*Comment:* Many commenters either opposed or expressed concern with our proposed change to make QP determinations at the individual-level. These commenters stated they believed that even after making the change, our proposal would still serve as a disincentive for specialists to participate in Advanced APMs because it would still be difficult for them to achieve QP status. Several commenters stated the change would make it challenging or nearly impossible for specialists to achieve QP status. Some of these commenters also stated that making the change at the same time that QP thresholds are scheduled to increase could result in the opposite effect despite this change in policy, and make it still even more difficult for eligible clinicians to achieve QP status because they would be depending on their own participation activities. A few commenters expressed concern for the impact on certain other health professionals whose services are in part, or largely, billed incident to the services of a physician or practitioner with whom they work.

*Response:* We share the commenters' goal of making the participation of all health professionals in APMs as straightforward as possible, including specialists. Our proposal was intended to eliminate the incentive for APM Entities to reduce the number of certain specialists or exclude them simply for financial considerations as sometimes occurs under our current policy of making QP determinations at the APM Entity-level. In this scenario, specialists themselves often lack control over whether they have the option to participate in the APM Entity. While we understand that specialists face certain challenges in achieving QP status, and therefore, may choose not to engage with Advanced APMs, we believe it is important to avoid having their participation precluded or terminated by the APM Entity. In addition, the proposed change to make QP determinations at the individual level was intended to prevent the assignment

of QP status to eligible clinicians who have furnished relatively few of their services through the Advanced APM.

We appreciate the commenters' point that the increase in the QP threshold, required by statute, will make it more challenging for certain eligible clinicians to achieve QP status, and we share the goal of allowing more specialists the opportunity to participate in Advanced APMs.

*Comment:* Several commenters stated that the proposal to make QP determinations at the individual level does not support transition to value-based arrangements and will negatively impact specialists in particular. A few commenters suggested that the proposal will negatively affect team-based care or care coordination needed for patient-centered care because the incentive will no longer encourage collaboration. A few commenters stated that the proposal is not consistent with providing accountable care. Several commenters expressed concern that APM Entities, particularly ACOs, could become responsible for both coordinating MIPS measure submissions and administering an Advanced APM, which would be unduly burdensome. Several commenters also stated the proposed changes would increase the administrative burden on individual physicians, both specialists and primary care.

*Response:* We believe the current policy of making QP determinations at the APM Entity level creates conflicting incentives for APM Entities between their eligible clinicians' interest in achieving QP status, and their participation in an Advanced APM that includes providers that deliver an appropriate spectrum of services. We continue to be concerned that the current policy may have inadvertently created incentives for APM Entities to make decisions about which eligible clinicians to include in their organization based on the clinicians' likely contribution to achieving QP status rather than providing a comprehensive continuum of patient-centered care. We share the commenters' goal of designing payment incentives that support the delivery of the appropriate spectrum of services, allowing APM Entities to focus on what is best according to their Advanced APM's goals and their own organizational goals relating to the provision of patient-centered care.

*Comment:* Many commenters suggested that rather than moving to QP determinations at the individual level, CMS should make QP determinations at both the APM Entity level and the individual level, and then select the most favorable result for each clinician.

*Response:* We do not believe this approach would adequately address our concerns related to specialist participation in Advanced APMs. While such an approach might avoid decreases in nominal specialist participation, it would do so without encouraging more intensive Advanced APM participation by individual eligible clinicians, perpetuating the issue of QP status for eligible clinicians with minimal participation in an Advanced APM.

*Comment:* A few commenters suggested that not enough analysis has been conducted to estimate the impact of the proposal on clinicians participating in Advanced APMs and their QP status. These commenters suggested that more modeling and data analysis is needed to look at the impact it will have particularly on specialists before any policy change is implemented. Some of these commenters also suggested that the impact of the proposal on different types of specialties should be conducted. One commenter stated that our impact analysis did not breakdown the effect on different types of specialties.

*Response:* We have conducted an analysis to estimate the impact of this policy on QP status, and presented the results in the proposed rule that was available for commenters' review (88 FR 52718). In short, we anticipated that implementing our proposal would have led to a decrease in the total number of eligible clinicians achieving QP status but would reflect improved attribution of APM participation. We will consider conducting additional analysis in the future.

*Comment:* One commenter stated that certain specialists are restricted in the number of ACOs they are allowed to participate in, while others do not face such restrictions. That commenter suggested that CMS change the requirements and allow all types of specialists to participate in as many ACOs as they choose, which would help them to achieve QP status. That commenter also suggested that we work more closely with the Physician Technical Advisory

Committee to design more models for specialist.

*Response:* The Quality Payment Program does not restrict the number or type of Advanced APMs in which specialists may participate. Different Advanced APMs are available to different provider types and patient populations, and provider options are available.

Although we continue to believe that our proposal to make all QP determinations at the individual level has strong merit, and that it would be broadly beneficial for APM Entities and eligible clinicians participating in Advanced APMs, after consideration of public comments, we are not finalizing our proposal for the CY 2024 QP performance period. Meaningful participation in Advanced APMs by a broad range of providers remains a goal that we share with many of the commenters, and we are committed to implement policies in the future that address undue QP determinations. However, we recognize the concerns raised by commenters, especially with respect to specialist participation in Advanced APMs, and that the changes in incentives and the interactions between them, combined with the anticipated statutory increases in QP thresholds, would create significant uncertainty among specialist communities. Given the comments we received expressing concerns about the potential impact of the new policies, we have concluded that it would be appropriate to conduct further consultation and analysis to evaluate the expected impact of these policies on eligible clinicians, especially specialists, participating in Advanced APMs. We plan to share our findings with interested parties when information becomes available so that the impact of the policies is better understood throughout the provider community. We will also consider the results of this analysis before potentially revisiting these proposed policy changes in future rulemaking. Our current policy of making QP determinations at the APM-Entity will remain in place for 2024.

### (3) Payment Amount and Patient Count Methods

In the CY 2017 Quality Payment Program final rule (81 FR 77450 through 77457) we finalized the payment amount method and patient count method for calculation of Threshold Scores used for QP determinations under the Medicare option and codified these methods at

§ 414.1435(a) and (b), respectively. The payment amount method is based on payments for Medicare Part B covered professional services, including certain supplemental service payments, while the patient count method is based on numbers of patients. Both methods use the ratio of “attributed beneficiaries” to “attribution-eligible beneficiaries, as defined at § 415.1305.<sup>503</sup>

Attributed beneficiaries are those who are attributed to the APM Entity under the terms of the Advanced APM as indicated on the most recent available list of attributed beneficiaries at the time of a QP determination. Attribution-eligible beneficiaries generally are those who, during the QP Performance Period, meet six criteria specified in the definition of that term at § 414.1305 and described in section IV.A.4.m.(3) of the proposed rule.

When making QP determinations at the APM Entity-level or individual eligible clinician level, we begin by calculating Threshold Scores using the payment amount and patient count methods. These Threshold Scores are percentages based on the ratio of the payment amounts or patient counts for attributed beneficiaries to the payment amounts or patient counts for attribution-eligible beneficiaries during the QP performance period. If the Threshold Score (using either the payment amount or patient count method) for the eligible clinician or APM Entity, as applicable, meets or exceeds the relevant QP threshold described at § 414.1430(a), the relevant eligible clinician or clinicians (either the individual eligible clinician or all those on the APM Entity’s Participation List) achieve QP status for such year.

### **FIGURE 3: QP Determination Calculation**

$$\frac{\text{Attributed beneficiaries}}{\text{Attribution-eligible beneficiaries}}$$

---

<sup>503</sup> For technical information on the QP calculation methodology, see the “QP Methodology Fact Sheet” that we publish annually, which can be found as part of the “2023 Learning Resources for QP Status and APM Incentive Payment” materials on the Quality Payment Program Resource Library at <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1509/2023%20Learning%20Resources%20for%20QP%20Status%20and%20APM%20Incentive%20Payment.zip>.

The regulation at § 414.1435(b)(3) provides that a beneficiary may be counted only once in the numerator and denominator for a single APM Entity group, and at § 414.1435(b)(4), that a beneficiary may be counted multiple times in the numerator and denominator for multiple different APM Entity groups. In the CY 2021 PFS final rule (85 FR 84951 through 84952), we amended § 414.1435(c)(1)(i) to specify that beneficiaries who have been prospectively attributed to an APM Entity for a QP Performance Period will be excluded from the attribution-eligible beneficiary count for any other APM Entity that is participating in an APM where that beneficiary would be ineligible to be added to the APM Entity's attributed beneficiary list. This means that beneficiaries who have been attributed to one APM Entity and are thus barred under the terms of an Advanced APM from attribution to another APM Entity are removed from the denominator of both the payment amount method and patient count method in QP Threshold Score calculations for the APM Entity to which they cannot be attributed (in other words, we do not penalize an APM Entity in the QP Threshold Score calculation by including a beneficiary in its denominator when the terms of an Advanced APM do not permit such beneficiary to be attributed to such APM Entity).

(a) Attributed beneficiary:

An attributed beneficiary is a beneficiary attributed to the APM Entity under the terms of the Advanced APM as indicated on the most recent available list of attributed beneficiaries at the time of a QP determination. There may be beneficiaries on the most recent available list who do not meet the criteria to be attribution-eligible beneficiaries because the QP performance period does not coincide with the Advanced APM's performance period or attribution period, or for other reasons. There may be cases where a beneficiary's status changes, for example by enrolling in a Medicare Advantage Plan. We exclude these beneficiaries from our Threshold Score calculations because they do not meet criteria to be attribution-eligible beneficiaries. Although APMs may have reconciliation processes in place to address changes in beneficiary status at various intervals, those processes do not necessarily coincide with the timeframe of QP

determinations. Therefore, when calculating Threshold Scores for QP determinations, we exclude from the list of attributed beneficiaries any beneficiaries who do not meet the criteria to be attribution-eligible beneficiaries at that point in time.

(b) Attribution-eligible beneficiary:

An attribution-eligible beneficiary is a beneficiary who:

- Is not enrolled in Medicare Advantage or a Medicare cost plan;
- Does not have Medicare as a secondary payer;
- Is enrolled in both Medicare Parts A and B;
- Is at least 18 years of age;
- Is a United States resident; and
- Has a minimum of one claim for E/M services furnished by an eligible clinician who is

in the APM Entity for any period during the QP Performance Period or, for an Advanced APM that does not base attribution on E/M services and for which attributed beneficiaries are not a subset of the attribution-eligible beneficiary population based on the requirement to have at least one claim for E/M services furnished by an eligible clinician who is in the APM Entity for any period during the QP Performance Period, the attribution basis determined by CMS based upon the methodology the Advanced APM uses for attribution, which may include a combination of E/M and/or other services.

Our stated intent when we finalized the definition of attribution-eligible beneficiary (81 FR 77451 through 77452) was to have a definition that would, for purposes of QP determinations, allow us to be consistent across Advanced APMs in how we consider the population of beneficiaries served by an APM Entity. The criteria we used to define attribution-eligible beneficiary were aligned with the attribution methodologies and rules for our contemporaneous Advanced APMs. The first five criteria are conditions that are required for a beneficiary to be attributed to any Advanced APM. The sixth criterion identifies beneficiaries who have received certain services from an eligible clinician who is associated with an APM

Entity for any period during the QP Performance Period. For Most Advanced APMs, we chose to refer to E/M services because many Advanced APMs use E/M services to attribute beneficiaries to their participant APM Entities. Over time, we have updated the list of services that are considered to be E/M services for purposes of identifying attribution-eligible beneficiaries and have published this list as part of the “2023 Learning Resources for QP Status and APM Incentive Payment” materials on the Quality Payment Program Resource Library at <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1509/2023%20Learning%20Resources%20for%20QP%20Status%20and%20APM%20Incentive%20Payment.zip>.

We also included an exception in this sixth criterion to allow an alternative approach for Advanced APMs that do not base attribution exclusively on E/M services, and thus for which attributed beneficiaries are not a subset of the attribution-eligible beneficiary population based on the requirement to have at least one claim for and E/M service. To date, we have implemented this alternative approach for four Advanced APMs:

- Bundled Payments for Care Improvement Advanced Model.
- Comprehensive Care for Joint Replacement Payment Model (CEHRT Track).
- Comprehensive ESRD Care Model (LDO arrangement and Non LDO Two Sided Risk Arrangement).
- Maryland Total Cost of Care Model (Care Redesign Program).

We have published links to the methodologies we use to identify attribution-eligible beneficiaries for these Advanced APMs in the “2023 Learning Resources for QP Status and APM Incentive Payment” materials on the Quality Payment Program Resource Library at <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1509/2023%20Learning%20Resources%20for%20QP%20Status%20and%20APM%20Incentive%20Payment.zip>.

We adopted the general rule with flexibility to apply alternative methods for this criterion to ensure that, for the Advanced APMs for which attribution is based on services other than E/M services, the attributed beneficiary population is truly a subset of such Advanced APMs' attribution-eligible beneficiary populations and, ultimately, so that our way of identifying beneficiaries for purposes of Threshold Score calculations for QP determinations is appropriate for such Advanced APMs. That said, our thinking at the time that we developed these approaches was shaped by the form and nature of the Advanced APMs that existed at that time. A key lesson we have learned over time as we have implemented the APM track of the Quality Payment Program is that, by affording sufficient flexibility within the program, we can both foster innovation in Advanced APMs and simplify our execution of the program. By having a more narrowly-defined default approach to beneficiary attribution (relying on E/M services), we frequently needed to exercise flexibility to determine an appropriate attribution methodology for Advanced APMs that fell into the exception, which meant that we identified several individually-tailored ways of performing the attribution methodology for each specific Advanced APM. As such, we have come to believe that application of our current regulations may result in increased complexity over time if, as we anticipate, Advanced APMs continue to evolve and use novel approaches to value-based care that may emphasize a broad range of covered professional services.

Further, as we noted in our discussion of the proposal to calculate QP status at the individual NPI level, primary care practitioners generally furnish a higher proportion of E/M services than do specialists with the same beneficiary, and as for the Threshold Score calculations described previously, the emphasis on E/M services in our beneficiary attribution policy may have inadvertently encouraged APM Entities to exclude specialists from their Participation Lists. Under our current policy, if one or more eligible clinicians on the APM Entity's Participation List furnish covered professional services to a beneficiary but none of those services are among the E/M services we use for attribution, that beneficiary would not be

attribution-eligible, and therefore, would not be included in our QP determination calculation, even though the beneficiary is actually receiving covered professional services from an eligible clinician on the APM Entity's Participation List.

We proposed to change the definition of "attribution-eligible beneficiary" at § 414.1305 so that a single definition using covered professional services will be applied regardless of the Advanced APMs in which the eligible clinician participates. We believe that this complemented our proposal to make QP determinations at the individual eligible clinician level. We are also concerned that retention of the current policy where E/M services are the default basis for attribution, and where special processes are required for Advanced APMs that use a different attribution basis, could result in a complex set of unique attribution approaches for Advanced APMs.

To create a uniform basis for beneficiary attribution across all Advanced APMs, we proposed to modify the sixth criterion of the definition of "attribution-eligible beneficiary" at § 414.1305 to include any beneficiary who has received a covered professional service furnished by the eligible clinician (NPI) for whom we are making the QP determination. By no longer specifying E/M services as the default attribution basis in the sixth criterion, we also eliminate the need for flexibility to use a different attribution basis that ties attribution-eligibility to a specific Advanced APM's attribution methodology. This would have simplified and streamlined the attribution methodology by making attribution based on covered professional services across all Advanced APMs

The proposal to base attribution eligibility on the receipt of a covered professional service also would have addressed the issue discussed earlier in this section whereby, under our current policy, beneficiary attribution for purposes of QP determinations is contingent upon the beneficiary receiving an E/M service, and as a result, beneficiaries who are actually being provided covered professional services by eligible clinicians on an APM Entity's Participation List are not attribution-eligible if none of the services provided are E/M services. Under our

proposal, because we would consider all covered professional services for attribution, and not solely E/M services, we would have been able to include as attributed beneficiaries those who are receiving only other (non-E/M) covered professional services through the Advanced APM. We believe this proposal will result in a QP calculation that, by including beneficiaries receiving any covered professional service, more accurately reflects eligible clinicians' actual participation in Advanced APMs.

We note that the proposal will not change the dates of service used for purposes of QP determinations. As such, QP determinations at any given snapshot date (March 31, June 30, and August 31, respectively) will be made by including all covered professional services furnished during the QP Performance Period for January 1 through the applicable snapshot date.

We believe that this change will more appropriately recognize the Advanced APM participation of the eligible clinicians for whom these determinations are being made, particularly when considered in conjunction with the proposal to make QP determinations at the individual eligible clinician level. We further believe that this proposal will simplify and streamline QP determinations and address the challenges to Advanced APM participation reportedly faced by specialists who are less likely than primary care practitioners to provide E/M services.

We solicited comment on this proposal to modify the sixth criterion in the definition of "attribution-eligible beneficiary" at § 414.1305 to include a beneficiary who has a minimum of one claim for a covered professional service furnished by an eligible clinician who is on the Participation List for the APM Entity at any determination date during the QP Performance Period.

We received public comments on the proposal. The following is a summary of the comments we received and our responses.

*Comment:* Two commenters expressed support for our proposal to change the definition of "attribution-eligible beneficiary". One of these commenters suggested we implement this

change as a better alternative to our proposal to change QP determinations at the individual level.

*Response:* We appreciate the comments. We believe our proposal to change the definition of “attribution-eligible beneficiary” would complement QP determination at the individual level in terms of the policy objectives we are pursuing and would work best if it is implemented at the same time.

*Comment:* Two commenters noted that our proposal to change the definition of “attribution-eligible beneficiary” to base attribution on covered professional services would be applied regardless of the Advanced APMs in which the eligible clinician participates. These commenters expressed concern with making the change, particularly as we proposed to change QP determinations to the individual-level.

*Response:* We continue to believe the proposed change in the definition of “attribution-eligible beneficiary” would complement the change to make all QP determinations at the individual level. The change would expand the scope of services that could lead to attribution to include services that are more often furnished by specialists, which would lead to relatively higher Threshold Scores for specialist eligible clinicians. We also believe that the definition change would create a uniform, predictable, understandable basis for beneficiary attribution across all Advanced APMs. Further, it would simplify and streamline the attribution methodology by making attribution based on covered professional services across all Advanced APMs.

As with our proposal to make QP determinations at the individual level, we continue to believe that our proposal to modify the definition of “attribution-eligible beneficiary” has strong merit, but after consideration of public comments, we will not implement either of these proposals for the CY 2024 QP performance period. Modifying the definition of “attribution-eligible beneficiary” is closely tied to the proposal to make QP determinations at the individual level and we do not believe it would be productive to implement one without the other. Our current definition of “attribution-eligible beneficiary” will remain in place for 2024.

#### (4) QP thresholds and Partial QP thresholds

Section 1833(z)(2) of the Act specifies the thresholds for the level of participation in Advanced APMs required for an eligible clinician to become a QP for a year. The Medicare Option, based on Part B payments for covered professional services or counts of patients furnished covered professional services under Part B, has been applicable since payment year 2019 (performance year 2017). The All-Payer Combination Option, through which QP status is calculated using the Medicare Option, as well as an eligible clinician's participation in Other Payer Advanced APMs, has been applicable since payment year 2021 (performance year 2019). In the CY 2017 Quality Payment Program final rule (81 FR 77433 through 77439), we finalized our policy for QP and Partial QP Thresholds for the Medicare Option as codified at § 414.1430(a) and for the All-Payer Combination Option at § 414.1430(b).

Section 4111(a)(2) of the Consolidated Appropriations Act, 2023 (CAA, 2023) (Pub. L. 117-328, December 29, 2022) amended section 1833(z)(2) of the Act by extending for payment years 2024 and 2025 (performance years 2022 and 2023) the applicable payment amount and patient count thresholds for an eligible clinician to achieve QP status. Specifically, section 4111(a)(2) of the CAA, 2023, amended section 1833(z)(2) of the Act to continue the QP payment amount thresholds that applied in payment year 2024 (performance year 2022) to payment year 2025 (performance year 2023). Additionally, section 4111(a)(2) of the CAA, 2023, amended section 1833(z)(2) of the Act to require that, for payment year 2025, the Secretary use the same percentage criteria for the QP patient count threshold that applied in payment year 2022. As such, the Medicare Option QP thresholds for payment year 2025 will remain at 50 percent for the payment amount method and 35 percent for the patient count method. Section 4111(b) of the CAA, 2023, also amended section 1848(q)(1)(C)(iii) of the Act to extend through payment year 2025 the Partial QP thresholds that were established since payment year 2021 under the Medicare Option. Therefore, the Partial QP thresholds for payment year 2025

(performance year 2023) will remain at 40 percent for the payment amount method and 25 percent for the patient count method.

Under the All-Payer Combination Option, the QP thresholds for payment year 2025 (performance year 2023) will be 50 percent for the payment amount method and 35 percent for the patient count method. The Partial QP thresholds for payment year 2025 will be 40 percent for the payment amount method and 25 percent for the patient count method. To become a QP through the All-Payer Combination Option, eligible clinicians must first meet certain minimum threshold percentages under the Medicare Option. For payment year 2025 (performance year 2023), the minimum Medicare Option threshold an eligible clinician must meet for the All-Payer Combination Option to become a QP is 25 percent for the payment amount method or 20 percent for the patient count method. For Partial QP status, the minimum Medicare Option threshold an eligible clinician must meet for the All-Payer Combination Option is 20 percent for the payment amount method or 10 percent for the patient count method.

To conform our regulation with the amendments made by the CAA, 2023, we proposed to amend § 414.1430 by revising paragraphs (a) and (b) to reflect the statutory QP and Partial QP threshold percentages for both the payment amount and patient count under the Medicare Option and the All-Payer Option with respect to payment year 2025 (performance year 2023) in accordance with the CAA, 2023 amendments.

The proposed revisions to § 414.1430(a) and (b) for the Medicare Option and All-Payer Combination Option QP and Partial QP thresholds are as follows:

- Paragraph (a)(1)(iv) to state that for 2025 the amount is 50 percent, and paragraph (a)(1)(v) to state that for 2026 and later, the amount is 75 percent.
- Paragraph (a)(2)(iv) to state that for 2025 the amount is 40 percent, and paragraph (a)(2)(v) to state that for 2026 and later, the amount is 50 percent.
- Paragraph (a)(3)(iv) to state that for 2025 the amount is 35 percent, and paragraph (a)(3)(v) to state that for 2026 and later, the amount is 50 percent.

- Paragraph (a)(4)(iv) to state that for 2025 the amount is 25 percent, and paragraph (a)(4)(v) to state that for 2026 and later, the amount is 35 percent.

- Paragraph (b)(1)(i)(A) to state that for 2021 through 2025 the amount is 50 percent, and paragraph (b)(1)(i)(B) to state that for 2026 and later, the amount is 75 percent.

- Paragraph (b)(2)(i)(A) to state that for 2021 through 2025 the amount is 40 percent and paragraph (b)(2)(i)(B) to state that for 2026 and later, the amount is 50 percent.

- Paragraph (b)(3)(i)(A) to state that for 2021 through 2025 the amount is 35 percent, and paragraph (b)(3)(i)(B) to state that for 2026 and later, the amount is 50 percent.

- Paragraph (b)(4)(i)(A) to state that for 2021 through 2025 the amount is 25 percent, and paragraph (b)(4)(i)(B) to state that for 2026 and later, the amount is 35 percent.

We did not receive public comments on this provision, and therefore, we are finalizing as proposed.

**TABLE 61: QP Threshold Score Updates**

<b>Medicare Option - Payment Amount Method</b>								
Performance year / Payment Year	2021/2023 (Percent)		2022/2024 (Percent)		2023/2025 (Percent)		2024/2026 and later (Percent)

(5) APM Incentive Payment

Prior to amendments made by the CAA, 2023, section 1833(z)(1) of the Act provided for APM Incentive Payments for eligible clinicians who are QPs with respect to a year in each payment year from 2019 through 2024. Specifically, for each of the specified payment years, in addition to the amount of payment that would otherwise be made for covered professional services furnished by an eligible clinician who is a QP for such year, there is an additional lump sum APM Incentive Payment equal to 5 percent of the eligible clinician’s estimated aggregate payment amounts for such covered professional services for the preceding year (which we defined as the “base year”). Covered professional services is defined at § 414.1305, with reference to the statutory definition at section 1848(k)(3) of the Act, as services for which

payment is made under, or based on, the PFS and which are furnished by an eligible clinician (physician; practitioner as defined in section 1842(b)(18)(C) of the Act; PT, OT, or speech-language pathologist; or qualified audiologist as defined under section 1861(ll)(4)(B) of the Act).

In the CY 2017 Quality Payment Program final rule (81 FR 77445), we established a policy that, beginning with the 2017 QP Performance Period, the QP Performance Period would be the calendar year that is 2 calendar years before the payment year for the APM Incentive Payment. Thus, we established that the first QP Performance Period would begin on January 1, 2017, the first “base year” (established at 81 FR 77481 and 77482) for which we would use claims for professional services to calculate the 5 percent APM Incentive Payment amount would be in 2018, and the first payment year for the APM Incentive Payment would be in 2019 as required by the statute. Under our previously finalized policies, the QP Performance Period, base year, and payment year continue in this fashion on a rolling basis through payment year 2024, which was the final year for which the statute authorized an APM Incentive Payment. In the CY 2023 PFS final rule (87 FR 70114 through 70116), we explained that, beginning in payment year 2025, which correlates with performance year 2023, the statute did not provide for any type of payment incentive for eligible clinicians who become QPs.

Section 4111(a) of the CAA, 2023 amended section 1833(z)(1) of the Act to provide that eligible clinicians who are QPs with respect to payment year 2025 (performance year 2023) will receive an APM Incentive Payment equal to 3.5 percent of their estimated aggregate payment amounts for Medicare Part B covered professional services in the preceding year. In effect, this statutory change extends the APM Incentive Payment for one additional year, at a new percentage of 3.5 percent rather than 5 percent.

Accordingly, we proposed to incorporate the change made by the CAA, 2023, by amending the regulation text at § 414.1450 to add the payment year 2025 APM Incentive Payment amount of 3.5 percent of covered professional services payments. We proposed to amend paragraph (b)(1) to state that the amount of the APM Incentive Payment for payment

years 2019 through 2024 is equal to 5 percent and, for payment year 2025, 3.5 percent, of the estimated aggregate payments for covered professional services furnished during the calendar year immediately preceding the payment year.

We also noted that the CAA, 2023, did not extend the APM Incentive Payment beyond payment year 2025. Beginning for the 2026 payment year, which relates to the 2024 QP Performance Period, section 1848(d)(1)(A) of the Act specifies that there shall be two separate PFS conversion factors, one for items and services furnished by a QP (the qualifying APM conversion factor), and the other for other items and services (the nonqualifying APM conversion factor). Each conversion factor will be equal to the conversion factor for the previous year multiplied by the applicable update for the year specified in section 1848(d)(20) of the Act. The update specified for the qualifying APM conversion factor will be 0.75 percent, while the update for all others will be 0.25 percent.

We did not receive public comments on this provision, and therefore, we are finalizing as proposed.

#### (6) Targeted Review of QP determinations

In the CY 2021 PFS final rule (85 FR 84952), we finalized a policy to provide an opportunity for eligible clinicians to bring to our attention potential clerical errors we may have made that could have resulted in the omission of an eligible clinician from a Participation List used for purposes of QP determinations, and for us to review and make corrections if warranted. We also finalized that, after the conclusion of the time period for targeted review, there would be no further review of our QP determination with respect to an eligible clinician for the QP Performance Period. We noted that, consistent with section 1833(z)(4) of the Act, and as provided under § 414.1455(a) of our regulations, there is no right to administrative or judicial review under sections 1869 or 1878 of the Act, or otherwise, of the determination that an eligible clinician is a QP or Partial QP under § 414.1425, or of the determination of the amount of the APM Incentive Payment under § 414.1450.

In the CY 2021 PFS final rule (85 FR 84953), we finalized our proposal to align the timing and procedures for this targeted review process with the MIPS targeted review process as codified at § 414.1385. We noted this alignment would reduce the likelihood of confusion and burden on eligible clinicians and APM Entities.

In light of the transition in incentives for eligible clinicians who are QPs for a year, as provided in statute, from an APM Incentive Payment to the differentially higher PFS conversion factor beginning with the 2024 QP performance period and 2026 payment year, we proposed at section IV.A.4.j. of the proposed rule to adjust the Targeted Review period in order to meet operational timelines to ensure that we can meet statutory requirements for the application of the differential conversion factors, and the resulting differential PFS payment rates, to eligible clinicians who are, and are not, QPs for the year. As discussed in section IV.A.4.j. of the proposed rule, we believe that adjusting the Targeted Review period will enable us to meet our statutory obligation to apply the differentially higher QP conversion factor beginning on January 1 of each payment year beginning with CY 2026. We encourage readers to review section IV.A.4.j. of the proposed rule.

## n. Advanced APMs

### (1) General overview

In this section, we address policies regarding several aspects of the Advanced APM criterion for CEHRT use at § 414.1415(a). We proposed to amend the definition of CEHRT at § 414.1305 that applies to Advanced APM participants, and to modify the Advanced APM CEHRT use criterion at § 414.1415(a) to recognize the CEHRT that is relevant to the clinical practice of participants in the Advanced APM.

We believe the Quality Payment Program must be responsive to, and supportive of, innovation in technology and in a provider organization. It is our goal to encourage not only provider ownership of health information technology (health IT), but full adoption and integration of the most advanced health IT into clinical practice. We developed these proposals to modify the CEHRT that is required for Advanced APMs with this goal in mind, and we will continue to monitor advancements and opportunities in the health IT space to better prepare and align our program and APMs with the most cutting-edge technologies and innovative provider arrangements, for the benefit of APM Entities and eligible clinicians, and the Medicare beneficiaries we serve.

### (2) Background

#### (a) Advanced APM CEHRT Use Criterion

Under section 1833(z)(3)(D)(i)(I) of the Act, Advanced APMs are those APMs that (among other things) require participants to use CEHRT. We codified this CEHRT use criterion for Advanced APMs at § 414.1415(a)(1). As such, the CEHRT use criterion under § 414.1415(a)(1) states that, to be an Advanced APM, the APM must require at least a certain percentage of eligible clinicians in each participating APM Entity group, or, for APMs in which hospitals are the APM Entities, each hospital, to use CEHRT to document and communicate clinical care to their patients or health care providers. In the CY 2017 Quality Payment Program final rule, we specified at § 414.1415(a)(1)(i) that an Advanced APM is one that requires at least

50 percent of eligible clinicians in each APM Entity group to use CEHRT to document and communicate clinical care to their patients or health providers (81 FR 77410). In the CY 2019 PFS final rule (83 FR 59918), we amended § 414.1415(a)(1) to increase the required percentage from 50 percent to 75 percent.

(b) Definition of CEHRT

Section 1848(o)(4) of the Act defines CEHRT as a qualified electronic health record (as defined in section 3000(13) of the Public Health Service Act, or PHSA) that is certified by the Office of the National Coordinator for Health Information Technology (ONC) pursuant to section 3001(c)(5) of the PHSA in accordance with the certification standards that ONC adopted under section 3004 of the PHSA.

In implementing the definition of CEHRT at § 414.1305 for the MIPS track of the Quality Payment Program, we adopted the definition of CEHRT used for the Medicare EHR Incentive Program (also known as “Meaningful Use”) at § 495.4 (81 FR 77211 through 77213). In the CY 2017 Quality Payment Program final rule, we explained that we intended “to maintain continuity for MIPS eligible clinicians and health IT vendors who may already have CEHRT or who have begun planning for a transition to technology certified to the 2015 Edition based on the definition of CEHRT finalized for the EHR Incentive Programs in the 2015 EHR Incentive Programs final rule” and “to maintain consistency with the EHR Incentive Programs CEHRT definition at 42 CFR § 495.4” (81 FR 77212).

For the Advanced APM track of the Quality Payment Program, we in turn adopted the definition of CEHRT for MIPS under § 414.1305 (81 FR 77409 through 77410). We explained that applying the same definition of CEHRT for purposes of both the MIPS and Advanced APM tracks of the Quality Payment Program would reduce administrative costs and confusion among eligible clinicians and maintain consistency across programs, permitting eligible clinicians to use shared CEHRT systems to participate in either MIPS or Advanced APMs (81 FR 77409 through 77410).

Consequently, the MIPS and Advanced APM tracks of the Quality Payment Program share the same definition of CEHRT at § 414.1305. Since the CY 2019 performance period, this has generally meant EHR technology (which could include multiple technologies) certified under the ONC Health IT Certification Program that meets the 2015 Edition Base EHR definition (as defined at 45 CFR 170.102) and that has been certified to certain other 2015 Edition health IT certification criteria as specified in the definition of CEHRT at § 414.1305. The currently applicable definition of CEHRT at § 414.1305 specifically requires that the EHR technology has been certified to the following 2015 Edition health IT certification criteria: (1) family health history at 45 CFR 170.315(a)(12); (2) patient health information capture at 45 CFR 170.315(e)(3); and (3) as necessary to report on applicable objectives and measures specified for the MIPS Promoting Interoperability performance category, including applicable measure calculation certification criteria at 45 CFR 170.315(g)(1) or (2) and clinical quality measure certification criteria that support the calculation and reporting of clinical quality measures at 45 CFR 170.315(c)(2) and (c)(3)(i) and (ii) (and optionally (c)(4)) and can be electronically accepted by CMS.

Because our definition of CEHRT at § 414.1305 ultimately derives from the definition of CEHRT used for the Meaningful Use Program, our Advanced APMs have required their participants to use CEHRT that is capable of meeting all requirements of a qualified EHR. As such, Advanced APMs generally require participants to use CEHRT that meets requirements for the 2015 Edition Base EHR (as defined at 45 CFR 170.102); all requirements of Meaningful Use set forth in section 1848(o)(2) of the Act; and all requirements for reporting on applicable objectives and measures specified for the MIPS Promoting Interoperability performance category. When we adopted the same definition of CEHRT at § 414.1305 for purposes of MIPS and Advanced APMs in the CY 2017 Quality Payment Program final rule, we acknowledged that such a policy may include some requirements not directly applicable to the APM Entities' practice. Specifically, we stated at that time that "we understand this proposed CEHRT definition

may include some EHR functionality used by MIPS eligible clinicians which may be less relevant for an APM participant and likewise APM participants may use additional functions that are not required for MIPS participation” (81 FR 77409). At the time, we reasoned that “using the same CEHRT definition for both MIPS and Advanced APMs would allow eligible clinicians to continue to use shared EHR systems and give eligible clinicians flexibility of participation as a MIPS eligible clinician or an eligible clinician in an Advanced APM without needing to change or upgrade EHR systems” (81 FR 77409).

Although we acknowledged that this CEHRT definition may impose more rigorous requirements on APM participants than necessary, we nonetheless maintained that “we generally want APMs to retain the flexibility to require activities performed using CEHRT that may vary from those prescribed under the advancing care information performance category in MIPS” (81 FR 77412).<sup>504</sup> We also recognized that aligning the CEHRT definition for Advanced APMs with MIPS “would go beyond what the statute requires” (81 FR 77412). When we adopted the CEHRT definition for MIPS and Advanced APMs, one commenter suggested that our proposed CEHRT criterion for Advanced APMs was narrow, and that “a strong, broad health IT infrastructure should be a key element used to identify Advanced APMs rather than the narrow proposed CEHRT criteria” (81 FR 77410). We agreed that “Advanced APMs need a strong health IT infrastructure as a foundation for communicating and delivering comprehensive and coordinated care to their patients,” but at that time we wanted to prioritize continuity between the two tracks of the Quality Payment Program to maximize flexibility for eligible clinicians. However, we indicated that we would be prepared to update this definition as needed in the future.

---

<sup>504</sup> Section 1848(q)(2)(A)(iv) and (B)(iv) of the Act requires that the Secretary assess MIPS eligible clinicians’ performance with respect to the “meaningful use of certified EHR technology” in accordance with the requirements set forth at section 1848(o)(2) of the Act as one of the four performance categories for MIPS. In the CY 2017 Quality Payment Program final rule, we named this required MIPS performance category the “advancing care information performance category.” (81 FR 77010). We have since renamed this MIPS performance category, requiring the meaningful use of CEHRT, as the “Promoting Interoperability performance category.” (85 FR 84820 through 84821).

### (3) Proposal to Update CEHRT definition and CEHRT Use Criterion for Advanced APMs

After several years of experience with the uniform definition of CEHRT for purposes of MIPS and Advanced APMs and based on input we have received from interested parties, we now believe that the standard for CEHRT use for Advanced APMs may have been unnecessarily burdensome, imposing unwarranted barriers to organization of and participation in Advanced APMs, and not clinically relevant for many prospective and current participants in Advanced APMs. As previously discussed, our policy at § 414.1415(a)(1)(i) currently requires that at least 75 percent of eligible clinicians in each participating APM Entity group, and for APMs in which hospitals are APM Entities, each hospital, to use CEHRT, as defined in § 414.1305, to document and communicate clinical care to their patients or health care providers. By referring in the Advanced APM CEHRT use criterion to CEHRT, as defined in § 414.1305, Advanced APMs have required participants to adopt and implement health IT that is capable of meeting all requirements of a qualified EHR, which means CEHRT that meets all requirements for 2015 Edition Base EHR (as defined at 45 CFR 170.102); all requirements of Meaningful Use set forth in section 1848(o)(2) of the Act; and all requirements for reporting on applicable objectives and measures specified for the MIPS Promoting Interoperability performance category. We have heard from many interested parties that our CEHRT use requirements for Advanced APMs are falling short of some of our intended goals. Specifically, we have heard from many interested parties that our current requirements for use of CEHRT have led Advanced APMs to apply an inflexible standard that does not allow them to take into account whether certain CEHRT modules are relevant for, and applicable to, the specific clinical practice areas of their intended or actual participants. By placing a broad set of requirements for use of CEHRT, particularly regarding the criteria the health IT must be certified as meeting to satisfy our definition of CEHRT at § 414.1305, interested parties report that we are needlessly burdening some potential and actual participants in Advanced APMs because they must adopt health IT modules that are not always clinically relevant across provider types that would participate in an Advanced APM.

Specifically, interested parties noted that the CEHRT definition used for our Advanced APM criterion means that the APM must require participants to use health IT certified as meeting criteria necessary to report on objectives and measures of the MIPS Promoting Interoperability performance category, even when such health IT is not clinically relevant for or applicable to APM participants' practice, is needlessly burdensome and a barrier to innovation and participation in APMs. To support their position, interested parties noted as an example that application of our current Advanced APM CEHRT use criterion and associated CEHRT definition has required specialists in the Kidney Care Choices (KCC) Model or providers in the ACO Realizing Equity, Access, and Community Health (REACH) Model to purchase certified Health IT Modules beyond those required as part of the 2015 Edition Base EHR definition at 45 CFR 170.102 that are not immediately necessary or applicable to their clinical practice.

We have learned that Advanced APMs have not had the flexibility to require certified health IT that is tailored to their specific participants' practice areas. Likewise, we could envision a scenario where, to comply with the Advanced APM CEHRT use criterion under our current policy, an APM or APM Entity would exclude from participation specialists or other eligible clinician types, such as pathologists, for whom compliance with our current CEHRT requirements beyond the Base EHR definition would be burdensome and beyond the scope of their typical practice, even though participation of such eligible clinicians would be relevant and beneficial to the goals of the APM.

For Advanced APMs, we believe that it is important both to apply a rigorous standard for use of CEHRT and to allow sufficient flexibility to Advanced APMs to specify CEHRT modules that are clinically relevant for their participants. We believe that our current CEHRT use requirements meet the former goal (application of a rigorous standard), but not the latter (allowing sufficient flexibility).

Further, our current CEHRT use criterion specifies that 75 percent of participants in the APM must use CEHRT as defined in § 414.1305 and allows for 25 percent of participants to not

have or use CEHRT. This policy establishes a minimum percentage of Advanced APM participants that must use CEHRT, but without consideration of which eligible clinicians in each participating APM Entity (or hospital) must use CEHRT, or whether it is clinically appropriate for any of those eligible clinicians to not use CEHRT. As such, this policy could allow eligible clinicians who could and should be using CEHRT to forego CEHRT use solely because enough of their colleagues are using CEHRT to meet the requirement of the Advanced APM.

Additionally, we have heard from interested parties that, for most Advanced APM participants, CEHRT use among eligible clinicians is close to 100 percent. Given this information and the fact that the 75 percent CEHRT use standard has been in effect for almost five years, we believe it is appropriate to re-evaluate our approach to the application of the CEHRT use requirement to Advanced APMs and their participants. We want to maintain the rigor of our CEHRT use criterion for Advanced APMs while providing Advanced APMs flexibility to require CEHRT use that is applicable for the practice areas of their participants and their eligible clinicians. Further, we believe any exceptions to CEHRT use that are permitted under the Advanced APM should be based on clinical appropriateness, rather than on generalized application of percentages.

First, we proposed to amend the definition of CEHRT at § 414.1305 by adding a new paragraph (3) to specify that, for purposes of the Advanced APM CEHRT use criterion under § 414.1415(a)(1), beginning with CY 2024, CEHRT means EHR technology certified under the ONC Health IT Certification Program that meets: (1) the 2015 Edition Base EHR definition, or any subsequent Base EHR definition (as defined in at 45 CFR 170.102); and (2) any such ONC health IT certification criteria adopted or updated in 45 CFR 170.315 that are determined applicable for the APM, for the year, considering factors such as clinical practice areas involved, promotion of interoperability, relevance to reporting on applicable quality measures, clinical care delivery objectives of the APM, or any other factor relevant to documenting and communicating clinical care to patients or their health care providers in the APM.

We believe our proposal to revise the definition of CEHRT for Advanced APMs at § 414.1305 would provide flexibility to each APM to determine what CEHRT functionalities are relevant to the model and its participant APM Entities and eligible clinicians. We believe that providing Advanced APMs with the greater flexibility permitted by the statute with respect to requiring CEHRT use will foster innovation in model design and diversity in APM participation. Specifically, we believe our amendment to the CEHRT definition at § 414.1305 will facilitate innovation in APM design, and enable a broad range of participants and their eligible clinicians to meet Advanced APM CEHRT use requirements by adopting health IT that satisfies the 2015 Edition Base EHR definition, or subsequent Base EHR definition, at 45 CFR 170.102 and is certified as meeting other ONC health IT certification criteria adopted, or updated in 45 CFR 170.315, as is clinically relevant to their practice, without unnecessarily obtaining other health IT, such as the health IT necessary to report on applicable objectives and measures specified for the MIPS Promoting Interoperability performance category.

We note that participation in an Advanced APM does not automatically exclude eligible clinicians from MIPS. Eligible clinicians in an Advanced APM who do not achieve Qualifying APM Participant (QP) status or Partial QP status, or who are not otherwise excluded or exempt from MIPS (for example, on the basis of low Medicare volume, new Medicare enrollment, or eligible clinician type), remain subject to the MIPS reporting requirements and payment adjustment. Accordingly, under our proposal, eligible clinicians in Advanced APMs will still need to be prepared to report to MIPS, including using CEHRT as necessary to report on applicable objectives and measures specified for the MIPS Promoting Interoperability performance category, in the event that they do not achieve QP or Partial QP status or are not excluded or exempt from MIPS on another basis.

In section IV.A.4.f.(4) of the proposed rule, we also proposed other modifications to the CEHRT definition at § 414.1305 to be more flexible in reflecting any changes ONC may make to its Base EHR definition, certification criteria, and other standards for health IT at 45 CFR part

170. Our proposed amendment to the CEHRT definition under paragraph (3) at § 414.1305 for Advanced APMs is consistent with our other amendments to the CEHRT definition, which we are finalizing as set forth in section IV.A.4.f.(4) of this final rule.

