPs that may supervise PR/CR/ICR services are defined at §§ 410.47(a) and 410.49(a) by cross-reference to a specific statute, we believe repeating part of that definition in these regulatory sections is unnecessary. Therefore, we are finalizing these additions and revisions as proposed.

#### F. Modifications Related to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs)

##### 1. Background

Section 2005 of the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment (SUPPORT) for Patients and Communities Act (SUPPORT Act) (Pub. L. 115-271, October 24, 2018) established a new Medicare Part B benefit for OUD treatment services furnished by OTPs during an episode of care beginning on or after January 1, 2020. In the CY 2020 PFS final rule (84 FR 62630 through 62677 and 84 FR 62919 through 62926), we

implemented Medicare coverage and provider enrollment requirements and established a methodology for determining the bundled payments for episodes of care for the treatment of OUD furnished by OTPs. We also established in the CY 2020 PFS final rule new codes and finalized bundled payments for weekly episodes of care that include methadone, oral buprenorphine, implantable buprenorphine, injectable buprenorphine or naltrexone, and non-drug episodes of care, as well as add-on codes for intake and periodic assessments, take-home dosages for methadone and oral buprenorphine, and additional counseling. In the CY 2021 PFS final rule (85 FR 84683 through 84692), we adopted new add-on codes for take home supplies of nasal naloxone and injectable naloxone. In the CY 2022 PFS final rule (86 FR 65340 and 65341), we established a new add-on code and payment for a higher dose of nasal naloxone. We also revised paragraphs (iii) and (iv) in the definition of “Opioid use disorder treatment service” at § 410.67(b) to allow OTPs to furnish individual and group therapy and substance use counseling using audio-only telephone calls rather than two-way interactive audio/video communication technology after the conclusion of the public health emergency (PHE) for COVID-19 in cases where audio/video communication technology is not available to the beneficiary, provided all other applicable requirements are met (86 FR 65342).

More recently, CMS made further modifications and expansions to covered services for the treatment of OUD by OTPs in the CY 2023 PFS final rule (87 FR 69768 through 69777). Specifically, we revised our methodology for pricing the drug component of the methadone weekly bundle and the add-on code for take-home supplies of methadone by using the payment amount for methadone for CY 2021 updated by the Producer Price Index (PPI) for Pharmaceuticals for Human Use (Prescription) to better reflect the changes in methadone costs for OTPs over time. Additionally, we finalized a modification to the payment rate for individual therapy in the non-drug component of the bundled payment for an episode of care to base the payment rate on the rate for longer therapy sessions that better account for the greater severity of needs for patients with an OUD and receiving treatment in the OTP setting. Moreover, for the

purposes of the geographic adjustment, we clarified that services furnished via OTP mobile units will be treated as if the services were furnished in the physical location of the OTP for purposes of determining payments to OTPs under the Medicare OTP bundled payment codes and/or add-on codes to the extent that the services are medically reasonable and necessary and are furnished in accordance with Substance Abuse and Mental Health Services Administration (SAMHSA) and Drug Enforcement Administration (DEA) guidance. We believe that this policy enables OTPs to better serve Medicare beneficiaries living in underserved areas by providing access to many of the same OUD treatment services offered at the brick-and-mortar location of the OTP. We continue to monitor utilization of OUD treatment services furnished by OTPs to ensure that Medicare beneficiaries have appropriate access to care. For CY 2024, we proposed several modifications to the policies governing Medicare coverage and payment for OUD treatment services furnished by OTPs.

## 2. Additional Flexibilities for Periodic Assessments furnished via Audio-only Telecommunications

In the CY 2024 PFS proposed rule (88 FR 52414 through 52415), we discuss several flexibilities for OTPs regarding the use of telecommunications that we have finalized, both during the PHE for COVID-19 and outside of the PHE. In the CY 2020 PFS final rule, we finalized a policy allowing OTPs to furnish substance use counseling and individual and group therapy via two-way interactive audio-video communication technology. In the Interim Final Rule with Comment Period (IFC) entitled “Medicare and Medicaid Programs: Policy and Regulatory Revisions in Response to the COVID-19 Public Health Emergency,” which appeared in the April 6, 2020 **Federal Register** (85 FR 19258), we revised paragraphs (iii) and (iv) in the definition of opioid use disorder treatment service at § 410.67(b) on an interim final basis to allow the therapy and counseling portions of the weekly bundles, as well as the add-on code for additional counseling or therapy, to be furnished using audio-only telephone calls rather than via two-way interactive audio-video communication technology during the PHE for the COVID-19

if beneficiaries do not have access to two-way audio-video communications technology, provided all other applicable requirements are met. In the CY 2022 PFS final rule (86 FR 65341 through 65343), we finalized that after the conclusion of the PHE for COVID-19, OTPs are permitted to furnish substance use counseling and individual and group therapy via audio-only telephone calls when audio and video communication technology is not available to the beneficiary. As we explained in the CY 2022 PFS final rule (86 FR 65342), we interpret the requirement that audio/video technology is “not available to the beneficiary” to include circumstances in which the beneficiary is not capable of or has not consented to the use of devices that permit a two-way, audio/video interaction because in each of these instances audio/video communication technology is not able to be used in furnishing services to the beneficiary. More recently in the CY 2023 PFS final rule (87 FR 69775 through 69777), we further extended telecommunication flexibilities for the initiation of treatment with buprenorphine outside of the COVID-19 PHE. Specifically, we allowed the OTP intake add-on code to be furnished via two-way, audio-video communications technology when billed for the initiation of treatment with buprenorphine, to the extent that the use of audio-video telecommunications technology to initiate treatment with buprenorphine is authorized by DEA and SAMHSA at the time the service is furnished. We also permitted the use of audio-only communication technology to initiate treatment with buprenorphine in cases where audio-video technology is not available to the beneficiary, provided all other applicable requirements are met.

In the IFC entitled “Medicare and Medicaid Programs, Basic Health Program, and Exchanges; Additional Policy and Regulatory Revisions in Response to the COVID-19 Public Health Emergency and Delay of Certain Reporting Requirements for the Skilled Nursing Facility Quality Reporting Program,” which appeared in the May 8, 2020 **Federal Register** (85 FR 27558), we revised paragraph (vii) in the definition of “Opioid use disorder treatment service” at § 410.67(b) on an interim final basis to allow periodic assessments to be furnished during the PHE for COVID-19 via two-way interactive audio-video telecommunication technology and, in

cases where beneficiaries do not have access to two-way audio-video communication technology, to permit the periodic assessments to be furnished using audio-only telephone calls rather than via two-way interactive audio-video communication technology, provided all other applicable requirements are met. In the CY 2021 PFS final rule (85 FR 84690), we finalized our proposal to revise paragraph (vii) in the definition of “Opioid use disorder treatment service” at § 410.67(b) to provide that periodic assessments (HCPCS code G2077) must be furnished during a face-to-face encounter, which includes services furnished via two-way interactive audio-video communication technology, as clinically appropriate, provided all other applicable requirements are met, on a permanent basis.

Furthermore, in the CY 2023 PFS proposed rule (87 FR 46093), we solicited comments on whether we should allow periodic assessments to continue to be furnished using audio-only communication technology following the end of the PHE for COVID-19 for patients who are receiving treatment via buprenorphine, and if this flexibility should also continue to apply to patients receiving methadone or naltrexone. In response, several commenters advocated for CMS to continue to allow periodic assessments to be furnished using audio-only when video is not available after the end of the PHE. Commenters highlighted that making audio-only flexibilities permanent would further promote equity for individuals who are economically disadvantaged, live in rural areas, are racial and ethnic minorities, lack access to reliable broadband or internet access, or do not possess devices with video capability. Additionally, a few commenters explained that there is some evidence to show higher utilization of audio-only visits for older adults. For example, one commenter stated that one analysis of claims data showed the proportion of telephonic audio-only visits increases with the age of the patient, with “17 percent of visits delivered via audio-only interaction for patients 41-60 years of age, 30 percent for patients 61-80 years of age, and 47 percent of visits for patients over 81.”<sup>195</sup> One commenter stated that periodic assessments are no less complex than intake/initial assessments,

---

<sup>195</sup> 2021 Medicare Coverage and Payment for Audio-Only Services: <https://www.aamc.org/media/55296/download>.

and thus are equally appropriate for audio-video and audio-only care. Lastly, several commenters expressed support for the use of telecommunications in circumstances when the provider and patient have together determined that the patient would individually benefit from telehealth services and a high quality of care is maintained. They encouraged CMS to expand flexibilities to furnish substance use disorder (SUD) services via telecommunications to allow providers and patients to decide collaboratively the best modality for individualized care. After considering these comments, CMS determined that it would be appropriate to allow periodic assessments to be furnished audio-only when video is not available through the end of CY 2023, to the extent that it is authorized by SAMHSA and DEA at the time the service is furnished and, in a manner consistent with all applicable requirements. We stated our belief that this modification would allow continued beneficiary access to these services for the duration of CY 2023 in the event the PHE terminated before the end of 2023 and that it would also grant additional time for CMS to further consider telecommunication flexibilities associated with periodic assessments. Accordingly, we revised the requirements related to the periodic assessment services in paragraph (vii) in the definition of “Opioid use disorder treatment service” at § 410.67(b) of the regulations to reflect these changes (87 FR 69777).

In the CY 2024 PFS proposed rule (88 FR 52415 through 52416), we explained that section 4113 of Division FF, Title IV, Subtitle A of the Consolidated Appropriations Act of 2023 (CAA, 2023) (Pub. L. 117-328, December 29, 2022) extended the telehealth flexibilities enacted in the Consolidated Appropriations Act of 2022 (CAA, 2022) (Pub. L. 117-103, March 15, 2022). Specifically, it amended sections 1834(m), 1834(o), and 1834(y) of the Act to delay the requirement for an in-person visit prior to furnishing certain mental health services via telecommunications technology by physicians and other practitioners, Rural Health Clinics (RHCs), and Federally Qualified Health Centers (FQHCs) until dates of service on or after January 1, 2025, if the COVID-19 PHE ended prior to that date. Additionally, it extended the flexibilities available during the PHE that allow for certain Medicare telehealth services defined

in section 1834(m)(4)(F)(i) of the Act to be furnished via an audio-only telecommunications system through December 31, 2024, if the PHE for COVID-19 ends prior to that date. We stated that the PHE for COVID-19, which was declared under section 319 of the Public Health Service Act, expired at the end of the day on May 11, 2023, so the aforementioned flexibilities will be extended through the end of CY 2024 or CY 2025, as applicable.

To better align coverage for periodic assessments furnished by OTPs with the telehealth flexibilities described in section 4113 of the CAA, 2023, in the CY 2024 PFS proposed rule, we proposed to extend the audio-only flexibilities for periodic assessments furnished by OTPs through the end of CY 2024. Under this proposal, we stated that we would allow periodic assessments to be furnished audio-only when video is not available to the extent that use of audio-only communications technology is permitted under the applicable SAMHSA and DEA requirements at the time the service is furnished, and all other applicable requirements are met.<sup>196</sup> We believe extending this flexibility would promote continued beneficiary access to these services following the end of the PHE and for the duration of CY 2024. During the COVID-19 pandemic, SUD treatment facilities increased telemedicine offerings by 143 percent, and as of 2021, almost 60 percent of SUD treatment facilities offer telehealth.<sup>197</sup> Notably, telephone-based (that is, audio-only) therapy and recovery support services provided by SUD programs have been found to be one of the most common modes of telehealth for treatment of opioid use disorder.<sup>198</sup> Therefore, extending these audio-only flexibilities for an additional year may minimize disruptions associated with the conclusion of the PHE. Additionally, we explained that evidence has shown that Medicare beneficiaries who are older than 65 years-old, racial/ethnic minorities, dual-enrollees, or living in rural areas, or who experience low broadband access, low-income, and/or not speaking English as their primary language, are more likely to be offered and use

---

<sup>196</sup> <https://www.samhsa.gov/medications-substance-use-disorders/statutes-regulations-guidelines>.  
<https://www.deadiversion.usdoj.gov/>.

<sup>197</sup> <https://pubmed.ncbi.nlm.nih.gov/34407631/>.

<sup>198</sup> <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC8250742/>.

audio-only telemedicine services than audio-video services.<sup>199</sup> Other evidence also has suggested that while Tribal populations, including American Indian and Alaska Natives, have the highest rates of OUD prevalence among Medicare beneficiaries, one-third of these populations do not have adequate access to high-speed broadband and continue to rely on audio-only visits.<sup>200</sup> Therefore, minimizing disruptions to care for beneficiaries currently receiving audio-only periodic assessments may further promote health equity and minimize disparities in access to care. Lastly, we stated that extending these flexibilities another year will allow CMS time to further consider this issue, including whether periodic assessments should continue to be furnished using audio-only communication technology following the end of CY 2024 for patients who are receiving treatment via buprenorphine, methadone, and/or naltrexone at OTPs.

Accordingly, we proposed to revise paragraph (vii) of the definition of “Opioid use disorder treatment service” at § 410.67(b) of the regulations to state that through the end of CY 2024, in cases where a beneficiary does not have access to two-way audio-video communications technology, periodic assessments can be furnished using audio-only telephone calls if all other applicable requirements are met (88 FR 52416).

We received many public comments on our proposal to extend the audio-only flexibilities for periodic assessments furnished by OTPs through the end of CY 2024. The following is a summary of the comments we received and our responses.

*Comment:* Commenters were very supportive of extending the audio-only flexibilities for periodic assessments furnished by OTPs through the end of CY 2024. Many commenters stated that this proposal, if finalized, would meaningfully promote efforts towards improving health equity. A few commenters noted that the audio-only extension would be beneficial for the Medicare population, as evidence has shown clinicians are experiencing a higher utilization of

<sup>200</sup> <https://docs.fcc.gov/public/attachments/FCC-20-50A1.pdf>; <https://www.cms.gov/files/document/aian-telehealthwebinar.pdf>; <https://www.sciencedirect.com/science/article/pii/S0749379721000921?via%3Dihub>.

audio-only visits for older adults, especially as the age of the patient increases.<sup>201</sup> Commenters also reiterated that audio-only telehealth encounters are more prominent among individuals who are older, Black, Hispanic, American Indian/Alaskan Native, Spanish-speaking, living in areas with low broadband access, low-income, and with public insurance.<sup>202</sup> Additionally, several commenters raised that many underserved populations experience challenges partaking in video-based telehealth services for several reasons, including not possessing the needed technological proficiencies to operate video-based services, not having a caregiver able to assist them with appointments, feeling discomfort with the use of video, and because of the cost of high-speed internet and data required for video technologies. Furthermore, multiple commenters provided evidence demonstrating the effectiveness of audio-only telehealth services on patient outcomes. One commenter cited a recent study in which telehealth expansion implemented by CMS during the COVID-19 PHE was associated with improved treatment retention and a lower likelihood of overdose for patients receiving medications for opioid use disorder (MOUD).<sup>203</sup> Several other commenters shared data that audio-only visits produce many of the same benefits as video-based visits,<sup>204</sup> and that patients often report that audio-only visits left them feeling supported and with greater privacy, provided increased access to behavioral health professionals, and helped reduce transportation barriers.<sup>205</sup> Moreover, many commenters shared that our proposal to extend

<sup>204</sup> Danila, M.I., Sun,D., Jackson,L.E., Cutter, G., Jackson, E.A., Ford, E.W., DeLaney, E., Mudano, A., Foster, P.J., Rosas, G., Melnick, J.A, Curtis,J.R., & Saag, K.G. (2022, November). Satisfaction with modes of telemedicine delivery during COVID-19: A randomized, single-blind, parallel group, noninferiority trial. *The American Journal of the Medical Sciences*, 364 (5).

<sup>205</sup> Kang AW, Walton M, Hoadley A, DelaCuesta C, Hurley L, Martin R. Patient Experiences with the Transition to Telephone Counseling during the COVID-19 Pandemic. *Healthcare (Basel)*. 2021;9(6):663. Published 2021 Jun 2. doi:10.3390/healthcare9060663.

audio-only flexibilities for periodic assessments would help facilitate collaborative decision-making and allow the provider and patient to select the modality of care that best suits the patient's needs. Lastly, a few commenters stated that an extension of these flexibilities would provide both patients and providers additional time to adjust to changes in ways appointments are conducted in preparation for a reversion to many policies preceding the COVID-19 pandemic, while minimizing potential disruptions to treatment.

*Response:* We appreciate the positive feedback submitted by commenters in response to our proposal to extend audio-only flexibilities for periodic assessments furnished by OTPs through CY 2024. CMS agrees that the proposed policy may further the objectives of promoting health equity among underserved populations, be consistent with evidence indicating the effectiveness of audio-only services on patient utilization and outcomes, help facilitate collaborative decision-making between the provider and patient, allow OTPs additional time to adjust their activities as flexibilities that were tied to the COVID-19 PHE termination, and minimize potential disruptions to care for Medicare beneficiaries with an OUD.

*Comment:* A few commenters supported extending audio-only flexibilities in OTP settings but asserted that greater regulatory flexibility must come with additional safeguards. These commenters stated that shifting additional services to telehealth settings could increase the risk of a diminished quality of care, and that telehealth modalities are not appropriate for every doctor and patient interaction. The commenters stated that even if telehealth flexibilities are extended, periodic in-person visits should be required and coupled with a compliance and monitoring process to ensure program integrity. These commenters supported extending audio-only flexibilities by an additional year in OTP settings because it would provide CMS more time to examine how various telecommunications modalities can be deployed appropriately while maintaining a high quality of care and safety before permanently extending these flexibilities.

*Response:* We agree with the commenters regarding the importance of maintaining standards to ensure safety and quality of care for Medicare beneficiaries. Accordingly, we

continue to defer to SAMHSA and DEA clinical guidance and other applicable requirements to achieve this objective.<sup>206</sup> We will continue to analyze clinical evidence and guidance to ensure that any flexibilities to utilize audio-only/audio-video modalities meet all applicable requirements, and monitor claims and utilization data for program integrity purposes. We may address any concerns related to these aforementioned issues through future rulemaking as needed.

*Comment:* Many commenters requested that CMS make the extension for audio-only periodic assessments permanent beyond CY 2024. Commenters stated that extending this policy permanently would retain a beneficiary's right to decide with their provider how best to receive their care and would curtail existing barriers that Medicare beneficiaries with an OUD may face in accessing care. Another commenter urged CMS to work with the DEA and SAMHSA to maintain audio-only flexibilities for the treatment of OUD, as they expand access to treatment for rural populations.

*Response:* We thank commenters for providing this feedback. In the CY 2024 PFS proposed rule, we stated that extending these flexibilities for audio-only periodic assessments by one additional year would allow CMS time to further consider whether periodic assessments should continue to be furnished using audio-only communication technology following the end of CY 2024. An additional year would also allow CMS time to examine whether a permanent flexibility to furnish periodic assessments via audio-only telecommunications would be appropriate for patients who are receiving treatment via buprenorphine, methadone, and/or naltrexone at OTPs, and whether proper safeguards are in place so these services can be delivered in a way that would not diminish safety or quality of care for Medicare beneficiaries with an OUD (88 FR 52415). We will continue to evaluate this issue, including reviewing relevant SAMHSA and DEA guidance on this issue, and may consider additional changes

---

<sup>206</sup> <https://www.samhsa.gov/medications-substance-use-disorders/statutes-regulations-guidelines>.  
<https://www.deadiversion.usdoj.gov/>.

through future rulemaking.

*Comment:* One commenter stated that they supported CMS's proposal to continue to allow OTPs to furnish substance use counseling and individual and group therapy via audio-only communications through CY 2024 when audio-video communication technology is not available to the beneficiary.

*Response:* We clarify that CMS previously finalized a policy in the CY 2022 PFS final rule (86 FR 65342) to allow individual and group therapy and substance use counseling to be furnished audio-only after the conclusion of the COVID-19 PHE in OTP settings in cases where audio-video communication technology is not available to the beneficiary, and all other applicable requirements are met. In the CY 2024 PFS proposed rule, the proposal was specifically related to extending current flexibilities for periodic assessments that are furnished via audio-only telecommunications through the end of CY 2024.

*Comment:* A few commenters acknowledged the recent approval by the Food and Drug Administration (FDA) to allow certain naloxone products to be available over the counter. These same commenters asked that CMS continue to pay for take-home supplies of naloxone provided by OTPs whether naloxone is available by prescription or over the counter to ensure continued access to this lifesaving drug.

*Response:* Although we did not make a proposal related to take-home supplies of naloxone, we appreciate that commenters raised this important issue. CMS shares in the commenters' interest to ensure access to naloxone when medically necessary to treat a potential overdose. CMS currently covers take-home supplies of naloxone under Medicare Part B within the OTP benefit as described by the HCPCS add-on codes G2215 (*take-home supply of nasal naloxone*), G2216 (*take-home supply of injectable naloxone*), and G1028 (*take-home supply of nasal naloxone; 2-pack of 8mg per 0.1 mL nasal spray*).

*Comment:* We received other comments on several topics that were outside the scope of the proposed rule. Those topics included the following: implementing policy changes to

leverage pharmacists to deliver clinical services for patients with an OUD; clarifying that OTPs can bill Medicare for primary care services so that these services can be furnished in conjunction with SUD treatment; and, creating new codes for remote therapeutic monitoring (RTM) to allow for remote observation of patients receiving take-home doses of methadone.

*Response:* While these comments are out of scope for this final rule as they do not relate to our proposal to allow OTPs to furnish periodic assessments audio-only through CY 2024, we appreciate commenters raising these issues and may consider these recommendations for future rulemaking.

After consideration of the public comments, we are finalizing our proposal to revise paragraph (vii) of the definition of “Opioid use disorder treatment service” at § 410.67(b) of the regulations to state that through the end of CY 2024, in cases where a beneficiary does not have access to two-way audio-video communications technology, periodic assessments can be furnished using audio-only telephone calls if all other applicable requirements are met.

### 3. Intensive Outpatient Program (IOP) Services Provided by OTPs

In the CY 2023 PFS proposed rule, we solicited comments on intensive outpatient mental health treatment (87 FR 45943 through 45944). Commenters emphasized the importance of ensuring access to intensive outpatient program (IOP) services in OTP settings and that these services are valuable to those with SUDs (for example, OUD), including individuals who cannot stabilize at a lower level of care or require more care than can be provided in office settings and individuals who have stabilized biomedical conditions and the need for close monitoring but no longer require a higher level of care for SUD treatment, such as partial hospitalization or inpatient care.

Please see the CY 2024 Outpatient Prospective Payment System (OPPS) final rule for the full policy discussion and additional details regarding the proposal to establish Medicare payment for IOP services provided by OTPs, as well as our responses to comments and final policies on these proposals.

## G. Medicare Shared Savings Program

### 1. Executive Summary and Background

#### a. Purpose

Eligible groups of providers and suppliers, including physicians, hospitals, and other healthcare providers, may participate in the Medicare Shared Savings Program (Shared Savings Program) by forming or joining an accountable care organization (ACO), and in so, doing agree to become accountable for the total cost and quality of care provided under Original Medicare to an assigned population of Medicare fee-for-service (FFS) beneficiaries. Under the Shared Savings Program, providers and suppliers that participate in an ACO continue to receive Medicare FFS payments under Parts A and B, and the ACO may be eligible to receive a shared savings payment if it meets specified quality and savings requirements, and in some instances may be required to share in losses if it increases health care spending.

As of January 1, 2023, 10.9 million people with Medicare receive care from one of the 573,126 health care providers in the 456 ACOs participating in the Shared Savings Program, the largest value-based care program in the country.<sup>207</sup> While the Shared Savings Program experienced a decrease in the number of ACOs and assigned beneficiaries for 2023, the policies finalized in the CY 2023 PFS final rule (87 FR 69777 through 69968) are expected to grow participation in the program for 2024 and beyond, when many of the new policies are set to go into effect. These policies are expected to drive growth in participation, particularly in rural and underserved areas, promote equity, advance alignment across accountable care initiatives, and increase the number of beneficiaries assigned to ACOs participating in the program by up to four million over the next several years.<sup>208</sup> Accordingly, we expect these recently finalized changes

---

<sup>207</sup> Refer to CMS, Shared Savings Program Fast Facts – As of January 1, 2023, available at <https://www.cms.gov/files/document/2023-shared-savings-program-fast-facts.pdf>.

<sup>208</sup> See CMS Press Release, “CMS Announces Increase in 2023 in Organizations and Beneficiaries Benefiting from Coordinated Care in Accountable Care Relationship”, January 17, 2023, available at <https://www.cms.gov/newsroom/press-releases/cms-announces-increase-2023-organizations-and-beneficiaries-benefiting-coordinated-care-accountable>.

will support CMS in achieving its goal of having 100 percent of people with Original Medicare in a care relationship with accountability for quality and total cost of care by 2030.<sup>209</sup>

To further advance Medicare’s overall value-based care strategy of growth, alignment, and equity, and to respond to concerns raised by ACOs and other interested parties, we proposed changes to the Shared Savings Program as described in section III.G. of the CY 2024 PFS proposed rule (88 FR 52416 through 52498), and we sought public comments which we summarize and respond to in sections III.G.2. through III.G.8. of this final rule. We proposed changes to the quality performance standard and reporting requirements under the Alternative Payment Model (APM) Performance Pathway (APP) within the Quality Payment Program (QPP) that would continue to move ACOs toward digital measurement of quality and align with the QPP. Further, we proposed to add a third step to the step-wise beneficiary assignment methodology under which we would use an expanded period of time to identify whether a beneficiary has met the requirement for having received a primary care service from a physician who is an ACO professional in the ACO to allow additional beneficiaries to be eligible for assignment, as well as proposing related changes to how we identify assignable beneficiaries used in certain Shared Savings Program calculations. Additionally, we proposed updates to the definition of primary care services used for purposes of beneficiary assignment to remain consistent with billing and coding guidelines. We also proposed refinements to the financial benchmarking methodology for ACOs in agreement periods beginning on January 1, 2024, and in subsequent years, to cap the risk score growth in an ACO’s regional service area when calculating regional trends used to update the historical benchmark at the time of financial reconciliation for symmetry with the cap on ACO risk score growth; further mitigate the impact of the negative regional adjustment on the benchmark to encourage participation by ACOs caring

for medically complex, high-cost beneficiaries; specify the circumstances in which CMS would recalculate the prior savings adjustment for changes in values used in benchmark calculations due to compliance action taken to address avoidance of at-risk beneficiaries, or as a result of the issuance of a revised initial determination of financial performance for a previous performance year following a reopening of ACO shared savings and shared losses calculations; and apply the same CMS-HCC risk adjustment methodology applicable to the calendar year corresponding to the performance year in calculating risk scores for Medicare FFS beneficiaries for each benchmark year. We also proposed to refine our policies for the newly established advance investment payments (AIP) and to make updates to other programmatic areas, including the program's eligibility requirements, and make timely technical changes to the regulations for clarity and consistency. Lastly, we solicited comments on potential future developments to Shared Savings Program policies, including with respect to incorporating a new track that would offer a higher level of risk and potential reward than currently available under the ENHANCED track, refining the three-way blended benchmark update factor and the prior savings adjustment, and promoting ACO and community-based organization (CBO) collaboration.

b. Statutory and Regulatory Background on the Shared Savings Program

On March 23, 2010, the Patient Protection and Affordable Care Act (Pub. L. 111–148) was enacted, followed by enactment of the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152) on March 30, 2010, which amended certain provisions of the Patient Protection and Affordable Care Act (hereinafter collectively referred to as “the Affordable Care Act”). Section 3022 of the Affordable Care Act amended Title XVIII of the Act (42 U.S.C. 1395 et seq.) by adding section 1899 of the Act to establish the Medicare Shared Savings Program (Shared Savings Program) to facilitate coordination and cooperation among healthcare providers to improve the quality of care for Medicare FFS beneficiaries and reduce the rate of growth in expenditures under Medicare Parts A and B. (See 42 U.S.C. 1395jjj.)

Section 1899 of the Act has been amended through subsequent legislation. The requirements for assignment of Medicare FFS beneficiaries to ACOs participating under the program were amended by the 21st Century Cures Act (the CURES Act) (Pub. L. 114–255, December 13, 2016). The Bipartisan Budget Act of 2018 (Pub. L. 115–123, February 9, 2018), further amended section 1899 of the Act to provide for the following: expanded use of telehealth services by physicians or practitioners participating in an applicable ACO to furnish services to prospectively assigned beneficiaries; greater flexibility in the assignment of Medicare FFS beneficiaries to ACOs by allowing ACOs in tracks under retrospective beneficiary assignment a choice of prospective assignment for the agreement period; permitting Medicare FFS beneficiaries to voluntarily identify an ACO professional as their primary care provider and requiring that such beneficiaries be notified of the ability to make and change such identification, and mandating that any such voluntary identification will supersede claims-based assignment; and allowing ACOs under certain two-sided risk models to establish CMS-approved beneficiary incentive programs.

The Shared Savings Program regulations are codified at 42 CFR part 425. The final rule establishing the Shared Savings Program appeared in the November 2, 2011 **Federal Register** (Medicare Program; Medicare Shared Savings Program: Accountable Care Organizations; final rule (76 FR 67802) (hereinafter referred to as the “November 2011 final rule”). A subsequent major update to the program rules appeared in the June 9, 2015 **Federal Register** (Medicare Program; Medicare Shared Savings Program: Accountable Care Organizations; final rule (80 FR 32692) (hereinafter referred to as the “June 2015 final rule”). The final rule entitled, “Medicare Program; Medicare Shared Savings Program; Accountable Care Organizations—Revised Benchmark Rebased Methodology, Facilitating Transition to Performance-Based Risk, and Administrative Finality of Financial Calculations,” which addressed changes related to the program’s financial benchmark methodology, appeared in the June 10, 2016 **Federal Register** (81 FR 37950) (hereinafter referred to as the “June 2016 final rule”). A final rule, “Medicare

Program; Revisions to Payment Policies Under the Physician Fee Schedule and Other Revisions to Part B for CY 2019; Medicare Shared Savings Program Requirements; Quality Payment Program; Medicaid Promoting Interoperability Program; Quality Payment Program—Extreme and Uncontrollable Circumstance Policy for the 2019 MIPS Payment Year; Provisions From the Medicare Shared Savings Program—Accountable Care Organizations—Pathways to Success; and Expanding the Use of Telehealth Services for the Treatment of Opioid Use Disorder Under the Substance Use-Disorder Prevention That Promotes Opioid Recovery and Treatment (SUPPORT) for Patients and Communities Act”, appeared in the November 23, 2018 **Federal Register** (83 FR 59452) (hereinafter referred to as the “November 2018 final rule” or the “CY 2019 PFS final rule”). In the November 2018 final rule, we finalized a voluntary 6-month extension for existing ACOs whose participation agreements would otherwise expire on December 31, 2018; allowed beneficiaries greater flexibility in designating their primary care provider and in the use of that designation for purposes of assigning the beneficiary to an ACO if the clinician they align with is participating in an ACO; revised the definition of primary care services used in beneficiary assignment; provided relief for ACOs and their clinicians impacted by extreme and uncontrollable circumstances in performance year 2018 and subsequent years; established a new Certified Electronic Health Record Technology (CEHRT) use threshold requirement; and reduced the Shared Savings Program quality measure set from 31 to 23 measures (83 FR 59940 through 59990 and 59707 through 59715).

A final rule redesigning the Shared Savings Program appeared in the December 31, 2018 **Federal Register** (Medicare Program: Medicare Shared Savings Program; Accountable Care Organizations—Pathways to Success and Extreme and Uncontrollable Circumstances Policies for Performance Year 2017; final rule (83 FR 67816) (hereinafter referred to as the “December 2018 final rule”). In the December 2018 final rule, we finalized a number of policies for the Shared Savings Program, including a redesign of the participation options available under the program to encourage ACOs to transition to two-sided risk models; new tools to support

coordination of care across settings and strengthen beneficiary engagement; and revisions to ensure rigorous benchmarking.

In the interim final rule with comment period (IFC) entitled “Medicare and Medicaid Programs; Policy and Regulatory Revisions in Response to the COVID-19 Public Health Emergency”, which was effective on the March 31, 2020 date of display and appeared in the April 6, 2020 **Federal Register** (85 FR 19230) (hereinafter referred to as the “March 31, 2020 COVID-19 IFC”), we removed the restriction that prevented the application of the Shared Savings Program extreme and uncontrollable circumstances policy for disasters that occur during the quality reporting period if the reporting period is extended to offer relief under the Shared Savings Program to all ACOs that may be unable to completely and accurately report quality data for 2019 due to the PHE for COVID-19 (85 FR 19267 and 19268).

In the IFC entitled “Medicare and Medicaid Programs; Basic Health Program, and Exchanges; Additional Policy and Regulatory Revisions in Response to the COVID-19 Public Health Emergency and Delay of Certain Reporting Requirements for the Skilled Nursing Facility Quality Reporting Program” which was effective on May 8, 2020, and appeared in the May 8, 2020 **Federal Register** (85 FR 27550) (hereinafter referred to as the “May 8, 2020 COVID-19 IFC”), we modified Shared Savings Program policies to: (1) allow ACOs whose agreement periods expired on December 31, 2020, the option to extend their existing agreement period by 1-year, and allow ACOs in the BASIC track’s glide path the option to elect to maintain their current level of participation for performance year 2021; (2) adjust program calculations to remove payment amounts for episodes of care for treatment of COVID-19; and (3) expand the definition of primary care services for purposes of determining beneficiary assignment to include telehealth codes for virtual check-ins, e-visits, and telephonic communication. We also clarified the applicability of the program’s extreme and uncontrollable circumstances policy to mitigate shared losses for the period of the PHE for COVID-19 starting in January 2020 (85 FR 27573 through 27587).