Second, we proposed to amend our current Advanced APM CEHRT use criterion at § 414.1415(a)(1). Specifically, we proposed to amend the regulation to end the current 75 percent CEHRT use requirement at § 414.1415(a)(1)(i) with the CY 2023 QP performance period. Then we proposed to add a new paragraph at § 414.1415(a)(1)(iii) to specify that, to be an Advanced APM, the APM must require all eligible clinicians in each participating APM Entity, or for APMs in which hospitals are the participants, each hospital, to use CEHRT that meets our proposed new paragraph (3) of the CEHRT definition at § 414.1305. In essence, we proposed to no longer specify a minimum number of eligible clinicians that an Advanced APM must require to use CEHRT, and instead, simply specify that the Advanced APM must require all participating eligible clinicians to use CEHRT that meets our proposed modified, and more flexible, definition. We also proposed to revise § 414.1415 by making non-substantive technical edits to paragraphs (a)(1)(i) and (ii) to improve clarity.

This policy, which we proposed and are finalizing with modification as discussed herein, is consistent with section 1833(z)(3)(D)(i)(I) of the Act, which generally requires that Advanced APMs require their participants to use CEHRT as defined in section 1848(o)(4) of the Act. We believe this amendment to the Advanced APM CEHRT use criterion will further enhance innovation in Advanced APM development and diversity in participation, allowing for novel APM Entity compositions, because Advanced APM participants will no longer have to concern themselves with the percentage of eligible clinicians that meet our current CEHRT requirements. We further believe that, under our more flexible CEHRT definition and Advanced APM CEHRT use criterion, Advanced APMs could create their own CEHRT use requirements, potentially beyond what we currently require, tailored to the various types of clinicians and practice areas the Advanced APM intends to include in its model. We believe our proposal will permit

Advanced APMs to recruit and retain participants that represent a variety of practice types, and to require different types of EHR technologies certified under the ONC Health IT Certification Program as meeting the 2015 Edition Base EHR definition, or subsequent Base EHR definition, at 45 CFR 170.102 and additional ONC health IT certification criteria adopted and updated in 45 CFR 170.315 as specifically applicable to different types of clinical practice.

We sought comment on this proposal.

The following is a summary of the comments we received and our responses.

*Comment:* Most commenters expressed support for the proposal to amend the definition of CEHRT at § 414.1305, noting their appreciation for the greater flexibility it would afford, as well as for making permanent references to ONC regulations such that CMS rulemaking will not be necessary to incorporate future updates to ONC health IT certification criteria within the definition of CEHRT.

*Response:* We thank commenters for their support.

*Comment:* One commenter expressed concern about changing the CEHRT definition to be “edition-less,” citing concerns with respect to smaller practices being able to meet deadlines for updating EHRs. This commenter noted they believe additional flexibility is warranted to give time to these practices to keep up with CEHRT requirements as they change. Another commenter expressed concern about the timing of our proposal to modify our CEHRT definition with respect to ONC’s proposed rule that proposes to modify definitions and certification requirements in ONC’s regulations that our CEHRT definition references and recommended that we wait until ONC’s rule is finalized before modifying our definition.

*Response:* We appreciate a desire to meet the needs of smaller practices. We note that section 1833(z)(3)(D)(i)(I) of the Act specifies that Advanced APMs are those that require participants to use CEHRT, and that the definition of CEHRT references health IT certification criteria established by ONC, which in turn is implemented under regulations promulgated by ONC. The CEHRT definition used for purposes of the Advanced APM criterion must inherently,

and at a minimum, require technology to meet certification criteria established by ONC. As such, we believe our regulatory definition of CEHRT must be flexible to reflect any changes ONC proposes and finalizes regarding its own definition of Base EHR and its certification criteria to ensure our Advanced APM standard aligns with ONC's regulations as required by our statute. We believe that waiting to revise our CEHRT definition, based on whether ONC finalizes its proposals (88 FR 23757 through 23762), would increase regulatory burden and complexity. Rather, this final policy would incorporate the timelines ONC adopts through notice and comment rulemaking for health IT developers to update and provide certified technology to their customers. While our proposals have been informed by the "edition-less" approach and related proposals described by ONC (88 FR 23757 through 23762), we believe that our final policies will simplify participation and reduce confusion for CMS program participants whether or not ONC finalizes its proposals. However, we do recognize that smaller practices may face additional burden to keep up with changes, and we will continue to examine the ability of small practices to meet CEHRT requirements in Advanced APMs, including through the examining the potential use of flexibilities described in greater detail below.

*Comment:* One commenter supported our proposal to replace the 75 percent CEHRT use threshold with a requirement that Advanced APMs require the use of CEHRT.

*Response:* We thank the commenter for their support.

*Comment:* Most commenters opposed our proposal to remove the current 75 percent CEHRT use requirement at § 414.1415(a)(1)(i) and requested that we retain this aspect of the current regulations, noting that the threshold provides flexibility, and citing concerns that requiring Advanced APMs to require all eligible clinicians to have CEHRT is unforgiving. One commenter cited that a single clinician could fail to use CEHRT for reasons such as "travel, sickness, or injury," and expressed concern that this could make the entire Advanced APM fail to meet our proposed standard. One commenter encouraged us to instead look at data other Federal Agencies collect on the levels of CEHRT adoption, such as ONC's "Insights Condition" data

from its most recent proposed rule. One commenter indicated that we should be encouraging clinicians not currently using CEHRT to join APMs. One commenter specifically expressed concern relating to the ability of smaller practices to participate in Advanced APMs.

*Response:* We understand commenters' concerns that requiring all eligible clinicians to use CEHRT is an exacting standard on its face. We believe that the flexibilities introduced in our proposed amendment to the definition of CEHRT at § 414.1305 would allow Advanced APMs to establish requirements for CEHRT use that are reasonable expectations for Advanced APM participants. As discussed in the proposed rule, our original definition of CEHRT was one that we recognized would not necessarily be relevant to all practice areas. Under the new definition, Advanced APMs can consider clinical practice when establishing their CEHRT use requirements, and thereby establish a standard that would be reasonable to expect participating APM Entities and eligible clinicians in relevant clinical practice areas to be capable of meeting.

As we discussed in the proposed rule, the use of a CEHRT use threshold without consideration of which eligible clinicians in each participating APM Entity (or hospital) must use CEHRT, or whether it is clinically appropriate for any of those eligible clinicians to not use CEHRT, would potentially allow for eligible clinicians who could and should be using CEHRT to forego CEHRT use solely because enough of their colleagues are using CEHRT to meet the requirement of the Advanced APM. We note that section 1833(z)(3)(D)(i)(I) of the Act does not specify the use of any threshold for purposes of the Advanced APM CEHRT use criterion, whereas the statute does specify the use of, and sometimes also level for, thresholds for other provisions (such as the level of Advanced APM participation necessary to achieve QP status). After several years of experience applying the threshold-based CEHRT use criterion, we do not believe it is serving as a sufficiently meaningful approach for measuring eligible clinicians' adoption of clinically appropriate CEHRT.

In describing the proposal, we stated that we expect Advanced APMs to require all eligible clinicians to use CEHRT (88 FR 52627). Specifically, our proposal was that Advanced

APMs would have to require participants to use CEHRT that meets the (current or subsequent) Base EHR definition at 45 CFR 170.102 and could require CEHRT to meet additional certification criteria under 45 CFR 170.315 as clinically appropriate. As further outlined below in this response, we believe that it is reasonable to expect all Advanced APM participants to have technology that is capable of meeting at least the Base EHR definition. However, we do not expect that this would occur entirely without exceptions across all possible circumstances. As we stated in the proposed rule, we believe that any exceptions permitted under the Advanced APM should be based on clinical appropriateness, rather than the provision of a generalized application of percentages to CEHRT use (88 FR 52626).

We also note that we apply the Advanced APM criteria and identify Advanced APMs before the beginning of each QP performance period based on the structure of the APM and, in the case of CEHRT use, what health IT technology the APM requires of its participant APM entities and eligible clinicians. We would not anticipate removing Advanced APM status from an APM under circumstances such as a single eligible clinician failing to use CEHRT; and we recognize that Advanced APMs may provide for, and have reasons to apply, exceptions from time to time. In the example of travel, illness, or injury, that one commenter cited, an Advanced APM may have in place and choose to apply an exception based on significant hardship or an Extreme and Uncontrollable Circumstance (EUC) policy, and we would work with that Advanced APM with respect to the application of such an exception to the Advanced APM criteria, including CEHRT use. For example, in the spring of 2020, we recognized that, as part of CMS's COVID-19 response to reduce burden or ease financial strain, Advanced APMs might apply exceptions to their requirements to the extent permitted by the terms of each Advanced APM, and did not consider removing Advanced APM status on the basis of any such decisions that may have affected one or more of the Advanced APM criteria. If a circumstance were to arise in which we were to determine that a particular Advanced APM or its participants were not in compliance with one of the Advanced APM criteria, including the CEHRT use criterion, we

first would seek to identify steps for the Advanced APM and/or its participants to remediate the identified problem such that Advanced APM status could be maintained. In the event that we determine that the removal of Advanced APM status would be necessary, such a removal would apply to future performance years and would involve a process for notice to its participants and the public that the APM no longer would be an Advanced APM for the upcoming performance period.

Additionally, as one commenter noted, CEHRT may be a barrier for smaller practices to participate in Advanced APMs. We acknowledge that this may be the case, and will consider whether greater flexibility in our CEHRT use criterion is warranted, for example, if a particular APM were designed to include smaller practices and identified a reason why time- or situation-limited exceptions to the CEHRT use criterion for those small practices may be appropriate as a matter of the APM's design. In general, we believe that taking specific circumstances into account in the context of APM design is a better approach for CEHRT use requirements in contrast to applying a blanket threshold, which leaves room for eligible clinicians in Advanced APMs to not engage meaningfully in CEHRT use for no real reason. To the extent that we identify in the future that further rulemaking may be warranted or necessary to establish specific criteria for exceptions, we would update our rules accordingly through notice-and-comment rulemaking. At this time, we believe that the Advanced APM should lead the way in identifying the potential appropriateness of any exceptions, and we would consider those exceptions when determining or reviewing Advanced APM status.

We expect that Advanced APMs readily can require that their participants use CEHRT that meets at least the 2015 Edition Base EHR definition, or subsequent Base EHR definition at 45 CFR 170.102, because these participants would use CEHRT that meets at least this Base EHR definition under several Medicare programs. First, as we noted in the CY 2024 PFS proposed rule, the current Advanced APM CEHRT use criterion is that the APM must require 75 percent of eligible clinicians participating in the APM to use CEHRT that meets both the Base EHR

definition at 45 CFR 170.102 and the ONC health IT certification criteria at 45 CFR 170.315 to satisfy Meaningful Use requirements and MIPS Promoting Interoperability performance category requirements (88 FR 52626). Second, MIPS eligible clinicians, who may also participate in an Advanced APM, use CEHRT (§ 414.1375(b)(1)) as defined at § 414.1305, meeting both the Base EHR definition at 45 CFR 170.102 and specific certification criteria at 45 CFR 170.315 for reporting applicable measures and activities, for purposes of the MIPS Promoting Interoperability performance category. Although these requirements vary with respect to what additional ONC health IT certification criteria at 45 CFR 170.315 the CEHRT must meet, both the Advanced APM CEHRT use criterion and MIPS expect eligible clinicians to use CEHRT that at least meets the Base EHR definition at 45 CFR 170.102. As discussed herein, we are finalizing our proposal to revise the definition of CEHRT that Advanced APMs must require to mean CEHRT that meets the Base EHR definition at 45 CFR 170.102 and any additional ONC health IT certification criteria set forth in 45 CFR 170.315 that the Advanced APM determines applicable, considering certain factors. Given this revision, we believe that Advanced APM participants who are using CEHRT already under the more strenuous requirements should be able to ensure their CEHRT continues to meet the Base EHR definition at 170.102.

The only gap we expect in CEHRT use are Advanced APM participants who have not been required to use CEHRT to date either under MIPS, such as due to application of exceptions or reweighting policies, or the Advanced APM CEHRT use criterion at § 414.1415(a)(1)(i). However, as we noted in the CY 2024 PFS proposed rule, we have heard from interested parties that CEHRT use among eligible clinicians in Advanced APMs is close to 100 percent (88 FR 52626). Therefore, we believe that given the opportunity for a transition year as described further below in this section, and our ability under the revised definition to consider a potential exception that a particular Advanced APM believes is clinically appropriate, as a general matter we can reasonably expect that by 2025, all eligible clinicians participating in Advanced APMs should have CEHRT that meets at least the Base EHR definition.

We believe that adopting a flexible definition of CEHRT, as proposed, would permit Advanced APMs to select more specific CEHRT requirements (for instance, specifying which certification criteria under 45 CFR 170.315 should be incorporated into CEHRT requirements beyond the applicable Base EHR definition) that their participating eligible clinicians must meet and use to document and communicate their clinical care to patients and other health care providers. CMS collaborates with ONC regarding certification criteria for health IT referenced in the CEHRT definition, including relevant capabilities for Advanced APMs, and we agree that the examination of available data from ONC (and other Federal partners) is relevant in decision-making; that is, we believe that these types of data are most useful when considered at the individual Advanced APM level, as the purpose of a specific Advanced APM and the practice areas of its participants will be relevant drivers of the specific ONC health IT certification criteria required by that Advanced APM, and is likely to be different between Advanced APMs.

*Comment:* One commenter expressed support for increasing the current 75 percent threshold to 100 percent “over the next few performance years,” but expressed concern that removing the 75 percent threshold by QP performance period 2024 does not give participants sufficient time to work with or remove eligible clinicians that do not currently use CEHRT. This commenter notes that CMS’s deadline to remove participating TINs from the Shared Savings Program (CMS’s largest Advanced APM) was September 5, 2023, which was before the proposed rule would be finalized and therefore prior to participant ACOs knowing what policies would be in place for QP performance period 2024. Similarly, another commenter requested that we consider finalizing the proposal for QP performance period 2025 rather than 2024 because, while its organization’s CEHRT use is close to 100 percent, it is not quite there, and the additional year would provide a sufficient glide path to full compliance either through adoption of CEHRT by the remaining few that do not have it or removal of those participants from the organization. One commenter did not express outright support or opposition to the proposal to end the 75 percent CEHRT use threshold, but recommended that we incorporate a transition

period and delay ending the 75 percent threshold until a later QP performance period.

*Response:* After further reflection, we agree that a transition period would be appropriate, and agree with the commenters that indicated that some participants had to make decisions about 2024 participation without certainty about what rules would be in place for that QP performance period or having much time to work with members that may be using technology that does not currently meet the CEHRT definition. Our information pertaining to CEHRT use by Advanced APM participants indicates readiness to meet the new standard, but we recognize that a transition period would be helpful to address potential circumstances on which we may not have information, such as the CEHRT readiness of practices that may have been considering joining Advanced APMs in the near future, and give current and future potential participants the ability to make participation decisions for a particular QP performance period with full knowledge of the policies that will be in place for that year. We note that, because the definition of CEHRT that we are finalizing in this rule will allow for Advanced APMs to tailor their CEHRT requirements to clinical practice, it is possible that technology that eligible clinicians currently have that did not meet the existing CEHRT definition will meet the new definition. We encourage Advanced APMs to evaluate the CEHRT their eligible clinicians use with that new definition in mind (for example by determining if at least the Base EHR definition at 45 CFR 170.102 is met). We believe that providing an additional year should afford sufficient time for such an evaluation and we encourage participants to further use the time to work with their participant membership who do not have technology meeting the CEHRT definition to adopt it, as opposed to simply removing those clinicians from participation. We also believe that a transition year will allow us time to address concerns about the proposed new standard that were expressed in the previous comment. Accordingly, we will delay removal of the 75 percent threshold for CEHRT use until the CY 2025 QP performance period. We encourage Advanced APM participants to work with their Advanced APMs to understand what requirements apply to them.

After consideration of public comments, we are finalizing our proposal to amend the definition of CEHRT at § 414.1305 by adding a new paragraph (3) to specify that, for purposes of the Advanced APM criterion under § 414.1415, beginning with CY 2024, CEHRT means EHR technology certified under the ONC Health IT Certification Program that meets: (1) the 2015 Edition Base EHR definition, or any subsequent Base EHR definition (as defined in at 45 CFR 170.102); and (2) any such ONC health IT certification criteria adopted or updated in 45 CFR 170.315 that are determined applicable for the APM, for the year, considering factors such as clinical practice areas, promotion of interoperability, relevance to reporting on applicable quality measures, clinical care delivery objectives of the APM, or any other factor relevant to documenting and communicating clinical care to patients or their health care providers in the APM. We are also finalizing our proposal with modification to add a new paragraph at § 414.1415(a)(1)(iii) to specify that beginning with the CY 2025 QP performance period, to be an Advanced APM, the APM must require all eligible clinicians in each participating APM Entity, or for APMs in which hospitals are the participants, each hospital, to use CEHRT that meets our proposed new paragraph (3) of the CEHRT definition at § 414.1305. Finally, we are finalizing, with modification, our proposal to amend § 414.1415(a)(1)(i) to end the current 75 percent CEHRT use requirement with the CY 2024 QP performance period, instead of the CY 2023 QP performance period.

#### (4) All Payer Advanced APMs

In the CY 2017 Quality Payment Program final rule (81 FR 77459), we proposed policies, effective beginning for performance year 2021, that would allow eligible clinicians to earn QP status through participation in a combination of Medicare Advanced APMs and other payment arrangements designed and implemented by other payers (Other Payer Advanced APMs). The statute includes a CEHRT use criterion for Other Payer Advanced APMs as it does for Medicare Advanced APMs, and we finalized the same CEHRT use criterion for Other Payer Advanced APMs as for Medicare Advanced APMs (81 FR 77463). Likewise, in this rule, we

proposed to amend the Other Payer Advanced APM criteria at § 414.1420(b) to conform with the changes we proposed for Medicare Advanced APMs, and to be reflected in amendments to § 414.1415(a)(1)(i), to remove the 75 percent minimum CEHRT use requirement for Advanced APMs, and replace it with a more flexible CEHRT use requirement based on our revised definition of CEHRT for purposes of Advanced APM determinations. We also proposed to revise § 414.1420(b) by making additional non-substantive technical edits to improve clarity.

The changes we proposed for Medicare Advanced APMs are designed to require use of technologically sufficient EHRs consistent with the ONC Base EHR definition at 45 CFR 170.102, while affording Advanced APMs the ability to tailor additional CEHRT use requirements to those features or capabilities that are clinically relevant to the APM and its participants. We believe that this same flexibility should be afforded in the context of Other Payer Advanced APMs. The All-Payer Combination Option through which we consider the participation of eligible clinicians in Other Payer Advanced APMs offers an additional pathway to achieve QP status for eligible clinicians participating in both Medicare Advanced APMs and Other Payer Advanced APMs. Under the All-Payer Combination Option, we consider the combined participation of eligible clinicians in Medicare and Other Payer Advanced APMs. Similar to the statutory CEHRT use requirement for Advanced APMs under section 1833(z)(3)(D)(i)(I) of the Act, section 1833(z)(2)(iii)(II)(bb) of the Act specifies that Other Payer Advanced APMs are those under which CEHRT is used. Since the All-Payer Combination Option for QP determinations involves the same eligible clinician as the Medicare Option and, considers their participation in both Medicare Advanced APMs and Other Payer Advanced APMs, we believe we should continue to apply the same CEHRT use standard for both Medicare and Other Payer Advanced APMs. Further, we believe the same need exists for flexibility in the CEHRT that is required to be used in Other Payer Advanced APMs. This will allow Other Payer Advanced APMs to structure their CEHRT use requirements to be clinically relevant to the APM and participating eligible clinicians and avoid the need for participants to obtain clinically

unnecessary technology simply for purposes of meeting what we now believe to be an overly restrictive CEHRT use criterion.

We sought comment on this proposal.

We did not receive public comments on this provision. However, one key goal of ours in implementation of Medicare Advanced APM and Other Payer Advanced APM policies is to align them wherever appropriate, and with that alignment in mind, because we are delaying the removal of the 75 percent threshold for Medicare Advanced APMs, and we also are finalizing the Other Payer Advanced APM proposal with a one-year delay. As such, we are finalizing that the conforming changes we proposed in § 414.1420(b) to remove the 75 percent CEHRT use threshold and instead require the use of CEHRT will be finalized with an effective date of QP Performance Period 2025. We note that because the definition for CEHRT at 414.1305 will be finalized as proposed, the more flexible definition will be in place for Other Payer Advanced APMs, as well as for Medicare Advanced APMs.

## V. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 et seq.), we are required to publish a 60-day notice in the **Federal Register** and solicit public comment before a “collection of information” requirement is submitted to the Office of Management and Budget (OMB) for review and approval. For the purposes of the PRA and this section of the preamble, collection of information is defined under 5 CFR 1320.3(c) of the PRA’s implementing regulations.

To fairly evaluate whether an information collection should be approved by OMB, PRA section 3506(c)(2)(A) requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our burden estimates.
- The quality, utility, and clarity of the information to be collected.
- Our effort to minimize the information collection burden on the affected public, including the use of automated collection techniques.

We solicited public comment on each of these issues for the following sections of this document that contain information collection requirements.

Comments received are summarized under each relevant section.

### A. *Wage Estimates*

*Private Sector:* To derive average costs, we used data from the U.S. Bureau of Labor Statistics’ (BLS) May 2022 National Occupational Employment and Wage Estimates for all salary estimates ([https://www.bls.gov/oes/2022/oes\\_nat.htm](https://www.bls.gov/oes/2022/oes_nat.htm)). In this regard, Table 62 presents BLS’ mean hourly wage, our estimated cost of fringe benefits and other indirect costs (calculated at 100 percent of salary), and our adjusted hourly wage. There are many sources of variance in the average cost estimates, both because fringe benefits and other indirect costs vary significantly from employer to employer, and because methods of estimating these costs vary widely from

study to study. Therefore, we believe that doubling the hourly wage to estimate total cost is a reasonably accurate estimation method.

**TABLE 62: National Occupational Employment and Wage Estimates  
(Excluding Physicians)**

<b>Occupation title</b>	<b>Occupation code</b>	<b>Mean hourly wage (\$/hr)</b>	<b>Fringe benefits and other indirect costs (\$/hr)</b>	<b>Adjusted hourly wage (\$/hr)</b>
Billing and Posting Clerks	43-3021	21.54	21.54	43.08
Business Operations Specialists	13-1000	40.04	40.04	80.08
Computer System Analysts	15-1211	51.70	51.70	103.40
Financial Specialists	13-2000	44.37	44.37	88.74
General and Operations Manager	11-1021	59.07	59.07	118.14
Licensed Practical and Licensed Vocational Nurses	29-2061	26.86	26.86	53.72
Medical and Health Services Managers	11-9111	61.53	61.53	123.06
Secretaries and Administrative Assistants	43-6014	20.87	20.87	41.74
Nurse Practitioners	29-1171	59.94	59.94	119.88
Physician Assistants	29-1071	60.23	60.23	120.46

For our purposes, BLS’ May 2022 National Occupational Employment and Wage Estimates does not provide an occupation that we could use for “Physician” wage data. To estimate a Physician’s costs, we are using an average conglomerate wage of \$274.44/hr as demonstrated below in Table 63.

**TABLE 63: National Occupational Employment and Wage Estimates  
(Physicians)**

Occupation title	Occupation code	Mean hourly wage (\$/hr)	Fringe benefits and overhead (\$/hr)	Adjusted hourly wage (\$/hr)
Anesthesiologists	29-1211	145.66	145.66	291.32
Family Medicine Physicians	29-1215	107.91	107.91	215.82
General Internal Medicine Physicians	29-1216	108.30	108.30	216.60
Obstetricians and Gynecologists	29-1218	133.33	133.33	266.66
Orthopedic Surgeons, Except Pediatric	29-1242	178.56	178.56	357.12
Pediatric Surgeons	29-1243	174.51	174.51	349.02
Pediatricians, General	29-1221	97.71	97.71	195.42
Physicians, All Other	29-1229	114.76	114.76	229.52
Psychiatrists	29-1223	118.92	118.92	237.84
Surgeons	29-1240	162.49	162.49	324.98
Surgeons, All Other	29-1249	167.25	167.25	344.50
Total				3,018.80
Average Physician Wage (3,018.80/11)				274.44

*Beneficiaries:* We believe that the cost for beneficiaries undertaking administrative and other tasks on their own time is a post-tax wage of \$21.98/hr.

The Valuing Time in U.S. Department of Health and Human Services Regulatory Impact Analyses: Conceptual Framework and Best Practices<sup>505</sup> identifies the approach for valuing time when individuals undertake activities on their own time. To derive the costs for beneficiaries, a measurement of the usual weekly earnings of wage and salary workers of \$1,059<sup>506</sup> for 2022, divided by 40 hours to calculate an hourly pre-tax wage rate of \$26.48/hr. This rate is adjusted downwards by an estimate of the effective tax rate for median income households of about 17 percent or \$4.50/hr ( $\$26.48/\text{hr} \times 0.17$ ), resulting in the post-tax hourly wage rate of \$21.98/hr ( $\$26.48/\text{hr} - \$4.50/\text{hr}$ ). Unlike our State and private sector wage adjustments, we are not adjusting beneficiary wages for fringe benefits and other indirect costs since the individuals' activities, if any, would occur outside the scope of their employment.

#### *B. Information Collection Requirements (ICRs)*

<sup>505</sup> [https://aspe.hhs.gov/sites/default/files/migrated\\_legacy\\_files//176806/VOT.pdf](https://aspe.hhs.gov/sites/default/files/migrated_legacy_files//176806/VOT.pdf).

## 1. ICRs Requiring Manufacturers of Certain Single-dose Container or Single-use Package Drugs to Provide Refunds with Respect to Discarded Amounts (§ 414.940)

The following changes will be submitted to OMB for approval under control number 0938-1435 (CMS-10835).

As discussed in section III.A. of this final rule, as a part of implementing section 1847A(h) of the Act, as added by section 90004 of the Infrastructure Act, the Secretary is authorized to recognize, through notice and comment rulemaking, drugs with unique circumstances that justify an increase of the applicable percentage greater than 10 percent. In section III.A.3.d of this final rule, we finalized modifications to § 414.940 to establish an application process for drug manufacturers to request an increased applicable percentage for an individual drug product based on its unique circumstances.

To request we consider increasing the applicable percentage for a particular refundable drug, a manufacturer must submit the following: (1) a written request that a drug be considered for an increased applicable percentage based on its unique circumstances; (2) FDA-approved labeling for the drug, or, if the drug is not yet approved, documentation of the FDA acceptance or filing of the NDA or BLA submission; (3) justification for the consideration of an increased applicable percentage based on such unique circumstances; and (4) justification for the requested increase in the applicable percentage. Such justification can include documents, such as (but not limited to) a minimum vial fill volume study or a dose preparation study. We are also finalizing that for manufacturers that do not have FDA approval for their product by February 1, the product must be FDA-approved label by August 1 and the manufacturer must notify and submit the approved labeling to CMS no later than September 1 for their application to be complete and eligible for consideration for an increased applicable percentage based on unique circumstances.

As discussed in section VI.E.4. of this final rule, our estimates show a projected 27 billing and payment codes meeting the definition of refundable single-dose container or single-use package drug with more discarded units than their respective applicable percentage, (that is,

10 percent for those not increased through rulemaking, as specified in section 1847A(h)(3) of the Act, or 26, 45, or 90 percent, as finalized in section III.A. for certain drugs). Therefore, we anticipate a similar number of drugs could owe a refund under section 90004 of the Infrastructure Act. Since 22 of those billing codes have an estimated annual refund obligation of over \$50,000, we expect that, initially (that is, the first year the application process is available), the manufacturers of those 22 drugs to submit an application for consideration of an increased applicable percentage based on unique circumstances.

Once a manufacturer has applied for a drug and a decision has been made regarding whether an increased applicable percentage is appropriate, the manufacturer will not need to apply again. We clarify in section III.A. of this final rule, that unique circumstances and increased applicable percentage for an individual drug, once finalized through rulemaking, are permanent, unless modified through subsequent rulemaking. Therefore, subsequent years we will expect a smaller number of applications. When evaluating the approval dates of these 22 drugs, we find that there is a range of 0 to 4 drugs per year approved that will be expected to owe a refund of more than \$50,000 per year. From 2010 through 2020, the mean number of such approvals is 1.45 per year. Rounding that figure up, we estimate that we will typically receive 2 applications per year subsequent to the initial application year.

We estimate that the burden per respondent/applicant of drafting and submitting the unique circumstance application to be 5 hours. As we anticipate no more than 22 applications in the initial year that applications are available, we estimate a one-time first year burden of 110 hours (22 applications x 5 hr) at a cost of \$4,591 (\$41.74/hr x 110 hr). For subsequent years, we estimate an annual burden of 10 hours (2 applications x 5 hr per respondent/applicant) at a cost of \$418 (\$41.74/hr x 10 hr).

## 2. ICRs Regarding the Clinical Laboratory Fee Schedule: Data Reporting by Laboratories

As described in section III.D. of this final rule, under the Clinical Laboratory Fee Schedule, “reporting entities” must report to CMS during a “data reporting period” “applicable

information” collected during a “data collection period” for their component “applicable laboratories,” and we revised the regulations at § 414.504(a)(1) to account for a delay in reporting until January 1, 2024 through March 31, 2024. As stated in section 1834A(h)(2) of the Act, chapter 35 of title 44 U.S.C., which includes such provisions as the PRA does not apply to information collected under section 1834A of the Act. Consequently, we are not setting out any requirements or burden for public review and OMB approval as prescribed under the PRA. Please refer to section VI.E.7. of this final rule for a discussion of the impacts associated with the changes described in section III.D. of this final rule.

### 3. ICRs Regarding the Medicare Shared Savings Program

Section 1899(e) of the Act provides that chapter 35 of title 44 of the U.S.C., which includes such provisions as the PRA, shall not apply to the Shared Savings Program. Accordingly, we are not setting out Shared Savings Program burden estimates under this section of the preamble. Please refer to section VI.E.10. of this final rule for a discussion of the impacts associated with the changes to the Shared Savings Program as described in section III.G. of this final rule.

### 4. ICRs Regarding the Updates to the Medicare Diabetes Prevention Program

In section III.L. of this final rule, we finalized the proposed policy to extend specific Medicare Diabetes Prevention Program (MDPP) flexibilities allowed during the PHE for the COVID-19 1135 waiver event by 4 years. In addition, we finalized the policies necessary to update the MDPP payment structure to pay for beneficiary attendance on a fee-for-service basis while retaining the diabetes risk reduction performance payments. Finally, we are finalizing the provision to remove the requirement for MDPP interim preliminary recognition and replace it with CDC preliminary recognition as well as remove most references to, and requirements of, the Ongoing Maintenance Sessions given that eligibility for these services will end on December 31, 2023. We expect the policies will increase the number of eligible organizations willing to enroll as MDPP suppliers. We also anticipate that the extended PHE flexibilities will make MDPP

more marketable to both suppliers and beneficiaries due to the continued flexibility in how the MDPP set of services are delivered live, either in-person or virtually (or a combination of the two). We anticipate the payment structure changes will motivate suppliers to retain participants due to more frequent payments. Section 1115A(d)(3) of the Act exempts Innovation Center model tests and expansions, which include the MDPP expanded model, from the provisions of the PRA. Accordingly, this collection of information section does not set out any burden for the provisions.

#### 5. Appropriate Use Criteria for Advanced Diagnostic Imaging

As discussed in section III.J. of this final rule, we are finalizing our proposal to pause efforts to implement the Appropriate Use Criteria (AUC) for Advanced Diagnostic Imaging Services program for reevaluation and to rescind and reserve for future use the current AUC program regulations at § 414.94. The program was established in the Protecting Access to Medicare Act of 2014 (PAMA) and we have used rulemaking over the ensuing years to stand up the program in phases while aiming for a clinically useful and least provider-burdensome approach. At this time, we have exhausted all reasonable options for fully operationalizing the AUC program consistent with the statutory provisions as prescribed in section 1834(q)(B) of the Act directing CMS to require real-time claims-based reporting to collect information on AUC consultation and imaging patterns for advanced diagnostic imaging services to ultimately inform outlier identification and prior authorization. As a result, we have determined in section III.J. of this final rule to pause implementation of the AUC program for reevaluation and rescind the current AUC program regulations from § 414.94.

The following collection of information requests are affected by this rule's final decision to rescind the AUC program regulations from § 414.94: CMS-10570 (OMB 0938-1288), CMS-10624 (OMB 0938-1315), and CMS-10654 (OMB 0938-1345). Given that the AUC program regulations, which include these information collection requirements, will be rescinded, all three collections are no longer needed.

CMS-10570 (OMB 0938-1288) relates to the application and qualification process for provider-led entities (PLEs). Since we are finalizing the proposal and will rescind the AUC regulations at § 414.94, we are discontinuing this collection of information. Table 64 scores the impact of discontinuing the requirements and burden that are currently active and approved by OMB under the aforementioned control number, showing an expected 10 re-applications per year. We note however, that because we received less than 10 applicants in each year 2017-2022, there have been and will continue to be fewer than 10 re-applicants each year. In fact, the number of PLEs has overall decreased as qualified PLEs exit the program, choosing not to re-apply. In 2022 we expected all seven PLEs approved in 2017 to reapply; however, only two submitted re-applications and were re-qualified. For 2023, we froze the re-application process, continuing the approval of the three PLEs that had initially qualified in 2018. If we were not pausing the AUC program and rescinding the current regulations at § 414.94, then we would expect one re-application in 2024 and no re-applications in 2025.

At the time of the last approval in 2021, we expected the burden for PLEs re-applying for qualification to be half the burden of the initial application process. In the explanation below, we continue to use the previously approved number of responses, respondents and time, while updating the labor cost to reflect May 2022 BLS wages. As previously estimated, the PLEs would be able to make modifications to their original application which should result in a burden of 10 hours at \$80.08/hr for a business operations specialist (occupation code 13-100) to compile, prepare and submit the required information, 2.5 hours at \$123.06/hr for a medical and health services manager (occupation code 11-911) to review and approve the submission, and 2.5 hours at \$242.3/hr for a physician (occupation code 29-1210) to review and approve the submission materials. Annually, we estimate 15 hours per submission at a cost of \$1,714.2 per organization. In aggregate, we estimate 150 hours (15 hr x 10 submissions) at \$17,142 (\$1,714 x 10 submissions).

**TABLE 64: Burden of Pausing AUC Program Implementation Efforts for Reevaluation and Rescinding § 414.94**

Regulation Section(s)	Respondents	Total Responses	Time per Response (hours)	Total Annual Time (hours)	Labor Cost of Reporting (\$/hr)	Total Cost (\$)
§ 414.94(c)(2) (reapplication)	(10)	(10)	(15)	(150)	(1,714.2)	(17,142)

CMS-10624 (OMB 0938-1315) relates to the application and qualification process for Clinical Decision Support Mechanisms (CDSMs). This collection of information is no longer active. CMS-10624 was first approved on March 6, 2017, and was associated with the CY 2017 Physician Fee Schedule final rule (November 15, 2016; 81 FR 80170). CMS-10624 last expired on March 31, 2020. In June 2020, CMS filed a request to discontinue CMS-10624 (OMB 0938-1315).

CMS-10654 (OMB 0938-1345) relates to the consultation of AUC through a qualified CDSM by an ordering professional or clinical staff acting under the direction of the ordering professional. While this collection of information is no longer active, the impact of discontinuing the requirements and burden is addressed in this final rule RIA (*see* section VII. Regulatory Impact Analysis of this final rule).

#### 6. ICRs for Medicare Provider and Supplier Enrollment

None of this rule's Medicare and Medicaid provider enrollment provisions include any new, revised, or removed information collection requirements or burden. Regarding the finalization of our policy to reduce the timeframe for reporting practice location changes from 90 days to 30 days, this change will not alter the requirement for disclosing the change via the applicable Form CMS-855 or Form CMS-20134. It will only revise the timeframe in which the change must be reported. Hence, there will be no change in the ICR burden.

#### 7. ICRs Regarding the Medicare Ground Ambulance Data Collection System (GADCS) (§414.626)

Section 1834(l)(17) of the Act requires that the Secretary develop a ground ambulance data collection system that collects cost, revenue, utilization, and other information determined

appropriate by the Secretary with respect to providers of services and suppliers of ground ambulance services (ground ambulance organizations). Section 1834(l)(17)(I) of the Act states that the PRA does not apply to the collection of information required under section 1834(l)(17) of the Act. Accordingly, we did not set out any burden estimates under this section of the rule.

We did not receive any public comments on our claim that the provision is exempt from the PRA and are finalizing that claim as proposed.

## 8. ICRs Related to the Changes in the RHC/FQHC CfCs and Hospice CoPs

### a. Permitting MFT and MHCs to furnish services in RHC/FQHCs

The following changes will be submitted to OMB for approval under control number 0938-0344 (CMS-R-38).

In section III.C. of this final rule, we implement section 4121 of the CAA by conforming changes at § 491.8(a)(3) and (6) that would add MFT and MHCs to the list of staff who may be the owner or an employee of the clinic or center or may furnish services under contract to the clinic or center as well as included as staff available to furnish patient care services at all times the clinic or center operates. If an RHC or FQHC provides services furnished by an MFT or MHC, they will be required to update their patient care policy, as set out in section § 491.9(b)(2) of the CfCs.

The existing requirement at § 491.9(b)(2), *Patient care policies*, requires that policies are developed with the advice of a group of professional personnel that includes one or more physicians and one or more physician assistants or nurse practitioners, with at least one member who is not a member of the clinic or center staff. The patient care policies must describe the services the clinic or center furnishes directly, through agreement or arrangement, guidelines for medical management of health problems, and rules for the storage, handling, and administration of drugs and biologicals.

As we proposed to include MFTs and MHCs as professionals who can provide services in an RHC and FQHC, there will be a burden associated with the existing requirement at

§ 491.9(b)(3)(i). This requirement states that policies include “A description of the services they provide directly or through agreement or arrangement.” Therefore, if an RHC or FQHC provides services furnished by an MFT or MHC they must update their policies to include a description of the services provided.

We note that the time and effort required to conduct this activity will vary depending on if a clinic or center chooses to provide services furnished by an MFT or MHC. We also believe that some RHCs and FQHCs may already provide services furnished by an MFT or MHC. State Medicaid programs can cover ambulatory care services (including mental health and substance use disorder services) under a number of different mandatory Medicaid benefits such as outpatient hospital services, physician services, RHC and FQHC services, as well as optional benefits such as rehabilitative services, and services of other licensed practitioners.

The National Association of Community Health Center’s 2017 policy assessment suggests that 21 State Medicaid programs cover services provided by MFTs, and 25 State Medicaid programs cover services provided by licensed professional counselors.<sup>507</sup> Due to approximately half of the State’s Medicaid programs already covering services furnished by an MFT or MHC and the assumption that some centers and clinics will not provide these services, we believe only 50 percent of RHCs and 50 percent of FQHCs will incur this burden. The total RHCs and FQHCs who will have to meet this 1-time burden is 2,643 clinics and 5,643 centers, or 8,286 combined.<sup>508,509</sup>

Each clinic or center is required by the existing requirement at § 491.9(b)(2) to have at least one physician/administrator at \$274.44/hr and one advanced practice provider (nurse practitioner or physician assistant) at \$120.17/hr (\$119.88 + \$120.46/2) reviewing and updating the policies. We estimate that it takes existing RHCs and FQHCs 4 hours every 2 years for clinical staff to review and make changes to all patient care policies. Based on this, we estimate

---

<sup>507</sup> <https://www.nachc.org/wp-content/uploads/2019/03/BH-Fact-Sheet-3.20.19.pdf>

<sup>508</sup> [https://qcor.cms.gov/active\\_nh.jsp?which=12&report=active\\_nh.jsp&jumpfrom=#pagetop](https://qcor.cms.gov/active_nh.jsp?which=12&report=active_nh.jsp&jumpfrom=#pagetop)

<sup>509</sup> [https://qcor.cms.gov/active\\_nh.jsp?which=11&report=active\\_nh.jsp&jumpfrom=#pagetop](https://qcor.cms.gov/active_nh.jsp?which=11&report=active_nh.jsp&jumpfrom=#pagetop)

that adding MFT and MHC services (as necessary) to the patient care policies would take approximately 15 minutes (0.25 hr) for each clinical professional. In aggregate, we estimate an annual burden of 4,143 hours (0.50 hr x 8,268 RHC and FQHCs) at a cost of \$817,631.92 [(2,072 hr x \$274.44/hr) + (2,072/hr x \$120.17/hr)].

**TABLE 65: One-time Burden for Time Spent on Clinics or Centers Updating Patient Care Policies to Include a Description of MFT and MHC Services**

Occupation	Hourly Wage (a)	Time (b)	Number of clinics and centers (c)	Total Time (d)=(b) x (c)	One-time cost estimate (a) x (d)	
Physician	\$274.44/hr	0.25 hr	8,286		2,072	\$568,639.68
Advanced Practice Provider	\$120.17/hr	0.25 hr	8,286		2,072	\$248,992.24
Total:	Varies	0.50 hr	8,286		4,143	\$817,631.92

We did not receive public comments on this provision; and therefore, we are finalizing as proposed.

b. ICRs related to Permitting MFTs and MHCs to Serve as Members of the Interdisciplinary Group (IDG) in Hospices (§ 418.56 and § 418.114)

In section III.O. of this final rule, we will implement subtitle C, section 4121 of the CAA 2023 by conforming changes at § 418.56(a)(1)(iii) that will permit MFTs or MHCs, in addition to social workers, to serve as members of the IDG. The conforming change will require hospices to include one SW, MFT or MHC to serve as a member of the IDG. Hospices will have the flexibility to determine which discipline(s) are appropriate to serve on the IDG. We believe that with the introduction of MFT and MHC into the hospice CoPs, it is important to include these new disciplines into the personnel qualifications at § 418.114.

In this rule we also proposed to add both MFT and MHC to the provider requirements under 42 CFR subpart B (Medical and Other Health Services) at §§ 410.53 and 410.54. Therefore, to avoid duplication and confusion between the CoP and the provider requirements under the Medical and Other Health Services provision, we proposed to add both MFT and MHC

to the requirements at § 418.114(b)(9) and (10) and referencing the new requirement at §§ 410.53 and 410.54, respectively.

In accordance with the implementing regulations of the PRA at 5 CFR 1320.3(b)(2), we believe that both the existing requirements and the revisions to the requirements at §§ 418.56(a)(iii) and 418.114(b)(9) and (10) are exempt from the PRA. We believe permitting hospices the ability to select one of these disciplines (SW, MFT or MHC) to serve as a member of the IDG and the addition of both MFT and MHC to the personnel requirements with reference to the new requirement at §§ 410.53 and 410.54 respectively, is reasonable and customary business practice. We state such in the information collection request that is currently approved under OMB control number: 0938-1067 ((CMS-10277). Therefore, we did not propose to seek OMB's approval for any information collection or recordkeeping activities that may be conducted in connection with the revisions to §§ 418.56(a)(1)(iii) and 418.114(b)(9) and (10), but we requested public comment on our determination that the time and effort necessary to comply with these evaluation requirements is usual and customary and this time and effort would be incurred by hospice staff even absent this regulatory requirement.

The following is a summary of the comments we received and our responses.

*Comment:* A commenter questioned if the hospice would need to document how a decision was made to assign the MFT, MHC, or SW to the patients IDG. They also stated that this may cause additional administrative burden if hospices are required to prove how they chose the MFT, MHC or SW to serve on the patients IDG.

*Response:* We appreciate the clarification question on how the IDG is to show the decision on which provider (MFT, MHC, or SW) to serve as a member of the patients IDG. We have removed the proposed requirement “depending on the needs and preferences of the patient”. Therefore, the hospice will not be required to show the decision on which provider (MFT, MHC, or SW) would serve as a member of the patients IDG. It is important for the hospice to assess and determine, along with the input from the patient and family, which care and services best

align with the needs of the patient. Therefore, we expect that the hospice would include the patient's needs as part of the patient assessment and care planning process. This information would be included in the patients' medical record and discussed at the IDG team meeting just as other important care aspects are discussed and documented by the IDG, including any changes to care delivery. We believe the IDG documentation is reasonable and customary business practice, therefore no additional burden on the provider.