We have also made use of the annual CY PFS rules to address quality reporting for the Shared Savings Program and certain other issues. For summaries of certain policies finalized in prior PFS rules, refer to the CY 2020 PFS proposed rule (84 FR 40705), the CY 2021 PFS final rule (85 FR 84717), the CY 2022 PFS final rule (86 FR 65253 and 65254), and the CY 2023 PFS final rule (87 FR 69779 and 69780). In the CY 2023 PFS final rule (87 FR 69777 through 69968), we finalized changes to Shared Savings Program policies, including to: provide advance shared savings payments in the form of advance investment payments to certain new, low revenue ACOs that can be used to support their participation in the Shared Savings Program; provide greater flexibility in the progression to performance-based risk; establish a health equity adjustment to an ACO's Merit-based Incentive Payment System (MIPS) quality performance category score used to determine shared savings and losses to recognize high quality performance by ACOs serving a higher proportion of underserved populations; incorporate a sliding scale reflecting an ACO's quality performance for use in determining shared savings for ACOs, and revise the approach for determining shared losses for ENHANCED track ACOs; modify the benchmarking methodology to strengthen financial incentives for long term participation by reducing the impact of ACOs' performance and market penetration on their benchmarks, and to support the business case for ACOs serving high-risk and high dually eligible populations to participate, as well as mitigate bias in regional expenditure calculations for ACOs electing prospective assignment; expand opportunities for certain low revenue ACOs participating in the BASIC track to share in savings; make changes to policies within other programmatic areas, including the program's beneficiary assignment methodology, requirements related to marketing material review and beneficiary notifications, the SNF 3-day rule waiver application, and data sharing requirements.

Policies applicable to Shared Savings Program ACOs for purposes of reporting for other programs have also continued to evolve based on changes in the statute. The Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, April 16, 2015) established

the Quality Payment Program. In the CY 2017 Quality Payment Program final rule with comment period (81 FR 77008), we established regulations for the MIPS and Advanced APMs and related policies applicable to eligible clinicians who participate in APMs, including the Shared Savings Program. We have also made updates to policies under the Quality Payment Program through the annual CY PFS rules.

### c. Summary of Shared Savings Program Provisions

In sections III.G.2. through III.G.7. of this final rule, we summarize and respond to public comments received on the proposed modifications to the Shared Savings Program's policies discussed in section III.G. of the CY 2024 PFS proposed rule (88 FR 52416 through 52498). Some commenters' suggestions for modifications to Shared Savings Program policies went beyond the scope of the proposals discussed in section III.G. of the CY 2024 PFS proposed rule and will not be addressed in this section of this final rule. As a general summary, we are finalizing the following changes to Shared Savings Program policies to:

- Revise the quality reporting and the quality performance requirements (section III.G.2. of this final rule), including the following:

- ++ Allow Shared Savings Program ACOs the option to report quality measures under the APP on only their Medicare beneficiaries through Medicare CQMs (section III.G.2.b. of this final rule).

- ++ Update the APP measure set for Shared Savings Program ACOs (section III.G.2.c. of this final rule).

- ++ Revise the calculation of the health equity adjustment underserved multiplier (section III.G.2.d. of this final rule).

- ++ Use historical data to establish the 40th percentile MIPS Quality performance category score used for the quality performance standard (section III.G.2.e. of this final rule).

- ++ Apply a Shared Savings Program scoring policy for excluded APP measures and APP measures that lack a benchmark (section III.G.2.f. of this final rule).

++ Require Spanish language administration of the CAHPS for MIPS survey (section III.G.2.g. of this final rule).

++ Align CEHRT requirements for Shared Savings Program ACOs with MIPS (section III.G.2.h. of this final rule).

++ Revise the requirement to meet the case minimum requirement for quality performance standard determinations (section III.G.2.j. of this final rule).

- Revise the policies for determining beneficiary assignment (section III.G.3 of this final rule).

++ Modify the step-wise beneficiary assignment methodology and approach to identifying the assignable beneficiary population (section III.G.3.a of this final rule).

++ Update the definition of primary care services used in beneficiary assignment at § 425.400(c) (section III.G.3.b of this final rule).

- Revise the policies on the Shared Savings Program's benchmarking methodology (section III.G.4 of this final rule).

++ Modify the calculation of the regional update factor used to update the historical benchmark between benchmark year (BY) 3 and the performance year by capping an ACO's regional service area risk score growth through use of an adjustment factor to provide more equitable treatment for ACOs and for symmetry with the cap on ACO risk score growth (section III.G.4.b of this final rule).

++ Further mitigate the impact of the negative regional adjustment on the benchmark to encourage participation by ACOs caring for medically complex, high-cost beneficiaries (section III.G.4.c of this final rule).

++ Specify the circumstances in which CMS will recalculate the prior savings adjustment for changes in values used in benchmark calculations due to compliance action taken to address avoidance of at-risk beneficiaries, or as a result of the issuance of a revised initial determination of financial performance for a previous performance year (section III.G.4.d of this final rule).

++ Specify use of the CMS-HCC risk adjustment methodology applicable to the calendar year corresponding to the performance year in calculating prospective HCC risk scores for Medicare FFS beneficiaries for the performance year, and for each benchmark year of the ACO's agreement period (section III.G.4.e. of this final rule).

- Refine AIP policies, including the following (section III.G.5 of this final rule):

++ Modify AIP eligibility requirements to allow an ACO to elect to advance to a two-sided model level of the BASIC track's glide path beginning with the third performance year of the 5-year agreement period in which the ACO receives advance investment payments.

++ Modify AIP recoupment and recovery policies to forgo immediate collection of advance investment payments from an ACO that terminates its participation agreement early in order to early renew under a new participation agreement to continue its participation in the Shared Savings Program.

++ Modify termination policies to specify that CMS will immediately terminate advance investment payments to an ACO for future quarters if the ACO voluntarily terminates its participation agreement.

++ Modify ACO reporting requirements to require ACOs to submit spend plan updates and actual spend information to CMS in addition to publicly reporting such information.

++ Modify AIP requirements to permit ACOs to seek reconsideration review of all quarterly payment calculations.

- Update Shared Savings Program eligibility requirements, including the following (section III.G.6 of this final rule):

++ Remove the option for ACOs to request an exception to the shared governance requirement that 75 percent control of an ACO's governing body must be held by ACO participants.

++ Codify the existing Shared Savings Program operational approach to specify that CMS determines that an ACO participant TIN participated in a performance-based risk Medicare

ACO initiative if it was or will be included on a participant list used in financial reconciliation for a performance year under performance-based risk during the five most recent performance years.

- Make technical changes to references in Shared Savings Program regulations (section III.G.7 of this final rule), including to update assignment selection references to either § 425.226(a)(1) or § 425.400(a)(4)(ii) in subpart G of the regulations, correct typographical errors in the definitions in § 425.20, and update certain terminology used in § 425.702.

We solicited comments in the CY 2024 proposed rule regarding our intent to propose future policies aligning the APP measure set for Sharing Savings Program ACOs with the quality measures under the “Universal Foundation” beginning in performance year 2025 (as described in section III.G.2.b.(2). of this final rule). We also solicited comments on MIPS Value Pathway reporting for specialists in Shared Savings Program ACOs (as described in section III.G.2.i. of this final rule).

In addition, in the CY 2024 PFS proposed rule, we solicited comments on potential future developments to Shared Savings Program policies (as discussed in section III.G.8. of this final rule), including: incorporating a track with higher risk and potential reward than the ENHANCED track; modifying the amount of the prior savings adjustment through potential changes to the 50 percent scaling factor used in determining the adjustment, as well as considerations for potential modifications to the positive regional adjustment to reduce the possibility of inflating the benchmark; potential refinements to the Accountable Care Prospective Trend (ACPT) and the three-way blended benchmark update factor over time to further mitigate potential ratchet effects within the update factor; and policies to promote ACO and CBO collaboration.

In combination, the policies we are adopting for the Shared Savings Program in this final rule are anticipated to improve the incentive for ACOs to sustainably participate and earn shared savings in the program. On net, total program spending is estimated to decrease by \$330 million

over the 10-year period 2024 through 2033. These changes are also anticipated to support the goals outlined in the CY 2023 PFS final rule for growing the program with a particular focus on including underserved beneficiaries.

Certain policies, including both existing policies and the new policies adopted in this final rule, rely upon the authority granted in section 1899(i)(3) of the Act to use other payment models that the Secretary determines will improve the quality and efficiency of items and services furnished under the Medicare program, and that do not result in program expenditures greater than those that would result under the statutory payment model. The following policies require the use of our authority under section 1899(i) of the Act: the modifications to the calculation of regional component of the three-way blended update factor to cap regional service area risk score growth for symmetry with the ACO risk score growth cap, as described in section III.G.4.b of this final rule and the refinements to AIP policies as described in section III.G.5. of this final rule. Further, certain existing policies adopted under the authority of section 1899(i)(3) of the Act that depend on use of the assigned population and assignable beneficiary populations will be affected by the addition of a new third step of the beneficiary assignment methodology and the revisions to the definition of “assignable beneficiary” described in section III.G.3. of this final rule, including the following: the amount of advance investment payments; factors used in determining shared losses for ACOs under two-sided risk models (including calculation of the variable MSR/MLR based on the ACO’s number of assigned beneficiaries, and the applicability of the extreme and uncontrollable circumstances policy for mitigating shared losses for ACOs under two-sided risk models); and calculation of the ACPT, regional and national components of the three-way blended benchmark update factor. As described in the Regulatory Impact Analysis in section VI. and elsewhere in this final rule, the changes we are finalizing to our payment methodology are expected to improve the quality and efficiency of care and are not expected to result in a situation in which the payment methodology under the Shared Savings Program, including all policies adopted under the authority of section 1899(i) of the Act, results in more

spending under the program than would have resulted under the statutory payment methodology in section 1899(d) of the Act. We will continue to reexamine this projection in the future to ensure that the requirement under section 1899(i)(3)(B) of the Act that an alternative payment model not result in additional program expenditures continues to be satisfied. In the event that we later determine that the payment model that includes policies established under section 1899(i)(3) of the Act no longer meets this requirement, we would undertake additional notice and comment rulemaking to make adjustments to the payment model to assure continued compliance with the statutory requirements.

## 2. Quality Performance Standard and Other Reporting Requirements

### a. Background

Section 1899(b)(3)(C) of the Act states that the Secretary shall establish quality performance standards to assess the quality of care furnished by ACOs and seek to improve the quality of care furnished by ACOs over time by specifying higher standards, new measures, or both for purposes of assessing such quality of care. As we stated in the November 2011 final rule establishing the Shared Savings Program (76 FR 67872), our principal goal in selecting quality measures for ACOs has been to identify measures of success in the delivery of high-quality health care at the individual and population levels. In the November 2011 final rule, we established a quality measure set spanning four domains: patient experience of care, care coordination/ patient safety, preventative health, and at-risk population (76 FR 67872 through 67891). We have subsequently updated the measures that comprise the quality performance measure set for the Shared Savings Program through rulemaking in the CY 2015, 2016, 2017, 2019, and 2023 PFS final rules (79 FR 67907 through 67921, 80 FR 71263 through 71269, 81 FR 80484 through 80488, 83 FR 59707 through 59715, 87 FR 69860 through 69763, respectively).

### b. Option for Shared Savings Program ACOs to Report Medicare CQMs

#### (1) Background

In the CY 2021 PFS final rule, we finalized modifications to the Shared Savings Program quality reporting requirements and quality performance standard for performance year 2021 and subsequent performance years (85 FR 84720). For performance year 2021 and subsequent years, ACOs are required to report quality data via the Alternative Payment Model (APM) Performance Pathway (APP). Pursuant to policies finalized under the CY 2022 and CY 2023 PFS (86 FR 65685; 87 FR 69858), to meet the quality performance standard under the Shared Savings Program through performance year 2024, ACOs must report the ten CMS Web Interface measures or the three eCQMs/MIPS CQMs, and the CAHPS for MIPS survey. In performance year 2025 and subsequent performance years, ACOs must report the three eCQMs/MIPS CQMs and the CAHPS for MIPS survey.

Since the CY 2021 PFS final rule was issued, interested parties have continued to express concerns about requiring ACOs to report all payer/all patient eCQMs/MIPS CQMs via the APP due to the cost of purchasing and implementing a system wide infrastructure to aggregate data from multiple ACO participant TINs and varying EHR systems (86 FR 65257). In the CY 2022 PFS, commenters supported our acknowledgement of the complexity of the transition to all payer/all patient eCQM/MIPS CQMs (86 FR 65259). Additionally, one commenter questioned how data completeness standards could be met, given the issues of deduplication and patients adding or moving insurance coverage (87 FR 65260). In public comments to the CY 2023 PFS proposed rule, some commenters expressed multiple concerns regarding the requirement to report all payer/all patient eCQMs/MIPS CQMS beginning in performance year 2025, such as issues related to meeting all payer data requirements, data completeness requirements, data aggregation and deduplication issues, and interoperability issues among different EHRs (87 FR 69837). In the CY 2023 PFS final rule, we explained these comments went beyond the scope of our proposals. These comment letters included details of the commenters' concerns. Specifically, some commenters, which included ACOs, noted the financial burden of aggregating, deduplicating, and exporting eCQM data across multiple TINs and EHRs. Commenters,

including ACOs, expressed concerns that the requirement to report all payer measures ties performance to patients that the ACO does not actively manage, increases the difficulty of meeting data completeness, and may negatively impact an ACO's performance by including patients seen by specialists. We also acknowledged that as the transition to reporting all-payer eCQMs/MIPS CQMs continues, the health equity adjustment which we finalized in the CY 2023 PFS final rule (87 FR 69842) will support ACOs that may experience challenges with the new quality reporting requirement and will provide an incentive for ACOs to serve underserved populations during the transition to reporting eCQMs/MIPS CQMs. In the CY 2023 PFS final rule, we stated that we are continuing to monitor the impact of these policies as we gain more experience with ACOs reporting all payer/all patient eCQMs/MIPS CQMs and, further, that we are exploring how to address some of the concerns related to data aggregation and the all payer requirement and may revisit these and related issues in future rulemaking based on lessons learned (87 FR 69833).

Consistent with our goal to support ACOs in the transition to all payer/all patient eCQMs/MIPS CQMs, in the CY 2023 PFS final rule we extended the eCQM/MIPS CQM reporting incentive through PY 2024 to provide an incentive to ACOs to report the eCQMs/MIPS CQMs, while allowing them time to gauge their performance on the eCQMs/MIPS CQMs before full reporting of these measures is required beginning in performance year 2025 (87 FR 69835). Building on our goal to provide technical support to ACOs and to help ACOs build the skills necessary to aggregate and match patient data to report all payer/all patient eCQMs/MIPS CQMS, in December 2022, we hosted a webinar to support ACOs in the transition to reporting all payer/all patient eCQMs/MIPS CQMs and released a guidance document on the topic. Resources from the "Reporting MIPS CQMs and eCQMs in the APM Performance Pathway" webinar are available at <https://youtu.be/LDrpoGnnRQs>. The guidance document, entitled "Medicare Shared Savings Program: Reporting MIPS CQMs and eCQMs in the Alternative Payment Model Performance Pathway (APP)" is available in the

Quality Payment Program Resource Library at <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2179/APP%20Guidance%20Document%20for%20ACOs.pdf>

f. We are committed to continuing to support ACOs in the transition to all payer/all patient eCQMs/MIPS CQMs and in the transition to digital quality measurement reporting.

## (2) Reporting the Medicare CQMs

In light of the concerns raised by ACOs and other interested parties and our commitment to supporting ACOs in the transition to digital quality measure reporting, for performance year 2024 and subsequent performance years as determined by CMS, we proposed in the CY 2024 PFS proposed rule to establish the Medicare CQMs for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQMs) as a new collection type for Shared Savings Program ACOs reporting on the Medicare CQMs (reporting quality data on beneficiaries eligible for Medicare CQMs as defined at § 425.20) within the APP measure set and administering the CAHPS for MIPS Survey as required under the APP (88 FR 52420 through 52424). As stated in the CY 2024 PFS proposed rule (88 FR 52420), Medicare CQMs would serve as a transition collection type to help some ACOs build the infrastructure, skills, knowledge, and expertise necessary to report all payer/all patient MIPS CQMs and eCQMs by defining a population of beneficiaries that exist within the all payer/all patient MIPS CQM Specifications and tethering that population to claims encounters with ACO professionals with specialties used in assignment. Specifically, we believe that Medicare CQMs would address the concern raised by ACOs that – for ACOs with a higher proportion of specialty practices and/or multiple EHR systems – the broader all payer/all patient eligible population would capture beneficiaries with no primary care relationship to the ACO. Further, we believe that ACOs, particularly ACOs with a higher proportion of specialty practices and/or multiple EHRs, would be able to utilize Medicare Part A and B claims data to help identify the ACO’s eligible population and validate the ACO’s patient matching and deduplication efforts. For these

reasons, we believe that it is appropriate to establish Medicare CQMs as a new collection type for Shared Savings Program ACOs only.

In the CY 2024 PFS proposed rule (88 FR 52420), we stated that we recognized that Medicare CQMs might not be the most suitable collection type for some ACOs, particularly ACOs with a single-EHR platform, a high proportion of primary care practices, and/or ACOs composed of participants with experience reporting all payer/all patient measures in traditional MIPS. We also encouraged ACOs to evaluate all quality reporting options to determine which collection type is most appropriate based on the ACO's unique composition and technical infrastructure. In addition to our proposal to report quality data utilizing the Medicare CQMs collection type, in performance year 2024, ACOs would have the option to report quality data utilizing the CMS Web Interface measures, eCQMs, and/or MIPS CQMs collection types (88 FR 52420). As described in our proposal, in performance year 2025 and subsequent performance years as determined by CMS, ACOs would have the option to report quality data utilizing the eCQMs, MIPS CQMs, and/or Medicare CQMs collection types (88 FR 52420).