After consideration of public comments on this provision, we are finalizing § 418.56 with one modification of the proposed language. We are deleting "depending on the needs and preferences of the patient." The inclusion of an MFT and MHC as members of the hospice IDG helps to accommodate the patient's needs. We believe that this action strengthens our response to the need for increased access to behavioral and mental health services.

#### 9. RFI: Histopathology, Cytology, and Clinical Cytogenetics Regulations under the Clinical Laboratory Improvement Amendments (CLIA) of 1988

Please note that this is an RFI only. In accordance with the implementing regulations of the Paperwork Reduction Act of 1995 (PRA), specifically 5 CFR 1320.3(h)(4), this general solicitation is exempt from the PRA. Facts or opinions submitted in response to general solicitations of comments from the public, published in the **Federal Register** or other publications, regardless of the form or format thereof, provided that no person is required to supply specific information pertaining to the commenter, other than that necessary for self-identification, as a condition of the agency's full consideration, are not generally considered information collections and therefore not subject to the PRA.

This RFI is issued solely for information and planning purposes; it does not constitute a Request for Proposal, applications, proposal abstracts, or quotations. This RFI does not commit the U.S. Government to contract for any supplies or services or make a grant award. Further, we did not seek proposals through this RFI and will not accept unsolicited proposals. Responders are advised that the U.S. Government will not pay for any information or administrative costs

incurred in response to this RFI; all costs associated with responding to this RFI will be solely at the interested party's expense. We noted that not responding to this RFI does not preclude participation in any future procurement, if conducted. It is the responsibility of the potential responders to monitor this RFI announcement for additional information pertaining to this request. In addition, we noted that we will not respond to questions about the policy issues raised in this RFI.

We will actively consider all input as we develop future regulatory proposals or future subregulatory policy guidance. We may or may not choose to contact individual responders. Such communications would be for the sole purpose of clarifying statements in the responders' written responses. Contractor support personnel may be used to review responses to this RFI. Responses to this notice are not offers and cannot be accepted by the U.S. Government to form a binding contract or issue a grant. Information obtained as a result of this RFI may be used by the Government for program planning on a non-attribution basis. Respondents should not include any information that might be considered proprietary or confidential. This RFI should not be construed as a commitment or authorization to incur cost for which reimbursement will be required or sought. All submissions become U.S. Government property and will not be returned.

## 10. Basic Health Program (BHP) Provisions

### a. Information Collection Requirements (ICRs)

We did not receive any public comments on the collection of information requirements for the BHP provisions; and therefore, we are finalizing as proposed. The following finalized provisions will be submitted to OMB for approval under OMB control number 0938-1218 (CMS-10510).

#### (1) ICRs Regarding the BHP Blueprint (§ 600.125)

We finalized at § 600.125(a)(1) through (3) that Blueprint revisions must be submitted to reflect: (1) changes in Federal laws, regulations, policy interpretations or court decisions that

affect provisions in the certified Blueprint; (2) significant changes that alter core program operations or the BHP benefit package; or (3) changes to enrollment, disenrollment, and verification policies described in the certified Blueprint. We noted that only § 600.125(a)(1) is a new requirement. The requirements under § 600.125(a)(2) and (3) are existing. We finalized at § 600.125(b) that a State may submit revisions to its certified Blueprint at any time within the same quarter of the proposed effective date of revised Blueprint. We finalized at § 600.125(c) that HHS must review the revised Blueprint within 90 calendar days or provide the State written notice of disapproval or additional information it needs to make a final determination.

We estimated that, on average, a State operating a BHP will submit one revised Blueprint in response to § 600.125(a)(1) annually. Because only two States are currently certified to operate a BHP, we provided the burden estimate for two States. We estimated that the provision under § 600.125(a)(1) will increase State burden. We estimated that the provisions under § 600.125(b) and (c) will have no impact on State burden. We estimated that, on average, it will take a State 4 additional hours at \$80.08/hr for a Business Operations Specialist and 2 additional hours at \$118.14/hr for a General Manager to meet the new Blueprint requirements under § 600.125(a)(1). In aggregate, we estimated an increased burden of 12 hours (2 States x 6 hr/State) at a cost of \$1,113 [2 States x ((4 hr x \$80.08/hr) + (2 hr x \$118.14/hr))]. We noted that this cost will be incurred 100 percent by the State, as Federal BHP funds cannot be used for program administration.

## (2) ICRs Regarding the Operation of a BHP (§§ 600.145(a), 600.145(f)(2), and 600.330(f))

We finalized at § 600.145(a) that a State must implement its BHP in accordance with: (1) the approved and full certified State BHP Blueprint; or (2) the approved suspension application (see ICR section 3 below).

We finalized at § 600.145(f)(2) that the State operating a BHP must perform eligibility and health services appeals as specified in § 600.335.

The ongoing burden associated with the requirements under § 600.145 is the time and

effort it would take each participating State to perform the recordkeeping and reporting portions of the core operating functions of a BHP including eligibility determinations and appeals as well as enrollment and disenrollment, health plan contracting, oversight and financial integrity, consumer assistance, and if necessary program termination or suspension.

Because only two States are currently certified to operate a BHP, we provided the burden estimate for two States. We estimated that it would take a business operations specialist 4 additional hours at \$80.08/hr to meet these new recordkeeping and reporting requirements for health services appeals. In aggregate, we estimated an increased burden of 8 hours (2 States x 4 hr/response) at a cost of \$641 (2 States x 4 hr x \$80.08/hr). We noted that this cost will be incurred 100 percent by the State, as Federal BHP funds cannot be used for program administration.

We finalized at § 600.330(f), BHP eligibility notices must be written in plain language and be provided in a manner which ensures individuals with disabilities are provided with effective communication and takes steps to provide meaningful access to eligible individuals with limited English proficiency. These notices must be developed and processed in a coordinated fashion with other insurance affordability programs which have the same accessibility standards at 45 CFR 155.230(b). As such, we estimated no additional burden for the BHP for the noticing requirement.

### (3) ICRs Regarding Suspension of a BHP (§§ 600.140(b) and 600.170(a)(2))

We finalized at § 600.140(b)(1) if a State decides to suspend its BHP or requests a suspension extension, a State must submit to the Secretary a suspension application or suspension extension application. We finalized at § 600.140(b)(3) that a State must submit written notices to all BHP enrollees and participating standard health plan offers at least 90 days prior to the effective date of the suspension. We finalized at § 600.140(b)(4) that the State must submit to HHS within 12 months of the suspension effective date the data required by § 600.610 needed to complete the financial reconciliation process with HHS. We finalized at

§ 600.140(b)(5) that the State must submit the annual report required by § 600.170(a)(2). We finalized at § 600.140(b)(6) that the State must annually remit to HHS any interest that has accrued on the balance of the BHP trust fund during the suspension period. We finalized at § 600.140(b)(7) that the State must submit a transition plan to HHS that describes how the State will reinstate its BHP or terminate the program.

Two States are currently certified to operate a BHP; therefore, we provided the burden estimate for two States.

We estimated that, on average, it will take a Business Operations Specialist 30 hours at \$80.08/hr and a General Manager 4 hours at \$118.14/hr to submit a suspension application to the Secretary. In aggregate, we estimated a one-time burden of 68 hours (2 States x 34 hr/response) at a cost of \$5,780 [2 States x ((30 hr x \$80.08/hr) + (4 hr x \$118.14/hr))]. We estimated that, on average, it will take a Business Operations Specialist 30 hours at \$80.08/hr and a General Manager 4 hours at \$118.14/hr to submit a suspension extension application to the Secretary. In aggregate, we estimated a one-time burden of 68 hours (2 States x 34 hr/response) at a cost of \$5,780 [2 States x ((30 hr x \$80.08/hr) + (4 hr x \$118.14/hr))].

We estimated that, on average, it will take a Business Operations Specialist 32 hours at \$80.08/hr to prepare and submit notification to all participating standard health plans and enrollees. In aggregate, we estimated a one-time burden of 64 hours (2 States x 32 hr/response) at a cost of \$5,125 [2 States x (32 hr x \$80.08/hr)].

We estimated that it would take a Business Operations Specialist 25 hours at \$80.08/hr and a General Manager 4 hours at \$118.14/hr to compile and submit data required for quarterly financial reconciliation. In aggregate, we estimated an annual burden of 232 hours (2 States x 29 hr/response x 4 responses/yr) at a cost of \$19,796 [2 States x 4 responses/yr ((25 hr x \$80.08/hr) + (4 hr x \$118.14/hr))].

We estimated that, on average, it will take a Financial Specialist 8 hours at \$88.74/hr to remit annually the interest accrued on the balance of the BHP trust fund while in suspension. In

aggregate, we estimated an annual burden of 16 hours (2 States x 8 hr/response) at a cost of \$1,420 [2 States x (8 hr x \$88.74/hr)].

We estimated that it will take a Business Operations Specialist 20 hours at \$80.08/hr and a General Manager 4 hours at \$118.14/hr to submit a transition plan to reinstate its BHP or terminate the program. In aggregate, we estimated a one-time burden of 48 hours (2 States x 24 hr/response) at a cost of \$4,148 [2 States x ((20 hr x \$80.08/hr) + (4 hr x \$118.14/hr))].

We estimated that, on average, it will take a Business Operations Specialist 40 hours at \$80.08/hr and 4 hours at \$118.14/hr for a General Manager to complete and submit the State's annual report, for a total annual burden of 88 hours at a cost of \$7,352 [2 States x ((40 hr x \$80.08/hr) + (4 hr x \$118.14/hr))]. We noted that these costs will be incurred 100 percent by the State, as Federal BHP funds cannot be used for program administration.

b. Burden Summary

**TABLE 66: Summary of Requirements and Burden Estimates**

Regulation Section(s)/ ICR Provision	OMB Control No./ CMS-ID	Year	Number of Respondents	Number of Responses	Time per Response (hrs)	Total Time (hr)	Hourly Labor Rate (\$/hr)	Total Labor Cost (\$)	State Share (\$)	Total Beneficiary Cost (\$)

11. The Quality Payment Program (QPP) (42 CFR part 414 and section IV. of this final rule)

The following QPP-specific ICRs reflect changes to our currently approved burden due to policy changes in this CY 2024 final rule as well as adjustments to the policies that have been previously finalized in the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77008 and 82 FR 53568, respectively), CY 2019, CY 2020, CY 2021, CY 2022, and CY 2023 PFS final rules (83 FR 59452, 84 FR 62568, 85 FR 84472, 86 FR 64996, and 87 FR 70131, respectively) due to revised assumptions based on updated data available at the time of the publication of this final rule.

## a. Background

### (1) ICRs Associated with Merit-based Incentive Payment System (MIPS) and Advanced Alternative Payment Models (APMs)

In the following sections, we discuss a series of ICRs associated with the Quality Payment Program, including for MIPS and Advanced APMs. The following sections describe the changes in the estimated burden for the information collections relevant to the policies discussed in the CY 2024 PFS final rule and the revisions to our currently approved information requests for MIPS and Advanced APM ICRs. The estimated burden will be submitted to OMB under control number 0938-1314 (CMS-10621). The estimated burden for the CAHPS for MIPS Survey discussed in sections V.B.11.c.(5), V.B.11.e.(8), and V.B.11.e.(9) of this rule was submitted under OMB control number 0938-1222 (CMS-10450). We noted that we have received approvals for the collection of information associated the virtual group election process under OMB control number 0938-1343 (CMS-10652).

### (2) Summary of Changes for the Quality Payment Program: MIPS

We have included the change in the estimated burden for the CY 2024 performance period/2026 MIPS payment year due to the policies and information collections in this final rule. The policies in this final rule impact the burden estimates for the CY 2024 performance period/2026 MIPS payment year.

The following five MIPS ICRs show changes in burden due to the policies in this final rule: (1) Quality performance category data submission by Medicare Part B claims collection type; (2) Quality performance category data submission by qualified clinical data registry (QCDR) and MIPS CQM collection type; (3) Quality performance category data submission by eCQM collection type; (4) MIPS Value Pathways (MVP) quality performance category submission, and (5) MVP registration. In aggregate, we estimate the policies will result in a net decrease in burden of 4,147 hours and \$477,101 for the CY 2024 performance period/2026 MIPS payment year. The remaining changes to our currently approved burden estimates are

adjustments due to the revised burden assumptions based on the updated data available at the time of publication of this final rule. As discussed in section VI.E.23.a.(2) of this final rule, we based our estimates on submission data from the CY 2022 performance period/2024 MIPS payment year.

In the CY 2024 PFS proposed rule (88 FR 52636), we proposed to add two new ICRs, “QCDR full self-nomination process” and “qualified registry full self-nomination process” to distinctly capture the burden for the number of QCDRs and qualified registries submitting applications for the simplified and full self-nomination process. We noted that the addition of these ICRs is not due to finalizing the policies discussed in section IV.A.4.k. of this final rule. It is a change in our approach in representing the estimated burden for the third-party intermediary self-nomination process due to availability of updated data. We discuss the details of these changes in sections V.B.11.c.(2) and V.B.11.c.(3) of this final rule.

We proposed to remove one ICR, “nomination of Promoting Interoperability measures,” in the CY 2024 PFS proposed rule (88 FR 52636). We note that the removal of the ICR is not due to finalizing the policies discussed in section IV.A.4.f.(4) of this final rule. It is due to a consistent decline in the number of submissions received for the ICR.

We did not propose any changes or adjustments to the following ICRs (88 FR 52636): Registration for virtual groups; OAuth credentialing and token request process; Quality Payment Program identity management application process; subgroups registration; nomination of MVPs; and opt-out of performance data display on Compare Tools for voluntary participants. We note that we have received updated data for this final rule and adjusted the estimated burden as applicable. See section V.B.11. of this final rule for a summary of the ICRs, the overall burden estimates, and a summary of the assumption and data changes affecting each ICR.

The accuracy of our estimates of the total burden for data submission under the quality, Promoting Interoperability, and improvement activities performance categories may be impacted by two primary factors. First, we are unable to predict with absolute certainty who will be a

Qualifying APM Participant (QP) for the CY 2024 performance period/2026 MIPS payment year. New eligible clinician participants in Advanced APMs who become QPs will be excluded from MIPS reporting requirements and payment adjustments, and as such, are unlikely to report under MIPS; while some current Advanced APM participants may end participation such that the APM Entity's eligible clinicians may not be QPs for a year based on § 414.1425(c)(5), and thus be required to report under MIPS. Second, it is difficult to predict whether Partial QPs, who can elect to report to MIPS, will choose to participate in the CY 2024 performance period/2026 MIPS payment year compared to the CY 2022 performance period/2024 MIPS payment year. Therefore, the actual number of Advanced APM participants and how they elect to submit data may be different than our estimates. However, we believe our estimates are the most appropriate given the available data. Additionally, we will continue to update our estimates annually as data becomes available.

### (3) Summary of Quality Payment Program Changes: Advanced APMs

For these ICRs (identified above under, "ICRs Associated with MIPS and Advanced APMs"), we did not implement any changes to currently approved burden estimates for the CY 2024 performance period/2026 MIPS payment year. Therefore, we did not propose any changes to the Partial QP elections; Other Payer Advanced APM identification: Payer Initiated and Eligible Clinician Initiated Processes; and submission of Data for QP determinations under the All-Payer Combination Option (88 FR 52636).

### (4) Framework for Understanding the Burden of MIPS Data Submission

Because of the wide range of information collection requirements under MIPS, Table 67 presents a framework for understanding how the organizations permitted or required to submit data on behalf of clinicians vary across the types of data, and whether the clinician is a MIPS eligible clinician or other eligible clinician voluntarily submitting data, MIPS APM participant, or an Advanced APM participant. In Table 67, MIPS eligible clinicians and other clinicians voluntarily submitting data to MIPS may submit data as individuals, groups, or virtual groups for

the quality, Promoting Interoperability, and improvement activities performance categories. Note that virtual groups are subject to the same data submission requirements as groups, and therefore, we will refer only to groups for the remainder of this section, unless otherwise noted. Beginning with the CY 2023 performance period/2025 MIPS payment year, clinicians could also participate as subgroups for reporting measures and activities in an MVP. We note that the subgroup reporting option is not available for clinicians participating in traditional MIPS. We finalized in the CY 2022 PFS final rule that a subgroup reporting measures and activities in an MVP will submit its affiliated group's data for the Promoting Interoperability performance category and in the scenario that a subgroup does not submit its affiliated group's data, the subgroup will receive a zero score for the Promoting Interoperability performance category (86 FR 65413 through 65414).

Because MIPS eligible clinicians are not required to submit any additional information for assessment under the cost performance category, the administrative claims data used to calculate the scores for the cost performance category is not represented in Table 67.

For MIPS eligible clinicians participating in MIPS APMs, the organizations submitting data on behalf of MIPS eligible clinicians will vary between performance categories and, in some instances, between MIPS APMs. We previously finalized in the CY 2021 PFS final rule that the APM Performance Pathway is available for both Accountable Care Organization (ACO) participants and non-ACO participants to submit quality data (85 FR 84859 through 84866). Due to data limitations and our inability to determine who will use the APM Performance Pathway versus the traditional MIPS submission mechanism for the CY 2024 performance period/2026 MIPS payment year, we assume ACO APM Entities will submit data through the APM Performance Pathway, using the CMS Web Interface option, and non-ACO APM Entities will participate through traditional MIPS, thereby submitting as an individual or group rather than as an entity. We also want to note that as finalized in the CY 2022 PFS final rule (86 FR 65259 through 65263), the CMS Web Interface collection type is available through the CY 2024

performance period/2026 MIPS payment year only for clinicians participating in the Shared Savings Program. Per section 1899(e) of the Act, submissions received from eligible clinicians in ACOs are not included in burden estimates for this final rule because quality data submissions to fulfill requirements of the Shared Savings Program are not subject to the PRA.

For the Promoting Interoperability performance category, group TINs may submit data on behalf of eligible clinicians in MIPS APMs, or eligible clinicians in MIPS APMs may submit data individually. Additionally, we finalized the introduction of a voluntary reporting option for APM Entities to report the Promoting Interoperability performance category at the APM Entity level beginning with the CY 2023 performance period/2025 MIPS payment year (87 FR 70087 and 70088). For the improvement activities performance category, we will assume no reporting burden for MIPS APM participants. In the CY 2017 Quality Payment Program final rule, we established that, for MIPS APMs, we compare the requirements of the specific MIPS APM with the list of activities in the improvement activities inventory and score those activities in the same manner that they are otherwise scored for MIPS eligible clinicians (81 FR 77185). Although the policy allows for the submission of additional improvement activities if a MIPS APM Entity receives less than the maximum improvement activities performance category score, to date all MIPS APM Entities have qualified for the maximum improvement activities score. Therefore, we assume that no additional submission will be needed.

Eligible clinicians who attain Partial QP status may incur additional burden if they elect to participate in MIPS, which is discussed in more detail in the CY 2018 Quality Payment Program final rule (82 FR 53841 through 53844).

**TABLE 67: Clinicians or Organizations Submitting MIPS Data on Behalf of Clinicians, by Type of Data and Category of Clinician**

<b>Type of Data Submitted</b>	<b>Category of Clinician</b>
Quality Performance Category	Individual clinician (MIPS eligible, voluntary, opt-in), group, virtual group, subgroup, or APM Entity. Subgroup reporting is only available for clinicians participating in MVP reporting.
Promoting Interoperability Performance Category	Individual clinician (MIPS eligible, voluntary, opt-in), group, virtual group, subgroup, or APM Entity. Each eligible clinician in an APM Entity could report data for the Promoting Interoperability performance category at the individual level, or as part of their group TIN, or under their APM Entity TIN. The burden estimates for this final rule assume group TIN-level reporting.
Improvement Activities Performance Category	Individual clinician (MIPS eligible, voluntary, opt-in), group, virtual group, subgroup, or APM Entity. The burden estimates for this final rule assume no improvement activities performance category reporting burden for APM participants because we assume the MIPS APM model provides a maximum improvement activity score. APM Entities participating in MIPS APMs receive an improvement activities performance category score of at least 50 percent (§ 414.1380) and do not need to submit improvement activities data unless the CMS-assigned improvement activities scores are below the maximum improvement activities score.
Reweighting Applications for extreme and uncontrollable circumstances and significant hardship or other exceptions	Clinicians who submit an application may be eligible for a reweighting of the approved performance category to zero percent under specific circumstances as set forth in § 414.1380(c)(2), including, but not limited to, extreme and uncontrollable circumstances and significant hardship or another type of exception. Certain types of MIPS eligible clinicians are automatically eligible for a zero percent weighting for the Promoting Interoperability performance category as described in § 414.1380(c)(2)(i)(A)(4).
MVP and Subgroup Registration	An MVP participant, as described at § 414.1305, electing to submit data for the measures and activities in an MVP must register. Clinicians who choose to participate as a subgroup for reporting an MVP must also register.
Partial QP Election	Eligible clinicians who attain Partial QP status and choose to participate in MIPS would need to submit a partial QP election form.
Registration for the CAHPS for MIPS Survey	Groups electing to use a CMS-approved survey vendor to administer the CAHPS for MIPS survey must register.
Virtual Group Registration	Virtual groups must register via email. Virtual group participation is limited to MIPS eligible clinicians, specifically, solo practitioners and groups consisting of 10 eligible clinicians or fewer.
APM Performance Pathway	Clinicians in MIPS APMs electing the APM Performance Pathway. The burden estimates for this final rule assume that ACO APM Entities will submit data through the APM Performance Pathway, using the CMS Web Interface option (available through the CY 2024 performance period/2026 MIPS payment year), and non-ACO APM Entities will participate through traditional MIPS, thereby submitting as an individual or group rather than as an APM Entity.

The policies finalized in the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77008 and 82 FR 53568), the CY 2019, CY 2020, CY 2021, CY 2022, and CY 2023 PFS final rules (83 FR 59452, 84 FR 62568, 85 FR 84472, 86 FR 64996, and 87 FR 70131), and

continued in this final rule create some additional data collection requirements not listed in Table 67. These additional data collections, some of which are currently approved by OMB under the control numbers 0938-1314 (Quality Payment Program, CMS-10621) and 0938-1222 (CAHPS for MIPS, CMS-10450), are as follows:

Additional ICRs related to MIPS third-party intermediaries (see sections V.B.11. c. and V.B.11.d. of this final rule):

- Self-nomination of new and returning QCDRs (81 FR 77507 through 77508, 82 FR 53906 through 53908, and 83 FR 59998 through 60000) (OMB 0938-1314).
- Self-nomination of new and returning qualified registries (81 FR 77507 through 77508, 82 FR 53906 through 53908, and 83 FR 59997 through 59998) (OMB 0938-1314)
- Third party intermediary plan audits
- Approval process for new and returning CAHPS for MIPS survey vendors (82 FR 53908) (OMB 0938–1222).
- Open Authorization Credentialing and Token Request Process (OMB 0938-1314) (85 FR 84969 through 84970).

Additional ICRs related to the data submission and the quality performance category (see section V.B.11.e. of this final rule):

- CAHPS for MIPS survey completion by beneficiaries (81 FR 77509, 82 FR 53916 through 53917, and 83 FR 60008 through 60009) (OMB 0938-1222).
- Quality Payment Program Identity Management Application Process (82 FR 53914 and 83 FR 60003 through 60004) (OMB 0938-1314).

Additional ICRs related to the Promoting Interoperability performance category (see section V.B.11.g. of this final rule):

- Reweighting Applications for Promoting Interoperability and other performance categories (82 FR 53918 and 83 FR 60011 through 60012) (OMB 0938-1314).

Additional ICRs related to call for new MIPS measures and activities (see sections V.B.11.j, V.B.11.f, V.B.11.k., and V.B.11.h. of this final rule):

- Nomination of improvement activities (82 FR 53922 and 83 FR 60017 through 60018) (OMB 0938-1314).

- Call for MIPS quality measures (83 FR 60010 through 60011) (OMB 0938-1314).

- Nomination of MVPs (85 FR 84990 through 84991) (OMB 0938-1314)

- Nomination of Promoting Interoperability measures (83 FR 60014 through 60015)

(OMB 0938-1314)

Additional ICRs related to MIPS (see section V.B.11.o. of this final rule):

- Opt out of performance data display on Compare Tools for voluntary reporters under MIPS (82 FR 53924 through 53925 and 83 FR 60022) (OMB 0938-1314).

Additional ICRs related to APMs (see sections V.B.11.m. and V.B.11.n. of this final rule):

- Partial QP Election (81 FR 77512 through 77513, 82 FR 53922 through 53923, and 83 FR 60018 through 60019) (OMB 0938-1314).

- Other Payer Advanced APM determinations: Payer Initiated Process (82 FR 53923 through 53924 and 83 FR 60019 through 60020) (OMB 0938-1314).

- Other Payer Advanced APM determinations: Eligible Clinician Initiated Process (82 FR 53924 and 83 FR 60020) (OMB 0938-1314).

- Submission of Data for All-Payer QP Determinations (83 FR 60021) (OMB 0938-1314).

b. ICRs Regarding the Virtual Group Election (§ 414.1315)

We did not propose any new or revised collection of information requirements or burden related to the virtual group election for the CY 2024 performance period/2026 MIPS payment year. The virtual group election requirements and burden are currently approved by OMB under

control number 0938-1343 (CMS-10652). Consequently, we are not making any changes under that control number.

c. ICRs Regarding Third Party Intermediaries (§ 414.1400)

The following changes will be submitted to OMB for review under control number 0938-1314 (CMS-10621). As discussed above in section V.B.11.a.(2) of this final rule, we proposed to add two new ICRs, “QCDR simplified self-nomination process” and “qualified registry self-nomination process”, to represent the estimated burden for the third party intermediaries submitting applications for the simplified self-nomination process. We discuss the details of these changes in the below sections.

As discussed in section IV.A.4.k. of this final rule, we are finalizing our proposals to: (1) add requirements for third party intermediaries to obtain documentation of their authority to submit on behalf of a MIPS eligible clinician, group, virtual group, subgroup, or an APM Entity; (2) specify the use of a simplified self-nomination process for existing QCDRs and qualified registries; (3) add requirements for QCDRs and qualified registries to provide measure numbers and identifiers for performance categories; (4) add a requirement for QCDRs and qualified registries to attest that information contained in the qualified posting about them is correct; (5) modify requirements for QCDRs and qualified registries to support MVP reporting to increase flexibility for measures supported; (6) specify requirements for a transition plan for QCDRs and qualified registries withdrawing from the program; (7) specify requirements for data validation audits; (8) add additional criteria for rejecting QCDR measures; (9) add a requirement for QCDR measure specifications to be displayed throughout the performance period and data submission period; (9) eliminate the Health IT vendor category; (10) add failure to maintain updated contact information as criteria for remedial action; (11) revise corrective action plan requirements; (12) allow CMS to terminate third-party intermediaries that are on remedial action for 2 consecutive years; (13) specify the process for publicly posting remedial action; and (14) specify the criteria for audits. In the CY 2024 PFS proposed rule (88 FR 52639), we noted that the policy to

eliminate the health IT vendor category beginning with the CY 2025 performance period/2027 MIPS payment year will not have any impact on the estimated burden for third party self-nomination process in the CY 2024 performance period/2026 MIPS payment year. We discussed that the removal of health IT vendor category beginning with the CY 2025 performance period/2027 MIPS payment year could encourage some existing health IT vendors to complete the requirements under the qualified registry self-nomination process. However, we did not propose any adjustments in the number of qualified registries that will submit applications for the qualified registry self-nomination process during the CY 2024 performance period/2026 MIPS payment year because we believe that many third party intermediaries serve as both health IT vendors and qualified registries for the purposes of submitting data for MIPS eligible clinicians.

We assume that the changes to codify previously finalized preamble language related to third party intermediaries in the regulatory text will result in modifying the regulatory text to reflect previously finalized policies for third party intermediaries or provide additional clarification of the previously finalized policies. We do not expect to receive additional information from QCDRs and qualified registries during the self-nomination process due to finalizing the above policies and therefore, we are not making any adjustments to the currently approved burden estimates for third party intermediaries. We refer readers to section IV.A.4.k. of this rule for additional details on the finalized policies for third party intermediaries. Additionally, we refer readers to section VI.E.23.e.(2)(a) of this rule where we discuss the details in our impact analysis for these policies.

#### (1) Background

Under MIPS, the quality, Promoting Interoperability, and improvement activities performance category data may be submitted via relevant third-party intermediaries, such as qualified registries, QCDRs, and health IT vendors. Data on the CAHPS for MIPS survey, which counts as either one quality performance category measure, or towards an improvement activity, can be submitted via CMS-approved survey vendors. Entities seeking approval to

submit data on behalf of clinicians as a qualified registry, QCDR, or survey vendor must complete a self-nomination process annually.<sup>510</sup> The processes for self-nomination of entities seeking approval as qualified registries and QCDRs are similar with the exception that QCDRs have the option to nominate QCDR measures for approval for the reporting of quality performance category data. Therefore, differences between QCDRs and qualified registry self-nomination are associated with the preparation of QCDR measures for approval.

## (2) QCDR Self-Nomination Applications

As described below in this section, we proposed to separate the burden for the number of QCDR self-nomination applications submitted for the simplified and full self-nomination process for the CY 2024 performance period/2026 MIPS payment year (88 FR 52639 through 52642). In the CY 2023 PFS final rule (87 FR 70137 through 70139), we used the same estimate for the number of respondents that submitted applications for the simplified and full self-nomination process because we did not have separate estimates at the time. Additionally, we only used the burden for the full QCDR self-nomination process in our final burden summary estimates. Due to the availability of updated data and the distinct number of estimated respondents for the simplified and full self-nomination process, we proposed to add a new ICR to capture the burden for the simplified QCDR self-nomination process. We note that the change in estimated burden is not due to finalizing the policies discussed in section IV.A.4.k. of this rule. To accurately represent the estimated burden incurred by the QCDRs for the simplified and full self-nomination process, we discuss the burden under separate ICRs.

As discussed later in this section, we are updating our estimates for the simplified and full QCDR self-nomination process based on the number of applications received during the CY 2023 self-nomination period for the CY 2024 performance period/2026 MIPS payment year. Specifically, we are updating our estimates for: (1) the number of QCDRs that will submit

---

<sup>510</sup> As stated in the CY 2019 PFS final rule (83 FR 59998), health IT vendors are not included in the burden estimates for MIPS.

applications under the simplified and full self-nomination process; (2) the number of measures (existing or borrowed and new measures) submitted by a QCDR; (3) the average time required for a QCDR to submit the measure information; and (4) the time required for the simplified and full QCDR self-nomination process.

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77507 through 77508, and 82 FR 53906 through 53908, respectively), and the CY 2019, CY 2020, CY 2021, CY 2022, and CY 2023 PFS final rules (83 FR 59998 through 60000, 84 FR 63116 through 63121, 85 FR 84964 through 84969, 86 FR 65569 through 65573, and 87 FR 70138 through 70139, respectively) for our previously finalized requirements and estimated burden for self-nomination of QCDRs and nomination of QCDR measures.

(a) Simplified Self-Nomination Process and Other Requirements

Based on updated data for the number of applications received during the CY 2023 QCDR self-nomination period for the CY 2024 performance period/2026 MIPS payment year, we estimate that 44 existing QCDRs will submit applications under the simplified self-nomination process. We continue to estimate that each QCDR will submit 12 measures, on average, however, based on the number of QCDR measure submissions received during the CY 2023 QCDR self-nomination period, we are adjusting our estimates for the number of new and existing or borrowed measures discussed in the CY 2023 PFS final rule (87 FR 70138). We note that we are not revising or adjusting our estimated per response time for a QCDR to submit a new measure (2 hr/response) and an existing or borrowed measure (0.5 hr/ response). For the QCDRs that submit measures for consideration during the self-nomination process, we estimate that we will receive approximately 2 new measures and 10 existing or borrowed measures on average per QCDR. Due to this change, we are also adjusting the estimated weighted average time required for each QCDR to submit a measure from 0.63 hours to 0.75 hours  $(((2 \text{ new measure} \times 2 \text{ hr}) + (10 \text{ existing or borrowed measures} \times 0.5 \text{ hr}))/\text{total \# of measures (12)})$ . We note that we are not making any changes to the currently approved time of 0.5 hours required for

existing QCDRs that do not submit measures under the simplified self-nomination process. For existing QCDRs that submit measures as part of their self-nomination process, due to the estimated decrease in the number of existing or borrowed QCDR measures and an increase in the number of new QCDR measures submitted with the self-nomination application discussed previously in this section, we estimate that it will take 9.5 hours [0.5 hr for the simplified self-nomination process + (12 measures × 0.75 hr/measure for QCDR measure submission)] for a QCDR to submit an application under the simplified self-nomination process. We note that this will result in an overall increase of 1.4 hours from the estimated time the currently approved time of 8.1 hours required for the simplified QCDR self-nomination process (87 FR 70139).

Based on the above assumptions, we provide an estimate of the total annual burden associated with a QCDR self-nominating to be considered “qualified” to submit data on behalf of MIPS eligible clinicians.

As shown in Table 68, we assume that the staff involved in the simplified QCDR self-nomination process will continue to be computer systems analysts or their equivalent who have an average adjusted labor rate of \$103.40/hr. We estimate the burden per response will be \$982.30 (9.5 hr x \$103.40/hr). In aggregate, for the CY 2024 performance period/2026 MIPS payment year, we estimate that the annual burden for the simplified QCDR self-nomination process will be 418 hours (44 responses x 9.5 hr) at a cost of \$43,221 (44 applications x \$982.30/application).

**TABLE 68: Estimated Burden for Simplified QCDR Self-Nomination and QCDR Measure Submission**

<b>Burden and Respondent Descriptions</b>	<b>Burden Estimate</b>
# of Simplified QCDR Self-Nomination Applications submitted (a)	44
Annual Hours Per QCDR for Simplified Process (b)	9.5
Total Annual Hours for Self-nomination (c) = (a) * (b)	<b>418</b>
Cost per Application at Labor Cost for computer systems analysts at \$103.40/hr (d)	\$982.30
Total Annual Cost (e) = (a) * (d)	<b>\$43,221</b>

In Table 69, the addition of this new ICR for the CY 2024 performance period/2026 MIPS payment year will result in an increase of 418 hours at a cost of \$43,221 for the simplified QCDR self-nomination process. We note that the increase in burden is due to separating the estimated burden for the simplified QCDR self-nomination process.

**TABLE 69: Change in Estimated Burden for Simplified QCDR Self-Nomination and QCDR Measure Submission**

<b>Burden and Respondent Descriptions</b>	<b>Burden Estimate</b>
Total Currently Approved Annual Time (hr) (a)	0
Total Annual Time (hr) for Respondents in CY 2024 PFS final rule (b) (See Table 68, row (c))	418
Difference (c) = (b) - (a)	<b>+418</b>
Total Currently Approved Annual Cost (d)	0
Total Annual Cost for Respondents in CY 2024 PFS final rule (e) (See Table 68, row (e))	\$43,221
Difference (f) = (e) - (d)	<b>+\$43,221</b>

We did not receive any comments on our proposed requirements and burden estimates for the simplified QCDR self-nomination process. We note that we adjusted the burden estimates from the CY 2024 PFS proposed rule (88 FR 52639 through 52641) due to the availability of updated data.

**(b) Full QCDR Self-Nomination Process and Other Requirements**

Based on the number of applications that we received during the CY 2023 self-nomination period for the CY 2024 performance period/2026 MIPS payment year, we estimate that 12 new QCDRs would submit applications under the full self-nomination process. This is a decrease of 51 respondents from the currently approved estimate of 63 for the QCDR self-nomination process (87 FR 70139). We continue to estimate that each QCDR will submit 12 measures, on average, however, based on the number of QCDR measure submissions received during the CY 2023 QCDR self-nomination period, we are adjusting our estimates for the number of new and existing or borrowed measures discussed in the CY 2023 PFS final rule (87 FR 70138). We note that we are not revising or adjusting our estimated per response time for a QCDR to submit a new measure (2 hr/response) and an existing or borrowed measure (0.5 hr/response). For the QCDRs that submit measures for consideration during the self-nomination

process, we estimate that we will receive approximately 2 new measures and 10 existing or borrowed measures on average per QCDR. Due to this change, we are also adjusting the estimated weighted average time required for each QCDR to submit a measure from 0.63 hours to 0.75 hours  $[(2 \text{ new measure} \times 2 \text{ hr}) + (10 \text{ existing or borrowed measures} \times 0.5 \text{ hr}) / \text{total \# of measures (12)}]$ . We note that we are not making any changes to the currently approved time of 0.5 hours required for the QCDRs that do not submit measures under the simplified self-nomination process. For new QCDRs that submit measures as part of their self-nomination process, due to the estimated decrease in the number of existing or borrowed QCDR measures and an increase in the number of new QCDR measures submitted with the self-nomination application discussed above, we estimate that it will take 11.5 hours  $[2.5 \text{ hr for the full self-nomination process} + (12 \text{ measures} \times 0.75 \text{ hr/measure for QCDR measure submission})]$  for a QCDR to submit an application under the full self-nomination process. We note that this will result in an overall increase of 1.4 hours from the estimated time the currently approved time of 10.1 hours required for the full QCDR self-nomination process (87 FR 70139).

Based on the above assumptions, we provide an estimate of the total annual burden associated with a QCDR self-nominating to be considered “qualified” to submit data on behalf of MIPS eligible clinicians.

In Table 70, we assume that the staff involved in the full QCDR self-nomination process will continue to be computer systems analysts or their equivalent who have an average adjusted labor rate of \$103.40/hr. We estimate the burden per response would be \$1,189.10  $(11.5 \text{ hr} \times \$103.40/\text{hr})$ . In aggregate, for the CY 2024 performance period/2026 MIPS payment year, we estimate that the annual burden for the full QCDR self-nomination process will be 138 hours  $(12 \text{ applications} \times 11.5 \text{ hr})$  at a cost of \$14,269  $(12 \text{ applications} \times \$1,189.10/\text{application})$ .

**TABLE 70: Estimated Burden for Full QCDR Self-Nomination and QCDR Measure Submission**

Burden and Respondent Descriptions	Burden Estimate
# of Full QCDR Self-Nomination Applications submitted (a)	12
Annual Hours Per QCDR for Full Process (b)	11.5
Total Annual Hours for Full Self-nomination (c) = (a) * (b)	138
Cost per Application at Labor Cost computer systems analyst at \$103.40/hr (d)	\$1,189.10
Total Annual Cost (e) = (a) * (d)	\$14,269

In Table 71, we use the currently approved burden as the baseline for calculating the net change in burden for the full QCDR self-nomination process. We note that we discussed the estimated burden for the full QCDR self-nomination process under “maximum burden” in Table 108 in the CY 2023 PFS final rule (87 FR 70139). For the CY 2024 performance period/2026 MIPS payment year, the change in the representation of burden for this ICR described above in this section results in a decrease of 498 hours and \$51,524 for the full self-nomination process. We also note that the decrease in burden accounts for the change due to separating the estimated burden based on the simplified and full self-nomination process.

**TABLE 71: Change in Estimated Burden for Full QCDR Self-Nomination and QCDR Measure Submission**

Burden and Respondent Descriptions	Burden Estimate
Total Currently Approved Annual Time (hr) (a)	636
Total Annual Time (hr) for Respondents in CY 2024 PFS final rule (b) (See Table 70, row (c))	138
Difference (c) = (b) - (a)	<b>-498</b>
Total Currently Approved Annual Cost (d)	\$65,793
Total Annual Cost for Respondents in CY 2024 PFS final rule (e) (See Table 70, row (e))	\$14,269
Difference (f) = (e) - (d)	<b>-\$51,524</b>

We did not receive any comments on our proposed requirements and burden estimates for the full QCDR self-nomination process. We note that we adjusted the burden estimates from the CY 2024 PFS proposed rule (88 FR 52641 through 52642) due to the availability of updated data.

(c) QCDR Measure Requirements

In the CY 2017 Quality Payment Program final rule (81 FR 77375 through 77377), we established that QCDRs could submit measures that are not on the annual list of MIPS quality measures as part of the self-nomination process for an entity to become a QCDR.

As discussed in section IV.A.4.k.(4)(b)(i) of this final rule, we are finalizing our proposal to add that the measure being submitted after self-nomination to our list of reasons for rejecting a QCDR measure at § 414.1400(b)(4)(iv)(O). We will not revise or adjust our burden estimates because the policy only clarifies requirements for rejecting a QCDR measure and will not substantively change the estimated average weighted time required for a QCDR to submit information for a QCDR measure at the time of self-nomination.

As discussed in section IV.A.4.k.(4)(b)(ii) of this final rule, we are finalizing our proposal at § 414.1400(b)(4)(iv)(P) that a QCDR measure may be rejected if the QCDR submits more than 30 quality measures not in the annual list of MIPS quality measures for CMS consideration. We will not revise or adjust our burden estimates as result of this change because limiting the number of measures submitted during the QCDR self-nomination process will not substantively change the estimated average weighted time required for a QCDR to submit information for a QCDR measure at the time of self-nomination.

As discussed in section IV.A.4.k.(4)(b)(iv) of this final rule, we are finalizing our proposal to revise § 414.1400(b)(4)(i)(B) to add a provision that the approved QCDR measure specifications must remain published through the performance period and data submission period. We will not revise or adjust our burden estimates as result of this change because establishing a standard for the duration of posting the approved QCDR measure specifications would not substantively change the estimated average weighted time required for a QCDR to submit information for a QCDR measure at the time of self-nomination.

### (3) Qualified Registry Self-Nomination Process and Other Requirements

We refer readers to § 414.1400(b)(2) which states that entities seeking to qualify as a qualified registry for the applicable performance period must complete a self-nomination process to be considered for approval.

As described in the CY 2024 PFS proposed rule, we proposed to separate the burden for the number of qualified registry self-nomination applications submitted for the simplified and full self-nomination process for the CY 2024 performance period/2026 MIPS payment year (88 FR 52642 through 52644). In the CY 2023 PFS final rule (87 FR 70139 through 70140), we used the same estimate for the number of respondents that submitted applications for the simplified and full self-nomination process because we did not have separate estimates at the time. Additionally, we only used the burden for the full qualified registry self-nomination process in our final burden summary estimates. Due to the availability of updated data and the distinct number of estimated respondents for the simplified and full self-nomination process, we proposed to add a new ICR to capture the burden for the qualified registry self-nomination process. We note that the change is not due to finalizing the policies discussed in section IV.A.4.k. of this final rule. With the addition of a new ICR, we believe that we will be able to accurately represent the estimated burden incurred by the qualified registries for both the simplified and full self-nomination process.

(a) Simplified Qualified Registry Self-Nomination Process

Based on the number of applications received during the CY 2023 self-nomination period for the CY 2024 performance period/2026 MIPS payment year, we estimate that 84 qualified registries will submit applications under the simplified self-nomination process. We note that we are not making any changes to the currently approved time of 0.5 hours required for the simplified qualified registry self-nomination process (87 FR 70140).

Based on the above assumptions, we provided an estimate of the total annual burden associated with a qualified registry self-nominating to be considered “qualified” to submit data on behalf of MIPS eligible clinicians.

In Table 72, we assume that the staff involved in the simplified qualified registry self-nomination process will continue to be computer systems analysts or their equivalent, who have an average adjusted labor rate of \$103.40/hr. We estimate the burden per response will be \$51.70 (0.5hr x \$103.40/hr) for the simplified self-nomination process. In aggregate, for the CY 2024 performance period/2026 MIPS payment year, we estimate that the annual burden for the simplified qualified registry self-nomination process will be 42 hours (84 applications x 0.5 hr) at a cost of \$4,343 (84 applications x \$51.70//application).

**TABLE 72: Estimated Burden for Simplified Qualified Registry Self-Nomination**

<b>Burden and Respondent Descriptions</b>	<b>Burden Estimate</b>
# of Simplified Self-Nomination Applications submitted (a)	84
Annual Hours Per Qualified Registry for Simplified Process (b)	0.5
Total Annual Hours for Simplified Self-nomination (c) = (a) * (b)	<b>42</b>
Cost per Application at Labor Cost computer systems analyst at \$103.40/hr (d)	\$51.70
Total Annual Cost (e) = (a) * (d)	<b>\$4,343</b>

In Table 73, the addition of this ICR for the CY 2024 performance period/2026 MIPS payment year will result in a change of +42 hours at a cost of \$4,343 for the simplified qualified registry self-nomination process. We note that the increase in burden is due to separating the estimated burden for the simplified and full qualified registry self-nomination process.

**TABLE 73: Change in Estimated Burden for Simplified Qualified Registry Self-Nomination**

<b>Burden and Respondent Descriptions</b>	<b>Burden Estimate</b>
Total Currently Approved Annual Time (hr) (a)	0
Total Annual Time (hr) for Respondents in CY 2024 PFS final rule (b) (See Table 72, row (c))	42
Difference (c) = (b) - (a)	<b>+42</b>
Total Currently Approved Annual Cost (d)	\$0
Total Annual Cost for Respondents in CY 2024 PFS final rule (e) (See Table 72, row (e))	\$4,343
Difference (f) = (e) - (d)	<b>+\$4,343</b>

We did not receive any comments on our proposed requirements and burden estimates for the simplified qualified registry self-nomination process. We note that we adjusted the burden

estimates from the CY 2024 PFS proposed rule (88 FR 52642 through 52643) due to the availability of updated data.

(b) Full Qualified Registry Self-Nomination Process

Based on the number of applications we received during the CY 2023 self-nomination period for the CY 2024 performance period/2026 MIPS payment year, we estimate that 27 qualified registries will submit applications under the full self-nomination process. This is a decrease of 105 from the currently approved estimate of 132 for the qualified registry self-nomination process (87 FR 70140). We note we are not making any changes to our currently approved per response time estimate of 2 hours for the full qualified registry self-nomination process (87 FR 70139 through 70140).

Based on the assumptions discussed in this section, we provide an estimate of the total annual burden associated with a qualified registry self-nominating to be considered “qualified” to submit data on MIPS eligible clinicians.

In Table 74, we assume the staff involved in the qualified registry self-nomination process will continue to be computer systems analysts or their equivalent, who have an average labor rate of \$103.40/hr. We estimate the burden per response will be \$206.80 (2 x 103.40/hr) for the full self-nomination process. In aggregate, for the CY 2024 performance period/2026 MIPS payment year, we estimate that the annual burden for the full qualified registry self-nomination process will be 54 hours (27 applications x 2 hr) at a cost of \$5,584 (27 applications x \$206.80/application).

**TABLE 74: Estimated Burden for Qualified Registry Full Self-Nomination**

<b>Burden and Respondent Descriptions</b>	<b>Burden Estimate</b>
# of Qualified Registry Full Self-Nomination Applications submitted (a)	27
Annual Hours Per Qualified Registry for Full Process (b)	2
<b>Total Annual Hours for Full Self-Nomination (c) = (a) * (b)</b>	<b>54</b>
Cost per Application at Labor Cost (computer systems analyst’s labor rate of \$103.40/hr) (d)	\$206.80
<b>Total Annual Cost (e) = (a) * (d)</b>	<b>\$5,584</b>

In Table 75, we use the currently approved burden as the baseline for calculating the net change in burden for the simplified qualified registry self-nomination process. We note that we discussed the estimated burden for the full qualified registry self-nomination process under “maximum burden” in Table 110 in the CY 2023 PFS final rule (87 FR 70140). For the CY 2024 performance period/2026 MIPS payment year, the change in the representation of burden for this ICR described above results in a decrease of 210 hours and a decrease of \$21,714 for the full qualified registry self-nomination process. We note the decrease in burden accounts for the changes due to separating the estimated burden based on the simplified and full qualified registry self-nomination process.

**TABLE 75: Change in Estimated Burden for Full Qualified Registry Self-Nomination**

<b>Burden and Respondent Descriptions</b>	<b>Burden Estimate</b>
Total Currently Approved Annual Time (hr) (a)	264
Total Annual Time (hr) for Respondents in CY 2024 PFS final rule (b) (See Table 74, row (c))	54
Difference (c) = (b) - (a)	<b>-210</b>
Total Currently Approved Annual Cost (d)	\$27,298
Total Annual Cost for Respondents in CY 2024 PFS final rule (e) (See Table 74, row (e))	\$5,584
Difference (f) = (e) - (d)	<b>-\$21,714</b>

We did not receive any comments on our proposed requirements and burden estimates for the full qualified registry self-nomination process. We note that we adjusted the burden estimates from the CY 2024 PFS proposed rule (88 FR 52643 through 52644) due to the availability of updated data.

#### (4) Third Party Intermediary Plan Audits

The following changes associated with developing the plans and audits by QCDRs and

qualified registries will be submitted to OMB for review under control number 0938-1314 (CMS-10621).

(a) Targeted Audits

In the CY 2022 PFS final rule (86 FR 65547 through 65548), we finalized that beginning with the CY 2021 performance period/CY 2023 MIPS payment year, the QCDR or qualified registry must conduct targeted audits in accordance with requirements at § 414.1400(b)(3)(vi). Consistent with our assumptions in the CY 2022 PFS and CY 2023 PFS final rules for the QCDRs (86 FR 65574 and 87 FR 70141 respectively) and qualified registries (86 FR 65571 and 87 FR 70141 respectively) that would submit the results of targeted audits, we estimate the time required for a QCDR or qualified registry to submit a targeted audit ranges between 5 and 10 hours for the simplified and full self-nomination process, respectively. We assume the staff involved in submitting the targeted audits will continue to be computer systems analysts or their equivalent, who have an average labor rate of \$103.40/hr.

Based on the number of data validation execution reports submitted for the CY 2022 performance period/2024 MIPS payment year, we estimate that 29 third party intermediaries will submit targeted audits for the CY 2024 performance period/2026 MIPS payment year (See Table 76). We estimate that the cost for a QCDR or a qualified registry to submit a targeted audit will range from \$517 (5 hr x \$103.40/hr) to \$1,034 (10 hr x \$103.40/hr). In aggregate, we estimate an annual burden ranging from 145 hours (29 responses × 5 hr/audit) and \$14,993 (29 targeted audits x \$517/audit) to 290 hours (29 responses × 10 hr/audit) and \$29,986 (29 targeted audits x \$1,034/audit) (see Table 77 for the cost per audit).

(b) Participation Plans

In the CY 2022 PFS final rule (86 FR 65546), we finalized requirements for approved QCDRs and qualified registries that did not submit performance data and therefore will need to submit a participation plan as part of their self-nomination process. We refer readers to

§ 414.1400(e) for additional details on policies for remedial action and termination of third party intermediaries.

In the CY 2023 PFS final rule, we estimated that it will take 3 hours for a QCDR or qualified registry to submit a participation plan (87 FR 70141). We found that we overestimated the time required to submit a participation plan and therefore, are revising our estimate that it would take 2 hours for a QCDR or qualified registry to submit a participation plan. We assume the staff involved in submitting a participation plan will continue to be computer systems analysts or their equivalent, who have an average labor rate of \$103.40/hr.

As shown in Table 76, following additional review of the MIPS data submission reports, we estimate that 64 third party intermediaries will submit participation plans for the CY 2024 performance period/2026 MIPS payment year.

In Table 77, we estimate that the cost for a QCDR or a qualified registry to submit a participation plan is \$206.80 (2 hours x \$103.40/hr). In aggregate, we estimate the total impact associated with QCDRs and qualified registries to submit participation plans would be 128 hours (64 participation plans × 2 hr/plan) at a cost of \$13,235 (64 participation plans x \$206.80/plan) (see Table 77 for the cost per audit).

(c) Corrective Action Plans (CAPs)

In the CY 2017 Quality Payment Program final rule, we established the process for corrective action plans (CAPs) (81 FR 77386 through 77389). As discussed in section IV.A.4.k.(6)(b) of this final rule, we are finalizing our proposal an additional provision at § 414.1400(e)(2)(iv) to allow us to immediately or with advance notice terminate a third party intermediary that has not maintained current contact information for correspondence. Additionally, we are finalizing to add at § 414.1400(e)(2)(v) that CMS may terminate third party intermediaries that are on remedial action for 2 consecutive years. We are not making any changes to our currently approved estimated burden due to these finalized policies because these

changes provide additional rationale for remedial action policies and do not add any additional requirements for third party intermediaries.

Based on the increased number of QCDR and qualified registries that required remedial actions for the CY 2022 performance period/2024 MIPS payment year, we anticipate the same trend would continue for the CY 2024 performance period/2026 MIPS payment year. Therefore, we estimate 24 third party intermediaries will submit CAPs for the CY 2024 performance period/2026 MIPS payment year. This is an increase of 14 respondents from the currently approved estimate of ten (87 FR 70142). We are not changing our currently approved estimate of 3 hours for a QCDR or qualified registry to submit a CAP. We also assume the staff involved in submitting the CAP will continue to be computer systems analysts or their equivalent, who have an average labor rate of \$103.40/hr. As shown in Table 77, we estimate that the cost for a QCDR or a qualified registry to submit a CAP is \$310.20 (3 hours x \$103.40/hr). In aggregate, we estimate the total impact associated with QCDRs and qualified registries to CAPs will be 72 hours (24 CAPs × 3 hr/plan) at a cost of \$7,445 (24 CAPs x \$310.20/plan).

#### (d) Transition Plans

We established a policy at § 414.1400(a)(2)(F) which states a condition of approval for the third party intermediary is to agree that prior to discontinuing services to any MIPS eligible individual clinician, group, virtual group, subgroup, or APM Entity during a performance period, the third party intermediary must support the transition of such MIPS eligible clinician, group, virtual group, subgroup, or APM Entity to an alternate third party intermediary, submitter type, or, for any measure on which data has been collected, collection type according to a CMS approved transition plan. In this final rule, we estimate that we will receive nine transition plans for the CY 2024 performance period/2026 MIPS payment year. This adjustment will result in a decrease of one from the currently approved estimate of 10 (87 FR 70142). We continue to estimate it will take approximately 1 hour for a computer system analyst or their equivalent at a labor rate of \$103.40/hr to develop a transition plan on behalf of each QCDR or qualified

registry during the self-nomination period. However, we are unable to estimate the burden for implementing the actions in the transition plan because the level of effort may vary for each QCDR or qualified registry. In aggregate, we estimate the impact associated with qualified registries completing transition plans is 9 hours (9 transition plans × 1 hr/plan) at a cost of \$931 (9 transition plans × \$103.40/hr). We refer readers to section VI.E.23.e.(2)(a) of this final rule where we discuss our impact analysis for the transition plans submitted by QCDRs and qualified registries.

As discussed in section IV.A.4.k.(6)(c) of this final rule, we are finalizing our proposal to add an additional requirement at § 414.1400(e)(1)(i)(F) for the QCDR or qualified registry under a corrective action plan to communicate the final resolution to CMS once the resolution is complete and to provide an update, if any, to the monitoring plan provided under § 414.1400(e)(1)(i)(C). We believe the revision will ensure third party intermediaries complete the requirements within the communication plan and will not add any additional requirements for a third-party intermediary to submit a CAP.

As discussed in section IV.A.4.k.(6)(d) of this rule, we are finalizing our proposal to add a new provision at § 414.1400(e)(1)(ii)(B) that CMS may, beginning with the CY 2025 performance period/2027 MIPS payment year, publicly disclose on the CMS website that CMS took remedial action against or terminated the third party intermediary. We are also finalizing to modify § 414.1400(e)(1)(ii) by redesignating it as § 414.1400(a)(2)(ii)(A) and ending the policy after the CY 2025 MIPS reporting period/CY 2027 MIPS payment year.

As discussed in section IV.A.4.k.(6)(e) of this final rule, we are finalizing our proposal to clarify the previously established policy under § 414.1400(a)(2)(ii)(A) to state that our consideration can include past compliance including remedial actions. We are also finalizing at § 414.1400(f) that third party intermediaries may be randomly selected for compliance evaluation or may be selected at the suggestion of CMS if there is an area of concern regarding the third party intermediary. We are also finalizing to redesignate the existing section

§ 414.1400(f) (which includes paragraphs (f)(1), (2), and (3)) as paragraph (a)(3)(vii) with minor changes in the text for clarity.

We do not expect to receive additional information from QCDRs and qualified registries during the self-nomination process due to finalizing the above policies and therefore, are not making any adjustments to the currently approved burden estimates for third party intermediary plan audits. Additionally, we refer readers to section VI.E.23.e.(2)(a) of this final rule where we outline the details in our impact analysis for these policies.

(e) Final Burden for Third Party Intermediary Plan Audits

In aggregate, as shown in Table 76, we assume that 126 third party intermediaries will submit plan audits (29 targeted audits, 64 participation plans, 24 CAPs, and 9 transition plans).

**TABLE 76: Estimated Number of Respondents to Submit Plan Audits**

<b>Burden and Respondent Descriptions</b>	<b># of Respondents</b>
# of Targeted Audits (a)	29
# of Participation Plans (b)	64
# of Corrective Action Plans (CAPs) (c)	24
# of Transition Plans (d)	9
<b>Total Respondents (e) = (a) + (b) + (c) + (d)</b>	<b>126</b>

As shown in in Table 77, we assume that the staff involved in the submission of the plan audits during the third party intermediary self-nomination process will continue to be computer systems analysts or their equivalent, who have an average labor rate of \$103.40/hr. For the CY 2024 performance period/2026 MIPS payment year, in aggregate, the estimated annual burden for the submission of third party intermediary plan audits will range from 354 hours to 499 hours at a cost ranging from \$36,604 (354 hr x \$103.40 /hr) and \$51,597 (499 hr x \$103.40 /hr).

**TABLE 77: Estimated Burden for Third Party Intermediary Plan Audits**

<b>Burden and Respondent Descriptions</b>	<b>Simplified Process</b>	<b>Full Process</b>
# of Hours per Completion of Targeted Audit (a)	5	10
<b>Total Annual Hours for Completion of 29 Targeted Audits (b)</b>	<b>145</b>	<b>290</b>
# of Hours per Submission of Participation Plan (c)	2	2
<b>Total Annual Hours for Submission of 64 Participation Plans (d)</b>	<b>128</b>	<b>128</b>
# of Hours per Submission CAP (e)	3	3
<b>Total Annual Hours for Submission of 24 CAPs (f)</b>	<b>72</b>	<b>72</b>
# of Hours per Submission of Transition Plan (g)	1	1
<b>Total Annual Hours for Submission of 9 Transition Plans (h)</b>	<b>9</b>	<b>9</b>
<b>Total Annual Hours for Submission of Plan Audits (i) = (b) + (d) + (f) + (h)</b>	<b>354</b>	<b>499</b>
Cost Per Targeted Audit (@ computer systems analyst's labor rate of \$103.40/hr) (j) = (a) * \$103.40/hr	\$517	\$1,034
Cost Per Participation Plan (@ computer systems analyst's labor rate of \$103.40/hr) (k) = (c) * \$103.40/hr	\$206.80	\$206.80
Cost per CAP (@ computer systems analyst's labor rate of \$103.40/hr) (l) = (e) * \$103.40/hr	\$310.20	\$310.20
Cost per Transition Plan @computer systems analyst's labor rate of \$103.40/hr (m) = (g) * \$103.40/hr	\$103.40	\$103.40
<b>Total Annual Cost (n) = 29 * (j) + 64 * (k) + 24 * (l) + 9 * (m) (simplified) and 29 * (j) + 64 * (k) + 24 * (l) + 9 * (m) (full)</b>	<b>\$36,604</b>	<b>\$51,597</b>

As shown in Table 78, for the CY 2024 performance period/2026 MIPS payment year, the change in the number of respondents for third party intermediary plan audits results in a change of -71 hours at a cost of -\$7,341 under the simplified self-nomination process and -86 hours at a cost of -\$8,892 under the full self-nomination process.

We note for the purposes of calculating estimated change in burden in Tables 109 through 111 of this rule, we use only estimated burden for the plan audits submitted under the full self-nomination process.

**TABLE 78: Change in Estimated Burden for Third Party Intermediary Plan Audits**

<b>Burden and Respondent Descriptions</b>	<b>Simplified Process</b>	<b>Full Process</b>
Total Currently Approved Annual Hours (a)	425	585
Total Annual Hours for Respondents in CY 2024 PFS final rule (b) (See Table 77, row (i))	354	499
<b>Difference (c) = (b) - (a)</b>	<b>-71</b>	<b>-86</b>
Total Currently Approved Annual Cost (d)	\$43,945	\$60,489
Total Annual Cost for Respondents in CY 2024 PFS final rule (e) (See Table 77, row (n))	\$36,604	\$51,597
<b>Difference (f) = (e) - (d)</b>	<b>-\$7,341</b>	<b>-\$8,892</b>

We did not receive any comments on our proposed requirements and burden estimates for the QCDRs and qualified registries submitting plan audits under the self-nomination process. We note that we adjusted the burden estimates from the CY 2024 PFS proposed rule (88 FR 52644 through 52646) due to the availability of updated data.

#### (5) Survey Vendor Requirements

The following changes associated with CAHPS survey vendors to submit data for eligible clinicians will be submitted to OMB for review under control number 0938-1222 (CMS-10450). We noted that the associated burden will be made available for public review and comment under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices.

We refer readers to § 414.1400(d) for the requirements for CMS-approved survey vendors that may submit data on the CAHPS for MIPS Survey.

In the CY 2024 PFS proposed rule, we proposed to adjust the estimated number of currently approved vendors that will apply to participate as CAHPS for MIPS Survey vendors (88 FR 52646 through 52647). We estimated that we will receive approximately 10 survey vendor applications for the CY 2024 performance period/2026 MIPS payment year. This adjustment will result in a decrease of 5 survey vendor applications from our currently approved estimate of 15 vendors in the CY 2018 QPP final rule (82 FR 53908). As shown in Table 79, for the CY 2024 performance period/2026 MIPS payment year, we continue to estimate that the per response time is 10 hours. This will result in an estimated annual burden of 100 hours (10 survey vendor applications x 10 hr/application) at a cost of \$10,340 (10 applications x \$1,034/application).

**TABLE 79: Estimated Burden for Survey Vendor Requirements**

<b>Burden and Respondent Descriptions</b>	<b>Burden Estimate</b>
# of Survey Vendor Applications (a)	10
# of Hours per Computer Systems Analyst (b)	10
<b>Total Annual Hours (c) = (a) * (b)</b>	<b>100</b>
Cost to Submit a Survey Vendor Application (computer systems analyst @ \$103.40/hr) (d)	\$1,034
<b>Total Annual Cost (e) = (a) * (d)</b>	<b>\$10,340</b>

In Table 80, we illustrate the net change in estimated burden for survey vendor requirements using the currently approved burden in the CY 2018 Quality Payment Program final rule (82 FR 53908). In aggregate, using our currently approved per response time estimate, the decrease in the number of respondents participating as CAHPS for MIPS Survey vendors will result in a total annual adjustment of -50 hours (-5 responses x 10 hr/application) at a cost of -\$5,170 (-5 x (10 hr x \$103.40/hr)) for the CY 2024 performance period/2026 MIPS payment year.

**TABLE 80: Change in Estimated Burden for Survey Vendor Requirements**

<b>Burden and Respondent Descriptions</b>	<b>CY 2024 Performance Period</b>
Total Currently Approved Annual Hours (a)	150
Total Annual Hours for Respondents in CY 2024 PFS Final Rule (b) (See Table 79, row(b))	100
<b>Difference (c) = (b) - (a)</b>	<b>-50</b>
Total Currently Approved Annual Cost (d)	\$15,510
Total Annual Cost for Respondents in CY 2024 PFS Final Rule (e) (See Table 79, row (e))	\$10,340
<b>Difference (f) = (e) - (d)</b>	<b>-\$5,170</b>

We did not receive any comments on our proposed requirements and burden estimates for the estimated burden on the requirements for the CAHPS Survey vendors.

d. ICRs Regarding Open Authorization (OAuth) Credentialing and Token Request Process

We did not propose any new or revised collection of information requirements or burden related to the OAuth credentialing and token request process for the CY 2024 performance period/2026 MIPS payment year. The requirements and burden for the OAuth credentialing and token request process are currently approved by OMB under control number 0938–1314 (CMS–

10621). Consequently, we are not making any changes to the burden for the OAuth credentialing and token request process under that control number.

e. ICRs Regarding Quality Data Submission (§§ 414.1318, 414.1325, 414.1335, and 414.1365)

(1) Background

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77502 through 77503 and 82 FR 53908 through 53912, respectively), the CY 2019, CY 2020, CY 2021, CY 2022, and CY 2023 PFS final rules (83 FR 60000 through 60003, 84 FR 63121 through 63124, 85 FR 84970 through 84974, 86 FR 65576 through 65588, and 87 FR 70145 through 70154, respectively) for our previously finalized estimated burden associated with data submission for the quality performance category.

Under our current policies, two groups of clinicians must submit data for the quality performance category under MIPS: those who submit data as MIPS eligible clinicians, and those who submit data voluntarily but are not subject to MIPS payment adjustments. Clinicians are ineligible for MIPS payment adjustments if they are newly enrolled to Medicare; are QPs; are partial QPs who elect to not participate in MIPS; are not one of the clinician types included in the definition for MIPS eligible clinician; or do not exceed the low-volume threshold as an individual or as a group.

(2) Changes and Adjustments to Quality Performance Category Respondents

To determine which QPs should be excluded from MIPS, we used the Advanced APM payment and patient percentages from the APM Participant List for the final snapshot date for the 2021 QP Performance period. From this data, we calculated the QP determinations as described in the Qualifying APM Participant (QP) definition at § 414.1305 for the CY 2024 performance period/2026 MIPS payment year. Due to data limitations, we could not identify specific clinicians who have not yet enrolled in APMs, but who may become QPs in the future for the CY 2024 performance period/2026 MIPS payment year (and therefore will no longer

need to submit data to MIPS); hence, our model may underestimate or overestimate the number of respondents.

In the CY 2024 PFS proposed rule (88 FR 52648), we noted that we continued to use submissions data from the CY 2021 performance period/2023 MIPS payment year to estimate the number of respondents that will submit data for the CY 2024 performance period/2026 MIPS payment year. We note that in this final rule, we have received updated data and therefore, adjusted the estimated number of respondents that will submit data for the CY 2024 performance period/2026 MIPS payment year based on the submissions received for the CY 2022 performance period/2024 MIPS payment year. We refer readers to sections V.B.11.e.(4), V.B.11.e.(5), V.B.11.e.(6), V.B.11.e.7.(a)(i) and V.B.11.e.(7)(a)(iii) of this final rule for additional details.

We assume 100 percent of ACO APM Entities will submit quality data to CMS as required under their models. While we do not believe there is additional reporting for ACO APM entities, consistent with assumptions used in the CY 2021, CY 2022, and CY 2023 PFS final rules (85 FR 84972, 86 FR 65567 and 87 FR 70145), we include all quality data voluntarily submitted by MIPS APM participants at the individual or TIN-level in our respondent estimates. As stated in section V.B.11.a.(4) of this final rule, we assume non-ACO APM Entities will participate through traditional MIPS and submit as an individual or group rather than as an entity. To estimate who will be a MIPS APM participant in the CY 2024 performance period/2026 MIPS payment year, we used the Advanced APM payment and patient percentages from the APM Participant List for the final snapshot date for the 2021 QP performance period. We elected to use this data source because the overlap with the data submissions for the CY 2022 performance period/2024 MIPS payment year enabled the exclusion of Partial QPs that elected to not participate in MIPS and required fewer assumptions as to who is a QP or not. Based on this information, if we determine that a MIPS eligible clinician will not be scored as a

MIPS APM, then their reporting assumption is based on their reporting as a group or individual for the CY 2022 performance period/2024 MIPS payment year.

Our burden estimates for the quality performance category do not include the burden for the quality data that APM Entities submit to fulfill the requirements of their APMs. The associated burden is excluded from this collection of information section but is discussed in the regulatory impact analysis section of this final rule because sections 1899(e) and 1115A(d)(3) of the Act (42 U.S.C. 1395jjj(e) and 1315a(d)(3), respectively) state that the Shared Savings Program and the testing, evaluation, and expansion of Innovation Center models tested under section 1115A of the Act (or section 3021 of the Affordable Care Act) are not subject to the PRA.<sup>511</sup>

For the CY 2024 performance period/2026 MIPS payment year, respondents will have the option to submit quality performance category data via Medicare Part B claims, direct, and log in and upload submission types. We estimated the burden for collecting data via collection type: Medicare Part B claims, QCDR and MIPS CQMs, and eCQMs. Additionally, we captured the burden for clinicians who choose to submit via these collection types for the quality performance category of MVPs. We believe that, while estimating burden by submission type may be better aligned with the way clinicians participate with the Quality Payment Program, it is more important to reduce confusion and enable greater transparency by maintaining consistency with previous rulemaking. In the CY 2019 PFS final rule, we finalized proposals to limit the Medicare Part B claims collection type to small practices beginning with the CY 2019 performance period/2021 MIPS payment year and to allow clinicians in small practices to report Medicare Part B claims as a group or as individuals (83 FR 59752).

Because MIPS eligible clinicians may submit data for multiple collection types for a single performance category, the estimated numbers of individual clinicians and groups to collect

---

<sup>511</sup> Our estimates do reflect the burden on MIPS APM participants of submitting Promoting Interoperability performance category data, which is outside the requirements of their APMs.

via the various collection types are not mutually exclusive and reflect the occurrence of individual clinicians or groups that collected data via multiple collection types during the CY 2022 performance period/2024 MIPS payment year. We captured the burden of any eligible clinician that may have historically collected via multiple collection types, as we assume they will continue to collect via multiple collection types and that our MIPS scoring methodology will take the highest score where the same measure is submitted via multiple collection types.

Table 81 uses methods similar to those described above to estimate the number of MIPS eligible clinicians that will submit data as individual clinicians via each collection type in the CY 2024 performance period/2026 MIPS payment year. For the CY 2024 performance period/2026 MIPS payment year, we estimate that approximately 13,413 clinicians will submit data as individuals using the Medicare Part B claims collection type; approximately 10,682 clinicians will submit data as individuals using MIPS CQM and QCDR collection type; and approximately 22,897 clinicians will submit data as individuals using eCQMs collection type. Based on performance data from the CY 2022 performance period/2024 MIPS payment year, these are adjustments of -1,323, -776, and 4,535 respondents from the currently approved estimates of 14,736, 11,458, and 18,362 for the Medicare Part B claims, MIPS CQM and QCDR, and eCQM collection types, respectively.

**TABLE 81: Estimated Number of Clinicians Submitting Quality Performance Category Data as Individuals by Collection Type**

<b>Burden and Respondent Description</b>	<b>Medicare Part B Claims</b>	<b>QCDR/ MIPS CQM</b>	<b>eCQM</b>	<b>Total</b>
2024 MIPS performance period (excludes QPs) (a)	15,597	12,421	26,624	54,642
MVP Adjustment @ 14% (b) = (a)* 0.14	-2,184	-1,739	-3,727	-7,650
<b>2024 MIPS Performance Period (excludes QPs and Adjusted for MVP) (c)= (a) – (b)</b>	<b>13,413</b>	<b>10,682</b>	<b>22,897</b>	<b>46,992</b>
**Currently approved 2023 MIPS Performance Period (excludes QPs) (d)	14,736	11,458	18,362	44,556
<b>Difference (e) = (c) – (d)</b>	<b>-1,323</b>	<b>-776</b>	<b>4,535</b>	<b>2,436</b>

\* We estimate 14 percent of clinicians will participate in MVP reporting as discussed in section V.11.e.(7) of this rule.

\*\*Currently approved by OMB under control number 0938-1314 (CMS-10621).

Consistent with the policy finalized in the CY 2018 Quality Payment Program final rule that for MIPS eligible clinicians who collect measures via Medicare Part B claims, MIPS CQM, eCQM, or QCDR collection types and submit more than the required number of measures (82 FR 53735 through 54736), we will score the clinician on the required measures with the highest assigned measure achievement points and thus, the same clinician may be counted as a respondent for more than one collection type. Therefore, our columns in Table 81 are not mutually exclusive.

Table 82 provides our estimates for the number of groups or virtual groups that will submit quality data on behalf of clinicians for each collection type in the CY 2024 performance periods/2026 MIPS payment year. We assume clinicians who submitted quality data as groups in the CY 2022 performance period/2024 MIPS payment year will continue to submit data for the quality performance category either as groups, or virtual groups for the same collection types for the 2024 performance period/2026 MIPS payment years. We used the same methodology described in the CY 2022 PFS final rule (86 FR 65577) on our assumptions related to the use of an alternate collection type for groups that submitted data via the CMS Web Interface collection type for the CY 2022 performance period/2024 MIPS payment year.

As shown in Table 82, for the CY 2024 performance period/2026 MIPS payment year, we estimate that 5,950 groups and virtual groups will submit data for the MIPS CQM and QCDR collection type and 5,817 groups and virtual groups will submit for the eCQM collection type. These are adjustments of -508 and 290 respondents from the currently approved estimates of 6,458, and 5,527 for the groups and virtual groups that will submit data using MIPS CQM and QCDR, and eCQM collection types, respectively.

**TABLE 82: Estimated Number of Groups and Virtual Groups Submitting Quality Performance Category Data by Collection Type**

<b>Burden and Respondent Description</b>	<b>Medicare Part B Claims</b>	<b>QCDR/ MIPS CQM</b>	<b>eCQM</b>	<b>Total</b>
2024 MIPS performance period (excludes QPs) (a) prior to adjustments	0	6,918	6,764	13,682
Adjustment for MVPs (14%) (b) = (a) * 0.14	0	-968	-947	-1,915
<b>2024 MIPS performance period (excludes QPs and) Adjusted for MVP). (c) = (a) – (b)</b>	0	<b>5,950</b>	<b>5,817</b>	<b>11,767</b>
**Currently approved 2023 MIPS performance period (excludes QPs) (d)	0	6,458	5,527	11,985
Difference (e) = (c) - (d)	0	<b>-508</b>	<b>290</b>	<b>-218</b>

\* We estimate 14 percent of clinicians will participate in MVP reporting as discussed in section V.B.11.e.7. of this rule.

\*\*Currently approved by OMB under control number 0938-1314 (CMS-10621).

The burden associated with the submission of quality performance category data has some limitations. We believe it is difficult to quantify the burden accurately because clinicians and groups may have different processes for integrating quality data submission into their practices' workflows. Moreover, the time needed for a clinician to review quality measures and other information, select measures applicable to their patients and the services they furnish, and incorporate the use of quality measures into the practice workflows is expected to vary along with the number of measures that are potentially applicable to a given clinician's practice and by the collection type. For example, clinicians submitting data via the Medicare Part B claims collection type need to integrate the capture of quality data codes for each encounter whereas clinicians submitting via the eCQM collection types may have quality measures automated as part of their Electronic Health Record (EHR) implementation.

We believe the burden associated with submitting quality measures data will vary depending on the collection type selected by the clinician, group, or third-party. As such, we separately estimate the burden for clinicians, groups, and third parties to submit quality measures data by the collection type used. For the purposes of our burden estimates for the Medicare Part B claims, MIPS CQM and QCDR, and eCQM collection types, we also assume that, on average, each clinician or group will submit 6 quality measures. Additionally, as finalized in the CY 2022

PFS final rule (86 FR 65394 through 65397), group TINs could also choose to participate as subgroups for MVP reporting beginning with the CY 2023 performance period/2025 MIPS payment year. We refer readers to the CY 2022 PFS final rule for additional details on MVP quality reporting requirements (86 FR 65411 through 65412).

In terms of the quality measures available for clinicians and groups to report for the CY 2024 performance period/2026 MIPS payment year, we proposed a measure set of 200 quality measures (88 FR 52567 through 52568). As shown in Table 83, we are finalizing 198 quality measures for the CY 2024 performance period/2026 MIPS payment year. The new MIPS quality measures for inclusion in MIPS for the CY 2024 performance period/2026 MIPS payment year and future years are found in Table Group A of Appendix 1; MIPS quality measures with substantive changes can be found in Table Group D of Appendix 1; and MIPS quality measures proposed for removal can be found in Table Group C of Appendix 1. These measures are stratified by collection type in Table 83, as well as counts of new, removed, and substantively changed measures. There are no changes to the remaining measures not included in Appendix 1. We refer readers to Appendix 1: MIPS Quality Measures of this final rule for additional information.

**TABLE 83: Summary of Quality Measure Inventory Finalized for the CY 2024 Performance Period**

Collection Type	# Measures as New	# Measures for Removal*	# Measures with a Substantive Change*	# Measures for CY 2024*
Medicare Part B Claims	0	-3	10	27
MIPS CQMs Specifications	+11	-10	51	173
eCQM Specifications	0	-3	26	44
Survey – CSV	0	0	0	1
Administrative Claims	0	0	0	4
Total*	+11**	-11***	59	198

\*A measure may be specified under multiple collection types but will only be counted once in the total.

\*\*We are finalizing the proposal, with modification, to add 11 quality measures.

\*\*\* We are finalizing the proposal, with modification, to remove 11 MIPS quality measures and finalizing as proposed to partially remove 3 MIPS quality measures (removed from traditional MIPS, for use in MVPs.) NOTE: The 3 MIPS quality measures partially removed from traditional MIPS are not included in the total number of measures finalized for removal from MIPS starting with the CY 2024 performance period.

For the CY 2024 performance period/2026 MIPS payment year, we are finalizing 198 measures, which is the same as the currently approved estimate of 198 measures. Specifically, as discussed in section IV.A.4.f.(1)(e) of this rule, we are finalizing our proposal, with modification, to add 11 new MIPS quality measures. We are also finalizing our proposal, with modification, to remove 11 MIPS quality measures, and finalizing as proposed, to partially remove 3 MIPS quality measures (from traditional MIPS for use in MVPs) and make substantive updates to 59 MIPS quality measures. We do not anticipate our provision to remove these measures will increase or decrease the reporting burden on clinicians and groups as respondents generally are still required to submit quality data for 6 measures in traditional MIPS reporting or submit quality data for 4 measures in an MVP.

### (3) Quality Payment Program Identity Management Application Process

We did not propose any new or revised collection of information requirements or burden related to the identity management application process for the CY 2024 performance period/2026 MIPS payment year. The identity management application process requirements and burden are currently approved by OMB under control number 0938-1314 (CMS-10621). Consequently, we are not making any changes for the identity management application process under that control number.

#### (4) Quality Data Submission by Clinicians: Medicare Part B Claims-Based Collection Type

The following changes will be submitted to OMB for review under control number 0938-1314 (CMS-10621).

In this rule, we did not propose any new or revised collection of information requirements or burden related to the submission of Medicare Part B claims data for the quality performance category. Our updated estimate for MVP participation due to policy changes to the MVP inventory as discussed in section IV.A.4.a. of this rule, impacts the number of clinicians submitting quality data for MIPS using the Medicare Part B Claims-based collection type. We refer readers to Table 87 of this section for the change in associated burden related to the submission of Medicare Part B claims data for the MVP quality performance category in the CY 2024 performance period/2026 MIPS payment year.

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77501 through 77504 and 82 FR 53912, respectively), the CY 2019, CY 2020, CY 2021, CY 2022, and CY 2023 PFS final rules (83 FR 60004 through 60005, 84 FR 63124 through 63126, 85 FR 84975 through 84976, 86 FR 65582 through 65584, and 87 FR 70149 through 70151 respectively) for our previously finalized requirements and burden for quality data submission via the Medicare Part B claims collection type.

As noted in Table 81, we estimate that 13,413 individual clinicians will collect and submit quality data via the Medicare Part B claims collection type, a decrease of 1,323 from the currently approved estimate of 14,736 (87 FR 70150).

In Table 84, consistent with our currently approved per response time figures and using the updated wage rates in Table 62 of this final rule, we continue to estimate the burden of quality data submission using Medicare Part B claims will range from 0.15 hours (9 minutes) at a cost of \$15.51 (0.15 hr x \$103.40) for a computer systems analyst to 7.2 hours at a cost of \$744.48 (7.2 hr x \$103.40/hr). The burden also accounts for the effort needed to become familiar with MIPS quality measure specifications.

Consistent with our currently approved per response time estimates and using the updated wage rates in Table 62 of this final rule, we believe that the start-up cost for a clinician's practice to review measure specifications is 7 hours, consisting of 3 hours for a medical and health services manager at \$123.06/hr, 1 hour for a physician at \$274.44/hr, 1 hour for an LPN at \$53.72/hr, 1 hour for a computer systems analyst at \$103.40/hr, and 1 hour for a billing and posting clerk at \$43.08/hr.

In Table 84, considering both data submission and start-up requirements for our adjusted number of clinicians, the estimated time (per clinician) ranges from a minimum of 7.15 hours (0.15 hr + 7 hr) to a maximum of 14.2 hours (7.2 hr + 7 hr). In aggregate, the total annual time for the CY 2024 performance period/2026 MIPS payment year ranges from 95,903 hours (7.15 hr x 13,413 respondents) to 190,465 hours (14.2 hr x 13,413 respondents). The total annual cost for the CY 2024 performance period/2026 MIPS payment year ranges from a minimum of \$11,526,193 (13,413 respondents x \$859.33/response) to a maximum of \$21,303,868 (13,413 respondents x \$1588.30/response).

**TABLE 84: Estimated Burden for Quality Performance Category: Clinicians Using the Medicare Part B Claims Collection Type**

<b>Burden and Respondent Descriptions</b>	<b>Minimum Burden</b>	<b>Median Burden</b>	<b>Maximum Burden</b>
# of Clinicians (a)	13,413	13,413	13,413
Hours Per Computer Systems Analyst to Submit Quality Data (b)	0.15	1.05	7.2
# of Hours Medical and Health Services Manager Review Measure Specifications (c)	3	3	3
# of Hours Computer Systems Analyst Review Measure Specifications (d)	1	1	1
# of Hours LPN Review Measure Specifications (e)	1	1	1
# of Hours Billing Clerk Review Measure Specifications (f)	1	1	1
# of Hours Physician Review Measure Specifications (g)	1	1	1
Annual Hours per Clinician (h) = (b) + (c) + (d) + (e) + (f) + (g)	7.15	8.05	14.2
Total Annual Hours (i) = (a) * (h)	<b>95,903</b>	<b>107,975</b>	<b>190,465</b>
Cost to Submit Quality Data (@ computer systems analyst's labor rate of \$103.40/hr @ varying times) (j)	\$15.51	\$108.57	\$744.48
Cost to Review Measure Specifications (@ medical and health services manager's labor rate of \$123.06/hr @ 3 hr) (k)	\$369.18	\$369.18	\$369.18
Cost to Review Measure Specifications (@ computer systems analyst's labor rate of \$103.40/hr @ 1 hr) (l)	\$103.40	\$103.40	\$1'3.40
Cost to Review Measure Specifications (@ LPN's labor rate of \$53.72/hr @1 hr) (m)	\$53.72	\$53.72	\$53.72
Cost to Review Measure Specifications (@ billing clerk's labor rate of \$43.08/hr @ 1 hr) (n)	\$43.08	\$43.08	\$43.08
Cost to Review Measure Specifications (@ physician's labor rate of \$274.44/hr @ 1 hr) (o)	\$274.44	\$274.44	\$274.44
*Total Annual Cost Per Clinician (p) = (j) + (k) + (l) + (m) + (n) + (o)	\$859.33	\$952.39	\$1,588.30
*Total Annual Cost (q) = (a) * (p)	<b>\$11,526,193</b>	<b>\$12,774,407</b>	<b>\$21,303,868</b>

In Table 85, we used the currently approved burden as the baseline to calculate the net burden for the quality data submissions from clinicians using the Medicare Part B Claims-based collection type. In aggregate, using our currently approved per response time estimates, the decrease in number of responses from 14,736 to 13,413 (-1,323) results in a total maximum adjustment of -18,786 hours (-1,323 responses x 14.2 hr/response) at a cost of -\$2,101,321 (-1,323 responses x \$1,588.30/response). For purposes of calculating total burden associated with this final rule as shown in Tables 109 through 111, only the maximum burden is used.

**TABLE 85: Burden Adjustments for Quality Performance Category: Clinicians Using the Medicare Part B Claims Collection Type**

<b>Burden and Respondent Descriptions</b>	<b>Burden Estimate</b>
Total Currently Approved Annual Hours (a)	209,251
Total Annual Hours for Respondents in CY 2024 PFS Final Rule (b) (see Tab-e D-A23, row (i))	190,465
<b>Difference (c) = (b) - (a)</b>	<b>-18,786</b>
Total Currently Approved Annual Cost (d)	\$23,405,189
Total Annual Cost for Respondents in CY 2024 PFS Final Rule (e) (see Tab-e D-A23, row (q))	\$21,303,868
<b>Difference (f) = (d) - (e)</b>	<b>-\$2,101,321</b>

We did not receive any comments on our proposed requirements and burden estimates for the quality performance category submission using the Medicare Part B Claims collection type.

We note that we adjusted the burden estimates from the CY 2024 PFS proposed rule (88 FR 52651 through 52653) due to the availability of updated data.

(5) Quality Data Submission by Individuals and Groups Using MIPS CQM and QCDR Collection Types

The following changes will be submitted to OMB for review under control number 0938-1314 (CMS-10621).

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77504 through 77505 and 82 FR 53912 through 53914, respectively), the CY 2019, CY 2020, CY 2021, CY 2022, and CY 2023 PFS final rules (83 FR 60005 through 60006, 84 FR 63127 through 63128, 85 FR 84977 through 84979, 86 FR 65584 through 65586, and 87 FR 70151 through 70153, respectively) for our previously finalized requirements and burden for quality data submission via the MIPS CQM and QCDR collection types. We refer readers to Table 92 for the estimated change in associated burden for quality data submission using MIPS CQM and QCDR collection types related to MVP and subgroup reporting in the CY 2024 performance period/2026 MIPS payment year.

As noted in Tables 78 and 79, based on data from the CY 2022 performance period/2024 MIPS payment year, for the CY 2024 performance period/2026 MIPS payment year, we estimate that 16,632 clinicians (10,682 individuals and 5,950 groups and virtual groups) will submit quality data as individuals or groups using MIPS CQM or QCDR collection types. This is a decrease of 1,284 clinicians from the currently approved estimate of 17,916 clinicians provided in the CY 2023 PFS final rule (87 FR 70152). Given the number of measures required for clinicians and groups is the same, we expect the burden to be the same for each respondent collecting data via MIPS CQM or QCDR, whether the clinician is participating in MIPS as an individual or group.

Under the MIPS CQM and QCDR collection types, the individual clinician or group may either submit the quality measures data directly to us, log in and upload a file, or utilize a third party intermediary to submit the data to us on the clinician's or group's behalf. We estimate that the burden associated with the QCDR collection type is similar to the burden associated with the MIPS CQM collection type; therefore, we discuss the burden for both together below. For MIPS CQM and QCDR collection types, we estimate an additional time for respondents (individual clinicians and groups) to become familiar with MIPS quality measure specifications and, in some cases, specialty measure sets and QCDR measures. Therefore, we believe the burden for an individual clinician or group to review measure specifications and submit quality data is a total of 9 hours at a cost of \$1,039.54 per response. This consists of 3 hours at \$103.40/hr for a computer systems analyst (or their equivalent) to submit quality data along with 2 hours at \$123.06/hr for a medical and health services manager, 1 hour at \$103.40/hr for a computer systems analyst, 1 hour at \$53.72/hr for a LPN, 1 hour at \$43.08/hr for a billing clerk, and 1 hour at \$274.44/hr for a physician to review measure specifications. Additionally, clinicians and groups who do not submit data directly will need to authorize or instruct the qualified registry or QCDR to submit quality measures' results and numerator and denominator data on quality measures to us on their behalf. We estimate the time and effort associated with authorizing or

instructing the quality registry or QCDR to submit this data will be approximately 5 minutes (0.083 hr) at \$103.40/hr for a computer systems analyst at a cost of \$8.15 (0.083 hr x \$103.40/hr). Overall, we estimate 9.083 hr/response (3 hr + 2 hr + 1 hr + 1 hr + 1 hr + 1 hr + 0.083 hr) at a cost of \$1,039.54/response [(3 hr x \$103.40/hr) + (2 hr x \$123.06/hr) + (1 hr x \$274.44/hr) + (1 hr x \$103.40/hr) + (1 hr x \$53.72/hr) + (1 hr x \$43.08/hr) + (0.083 hr x \$103.40/hr)].