We stated in the CY 2024 PFS proposed rule (88 FR 52421) that our long-term goal continues to be to support ACOs in the adoption of all payer/all patient measures. We would monitor the reporting of quality data utilizing the Medicare CQMs collection type. For example, one indicator to evaluate Medicare CQMs would be to assess if there are any Medicare CQMs topped out as described at § 414.1380(b)(1)(iv). Therefore, in the 4th year the measure could be removed and would no longer be available for reporting during the performance period (83 FR 59761). Once the measure has reached an extremely topped out status (for example, a measure with an average mean performance within the 98th to 100th percentile range), we may propose the measure for removal in the next rulemaking cycle, regardless of whether or not it is in the midst of the topped out measure lifecycle, due to the extremely high and unvarying performance where meaningful distinctions and improvement in performance can no longer be made, after taking into account any other relevant factors (83 FR 59763). Separately, we may specify higher

standards, new measures, or both – up to and including proposing to sunset the Medicare CQM collection type in future rulemaking – to ensure that Medicare CQMs conform to the intent of section 1899(b)(3)(C) of the Act and the priorities established in the CMS National Quality Strategy (88 FR 52421).

We also remain steadfast in our commitment to support providers in the transition from traditional MIPS to APMs and Advanced APMs. In our proposal, we acknowledged that Medicare CQMs may not be the preferred collection type for all ACOs. ACOs that are composed of participants with experience reporting all payer/all patient measures in traditional MIPS would continue to have the option to report all payer/all patient measures (88 FR 52421). In supporting providers in the transition from traditional MIPS to APMs and Advanced APMs, we also recognized the corresponding need to support ACOs in the transition to all payer/all patient reporting (88 FR 52421). In addition to the technical support that we would continue to provide ACOs, we believe that the Medicare CQM collection type would aid some ACOs in the transition to all payer/all patient measures by allowing ACOs to focus patient matching and data aggregation efforts on ACO professionals with specialties used in assignment while the ACO builds the infrastructure necessary to report on a broader eligible population (88 FR 52421).

To facilitate the reporting of Medicare CQMs, we proposed to amend the definition of “Collection Type” to include the Medicare CQM as an available collection type in MIPS for ACOs that participate in the Shared Savings Program (88 FR 52563). We noted that the Medicare CQMs collection type would serve as a transition collection type and be available as determined by CMS (88 FR 52421). Additionally, we proposed to establish data submission and completeness criteria pertaining to the Medicare CQMs for the MIPS quality performance category (88 FR 52567).

A Medicare CQM is essentially a MIPS CQM reported by an ACO under the APP on only the ACO’s Medicare FFS beneficiaries, instead of its all payer/all patient population. We

proposed to define a beneficiary eligible for Medicare CQMs at § 425.20 as a beneficiary identified for purposes of reporting Medicare CQMs who is either of the following:

- A Medicare FFS beneficiary (as defined at § 425.20) who –

++ Meets the criteria for a beneficiary to be assigned to an ACO described at § 425.401(a); and

++ Had at least one claim with a date of service during the measurement period from an ACO professional who is a primary care physician or who has one of the specialty designations included in § 425.402(c), or who is a physician assistant (PA), nurse practitioner (NP), or clinical nurse specialist (CNS).

- A Medicare FFS beneficiary who is assigned to an ACO in accordance with § 425.402(e) because the beneficiary designated an ACO professional participating in an ACO as responsible for coordinating their overall care.

While this definition refers to beneficiaries that have been assigned to an ACO, it nonetheless differs from our basic assignment methodology described under subpart E and from the concept of assignable beneficiary defined at § 425.20. Specifically, the use of the terms of “claim” (instead of primary care services) and “measurement period” (instead of assignment window) in the definition are synchronous with the application of all payer/all patient MIPS CQM Specifications in reporting Medicare CQMs. For example, we define primary care services as the set of services identified by the Healthcare Common Procedure Coding System (HCPCS) and revenue center codes designated under § 425.400(c). Each all payer/all patient MIPS CQM Specification identifies eligible encounters that, in part, identify patients that should be included in the measure’s eligible population.

In the CY 2024 PFS proposed rule, we stated that our proposed definition for beneficiary eligible for Medicare CQMs is intended to create alignment with the all payer/all patient MIPS CQM Specifications (88 FR 52421). The HCPCS and revenue center codes designated under § 425.400(c) as primary care services for purposes of assignment under the Shared Savings

Program only partially overlap with the codes designated as eligible encounters used to identify the eligible population in all payer/all patient MIPS CQM Specifications (88 FR 52421).

Applying primary care service codes or deferring to the basic assignment methodology under subpart E to identify the beneficiaries eligible for Medicare CQMs would have the unintended result of limiting the codes used to identify eligible encounters in the Medicare CQM Specification to only the codes that overlap with primary care services (88 FR 52421). Similarly, we defined the assignment window as the 12-month period used to assign beneficiaries to the ACO. In a manner that is identical to the all payer/all patient MIPS CQM Specifications, the Medicare CQM Specifications would identify the measurement period applicable to each measure (88 FR 52421). Applying the 12-month period used in assignment or deferring to the basic assignment methodology under Subpart E to identify the beneficiaries eligible for Medicare CQMs would have the unintended result of reducing the beneficiaries eligible for Medicare CQMs to only patients that had an eligible encounter during the overlap of the assignment window as defined at § 425.20 and the measurement period as defined in the Medicare CQM Specifications (88 FR 52421).

In the CY 2024 PFS proposed rule, we proposed to establish the data completeness criteria threshold for the Medicare CQM collection type, in which a Shared Savings Program ACO that meets the reporting requirements under the APP would submit quality measure data for Medicare CQMs on the APM Entity's applicable beneficiaries eligible for the Medicare CQMs, as proposed at § 425.20, who meet the measure's denominator criteria (88 FR 52567).

We also proposed the following data completeness criteria thresholds for Medicare CQMs:

- At least 75 percent for the CY 2024, CY 2025, and CY 2026 performance periods/2026, 2027, and 2028 MIPS payment years, respectively.
- At least 80 percent for the CY 2027 performance period/2029 MIPS payment year.

With the Medicare CQMs collection type serving as a transition collection type under the APP that would be available as determined by CMS, we proposed in the CY 2024 PFS proposed

rule to establish the aforementioned data completeness criteria thresholds in advance of the applicable performance periods (88 FR 52567). In our proposal, we recognized that it is advantageous to delineate the expectations for ACOs as they prepare to meet the quality reporting requirements for the Medicare CQMs collection type under the APP (88 FR 52421). We would assess the availability of the Medicare CQM as a collection type under the APP during the initial years of implementation and determine the timeframe to sunset the Medicare CQM as a collection type in future rulemaking.

As described in our proposal, an ACO that reports Medicare CQMs in an applicable performance year would aggregate patient data for beneficiaries who are eligible for Medicare CQMs, as proposed at § 425.20, across all ACO participants (88 FR 52422). The ACO would then match the aggregated patient data with each Medicare CQM Specification to identify the eligible population for each measure. The ACO's aggregated ACO submission must account for 100 percent of the eligible and matched patient population across all ACO participants. Data completeness is calculated based on submitted data. We believe that the proposal to establish the Medicare CQM collection type would address the concerns from ACOs regarding the capability of meeting the data completeness requirement for all payer data. Specifically, our proposal to define beneficiaries eligible for Medicare CQMs aims to focus ACOs' reporting efforts on beneficiaries with an encounter with an ACO professional with a specialty used in assignment and thereby reduce the potential for missing or un-matched patient data. It is important to note that ACOs that include or are composed solely of FQHCs or RHCs must report quality data on behalf of the FQHCs or RHCs that participate in the ACO. To clarify, while FQHCs and RHCs that provide services that are billed exclusively under FQHC or RHC payment methodologies are exempt from reporting traditional MIPS, FQHCs and RHCs that participate in APMs, such as the Shared Savings Program, are considered APM Entity groups described at § 414.1370.

To facilitate population-based activities related to improving health through quality measurement of Medicare CQMs and to aid ACOs in the process of patient matching and data

aggregation necessary to report Medicare CQMs, we stated in the CY 2024 PFS proposed rule that we would provide ACOs a list of beneficiaries who are eligible for Medicare CQMs within the ACO. As set forth in our regulations at § 425.702, we share certain aggregate reports with ACOs under specific conditions, and this information includes demographic data that represents the minimum data necessary for ACOs to conduct health care operations work, which includes demographic and diagnostic information necessary to report quality data. We proposed that the list of beneficiaries eligible for Medicare CQMs to be shared once annually, at the beginning of the quality data submission period (88 FR 52422). Since we would not have full run-out on performance year claims data prior to the start of the quality data submission period, the list of beneficiaries eligible for Medicare CQMs would not be a complete list of beneficiaries that should be included on an ACO's Medicare CQMs reporting. ACOs would have to ensure that all beneficiaries that meet the applicable Medicare CQM Specification and also meet the definition of a beneficiary eligible for Medicare CQMs proposed under § 425.20 are included in the ACO's eligible population/denominator for reporting each Medicare CQM. We proposed to add new paragraph (c)(1)(iii) to § 425.702 as follows:

For performance year 2024 and subsequent performance years, at the beginning of the quality submission period, CMS, upon the ACO's request for the data for purposes of population-based activities relating to improving health or reducing growth in health care costs, protocol development, case management, and care coordination, provides the ACO with information about its FFS population.

- The following information is made available to ACOs regarding beneficiaries eligible for Medicare CQMs as defined at § 425.20:

- ++ Beneficiary name.

- ++ Date of birth.

- ++ Beneficiary identifier.

- ++ Sex.

- Information in the following categories, which represents the minimum data necessary for ACOs to conduct health care operations work, is made available to ACOs regarding beneficiaries eligible for Medicare CQMs as defined at § 425.20:

- ++ Demographic data such as enrollment status.

- ++ Health status information such as risk profile and chronic condition subgroup.

- ++ Utilization rates of Medicare services such as the use of evaluation and management, hospital, emergency, and post-acute services, including the dates and place of service.

The list of beneficiaries eligible for Medicare CQMs shared by CMS would aim to help ACOs aggregate, and match and deduplicate patient data. We proposed including the minimum data necessary to facilitate the reporting of Medicare CQMs including beneficiary identifier, gender, date of birth and death (if applicable), chronic condition subgroup, and the NPIs of the top three frequented providers in the ACO (88 FR 52422). We also proposed to include health status information such as risk profile and chronic condition subgroup to the extent that such data would aid ACOs in identifying patients that meet the denominator criteria for the Medicare CQM Specifications (88 FR 52422). We would also provide technical assistance to ACOs when reporting the Medicare CQMs, including providing technical resource documents. Our proposal to create Medicare CQMs is intended to support ACOs through the transition to reporting the all payer/all patient eCQMs/MIPS CQMs and to facilitate quality assessment improvement activities (as described in the definition of health care operations at 45 CFR 164.501) since we would provide ACOs with a list of beneficiaries eligible for Medicare CQM reporting to aid in patient matching and data deduplication.

In the CY 2021 PFS final rule (85 FR 84733), we finalized the following three all payer/all patient eCQMs/MIPS CQMs under the APP for performance year 2021 and subsequent performance years:

- Quality ID#: 001 Diabetes: Hemoglobin A1c (HbA1c) Poor Control;

- Quality ID#: 134 Preventive Care and Screening: Screening for Depression and Follow-Up Plan; and

- Quality ID#: 236 Controlling High Blood Pressure.

In section IV.A.4.e of the CY 2024 PFS proposed rule (88 FR 52422), we proposed to add these measures as Medicare CQMs to the APP measure set for Shared Savings Program ACOs beginning with performance year 2024 and subsequent performance years. ACOs may report the three Medicare CQMs, or a combination of eCQMs/MIPS CQMs/Medicare CQMs, to meet the Shared Savings Program quality reporting requirement at § 425.510(b) and the quality performance standard at § 425.512(a)(5).

As a result, to meet the Shared Savings Program reporting requirements:

- For performance year 2024, an ACO would be required to report the 10 measures under the CMS web interface measures, or the three eCQMs/MIPS CQMs/Medicare CQMs. In addition, an ACO would be required to administer the CAHPS for MIPS Survey, and CMS will calculate the two claims-based measures.

- For performance year 2025 and subsequent performance years, an ACO would be required to report the three eCQMs/MIPS CQMs/Medicare CQMs. In addition, an ACO would be required to administer the CAHPS for MIPS Survey, and CMS will calculate the two claims-based measures.

ACOs may still report via the APP using the all payer/all patient eCQM/MIPS CQM collection types and may report different collection types for each measure.

In conjunction with the proposed changes to § 425.512(a)(2), we proposed to incorporate Medicare CQMs into the existing quality performance standard policies for new ACOs at § 425.512(a)(2)(i), (ii), and (iii) (88 FR 52423). Accordingly, we proposed that for the first performance year of an ACO's first agreement period under the Shared Savings Program, if the ACO reports data via the APP and meets MIPS data completeness requirement at § 414.1340 and

receives a MIPS Quality performance category score under § 414.1380(b)(1), the ACO will meet the quality performance standard under the Shared Savings Program, if:

- For performance year 2024. The ACO reports the 10 CMS Web Interface measures or the three eCQMs/MIPS CQMs/Medicare CQMs, and administers a CAHPS for MIPS survey under the APP.

- For performance year 2025 and subsequent performance years. The ACO reports the three eCQMs/MIPS CQMs/Medicare CQMs and administers a CAHPS for MIPS survey under the APP.

Additionally, we proposed to incorporate Medicare CQMs into the existing policies at § 425.512(a)(5)(iii) for when an ACO would not meet the quality performance standard or the alternative quality performance standard. Accordingly, we proposed that an ACO would not meet the quality performance standard or the alternative quality performance standard if:

- For performance year 2024, if an ACO (1) does not report any of the 10 CMS Web Interface measures or any of the three eCQMs/MIPS CQMs/Medicare CQMs and (2) does not administer a CAHPS for MIPS survey under the APP.

- For performance year 2025 and subsequent performance years, if an ACO (1) does not report any of the three eCQMs/MIPS CQMs/Medicare CQMs and (2) does not administer a CAHPS for MIPS survey under the APP.

We did not propose to add Medicare CQMs to the eCQM/MIPS CQM reporting incentive described at § 425.512(a)(5)(i)(A)(2) for performance year 2024. The eCQM/MIPS CQM reporting incentive intends to provide an incentive to ACOs to report the all payer/all patient eCQMs/MIPS CQMs while allowing them time to gauge their performance on the all payer/all patient eCQMs/MIPS CQMs before full reporting of these measures is required beginning in performance year 2025.

Under the goals of the CMS National Quality Strategy, we are moving towards a building-block approach to streamline quality measure across CMS quality programs for the

adult and pediatric populations. This “Universal Foundation” of quality measure would focus provider attention, reduce burden, identify disparities in care, prioritize development of interoperable, digital quality measures, allow for cross-comparisons across programs, and help identify measurement gaps. Following in the proposals under MIPS, we intend to propose future policies aligning the APP measure set for Shared Savings Program ACOs with the quality measures under the “Universal Foundation” beginning in performance year 2025. These Universal Foundation measures are proposed to be adopted into the existing the Value in Primary Care MVP as discussed in Table B.11 of Appendix 3: MVP Inventory of the CY 2024 PFS proposed rule (88 FR 52423). By creating alignment with the Universal Foundation in the Value in Primary Care MVP and the APP measure set by 2025, primary care clinicians would develop familiarity with the same quality measures that are reported in the APP while in MIPS. We expect this alignment would reduce the barriers to participation in the Shared Savings Program. The following is a summary of the comments we received and our responses.

*Comment:* Many commenters supported the proposal to establish the Medicare CQMs as a new collection type for Shared Savings Program ACOs. Several commenters were supportive of our proposal that Medicare CQMs would be reported by Shared Savings Program ACOs on only the ACO’s Medicare FFS beneficiaries. Commenters stated that reporting on Medicare patients will help ACOs bridge to all payer reporting and that the policy will encourage more ACOs to participate in the Shared Savings Program and transition into accountable care. Commenters also stated that the policy will help expand the number of beneficiaries in accountable care and support CMS’ strategic direction. Another commenter shared that Medicare CQMs will ensure a more direct comparison between populations than the all-payer eCQM and will mitigate complications related to payer mix. Another commenter noted that reporting specific to Medicare beneficiaries is the most appropriate measure of ACO quality performance. One commenter stated that limiting reporting to Medicare patients, versus all payer data, will be an important step towards reducing burden for providers in ACOs and

encouraging specialist participation. Another commenter shared that CQMs for the Medicare FFS patients with a treatment relationship to ACO professionals with a primary care or related specialty ensures that CMS receives meaningful quality information on the ACO's influence on the Medicare FFS population.