In Table 86, for the CY 2024 performance period/2026 MIPS payment year, in aggregate, we estimate a burden of 151,068 hours [9.083 hr/response x 16,632 responses] at a cost of \$17,289,629 (16,632 responses x \$1,039.54/response).

**TABLE 86: Estimated Burden for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the MIPS CQM and QCDR Collection Type**

<b>Burden and Respondent Descriptions</b>	<b>Burden Estimate</b>
# of clinicians submitting as individuals (a)	10,682
# of groups submitting via QCDR or MIPS CQM on behalf of individual clinicians (b)	5,950
<b>Total # of Respondents (c) = (a) + (b)</b>	<b>16,632</b>
Hours Per Respondent to Report Quality Data (d)	3
# of Hours per Medical and Health Services Manager to Review Measure Specifications (e)	2
# of Hours for Computer Systems Analyst to Review Measure Specifications (f)	1
# of Hours for LPN to Review Measure Specifications (g)	1
# of Hours for Billing Clerk to Review Measure Specifications (h)	1
# of Hours for Physician to Review Measure Specifications (i)	1
# of Hours Per Respondent to Authorize Qualified Registry to Report on Respondent's Behalf (j)	0.083
Annual Hours Per Respondent (k)= (d) + (e) + (f) + (g) + (h) + (i) + (j)	9.083
<b>Total Annual Hours (l) = (c)* (k)</b>	<b>151,068</b>
Cost Per Respondent to Submit Quality Data (@ computer systems analyst's labor rate of \$103.40/hr) (m)	\$310.20
Cost to Review Measure Specifications (@ medical and health services manager's labor rate of \$123.06/hr) (n)	\$246.12

Cost for Respondent to Authorize Qualified Registry/QCDR to Report on Respondent's Behalf (@ computer systems analyst's labor rate of \$103.40/hr) (s)	\$8.58
Total Annual Cost Per Respondent (t) = (m) + (n) + (o) + (p) + (q) + (r) + (s)	\$1,039.54
<b>Total Annual Cost (u) = (c) * (t)</b>	<b>\$17,289,629</b>

In Table 87, we calculated the net change in estimated burden for quality performance category submissions using the MIPS CQM and QCDR collection type by using the currently approved burden in the CY 2023 PFS final rule (87 FR 70151 through 70153). In aggregate, using the unchanged currently approved time per response estimate, the decrease of 1,284 respondents from 17,916 to 16,632 for the CY 2024 performance period/2026 MIPS payment year results in a decrease of 11,663 hours (-1,284 responses x 9.083 hr/response) at a cost of -\$1,334,770 (-1,284 responses x \$1,039.54/response).

**TABLE 87: Burden Adjustments for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the MIPS CQM and QCDR Collection Type**

<b>Burden and Respondent Descriptions</b>	<b>Burden Estimate</b>
Total Currently Approved Annual Hours (a)	162,731
Total Annual Hours for Respondents in CY 2024 PFS Final Rule (b) (see Table 86, row (l))	151,068
Difference (c) = (b) - (a)	<b>-11,663</b>
Total Currently Approved Annual Cost (d)	\$18,624,399
Total Annual Cost for Respondents in CY 2024 PFS Final Rule (e) (see Table 86, row (u))	\$17,289,629
Difference (f) = (e) - (d)	<b>-\$1,334,770</b>

We did not receive any comments on our proposed requirements and burden estimates for the quality performance category submission using the MIPS CQM and QCDR collection type. We note that we adjusted the burden estimates from the CY 2024 PFS proposed rule (88 FR 52653 through 52654) due to the availability of updated data.

(6) Quality Data Submission by Clinicians and Groups: eCQM Collection Type

The following changes will be submitted to OMB for review under control number 0938-1314 (CMS-10621).

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77505 through 77506 and 82 FR 53914 through 53915), CY 2019 PFS final rule (83 FR 60006 through 60007), CY 2020 PFS final rule (84 FR 63128 through 63130), CY 2021 PFS final rule (85 FR 84979 through 84980), the CY 2022 PFS final rule (86 FR 65586 through 65588), and the CY 2023 PFS final rule (87 FR 70153 through 70154) for our previously

finalized requirements and burden for quality data submission via the eCQM collection types. For the change in associated burden for quality data submission related to the provisions introducing MVP and subgroup reporting beginning in the CY 2024 performance period/2026 MIPS payment year, we refer readers to Table 92.

Based on updated data from the CY 2022 performance period/2024 MIPS payment year data, we assume that 28,714 clinicians (22,897 individual clinicians and 5,817 groups and virtual groups) will submit quality data using the eCQM collection type for the CY 2024 performance period/2026 MIPS payment year. This is an increase of 4,825 clinicians from the currently approved estimate of 23,889 clinicians provided in the CY 2023 PFS final rule (87 FR 70153). We assume the burden to be the same for each respondent using the eCQM collection type, whether the clinician is participating in MIPS as an individual or group.

Under the eCQM collection type, the individual clinician or group may either submit the quality measures data directly to us from their eCQM, log in and upload a file, or utilize a third-party intermediary to derive data from their certified EHR technology (CEHRT) and submit it to us on the clinician's or group's behalf.

To prepare for the eCQM collection type, the clinician or group must review the quality measures on which we will be accepting MIPS data extracted from eCQMs, select the appropriate quality measures, extract the necessary clinical data from their CEHRT, and submit the necessary data to a QCDR/qualified registry or use a health IT vendor to submit the data on behalf of the clinician or group. We assume the burden for collecting quality measures data via eCQM is similar for clinicians and groups who submit their data directly to us from their CEHRT and clinicians and groups who use a health IT vendor to submit the data on their behalf. This includes extracting the necessary clinical data from their CEHRT and submitting the necessary data to a QCDR/qualified registry.

We estimate that it will take no more than 2 hours at \$103.40/hr for a computer systems analyst to submit the actual data file. The burden will also involve becoming familiar with MIPS

quality measure specifications. In this regard, we estimate it will take 6 hours for a clinician or group to review measure specifications. Of that time, we estimate 2 hours at \$123.06/hr for a medical and health services manager, 1 hour at \$274.44/hr for a physician, 1 hour at \$103.40/hr for a computer systems analyst, 1 hour at \$53.72/hr for an LPN, and 1 hour at \$43.08/hr for a billing clerk. Overall, we estimate a cost of \$927.56/response [(2 hr x \$103.40/hr) + (2 hr x \$123.06/hr) + (1 hr x \$274.44/hr) + (1 hr x \$103.40/hr) + (1 hr x \$53.72/hr) + (1 hr x \$43.08/hr)].

In Table 88, for the CY 2024 performance period/2026 MIPS payment year, in aggregate, we estimate a burden of 229,712 hours [8 hr x 28,714 responses] at a cost of \$26,633,958 (28,714 responses x \$927.56/response).

**TABLE 88: Estimated Burden for Quality Performance Category: Clinicians (Submitting Individually or as Part of a Group) Using the eCQM Collection Type**

<b>Burden and Respondent Descriptions</b>	<b>Burden Estimate</b>
# of clinicians submitting as individuals (a)	22,897
# of Groups submitting via EHR on behalf of individual clinicians (b)	5,817
<b>Total # of Respondents (c)=(a)+(b)</b>	<b>28,714</b>
Hours Per Respondent to Submit MIPS Quality Data File to (d)	2
# of Hours Per Medical and Health Services Manager to Review Measure Specifications (e)	2
# of Hours Per Computer Systems Analyst to Review Measure Specifications (f)	1
# of Hours Per LPN to Review Measure Specifications (g)	1
# of Hours Per Billing Clerk to Review Measure Specifications (h)	1
# of Hours Per Physician to Review Measure Specifications (i)	1
Annual Hours Per Respondent (j) = (d) + (e) + (f) + (g) + (h) + (i)	8
<b>Total Annual Hours (k) = (c) * (j)</b>	<b>229,712</b>
Cost Per Respondent to Submit Quality Data (@ computer systems analyst's labor rate of \$103.40/hr) (l)	\$206.80
Cost to Review Measure Specifications (@ medical and health services manager's labor rate of \$123.06/hr) (m)	\$246.12
Cost to Review Measure Specifications (@ computer system's analyst's labor rate of \$103.40/hr) (n)	\$103.40
Cost to Review Measure Specifications (@ LPN's labor rate of \$53.72/hr) (o)	\$53.72
Cost to Review Measure Specifications (@ clerk's labor rate of \$43.08/hr) (p)	\$43.08
Cost to Review Measure Specifications (@ physician's labor rate of \$274.44/hr) (q)	\$274.44
Total Cost Per Respondent (r)=(l)+(m)+(n)+(o)+(p)+(q)	\$927.56
<b>Total Annual Cost (s) = (c) * (r)</b>	<b>\$26,633,958</b>

In Table 89, we illustrate the net change in burden for submissions in the quality performance category using the eCQM collection type from the currently approved burden in the CY 2023 PFS final rule (87 FR 70153 through 70154). In aggregate, using our currently

approved time per response burden estimate, the increase of 4,825 respondents from 23,889 to 28,714 for the CY 2024 performance period/2026 MIPS payment year results in an increase of 38,600 hours (4,825 responses x 8 hr/response) at a cost of \$4,475,477 (4,825 responses x \$927.56/response).

**TABLE 89: Burden Adjustments for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the eCQM Collection Type**

<b>Burden and Respondent Descriptions</b>	<b>Burden Estimate</b>
Total Currently Approved Annual Hours (a)	191,112
Total Annual Hours for respondents in CY 2024 PFS Final Rule (b) (see Table 88, row (k))	229,712
Difference (c) = (b) - (a)	<b>38,600</b>
Total Currently Approved Annual Cost (d)	\$22,158,481
Total Annual Cost for Respondents in CY 2024 PFS Final Rule (e) (see Table 88, row (s))	\$26,633,958
Difference (f) = (e) - (d)	<b>\$4,475,477</b>

We did not receive any comments on our proposed requirements and burden estimates for the quality performance category submission using the eCQM collection type. We note that we adjusted the burden estimates from the CY 2024 PFS proposed rule (88 FR 52655 through 52656) due to the availability of updated data.

(7) ICRs Regarding Burden for MVP Reporting

The following changes will be submitted to OMB for review under control number 0938–1314 (CMS–10621).

(a) Burden for MVP Reporting Requirements

In the CY 2022 PFS final rule, we finalized an option for clinicians choosing to report MVPs to participate through subgroups beginning with the CY 2023 performance period/2025 MIPS payment year (86 FR 65392 through 65394). We refer readers to the CY 2022 and CY 2023 PFS final rules for our previously finalized burden assumptions and requirements for submission data for the MVP performance category, and for the estimated number of clinicians participating as subgroups in the CY 2023 performance period/2025 MIPS payment year (86 FR 65590 through 65592 and 87 FR 70155).

As discussed in section IV.A.4.a of this final rule, we are finalizing our proposal to add five new MVPs to the MVP Inventory. Additionally, we are finalizing our proposal to consolidate the previously finalized Promoting Wellness and Optimizing Chronic Disease Management MVPs into a single consolidated primary care MVP titled Value in Primary Care MVP. Therefore, MVP participants will have a total of 16 MVPs available for the CY 2024 performance period/2026 MIPS payment year. Due to the availability of new MVPs, we expect an increase in the projected number of MVP participants. For each newly proposed MVP, we calculated the average quality measure submission rate across the measures available in each MVP for the CY 2021 performance period/2023 MIPS payment year. The total of these average quality measure submissions for each MVP was equivalent to about 2 percent of total quality measure submissions in the CY 2021 performance period/2023 MIPS payment year. We assume there would not be any changes to MVP submissions due to the finalizing of our proposal discussed in section IV.A.4.b. of this final rule to consolidate the measures in the Promoting Wellness and Optimizing Chronic Disease Management MVPs into a Value in Primary Care MVP. That is, we assume clinicians who would have submitted the Optimizing Chronic Disease Management MVP, or the Promoting Wellness MVP would instead submit the Value in Primary Care MVP. Therefore, we estimate that 14 percent of the clinicians will participate in MVP reporting in the CY 2024 performance period/2026 MIPS payment year. This is an increase of 2 percentage points from the currently approved estimate of 12 percent in the CY 2023 PFS final rule (87 FR 70155). We refer readers to Appendix 3: MVP Inventory of this final rule for additional details on the MVPs available for the CY 2024 performance period/2026 MIPS payment year. We assume the changes to the existing MVPs and the addition of new MVPs will not impact the currently approved number of subgroups. We expect clinician participation in subgroups will be relatively low for the CY 2024 performance period/2026 MIPS payment year due the voluntary subgroup reporting option and the additional burden involved for groups to organize clinicians into subgroups. Therefore, we did not make any adjustments to our

previously finalized estimate in the CY 2023 PFS final rule (87 FR 70155) that 20 subgroups will participate in MVP reporting.

(i) Burden for MVP Registration: Individuals, Groups and APM Entities

We refer readers to the CY 2023 PFS final rule (87 FR 70155 through 70156) for our previously finalized burden relevant to MVP registration for clinicians participating as an individual and/or group for MVP reporting.

As previously discussed, we estimate that approximately 14 percent of the clinicians that currently participate in MIPS will submit data for the measures and activities in an MVP. For the CY 2024 performance period/2026 MIPS payment year, we assume that the total number of individual clinicians, groups, subgroups and APM Entities that will complete the MVP registration process is 9,585. In Table 90, we estimate that it will take 2,396 hours (9,585 responses x 0.25 hr/response) at a cost of \$247,772 (9,585 registrations x \$25.85/registration) for individual clinicians, groups and APM Entities to register for MVP reporting in the CY 2024 performance period/2026 MIPS payment year.

**TABLE 90: Estimated Burden for MVP Registration (Individuals, Groups, Subgroups, and APM Entities)**

<b>Burden and Respondent Descriptions</b>	<b>Burden Estimate</b>
Estimated # of Individual clinicians, groups, subgroups and APM Entities Registering (a)	9,585
Estimated Time Per Registration (hr) (b)	0.25
<b>Estimated Total Annual Time for MVP Registration (c) = (a) * (b)</b>	<b>2,396</b>
Estimated Cost Per Registration (e) = (d) * (b)	25.85
<b>Estimated Total Annual Cost for MVP Registration (f) = (a) * (e)</b>	<b>\$247,772</b>

In Table 91, we illustrate the net change in burden for MVP registration using the currently approved burden in the CY 2023 PFS final rule (87 FR 70155 through 70156). In aggregate, for the CY 2024 performance period/2026 MIPS payment year, the adjustment in the number of respondents expected to register for MVP reporting from 7,731 to 9,585 results in an increase of 1,854 responses. In aggregate, when combined with the currently approved per response time estimate, this will result in an increase of 463 hours (2,396 hours – 1,933 hours) at a cost of \$47,926 (\$247,772 – \$199,846).

**TABLE 91: Burden Adjustment for MVP Registration (Individuals, Groups, Subgroups, and APM Entities)**

<b>Burden and Respondent Descriptions</b>	<b>Burden Estimate</b>
Total Currently Approved Annual Hours (a)	1,933
Total Annual Hours for Respondents in CY 2024 PFS Final Rule (b) (See Table 90, row (c))	2,396
<b>Difference (c) = (b) – (a)</b>	<b>+463</b>
Total Currently Approved Annual Cost (d)	\$199,846
Total Annual Cost for Respondents in CY 2024 PFS Final Rule (e) (See Table 90, row (e))	\$247,772
<b>Difference (f) = (e) - (d)</b>	<b>+\$47,926</b>

We did not receive any comments on our proposed requirements and burden estimates for the MVP registrations. We note that we adjusted the burden estimates from the CY 2024 PFS proposed rule (88 FR 52657 through 52658) due to the availability of updated data.

(ii) Burden for Subgroup Registration

We did not propose any changes to our currently approved subgroup registration burden (86 FR 65590). We note that the subgroup policies discussed in section IV.A.4.d. of this final rule do not impact the currently approved burden for subgroup registration. We discuss in detail below, the policies and our reasons for not changing the currently approved burden for subgroup registration. The burden relevant to the subgroup registration requirement is currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not making any changes pertaining to subgroup registration under that control number.

As discussed in section IV.A.4.d.(2) of this final rule, we are finalizing our proposal to modify § 414.1365(e)(2)(ii) to read that, an MVP Participant that is a subgroup will receive the same reweighting that is applied to its affiliated group, but that for the CY 2023 MIPS performance period/2025 MIPS payment year, if reweighting is not applied to the affiliated group, the subgroup may receive reweighting in the circumstances independent of the affiliated group as described in § 414.1365(e)(2)(ii)(A) and (B). We believe that the modification to the subgroup reweighting policy will not impact the currently approved burden for subgroup registration because it will not change any requirements related to subgroup registration.

As discussed in section IV.A.4.d.(3) of this final rule, we are also finalizing our proposal to modify the text at § 414.1365(e)(3) to read that if an MVP Participant, that is not an APM Entity or a subgroup, is eligible for facility-based scoring, a facility-based score will also be calculated in accordance with § 414.1380(e). Additionally, we are finalizing our proposal to add § 414.1365(e)(4)(i) to read that for subgroups, the affiliated group's complex patient bonus will be added to the final score. The revisions will not impact the currently approved burden for subgroup registration since these changes only modify the regulatory text relevant to subgroup scoring policies.

As discussed in section IV.A.4.d.(4) of this final rule, we are finalizing our proposal to modify § 414.1385(a)(1) to read that a MIPS eligible clinician, subgroup, or group (including their designated support staff), or a third-party intermediary as defined at § 414.1305, may submit a request for a targeted review. The change will not impact the currently approved burden for subgroup registration since the addition of subgroups to the targeted review language only modifies the regulatory text relevant to the targeted review process and does not change the subgroup registration requirements. We finalized in the CY 2017 Quality Payment Program final rule that a MIPS eligible clinician or group may request a targeted review of the calculation of the MIPS payment adjustment factor under section 1848(q)(6)(A) of the Act and, as applicable, the calculation of the additional MIPS payment adjustment factor under section 1848(q)(6)(C) of the Act (collectively referred to as the MIPS payment adjustment factors) applicable to such MIPS eligible clinician or group for a year (81 FR 77546). We note that information collection requirements, such as targeted reviews, that are imposed after an administrative action are not subject to the PRA under 5 CFR 1320.4(a)(2). Therefore, we are not making any adjustments to the currently approved subgroup registration burden because of the proposal to add subgroups to the targeted review regulation text.

(iii) Burden for MVP Quality Performance Category Submission.

In the CY 2022 PFS final rule (86 FR 65411 through 65415), we previously finalized the reporting requirements for the MVP quality performance category at § 414.1365(c)(1)(i). As discussed in section V.B.11.e. of this rule, we did not propose new requirements to submit data for the quality performance category of MVPs. Therefore, we are not making any changes to our currently approved per response time estimates for submitting the MVP quality performance category data.

As described in section V.B.11.e.(7)(a) of this final rule, we estimate that 14 percent of the clinicians who participated in MIPS for the CY 2022 performance period/2024 MIPS payment year will submit data for the quality performance category of MVP in the CY 2024 performance period/2026 MIPS payment year. We also estimate there will be 20 subgroup reporters in the CY 2024 performance period/2026 MIPS payment year. In Table 92, we estimate that 4,674 clinicians and 10 subgroups will submit data using eCQMs collection type at \$614.45/response (see line q for eCQMs); 2,707 clinicians and 10 subgroups will submit data using MIPS CQM and QCDR collection type at \$683.73/response (see line q for CQM and QCDRs); and 2,184 clinicians and 0 subgroups will submit data for the MVP quality performance category using the Medicare Part B claims collection type at \$1,055.70/response (see line q for claims). For the CY 2024 performance period/2026 MIPS payment year, using our currently approved per response time estimates for the clinicians and subgroups submitting data for the MVP quality performance category, we estimate a burden of 24,825 hours [5.3 hr x 4,684 (4,674 +10) responses] at a cost of \$2,878,084 (4,684 responses x \$614.45/response) for the eCQM collection type, 16,220 hours [5.97 hr x 2,717 (2,707 +10)] at a cost of \$1,857,694 (2,717 responses x \$683.73/responses) for the MIPS CQM and QCDR collection type, and 20,617 hours (9.44 hr x 2,184 clinician responses) at a cost of \$2,305,649 (2,184 responses x \$1,055.70/response) for the Medicare Part B claims collection type.

**TABLE 92: Estimated Burden for MVP Quality Performance Category Submission**

<b>Burden and Respondent Descriptions</b>	<b>eCQM Collection Type</b>	<b>CQM and QCDR Collection Type</b>	<b>Claims Collection Type</b>
# of Submissions from pre-existing collection types (a)	4,674	2,707	2,184
# of Subgroup reporters (b)	10	10	0
Total MVP participants(c) = (a) + (b)	4,684	2,717	2,184
Hours Per Computer Systems Analyst to Submit Quality Data (d)	1.33	2	4.8
# of Hours Medical and Health Services Manager Review Measure Specifications (e)	1.33	1.33	2
# of Hours Computer Systems Analyst Review Measure Specifications (f)	0.66	0.66	0.66

# of Hours Billing Clerk Review Measure Specifications (h)	0.66	0.66	0.66
# of Hours Physician Review Measure Specifications (i)	0.66	0.66	0.66
Annual Hours per Clinician Submitting Data for MVPs (j) = (d) + (e) + (f) + (g) + (h) + (i)	5.3	5.97	9.44
<b>Total Annual Hours (k) = (c) * (j)</b>	<b>24,825</b>	<b>16,220</b>	<b>20,617</b>
Cost to Submit Quality Data (@ computer systems analyst's labor rate of \$103.40/hr @ varying times) (k)	\$137.52	\$206.80	\$496.32
Cost to Review Measure Specifications (@ medical and health services manager's labor rate of \$123.06/hr) (l)	\$163.67	\$163.67	\$246.12
Cost to Review Measure Specifications (@ computer systems analyst's labor rate of \$103.40/hr) (m)	\$68.24	\$68.24	\$68.24
Cost to Review Measure Specifications (@ LPN's labor rate of \$53.72/hr) (n)	\$35.46	\$35.46	\$35.46
Cost to Review Measure Specifications (@ billing clerk's labor rate of \$43.08/hr) (o)	\$28.43	\$28.43	\$28.43
Cost to Review Measure Specifications (@ physician's labor rate of \$274.44/hr) (p)	\$181.13	\$181.13	\$181.13
Total Annual Cost Per Submission (q) = (k) + (l) + (m) + (n) + (o) + (p)	\$614.45	\$683.73	\$1,055.70
<b>Total Cost (r) = (c) * (q)</b>	<b>\$2,878,084</b>	<b>\$1,857,694</b>	<b>\$2,305,649</b>

Table 93 illustrates the changes in estimated burden for clinicians who will submit the MVP quality performance category utilizing the eCQM, MIPS CQM and QCDR, and claims collection types in the CY 2024 performance period/2026 MIPS payment year. We note we used the currently approved burden in the CY 2023 PFS final rule (87 FR 70157 through 70159) as the baseline to determine the net change in burden. In aggregate, when combined with our currently approved per response time estimate, the increase in 1,854 respondents who will submit data for the MVP quality performance category will result in an increase of 7,505 hours and \$870,048 for the eCQM collection type, an increase of 1,576 hours and \$180,499 for the

CQM and QCDR collection type, and an increase of 1,643 hours and \$183,687 for the claims collection type.

**TABLE 93: Burden Adjustments for MVP Quality Performance Category Submission**

<b>Burden and Respondent Descriptions</b>	<b>eCQM Collection Type</b>	<b>CQM and QCDR Collection Type</b>	<b>Claims Collection Type</b>
Total Currently Approved Annual Hours (a)	17,320	14,644	18,974
Total Annual Hours for Respondents in CY 2024 PFS Final Rule (b) (See Table 92, row (k))	24,825	16,220	20,617
<b>Difference (c) = (b) - (a)</b>	<b>7,505</b>	<b>1,576</b>	<b>1,643</b>
Total Currently Approved Annual Cost (d)	\$2,008,036	\$1,677,195	\$2,121,962
Total Annual Cost for Respondents in CY 2024 PFS Final Rule (e) (See Table 92, row (r))	\$2,878,084	\$1,857,694	\$2,305,649
<b>Difference (f) = (e) - (d)</b>	<b>\$870,048</b>	<b>\$180,499</b>	<b>\$183,687</b>

We did not receive any comments on our proposed requirements and burden estimates for the MVP quality performance category submission. We note that we adjusted the burden estimates from the CY 2024 PFS proposed rule (88 FR 52658 through 52660) due to the availability of updated data.

**(8) Beneficiary Responses to CAHPS for MIPS Survey**

The following changes associated with CAHPS survey vendors to submit data for eligible clinicians will be submitted to OMB for review under control number 0938-1222 (CMS-10450). We noted that the associated burden will be made available for public review and comment under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices.

We refer readers to the CY 2021 Quality Payment Program final rule (85 FR 84982 through 84983) for our previously finalized estimated burden associated with beneficiary responses to the CAHPS for MIPS Survey.

As discussed in section IV.A.4.f.(1)(c)(ii)(A) of this final rule, we are finalizing our proposal to require Spanish language administration of the CAHPS for MIPS Survey. Specifically, we are finalizing our proposal to require organizations to contract with a CMS-approved survey vendor that, in addition to administering the survey in English, will administer

the Spanish survey translation to Spanish-preferring patients using the procedures detailed in the CAHPS for MIPS Quality Assurance Guidelines. For requirements and burden, we estimate an average administration time of 13.1 minutes (or 0.2183 hr) at a pace of 4.5 items per minute for the English version of the survey. For the Spanish version, we estimate an average administration time of 15.7 minutes (assuming 20 percent more words in the Spanish translation). However, since less than 1 percent of surveys were administered in Spanish for the CY 2022 performance period/2024 MIPS payment year, we are not updating our burden estimates to include the time associated with the Spanish version at this time.

In the CY 2024 PFS proposed rule (88 FR 52660), we proposed to adjust the currently approved estimated number of beneficiaries that will respond to the CAHPS for MIPS survey. For the CY 2024 performance period/2026 MIPS payment year, we estimated that 100 groups will elect to report on the CAHPS for MIPS survey. Based on the number of complete and partially complete surveys for groups participating in CAHPS for MIPS survey administration for the CY 2022 performance period/2024 MIPS payment year, we estimated that an average of 255 beneficiaries will respond per group for the CY 2024 performance period/2026 MIPS payment year. Therefore, we estimated that the CAHPS for MIPS survey will be administered to approximately 25,500 beneficiaries for the CY 2024 performance period/2026 MIPS payment year. This adjustment will result in a decrease of 4,452 beneficiary respondents from our currently approved estimate of 29,952 beneficiary respondents in the CY 2021 PFS final rule (85 FR 84982). As shown in Table 94, for the CY 2024 performance period/2026 MIPS payment year, we continue to estimate that the per response time to administer the survey is 0.2183 hours. This will result in an estimated annual burden of 5,567 hours at a cost of \$165,750.

**TABLE 94: Estimated Burden for Beneficiary Response Requirements**

<b>Burden and Respondent Descriptions</b>	<b>Burden Estimate</b>
# of Groups Practices Administering CAHPS for MIPS Survey (a)	100
# of Beneficiaries Per Group Responding to Survey (b)	255
# of Total Beneficiaries Reporting (c)=(a)*(b)	25,500
# of Hours Per Beneficiary Respondent (d)	0.2183
<b>Total Annual Hours (e) = (c) * (d)</b>	<b>5,567</b>
Cost for Beneficiary to Respond to CAHPS for MIPS Survey @ labor rate of \$29.76/hr (f) = (d) *\$29.76/hr	\$6.50
<b>Total Annual Cost (g) = (e) * (f)</b>	<b>\$165,750</b>

In Table 95, we illustrate the net change in estimated burden for beneficiary response requirements using the currently approved burden in the CY 2021 PFS final rule (85 FR 84982 through 84983). In aggregate, using our currently approved per response time estimate, the decrease in the number of respondents submitting responses for the CAHPS for MIPS survey results in a total annual adjustment of -972 hours at a cost of -\$28,938 for the CY 2024 performance period/2026 MIPS payment year.

**TABLE 95: Change in Estimated Burden for Beneficiary Response Requirements**

<b>Burden and Respondent Descriptions</b>	<b>CY 2024 Performance Period</b>
Total Currently Approved Annual Hours (a)	6,539
Total Annual Hours for Respondents in CY 2024 PFS Final Rule (b) (See Table 94, row (e))	5,567
<b>Difference (c) = (b) - (a)</b>	<b>-972</b>
Total Currently Approved Annual Cost (d)	\$194,688
Total Annual Cost for Respondents in CY 2024 PFS Final Rule (e) (See Table 94, row (g))	\$165,750
<b>Difference (f) = (e) - (d)</b>	<b>-\$28,938</b>

We did not receive any comments on our proposed requirements and burden estimates for the beneficiaries responding to the CAHPS for MIPS Survey.

(9) Group Registration for CAHPS for MIPS Survey

The following changes will be submitted to OMB for review under control number 0938-1222 (CMS-10450). We noted that the associated burden will be made available for public review and comment under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices.

We refer readers to CY 2019 PFS final rule (83 FR 60009 through 60010) for the previously approved requirements and burden for group registration for the CAHPS for MIPS Survey.

In the CY 2024 PFS proposed rule (88 FR 52661), we proposed to adjust the estimated number of groups registering for the CAHPS for MIPS Survey that were previously approved in the CY 2019 PFS final rule (83 FR 60009 through 60010) based on updated data from the CY 2022 performance period/2024 MIPS payment year. We estimated that 266 groups will register for the CAHPS for MIPS Survey for the CY 2024 performance period/2026 MIPS payment year. This adjustment will result in a decrease of 16 group registrations from our currently approved estimate of 282 groups in the CY 2019 PFS final rule (83 FR 60010). In Table 96, for the CY 2024 performance period/2026 MIPS payment year, we continue to estimate that the per response time is 0.75 hours. This will result in an estimated annual burden of 200 hours (266 groups x 0.75 hr/registration) at a cost of \$20,628 (266 registrations x \$77.55/registration) for a computer systems analyst).

**TABLE 96: Estimated Burden for Group Registration for the CAHPS for MIPS Survey**

Burden and Respondent Descriptions	Burden Estimate
# of Groups Registering for the CAHPS for MIPS Survey (a)	266
# of Hours Per Computer Systems Analyst (b)	0.75
<b>Total Annual Hours (c) = (a) * (b)</b>	<b>200</b>
Cost to Register a Group for the CAHPS for MIPS Survey (@ computer systems analyst @ \$103.40/hr) (d) = (b) * \$103.40/hr	\$77.55
<b>Total Annual Cost (e) = (c) * (d)</b>	<b>\$20,628</b>

In Table 97, we illustrate the net change in estimated burden for groups registering for the CAHPS for MIPS Survey using the currently approved burden in the CY 2019 PFS final rule (83 FR 60009 through 60010). In aggregate, using our currently approved per response time estimate, the decrease in the number of respondents registering for the CAHPS for MIPS Survey from 282 to 266 results in a total annual adjustment of -12 hours (-16 responses x 0.75 hr/nomination) at a cost of -\$1,241 for the CY 2024 performance period/2026 MIPS payment year.

**TABLE 97: Change in Estimated Burden for Group Registration for the CAHPS for MIPS Survey**

<b>Burden and Respondent Descriptions</b>	<b>CY 2024 Performance Period</b>
Total Currently Approved Annual Hours (a)	212
Total Annual Hours for Respondents in CY 2024 PFS Final Rule (b) (See Table 96, row (c))	200
<b>Difference (c) = (b) - (a)</b>	<b>-12</b>
Total Currently Approved Annual Cost (d)	\$21,869
Total Annual Cost for Respondents in CY 2024 PFS Final Rule (e) (See Table 96, row (i))	\$20,628
<b>Difference (f) = (e) - (d)</b>	<b>-\$1,241</b>

We did not receive any comments on our proposed requirements and burden estimates for the groups registering for the CAHPS for MIPS Survey.

f. ICRs Regarding the Call for MIPS Quality Measures

The following changes will be submitted to OMB for review under control number 0938–1314 (CMS–10621).

In this rule, we did not propose any new or revised collection of information requirements or burden related to the call for MIPS quality measures. However, based on the actual number of quality measure submissions received for CMS consideration during the 2023 Annual Call for Quality Measures, we adjusted our burden estimates for the CY 2024 performance period/2026 MIPS payment year.

In the CY 2024 PFS proposed rule (88 FR 52662), we estimated that we will receive 31 quality measure submissions during the 2023 Annual Call for Quality Measures, an increase of 2 from the currently approved number of quality measure submissions for consideration (87 FR 70159 through 70160). We did not propose any changes to the 5.5 hour (2.4 hr for practice administrator + 3.1 hr for clinician) per response time estimate for quality measure submissions.

In Table 98, we estimate an annual burden of 171 hours (31 measure submissions × 5.5 hr/measure) at a cost of \$35,529 (31 measure submissions x \$1,146.11/submission for the CY 2024 performance period/2026 MIPS payment year).

**TABLE 98: Estimated Burden for Call for Quality Measures**

<b>Burden and Respondent Descriptions</b>	<b>Burden estimate</b>
# of New Quality Measures Submitted for Consideration (a)	31
# of Hours per Practice Administrator to Identify, Propose and Link Measure (b)	2.4
# of Hours per Clinician to Identify and Link Measure (c)	1.1
# of Hours per Clinician to Complete Peer Review Article Form (d)	2
Annual Hours Per Response (e) = (b) + (c) + (d)	5.5
<b>Total Annual Hours (f)=(a)*(e)</b>	<b>171</b>
Cost to Identify and Submit Measure (@ practice administrator's labor rate of \$123.06/hr) * 2.4 hr = (g)	\$295.34
Cost to Identify Quality Measure and Complete Peer Review Article Form (@ clinician's labor rate of \$274.44/hr) * 3.1 hr = (h)	\$850.77
Total Annual Cost Per Submitted Measure (i) = (g) + (h)	\$1,146.11
<b>*Total Annual Cost (j)=(a)*(i)</b>	<b>\$35,529</b>

In Table 99, we illustrate the net change in estimated burden for the call for quality measures using the currently approved burden in the CY 2023 PFS final rule (87 FR 70159 through 70160). In aggregate, the estimated increase in the number of quality measure submissions will result in an adjustment of +11 hours (+2 measure submissions x 5.5 hr/measure submission) at a cost of \$2,292 (+2 measure submissions x \$1,146.11/measure submission) for the CY 2024 performance period/2026 MIPS payment year.

**TABLE 99: Burden Adjustments for Call for Quality Measures**

<b>Burden and Respondent Descriptions</b>	<b>Burden Estimate</b>
Total Currently Approved Annual Hours for Respondents (a)	160
Total Annual Hours for Respondents in CY 2024 PFS Final Rule (b) (See Table 98, row (f))	171
<b>Difference (c) = (b) - (a)</b>	<b>+11</b>
Total Currently Approved Annual Cost for Respondents (d)	\$33,237
Total Annual Cost for Respondents in CY 2024 PFS Final Rule (e) (See Table 98, row (j))	\$35,529
<b>Difference (f) = (e) - (d)</b>	<b>+\$2,292</b>

We did not receive any comments on our proposed requirements and burden estimates for the call for quality measures.

g. ICRs Regarding Promoting Interoperability Data (§§ 414.1375 and 414.1380)

(1) Background

For the CY 2024 performance period/2026 MIPS payment year, MIPS eligible clinicians, groups, subgroups, and APM Entities can submit Promoting Interoperability performance category data through direct log in and upload or log in and attest submission types. We note that the log in and attest submission type is only available for the Promoting Interoperability performance category and is not available for the quality performance category. With the exception of submitters who elect to use the log in and attest submission type for the Promoting Interoperability performance category, we anticipated that MIPS eligible individual clinicians, groups, subgroups, and APM Entities will use the same data submission type for both the quality and Promoting Interoperability performance categories and that the clinicians, practice managers, and computer systems analysts involved in supporting the quality data submission will also support the Promoting Interoperability data submission process. The following burden estimates show only incremental hours required above and beyond the time already accounted for in the quality data submission process. We note that this analysis assesses burden by performance category and submission type and emphasizes that MIPS is a consolidated program. We analyzed data submitted by MIPS eligible clinicians, groups, subgroups and APM Entities, and assesses clinician performance based on all the four MIPS performance categories, as applicable.

(2) Reweighting Applications for Promoting Interoperability and Other Performance Categories

The following changes will be submitted to OMB for review under control number 0938-1314 (CMS-10621).

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77240 through 77243), CY 2018 Quality Payment Program final rule (82 FR 53918 through 53919), and the CY 2019, CY 2020, CY 2021, CY 2022, and CY 2023 PFS final rules (83 FR 60011 through 60012, 84 FR 63134 through 63135, 85 FR 84984 through 84985, 86 FR 65596 through 65598, and 87 FR 70160 through 70162, respectively) for our previously finalized requirements for, and our analysis of the information collection and reporting burden associated with, reweighting applications for Promoting Interoperability and other performance categories.

As established in the CY 2017 and CY 2018 Quality Payment Program final rules, MIPS eligible clinicians may submit an application requesting reweighting to zero percent for the Promoting Interoperability, quality, cost, and/or improvement activities performance categories under specific circumstances as set forth in § 414.1380(c)(2), including, but not limited to, extreme and uncontrollable circumstances and significant hardship or other type of exception (81 FR 77240 through 77243, 82 FR 53680 through 53686, and 82 FR 53783 through 53785). Table 100 summarizes our analysis of the estimated burden, including for MIPS eligible clinicians to apply for reweighting of the Promoting Interoperability performance category and other performance categories to zero percent due to a significant hardship or other exception as provided in § 414.1380(c)(2)(i).

Respondents (MIPS eligible individual clinicians, groups, or APM Entities) who apply for a reweighting of the quality, cost, and/or improvement activities performance categories have the option of applying for reweighting of the Promoting Interoperability performance category on the same online form. We assume respondents applying for a reweighting of the Promoting Interoperability performance category due to extreme and uncontrollable circumstances (for example, PHE for COVID-19, vendor issues, etc.) will also request a reweighting of at least one of the other performance categories simultaneously and not submit multiple reweighting applications.

As discussed in section IV.A.4.f.(4)(f) of this final rule, we are finalizing our proposal to continue the existing policy of CMS automatically reweighting the Promoting Interoperability performance category for clinical social workers for the CY 2024 performance period/2026 MIPS payment year and making the corresponding revisions to the regulatory text at § 414.1380(c)(2)(i)(A)(4)(iii). In our analysis of the information collection and reporting burden, we did not adjust our estimated number of respondents submitting reweighting applications due to this proposal because these changes only modify the regulatory text and do not change the existing reweighting policy for these clinician types participating in MIPS in the

CY 2024 performance period/2026 MIPS payment year. To further clarify, these clinician types are automatically reweighted for the Promoting Interoperability performance category and do not need to submit a reweighting application, and therefore do not impact our information collection and reporting burden analysis.

Based on the number of reweighting applications received at the time of the publication of this rule for the CY 2022 performance period/2024 MIPS payment year, we adjusted our burden estimates relevant to this ICR. In this final rule, we estimate that we will receive a total of 29,227 applications to request reweighting for any or all the four MIPS performance categories for the CY 2024 performance period/2026 MIPS payment year. Out of the 29,227, we estimate that 2,706 respondents will submit a request to reweight the Promoting Interoperability performance category to zero percent due to a significant hardship or other exception as provided in § 414.1380(c)(2)(i)(C). We estimate that the remaining 26,510 respondents will submit a request to reweight one or more of the quality, cost, Promoting Interoperability, or improvement activities performance categories due to an extreme or uncontrollable circumstance as provided in § 414.1380(c)(2)(i). Additionally, we estimated 11 APM Entities will submit an extreme and uncontrollable circumstances exception application for the CY 2024 performance period/ 2026 MIPS payment year. This adjustment results in an increase of 23,788 respondents compared to our currently approved estimate of 5,439 respondents (87 FR 70161). This increase is based on the actual number of reweighting applications submitted for the CY 2022 performance period/2024 MIPS payment year. We note this estimate reflects the significant increase in the number of submitted applications due to extending the deadline, as a result of the ongoing PHE for COVID-19 at the time, for submitting the reweighting applications for the CY 2022 performance period/2024 MIPS payment year to March 3<sup>rd</sup>, 2023.

Consistent with our assumptions in the CY 2023 PFS final rule (87 FR 70160 through 70162), we continued to estimate it will take 0.25 hours for a computer system analyst to complete and submit the reweighting application. In Table 100, we estimate an annual burden of

7,307 hours (29,227 applications x 0.25 hr/application) at a cost of \$755,518 (29,227 applications x \$25.85/application).

**TABLE 100: Estimated Burden for Reweighting Applications for Promoting Interoperability and Other Performance Categories**

<b>Burden and Respondent Descriptions</b>	<b>Burden Estimate</b>
# of Eligible Clinicians or Groups Applying Due to Significant Hardship and Other Exceptions or Extreme and Uncontrollable Circumstances (a)	29,216
# APM Entities requesting Extreme and Uncontrollable Circumstances exception (b)	11
Total Applications Submitted (c)	<b>29,227</b>
Annual Hours Per Applicant per Application Submission (d)	0.25
Total Annual Hours (e) = (c) * (d)	<b>7,307</b>
Cost to Submit a Reweighting Application @ computer systems analyst's labor rate of \$103.40/hr (f) = (d) * \$103.40/hr	\$25.85
Total Annual Cost (g) = (e) * (f)	<b>\$755,518</b>

In Table 101, we illustrate the net change in estimated burden for submission of reweighting applications for Promoting Interoperability and other performance categories using the currently approved burden in the CY 2023 PFS final rule (87 FR 70160 through 70162). The adjustment in the estimated number of respondents, from 5,439 to 29,227 respondents, results in an increase of 23,788 respondents. In aggregate, using our currently approved per response time estimate, as shown in Table 101, the increase in 23,788 respondents results in an increase of 5,947 hours (+23,788 responses x 0.25 hr/response) and \$614,920 (+5,947 hr x \$103.40/hr) for the CY 2024 performance period/2026 MIPS payment year.

**TABLE 101: Change in Estimated Burden for Reweighting Applications for Promoting Interoperability and Other Performance Categories**

<b>Burden and Respondent Descriptions</b>	<b>Burden Estimate</b>
Total Currently Approved Annual Hours in CY 2023 PFS final rule (a)	1,360
Total Annual Hours for Respondents in CY 2024 PFS final rule (b) (See Table 100, row (c))	7,307
Difference (c) = (b) - (a)	<b>+5,947</b>
Total Currently Approved Annual Cost in CY 2023 PFS final rule (d)	\$140,598
Total Annual Cost for Respondents in CY 2024 PFS final rule (e) (See Table 100, row (e))	\$755,518
Difference (f) = (e) - (d)	<b>+\$614,920</b>

We did not receive any comments on our proposed requirements and burden estimates for the submission of reweighting applications for Promoting Interoperability and other performance

categories.

### (3) Submitting Promoting Interoperability Data

The following changes relevant to the submission of Promoting Interoperability data requirements and burden will be submitted for approval under OMB under control number 0938-1314 (CMS-10621). We note that we adjusted the burden estimates from the CY 2024 PFS proposed rule (88 FR 52664 through 52665) due to the availability of updated data from the CY 2022 performance period/2024 MIPS payment year.

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77509 through 77511, and 82 FR 53919 through 53920, respectively), and the CY 2019, CY 2020, CY 2021, CY 2022, and CY 2023 PFS final rules (83 FR 60013 through 60014, 84 FR 63135 through 63137, 85 FR 84985 through 84987, 86 FR 65598 through 65600, and 87 FR 70162 through 70164, respectively) for our previously finalized requirements and burden for submission of data for the Promoting Interoperability performance category.