A few commenters agreed that Medicare CQMs would address most of ACOs' concerns regarding all payer/all patient reporting, such as difficulties reporting for those ACOs with a higher proportion of specialty practices or groups with multiple EHRs, beneficiaries with no primary care relationship, and shouldering a greater burden when matching and deduplicating patient records. Other commenters noted Medicare CQMs reduce concerns about specialists reporting on primary care focused measures. Commenters shared that Medicare CQMs were responsive to several key concerns raised by ACOs regarding feasibility of implementing eCQMs/MIPS CQMs, including equity concerns.

One commenter agreed that Medicare CQMs would serve as an intermediary step to help ACOs build the infrastructure, skills, knowledge, and expertise required to report eCQMs/MIPS CQMs. A few commenters stated that Medicare CQMs will provide a learning period and additional time to address barriers in reporting eCQMs.

A few commenters noted that Medicare CQMs will ease the concern with the state of readiness of reporting on eCQMs and reduce administrative burden and cost relative to an all-payer reporting requirement. One commenter stated that the transition away from the Web Interface reporting has created a large resource burden on ACOs to develop new processes, hire vendors, and manage frequently changing requirements, and additional support and flexibility will allow ACOs to meet these requirements and promote digital quality measurement reporting rather than creating additional costs and unnecessary burden.

One commenter stated that Medicare CQMs are far better matched to ACOs' reporting capabilities than all-payer eCQMs, which would otherwise be required if this proposal is not finalized. Another commenter noted that ACOs with participants on multiple EHR systems may

still be challenged when gathering and aggregating data to report, but the option to report using Medicare CQMs should provide ACOs with adequate opportunities to overcome this challenge and prepare them to report all payer/all patient eCQMs/MIPS CQMs.

*Response:* We appreciate commenters' recognition of the role that Medicare CQMs could have in advancing digital quality measurement, supporting ACOs in developing processes to gather and aggregate data for care coordination and quality improvement, and bridging the gap to all payer quality measurement.

*Comment:* Several commenters expressed concern about the implementation of Medicare CQMs beginning in performance year 2024. A few commenters stated that ACOs will most likely need more time to implement these changes than allotted in this proposal. One commenter stated that we should limit reporting to the list of beneficiaries eligible for Medicare CQMs provided by CMS in the initial performance year of Medicare CQMs to ensure greater uptake by ACOs given the complexity and time it will take to identify patients. One commenter suggested delaying the implementation of Medicare CQMs until performance year 2027 if reporting is not limited.

*Response:* We acknowledge concerns about the implementation of Medicare CQMs. Implementing Medicare CQMs in performance year 2024 is appropriate as Medicare CQMs are an optional collection type. Medicare CQMs are intended to support ACOs in transitioning to all payer/all patient measures and to address concerns about the feasibility of reporting eCQMs/MIPS CQMs that requires aggregating and deduplicating an even larger volume of patient data, which would otherwise have been required starting in 2025. We recognize that Medicare CQMs might not be the suitable collection type for some ACOs. In performance year 2024, ACOs would have the option to report quality data utilizing the CMS Web Interface measures, eCQMs, and/or MIPS CQMs collection types. Under our proposal, in performance year 2025 and subsequent performance years, ACOs would have the option to report quality data utilizing the eCQMs, MIPS CQMs, and/or Medicare CQMs collection types. We encourage

ACOs to evaluate all quality reporting options to determine which collection type is most appropriate based on the ACO's unique composition and technical infrastructure.

In response to comments which suggest limiting reporting, as discussed later in this section of the final rule, we are modifying our proposal to provide a quarterly list of beneficiaries eligible for Medicare CQMs which will provide ACOs with more frequent cumulative list of beneficiaries eligible for the measure to facilitate population-based activities related to improving health through quality measurement and to aid ACOs in the process of patient matching and data aggregation necessary for reporting quality measures.

*Comment:* One commenter applauded us for our willingness to assist ACOs that might be struggling to operationalize payer-agnostic reporting solutions but disagreed with Medicare CQMs being unilaterally offered to only Shared Savings Program ACOs and not to organizations that may struggle with the exact same reporting barriers on the MIPS reporting side. The commenter questioned why the Medicare CQM reporting option was not also made available in the form of a (modified) eCQM and noted that there are organizations participating in either the Shared Savings Program or MIPS who report via eCQMs that may face the same barriers of multiple EHR systems and/or high proportions of specialty practices that we have cited as an impetus for the proposal of Medicare CQMs.

*Response:* We refer the reader to past MIPS rules, where CMS has consistently stated that it would use all-payer measures in MIPS where possible to create a more comprehensive picture of the practice performance (81 FR 77098). Alongside that goal, we also stated that we aim to simplify reporting and reduce administrative burden (81 FR 77098). ACOs face unique challenges in matching patients and aggregating their data for quality measures. These challenges are not commonly shared by MIPS eligible clinicians. Further, we did not propose to establish a Medicare eCQM because of the complexity and potential technical burden ACOs and their vendors would face in implementing eCQMs for a Medicare-only population. As discussed in the CY 2024 PFS proposed rule (88 FR 52420), we proposed Medicare CQMs in light of

concerns raised by ACOs and other interested parties and our commitment to supporting ACOs in the transition to digital quality measure reporting. Medicare CQMs would serve as a transition collection type to help some ACOs build the infrastructure, skills, knowledge, and expertise necessary to report all payer/all patient MIPS CQMs and eCQMs by defining a population of beneficiaries that exist within the all payer/all patient MIPS CQM Specifications and tethering that population to claims encounters with ACO professionals with specialties used in assignment. Specifically, Medicare CQMs would address the concern raised by ACOs that for ACOs with a higher proportion of specialty practices the broader all payer/all patient eligible population would capture beneficiaries with no primary care relationship to the ACO. Further, given ACOs are commonly made up of multiple practices using multiple EHRs, ACOs would be able to utilize Medicare Parts A and B claims data to help identify the ACO's eligible population and to validate the ACO's patient matching and deduplication efforts. For these reasons, it is appropriate to establish Medicare CQMs as a new collection type for Shared Savings Program ACOs only.

*Comment:* Many commenters raised questions and concerns regarding how CMS will determine the appropriate Medicare CQM population for these measures. Some commenters noted that the proposed denominator eligibility criteria are similar to but differ in timeline from the current assignment methodology and that this creates unnecessary complexity, potentially leading to confusion in identifying the appropriate Medicare ACO population. A few commenters suggested we combine the new Medicare CQM assignment methodology with the existing assignment methodology, which would mitigate potential challenges and ensure a smoother implementation process. A few commenters recommended that CMS limit the list of beneficiaries eligible for Medicare CQMs to beneficiaries that are attributed to the ACO. One commenter stated that depending on an ACO's selected assignment methodology, they may not be fully aware of their full assignable population and that we should limit reporting under Medicare CQMs to the ACO's assigned population rather than the assignable. Several

commenters asked that we clarify if the list of beneficiaries eligible for Medicare CQMs is limited to assigned beneficiaries or if it includes all assignable beneficiaries eligible for the measure. A few commenters suggested using the existing ACO population base to create less confusion.

*Response:* In response to commenters' suggestions that we align the definition of beneficiary eligible for Medicare CQM with our assignment methodology, we note that our proposal aims to align Medicare CQMs with the all payer/all patient measure specifications because Medicare CQMs are intended to support ACOs in the transition to all payer/all patient measures. For reasons previously mentioned, our proposal would limit Medicare CQM reporting to beneficiaries that had an encounter with an ACO professional with a specialty used in assignment or who were voluntarily assigned to the ACO. Our proposed approach balances our commitment to the transition to all payer/all patient measures and the need to provide additional support to some ACOs as they build the skills and infrastructure necessary to report digital quality measures.

In addition, the term "attributed" means that the patient had the plurality of their care with the ACO. The definition of a beneficiary eligible for Medicare CQM does not require that a patient had the plurality of their care with the ACO and, as such, the list of beneficiaries eligible for Medicare CQMs is broader than the ACO's attributed population.

*Comment:* One commenter recommended that we limit the list to Medicare patients who have an encounter with a physician with a specialty utilized in step 1 of attribution under the current assignment methodology. A commenter stated that the proposal limits quality reporting to Medicare patients with a primary care visit instead of all patients with any type of visit.

*Response:* As discussed in the June 2015 final rule, primary care services can generally be defined based on the type of service provided, the type of provider specialty that provides the service, or both (80 FR 32748). The list of provider specialties used in assignment was based on public comments and recommendations by CMS medical officers knowledgeable about the

services typically performed by physicians and non-physician practitioners (80 FR 32750). In finalizing the list of specialties used in assignment, we attempted to limit the list of physician specialty types that would be excluded from the assignment process to those physician specialties that would very rarely, if ever, provide primary care to beneficiaries (80 FR 32750). Tethering the Medicare CQM population to claims encounters with ACO professionals with specialties used in assignment limits the ACO's quality reporting to patients with a care relationship with the ACO and is responsive to feedback from ACOs and other interested parties.

Further, our proposed definition for a beneficiary eligible for Medicare CQMs does not require a primary care visit in order to create alignment with the all payer/all patient MIPS CQM Specifications. The HCPCS and revenue center codes designated under § 425.400(c) as primary care services for purposes of assignment under the Shared Savings Program only partially overlap with the codes designated as eligible encounters used to identify the eligible population in all payer/all patient MIPS CQM Specifications. Applying primary care service codes or deferring to the basic assignment methodology under subpart E to identify the beneficiaries eligible for Medicare CQMs would have the unintended result of limiting the codes used to identify eligible encounters in the Medicare CQM Specification to only the codes that overlap with primary care services.

Medicare CQMs are an all beneficiary Medicare measure (not just ACO assigned beneficiaries) and is designed to help ACOs address challenges with aggregating patient data required to report Medicare CQMs and the all payer/all patient MIPS CQMs and eCQMs in the future.

*Comment:* One commenter asked how the assignable Medicare population reporting requirements will apply to ACOs that have elected prospective versus retrospective assignment.

*Response:* Our proposed definition for beneficiary eligible for Medicare CQM is the same for ACOs under preliminary prospective assignment with retrospective reconciliation and ACOs under prospective assignment. In a manner that is identical to the all payer/all patient MIPS

CQM Specifications, the Medicare CQM Specifications would identify the measurement period applicable to each measure along with the beneficiary encounters for inclusion in the measure regardless of the ACO's assignment election.

*Comment:* One commenter requested that CMS provide further technical specifications on the eligibility of beneficiaries who meet the CQM requirement, the process for identifying these beneficiaries within EMRs/Vendor systems, and the impacts of FQHC/RHC in quality score as these entities would not traditionally be included in MIPS. This commenter added that this will allow ACOs to better determine next steps for moving away from the Web Interface reporting, while allowing better stewardship of resources to do this work.

*Response:* As stated in our proposal, ACOs that include or are composed solely of FQHCs or RHCs must report quality data on behalf of the FQHCs or RHCs that participate in the ACO (88 FR 52422). To clarify, while FQHCs and RHCs that provide services that are billed exclusively under FQHC or RHC payment methodologies are exempt from reporting traditional MIPS, FQHCs and RHCs that participate in APMs, such as the Shared Savings Program, are considered APM Entity groups described at § 414.1370 (88 FR 52422). It may be helpful to note that the three quality measures (for example, eQMs, MIPS CQMs, Medicare CQMs) included in the APP measure set for PY 2024 overlap with measures that health centers report via the Uniform Data System (UDS). This experience reporting quality measures may be helpful for health centers that participate in the Shared Savings Program as they transition to the APP measure set.

Further, we will provide technical guidance and specifications to ACOs to support ACOs in the identification of beneficiaries eligible for Medicare CQMs. Specifically, parameters for the list of beneficiaries eligible for Medicare CQMs will be included along with the list of beneficiaries eligible for Medicare CQMs in the ACO's Quarterly Informational Report Packages.

*Comment:* A few commenters were concerned that ACOs reporting Medicare CQMs

would need to collect data from specialist practices that do not care for any Shared Savings Program attributed patients.

*Response:* Medicare CQMs include beneficiaries who had at least one claim with a date of service during the measurement period from an ACO professional who is a primary care physician, who has one of the specialty designations included in § 425.402(c), or who is a PA, NP, or CNS or is assigned to the ACO through voluntary alignment (88 FR 52421). We note that in the proposed definition of beneficiary eligible for Medicare CQMs under § 425.20, we incorrectly used the phrase “certified nurse specialist” (88 FR 52754). In this final rule, we are finalizing our proposed definition of beneficiary eligible for Medicare CQMs under § 425.20, with a modification for clarity, and to ensure consistency of terminology across provisions, to reference "clinical nurse specialist" instead of "certified nurse specialist.”

We recognize the care delivered to beneficiaries by a range of clinicians. ACOs that include specialists included in the Medicare CQM definition would need to collect data from those specialists in order to submit true, accurate, and complete data when reporting Medicare CQMs. ACOs and other interested parties can access the list of specialty designations used in assignment in Table 9 of the “Shared Savings and Losses, Assignment and Quality Performance Standard Methodology Specifications.” This document is updated annually and can be access on the Shared Savings Program website at <https://www.cms.gov/medicare/payment/fee-for-service-providers/shared-savings-program-ssp-acos/guidance-regulations>. As discussed elsewhere in this section of the final rule, we will provide ACOs with a list of beneficiaries eligible for Medicare CQMs that can be used by ACOs in identifying encounters with specialists that should be included in quality measure reporting and improvement.

*Comment:* Several commenters had concerns related to data aggregation and deduplication when submitting Medicare CQMs. One commenter stated that, because the eligible population for Medicare CQMs would be broader than the ACO assigned population, many ACOs must still hire data aggregation vendors. A few commenters noted that most ACOs will

require significant process workflow and software development if targeting only Medicare beneficiary data. A few commenters stated that ACOs face an initial reporting burden of collecting data from member practices on disparate EMRs and that this burden exists regardless of the scale of data collected. Commenters stated that Medicare CQMs do not resolve underlying challenges with electronic quality measurement and require significant manual data aggregation and patient matching across many tax identification numbers (TINs) and electronic health records (EHRs) types. One commenter stated that eliminating the all payer/all patient approach is helpful for large ACOs with multiple participants and EHR systems, but that the Medicare CQM option is still complex and requires data aggregation, patient matching and deduplication.

*Response:* We acknowledge commenters concerns related to data aggregation and deduplication when submitting Medicare CQMs and recognize ACOs will have to develop these capabilities to aggregate and exchange data either in-house or through vendors but that the movement toward digital quality data will help further enhance ACOs' care coordination and quality improvement capabilities. As discussed elsewhere in this section of the final rule, we will provide ACOs with a list of beneficiaries eligible for Medicare CQMs to support ACOs in the aggregation and deduplication of patient data.

In our proposal, we recognized that that Medicare CQMs may not be the suitable collection type for some ACOs (88 FR 52420). We encourage ACOs to evaluate all quality reporting options to determine which collection type is most appropriate based on the ACO's unique composition and technical infrastructure. In addition to our proposal to report quality data utilizing the Medicare CQMs collection type, in performance year 2024, ACOs would have the option to report quality data utilizing the CMS Web Interface measures, eCQMs, and/or MIPS CQMs.

To support ACOs in the transition to digital quality measures, in December 2022, we hosted a webinar to support ACOs in the transition to reporting all payer/all patient eCQMs/MIPS CQMs and released a guidance document on the topic. Specifically, the webinar

focused on the APP, guidance and resources for reporting via the APP, and questions and answers from ACOs and their vendors. Resources from the “Reporting MIPS CQMs and eCQMs in the APM Performance Pathway” webinar are available at <https://youtu.be/LDrpoGnnRQs> and <https://qpp.cms.gov/resources/webinars>. The guidance document, entitled “Medicare Shared Savings Program: Reporting MIPS CQMs and eCQMs in the Alternative Payment Model Performance Pathway (APP)” is available in the Quality Payment Program Resource Library at <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2179/APP%20Guidance%20Document%20for%20ACOs.pdf>. The guidance describes how ACOs should identify an appropriate combination of data variables to achieve consistent and replicable patient matching that provides the most complete and accurate data to meet the measure specification and valid and reliable measure performance. The guidance highlights these common variables that ACOs have used to achieve patient matching rates of 90 percent or higher, which is sufficient for quality reporting, and goes on to indicate that ACOs should use 100 percent of this matched, deduplicated population to determine the eligible population for each measure.

*Comment:* Some commenters noted that the Medicare CQM proposal does not advance digital quality measurement as it leaves the eCQM reporting option unchanged, while one commenter noted that Medicare CQMs do not advance digital quality measurement because CQMs do not use CEHRT. A commenter urged CMS to focus on addressing the existing gaps in digital infrastructure and equity – a prerequisite to advancing digital measurement – and to continue working with the Office of the National Coordinator for Health IT (ONC) to advance consensus-based standards for digital quality measurement and interoperability.

Another commenter stated that Medicare CQMs will not inherently advance their capabilities to report on eCQMs such as the adoption of CEHRT across ACO participants, processes to enable aggregation of quality measurement data across all ACO participants, the ability to assess data completeness and efficiently calculate quality measures outcomes or the

generation of QRDA-III files. Another commenter advocated for CMS to identify an alternative pathway to transmit data in a standardized way to enable successful patient matching, such as use of a national patient identifier or revisions to QRDA I formats. One commenter stated that incorporating additional demographics in the data (QRDA I or FHIR) may improve patient matching and support deduplication and suggested that CMS consider introducing extra demographic criteria in their CMS Implementation Guide or QRDA I specifications to enhance patient matching accuracy.

*Response:* Medicare CQMs would help ACOs build the infrastructure, skills, knowledge, and expertise necessary to aggregate patient data consistent with our goals described in our Digital Quality Measurement (dQM) Strategic Roadmap, which can be accessed at [https://ecqi.healthit.gov/sites/default/files/CMSdQMStrategicRoadmap\\_032822.pdf](https://ecqi.healthit.gov/sites/default/files/CMSdQMStrategicRoadmap_032822.pdf). Improving data aggregation skills will support ACOs in their adoption of all payer/all patient eCQMs/MIPS CQMs and the transition to dQMs.

As discussed in Domain Three: Optimize Data Aggregation of the dQM Strategic Roadmap, data aggregators currently play a vital role in the acquisition, processing, transmission, analysis, and application of digital health information. Aggregation of digital data is critical for measures that depend on information from multiple providers or sources. However, a solution that requires CMS to serve as the only data aggregator is neither cost effective nor desirable for our goals for accountable care. We recognize that providers and care settings are at different stages of readiness to adopt dQMs and that the timeframe for transition to dQMs across different quality reporting programs varies. As stated in our dQM Strategic Roadmap, we anticipate the transition may be paced with the uptake of FHIR API technology.

In response to suggestions regarding QRDA I or other file formats, QRDA I is based on the Health Level Seven International® (HL7®) Clinical Document Architecture (CDA) and does include demographic specifications. However, we note we did not propose QRDA I for Medicare CQMs and, further, that implementation guide updates are beyond the scope of our proposal. As

described elsewhere in this section of the final rule, to support ACOs in the aggregation and deduplication of patient data, we will provide ACOs with a quarterly list of beneficiaries eligible for Medicare CQM.

*Comment:* One commenter stated that Medicare CQMs will still require creating a QRDA file, which increases the administrative burden and cost for ACOs.

*Response:* Medicare CQMs conform to the measure specifications included on MIPS CQMs, not eCQMs. Thus, there is no data type designation determination requiring QRDA. We anticipate providing technical guidance to ACOs and their vendors to support successful adoption of Medicare CQM reporting in accordance with the use of multiple data submission types as permitted under the MIPS data submission standards.

*Comment:* A couple commenters requested clarification as to whether a third party intermediary is required to submit Medicare CQMs if an ACO has multiple electronic health record systems, or if an ACO can collect, match, and de-duplicate their own data if they have the expertise.

*Response:* Medicare CQMs may be submitted by the ACO or a third party intermediary. Medicare CQMs would be subject to the data submission requirements detailed at § 414.1325 which provide, “[e]xcept for the Medicare Part B claims submission type, the data may also be submitted on behalf of the individual MIPS eligible clinician or group by a third party intermediary described at § 414.1400.”

*Comment:* We received several comments in support of our proposal to provide ACOs a list of beneficiaries who are eligible for Medicare CQMs within the ACO. However, many commenters stated that it will add significant burden for ACOs to ensure that the list is complete, and that we should limit reporting of Medicare CQMs to the list of beneficiaries provided by CMS. One commenter stated ACOs will struggle to comprehensively identify the patient population for which they must report Medicare CQMs. Another commenter noted that ACOs operating under prospective assignment with retrospective reconciliation may not have the data

necessary to determine their assignable populations. Several commenters suggested that limiting the reporting of Medicare CQMs to the patients provided on the CMS-issued list at the beginning of the reporting period would reduce the burden associated with reporting significantly and make the option a more feasible one for 2024. One commenter asked how ACOs could use the list of beneficiaries eligible for Medicare CQMs with incomplete claims data at the start of the reporting year. The commenter stated that CMS should ensure that the population is clear and knowable to ACOs during the reporting period.

One commenter noted that sharing data once annually may lead to missing data points and may compromise data completeness, while another commenter expressed that the proposal creates confusion, and CMS would not be able to provide timely beneficiary information to ACOs for reporting purposes. One commenter suggested that we limit reporting requirements to beneficiaries that are aligned at both the beginning and the end of the performance period, while another commenter recommended that calculations be performed on the back end of the reporting trail by CMS and that the list is automatically furnished biannually. Other commenters suggested that CMS should establish the set of beneficiaries for which ACOs report Medicare CQMs based on third quarter roster file it provides to ACOs and the beneficiaries that have a claim in the last quarter and reduce burden by adding additional demographic data elements. The commenter requested that we work with interested parties to come up with a process to ensure ACOs know/can report on their eligible patients.

*Response:* We acknowledge the concerns and challenges raised by commenters regarding ACOs needing to ensure that the list of beneficiaries eligible for Medicare CQMs is complete. To support ACOs in reporting Medicare CQMs, we are modifying our proposal to provide ACOs with a list of beneficiaries eligible for Medicare CQMs once annually, at the beginning of the quality data submission period. Instead, we will provide each ACO with a list of beneficiaries eligible for Medicare CQMs each quarter throughout the performance year as part of the ACO's Quarterly Informational Reports Packages in order to give ACOs access to the full 12 months of

encounters necessary to report Medicare CQMs. The list will be cumulative and updated quarterly to reflect the most recent quarter's data. For example, encounters with dates of service January 1st through March 31st of the performance year will be included in the first quarter list. First quarter report packages are typically delivered to ACOs in May of the performance year. The second quarter list will include encounters with dates of service January 1st through June 30th of the performance year. Second quarter report packages are typically delivered to ACOs in August of the performance year. The third quarter list will include encounters with dates of service January 1st through September 30th of the performance year. Third quarter report packages are typically delivered to ACOs in November of the performance year. Lastly, the fourth quarter list of beneficiaries eligible for Medicare CQMs will include encounters with dates of service January 1st through December 31st of the performance year. Fourth quarter report packages are typically delivered to ACOs in February of the year following the performance year. The Quarterly Informational Reports Packages are delivered to ACOs via the data hub in the ACO Management System (ACO-MS). This list will reduce burden relative to the proposed annual list by giving ACOs a complete list of beneficiaries eligible for Medicare CQMs. The fourth quarter list will allow ACOs to verify that they have accounted for all beneficiaries eligible for Medicare CQMs.

The cadence of updating the list throughout the performance year will enable ACOs to aggregate data throughout the performance year. ACOs may use the fourth quarter list to ensure that all beneficiaries eligible for Medicare CQMs are captured in the ACOs' reporting. Sharing data throughout the performance year will allow ACOs to prepare the majority of their submission data in advance of the submission period and then use the fourth quarter list to ensure that all beneficiaries that are eligible for Medicare CQMs are captured in the ACOs' reporting.

Additionally, the quarterly list will reduce reporting burden relative to the proposed annual list by including beneficiary-level age, diagnosis, encounter, and exclusion flags on the list of beneficiaries eligible for Medicare CQMs to aid ACOs in identifying the denominator

eligible population for each measure to the extent that such data can be identified through claims and Medicare administrative systems. It is important to note that these flags are meant to assist ACOs in the aggregation of data and do not replace the need for ACOs to evaluate their patient population against each Medicare CQM Specification prior to submission, including confirming the beneficiaries meet the denominator criteria for the measure. In a manner identical to MIPS CQM Specifications, the Medicare CQM Specifications will allow for the use of multiple sources of data (for example, multiple EHRs, paper records, registries, patient management systems) to compile a measure's numerator and denominator. ACOs should use all available data, including the list of beneficiaries eligible for Medicare CQMs provided by CMS, to ensure that the ACO's quality data is true, accurate, and complete.

*Comment:* Several commenters had concerns about the timing of the claims run-out that would be used to determine the complete list of beneficiaries eligible for Medicare CQMs. A commenter shared that it would be helpful for CMS to define what is considered the recommended time to allow for claims run out for the patient list to be considered completed and to identify on the list patients that have been "excluded" from the reporting denominator. One commenter suggested that we extend the reporting window such that ACOs will have full 90-day claims run out for Medicare CQM data; for example, move the reporting deadline from March 31 to at least April 30, providing this can be done without delaying ACO financial reconciliations. The commenter added that ACOs should have confidence they can access the full and accurate list of patients whose data is used in quality measurement. One commenter asked if we considered a claims run-out period prior to the submission window for Medicare CQMs to ensure that the ACO can determine the appropriate and accurate measure population prior to calculation and submission.

A few commenters noted that the proposal's focus on claims during the measurement period could lead to discrepancies due to claims reporting delays of up to a year.

*Response:* We clarify our use of the phrase "run-out" at 88 FR 52422 of our proposal. We

intended to use the phrase “run-out” to indicate that the list of beneficiaries eligible for Medicare CQMs that we proposed to share prior to the start of the quality data submission period would not include a full 12-months of encounter data. Medicare CQM Specifications would be identical to MIPS CQM Specifications. As such, ACOs would be able to utilize multiple sources of information (for example, multiple EHRs, paper records, registries, patient management systems) to aggregate Medicare CQM performance data. ACOs would not be limited to the use of claims data to report Medicare CQMs. While ACOs would be required to report on a full 12-months of performance data for Medicare CQMs, unlike Part B claims measures, no claims run-out would be required to report Medicare CQMs.

*Comment:* One commenter recommended that we apply the incentive to report eCQMs/MIPS CQMs to Medicare CQMs. The commenter noted that we should reward maximum savings to ACOs that achieve the quality performance standard.

*Response:* As stated in the CY 2024 PFS proposed rule (88 FR 52423), we did not propose to add Medicare CQMs to the eCQM/MIPS CQM reporting incentive described at § 425.512(a)(5)(i)(A)(2) for performance year 2024. The incentive is for all payer/all patient eCQM/MIPS CQM reporting. Since Medicare CQMs would include only Medicare FFS beneficiaries, Medicare CQMs are not a form of all payer/all patient reporting. As such, they are not included in the eCQM/MIPS CQM reporting incentive. We note that the alternative quality performance standard, which we finalized in the CY 2023 PFS final rule (88 FR 69831), would be applicable to ACOs that report Medicare CQMs when those ACOs are otherwise eligible for scaled savings/losses.

*Comment:* Several commenters opposed the Medicare CQM proposal. One commenter stated that creating an ACO-specific measure specification creates additional burden on both practices and health care vendors (that is, EHR vendors, registry vendors, and health care IT vendors) to maintain the same measure based off multiple specifications. The commenter added that the measure benchmark will not be the same across the different collection types, leading to

confusion and non-comparable results. Another commenter concluded that reporting Medicare CQMs would require a third-party vendor resulting in an increased reporting expense because their current vendor does not support CQM.

Another commenter shared that they do not believe that introduction of new types of quality measures advances the goals of the Quality Payment Program and will likely lead to confusion among clinicians and administrative staff working on the program since Medicare CQMs are only available to Shared Savings Program ACOs and should not be categorized the same as MIPS CQMs/eCQMs available to all MIPS-eligible clinicians.

Another commenter opposed the proposal and stated that we are moving backwards by allowing ACOs to report on assigned and “assignable” Medicare beneficiaries. The commenter stated that ACOs should be required to report all payer data. This commenter stated they believe that the proposal will devalue the utility of publicly reported information and fall short of providing useful information to consumers about ACOs. They added that the proposal would create another point of disparity between MIPS, MVPs, and the Shared Savings Program: making fair comparisons across each impossible. The commenter questioned whether the proposal would meet the standard established section 1899(b)(3)(C) of the Act which states that, the Secretary shall establish quality performance standards to assess the quality of care furnished by ACOs and seek to improve the quality of care furnished by ACOs over time by specifying higher standards, new measures, or both for purposes of assessing such quality of care as it would seem that limiting the ACO’s reporting to only Medicare Patients is lowering the standards not “specifying higher standards.”

*Response:* We acknowledge commenters concerns regarding the creation of the Medicare CQM Specifications and direct readers to this section of this final rule for discussion on this topic. A measure specification for the Medicare CQMs collection type must be established in order for such collection type to have its own benchmark separate from the other collections, for example, MIPS CQMs collection type or eCQMs collection type. We direct

readers to our discussion of benchmarks in this section of the final rule to address concerns related to Medicare CQM benchmarking. Lastly, we direct readers to the discussion in this section of the final rule where we clarify that third-party intermediaries are permitted, but not required for reporting Medicare CQMs.

As discussed in our proposal, our long-term goal continues to be to support ACOs in the adoption of all payer/all patient measures (88 FR 52421). The Shared Savings Program has historically permitted an ACO to report on a sample of attributed Medicare beneficiaries through the CMS Web Interface. While we have encouraged and incentivized ACOs to transition to the reporting of all payer data for MIPS CQMs and/or eCQMs, many have commented on the complexity of doing so due to their difficulty matching and aggregating patient data across the various EHR systems used by their constituent clinician practices (88 FR 52420). We previously extended the availability of the CMS Web Interface in the Shared Savings Program to provide relief for these practices (86 FR 65262). Medicare CQMs provide a transition path for ACOs that have difficulty reporting patient data by limiting the beneficiaries for which an ACO must match and aggregate data to only Medicare beneficiaries that are eligible to be included. This is the logical next step in the reporting of digital quality measures as it is inclusive of the ACO's broader Medicare FFS population, which is larger than the sample currently used in the CMS Web Interface, but not as large as the all payer/all patient population that must be reported for an eCQM or MIPS CQM.

*Comment:* Many commenters suggested that we establish Medicare CQMs as a permanent option that is in place until digital quality measurement and reporting is feasible for all ACOs. Commenters outlined several benefits for making Medicare CQMs permanent, including reducing the ACOs need to choose, invest in, and implement multiple reporting types prior to digital quality measurement and reporting options becoming available, and that while the requirements for reporting are challenging, Medicare CQMs will still be an improvement over the other reporting options currently available. Another commenter noted that their EHR vendor

does not plan to support Medicare CQMS because it is a temporary reporting option not in alignment with or contributing to the adoption of eCQMs. One commenter stated that understanding the timeline for sunseting Medicare CQMs will help ACOs take the necessary steps to prepare for eCQM reporting and make decisions about continued participation in the program.

Another commenter urged CMS to maintain the Medicare CQM reporting option for ACOs until digital quality measurement and reporting is feasible for all ACO participants, especially small and independent providers who will need more technical assistance, resources, and support during this transition. Many commenters stated that Medicare CQMs should be a permanent collection types due to issues transitioning to all payer/all patient measures.

*Response:* We have heard that ACOs need a better understanding of how long Medicare CQMs will be an available collection type as they prepare to report quality measures for future performance years. Medicare CQMs are intended to serve as a transition to all payer/all patient reporting and not as a permanent collection type. We acknowledge that ACOs are at different stages of readiness to adopt all payer/all patient measures and we intend for Medicare CQMs to be available to ACOs during their transition to all patient/all payer reporting. We expect that the sunseting of the Medicare CQM collection type may be paced with the uptake of FHIR API technology, but this will be assessed on industry readiness and CMS requirements.

*Comment:* Many commenters suggested that we to consider a data completeness requirement lower than 75 percent for ACOs reporting eCQMs, MIPS CQMs, or Medicare CQMs due to the complexities of multiple practices and EHRs involved in a single ACO, and the significant burden and investment required by ACOs and participant providers to be able to complete any one of these reporting options.

One commenter suggested that we apply the same data completeness thresholds utilized for MIPS CQMs and Medicare CQMs to eCQMs and recommended that data completeness thresholds be applied at the ACO-level. A few commenters recommended that we maintain a 75

percent data completeness requirement for ACO quality measure reporting. The commenter stated that CMS should require ACOs to report on 100 percent of their assigned beneficiaries only and that this would be consistent with other payers' quality reporting methodology and allows all quality measures to utilize a uniform denominator set, while another few commenters expressed concern about the impact of potentially requiring 100 percent data completeness for any of the measure types in the future.

One commenter noted that it is unclear which data completeness standard the agency proposes to adopt, and that the proposal mentions both establishing data completeness at 75 percent for the CY 2024, CY 2025, and CY 2026 performance periods, as well as 100 percent data completeness in terms of aggregating, matching, and de-duplicating data. One commenter stated that our methodology and baseline for determining data completeness is unclear, so ACOs and others lack insight into whether they are submitting appropriately complete data.

*Response:* The data completeness criteria threshold of at least 75 percent for the Medicare CQMs aligns with the data completeness criteria threshold established for eCQM and MIPS CQM collection types for the CY 2024, CY 2025, and CY 2026 performance periods/ 2026, 2027, and 2028 MIPS payment years as discussed in section IV.A.4.f.(1)(d) of this final rule. It is appropriate for Medicare CQMs, eCQMs, and MIPS CQMs to have the same data completeness criteria in order to prevent confusion and complexity and to maintain a level of consistency in the program. Additionally, CMS will provide all ACOs with a list of beneficiaries eligible for Medicare CQMs each quarter, which will aid ACOs in satisfying data completeness by enabling ACOs to aggregate data throughout the performance year and use the fourth quarter list to ensure that all beneficiaries eligible for Medicare CQMs are captured in the ACOs' reporting.