As discussed in section IV.A.4.f.(4)(b) of this final rule, we are finalizing our proposal to require a continuous 180-day performance period for the Promoting Interoperability performance category beginning with the CY 2024 performance period/2026 MIPS payment year and are revising the regulation text at § 414.1320 to reflect this change. We assume MIPS eligible clinicians and groups that currently submit data for the Promoting Interoperability performance category will utilize the CEHRT for an entire calendar year performance period and therefore, the increase in the length of the performance period for the Promoting Interoperability performance category from 90 to 180 days will not create additional burden for MIPS eligible clinicians and groups that will submit data for the Promoting Interoperability performance category. We note that this is consistent with the discussion of burden for the above policy in the FY 2022 IPPS final rule (86 FR 45515).

As discussed in section IV.A.4.f.(4)(d)(i) of this final rule, we are finalizing our proposed changes to the Query of Prescription Drug Monitoring Program Measure under the Electronic

Prescribing Objective. Specifically, we are modifying the second exclusion for the Query of PDMP measure as proposed so that it reads as follows: Any MIPS eligible clinician who does not electronically prescribe any Schedule II opioids or Schedule III or IV drugs during the performance period. The changes will not affect the requirements for MIPS eligible clinicians and groups that submit data for the Promoting Interoperability performance category since the revision is meant to revise the previously finalized second exclusion in the CY 2018 Quality Payment Program final rule (82 FR 53679). Therefore, we are not making any adjustments to our currently approved estimated burden for this ICR.

As discussed in section IV.A.4.f.(4)(d)(ii) of this final rule, we are finalizing to revise the e-Prescribing measure description in Table 51 to read “At least one permissible prescription written by the MIPS eligible clinician is transmitted electronically using CEHRT” and the numerator will be updated to read to indicate “Number of prescriptions in the denominator generated and transmitted electronically using CEHRT” to reflect the removal of the health IT certification criterion “drug-formulary and preferred drug list checks.” These revisions will not affect the requirements for MIPS eligible clinicians and groups that submit data for the Promoting Interoperability performance category since these changes provide technical updates to the e-prescribing measure. Therefore, we are not making any adjustments to our currently approved estimated burden for this ICR.

As discussed in section IV.A.4.f.(4)(d)(iii) of this final rule, we are finalizing our proposal to modify our requirements for the SAFER Guides measure beginning with the CY 2024 performance period/2026 MIPS payment year and subsequent years, to require MIPS eligible clinicians conduct, and therefore attest “yes” to having completed an annual self-assessment of the CEHRT using the High Priority Practices SAFER Guide. Additionally, we are finalizing our proposal to amend the regulatory text *at* § 414.1375(b)(2)(ii)(C) to clearly specify that a MIPS eligible clinician must submit an attestation, with either an affirmative or negative response, with respect to whether the MIPS eligible clinician completed the annual self-

assessment under the SAFER Guides measure during the year in which the performance period occurs; this regulatory provision will only be applicable for the 2024 MIPS payment year through the 2025 MIPS payment year. We noted we have captured the estimated burden for reporting this measure in the CY 2022 PFS final rule (86 FR 65599) and the revision will not affect the data collection and submission requirements for MIPS eligible clinicians and groups that submit data for the Promoting Interoperability performance category. Therefore, we are not making any adjustments to our currently approved estimated burden for this ICR.

As shown in Table 102, based on updated data from the CY 2022 performance period/2024 MIPS payment year, we are adjusting our currently approved estimated burden for the submission of data in Promoting Interoperability performance category (87 FR 70162 through 70164). We estimate that a total number of 25,990 respondents, consisting of 19,292 individual MIPS eligible clinicians, 6,678 groups and virtual groups, and 20 subgroups will submit data for the Promoting Interoperability performance category in the CY 2024 performance period/2026 MIPS payment year. For MIPS eligible clinicians participating in an APM, we assume that each MIPS eligible clinician in an APM Entity reports data for the Promoting Interoperability performance category through either their group TIN or individual reporting. Sections 1899 and 1115A of the Act (42 U.S.C. 1395jjj and 42 U.S.C. 1315a, respectively) state that the Shared Savings Program and the testing, evaluation, and expansion of Innovation Center models are not subject to the PRA. However, in the CY 2019 PFS final rule, we established that MIPS eligible clinicians who participate in the Shared Savings Program are no longer limited to reporting for the Promoting Interoperability performance category through their ACO participant TIN (83 FR 59822 through 59823). Burden estimates for this rule assume group TIN-level reporting as we believe this is the most reasonable assumption for the Shared Savings Program, which requires that ACOs include full TINs as ACO participants.

**TABLE 102: Estimated Number of Respondents to Submit Promoting Interoperability Performance Data**

<b>Burden and Respondent Descriptions</b>	<b># of Respondents</b>
Number of individual clinicians to submit Promoting Interoperability in CY 2024 performance period (a)	19,292
Number of groups to submit Promoting Interoperability in CY 2024 performance period (b)	6,678
# of Subgroups to submit Promoting Interoperability in MVPs during the CY 2024 performance period (c)	20
<b>Total Respondents in CY 2024 performance period (d) = (a) + (b) + (c)</b>	<b>25,990</b>
Currently Approved Respondents (2023 PFS Final Rule) (e)	30,107
<b>Difference (f) = (d) – (e)</b>	<b>-4,117</b>

As shown in Table 103, we are not making any changes to the currently approved estimated time of 2.70 hours per response. Therefore, we estimate that it will result in a total burden of 70,173 hours (25,990 respondents x 2.70 incremental hours for a computer analyst’s time above and beyond the physician, medical and health services manager, and computer system’s analyst time required to submit quality data) and \$7,989,083 (81,289 hrs x \$98.28/hr) to submit data for the Promoting Interoperability performance category in the CY 2024 performance period/2026 MIPS payment year.

**TABLE 103: Estimated Burden for Promoting Interoperability Performance Category Data Submission**

<b>Burden and Respondent Description</b>	<b>Burden Estimate</b>
Number of individual clinicians to submit Promoting Interoperability (a)	19,292
Number of groups to submit Promoting Interoperability (b)	6,678
Number of subgroups to submit Promoting Interoperability (c)	20
<b>Total Respondents (d) = (a) + (b) + (c)</b>	<b>25,990</b>
Annual Hours Per Respondent (e)	2.70
<b>Total Annual Hours (f) = (d) * (e)</b>	<b>70,173</b>
Cost per Respondent to submit Promoting Interoperability data @ Computer System Analyst’s Labor Rate of \$103.40/hr (g) = (e) * \$103.40/hr	\$279.18
<b>Total Annual Cost (h) = (d) * (e)</b>	<b>\$7,255,888</b>

As shown in Table 104, we illustrate the change in burden for clinicians to submit data in the Promoting Interoperability performance category for the CY 2024 performance period/2026 MIPS payment year. In aggregate, we estimate that the decrease in the number of respondents

from 30,107 to 25,990 will result in a decrease of 11,116 hours (-4,117 respondents x 2.70 hrs/response) at a cost of -\$1,149,384 (-4,117 respondents x \$279.18/response).

**TABLE 104: Change in Estimated Burden for Promoting Interoperability Performance Category Data Submission**

<b>Burden and Respondent Description</b>	<b>Burden Estimate</b>
Total Currently Approved Annual Hours (a)	81,289
Total Annual Hours for Respondents in CY 2024 PFS final rule (b) (see Table 103, row (f))	70,173
<b>Difference (c) = (b) - (a)</b>	<b>-11,116</b>
Total Currently Approved Annual Cost (d)	\$8,405,272
Total Annual Cost for Respondents in CY 2024 PFS final rule (e) (see Table 103, row (h))	\$7,255,888
<b>Difference (f) = (e) - (d)</b>	<b>-\$1,149,384</b>

We did not receive any comments on our proposed requirements and burden estimates for the data submission in the Promoting Interoperability performance category. We note that we adjusted the burden estimates from the CY 2024 PFS proposed rule (88 FR 52664 through 52665) due to the availability of updated data from the CY 2022 performance period/2024 MIPS payment year.

#### h. ICRs Regarding the Nomination of Promoting Interoperability Measures

The following changes associated with the information collection related to the nomination of Promoting Interoperability measures will be submitted to OMB for review to remove the information collection relevant to the nomination of Promoting Interoperability measures under control number 0938-1314 (CMS 10621). This rule does not create any new or revised collection of information requirements or burden related to the nomination of Promoting Interoperability performance category measures. Due to a consistent decline in the number of submissions received for the Promoting Interoperability performance category measures, we estimated to receive fewer than 10 responses for this ICR. Therefore, we proposed to remove the ICR for nomination of Promoting Interoperability performance category measures.

As shown in Table 105, we estimated an annual burden of zero hours at a cost of \$0 for the CY 2024 performance period/2026 MIPS payment year.

**TABLE 105: Estimated Burden for Call for Promoting Interoperability Measures**

<b>Burden and Respondent Descriptions</b>	<b>Burden Estimate</b>
# of Organizations Nominating New Promoting Interoperability Measures (a)	0
# of Hours Per Medical and health services manager to Identify and Propose Measure (b)	0.30
# of Hours Per Clinician to Identify Measure (c)	0.20
Annual Hours Per Respondent (d) = (b) + (c)	0.50
<b>Total Annual Hours (e) = (a) [x] (d)</b>	<b>0</b>
Cost to Identify and Submit Measure (@ medical and health services manager's labor rate of \$123.06/hr.) (f) = (b) [x] \$123.06/hr	\$36.92
Cost to Identify Improvement Measure (@ physician's labor rate of \$274.44/hr.) (g) = (c) [x] \$274.44/hr	\$54.89
Total Annual Cost Per Respondent (h) = (f) + (g)	\$91.81
<b>Total Annual Cost (i) = (a) [x] (h)</b>	<b>\$0</b>

In Table 106, we illustrated the net change in estimated burden for nomination of Promoting Interoperability measures using the currently approved burden in the CY 2023 PFS final rule (87 FR 70163). The removal of the ICR for nomination of Promoting Interoperability measures results in a decrease of 5 hours (-10 responses x 0.5 hr/response) and a decrease of \$918 for the CY 2024 performance period/2026 MIPS payment year.

**TABLE 106: Change in Estimated Burden for Nomination of Promoting Interoperability Measures**

<b>Burden and Respondent Descriptions</b>	<b>Burden Estimate</b>
Total Currently Approved Annual Hours in CY 2023 PFS final rule (a)	5
Total Annual Hours for Respondents in CY 2024 PFS final rule (b) (See Table 105, row (c))	0
<b>Difference (c) = (b) - (a)</b>	<b>-5</b>
Total Currently Approved Annual Cost in CY 2023 PFS final rule (d)	\$918
Total Annual Cost for Respondents in CY 2024 PFS final rule (e) (See Table 105, row (e))	0
<b>Difference (f) = (e) - (d)</b>	<b>-\$918</b>

We did not receive any comments on our proposal to remove the ICR for the nomination of Promoting Interoperability measures.

i. ICRs Regarding Improvement Activities Submission (§§ 414.1305, 414.1355, 414.1360, and 414.1365)

The following requirements and burden will be submitted for approval under OMB control number 0938–1222 (CMS–10450).

As discussed in section IV.A.4.f.(3)(b)(ii) of this final rule, we are finalizing our proposed changes to the improvement activities inventory for the CY 2024 performance period/2026 MIPS payment year and future years as follows: adding five new improvement activities; modifying one existing improvement activity; and removing three previously adopted improvement activities. We do not believe the changes will impact our currently approved time for interested parties to submit information because MIPS eligible clinicians are still required to submit the same number of activities and the estimated per response time for each activity is uniform. Therefore, we are not adjusting our currently approved burden for improvement activities submission as a result of this proposal.

As shown in Table 107, we are adjusting the currently approved burden estimates (87 FR 70164 through 70165) due to availability of updated data from the CY 2022 performance period/2024 MIPS payment year. We estimate that a total of 50,269 respondents consisting of 37,939 individual clinicians, 12,330 groups and 20 subgroups will submit improvement activities during the CY 2024 performance period/2026 MIPS payment year. This adjustment represents an increase of 6,153 respondents from the currently approved estimate of 44,136 respondents in the CY 2023 PFS final rule (87 FR 70164 through 70165). As discussed in section V.B.11.e.(2) of this final rule, we did not include in our estimates clinicians who participate in an APM Entity and are determined to be QPs for the CY 2024 performance period/2026 MIPS payment year as we assume they will not be required to submit improvement activities data.

**TABLE 107: Estimated Burden for Improvement Activities Data Submission**

<b>Burden and Respondent Descriptions</b>	<b>Count</b>
# of clinicians to participate in improvement activities data submission as individuals during the CY 2024 performance period (a)	37,939
# of Groups to submit improvement activities on behalf of clinicians during the CY 2024 performance period (b)	12,330
# of Subgroups to submit improvement activities in MVPs during the CY 2023 performance period (c)	20
<b>Total # of Respondents (Groups, Subgroups, Virtual Groups, and Individual Clinicians) to submit improvement activities data during the CY 2024 performance period (d) = (a) + (b) + (c)</b>	<b>50,289</b>
*Total # of Currently Approved Respondents (Groups, Virtual Groups, and Individual Clinicians) to submit improvement activities data (CY 2023 PFS Final Rule) (e)	44,136
<b>Difference (f) = (d) - (e)</b>	<b>+6,153</b>

As shown in Table 108, we continue to estimate that the time required per response per individual or group is 5 minutes or 0.083 hours for a computer system analyst at a labor rate of \$103.40/hr to submit by logging in and manually attesting that certain activities were performed in the form and manner specified by CMS with a set of authenticated credentials. Therefore, we estimate an annual burden of 4,174 hours (50,289 respondents x 0.083 hr/response) at a cost of \$431,480 (50,289 respondents x \$8.58/response)) for the CY 2024 performance period/2026 MIPS payment year.

**TABLE 108: Estimated Burden for Improvement Activities Data Submission**

<b>Burden and Respondent Descriptions</b>	<b>Burden Estimate</b>
Total # of Respondents (Groups, Subgroups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the CY 2024 performance period (a)	50,289
Total Annual Hours Per Respondent (b)	0.083
<b>Total Annual Hours (c) = (a) * (b)</b>	<b>4,174</b>
Cost per Respondent to submit improvement activities data @ Computer System Analyst's Labor Rate of \$103.40/hr (d) = (b) * \$103.40/hr	\$8.58
<b>Total Annual Cost (e) = (a) * (d)</b>	<b>\$431,480</b>

As shown in Table 109, using our unchanged currently approved per respondent burden estimate, the increase in the number of respondents results in an increase of 511 hours (+6,153 respondents x 0.083 hr/respondent) at a cost of \$52,793 (+6,153 respondents x \$8.58/response) for the CY 2024 performance period/2026 MIPS payment year.

**TABLE 109: Change in Estimated Burden for Improvement Activities Submission**

<b>Burden and Respondent Descriptions</b>	<b>Burden Estimate</b>
Total Currently Approved Annual Hours (a)	3,663
Total Annual Hours for Respondents in CY 2024 PFS final rule (b) (See Table 108, row (c))	4,174
<b>Difference (c) = (b) - (a)</b>	<b>+511</b>
Total Currently Approved Annual Cost (d)	\$378,687
Total Annual Cost for Respondents in CY 2024 PFS final rule (e) (See Table 108, row (e))	\$431,480
<b>Difference (f) = (e) - (d)</b>	<b>+\$52,793</b>

We did not receive any comments on our proposed requirements and burden estimates for the submission of improvement activities. We note that we updated the burden estimates from the CY 2024 PFS proposed rule (87 FR 52666) due to the availability of updated data.

j. ICRs Regarding the Nomination of Improvement Activities (§ 414.1360)

The changes associated with data submission will be submitted to OMB for review under control number 0938-1314 (CMS 10621).

In the CY 2024 PFS proposed rule (88 FR 52666 through 52667), based on the actual number of respondents that submitted improvement activity nominations, we proposed to adjust the estimated number of improvement activity nominations that were previously approved in the CY 2022 PFS final rule (86 FR 65603 through 65605). We estimate that we will receive approximately 15 improvement activity nominations for the CY 2024 performance period/2026 MIPS payment year. This adjustment will result in a decrease of 16 improvement activity nominations from our currently approved estimate of 31 nominations in the CY 2022 PFS final rule (86 FR 65605). In Table 110, for the CY 2024 performance period/ 2026 MIPS payment year, we continue to estimate that the per response time is 4.4 hours. This will result in an estimated annual burden of 66 hours (15 nominations x 4.4 hr/nomination) at a cost of \$11,755 (15 x [(2.8 hr x \$123.06/hr for a medical and health services manager) + (1.6 hr x \$274.44/hr for a physician)]).

**TABLE 110: Estimated Burden for Nomination of Improvement Activities**

<b>Burden and Respondent Descriptions</b>	<b>Burden Estimate</b>
# of Nominations of New IAs (a)	15
# of Hours Per Medical and Health Services Manager (b)	2.8
# of Hours Per Physician (c)	1.6
Annual Hours Per Respondent (d)= (b) + (c)	4.4
<b>Total Annual Hours (e) = (a) * (d)</b>	<b>66</b>
Cost to Nominate an IA (@ medical and health services manager's labor rate of \$123.06/hr) (f) = (b) x \$123.06/hr	\$344.57
Cost to Nominate an IA (@ physician's labor rate of \$274.44/hr) (g) = (c) x \$274.44/hr	\$439.10
Total Annual Cost Per Respondent (h) = (f) + (g)	\$783.67
<b>Total Annual Cost (i) = (a) * (h)</b>	<b>\$11,755</b>

In Table 111, we illustrate the net change in estimated burden for nomination of

improvement activities using the currently approved burden in the CY 2022 PFS final rule (86 FR 65605). In aggregate, using our currently approved per response time estimate, the proposed decrease in the number of respondents submitting improvement activity nominations results in a total annual adjustment of -70 hours (-16 responses x 4.4 hr/nomination) at a cost of -\$12,539 (-16 x [(2.8 hr x \$123.06/hr) + (1.6 hr x \$274.44/hr)]) for the CY 2024 performance period/2026 MIPS payment year.

**TABLE 111: Change in Estimated Burden for Nomination of Improvement Activities**

<b>Burden and Respondent Descriptions</b>	<b>CY 2024 Performance Period</b>
Total Currently Approved Annual Hours (a)	136
Total Annual Hours for Respondents in CY 2024 PFS final rule (b) (See Table 110, row (d))	66
<b>Difference (c) = (b) - (a)</b>	<b>-70</b>
Total Currently Approved Annual Cost (d)	\$24,294
Total Annual Cost for Respondents in CY 2024 PFS final rule (e) (See Table 110, row (i))	\$11,755
<b>Difference (f) = (e) - (d)</b>	<b>-\$12,539</b>

We did not receive any comments on our proposed requirements and burden estimates for the nomination of improvement activities.

k. Nomination of MVPs

We did not propose any new or revised collection of information requirements or burden related to the nomination of MVPs for the CY 2024 performance period/2026 MIPS payment year. The requirements and burden for nomination of MVPs are currently approved by OMB under control number 0938-1314 (CMS-10621). Consequently, we are not making any changes to the nomination of MVPs under that control number.

l. ICRs Regarding the Cost Performance Category (§ 414.1350)

The cost performance category relies on administrative claims data. The Medicare Parts A and B claims submission process (OMB control number 0938-1197; CMS-1500 and CMS-1490S) is used to collect data on cost measures from MIPS eligible clinicians. MIPS eligible clinicians are not required to provide any documentation by CD or hardcopy. Moreover, the

policies in this rule do not result in the need to add or revise or delete any claims data fields.

Consequently, we are not making any changes under that control number.

m. ICRs Regarding Partial QP Elections (§§ 414.1310(b) and 414.1430)

We did not propose any new or revised collection of information requirements or burden related to the Partial QP Elections to participate in MIPS as a MIPS eligible clinician in the CY 2024 performance period/2026 MIPS payment year. The requirements and burden for Partial QP Elections are currently approved by OMB under control number 0938-1314 (CMS-10621).

Consequently, we are not making any changes to Partial QP Elections under that control number.

n. ICRs Regarding Other Payer Advanced APM Determinations: Payer-Initiated Process (§ 414.1445) and Eligible Clinician -Initiated Process (§ 414.1445)

We did not propose any new or revised collection of information requirements related to Other Payer Advanced APM determinations for the CY 2024 performance period/2026 MIPS payment year.

(1) Payer-Initiated Process (§ 414.1445)

We did not propose any new or revised collection of information requirements related to the Payer-Initiated Process for the CY 2024 performance period/2026 MIPS payment year. The requirements and burden associated with this information collection are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not making any changes to the Payer- Initiated process under that control number.

(2) Eligible Clinician-Initiated Process (§ 414.1445)

We did not propose any new or revised collection of information requirements or burden related to the Eligible Clinician-Initiated Process for the CY 2024 performance period/2026 MIPS payment year. The requirements and burden associated with this information collection are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not making any changes to the Eligible Clinician-Initiated Process under that control number.

(3) Submission of Data for QP Determinations under the All-Payer Combination Option

(§ 414.1440)

We did not propose any new or revised collection of information requirements or burden related to the Submission of Data for QP Determinations under the All-Payer Combination Option for the CY 2024 performance period/2026 MIPS payment year. The requirements and burden for the All-Payer Combination option are currently approved by OMB under control number 0938-1314 (CMS-10621). Consequently, we are not making any changes under that control number.

o. ICRs Regarding Voluntary Participants Election to Opt-Out of Performance Data Display on Compare Tools (§ 414.1395)

We did not propose any new or revised collection of information requirements or burden related to the election by voluntary participants to opt-out of public reporting on Compare Tools for the CY 2024 performance period/2026 MIPS payment year. The requirements and burden associated with this information collection are currently approved by OMB under control number 0938-1314 (CMS-10621). Consequently, we are not making any changes to the election of voluntary participants to opt-out of performance data display on Compare Tools under that control number.

p. Summary of Annual Quality Payment Program Burden Estimates

Table 112 summarizes this rule's total burden estimates for the Quality Payment Program for the CY 2024 performance period/2026 MIPS payment year.

In the CY 2023 PFS final rule, the total estimated burden for the CY 2024 performance period/2026 MIPS payment year (see Table 112, row a) was 710,644 hours at a cost of \$75,687,130 (87 FR 70169). Accounting for updated wage rates and the subset of all Quality Payment Program ICRs outlined in this rule compared to the CY 2023 PFS final rule, the total estimated annual burden of continuing policies and information set forth in the CY 2023 PFS final rule into the CY 2024 performance period/2026 MIPS payment year is 710,964 hours at a

cost of \$79,563,761 (see Table 112, row b). These represent an increase of 320 hours and an increase of \$3,876,631. To understand the burden implications of the policies in this rule, we provided an estimate of the total burden associated with continuing the policies and information collections set forth in the CY 2023 PFS final rule into the CY 2024 performance period/2026 MIPS payment year. The estimated burden of 728,359 hours at a cost of \$81,799,657 (see Table 112, row c) reflects the availability of more accurate data to account for all potential respondents and submissions across all the performance categories and represents an increase of 17,395 hours and \$2,235,896 (see Table 112, row d). Our total burden estimate for the CY 2024 performance period/2026 MIPS payment year is 724,212 hours and \$81,332,556 (see Table 112, row e), which represents an increase of 13,248 hours and \$1,758,795 from the CY 2023 PFS final rule estimate with updated wage rates and ICRs (see Table 112, row f). The difference of -4,147 hours (13,248 hours – 17,395 hours) and -\$477,101 (\$1,758,795 – \$2,235,896) (see Table 112, row g) between this estimate and the total burden shown in Table 112 is the decrease in burden associated with impacts of the policies for the CY 2024 performance period/2026 MIPS payment year.

**TABLE 112: Summary of Burden Estimates and Requirements from the CY 2024 PFS Final Rule**

<b>CY 2024 Performance Period/2026 MIPS Payment Year</b>		
<b>Burden Estimate Description</b>	<b>Time (Hours)</b>	<b>Cost</b>
Currently approved burden in CY 2023 PFS Final Rule (a)	710,644	\$75,687,130
CY 2023 PFS Final Rule w/ updated wage rates and ICRs (b)	710,964	\$79,563,761
CY 2023 PFS Final Rule w/ updated data and assumptions (c)	728,359	\$81,799,657
<b>Change in burden due to updated data and assumptions (d) = (c) – (b)</b>	<b>17,395</b>	<b>\$2,235,896</b>
CY 2024 PFS Final Rule Total Burden (e)	724,212	\$81,322,556
Total change in burden (as shown in Table 104) (f) = (e) – (b)	13,248	\$1,758,795
<b>Change in burden associated with policies (g) = (f) – (d)</b>	<b>-4,147</b>	<b>-\$477,101</b>

Table 114 provides the reasons for changes in the estimated burden for information collections in the Quality Payment Program segment of this final rule. We have divided the reasons for our change in burden into those related to policies in the CY 2024 PFS rule and those related to adjustments in burden continued from the CY 2023 PFS final rule policies that reflect updated data and revised methods.

**TABLE 114: Reasons for Change in Burden Compared to the Currently Approved CY 2023 Information Collection Burden**

ICR Title	Changes in burden due to CY 2024 policies	Adjustments in burden continued from CY 2023 PFS final rule policies due to revised methods or updated data
QCDR Simplified Self-Nomination and other Requirements (See Table 69)	None	Addition of a new ICR.
QCDR Full Self-Nomination and other Requirements (See Table 71)	None	Decrease in number of respondents due to updated assumptions. Decrease in the total number of hours due to restructuring the ICR.
Qualified Registry Simplified Self-Nomination and other Requirements (See Table 73)	None	Addition of a new ICR.
Qualified Registry Full Self-Nomination and other Requirements (See Table 75)	None	Decrease in number of respondents due to updated assumptions. Decrease in the total number of hours due to restructuring the ICR.
Third Party Intermediary Plan Audits (see Table 78)	None	Decrease in number of respondents and hours due to updated assumptions for the CY 2024 performance period/2026 MIPS payment year.
Survey Vendor Requirements (see Table 80)	None	Decrease in number of respondents due to updated assumptions.
Quality Performance Category: Medicare Part B Claims Collection Type (see Table 85)	Decrease in number of respondents due to the estimated increase in the number of respondents submitting for the MVP quality performance category via the claims collection type.	Decrease in the number of respondents due to updated assumptions for the CY 2024 performance period/2026 MIPS payment year.
Quality Performance Category: QCDR/ MIPS CQM Collection Type (see Table 87)	Decrease in number of respondents due to the estimated increase in the number of respondents submitting for the MVP quality performance category via the QCDR and MIPS CQM collection type.	Decrease in the number of respondents due to updated assumptions for the CY 2024 performance period/2026 MIPS payment year.
Quality Performance Category: eCQM Collection Type (see Table 89)	Decrease in number of respondents due to the estimated increase in the number of respondents submitting for the MVP quality performance category via the eCQM collection type.	Increase in the number of respondents due to updated assumptions for the CY 2024 performance period/2026 MIPS payment year.
MVP Registration (see Table 91)	Increase in number of respondents due to finalized addition of 5 new MVPs.	Increase in the number of respondents due to updated assumptions for the CY 2024 performance period/2026 MIPS payment year.
MVP Quality Submission (see Table 93)	Increase in number of respondents due to finalized addition of 5 new MVPs.	Increase in the number of respondents due to updated assumptions for the CY 2024 performance period/2026 MIPS payment year.
Beneficiary Responses for CAHPS for MIPS Survey (see Table 95)	None	Decrease in number of respondents due to updated projections for the CY 2024 performance period/2026 MIPS payment

ICR Title	Changes in burden due to CY 2024 rule policies	Adjustments in burden continued from CY 2023 PFS final rule policies due to revised methods or updated data
		year
Group Registration for CAHPS for MIPS Survey (see Table 97)	None	Decrease in number of respondents due to updated projections for the CY 2024 performance period/2026 MIPS payment year
Call for Quality Measures (see Table 99)	None	Increase in number of respondents due to updated projections for the CY 2024 performance period/2026 MIPS payment year
Promoting Interoperability Performance Category: Reweighting Applications for Promoting Interoperability and Other Performance Categories (see Table 101)	None	Increase in number of respondents due to updated projections for the CY 2024 performance period/2026 MIPS payment year.
Data Submission for the Promoting Interoperability Performance Category (see Table 104)	None	Decrease in number of respondents due to updated projections for the CY 2024 performance period/2026 MIPS payment year
Call for Promoting Interoperability Measures (see Table 106)	None	Removal of ICR.
Data Submission for the Improvement Activities Performance Category (see Table 109)		
Improvement Activities Performance Category: Nomination of Improvement Activities (see Table 111)	None	Decrease in number of respondents due to updated projections for the CY 2024 performance period/2026 MIPS payment year

C. Summary of Annual Burden Estimates for Changes

**TABLE 115: Annual Requirements and Burden Estimates**

Section(s) Under Title 42 of the CFR	OMB Control Number	No. Respondents	Total Annual Responses	Time per Response (hours)	Total Annual Time (hours)	Labor Cost (\$/hr)	Total Cost (\$)
§ 414.940 (Requiring Manufacturers of Certain Single-dose Container or Single-use Package Drugs to Provide Refunds with Respect to Discarded Amounts)	0938-1435 (CMS-10835)	22 in the initial year; 2 in subsequent years	22 in the initial year, 2 in subsequent years	5	110 in the initial year, 10 in subsequent years	41.74	4,591 in the initial year; 418 in subsequent years
§ 414.94(c)(2) (AUC Program Provider-Led Entity reapplication for qualification)	0938-1288 (CMS-10570)	(10)	(10)	(15)	(150)	(1,714.2)	(17,142)

## **VI. Regulatory Impact Analysis**

### *A. Statement of Need*

In this final rule, we are finalizing payment and policy changes under the Medicare PFS and required statutory changes under the Consolidated Appropriations Act, 2021 (CAA, 2021); sections 301, 302, 303, 304, and 305 under the Consolidated Appropriations Act, 2022 (CAA, 2022); sections 2003 and 2005 of the SUPPORT for Patients and Communities Act of 2018, sections 4113, 4114, and 4121 under the Consolidated Appropriations Act of 2023 (CAA, 2023), section 90004 of the Infrastructure Investment and Jobs Act, section 6 of the Sustaining Excellence in Medicaid Act of 2019, and sections 11101, 11402, 11403, 11407 under the Inflation Reduction Act (IRA). Our policies in this rule specifically address: changes to the PFS; other changes to Medicare Part B payment policies to ensure that payment systems are updated to reflect changes in medical practice, the relative value of services, and changes in the statute; updates and refinements to Medicare Shared Savings Program (Shared Savings Program) requirements; updates to the Quality Payment Program; updates to the Medicare coverage of opioid use disorder services furnished by opioid treatment programs; updates to certain Medicare provider enrollment policies; updates to electronic prescribing for controlled substances for a covered Part D drug under a prescription drug plan or an MA-PD plan (section 2003 of the SUPPORT Act); changes to the regulations associated with the Ambulance Fee Schedule and the Medicare Ground Ambulance Data Collection System; and changes to release Medicare Advantage risk adjustment data early for use with Care Compare websites. The policies reflect CMS' stewardship of the Medicare program and overarching policy objectives for ensuring equitable beneficiary access to appropriate and quality medical care.

#### 1. Statutory Provisions

- a. Extension of Certain Medicare Telehealth Flexibilities, Under Section 1834(m) of the Act, as Amended by the CAA, 2023

Section II.D.1.e. of this final rule implements section 4113, of the CAA, 2023, which extended through CY 2024 several temporary flexibilities for Medicare telehealth services adopted during the PHE for COVID-19. Specifically, section 4113 extended the temporary inapplicability of geographic and location restrictions, extended the temporary expansion of practitioner types who can be paid for Medicare telehealth services, delayed the in-person visit requirements for mental health services furnished via telehealth, and extended audio-only flexibilities for certain telehealth services. This provision is necessary to fulfill the statutory requirement to implement this extension through December 31, 2024.

**b. Drugs and Biological Products Paid Under Medicare Part B**

In section III.A.1. of this final rule, we discuss regulations text changes to implement provisions of the Inflation Reduction Act of 2022 that affect payment amounts or patient out-of-pocket costs for certain drugs and biologicals payable under Part B. Two provisions affect payment amounts for biosimilar biological products. Section 11402 of the IRA amends the payment limit for new biosimilars furnished on or after July 1, 2024 during the initial period when ASP data is not available. Section 11403 makes changes to the payment limit for certain biosimilar products with an ASP that is not more than the ASP of the reference biological for a period of 5 years. Two other provisions make statutory changes to patient out-of-pocket costs for certain drugs payable under Medicare Part B. Section 11101 of the IRA requires that beneficiary coinsurance for a Part B rebatable drug is to be based on the inflation-adjusted payment amount if the Medicare payment amount for a calendar quarter exceeds the inflation-adjusted payment amount, beginning on April 1, 2023. Section 11407 makes statutory changes to waive the deductible for insulin that is furnished through a covered item of durable medical equipment (DME) and establishes a \$35 cap on cost sharing for a month's supply of insulin furnished through a covered item of DME, both beginning July 1, 2023.

In section III.A.3. of this final rule, we discuss policies to implement section 90004 of the Infrastructure Investment and Jobs Act (Pub. L. 117-9, November 15, 2021) (IIJA) which

requires drug manufacturers to provide a refund to CMS for certain discarded amounts from a refundable single-dose container or single-use package drug. These provisions are necessary to fulfill the statutory requirement to implement this policy effective January 1, 2023 and reduce unnecessary Medicare spending for discarded drug.

c. Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

In section III.B.2. of this final rule, we implement sections 4113, 4121, and 4124 of the CAA, 2023. Section 4113 of the CAA, 2023 amends section 1834(m)(8) of the Act to extend payment for telehealth services furnished by RHCs and FQHCs for the limited period beginning on the first day after the end of the PHE for COVID-19 and ending on December 31, 2024. Section 4113 also delays the in-person requirements under Medicare for mental health visits furnished by RHCs and FQHCs via telecommunications technology until January 1, 2025.

Section 4121 of the CAA, 2023 amends section 1861(aa)(1)(B) of the Act by adding marriage and family therapists (MFT) and mental health counselors (MHC) as eligible practitioners of RHCs and FQHCs beginning January 1, 2024. Section 4121 allows MFTs and MHCs to bill directly and be paid as an RHC and FQHC practitioner under the RHC AIR and FQHC PPS.

Section 4124 of the CAA, 2023 establishes an Intensive Outpatient benefit in RHCs and FQHCs. Final policies related to implementation of IOP for RHCs and FQHCs are outlined in the CY 2024 OPSS final rule.

d. Clinical Laboratory Fee Schedule (CLFS) – Revisions Consistent with Recent Statutory Changes

In section III.D. of this final rule, we discuss the conforming regulations text changes for CLFS data reporting requirements due to the enactment of section 4114 of the CAA, 2023. For clinical diagnostic laboratory tests (CDLTs) that are not advanced diagnostic laboratory tests (ADLTs), the CAA, 2023 delayed the next data reporting period by one year. Instead of taking place from January 1, 2023 through March 31, 2023, data reporting will now take place from

January 1, 2024 through March 31, 2024, based on the original data collection period of January 1, 2019 through June 30, 2019. Data reporting for these tests then resumes on a 3-year cycle (2027, 2030, etc.). Additionally, the CAA, 2023 amended the statutory provisions for the phase-in of payment reductions resulting from private payor rate implementation to specify that the applicable percent in CY 2023 is 0 percent, meaning that the payment amount determined for a CDLT for CY 2023 shall not result in any reduction in payment as compared to the payment amount for that test for CY 2022. The CAA, 2023 further amended the statutory phase-in provisions to provide that for CYs 2024 through 2026, the payment amount for a CDLT may not be reduced by more than 15 percent as compared to the payment amount for that test established in the preceding year.

e. Pulmonary Rehabilitation (PR), Cardiac Rehabilitation (CR) and Intensive Cardiac Rehabilitation (ICR) Expansion of Supervising Practitioners

In section III.E. of this final rule, we are finalizing the proposed revisions to §§ 410.47 (PR) and 410.49 (CR/ICR) to add to the types of practitioners who may supervise PR, CR and ICR programs to also include a physician assistant (PA), nurse practitioner (NP) or clinical nurse specialist (CNS). These provisions are necessary to fulfill the statutory requirement to implement these changes made in section 51008 of the Bipartisan Budget Act of 2018 (Pub. L. 115-123, enacted February 9, 2018) (BBA of 2018) effective January 1, 2024.

f. Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug under a Prescription Drug Plan or an MA-PD Plan (Section 2003 of the SUPPORT Act)

In the CY 2024 PFS proposed rule (88 FR 52531 through 52536), we proposed changes to the electronic prescribing for controlled substances (EPCS) requirement specified in section 2003 of the SUPPORT Act (referred to as the CMS EPCS Program). The provisions finalized in section III.M. of this final rule specify the basis for the evaluation of compliance by describing how prescriptions are calculated, remove the same entity exception while conditioning the electronic prescribing requirement as subject to the exemption in § 423.160(a)(3)(iii), identify

non-compliance actions for subsequent measurement years, and update other CMS EPCS Program exceptions. Previously finalized policies did not include actions for non-compliance after the 2024 measurement year, and we needed to identify actions for non-compliance in subsequent measurement years.

g. Ambulance Fee Schedule and the Medicare Ground Ambulance Data Collection System

Section 4103 of the CAA amended section 1834(l)(12)(A) and (l)(13) of the Act to extend the payment add-ons set forth in those subsections through December 31, 2024. The ambulance extender provisions are enacted through legislation that is self-implementing. In this final rule, we are finalizing our proposal only to revise the dates in § 414.610(c)(1)(ii) and (c)(5)(ii) to conform the regulations to these self-implementing statutory requirements.

Section 1834(l)(17)(A) of the Act requires the Secretary to develop a data collection system (which may include use of a cost survey) to collect cost, revenue, utilization, and other information determined appropriate by the Secretary for providers and suppliers of ground ambulance services. In this final rule, we are finalizing our proposed revisions to the Medicare Ground Ambulance Data Collection Instrument. The changes and clarifications aimed to reduce burden on respondents, improve data quality, or both.

h. Quality Payment Program

This final rule is also necessary to make changes to the Quality Payment Program to move the program forward to focus more on measurement efforts, refine how clinicians will be able to participate in a more meaningful way through the Merit-based Incentive Payment System (MIPS) Value Pathways (MVPs), and highlight the value of participating in Advanced Alternative Payment Models (APMs). Authorized by MACRA, the Quality Payment Program is an incentive program that includes two participation tracks, MIPS and Advanced APMs. MIPS eligible clinicians are subject to a MIPS payment adjustment based on their performance in four performance categories: cost, quality, improvement activities, and Promoting Interoperability. Currently, reporting for traditional MIPS is seen as siloed across the performance categories.

These policy proposals are intended to promote better quality reporting to improve patient health outcomes by coordinating reporting for MIPS across performance categories, and make changes to scoring that will provide a better picture of clinicians' performance.

## 2. Discretionary Provisions

### a. Drugs and Biological Products Paid Under Medicare Part B

Section III.A.3. of this final rule, as part of our continued implementation of section 90004 of the Infrastructure Investment and Jobs Act (Pub. L. 117-9, November 15, 2021) (IIJA), which amended section 1847A of the Act to require manufacturers to provide a refund to CMS for certain discarded amounts from a refundable single-dose container or single-use package drug, finalizes the dates we will issue the initial refund report and subsequent annual reports to manufacturers, the method of calculation of the refund amount when there are multiple manufacturers of a refundable drug, increased applicable percentages for certain drugs with unique circumstances, and a future application process by which manufacturers may apply for an increased applicable percentage for a drug.

### b. RHCs and FQHCs

In section III.B. of this final rule, we finalized the policy to adopt the definition "immediate availability" as including real-time audio and visual interactive telecommunications for the direct supervision of services and supplies furnished incident to a physician's service through December 31, 2024 for RHCs and FQHCs. We also finalized the policy change the required level of supervision for behavioral health services furnished "incident to" a physician or non-physician practitioner's services at RHCs and FQHCs to allow general supervision, rather than direct supervision, consistent with the policies finalized under the PFS for CY 2023.

In section III.B.4. of this final rule, we finalized the policy to include Remote Patient Monitoring (RPM), Remote Therapeutic Monitoring (RTM), Community Health Integration (CHI), and Principal Illness Navigation (PIN) services in the general care management HCPCS code G0511 when these services are provided by RHCs and FQHCs. We also finalized the

revision of the calculation for G0511 to include the weighted average of these services using the CY 2021 PFS non-facility utilization. These provisions are necessary in that we evaluate coding policies in this rule and their applicability to RHCs and FQHCs.