To meet the data completeness criteria, ACOs must report quality performance data ("Performance Met," "Performance Not Met," or denomination exclusions/exceptions) for at least 75 percent of the eligible and matched denominator population for the performance year. In

our proposal, we stated that, “The ACO’s aggregated ACO submission must account for 100 percent of the eligible and matched patient population across all ACO participants” (88 FR 52422). By this we mean that ACOs must aggregate quality performance data from all of their ACO participants. Once patient data are matched and de-duplicated across all of the ACO’s participants, the ACO would then match the aggregated patient data with each Medicare CQM Specification to identify the eligible population for each measure. To aid ACOs in meeting data completeness, CMS will provide each ACO with a list of beneficiaries eligible for Medicare CQMs each quarter in order to give ACOs access to the full 12 months of encounters necessary to report Medicare CQMs.

In response to commenters suggestion that CMS should require ACOs to report on 100 percent of their assigned beneficiaries, we direct readers to the discussion in this section of the final rule regarding the alignment of beneficiaries eligible for Medicare CQMs and the all payer/all patient measure specification.

*Comment:* Many commenters expressed concern regarding our larger goal to require all ACOs to report all payer eCQMs/MIPS CQMs. Many commenters noted concerns that the current state of data standards and interoperability will not yet fully enable ACOs to meet the eCQM reporting requirements successfully.

Some commenters supported the transition to eCQM/MIPS CQM reporting. One commenter shared their belief that reporting eCQMs is a better reflection of overall quality, while another commenter encouraged CMS to continue working with providers to facilitate the transition to all payer/all patient measures even as/if the provider or ACO chooses to report Medicare CQMs.

*Response:* We did not propose any changes to the previously finalized policies regarding all payer eCQMs/MIPS CQMs. We note that the Medicare CQM collection type that we are finalizing in this rule addresses many of concerns about all payer/all patient shared by ACOs and other interested parties. Specifically, because beneficiaries eligible for Medicare CQMs must

have had a claim encounter with an ACO professional with a specialty used in assignment, Medicare CQMs would address the concern raised by ACOs that for ACOs with a higher proportion of specialty practices and/or multiple EHR systems, the broader all payer/all patient eligible population would capture beneficiaries with no primary care relationship to the ACO. Further, ACOs, particularly ACOs with a higher proportion of specialty practices and/or multiple EHRs, would be able utilize Medicare Part A and B claims data to help identify the ACO's eligible population and to validate the ACO's patient matching and deduplication efforts. For these reasons it is appropriate to establish Medicare CQMs as a new collection type for Shared Savings Program ACOs.

After consideration of the public comments received, we are finalizing our proposal to define a beneficiary eligible for Medicare CQMs at § 425.20. As discussed elsewhere in this section of the final rule, we are finalizing our proposed definition of beneficiary eligible for Medicare CQMs under § 425.20, with a modification for clarity, and to ensure consistency of terminology across provisions, to reference "clinical nurse specialist" instead of "certified nurse specialist." Specifically, we are finalizing the definition of a beneficiary eligible for Medicare CQMs at § 425.20 as a beneficiary identified for purposes of reporting Medicare CQMs for ACOs participating in the Medicare Shared Savings Program (Medicare CQMs) who is either of the following:

- A Medicare FFS beneficiary (as defined at § 425.20) who –
  - ++ Meets the criteria for a beneficiary to be assigned to an ACO described at § 425.401(a); and
  - ++ Had at least one claim with a date of service during the measurement period from an ACO professional who is a primary care physician or who has one of the specialty designations included in § 425.402(c), or who is a physician assistant, nurse practitioner, or clinical nurse specialist.

- A Medicare FFS beneficiary who is assigned to an ACO in accordance with § 425.402(e) because the beneficiary designated an ACO professional participating in an ACO as responsible for coordinating their overall care.

Additionally, we are finalizing our proposal with modifications to reflect that the list of beneficiaries eligible for Medicare CQMs will be shared more than once annually to add new paragraph (c)(1)(iii) to § 425.702 as follows:

For performance year 2024 and subsequent performance years, CMS, upon the ACO's request for the data for purposes of population-based activities relating to improving health or reducing growth in health care costs, protocol development, case management, and care coordination, provides the ACO with information about its FFS population.

- The following information is made available to ACOs regarding beneficiaries eligible for Medicare CQMs as defined at § 425.20:

- ++ Beneficiary name.

- ++ Date of birth.

- ++ Beneficiary identifier.

- ++ Sex.

- Information in the following categories, which represents the minimum data necessary for ACOs to conduct health care operations work, is made available to ACOs regarding beneficiaries eligible for Medicare CQMs as defined at § 425.20:

- ++ Demographic data such as enrollment status.

- ++ Health status information such as risk profile and chronic condition subgroup.

- ++ Utilization rates of Medicare services such as the use of evaluation and management, hospital, emergency, and post-acute services, including the dates and place of service.

As discussed in section IV.A.4.e of this final rule, we are finalizing our proposal to establish Medicare CQMs for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQMs) as a new collection type for Shared Savings Program

ACOs reporting on the Medicare CQMs (reporting quality data on beneficiaries eligible for Medicare CQMs as defined at § 425.20) within the APP measure set and administering the CAHPS for MIPS Survey as required under the APP.

As discussed in section IV.A.4.f.(1)(d) of this final rule, we are not finalizing the proposal to establish the data completeness criteria threshold of at least 80 percent for the CY 2027 performance period/2029 MIPS payment year.

### (3) Benchmarking Policy for Medicare CQMs

As the Shared Savings Program adopted the APP (see, for example, § 425.512(a)(3)(i)), benchmarks for quality measures used by the program are those established under the MIPS policies at § 414.1380(b)(1)(ii). We proposed that new benchmarks for scoring ACOs on the Medicare CQMs under MIPS would be developed in alignment with MIPS benchmarking policies (88 FR 52423). As historical Medicare CQM data would not be available at the time of the proposal, we proposed for performance year 2024 and 2025 to score Medicare CQMs using performance period benchmarks. Similarly, as quality performance data are submitted via Medicare CQM and baseline period data become available to establish historical benchmarks, we proposed for performance year 2026 and for subsequent performance years to transition to using historical benchmarks for Medicare CQMs when baseline period data are available to establish historical benchmarks in a manner that is consistent with the MIPS benchmarking policies at § 414.1380(b)(1)(ii).

The following is a summary of the comments we received on these proposals and our responses.

*Comment:* A few commenters supported CMS' proposal to use performance period benchmarks for performance years 2024 and 2025 before transitioning to historical benchmarks starting with performance year 2026.

*Response:* We thank the commenters for their support.

*Comment:* Several commenters were concerned about the proposal to score Medicare CQMs in performance years 2024 and 2025 using performance period benchmarks. One commenter stated that the use of same year percentile rankings is in direct conflict with CMS' stated desire to have all Traditional Medicare beneficiaries in accountable relationships by 2030 as in-year percentile calculations would result in a percent of participants to fail. The commenter also noted that the use of a historical period would create the opportunity for improvement. Another commenter stated that ACOs need Medicare CQM benchmarks to understand the impact of reporting Medicare CQMs compared to CMS Web Interface. A few commenters stated that benchmarks should be established prior to the start of the performance year and that having unknown benchmarks will discourage ACOs from reporting Medicare CQMs. One commenter added that benchmarks should be based on historical performance on which everyone can improve.

*Response:* As discussed in the CY 2024 PFS proposed rule (88 FR 52423), we proposed that new benchmarks for scoring ACOs on the Medicare CQMs under MIPS would be developed in alignment with MIPS benchmarking policies. Since Medicare CQMs would be subject to MIPS scoring policies, the application of MIPS benchmarking policies to Medicare CQMs is both logical and necessary for implementation of the new collection type. MIPS benchmarks are specific to each collection type (for example, eCQM, MIPS CQM, Medicare CQM, CMS Web Interface, Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Survey measures, and Part B claims measures). Because benchmarks are specific to collection type, a measure reported as an eCQM will be compared to a different benchmark than the same measure reported as a MIPS CQM or Medicare CQM.

In response to commenters concerns regarding the use of performance period benchmarks, as described in the MIPS Quality Benchmark Overview which is updated for each performance year and posted in the Quality Payment Program Resource Library, if a quality measure or collection type does not have a historical benchmark, we will attempt to calculate

benchmarks based on data submitted for the performance period. The PY 2023 MIPS Quality Benchmark Overview can be accessed at <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2272/2023%20Quality%20Benchmarks.zip>. We can establish performance period benchmarks when at least 20 instances of the measure are reported through the same collection type and meet data completeness and case minimum requirements and have a performance rate greater than 0% (or less than 100% for inverse measures). Consistent with MIPS benchmarking policies, since historical data would not be available for the Medicare CQM collection type in the first and second year of implementation, we proposed for performance years 2024 and 2025 to score Medicare CQMs using performance period benchmarks. In further alignment with MIPS benchmarking policies, we proposed for performance year 2026 and subsequent performance years to transition using historical benchmarks for Medicare CQMs when baseline period data are available to establish historical benchmarks in a manner that is consistent with the MIPS benchmarking policies at § 414.1380(b)(1)(ii). Benchmarks for the Medicare CQMs will be updated annually and posted on the Quality Payment Program Resource Library at <https://qpp.cms.gov/resources/resource-library>.

*Comment:* Several commenters expressed concerns about the use of MIPS benchmarking policies to establish benchmarks for Medicare CQMs. Commenters stated that the use of 20 entities reporting at least 20 patients was not a reliable basis for benchmarks, and benchmarks would vary year-to-year based on changes in the number of entities reporting. A few commenters stated that, on review of the existing benchmarking process for MIPS CQMs, eCQMs, and now Medicare CQMs, they do not believe that the process for distributing performance across deciles is transparent nor does this approach as constructed produce information that is meaningful. The commenters stated that the approach also assumes that all measures should be scored with the potential to achieve 100% (or 0% if it is an inverse measure) and may not reflect clinical knowledge or practical considerations of quality. A few commenters

stated that CMS needs to revise the benchmark methodology to increase transparency, consider the impact of random fluctuation, and adjust for practical considerations of comparison and relative performance. One commenter noted that ACOs have virtually no opportunity to improve scores based on data due to the current benchmarks and data lags. One commenter was concerned that that some ACOs could receive zero points or at most seven points.

*Response:* The MIPS benchmarking requirement of 20 submissions of at least 20 cases was established in the CY 2017 Quality Payment Program final rule as the minimum standard for establishing a benchmark to reliably score measures (81 FR 77277). In order for a benchmark to be established for the Medicare CQMs collection type, there would need to be a minimum of 20 Shared Savings Program ACOs with at least 20 cases reporting the measure and such submissions would need to meet the data completeness criteria requirement and have a performance rate greater than zero in order for a reliable benchmark to be established (42 CFR 414.1380(b)(1)(ii)(A)). For the CY 2024 performance period, benchmarks have not yet been established for the Medicare CQMs collection type since CY 2024 will be the first year in which such collection type will be available and as a result, performance period benchmarks will be established for the Medicare CQMs collection type if the benchmarking requirement of 20 submissions of at least 20 cases is met (§ 414.1380(b)(1)(ii)). With the number of Shared Savings Program ACOs reporting under the APP in order to meet the Shared Savings Program's quality performance standard, there is little variation in the volume of Shared Savings Program ACOs reporting data. As a result, we do not expect the establishment of reliable benchmarks for Medicare CQMs to be an issue.

To ensure that we establish robust benchmarks, each benchmark must have a minimum of 20 submissions that meet the data completeness requirement and meet the required case minimum criteria (20 cases) for scoring (§ 414.1380(b)(1)(ii)(A)). The benchmarking methodology relies on assigning points based on decile distributions with decimals. A decile distribution requires at least 10 observations. We doubled the requirement to 20 to be able to

assign decimal point values and minimize cliffs between deciles (81 FR 77277). We establish benchmarks using a percentile distribution, separated into deciles, because it translates measure-specific score distributions into a uniform distribution of those reporting the measure based on actual performance values. For each set of benchmarks, we calculate the decile breaks for measure performance and assign points for a measure based on which benchmark decile range the clinician's measure performance rate is between (81 FR 77286). For the quality performance category measures, we use the case minimum requirements for the quality measures used in the 2018 Value Modifier (VM) program (see § 414.1265): 20 cases for all quality measures (81 FR 77287). We referred readers to Table 46 of the CY 2016 PFS final rule (80 FR 71282), which summarized the analysis of the reliability of certain claims-based measures used for the 2016 VM payment adjustment. The benchmarking policy and decile scoring system allow the program to score clinicians on quality performance in the program relative to care as it is provided in actual clinical settings by scoring according to data submitted through participants. This allows us to drive improvements in clinical care that is more considerate of real-world practice and responsive to changes over time.

*Comment:* A few commenters suggested that we apply the MIPS scoring rules for new measures which establish a 7-point scoring floor, provided data completeness requirements are met, and a 5-point floor in year two. Commenters noted that, during this 2-year phase, ACOs would be better able/willing to allocate limited resources to technical development and workflows associated with the transition. Stratifying Medicare only data without a "point floor" guarantee, according to commenters, may result in ACOs choosing to simply submit all payer data versus Medicare only data as it will be a lighter lift. In addition, committing to performance against unknown benchmarks for this new collection type, ACOs would have no way to gauge near real-time performance which has been a staple of the program.

*Response:* We note that the scoring policy providing measure achievement points of a 7-point scoring floor and a 5-point scoring floor pertains to the submission of new MIPS quality

measures during their first 2 years in MIPS. Specifically, under the scoring policy for new MIPS quality measures in § 414.1380(b)(1)(i)(C), the measure achievement points available for the submission of a new MIPS quality measure (having a benchmark, and meeting case minimum and data completeness requirements) in its first year of MIPS are between 7 and 10 measure achievement points and the submission of a new MIPS quality measure (having a benchmark, and meeting case minimum and data completeness requirements) in its second year of MIPS are between 5 and 10 measure achievement points. The scoring policy for new MIPS quality measures is not applicable to the establishment of a new collection type or the application of a newly available collection type to an existing MIPS quality measure. In the CY 2022 PFS final rule, we noted that such policy will not apply to measures that have existed as a MIPS quality measure but are being introduced for a new collection type (86 FR 65500). For example, if a MIPS quality measure is currently available as a MIPS CQM and it becomes newly available as an eCQM or Medicare CQM, the application of the newly available collection type to an existing MIPS quality measure would not be considered a new measure under such scoring policy.

To operationalize the implementation of the Medicare CQMs collection type, specifically the capability to distinguish between the submission of data for a Medicare CQM and a MIPS CQM to CMS, we created an identifier that reflects the Quality number associated with a quality measure (that is, Q001, Q134, and Q236) followed by the letters “SSP.” For the reporting of Medicare CQMs, the identifiers are as follows: 001SSP, 134SSP, and 236SSP. We note that the Medicare CQM identifiers must be included in the submission files. We will take these comments into consideration for future rulemaking.

In response to the comment that ACOs would have no way to gauge near real-time performance which has been a staple of the program, we note that Medicare CQMs would transition to historical benchmarks when sufficient base period data are available to establish historical benchmarks in a manner that is consistent with MIPS benchmarking policies. We also direct readers to the discussion in section III.G.2.e. of this final rule regarding our finalized

policy to adopt a historical 40<sup>th</sup> percentile quality performance standard for performance year 2024 and subsequent performance years. In section III.G.2.e of this final rule, we are finalizing, as proposed, the proposal to provide ACOs with the 40th percentile MIPS Quality performance category score that would be used as the quality performance standard for a given performance year prior by the start of the performance year, which supports the ability for ACOs to understand and meet quality goals, allocate resources effectively, and ultimately support patients and improve quality outcomes. Lastly, as described at § 425.512(a)(4)(ii) and (5)(ii), in performance years beginning on or after January 1, 2023, ACOs that achieve a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP measure set and are otherwise eligible to share in savings would share in savings on a sliding scale (87 FR 69832). This alternative quality performance standard will help to mitigate impacts on shared savings and losses as ACOs transition to a new collection type.

*Comment:* Several commenters asked how benchmarks would be developed if fewer than 20 ACOs report Medicare CQMs.

*Response:* In the unlikely event that fewer than 20 instances of a Medicare CQM are reported that meet the data completeness and case minimum requirements, the MIPS scoring policy for measures that lack a benchmark would apply to that Medicare CQM. *See* § 414.1380(b)(1)(i)(A).

*Comment:* Since the Medicare CQMs would be available only to Shared Savings Program ACOs, a few commenters were concerned about ACOs being compared only to other ACOs that report Medicare CQMs. One commenter stated their preference to have their quality performance compared to all other participants on these measures. Another commenter stated that CMS should stop measuring ACOs against each other and instead measure ACOs on a national standard so that all ACOs can pass and do not lose out on savings due to arbitrary quality decile cut points.

*Response:* Given that benchmarks are specific to each collection type and that we proposed to establish Medicare CQMs as a new collection type for only Shared Savings Program ACOs, only ACO data will be available to benchmark Medicare CQMs. Additionally, the health equity adjustment would be applicable to Medicare CQMs for purposes of determining shared saving payments/losses. The application of the health equity adjustment would help improve performance when ACOs deliver high quality care to underserved patient populations. For these reasons, it is appropriate to establish benchmarks for Medicare CQMs that are consistent with MIPS benchmarking policies. ACOs that prefer to be compared to clinicians at large may do so by reporting eCQMs or MIPS CQMs, for which CMS calculates a benchmark using data reported by MIPS eligible clinicians reporting under the chosen collection type.

*Comment:* Commenters suggested the following alternative recommendations regarding establishing benchmarks for Medicare CQMs: A1c control and blood pressure control measures be considered topped out measures and depression screening be considered pay-for-reporting until benchmarks can be set for Medicare CQMs; for performance years 2024 and 2025, use CMS Web Interface benchmarks or make Medicare CQM measures pay-for-reporting; consider a process similar to the recent benchmarking of the CMS Web Interface measures where benchmarks would be defined based on pre-determined distributions of performance and thresholds are not dependent on random fluctuations in performance or on the fact that a measure is new to the program.

*Response:* We thank commenters for their feedback. The Shared Savings Program sunset our pay for reporting policy in PY 2020, and MIPS scoring policies do not include pay for reporting. As such, we would not apply pay for reporting to Medicare CQMs.

To address commenters suggestion that we consider a process similar to benchmarking of CMS Web Interface measures, we wish to underscore that MIPS benchmarking policies establish benchmarks for CMS Web Interface using historical data. Performance on CMS Web Interface measures are based on a sample of the ACO's beneficiaries and ACOs that have performed high

on CMS Web Interface measures. We anticipate that ACO performance may fluctuate as ACOs transition to new collection types, like Medicare CQMs. Once historical data are available for Medicare CQMs consistent with MIPS benchmarking policies, we proposed to transition to using historical benchmarks.

After consideration of public comments, we are finalizing our proposal to establish new benchmarks for scoring ACOs on the Medicare CQMs under MIPS in alignment with MIPS benchmarking policies. As historical Medicare CQM data would not be available, we are finalizing that for performance years 2024 and 2025, we will score Medicare CQMs using performance period benchmarks. We are also finalizing that, for performance year 2026 and subsequent performance years, when baseline period data are available to establish historical benchmarks in a manner that is consistent with the MIPS benchmarking policies at § 414.1380(b)(1)(ii), we will score Medicare CQMs using historical benchmarks.

#### (4) Expanding the Health Equity Adjustment to Medicare CQMs

In the CY 2023 PFS final rule (87 FR 69838 through 69858), for performance year 2023 and subsequent performance years, we finalized a health equity adjustment to upwardly adjust the MIPS Quality performance score for ACOs that report eCQMs/MIPS CQMs, are high performing on quality, and serve a higher proportion of underserved beneficiaries. As we stated in the CY 2023 PFS final rule, the goals of the health equity adjustment include rewarding ACOs serving a high proportion of underserved beneficiaries and supporting ACOs with the transition to eCQMs/MIPS CQMs (87 FR 69841).

Consistent with the goal of supporting ACOs in their transition to all payer/all patient eCQMs/MIPS CQMs, we proposed that ACOs that report Medicare CQMs would be eligible for the health equity adjustment to their quality performance category score when calculating shared savings payments (88 FR 52423). We proposed to revise § 425.512(b) to specify that, for performance years 2024 and subsequent performance years, we would calculate a health equity adjusted quality performance score for an ACO that reports the three Medicare CQMs or a

combination of eCQMs/MIPS CQMs/Medicare CQMs in the APP measure set, meeting the data completeness requirement at § 414.1340 for each measure, and administers the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B)). This proposal would advance equity within the Shared Savings Program by supporting ACOs that deliver high quality care and serve a high proportion of underserved individuals. Applying the health equity adjustment to an ACO's quality performance category score when reporting Medicare CQMs would encourage ACOs to treat underserved populations.

The following is a summary of the comments we received on these proposals and our responses.

*Comment:* We received several comments in support of our proposal to expand the health equity adjustment to Medicare CQMs. One commenter stated that the adjustment is necessary to correct the unintended consequence of disincentivizing the care of underserved populations in value-based payment systems. Another commenter noted the importance of a health equity adjustment in recognition of ACOs serving a high proportion of underserved beneficiaries who have traditionally lacked access to care or non-clinical resources that significantly impact their health.

One commenter supported our focus on health equity but stated these changes and financial implications are occurring too rapidly and urged a delay of at least one year. The commenter was concerned that the proposed calculation may not account for all components of health equity and noted the need for more funding and time for analysis and development. Another commenter supported our proposal, but they did not believe that a health equity adjustment is sufficient to address the underlying discrepancies in all-payer/all-patient measurement across vastly different patient populations. Another ACO concluded that it is unfair to compare a multispecialty group against other groups that either do not have specialists or have carved their specialists out of their ACOs, and that a more viable solution would be to require

primary care services to have been provided to patients before they are eligible for eCQM reporting for measures that are intended to track performance of primary care.

One commenter was opposed to our proposal to expand the health equity adjustment to Medicare CQMs and questioned the legality of providing financial incentives to ACOs (providers) to provide more services to people of certain races, sexualities, and religions.

*Response:* In response to the commenter that alluded to providing financial incentives to ACOs (providers) to provide more services to people of certain races, sexualities, and religions, our proposal to expand the health equity adjustment to Medicare CQMs does not incentivize ACOs, ACO providers/suppliers, or ACO professionals to provide more services to individuals based on race, sexuality, religion, or any other protected class. By applying the health equity adjustment to ACO's MIPS Quality performance category score when determining shared savings and shared losses for ACOs, ACOs are rewarded for delivering high quality care and serving a high proportion of underserved individuals. Here, the proportion of underserved beneficiaries is determined using the Area Deprivation Index, enrollment in the Medicare Part D low-income subsidy, and dual eligibility for Medicare and Medicaid (42 CFR 425.512(b)(2)(iv)(A)). For a fuller discussion of how we found these factors to represent a method for determining the proportion of underserved beneficiaries, please see the CY 2023 PFS final rule (87 FR 69838 through 69842). This approach is agnostic of race, gender, sexuality, and religion. As stated in Executive Order 13985, "Executive Order on Advancing Racial Equity and Support for Underserved Communities Through the Federal Government," by advancing equity across the Federal Government, we can create opportunities for the improvement of communities that have been historically underserved, which benefits everyone. Extending the health equity adjustment to Medicare CQMs is consistent with our goal of promoting health equity across the health care system.

To address commenter's concern that the proposed calculation may not account for all components of health equity and may need more funding and time for analysis and development,

we note that the health equity adjustment is designed to upwardly adjust the ACO's quality performance score and will not financially penalize ACOs. The health equity adjustment promotes health equity in a value-based care program, while simultaneously avoiding the pitfalls of other pay-for-equity type approaches. This health equity adjustment will not risk adjusting away disparities (thereby masking them) and does not set lower quality standards for underserved populations— rather, this provision will reward those providers who provide excellent care for underserved populations. Furthermore, these bonus points represent the sole motivation for ACOs seeking to improve quality and health equity.

In response to commenters' suggestion that we require primary care services to have been provided to patients before they are eligible for eCQM reporting for measures that are intended to track performance of primary care, we direct readers to this section of the final rule where we discuss the alignment of beneficiaries eligible for Medicare CQMs and the all payer/all patient Measure Specifications.

After consideration of public comments, we are finalizing our proposal that ACOs reporting Medicare CQMs will be eligible for the health equity adjustment to their quality performance category score when calculating shared savings payments. We are also finalizing our proposal to revise § 425.512(b) to specify that, for performance years 2024 and subsequent performance years, we will calculate a health equity adjusted quality performance score for an ACO that reports the three Medicare CQMs or a combination of eCQMs/MIPS CQMs/Medicare CQMs in the APP measure set, meeting the data completeness requirement at § 414.1340 for each measure, and administers the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B)).

#### (5) Summary of Final Policies

In Table 28 of this final rule, we summarize the changes to the regulation at § 425.512(a)(4) and (5) to reflect the changes we are finalizing to the quality reporting requirements and quality performance standard for performance year 2024 and subsequent

performance years. Performance benchmarks for performance year 2024 used to determine the 10th, 30th, and 40th percentiles for purposes of evaluating the eCQM/MIPS CQM reporting incentive described at § 425.512(a)(5)(i)(A)(2) will be posted on the Quality Payment Program Resource Library website at <https://qpp.cms.gov/resources/resource-library>.

We direct readers to the MIPS measure benchmarking policies described at § 414.1380(b)(1)(ii) and to both the quality benchmark and performance period benchmark documentation posted on the Quality Payment Program Resource Library website at <https://qpp.cms.gov/resources/resource-library> for more details. Performance benchmarks differ by collection type (that is, eCQM, MIPS CQM, Medicare CQM (as finalized), CMS Web Interface) and are updated for each performance year.

**TABLE 28: Final APP Reporting Requirements and Quality Performance Standard for Performance Year 2024 and Subsequent Performance Years**

	<b>Performance Year 2024</b>	<b>Performance year 2025 and Subsequent Performance Years*</b>
<b>Shared Savings Program ACO Quality Reporting requirements</b>	ACOs are required to report the 10 measures under the CMS Web Interface or the 3 eCQMs/MIPS CQMs/Medicare CQMs and administer the CAHPS for MIPS survey. CMS will calculate the two claims-based measures.	ACOs are required to report on the 3 eCQMs/MIPS CQMs/Medicare CQMs and administer the CAHPS for MIPS survey. CMS will calculate the two claims-based measures.
<b>Shared Savings Program ACO Quality Performance Standard</b>	<p>For ACOs that report eCQMs/MIPS CQMs/Medicare CQMs and serve a high proportion of underserved beneficiaries, achieving a health equity adjusted quality performance score that is equivalent to or higher than the <b>40th</b> percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility based-scoring, or</p> <p>Reporting the three eCQMs/MIPS CQMs in the APP measure set, meeting the data completeness requirement at § 414.1340 for all three eCQMs/MIPS CQMs and receives a MIPS Quality performance category score under § 414.1380(b)(1), achieving a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP measure set and a quality performance score equivalent to or higher than the 40th percentile of the performance benchmark on at least one of the remaining five measures in the APP measure set, or</p> <p>An ACO that fails to meet the criteria above but meets the alternative quality performance standard by achieving a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP measure would share in savings (if otherwise eligible) at a lower rate that is scaled by the ACO’s quality performance score.</p> <p>If an ACO (1) does not report any of the ten CMS Web Interface measures or any of the three eCQMs/MIPS CQMs/Medicare CQMs and (2) does not administer a CAHPS for MIPS survey under the APP, the ACO will not meet the quality performance standard or the alternative quality performance standard.</p>	<p>For ACOs that report eCQMs/MIPS CQMs/Medicare CQMs and serve a high proportion of underserved beneficiaries, achieving a health equity adjusted quality performance score that is equivalent to or higher than the <b>40th</b> percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility based-scoring, or</p> <p>An ACO that fails to meet the criteria above but meets the alternative quality performance standard by achieving a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP measure set would share in savings (if otherwise eligible) at a lower rate that is scaled by the ACO’s quality performance score.</p> <p>If an ACO (1) does not report any of the three eCQMs/MIPS CQMs/Medicare CQMs and (2) does not administer a CAHPS for MIPS survey under the APP, the ACO will not meet the quality performance standard or the alternative quality performance standard.</p>

\*The CMS Web Interface reporting option sunsets after performance year 2024 and is no longer available beginning with performance year 2025.

c. APP Measure Set

(1) Background

We refer readers to Table 29, which lists the measures included in the final APP measure set that will be reported by Shared Savings Program ACOs for performance year 2023 and subsequent performance years. These are the same measures finalized in the CY 2023 PFS final rule (87 FR 69862); however, we noted that the Collection Type for each measure has been updated. As finalized in the CY 2023 PFS final rule (87 FR 69863), we included the measure type in Table 29 for each measure in the measure set to provide ACOs a list of the outcome measures for purposes of meeting the quality performance incentive for reporting eCQMs/MIPS CQMs. This information is also relevant to the alternative quality performance standard under which ACOs that fail to meet the quality performance standard to qualify for the maximum sharing rate, but that achieve a quality performance score at the 10<sup>th</sup> percentile on 1 of the 4 outcome measures in the APP measure set, may be eligible to share in savings on a sliding scale (87 FR 69861). We noted inclusion of this information does not change any of the measures in the measure set.

**TABLE 29: Measures included in the APP Measure Set for Performance Year 2024 and Subsequent Performance Years <sup>a</sup>**

Measure #	Measure Title	Collection Type	Submitter Type	Meaningful Measures 2.0 Area	Measure Type
Quality ID#: 321	CAHPS for MIPS	CAHPS for MIPS Survey	Third Party Intermediary	Person-Centered Care	PRO-PM*
Measure # 479	Hospital-Wide, 30-day, All-Cause Unplanned Readmission (HWR) Rate for MIPS Eligible Clinician Groups	Administrative Claims	N/A	Affordability and Efficiency	Outcome^
Measure # 484	Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions	Administrative Claims	N/A	Affordability and Efficiency	Outcome^
Quality ID#: 001	Diabetes: Hemoglobin A1c (HbA1c) Poor Control	eCQM/MIPS CQM/Medicare CQM/CMS Web Interface**	APM Entity/Third Party Intermediary	Chronic Conditions	Intermediate Outcome^
Quality ID#: 134	Preventive Care and Screening: Screening for Depression and Follow-up Plan	eCQM/MIPS CQM/Medicare CQM/CMS Web Interface**	APM Entity/Third Party Intermediary	Behavioral Health	Process
Quality ID#: 236	Controlling High Blood Pressure	eCQM/MIPS CQM/Medicare CQM/CMS Web Interface**	APM Entity/Third Party Intermediary	Chronic Conditions	Intermediate Outcome^
Quality ID#: 318	Falls: Screening for Future Fall Risk	CMS Web Interface**	APM Entity/Third Party Intermediary	Safety	Process
Quality ID#: 110	Preventive Care and Screening: Influenza Immunization	CMS Web Interface**	APM Entity/Third Party Intermediary	Wellness and Prevention	Process
Quality ID#: 226	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention	CMS Web Interface**	APM Entity/Third Party Intermediary	Behavioral Health	Process
Quality ID#: 113	Colorectal Cancer Screening	CMS Web Interface**	APM Entity/Third Party Intermediary	Wellness and Prevention	Process

Quality ID#: 438	Statin Therapy for the Prevention and Treatment of Cardiovascular Disease	CMS Web Interface**	APM Entity/Third Party Intermediary	Chronic Conditions	Process
Quality ID#: 370	Depression Remission at Twelve Months***	CMS Web Interface**	APM Entity/Third Party Intermediary	Behavioral Health	Outcome^

<sup>a</sup>. We note that the CMS Web Interface measures: Statin Therapy for the Prevention and Treatment of Cardiovascular Disease (Quality ID#: 438) and Depression Remission at Twelve Months (Quality ID: # 370) do not have benchmarks; and therefore, are not scored for performance year 2024; they are however required to be reported in order to complete the Web Interface data set.

^ Indicates this is an outcome measure.

\* Patient-reported outcome-based performance measure (PRO-PM) is a performance measure that is based on patient-reported outcome measure (PROM) data aggregated for an accountable healthcare entity.

\*\*ACOs will have the option to report via the CMS Web Interface for performance year 2024 only.

\*\*\* This measure is not included as one of the four outcome measures for purposes of the Quality Reporting Standard as this measure is not scored.

(2) Revisions

The CMS Web Interface collection type under the APP includes 10 measures. We refer readers to Table Group E of Appendix 1 of this final rule for the proposed substantive changes to measure specifications for 9 out of 10 CMS Web Interface measures starting with performance year 2024. As proposed, the changes would update measures and align the CMS Web Interface measures with the practice workflows of the MIPS CQM collection type.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* We received a comment expressing appreciation for not making any significant changes to the APP measure set.

*Response:* We thank the commenter for their support.

We received many comments about issues that were not related to the proposals included in this section of the proposed rule. The issues were related to the clinical merits of adding the three Medicare CQMs to the APP measure set, the financial, administrative, resource, and technical burden of this policy on ACOs and healthcare vendors, and the scheduled sunseting of the CMS Web Interface in PY 2024. We refer readers to section IV.A.4.e., Reporting the Medicare CQMs, of this final rule for the disposition of our proposal to add three Medicare CQMs to the APP measure set.

Additionally, we requested information on the APP measure set and the Universal Foundation within the Medicare CQM proposal (88 FR 52423). We thank the commenters for their feedback and will take the comments under consideration in future rule making, as we evaluate the impact of aligning the APP measure set with the Universal Foundation measures and existing Value in Primary Care MVP.

In the CY 2021 PFS final rule (85 FR 84733), we finalized the following three all payer/all patient eCQMs/MIPS CQMs under the APP for performance year 2021 and subsequent performance years:

- Quality ID#: 001 Diabetes: Hemoglobin A1c (HbA1c) Poor Control;

- Quality ID#: 134 Preventive Care and Screening: Screening for Depression and Follow-Up Plan; and
- Quality ID#: 236 Controlling High Blood Pressure.