Also, in section III.B.4. of this final rule, we clarified the supervision requirement for obtaining consent for CCM services and virtual communication services furnished in RHCs and FQHCs.

c. Modifications Related to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs)

As outlined in section III.F. of this final rule, we finalized the policy to allow periodic assessments to be furnished via audio-only communication when two-way audio-video communications technology is not available to the beneficiary through the end of CY 2024, to the extent that it is authorized by SAMHSA and DEA at the time the service is furnished and all other applicable requirements are met. We believe this modification is needed because extending these audio-only flexibilities for an additional year may minimize disruptions associated with the conclusion of the PHE, and evidence has shown that Medicare beneficiaries from historically underserved populations are more likely to be offered and use audio-only telemedicine services than audio-video services.<sup>512</sup> Therefore, minimizing disruptions to care for audio-only periodic assessments may further promote health equity and minimize disparities in access to care.

d. Medicare Shared Savings Program

In section III.G. of this final rule, we are finalizing modifications to the Shared Savings Program to further advance Medicare's overall value-based care strategy of growth, alignment, and equity, and to respond to concerns raised by ACOs and other interested parties. The changes to the Shared Savings Program include the following: modifications to the quality performance standard and reporting requirements under the APP that would continue to move ACOs toward digital measurement of quality and to align with the Quality Payment Program; modifications to

---

<sup>512</sup> <https://pubmed.ncbi.nlm.nih.gov/33471458/>.

the step-wise beneficiary assignment methodology to add a new third step and related changes to how we identify the assignable beneficiary population; updates to the definition of primary care services used for purposes of beneficiary assignment to remain consistent with billing and coding guidelines; refinements to the financial benchmarking methodology for ACOs in agreement periods beginning on January 1, 2024, and in subsequent years to (1) cap the risk score growth in an ACO's regional service area when calculating regional trends used to update the historical benchmark at the time of financial reconciliation for symmetry with the cap on ACO risk score growth, (2) apply the same CMS-HCC risk adjustment methodology applicable to the calendar year corresponding to the performance year in calculating risk scores for Medicare FFS beneficiaries for each benchmark year, (3) further mitigate the impact of the negative regional adjustment on the benchmark to encourage participation by ACOs caring for medically complex, high cost beneficiaries, and (4) specify the circumstances in which CMS would recalculate the prior savings adjustment for changes in values used in benchmark calculations due to compliance action taken to address avoidance of at-risk beneficiaries, or as a result of the issuance of a revised initial determination of financial performance for a previous performance year following a reopening of ACO shared savings and shared losses calculations; refine newly established AIP policies; make updates to other programmatic areas including the program's eligibility requirements; and make timely technical changes to the regulations for clarity and consistency.

e. Medicare Part B Payment for Preventive Vaccine Administration Services

Section III.H. of this final rule outlines the implementation of policies that impact the payment amount for administration of preventive vaccines paid under the Part B vaccine benefit, specifically the in-home additional payment for Part B vaccine administration. Section III.H. of this final rule also codifies other amendments to the regulation text for Part B preventive vaccine administration. These provisions are necessary to provide stable payment for preventive vaccine administration and to allow predictability for providers and suppliers to rely on for building and sustaining robust vaccination programs.

f. Appropriate Use Criteria (AUC) for Advanced Diagnostic Imaging

In section III.J. of this final rule, we are finalizing our proposal to pause efforts to implement the AUC program for reevaluation and to rescind and reserve for future use the current AUC program regulations at § 414.94. These provisions are necessary because we have exhausted all reasonable options for fully operationalizing the AUC program consistent with the statutory provisions as prescribed in section 1834(q)(B) of the Act directing CMS to require real-time claims-based reporting to collect information on AUC consultation and imaging patterns for advanced diagnostic imaging services to ultimately inform outlier identification and prior authorization.

g. Medicare and Medicaid Provider Enrollment

This final rule also includes several regulatory enhancements to our Medicare and Medicaid provider enrollment policies that we proposed. These provisions focus on, but are not limited to: (1) expanding the bases for denying or revoking a provider's or supplier's Medicare enrollment; (2) revising the effective dates of certain Medicare revocations; and (3) revising certain policies regarding Medicaid terminations. These changes are necessary to help ensure that payments are made only to qualified providers and suppliers and/or to increase the efficiency of the Medicare and Medicaid provider enrollment processes. We believe that fulfilling these objectives will assist in protecting the Trust Funds and Medicare beneficiaries.

h. Expand Diabetes Screening and Diabetes Definitions

In section III.L. of this final rule, we are finalizing our proposal to (1) expand coverage of diabetes screening tests to include the Hemoglobin A1C test (HbA1c) test, (2) expand and simplify the frequency limitations for diabetes screening, and (3) simplify the regulatory definition of "diabetes" for diabetes screening, Medical Nutrition Therapy (MNT) and Diabetes Outpatient Self-Management Training Services (DSMT). Diabetes is a chronic disease that affects how the body turns food into energy and includes three main types: Type 1, Type 2, and gestational diabetes. The Centers for Disease Control and Prevention (CDC) reports that

approximately 37.3 million Americans are living with diabetes and an additional 96 million Americans are living with prediabetes.<sup>513</sup> CDC reports that 326,000 persons age 65 years and older are newly diagnosed with diabetes each year. CDC also estimates that among persons age 65 years and older, 21 percent have been diagnosed with diabetes while 5 percent have undiagnosed diabetes.<sup>514</sup> Diabetes is the leading cause of kidney failure and new cases of blindness among adults, and the sixth leading cause of death among adults age 65 years and older in the US.<sup>515</sup> Screening is performed on persons who may not exhibit symptoms to identify persons with either prediabetes or diabetes, who can then be referred for appropriate prevention or treatment, with the intention of improving health outcomes.

i. Basic Health Program Provisions

Section 1331 of the ACA requires the Secretary to establish a BHP, and section 1331(c)(4) of the ACA specifically provides that a State shall coordinate the administration of, and provision of benefits under the BHP with other State programs. Additionally, section 1331(f) of the ACA requires the Secretary to review each State's BHP on an annual basis. These regulations build from previous BHP regulations to provide for options for BHP implementation and operations as well as oversight of the BHP program, beginning with program year 2024.

j. A Social Determinants of Health Risk Assessment in the Annual Wellness Visit

As outlined in section III.S. of this final rule, we are finalizing our proposal to exercise our authority in section 1861(hhh)(2)(I) of the Act to add elements to the Annual Wellness Visit (AWV) by adding a new Social Determinants of Health (SDOH) Risk Assessment as an optional, additional element with an additional payment. We proposed that the SDOH Risk Assessment be separately payable with no beneficiary cost sharing when furnished as part of the same visit with the same date of service as the AWV. The AWV includes the establishment (or

<sup>515</sup> Heron M. Deaths: Leading causes for 2019. National Vital Statistics Reports; vol 70 no 9. Hyattsville, MD: National Center for Health Statistics. 2021. DOI: <https://dx.doi.org/10.15620/cdc:107021>.

update) of the patient’s medical and family history, application of a health risk assessment and the establishment (or update) of a personalized prevention plan. The AWW also provides an optional Advance Care Planning (ACP) service. The AWW is covered for eligible beneficiaries who are no longer within 12 months of the effective date of their first Medicare Part B coverage period and who have not received either an Initial Preventive Physical Examination (IPPE) or AWW within the past 12 months. The goals of AWW are health promotion, disease prevention and detection and include education, counseling, a health risk assessment, referrals for prevention services, and a review of opioid use. Additional information about the AWW can be found on the CMS website at (<https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNProducts/preventive-services/medicare-wellness-visits.html>).

#### *B. Overall Impact*

We have examined the impacts of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), Executive Order 14094 entitled “Modernizing Regulatory Review” (April 6, 2023), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96-354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104-4), and Executive Order 13132 on Federalism (August 4, 1999).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). The Executive Order 14094 entitled “Modernizing Regulatory Review” (hereinafter, the Modernizing E.O.) amends section 3(f)(1) of Executive Order 12866 (Regulatory Planning and Review). The amended section 3(f) of Executive Order 12866 defines a “significant regulatory action” as an action that is likely to result in a rule: (1) having an annual effect on the economy of \$200 million or more in any 1

year (adjusted every 3 years by the Administrator of OIRA for changes in gross domestic product), or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, territorial, or tribal governments or communities; (2) creating a serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raise legal or policy issues for which centralized review would meaningfully further the President's priorities or the principles set forth in this Executive order, as specifically authorized in a timely manner by the Administrator of OIRA in each case.

A regulatory impact analysis (RIA) must be prepared for major rules with significant regulatory action/s and/or with significant effects as per section 3(f)(1) (\$200 million or more in any 1 year). Based on our estimates, OMB's Office of Information and Regulatory Affairs has determined this rulemaking is significant per section 3(f)(1) as measured by the \$200 million or more in any 1 year. Accordingly, we have prepared an RIA that, to the best of our ability, presents the costs and benefits of the rulemaking. The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most hospitals, practitioners, and most other providers and suppliers are small entities, either by nonprofit status or by having annual revenues that qualify for small business status under the Small Business Administration standards. (For details, see the SBA's website at <https://www.sba.gov/document/support-table-size-standards> (refer to the 620000 series)). Individuals and States are not included in the definition of a small entity.

The RFA requires that we analyze regulatory options for small businesses and other entities. We prepare a regulatory flexibility analysis unless we certify that a rule would not have a significant economic impact on a substantial number of small entities. The analysis must include a justification concerning the reason action is being taken, the kinds and number of small

entities the rule affects, and an explanation of any meaningful options that achieve the objectives with less significant adverse economic impact on the small entities.

Approximately 95 percent of practitioners, other suppliers, and providers are considered to be small entities, based upon the SBA standards. There are over 1 million physicians, other practitioners, and medical suppliers that receive Medicare payment under the PFS. Because many of the affected entities are small entities, the analysis and discussion provided in this section, as well as elsewhere in this final rule is intended to comply with the RFA requirements regarding significant impact on a substantial number of small entities.

In addition, section 1102(b) of the Act requires us to prepare an RIA if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area for Medicare payment regulations and has fewer than 100 beds. Medicare does not pay rural hospitals for their services under the PFS; rather, Medicare payment is made under the PFS for physicians' services, which can be furnished by physicians and NPPs in a variety of settings, including rural hospitals. We did not prepare an analysis for section 1102(b) of the Act because we determined, and the Secretary certified, that this rule will not have a significant impact on the operations of a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits on State, local, or tribal governments or on the private sector before issuing any rule whose mandates require spending in any 1 year of \$100 million in 1995 dollars, updated annually for inflation. In 2023, that threshold is approximately \$177 million. This rule will impose no mandates on State, local, or tribal governments or on the private sector.

Executive Order 13132 establishes certain requirements that an agency must meet when it issues a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has federalism

implications. Since this rule does not impose any costs on State or local governments, the requirements of Executive Order 13132 are not applicable.

We prepared the following analysis, which, together with the information provided in the rest of this rule, meets all assessment requirements. The analysis explains the rationale for and purposes of this rule; details the costs and benefits of the rule; analyzes alternatives; and presents the measures we will use to minimize the burden on small entities. As indicated elsewhere in this rule, we discussed various changes to our regulations, payments, or payment policies to ensure that our payment systems reflect changes in medical practice and the relative value of services and to implement provisions of the statute. We provide information for each policy change in the relevant sections of this final rule. We are unaware of any relevant Federal rules that duplicate, overlap, or conflict with this rule. The relevant sections of this final rule describe significant alternatives we considered, if applicable.

### *C. Changes in Relative Value Unit (RVU) Impacts*

#### 1. Resource-Based Work, PE, and MP RVUs

Section 1848(c)(2)(B)(ii)(II) of the Act requires that increases or decreases in RVUs may not cause the amount of Medicare Part B expenditures for the year to differ by more than \$20 million from what expenditures would have been in the absence of these changes. If this threshold is exceeded, we make adjustments to preserve budget neutrality.

Our estimates of changes in Medicare expenditures for PFS services compared payment rates for CY 2023 with payment rates for CY 2024 using CY 2022 Medicare utilization. The payment impacts described in this final rule reflect averages by specialty based on Medicare utilization. The payment impact for an individual practitioner could vary from the average and will depend on the mix of services they furnish. The average percentage change in total revenues will be less than the impact displayed here because practitioners and other entities generally furnish services to both Medicare and non-Medicare patients. In addition, practitioners and other entities may receive substantial Medicare revenues for services under other Medicare

payment systems. For instance, independent laboratories receive approximately 83 percent of their Medicare revenues from clinical diagnostic laboratory tests that are paid under the Clinical Laboratory Fee Schedule (CLFS).

The PFS update adjustment factor for CY 2024, as specified in section 1848(d)(19) of the Act, is 0.00 percent before applying other adjustments. In addition, the CAA, 2023 provided a one-year 2.50 percent increase in PFS payment amounts for services furnished in CY 2023, and a one-year 1.25 percent increase in PFS payment amounts for services furnished during CY 2024, and required that the supplementary percentage increases shall not be taken into account in determining PFS payment rates for subsequent years.

To calculate the CY 2024 PFS conversion factor (CF), we took the CY 2023 conversion factor without the one-year 2.50 percent payment increase provided by the CAA, 2023 for CY 2023 and multiplied it by the budget neutrality adjustment required as described in the preceding paragraphs and the 1.25 percent PFS payment increase provided by the CAA, 2023 for CY 2024. We estimate the CY 2024 PFS CF to be 32.7442 which reflects the -2.18 percent budget neutrality adjustment under section 1848(c)(2)(B)(ii)(II) of the Act, the 0.00 percent update adjustment factor specified under section 1848(d)(19) of the Act, and the 1.25 percent payment increase for services furnished in CY 2024, as provided in the CAA, 2023. We estimate the CY 2024 anesthesia CF to be 20.4349, reflecting the same overall PFS adjustments with the addition of anesthesia-specific PE and MP adjustments.

**TABLE 116: Calculation of the CY 2024 PFS Conversion Factor**

CY 2023 Conversion Factor		33.8872
Conversion Factor without the CAA, 2023 (2.5 Percent Increase for CY 2023)		33.0607
CY 2024 RVU Budget Neutrality Adjustment	-2.20 percent (0.9780)	
CY 2024 1.25 Percent Increase Provided by the CAA, 2023	1.25 percent (1.0125)	
<b>CY 2024 Conversion Factor</b>		<b>32.7375</b>

**TABLE 117: Calculation of the CY 2024 Anesthesia Conversion Factor**

CY 2023 National Average Anesthesia Conversion Factor		21.1249
Conversion Factor without the CAA, 2023 (2.5 Percent Increase for CY 2023)		20.6097
CY 2024 RVU Budget Neutrality Adjustment	-2.18 percent (0.9782)	
CY 2024 Anesthesia Fee Schedule Practice Expense and Malpractice Adjustment	0.11 percent (1.0011)	
CY 2024 1.25 Percent Increase Provided by the CAA, 2023	1.25 percent (1.0125)	
<b>CY 2024 Conversion Factor</b>		<b>20.4349</b>

Table 118 shows the payment impact of the policies in this final rule on PFS services. To the extent that there are year-to-year changes in the volume and mix of services provided by practitioners, the actual impact on total Medicare revenues will be different from those shown in Table 118 (CY 2023 PFS Estimated Impact on Total Allowed Charges by Specialty). The following is an explanation of the information represented in Table 118.

- Column A (Specialty): Identifies the specialty for which data are shown.
- Column B (Allowed Charges): The aggregate estimated PFS allowed charges for the specialty based on CY 2022 utilization and CY 2023 rates. That is, allowed charges are the PFS amounts for covered services and include coinsurance and deductibles (which are the financial responsibility of the beneficiary). These amounts have been summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty.
- Column C (Impact of Work RVU Changes): This column shows the estimated CY 2024 impact on total allowed charges of the changes in the work RVUs, including the impact of changes due to potentially misvalued codes.
- Column D (Impact of PE RVU Changes): This column shows the estimated CY 2024 impact on total allowed charges of the changes in the PE RVUs.
- Column E (Impact of MP RVU Changes): This column shows the estimated CY 2024 impact on total allowed charges of the changes in the MP RVUs.

- Column F (Combined Impact): This column shows the estimated CY 2024 combined impact on total allowed charges of all the changes in the previous columns. Column F may not equal the sum of columns C, D, and E due to rounding.

**TABLE 118: CY 2024 PFS Estimated Impact on Total Allowed Charges by Specialty**

(A) Specialty	(B) Allowed Charges (mil)	(C) Impact of Work RVU Changes	(D) Impact of PE RVU Changes	(E) Impact of MP RVU Changes	(F) Combined Impact
ALLERGY/IMMUNOLOGY	\$217	0%	-1%	0%	-1%

\* Column F may not equal the sum of columns C, D, and E due to rounding.

In recent years, we have received requests from interested parties for CMS to provide more granular information that separates the specialty-specific impacts by site of service. These interested parties have presented high-level information to CMS suggesting that Medicare payment policies are directly responsible for consolidating privately owned physician practices and freestanding supplier facilities into larger health systems. Their concerns highlight a need to update the information under the PFS to account for current trends in healthcare delivery, especially concerning independent versus facility-based practices. We published an RFI in the CY 2023 PFS proposed rule to gather feedback on this issue and refer readers to the discussion in last year’s final rule (87 FR 69429 through 69438). As part of our holistic review of how best to update our data and offer interested parties additional information that addresses some of the concerns raised, we have recently improved our current suite of public use files (PUFs) by including a new file that shows estimated specialty payment impacts at a more granular level, specifically by showing ranges of impact for practitioners within a specialty. This file is available on the CMS website under downloads for the CY 2024 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

We provided an additional impact table for this rulemaking cycle that includes a facility/non-facility breakout of payment changes. The following is an explanation of the information represented in Table 119.

- Column A (Specialty): Identifies the specialty for which data are shown.
- Column B (Setting): Identifies the facility or nonfacility setting for which data are shown.
- Column C (Allowed Charges): The aggregate estimated PFS allowed charges for the specialty based on CY 2022 utilization and CY 2023 rates. That is, allowed charges are the PFS amounts for covered services and include coinsurance and deductibles (which are the financial responsibility of the beneficiary). These amounts have been summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty.
- Column D (Combined Impact): This column shows the estimated CY 2024 combined impact on total allowed charges.

## 2. CY 2024 PFS Impact Discussion

### a. Changes in RVUs

The most widespread specialty-level impacts of the RVU changes are generally related to the changes to RVUs for specific services resulting from the misvalued code initiative, including RVUs for new and revised codes. The estimated impacts for some specialties, including family practice, endocrinology, nurse practitioner, physician assistant, clinical social worker, psychiatry, clinical psychologist, and general practice, reflect increases relative to other specialties. These increases can largely be attributed to our implementation of the separate payment for the O/O E/M visit inherent complexity add-on code, the Year 3 update to clinical labor pricing, and/or the proposed adjustment to certain behavioral health services. Approximately 90 percent of the budget neutrality adjustment is attributable to the O/O E/M visit inherent complexity add-on code, with all other proposed valuation changes making up the other 10 percent. The services furnished by these specialties include relatively more E/M services, behavioral health care, or clinical labor for their practice expense costs. These increases are also due to increases in value for particular services after considering the recommendations from the American Medical Association's (AMA) Relative Value Scale Update Committee (RUC) and CMS review, and increased payments resulting from supply and equipment pricing updates.

The estimated impacts for several specialties, including anesthesiology, interventional radiology, radiology, nuclear medicine, vascular and thoracic surgery, physical/occupational therapy, anesthesiology, and audiology, reflect decreases in payments relative to payment to other specialties, largely resulting from the redistributive effects of the implementation of separate payment for the O/O E/M visit inherent complexity add-on code, the Year 3 update to clinical labor pricing, and/or the proposed adjustment to certain behavioral health services. The services furnished by these specialties were negatively affected by the redistributive effects of increases in work RVUs for other codes, and/or rely primarily on supply/equipment items for their practice expense costs and, therefore, were affected negatively by the updated Year 3 clinical labor pricing under budget neutrality. These decreases are also due to the revaluation of individual procedures based on reviews, including consideration of AMA RUC review and recommendations, as well as decreases resulting from the continued phase-in implementation of the previously finalized supply and equipment pricing updates. The estimated impacts also reflect decreases due to the continued implementation of previously finalized code-level reductions that are being phased in over several years. For independent laboratories, it is important to note that these entities receive approximately 83 percent of their Medicare revenues from services that are paid under the CLFS.

We often receive comments regarding the changes in RVUs displayed on the specialty impact table (Table 118), including comments received in response to the valuations. We remind interested parties that although the estimated impacts are displayed at the specialty level, typically, the changes are driven by the valuation of a relatively small number of new and/or potentially misvalued codes. The percentage changes in Table 118 are based upon aggregate estimated PFS allowed charges summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty, and compared to the same summed total from the previous calendar year. Therefore,

they are averages and may not necessarily represent what is happening to the particular services furnished by a single practitioner within any given specialty.

As discussed above, we have reviewed our suite of public use files and have worked on new ways to offer interested parties additional information that addresses concerns about the lack of granularity in our impact tables. To illustrate how impacts can vary within specialties, we created a public use file that models the expected percentage change in total RVUs per practitioner. Using CY 2022 utilization data, Total RVUs change between -1 percent and 1 percent for more than 15 percent of practitioners, representing approximately 26 percent of the changes in Total RVUs for all practitioners, with variation by specialty. Specialties, such as gastroenterology, exhibit little variation in changes in total RVUs per practitioner. Table 118 (CY 2024 PFS Estimated Impact on Total Allowed Charges by Specialty) indicates an overall change of 0 percent for this specialty, and the practitioner-level distribution shows that 89 percent of these practitioners will experience a change in Total RVUs between -2 percent and 2 percent. The specific service mix within a specialty may vary by practitioner, so individual practitioners may experience different changes in total RVUs. For example, Table 118 indicates a 1 percent increase in RVUs for the internal medicine specialty as a whole; however, 49 percent of internal medicine specialty practitioners—representing over 41 percent of Total RVUs for the specialty—will experience a 1 percent or more decrease in Total RVUs. Meanwhile, 40 percent of internal medicine specialty practitioners will experience 2 percent or more increases in Total RVUs, and these practitioners account for 40 percent of Total RVUs for this specialty. We also note the code level RVU changes are available in the Addendum B public use file that we make available with each rule.

The specialty impacts displayed in Table 118 reflect changes within the pool of total RVUs. The specialty impacts table, therefore, includes any changes in spending that result from finalized policies within BN (such as the updated proposals associated with the complexity add-on code G2211 in CY 2024 or the clinical labor pricing update that began in CY 2022) but does

not include any changes in spending which result from finalized policies that are not subject to BN adjustment, and therefore, have a neutral impact across all specialties. The 2.50 and 1.25 percent payment supplements for CY 2023 and CY 2024, respectively, are statutory changes that take place outside of BN, and therefore, are not captured in the specialty impacts displayed in Table 118.

#### b. Impact

Column F of Table 118 displays the estimated CY 2024 impact on total allowed charges, by specialty, of all the RVU changes. A table showing the estimated impact of all of the changes on total payments for selected high volume procedures is available under “downloads” on the CY 2024 PFS final rule website at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/>. We selected these procedures for the sake of illustration from among the procedures most commonly furnished by a broad spectrum of specialties. The change in both facility rates and nonfacility rates are shown. For an explanation of facility and nonfacility PE, we referred readers to Addendum A on the CMS website at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/>.

### 3. Health Equity

Advancing health equity is the first pillar of CMS’s 2022 Strategic Framework.<sup>516</sup> As part of our efforts to gain insight into how the PFS policies could affect health equity, we considered adding elements to our impact analysis detailing how policies impact particular patient populations. Patient populations that have been disadvantaged or underserved by the healthcare system may include patients with the following characteristics, among others: members of racial and ethnic minorities; members of federally recognized Tribes, people with disabilities; members of the lesbian, gay, bisexual, transgender, and queer (LGBTQ+) community; individuals with limited English proficiency, members of rural communities, and persons otherwise adversely affected by persistent poverty or inequality.

---

<sup>516</sup> Available at <https://www.cms.gov/files/document/2022-cms-strategic-framework.pdf>.

In the FY 2024 IPPS/LTCH PPS final rule (88 FR 59395 through 59401), we included a table that details providers in terms of the beneficiaries they serve, as well as differences in estimated average payments per case and changes in estimated average payments per case relative to other providers. Because we do not have data for all characteristics that may identify disadvantaged or underserved patient populations, we use several proxies to capture these characteristics, including elements from claims data and Medicare enrollment data. The characteristics included in the table in the IPPS/LTCH PPS final rule, described in further detail below, include race/ethnicity, dual eligibility for Medicaid and Medicare, Medicare low-income subsidy (LIS) enrollment, a joint indicator for dual or LIS enrollment, presence of an ICD-10-CM Z code indicating a “social determinant of health” (SDOH), presence of a behavioral health diagnosis code, receiving end-stage renal disease (ESRD) Medicare coverage, qualifying for Medicare due to disability, living in a rural area, and living in an area with an area deprivation index (ADI) greater than or equal to 85.

a. Race and Ethnicity

The first health equity-relevant grouping is race/ethnicity. To assign the race/ethnicity variables, we utilized the Medicare Bayesian Improved Surname Geocoding (MBISG) data in conjunction with the claims data. The method used to develop the MBISG data involves estimating a set of six racial and ethnic probabilities (White, Black, Hispanic, American Indian or Alaska Native, Asian or Pacific Islander, and multiracial) from the surname and address of beneficiaries by using previous self-reported data from a national survey of Medicare beneficiaries, post-stratified to CMS enrollment files. The CMS Office of Minority Health uses the MBISG method in its reports analyzing Medicare Advantage plan performance on Healthcare Effectiveness Data and Information Set (HEDIS) measures, and is being considered by CMS for use in other CMS programs. In the 2024 IPPS/LTCH proposed rule (88 FR 27261 through 27266), we estimated the percentage of discharges for each specified racial/ethnic category for

each hospital by taking the sum of the probabilities for that category for that hospital and dividing by the hospital's total number of discharges.

#### b. Income

The two main proxies for income available in the Medicare claims and enrollment data are dual eligibility for Medicare and Medicaid and Medicare LIS status. Dual-enrollment status is a powerful predictor of poor outcomes on some quality and resource use measures even after accounting for additional social and functional risk factors.<sup>517</sup> Medicare LIS enrollment refers to a beneficiary's enrollment in the low-income subsidy program for the Part D prescription drug benefit. This program covers all or part of the Part D premium for qualifying Medicare beneficiaries and gives them access to reduced copays for Part D drugs. (We note that beginning on January 1, 2024, eligibility for the full low-income subsidy will be expanded to include individuals currently eligible for the partial low-income subsidy.) Because Medicaid eligibility rules and benefits vary by State/territory, Medicare LIS enrollment identifies beneficiaries who are likely to have low income but may not be eligible for Medicaid. Not all beneficiaries who qualify for the duals or LIS programs actually enroll. Due to differences in the dual eligibility and LIS qualification criteria and less than complete participation in these programs, sometimes beneficiaries were flagged as dual but not LIS or vice versa. Hence this analysis also used a "dual or LIS" flag as a third proxy for low income. The dual and LIS flags were constructed based on enrollment/eligibility status in the CMS Chronic Conditions Data Warehouse (CCW) during the month of the hospital discharge.

#### c. Social Determinants of Health (SDOH)

Social determinants of health (SDOH) are the conditions in the environments where people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks.<sup>518</sup> These circumstances or determinants

---

<sup>517</sup> [https://aspe.hhs.gov/sites/default/files/migrated\\_legacy\\_files//195046/Social-Risk-in-Medicare%E2%80%99s-VBP-2nd-Report-Executive-Summary.pdf](https://aspe.hhs.gov/sites/default/files/migrated_legacy_files//195046/Social-Risk-in-Medicare%E2%80%99s-VBP-2nd-Report-Executive-Summary.pdf).

<sup>518</sup> Available at: <https://health.gov/healthypeople/priority-areas/social-determinants-health>.

influence an individual's health status and can contribute to wide health disparities and inequities. ICD-10-CM contains Z-codes that describe a range of issues related—but not limited—to education and literacy, employment, housing, ability to obtain adequate amounts of food or safe drinking water, and occupational exposure to toxic agents, dust, or radiation. The presence of ICD-10-CM Z-codes in the range Z55-Z65 identifies beneficiaries with these SDOH characteristics. The SDOH flag used for this analysis was turned on if one of these Z-codes was recorded on the claim for the physician service itself (that is, the beneficiary's prior claims were not examined for additional Z-codes). Analysis of Z-codes in Medicare claims data from 2019 suggests that Z-codes are used inconsistently across provider types and population groups, and are generally underreported.<sup>519</sup> Therefore, we believe Z-codes may not reflect the actual rates of SDOH.

#### d. Behavioral Health

Beneficiaries with behavioral health diagnoses often face co-occurring physical illnesses but often experience difficulty accessing care.<sup>520</sup> The combination of physical and behavioral health conditions can exacerbate both conditions and result in poorer outcomes than one condition alone.<sup>521</sup> Additionally, the intersection of behavioral health and health inequities is a core aspect of CMS' Behavioral Health Strategy.<sup>522</sup> We used the presence of one or more ICD-10-CM codes in the range of F01- F99 to identify beneficiaries with a behavioral health diagnosis.

#### e. Disability

<sup>522</sup> <https://www.cms.gov/cms-behavioral-health-strategy>.

Individuals under age 65 who are determined eligible for social security disability benefits may also be eligible for Medicare coverage.<sup>523</sup> Individuals may qualify for social security disability benefits on the basis of a medically determinable physical or mental impairment(s) that has lasted or is expected to last for a continuous period of at least 12 months or is expected to result in death<sup>524</sup>. Disabled beneficiaries often have complex healthcare needs and difficulty accessing care. Compared to people without disabilities, people with disabilities generally have less access to health care, have more depression and anxiety, engage more often in risky health behaviors such as smoking, and are less physically active.<sup>525</sup> Beneficiaries were classified as disabled for the purposes of this analysis if their original reason for qualifying for Medicare was disability; this information was obtained from Medicare's CCW enrollment data. We noted that this is likely an underestimation of disability, because it does not account for beneficiaries who became disabled after becoming entitled to Medicare.

f. End-Stage Renal Disease (ESRD)

Beneficiaries with ESRD have high healthcare needs and high medical spending, and often experience comorbid conditions and poor mental health. Beneficiaries with ESRD also experience significant disparities, such as a limited life expectancy<sup>526</sup>. Beneficiaries were classified as ESRD for the purposes of this analysis if they were receiving Medicare ESRD coverage during the month of the discharge; this information was obtained from the CCW enrollment data.

g. Geography

---

<sup>523</sup> Medicare eligibility on the basis of disability is discussed in 42 CFR § 406.12.

Beneficiaries in some geographic areas – particularly rural areas or areas with concentrated poverty – often have difficulty accessing care.<sup>527,528</sup> For this analysis, beneficiaries were classified on two dimensions: from a rural area and from an area with an area deprivation index (ADI) greater than or equal to 85.

Rural status is defined for this analysis using the primary Rural-Urban Commuting Area (RUCA) codes 4 – 10 (including micropolitan, small town, and rural areas) corresponding to each beneficiary's zip code. RUCA codes are defined at the census tract level based on measures of population density, urbanization, and daily commuting. The ADI is obtained from a publicly available dataset designed to capture socioeconomic disadvantage at the neighborhood level<sup>529</sup>. It utilizes data on income, education, employment, housing quality, and 13 other factors from the American Community Survey (ACS) and combines them into a single raw score, which is then used to rank neighborhoods (defined at various levels), with higher scores reflecting greater deprivation. The version of the ADI used for this analysis is at the Census Block Group level and the ADI corresponds to the Census Block Group's percentile nationally. Living in an area with an ADI score of 85 or above, a validated measure of neighborhood disadvantage, is shown to be a predictor of 30-day readmission rates, lower rates of cancer survival, poor end of life care for patients with heart failure, and longer lengths of stay and fewer home discharges post-knee

surgery even after accounting for individual social and economic risk factors.<sup>530,531,532,533,534</sup> The MedPAR discharge data was linked to the ADI data available in the CCW. Beneficiaries with no recorded ADI were treated as being from an urban area and as having an ADI less than 85.

In examining how we might expand our PFS impact analysis, we considered what framework might accurately provide insight into the relationship between PFS policies and health equity. Rather than examining changes in estimated average payments, we believe that illuminating the baseline is a necessary first step toward advancing our goal of measuring the impact of PFS policies on health equity. Table 121 displays the share of utilization for each of the health-equity relevant characteristics listed above. First, we list the share of enrollees with each characteristic. Next, we list the share of utilization by beneficiaries (that is, enrollees with at least one claim for a physician service in CY 2022) with each characteristic by provider specialty. The information contained in Table 121 is provided solely to demonstrate beneficiary utilization of services by provider specialty impact across a number of health equity dimensions and does not form the basis or rationale for the finalized policies.

In consideration of the differences between IPPS/LTCH and the PFS discussed below, we solicited comment from interested parties about how we might structure a PFS impact analysis that addresses these and other considerations to examine how changes in the PFS will impact

beneficiaries of particular groups. We also solicited comment about how such a framework will allow us to consider developing policies that enhance health equity under our existing statutory authority. We welcomed suggestions about alternative measures of health equity in our impact analysis, in particular with regard to the ADI as a proxy for disparities related to geographic variation. Finally, we sought feedback about additional categories beyond those described previously that should be considered in our analysis, along with potential data sources.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Commenters generally supported the inclusion of Table 121. One commenter suggested an alternative index of vulnerability in place of the ADI, citing concerns about the accuracy of the ADI. This commenter also requested clarification about how CMS may use the information in Table 121.

*Response:* We appreciate commenters support for our inclusion of the data in Table 121. With respect to the comment regarding an alternative vulnerability index, we may consider this in future rulemaking.

*Comment:* A commenter stated that the rule “contemplates variable payments for factors such as race/ethnicity...” and “it’s clear that CMS means to use the data to produce a payment based on billing or outcomes”.

*Response:* We believe the commenter misunderstood the purpose of including Table 121. We did not contemplate variable payments for factors such as race/ethnicity. As stated in the proposed rule, “the information contained in Table 107 is provided solely to demonstrate beneficiary utilization by provider specialty impact across several health equity dimensions. This does not form the basis or rationale for the proposed policies in the proposed rule.” As stated in the proposed rule, the purpose of including this data was to seek comment on how we might structure a PFS impact analysis that addresses these considerations and how we might develop policies that enhance health equity under our existing statutory authority.

Comment: A commenter requested clarification about the MBISG, specifically how it addresses mixed-race couples and individuals who are not appropriately placed in any racial category.

Response: The purpose of our use of the MBISG method is to augment CMS administrative measures of race and ethnicity (that is, enrollment data) to more accurately assign individuals into racial and ethnic categories for purposes of displaying utilization data across specialty. While no imputation method is 100 percent accurate, it is an improvement over administrative data and we believe it is sufficient for the purpose for which it is being used – to gain a general understanding of beneficiary utilization across specialty.

*Nature of a service.* In the table that details providers in terms of the beneficiaries they serve in the IPPS/LTCH PPS final rule, the unit of measurement we used was a hospital discharge. A discharge includes all resources involved in the hospital’s caring for a beneficiary during the hospital stay. There is no parallel construct under the PFS. While the resources involved in furnishing a given discharge can and do vary under the IPPS, a discharge consists of a somewhat predictable set of resources that occur across a number of cost centers. On the other hand, a service unit under the PFS can range from very discrete services, such as a single pulse oximetry measurement (CPT code 94760) with total RVUs of 0.07 to complex services that include several visits during a global period, such as a liver transplant (CPT code 47135) with total RVUs of 160.44. As an illustration, based on the MS-DRGs reported in the claims data, the standard deviation of the mean IPPS relative weight is of similar magnitude to the mean. In contrast, based on the PFS services reported in the claims data, the standard deviation of the mean PFS RVU service is vastly larger than the mean.

**TABLE 120: Differences in Claim-level Relative Weights between IPPS and PFS**

	IPPS Relative Weight <sup>535</sup> on claim	PFS RVU on claim
Mean	1.95	2.62
Standard Deviation	1.72	1,241

<sup>535</sup> The IPPS relative weights are not fully comparable to PFS RVUs because IPPS payments may include outliers. Even considering outliers, however, the standard deviation on IPPS payments is only slightly higher relative to the mean(\$17,104+/- \$21,825).

In addition, under the PFS, some services furnished during a single encounter are billed in multiple units. These services could range from allergy testing (CPT codes 95004 through 95078) to anesthesia services (CPT codes 00100 through 01860). The average total RVUs for services billed in multiple units are not comparable to services billed in a single unit per encounter.

*Number of practitioners serving a beneficiary and associated spending.* Under the IPPS, most beneficiaries who had one or more IPPS claims during fiscal year 2022 were served by 1 or 2 providers, which accounts for most of the spending under the IPPS. The share of beneficiaries served by a given number of providers is consistent with the share of spending incurred for these discharges. Less than 10 percent of beneficiaries were served by 5 or more providers. Under the PFS, during CY 2022, most beneficiaries with one or more PFS claims saw 5 or more practitioners. In contrast to the pattern under the IPPS, PFS spending for beneficiaries who saw 10 or more practitioners accounted for a disproportionate share of total spending. Under the IPPS, examining providers in terms of beneficiary characteristics reflects the care of most beneficiaries with one or more discharges under the IPPS. Under the PFS, the same framework would be mostly describing the 40 percent of beneficiaries with one or more PFS services who account for close to 80 percent of total spending.

*Utilization of services by beneficiary characteristic.* As shown in Table 121, the specialty-level services utilized by beneficiaries with particular characteristics varies widely. Beneficiaries with the characteristics in Table 121 do not access services consistent with the share of enrollees with that characteristic. As a result, comparing across deciles, for example, of practitioners serving beneficiaries of one race, would often be comparing very different service mixes. How discrete a service is, the setting it is furnished in, and the associated inputs may result in services that have very different baseline allowed charges.

A significant body of literature has examined the reasons for differential access to physician services by beneficiary characteristics. Some of the explanations of the differential utilization of services include:

- Patient preferences and willingness to undergo procedures, such as due to decreased belief in treatment efficacy and concerns about surgical risks<sup>536,537,538,539</sup>
- Geographic location: specialists and sub-specialists are sometimes clustered in urban areas due to higher demand for services<sup>540</sup>
- Differences in referral patterns<sup>541</sup> from primary care physicians and following hospitalizations
- Differences in providers who can speak the language of beneficiaries with Limited English Proficiency<sup>542</sup>

The information contained in Table 121 is provided solely to demonstrate beneficiary utilization by provider specialty impact across a number of health equity dimensions. This does not form the basis or rationale for the policies in this final rule.

#### *D. Impact of Changes Related to Telehealth Services*

In this final rule, we finalized implementation of the provisions of the CAA, 2023 that amended section 1834(m) of the Act to extend the application of certain Medicare telehealth flexibilities through December 31, 2024, including allowing Medicare telehealth services to be furnished to patients located anywhere within the U.S.; continuing the expanded scope of telehealth practitioners to include occupational therapists, physical therapists, speech-language pathologists, and audiologists; extending payment for telehealth services furnished by FQHCs and RHCs; and delaying the requirement that there be an in-person visit with the physician or practitioner within 6 months before an initial mental health telehealth service.

In this final rule, we finalized a refined process for considering requests received for adding services to the Medicare Telehealth Services List, which will include a decision on whether the services should be included on the list on a permanent or provisional basis. Because the underlying criteria for adding services to the Medicare Telehealth Services List are not changing, we do not expect this to impact the utilization of Medicare Telehealth services beginning in CY 2024 but we will continue to monitor the utilization of these services. We are finalizing that, beginning in CY 2024, claims billed with POS 10 (Telehealth Provided in Patient's Home) are paid at the non-facility PFS rate. Claims billed with POS 02 (Telehealth Provided Other than in Patient's Home) will continue to be paid at the PFS facility rate. As we are currently paying for the majority of services that will be billed with POS 10 at the PFS non-facility rate under the PHE-specific policy of basing payment on the place of service (and POS code) had the service been furnished in person, we believe that these services furnished via telehealth will largely continue to be paid as they are currently. Therefore, we believe the impact of this proposal will be roughly neutral even if utilization remains at current levels for these services. We anticipate that these provisions will result in continued utilization of Medicare telehealth services during CY 2024 at levels comparable to observed utilization of these services during the PHE for COVID-19.

## *E. Other Provisions of the Regulation*

### 1. Impact of Provisions for Medicare Parts A and B Payment for Dental Services Inextricably Linked to Specific Covered Medical Services

In section II.K.2. of this final rule, we are finalizing to allow Medicare Parts A and B payment for dental or oral examination performed as part of a comprehensive workup prior to, and medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with chemotherapy, chimeric antigen receptor (CAR) T-cell therapy, and the administration of high-dose bone-modifying agents (antiresorptive therapy) in the treatment of cancer. We are also finalizing to allow Medicare Parts A and B payment for dental or oral examination performed as part of a comprehensive workup prior to, medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with, and medically necessary diagnostic and treatment services to address dental or oral complications after, treatment of head and neck cancer using radiation, chemotherapy, surgery, or any combination of these. However, we do not anticipate any significant increase in utilization or payment impact for additional dental services given the historically low utilization of these therapies. Although, we acknowledge that the observed utilization of these services might have been low because of the size of the population of patients whose treatment would include such dental services and also because the dental services have been viewed as subject to the payment preclusion under section 1862(a)(12).

Based on an analysis of 2018-2022 incurred claims experience, we estimated that there are potentially 155,000 additional beneficiaries who might receive dental services for which Medicare payment could be made, relative to the current number of beneficiaries that received dental services. These are beneficiaries who would receive any of the treatments identified in our finalized policies for CY 2024 (that is, chemotherapy/CAR T-cell therapy/bone-modifying agent therapies used in the treatment of cancer and treatments for head and neck cancer) who would likely require dental services, and could utilize dental services for which services Medicare could

pay in CY 2024. The estimated average cost for these additional dental services is about \$525 per person on an allowed charge basis and roughly \$420 per person on a Medicare payment basis. This assumption is based on an analysis of 2019 incurred claims, but we believe results using more recent data would not be likely to change, due to the limited claims involving these services. Based on this same analysis, the effective rate of coverage was less than 0.2 percent. We do acknowledge that the actual take-up rate of services could be higher due to the proposed additional examples of medical services to which dental services are inextricably linked, which may raise awareness that payment is available. Therefore, we prepared impact estimates under the utilization assumptions of 0.2 percent and between 1-3 percent. We then applied these utilization ratios to estimate projected payments for dental exams and treatments in connection with cancer therapies. We found that the estimated yearly impact beginning in CY 2024 to be roughly \$130,000 per year with a 0.2 percent utilization assumption, and roughly \$650,000 to 2 million per year for the utilization assumptions of 1-3 percent. Therefore, we do not anticipate a significant payment impact for these provisions. It is important to note that there is a certain amount of uncertainty in these take-up rate assumptions, but they are consistent with the current utilization of dental services, including the expansion provided for in the CY 2023 PFS final rule. Additionally, since the cost impact of this proposal is negligible, it is not necessary to adjust the budget neutrality factor for the conversation factor.

## 2. Impact of Proposal to Implement Separate Payment for the Office/Outpatient (O/O) E/M Visit Inherent Complexity Add-on Code (HCPCS G2211)

In recent years, the AMA's CPT Editorial Committee has largely restructured the E/M visit code sets to acknowledge changes in medical practice. The AMA RUC has reviewed and provided recommendations for the revised E/M visit code sets in the context of the generally recognized need to better recognize resources involved in furnishing different types of services within the broader PFS. While we adopted the RUC-recommended values for the O/O E/M visit code family in the CY 2021 final rule, recognizing that those values generally reflect the

resources involved in furnishing those services, we did not believe those valuations appropriately reflected the resource costs involved in furnishing primary and other similarly longitudinal medical care for a serious or complex condition in office settings. To address this concern, effective beginning in CY 2021, we finalized an add-on code to separately pay for visit complexity inherent to O/O E/M visits for primary care and other medical care services that are part of ongoing care related to a patient's single, serious, or complex condition in the office setting (the O/O E/M visit inherent complexity add-on). After we finalized the CY 2021 payment changes for O/O E/M visits, in the CAA of 2021, Congress imposed a statutory moratorium on Medicare payment for the O/O E/M visit inherent complexity add-on code until January 1, 2024.

We proposed to implement payment for the O/O E/M visit inherent complexity add-on, HCPCS code G2211, with significant refinements to target improved payment for primary and other similar longitudinal care for serious or complex conditions. Specifically, we proposed that the O/O E/M visit complexity add-on code cannot be billed with visits reported using Modifier 25 which is used to indicate that the service is billed on the same day as a minor procedure or another E/M visit. (Previously, in the CY 2021 final rule, we stated we would not expect such billing; but as there was no explicit prohibition, these visits were included in the budget neutrality adjustment (85 FR 84572)). We also proposed to set PFS rates with a refined, more specific utilization assumption that better recognizes likely uptake of the code, differential use among specialties, and new and established patient visits, among other changes. These refined assumptions were developed, considering perspectives and information from interested parties. The resulting estimate reflects that the O/O E/M visit inherent complexity add-on code would likely be reported with approximately 38 percent of all O/O E/M visits for CY 2024. As discussed previously and shown below, we estimated the specific portion of the total budget neutrality adjustment attributable to the proposal to make payment for the O/O E/M inherent

complexity add-on code to be approximately 2.00 percent compared to an attributable budget neutrality adjustment of 3.20 percent as calculated in CY 2021 rulemaking.

### 3. Advancing Access to Behavioral Health

#### a. Impact of Proposed Payment for Marriage and Family Therapist (MFT) Services and Mental Health Counselor (MHC) Services

As outlined in section II.J. of this final rule, section 4121 of CAA, 2023 added section 1861(s)(2)(II) to establish a new Medicare benefit category for MFT services and MHC services furnished and billed by MFTs and MHCs, respectively. MFT and MHC services are defined in section 1861(III)(2) and 1861(III)(4), respectively, as services for the diagnosis and treatment of mental illnesses (other than services furnished to an inpatient of a hospital). An MFT or MHC is defined as an individual who possesses a master's or doctor's degree, is licensed or certified by the State in which they furnish services, who has performed at least 2 years of clinical supervised experience, and meets other requirements as the Secretary determines appropriate. Section 1833(a)(1)(FF) of the statute requires that MFT and MHC services be paid at 75 percent of the amount determined for payment of a clinical psychologist. MFT and MHC services are excluded from consolidated billing requirements under the skilled nursing facility prospective payment system. Services furnished by an MFT and MHC are covered when furnished in a rural health clinic and federally qualified health center. In addition, the hospice interdisciplinary team is required to include one social worker, MFT or MHC. Expenditures associated with payment for services furnished by MFTs and MHCs in CY 2024 will be incorporated into budget neutrality for PFS ratesetting in future years.

### 4. Drugs and Biological Products Paid Under Medicare Part B

Section 90004 of the Infrastructure Investment and Jobs Act (Pub. L. 117-9, November 15, 2021) amended section 1847A of the Act to require manufacturers to provide a refund to CMS for certain discarded amounts from a refundable single-dose container or single-use package drug. The refund amount is either as noted in section 1847A(b)(1)(B) of the Act in the

case of a single source drug or biological or as noted in section 1847A(b)(1)(C) of the Act in the case of a biosimilar biological product, multiplied by the amount of discarded drug that exceeds an applicable percentage, which is required to be at least 10 percent, of total charges (subject to certain exclusions) for the drug in a given calendar quarter. In the CY 2023 final rule, we finalized several policies to implement the provision, including: reporting requirements for the JW and JZ modifiers; the date upon which we will begin to edit claims for appropriate use of the JW and JZ modifiers, October 1, 2023; the definition of “refundable single-dose container or single-use package drug”; the manner in which refund amounts will be calculated; the annual basis we will send reports to manufacturers; the dispute resolution process; and enforcement provisions. In section III.A.3. of this final rule, we finalize the date of the initial report to manufacturers, the dates for subsequent reports, the method of calculation of the refund amount when there are multiple manufacturers of a refundable drug, increased applicable percentages for certain drugs with unique circumstances, and a future application process by which manufacturers may apply for an increased applicable percentage for a drug.

As we discussed in the CY 2024 PFS proposed rule (88 FR 52699 through 52704), we analyzed JW modifier data from 2021 as if the data represented dates of service on or after the effective date of section 90004 of the Infrastructure Act (that is, January 1, 2023).<sup>545</sup> Similar to our regulatory impact analysis in the CY 2023 PFS final rule (87 FR 70187 through 70188), we used the 2021 JW modifier data to estimate refund amounts as described in section 1847A(h)(3) of the Act. First, we subtracted the percent units discarded by 10 percent (the applicable percentage for most refundable drugs), except for five drugs for which we are finalizing higher applicable percentages in this final rule (for example, J9262, J0775, J0223, J3300, and J9269). Then, we multiplied that percentage by the CY 2021 total allowed amount to estimate the annual refund for a given billing and payment code. The quarterly refund was estimated by dividing the

---

<sup>545</sup> <https://data.cms.gov/summary-statistics-on-use-and-payments/medicare-medicaid-spending-by-drug/medicare-part-b-discarded-drug-units>.

annual estimate by 4. We note that this analysis remains appropriate for this final rule because we are finalizing the increased applicable percentages for the two categorical unique circumstances and the associated five billing and payment codes as proposed. In addition, the JW modifier data from 2021 is still the most recent data available for estimating how our final policies impact Medicare Part B expenditures.

Overall in the 2021 calendar year, Medicare paid nearly \$1.56 billion for discarded amounts of drugs from a single-dose container or single-use package paid under Part B. In that year, there were 51 billing and payment codes with 10 percent or more discarded units based on JW modifier data. Of these, 11 did not meet the definition of refundable single-dose container or single-use package drug in section 1847A(h)(8) of the Act because they are multiple source drug codes; 5 were excluded from the definition of refundable single-dose container or single-use package drug (as specified in section 1847A(h)(8)(B) of the Act) because they are identified as radiopharmaceuticals or imaging agents in FDA-approved labeling; and 3 are products referred to as skin substitutes, which were removed because we anticipate making changes to coding and payment policies regarding those products in future rulemaking. After these exclusions, there were 31 billing and payment codes that met the definition of refundable single-dose container or single-use package drug and have discarded units above the relevant finalized applicable percentage. Of these, three have discarded units that would fall below increased applicable percentages finalized in this final rule.

We estimated refund amounts as described in section 1847A(h)(3) of the Act were calculated based on this data by subtracting the percent units discarded by 10 percent (the applicable percentage), except for drugs with higher applicable percentages finalized in the CY 2023 final rule or as finalized in this final rule. Then, we multiplied the appropriate percentage by the CY 2021 total allowed amount to estimate the annual refund for a given billing and payment code. The quarterly refund was estimated by dividing the annual estimate by 4. Based

on this data, there will be approximately \$83.1 million in refunds due from manufacturers for the calendar year of 2021 (\$20.8 million each calendar quarter). See Table 122.

There are several limitations to this analysis that could substantially affect the total quarterly refund. Since new drugs are continually being approved, this estimate does not consider newer drugs that will meet the definition of refundable single-dose container or single-use package drug on or after the effective date of January 1, 2023. Since section 1847A(h)(8)(B)(iii) of the Act excludes drugs approved by FDA on or after November 15, 2021 and for which payment has been made under Part B for fewer than 18 months from this definition, we expect an impact on refund amounts after the 18-month exclusion has ended if the drug otherwise meets the definition. We also noted that this estimate is based on CY 2021 data for discarded drug amounts, which, for reasons discussed in the CY 2023 PFS final rule (87 FR 69716), we believe to be an underestimate due to the frequent omission of the JW modifier. Once we begin to edit claims for both the JW and JZ modifiers, reported discarded drug amounts will likely increase. Other substantial changes to this estimate may occur if a billing and payment code no longer meets this definition. For example, if a generic version of one of these drugs is marketed, the billing and payment code will become a multiple source drug code and will no longer meet the definition of refundable single-dose container or single-use package drug. Subsequently, the manufacturers will not be responsible for refunds under this provision. There may be changes in the percent discarded units for a given refundable single-dose container or single-use package drug if the manufacturer introduces additional vial sizes or modifies the vial size to reduce the amount discarded. Lastly, since data from the CMS website only includes billing and payment codes on the ASP drug pricing file<sup>547</sup> and implementation of section 90004 of the Infrastructure Act is not restricted to billing and payment codes included on the file, there may be other applicable data that was not assessed as part of this estimate.

We received one public comment on this economic impact analysis. The following is a summary of the comment and our response.

---

<sup>547</sup> <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Part-B-Drugs/McrPartBDrugAvgSalesPrice>.

*Comment:* One commenter stated that our economic impact analysis on the discarded drug refund provision reflects incomplete and inaccurate data because use of the JW modifier was not uniformly enforced during the year from which the data was collected. The commenter requested that we take efforts to verify the accuracy of the analysis.

*Response:* As noted previously in this final rule, we understand our analysis to have several limitations, including that we believe our refund estimates to understate actual discarded amounts for refundable drugs due to low compliance with the JW modifier requirement that went into effect on January 1, 2017. The discarded drug data that has been reported with the JW modifier data since 2013 is the best data available and is what we used for this analysis. We expect this data and our impact analyses to become more accurate after the implementation of claims edits for appropriate JW and JZ modifier use on October 2, 2023.

#### a. Impacts Related to the Issuance of the Initial Report

In section III.A.3.b. of this final rule, we finalized the policy to issue the initial refund report to manufacturers, to include all calendar quarters for 2023, no later than December 31, 2024. Accordingly, as outlined in section III.B.3.c. of this final rule, we finalized the policy to require that the refund amounts specified in the initial refund report be paid no later than February 28, 2025, except in circumstances where a report is under dispute.

Delaying the receipt of the rebate, that is in 2025 instead of 2024, only represents a cost to the extent the SMI trust fund receives less interest revenue. Only a portion of SMI trust fund revenue ends up invested in the bond portfolio. Based on current SMI trust fund operation patterns a delay in rebate collection as described in the rule would represent a cost less than \$2 million dollars in any given year and therefore would be negligible to SMI trust fund operations.

#### b. Impacts Related to the Application for Consideration

As outlined in section V.B.1. of this final rule, the information collection requirements, we estimated the annual burden per applicant to be 5 hours. If we anticipate no more than 22 applications in the initial year applications are available, the total annual drafting and submitting

burden would be 110 hours (22 applications per year x 5 hrs per applicant). We estimate an annual cost of this burden to be \$4,591.40 (\$41.74/hr x 110 hr). For subsequent years, we estimate a total annual burden related to drafting and submission of 10 hours (2 applications x 5 hr per respondent/applicant) at an annual cost of \$418 (41.74/hr x 10 hr).

#### 5. Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

In section III.B.4. of this final rule, we finalized the policy to include Remote Patient Monitoring (RPM) and Remote Therapeutic Monitoring (RTM) services, Community Health Integration (CHI) and Principal Illness Navigation (PIN) services, in the general care management HCPCS code G0511 when these services are provided by RHCs and FQHCs. Due to the growing number of services in the code, we revised the calculation for G0511 to include the weighted average of these services based on utilization under the PFS as this may provide a more complete and accurate payment amount.

In terms of estimated impacts to the Medicare program, expanding use of General Care Management HCPCS code G0511 to include RPM, RTM, CHI, and PIN may result in an increase in spending. Prior updates to G0511 have resulted in negligible increases.

#### 6. RHC and FQHC CfC changes: Permitting MFTs and MHCs to furnish services

Section 4121 of the CAA, 2023 amends section 1861(aa)(1)(B) of the Act by adding MFTs and MHCs as eligible practitioners of RHCs and FQHCs beginning January 1, 2024. We proposed regulation text changes to permit MFT and MHCs to provide services furnished at RHCs and FQHCs. These changes will include MFTs and MHCs as members of the staff who may be the owner or an employee of the clinic or center, or furnish services under contract to the clinic or center. Along with other permitted physicians and nonphysician practitioners, MFT and MHCs may be available to furnish patient care services at all times the clinic or center operates.

At § 491.9(b)(3) RHCs and FQHCs must have patient care policies that include: (1) a description of the services the clinic or center furnishes directly or through agreement or arrangement; (2) guidelines for medical management of health problems; and (3) rules for

storage, handling, and administration of drugs and biologicals. Additionally, § 491.9(b)(4) states that the RHC and FQHC patient policies must regularly be reviewed at least once every 2 years by a group of professional personnel that includes one or more physicians, one or more physician assistants (PAs) or nurse practitioners (NPs), and at least one person who is not a member of the clinic or center staff. If an RHC or FQHC provides services furnished by an MHC or MFT they must update their patient care policies with a description of the services they will provide.

The most recently published collection of information for RHCs and FQHCs (OMB control number 0938-0334), estimates that an annual review of the patient care policies may take approximately 2 hours. Therefore, we assume, it would take each medical professional (at least one physician and at least one PA or NP) 1 hour to review all policies and procedures, annually. Based on the prior analysis, we estimated it will take 30 minutes to add the description of MFT and MHC services. We also assume that only half of the RHCs and half of the FQHCs will have this burden applied to them, for a total burden estimate of \$817,631.92. We noted that there would be variations in how many clinics or centers employ or contract with an MFT and MHC based on their ability to expand their services. We also recognized that some RHCs and FQHCs may already provide these services as some States provide reimbursement under the Medicaid program; however, we do not know the exact number of clinics or centers that already have these practitioners on staff and will not incur the burden.

While this final rule does have a 1-time burden, there is evidence to suggest there are long-term financial savings in integrating mental health in medical care. Effectively integrating mental and medical care can save upwards of \$52 billion annually due to the existing Medicare mental health coverage gap.<sup>548</sup> Though this total encompasses all facility types, expanding access to MFT and MHC services in RHCs and FQHCs will have individual and societal cost savings. Older adults with mental health conditions have poorer health outcomes, higher hospitalization

<sup>548</sup> [https://onlinelibrary.wiley.com/doi/full/10.1002/jcad.12409?casa\\_token=z412GCn3OuYAAAAA%3AHO3p-cHeiVrLww0dZjTKIcuCbwMxvYtRUo4aj8AwB-tq2w\\_ZJV11gGpWW-oxilDK3awU0xIc2XKMnKhtAQ#jcad12409-bib-0003](https://onlinelibrary.wiley.com/doi/full/10.1002/jcad.12409?casa_token=z412GCn3OuYAAAAA%3AHO3p-cHeiVrLww0dZjTKIcuCbwMxvYtRUo4aj8AwB-tq2w_ZJV11gGpWW-oxilDK3awU0xIc2XKMnKhtAQ#jcad12409-bib-0003).

rates, and emergency room visits.<sup>549</sup> While there is an increasing need for mental health services, one barrier to effective treatment is access to mental health services.<sup>550</sup> Ensuring access to mental health care in rural communities is challenging as there are fewer mental health providers per capita in nonmetropolitan counties.<sup>551</sup> This coincides with HRSA's second quarter of the fiscal year 2023 designated health professional shortage area (HPSA) quarterly summary, which breaks down the number of HPSAs by primary medical care, dental, and mental health HPSAs based on four categories (rural, non-rural, partial rural, and unknown); and as population HPSAs, geographic HPSAs, or Facility HPSAs. The report does not provide accumulative HPSAs by the four categories.<sup>552</sup> Approximately 65 percent of federally designated health professional shortage areas are located in rural areas, and about 30 percent are located in non-rural areas.<sup>553</sup> The shortage of professionals in rural areas is severe, and the shortage of qualified professionals in combination with geographic limitations only exacerbates the mental health crisis in older adults.<sup>554</sup> While there are disparities in the availability of the behavioral workforce between rural and nonrural areas, counselors are integral to providing care in rural areas.<sup>555</sup>

## 7. Clinical Laboratory Fee Schedule

In section III.D. of this final rule, we outline statutory revisions to the data reporting period and phase-in of payment reductions under the CLFS. In accordance with section 4114 of the CAA, 2023, we finalized certain conforming changes to the data reporting and payment requirements in our regulations at 42 CFR part 414, subpart G. Specifically, for CDLTs that are not ADLTs, we are updating certain definitions and revising § 414.504(a)(1) to indicate that initially, data reporting begins January 1, 2017, and is required every 3 years beginning January

<sup>554</sup> <https://psycnet.apa.org/fulltext/2020-75725-002.html>.

<sup>555</sup> [chrome-extension://efaidnbmnnnibpcajpcglclefindmkaj/https://depts.washington.edu/fammed/rhrc/wp-content/uploads/sites/4/2016/09/RHRC\\_DB160\\_Larson.pdf](chrome-extension://efaidnbmnnnibpcajpcglclefindmkaj/https://depts.washington.edu/fammed/rhrc/wp-content/uploads/sites/4/2016/09/RHRC_DB160_Larson.pdf).

2024. The CAA, 2023 delays the next data reporting period under the CLFS for CDLTs that are not ADLTs by 1 year, that is, it requires the next data reporting period for these tests to take place during the period of January 1, 2024 through March 31, 2024. Subsequently, the next private payor rate-based CLFS update for these tests will be effective January 1, 2025, instead of January 1, 2024. In addition, we are making conforming changes to our requirements for the phase-in of payment reductions to reflect the CAA, 2023 amendments. Specifically, we are revising § 414.507(d) to indicate that for CY 2023, payment may not be reduced by more than 0.0 percent as compared to the amount established for CY 2022, and for CYs 2024 through 2026, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year.

We recognize that private payor rates for CDLTs paid on the CLFS and the volumes paid at each rate for each test, which are used to determine the weighted medians of private payor rates for the CLFS payment rates, have changed since the first data collection period (January 1, 2016 through June 30, 2016) and data reporting period (January 1, 2017 through March 31, 2017). In addition, as outlined in section III.D. of this final rule, in the CY 2019 PFS final rule (83 FR 59671 through 59676), we amended the definition of applicable laboratory to include hospital outreach laboratories that bill Medicare Part B using the CMS-1450 14x Type of Bill. As such, the CAA, 2023 amendments to the data reporting period will delay using updated private payor rate data to set revised CLFS payment rates for CDLTs that are not ADLTs.

Due to unforeseen changes in private payor rates due to shifts in market-based pricing for laboratory tests and the unpredictable nature of test volumes and their impact on calculating updated CLFS payment rates based on the weighted median of private payor rates, it is uncertain whether the delay in data reporting will result in a measurable budgetary impact. In other words, to assess the impact of delayed reporting and subsequent implementation of updated CLFS rates, we will need to calculate weighted medians of private payor rates based on new data and compare the revised rates to the current rates. As such, we believe that we will only know the

impact of the delay in data reporting after collecting actual updated applicable information from applicable laboratories and calculating the updated CLFS rates.

Regarding the conforming changes to our requirements for the phase-in of payment reductions, we note that for CYs 2024 through 2026, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year. Based on data reported in the 2017 data collection period, we estimate 14.8 percent (191) of tests on the CLFS may be subject to the full 15 percent phase-in reduction in CY 2024.

#### 8. Pulmonary Rehabilitation (PR), Cardiac Rehabilitation (CR) and Intensive Cardiac Rehabilitation (ICR) Expansion of Supervising Practitioners

As outlined in section III.E. of this final rule, we are finalizing the proposed revisions to §§ 410.47 (PR) and 410.49 (CR/ICR) to codify the statutory changes made in section 51008 of the Bipartisan Budget Act of 2018 (Pub. L. 115-123, enacted February 9, 2018) (BBA of 2018) which permit other specific types of practitioners to supervise these services effective January 1, 2024. The amendments add to the types of practitioners who may supervise PR, CR and ICR programs to also include a physician assistant (PA), nurse practitioner (NP) or clinical nurse specialist (CNS). Accordingly, we are finalizing additions and revisions to the PR and CR/ICR regulations to reflect these statutory amendments.

To assess the potential impact from expanding the types of practitioners that may supervise PR/CR/ICR we searched the literature for articles that evaluated the utilization rates of PR, CR and ICR to determine the historical utilization trends of these services as well as known barriers to utilization. Based on historical utilization trends as well as barriers to utilization discussed in the literature, we do not expect the changes to make a significant impact on the Medicare program.

*Nishi et al.* (2016) investigated the number of Medicare beneficiaries with COPD who received PR from January 1, 2003, to December 31, 2012. Their results included both individuals who had experienced hospitalizations for COPD and those who were outpatients only. The

number of unique patients with COPD who initially participated in PR during the study period was 2.6 percent in 2003 (before conditions of coverage at § 410.47 were established) and 2.88 percent in 2012 (after conditions of coverage at § 410.47 were established).<sup>556</sup> In 2019, *Spitzer, et al.* published an article based on Medicare claims data from 2012, finding that 2.7 percent of eligible Medicare beneficiaries received PR within 12 months of hospitalization with COPD.<sup>557</sup> Using claims data from fee-for-service Medicare beneficiaries hospitalized for COPD in 2014, *Lindenauer et al.* (2020) reported that only 3 percent initiated PR within 1 year of their hospital discharge.<sup>558</sup> Taken together, this data informs us that utilization of PR in the Medicare population is very low.

Million Hearts® 2027, a national initiative co-led by the Centers for Disease Control and Prevention (CDC) and CMS to prevent 1 million preventable cardiovascular disease (CVD) events in the next 5 years<sup>559</sup>, includes a goal of increasing use of CR and states that CR participation rates remain low, ranging from 19 percent to 34 percent.<sup>560</sup> Fleg and colleagues (2020) report that less than 25 percent “of eligible patients participate in CR” with a smaller proportion completing 36 sessions as recommended.<sup>561</sup> In their 2022 article, Varghese and colleagues state that less than 30 percent of eligible patients participate in CR in the United States.<sup>562</sup> *Husaini and colleagues* (2022) analyzed a sample of Medicare fee-for-service claims between 2012 and 2016 and reported that within 1 year of a qualifying event, 16 percent of

patients completed one or more CR session and 0.1 percent of patients completed one or more ICR sessions. They observed an increase of combined CR and ICR utilization from 14 percent (patients with qualifying events in 2012) to 18 percent (patients with qualifying events in 2015).<sup>563</sup> Taken together, this data informs us that utilization of CR and ICR is low, although not as low as PR.

Underutilization of PR, CR and ICR has been attributed to numerous factors as described by *Fleg et al.* “including a lack of referral or strong recommendation from a physician and inadequate follow-up or facilitation of enrollment after referral. Financial issues such as limited or absent health insurance coverage and the inability to afford copayments, even when insured, also limit CR/PR participation as do conflicting work and home responsibilities and distance and transportation difficulties. Social and cultural factors, including the lack of gender and racial diversity among CR/PR staff, language and cultural barriers, and lack of program availability and access are additional challenges... Many eligible patients are also commonly perceived as too frail...”<sup>564</sup> *Husaini et al.* (2022) reinforce the impact of similar factors in CR underuse. They cite “lower reimbursements relative to cost and variability in access”, physician “skepticism over benefit and a primary emphasis on cardiac medications and procedures”, and patient “reluctance or inability to commit 3-6 hr/wk for 8-12 wk to CR, logistical (transportation, work, etc) or financial impediments, a preference for exercise/rehabilitation at home, fear of failure, and physical limitations.”<sup>565</sup>

While the expansion of supervision requirements to include nonphysician practitioners could offer greater flexibility for PR and CR programs to operate, the barriers to utilization as

described by *Fleg and colleagues (2020)* and *Husiani and colleagues (2022)* are widespread and complex and low participation in PR, CR and ICR has remained steady for many years. We do not believe the expansion of supervising practitioners is likely to address these barriers.

Therefore, we do not anticipate any significant increase in utilization of PR, CR and ICR services and subsequent impact to the Medicare program or interested parties.

#### 9. Modifications Related to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs)

As outlined in section III.F. of this final rule, we are allowing periodic assessments to be furnished via audio-only communication when two-way audio-video communications technology is not available to the beneficiary through the end of CY 2024, to the extent that it is authorized by SAMHSA and DEA at the time the service is furnished and all other applicable requirements are met.

We believe the Part B cost impact of this flexibility for the use of telecommunications will be minimal because we do not expect that these flexibilities will increase the frequency with which medically necessary assessments are furnished.

#### 10. Medicare Shared Savings Program

##### a. General Impacts

As of January 1, 2023, 10.9 million Medicare beneficiaries receive care from a health care provider in one of the 456 ACOs participating in the Shared Savings Program, the largest value-based care program in the country. The modifications to Shared Savings Program policies we are finalizing with this final rule advance Medicare's overall value-based care strategy of growth, alignment, and equity, with many provisions overlapping these categories. Many of the policies in this final rule are incremental refinements to the broader changes finalized in the CY 2023 PFS final rule (87 FR 69777 through 69968). Those changes were designed to reverse recent trends where program participation had plateaued, higher spending populations were increasingly underrepresented in the program since the change to regionally adjusted

benchmarks, and access to ACOs appeared inequitable as evidenced by data indicating underserved populations were less likely to be assigned to a Shared Savings Program ACO, and to encourage growth of ACOs in underserved communities.

The changes to the Shared Savings Program regulations finalized with the CY 2023 PFS final rule were designed to increase program participation for new ACOs through the AIP option intended to promote health equity and provide ACOs greater choice in the pace of progression to performance-based risk; sustain program participation by reducing the effect of ACO performance on benchmark updates and benchmark rebasing; mitigate the bias in regional expenditure calculations that benefits ACOs electing prospective assignment; strengthen incentives for ACOs serving high-risk and high dual populations; improve the risk adjustment methodology to better account for medically complex, high-cost beneficiaries while continuing to guard against coding initiatives; increase opportunities for low revenue ACOs in the BASIC track to share in savings by allowing ACOs that do not meet the minimum savings rate (MSR) requirement to share in savings at a lower rate; encourage ACOs to transition more quickly to all-payer quality measure reporting; update the ACO beneficiary assignment methodology; and reduce administrative burden on ACOs. The changes to Shared Savings Program policies in this final rule include modifications designed to further these goals in concert with implementation of certain changes finalized in the CY 2023 PFS final rule, which are applicable for agreement periods beginning on January 1, 2024, and in subsequent years.

On average, updated benchmarks would marginally increase as a result of the modifications to the calculation of the regional component of the blended update factor used to update the historical benchmark between benchmark year (BY) 3 and the performance year (PY) by capping an ACO's regional service area risk score growth through use of an adjustment factor to provide more equitable treatment for ACOs and for symmetry with the cap on ACO risk score growth (section III.G.4.b. of this final rule). This change is expected to increase the regional update factor amount in certain cases where an ACO may operate in a regional service area with

rapid change in the average prospective HCC risk score for the FFS assignable beneficiary population. The current methodology for calculating the regional update factor risk adjusts county-level FFS expenditures in an ACO's regional service area by Medicare enrollment type by dividing average county-level FFS expenditures for assignable beneficiaries in the county by the average prospective HCC risk score for both the performance year and BY3. The expenditure growth between BY3 and the performance year calculated using risk-adjusted regional expenditures could therefore be reduced by large increases in average prospective HCC risk scores in the ACO's regional service area that would only be partly offset by the increase in prospective HCC risk score growth for the ACO's assigned beneficiary population due to the cap on ACO assigned beneficiary prospective HCC risk score growth when updating the benchmark between BY3 and the performance year. The adjustment we are adopting in this final rule, applicable for agreement periods beginning on January 1, 2024, and in subsequent years, will effectively strengthen the regional portion of the three-way blended update factor and help to limit losses ACOs may face when operating in regional service areas with high risk score growth and a beneficiary population that becomes more medically complex between BY3 and the performance year, increasing incentives for ACOs to form or continue participation in such areas. By utilizing a market share adjusted cap to account for ACO market share in the ACO's regional service area, the adjustment will still retain a disincentive against coding intensity for ACOs that may have a high market share in their region and consequently have greater influence on regional service area risk score changes. We expect this feature of the methodology will help dissuade such ACOs from attempting to artificially increase their benchmark by selectively serving lower risk beneficiaries and increasing the intensity of diagnoses submitted for those beneficiaries.

Analyses outlined in section III.G.4.b.(2) of this final rule, surrounding Tables 38 and 39, provide the basis for estimating the impact for the cap on regional service area risk score growth. Analysis of average prospective HCC risk score changes at the Hospital Referral Region (HRR)

level over an extended 2007 to 2021 historical period consistently indicated that risk score changes would be highly unlikely to exceed the cap in the first two years of an ACO’s agreement period but will increase somewhat as the 5-year agreement period progresses. The analysis also notably showed that average prospective HCC risk score variation increased markedly in 2020 and 2021 with the COVID-19 PHE.<sup>566</sup> The 11 percent of ACOs simulated to be impacted by the adjustment in PY 2021 (a mix of ACOs with 2-year and 3-year gaps between their respective BY3 and the simulated PY 2021) is therefore anticipated to overstate variation expected in agreement periods that start on January 1, 2024 or later.

Based on the simulation in the context of the longer-run HRR data, we project that starting in 2024 the adjustment will impact less than 1 percent of ACOs in PY1 of an agreement period, between 5 to 7 percent of ACOs by PY3, and up to 10 to 15 percent of ACOs by PY5. The adjustment for ACOs that are simulated to be impacted is relatively small, increasing updated benchmarks by about 0.2 percent up to 0.4 percent on average by PY5, but with the potential for up to a net adjustment of about 1.5 percent in extreme scenarios. The estimated cost from additional shared savings payments resulting from these adjustments totals \$370 million over 10 years as shown in Table 123.

**TABLE 123: Projected Impact of Using Adjustment Factor to Apply Risk Score Cap to Regional Portion of Blended Update Factor Calculation (\$ Millions)**

	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	Total
Impact Estimate	10	10	20	40	70	50	20	40	40	70	<b>370</b>
Estimate Range:											
Low Estimate	0	0	10	20	40	40	20	20	30	40	<b>220</b>
High Estimate	10	20	30	60	90	80	40	50	60	100	<b>540</b>

A material, albeit uncertain impact, is also estimated for the (a) use of a rolling 3-year historical period instead of contemporary performance to calculate the 40th percentile of the MIPS Quality performance category scores starting in PY 2024 and (b) use of the higher of the

<sup>566</sup> Public use data on Medicare Geographic Variation – by Hospital Referral Region, used for this analysis, is available at <https://data.cms.gov/summary-statistics-on-use-and-payments/medicare-geographic-comparisons/medicare-geographic-variation-by-hospital-referral-region>.

ACO’s health equity adjusted quality performance score or the 40th percentile MIPS Quality performance category score across all MIPS Quality performance scores if a measure that is used to calculate the MIPS Quality performance category score is excluded or does not have a benchmark. It is likely that MIPS Quality performance will improve at least marginally over time and therefore the historical performance could produce a target that effectively is lower than the contemporary 40<sup>th</sup> percentile stipulated at baseline. The effective reduction in the threshold when using the historical MIPS scores, combined with the ‘higher of’ approach when a measure is excluded or lacking a benchmark, are assumed to effectively reduce the quality target by 0 to 5 percentage points (mode 1.5 percentage points), which would produce an estimated \$110 million in additional shared savings payments over 10 years, as shown in the Table 124.

**TABLE 124: Projected Combined Impact of Quality Provisions to (a) Use Rolling 3-Year Historical Period to Calculate the 40<sup>th</sup> Percentile of the MIPS Quality Performance Category Scores and (b) Use the ‘Higher Of Value’ When Measures are Suppressed (\$ Millions)**

	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	Total
Impact Estimate	0	10	10	10	10	10	10	10	20	20	110
Estimate Range:											
Low Estimate	0	0	0	0	0	0	0	0	0	0	0
High Estimate	0	30	30	30	40	40	30	40	40	40	320

The impact of the policies to mitigate the impact of the negative regional adjustment on the benchmark is also estimated to be material. In the CY 2023 PFS final rule, CMS finalized changes applicable for agreement periods beginning on January 1, 2024, and in subsequent years, that would reduce the cap on negative regional adjustments from 5 percent to 1.5 percent and provide an offset factor to gradually decrease the negative regional adjustment amount as an ACO’s proportion of dually eligible Medicare and Medicaid beneficiaries increases or its weighted average prospective HCC risk score increases, or both. Removing the regional adjustment entirely, when the ACO’s regional adjustment amount (expressed as a single per capita value) is negative, will incrementally increase benchmarks for higher spending ACOs (increasing shared savings payments) but will also improve the incentive for higher spending

ACOs to join the Shared Savings Program and drive down unnecessary spending. For a high cost estimate we conservatively assume no new participation is generated in response to this change and estimate the higher benchmarks would generate about \$1.8 billion in additional shared savings payments partly offset by about \$1.6 billion in reduced spending in response to improved incentives. For a mean estimate we additionally assume 10 percent growth in participation from new high spending ACOs leading to about \$490 million net savings over 10 years.<sup>567</sup> For a low cost estimate we instead assume 20 percent growth in participation from high spending ACOs leading to about \$1.2 billion in net savings over 10 years. Table 125 shows these estimates over the 2024-2033 window.

**TABLE 125: Projected Impact of Provision to Mitigate the Impact of Negative Regional Adjustment on Benchmarks (\$ Millions)**

	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	Total
Impact Estimate	0	30	10	-20	-70	-110	-100	-70	-90	-70	<b>-490</b>
Estimate Range:											
Low Estimate	-10	-10	-40	-80	-130	-200	-200	-180	-200	-170	<b>-1,220</b>

Use of the CMS-HCC risk adjustment model(s) applicable to the calendar year corresponding to the performance year to calculate a Medicare FFS beneficiary’s prospective HCC risk score for the performance year, and for each benchmark year of the ACO’s agreement period for agreement periods beginning January 1, 2024, and in subsequent years, is anticipated to remove a potential bias that may otherwise reduce benchmarks particularly for ACOs with beneficiaries exhibiting higher average renormalized risk scores at baseline. An increase in average shared savings payments to ACOs that would have participated regardless of this

---

<sup>567</sup> Elimination of overall negative regional adjustments would likely generate participation growth from ACOs that would have faced significant negative adjustments despite the changes from the CY 2023 PFS final rule to reduce the impact of the negative regional adjustment, but also from other prospective high spending ACOs that may have difficulty estimating the relief they will ultimately receive from the offsets applicable to agreement periods beginning on January 1, 2024, and in subsequent years. Eliminating the overall negative regional adjustment entirely will materially improve the business case for participation from ACOs in the former category and may at least optically improve the business case for ACOs in the latter category without actually incurring cost to the program by increasing their benchmarks.

modification is expected to ultimately be more than offset by additional savings from increased participation from ACOs serving high risk beneficiaries that would have otherwise dropped out or avoided entering the Shared Savings Program under the current approach to calculating prospective HCC risk scores. Net savings are expected to be greater at the end of the 10-year scoring window because residual savings from added participation would grow, whereas benchmarks would not be as impacted in the later part of the scoring window because there is lower likelihood that later agreement periods would have been impacted by changes in the CMS HCC risk adjustment methodology. Table 126 shows these estimates over the 2024-2033 window.

**TABLE 126: Projected Impact of Using a Uniform Approach to Calculate Risk Scores in the Shared Savings Program Benchmark Calculations (\$ Millions)**

	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	Total
Impact Estimate	10	20	60	100	140	-70	-130	-180	-160	-110	<b>-320</b>
Estimate Range:											
Low Estimate	10	-10	10	30	50	-120	-200	-270	-280	-260	<b>-1,040</b>
High Estimate	20	80	130	190	240	70	10	-50	-40	-20	<b>630</b>

An overall net impact is difficult to quantify for the changes in section III.G.3.a. of this final rule, to incorporate use of a new third step in the step-wise beneficiary assignment methodology and the changes to how we identify the assignable beneficiary population. These changes are not currently estimated to have a net impact on program spending in either direction. Impacts on benchmark calculations for individual ACOs would likely be mixed and of relatively limited magnitude. The changes could allow some ACOs to increase efficiency by utilizing more non-physician practitioners in delivering primary care by reducing the risk of their beneficiaries being assigned to other ACOs. On the other hand, these changes could marginally increase shared savings payments to ACOs for efficiencies that currently accrue entirely to the program as spillover effects on beneficiaries unable to be assigned. The overall impact is currently anticipated to be roughly neutral. We will continue to analyze data on the impact of these changes on existing ACOs and will monitor effects of these policies in the future.

The remaining changes to the Shared Savings Program regulations are not estimated to have an impact on program spending at the aggregate level. These changes include modifying the definition of primary care services for purposes of determining beneficiary assignment, recalculating the prior savings adjustment for changes in the amount of savings earned by an ACO in a benchmark year due to compliance action taken to address avoidance of at-risk beneficiaries or changes in the amount of savings or losses for a benchmark year as a result of the issuance of a revised initial determination of financial performance, expanding quality reporting options to include Medicare CQMs, requiring reporting of the MIPS Promoting Interoperability performance category for all ACO participants, ACO providers/suppliers, and ACO professionals that are MIPS eligible clinicians, QPs, or Partial QPs, unless otherwise excluded, and using beneficiary counts instead of person years in health equity adjustment calculations, as well as changes to further refine AIP policies, revise program eligibility requirements, and make technical changes.

b. Compliance with Requirements of Section 1899(i)(3) of the Act

Certain policies, including both existing policies and new policies adopted in section III.G. of this final rule, rely upon the authority granted in section 1899(i)(3) of the Act to use other payment models that the Secretary determines will improve the quality and efficiency of items and services furnished under the Medicare program, and that do not result in program expenditures greater than those that would result under the statutory payment model. The following policies require the use of our authority under section 1899(i) of the Act: the modifications to the calculation of regional component of the three-way blended update factor to cap regional service area risk score growth for symmetry with the ACO risk score growth cap, as described in section III.G.4.b. of this final rule and the refinements to AIP policies as described in section III.G.5. of this final rule. Further, certain existing policies adopted under the authority of section 1899(i)(3) of the Act that depend on use of the assigned population and assignable beneficiary populations will be affected by the addition of a new third step of the beneficiary

assignment methodology and the revisions to the definition of assignable beneficiary described in section III.G.3. of this final rule, including the following: the amount of advance investment payments; factors used in determining shared losses for ACOs under two-sided risk models (including calculation of the variable MSR/MLR based on the ACO's number of assigned beneficiaries, and the applicability of the extreme and uncontrollable circumstances policy for mitigating shared losses for ACOs under two-sided risk models); and calculation of the ACPT, regional and national components of the three-way blended benchmark update factor. When considered together, these changes to the Shared Savings Program's payment methodology are expected to improve the quality and efficiency of items and services furnished under the Medicare program by improving the ability for ACOs to sustain effective participation in regions with changing populations and increasing the overall proportion of Medicare beneficiaries assigned to ACOs, and are not expected to result in a situation in which the payment methodology under the Shared Savings Program, including all policies adopted under the authority of section 1899(i) of the Act, results in more spending under the program than would have resulted under the statutory payment methodology in section 1899(d) of the Act.

In the CY 2023 PFS final rule we estimated that the projected impact of the payment methodology that incorporates all finalized changes from that final rule would result in \$4.9 billion in greater program savings compared to a hypothetical baseline payment methodology that excludes the policies that require section 1899(i)(3) of the Act authority (see 87 FR 70195 and 70196). The marginal impact of the changes adopted in this final rule is estimated to be \$330 million lower net spending over the 10- year window for all new policies combined, including the cap on an ACO's regional service area risk score growth, the addition of a new third step to the beneficiary assignment methodology, and the revised approach to identify the assignable beneficiary population. Therefore, we believe the relatively minor changes to program spending arising from the policies adopted in this final rule will not change our assessment that the

payment methodology adopted in the CY 2023 PFS final rule satisfies the requirement under section 1899(i)(3)(B) of the Act.

We will continue to reexamine this projection in the future to ensure that the requirement under section 1899(i)(3)(B) of the Act that an alternative payment model not result in additional program expenditures continues to be satisfied. In the event that we later determine that the payment model that includes policies established under section 1899(i)(3) of the Act no longer meets this requirement, we would undertake additional notice and comment rulemaking to make adjustments to the payment model to assure continued compliance with the statutory requirements.

#### 11. Medicare Part B Payment for At-Home Preventive Vaccine Administration Services

In section III.H. of this final rule, we finalized the policy to maintain the additional payment when a COVID-19 vaccine is administered in a beneficiary's home under certain circumstances, and to extend this payment to the administration of a pneumococcal, hepatitis B or influenza vaccines.

We estimate the impact of maintaining the additional payment for in-home COVID-19 vaccine administrations and to expand the policy to the administration of all Part B preventive vaccines. For this estimate, we analyzed CY 2021-2022 utilization of HCPCS code M0201 for the providers and suppliers that billed it, along with their utilization of the relevant preventive vaccine administration codes. During this period, the in-home additional payment was billed about 200,000 times by roughly 1,500 different providers and suppliers. For those providers or suppliers who administered COVID-19 vaccine in the home in 2021-2022, HCPCS code M0201 was billed about 2 percent of the time they administered any COVID-19 vaccination. Total Medicare payments for this service in 2021 and 2022 were \$4 million and \$3 million, respectively.

While we expect that in-home administrations of COVID vaccines will continue into CY 2024, we note that the overall utilization of the COVID-19 vaccine was significantly lower in

2022 than in 2021, and future utilization is unknown. Further, if we apply the prevalence of the utilization of HCPCS code M0201 for in-home administration of the COVID-19 vaccine to the utilization of the other three Part B preventive vaccinations, it will result in higher spending of roughly \$1-2 million. Therefore, the overall estimated impact of this final policy is increased spending of less than \$5 million in 2024. We note that our analysis assumed that there will be no additional providers or suppliers who will decide to begin providing these vaccines at home for CY2024, given that COVID-19 PHE ended on May 11, 2023.

## 12. Effects of Proposals Relating to the Medicare Diabetes Prevention Program Expanded Model

### a. Effects on Beneficiaries

We proposed to modify certain Medicare Diabetes Prevention Program (MDPP) expanded model policies to: (1) Extend the flexibilities allowed during the PHE for the COVID-19 1135 waiver event by 4 years (or until December 31, 2027), (2) update the MDPP payment structure to pay for beneficiary attendance on a fee-for-service basis while retaining the diabetes risk reduction performance payments, (3) remove the requirement for MDPP interim preliminary recognition and replace it with CDC preliminary recognition, and (4) remove most references to, and requirements of, the Ongoing Maintenance Sessions given that eligibility for these services will end on December 31, 2023. We anticipate that these changes will have a positive impact on beneficiaries' access to MDPP services by increasing the number of MDPP eligible organizations that enroll in Medicare as MDPP suppliers and, more importantly, increasing beneficiary access to the Set of MDPP services by allowing them continued access to MDPP through a live in-person or virtual classroom (or a combination of both modalities). The changes will also remove barriers specific to attending these classes solely in-person, which may include a lack of MDPP suppliers in certain communities and challenges related to beneficiary logistics concerning course attendance.

These modifications address MDPP supplier and beneficiary needs based upon available monitoring and evaluation data received to date, feedback from Medicare Advantage plans and existing MDPP suppliers, and feedback from beneficiary focus groups. The changes are also in response to comments from interested parties made through public comments in response to prior rulemaking.

During the initial rulemaking for the MDPP expanded model, we sought to ensure that MDPP will be delivered in-person, in a classroom-based setting, and within an established period of service to maintain consistency with the original DPP model test. At the time, priority was placed on establishing a structured expanded model that, when delivered within the confines of the rule, will create the least risk of fraud, waste, and abuse, increase the likelihood of success, and maintain the integrity of the data collected for evaluation purposes.

However, circumstances such as the PHE for COVID-19 led us to make changes to the MDPP expanded model through implementation of an Emergency Policy for MDPP that allows for temporary flexibilities while prioritizing availability and continuity of services for MDPP suppliers and MDPP beneficiaries impacted by such section 1135 waiver events. For example, in the CY 2021 PFS, we finalized the regulations in the March 31<sup>st</sup> COVID-19 IFC to amend the MDPP expanded model to revise certain MDPP policies during the COVID-19 PHE as well as any future 1135 waiver events where such 1135 waiver event may cause a disruption to in-person MDPP service delivery. These flexibilities allowed beneficiaries to either continue to have access to MDPP through participation in virtual sessions, pause an in-person MDPP class and resume with the most recent attendance session of record, or restart MDPP from the beginning in accordance with the March 31<sup>st</sup> COVID-19 IFC (85 FR 19230).

When establishing these flexibilities, we could not predict that the COVID-19 PHE would continue for over 3 years. Although beneficiary participation decreased significantly during the initial year of the COVID-19 PHE, MDPP participation has slowly increased since 2021. As this additional modality of delivery has helped improve supplier access to beneficiaries,

removing the PHE flexibilities and suppliers' ability to deliver MDPP virtually after 3 years will not only be disruptive to suppliers, it may in-fact be detrimental to the operations of the MDPP expanded model.

During the COVID-19 PHE, we permitted virtual delivery of the Set of MDPP services by MDPP suppliers who were recognized by the CDC with Diabetes Prevention Recognition Program (DPRP) in-person delivery mode, but did not permit suppliers who were only recognized by the CDC with either online or distance learning delivery modes. Although we finalized in the CY 2021 PFS that suppliers had to be prepared to return to in-person delivery when the PHE ended, the PHE lasted for over 39 months. Therefore, returning to a solely in-person, pre-PHE delivery model may not be as simple for some suppliers.

Post-PHE, many beneficiaries and suppliers have reported the desire to continue utilizing virtual delivery of MDPP for a wide range of reasons. Maintaining suppliers' ability to offer both synchronous virtual (distance learning) and in-person MDPP may increase beneficiary uptake of these services. It is important to note that permitting virtual delivery of MDPP throughout the PHE has not resulted in a spike in MDPP utilization. A reason for a lack of beneficiary participation may be tied to the fact that suppliers still had to maintain the ability to deliver in-person services (rent or own physical space), while some suppliers were unfortunately unable to pivot to virtual delivery during the COVID-19 PHE for a variety of reasons.

Current data depict that the most impactful MDPP results correspond to attending MDPP sessions virtually or through utilizing a hybrid approach (attending classes both virtually and in-person). Interim MDPP evaluation data illustrated that average participant weight loss is 5.1 percent since the expanded model launched on April 1, 2018, surpassing the expanded model's weight loss goal of 5 percent. In addition, the interim evaluation data show that, 53 percent of MDPP participants attained the 5 percent weight-loss goal, and 24.6 percent attained the 9

percent weight-loss goal.<sup>568</sup> Aligning with the Diabetes Prevention Program (DPP) model test<sup>569</sup> and studies on the National DPP,<sup>570,571</sup> MDPP participants who attended more sessions lost more weight. For example, among beneficiaries who attended at least 9 sessions, 64 percent met the 5 percent weight loss goal and 30 percent met the 9 percent weight loss goal. For MDPP participants impacted by the COVID-19 PHE, evaluation data confirm significantly increased weight loss accompanied with a higher number of sessions attended by participants completing the expanded model in 2021, with these participants attending primarily virtual sessions or a mixture of virtual and in-person sessions.

To date, there have been no preliminary indications that the synchronous virtual delivery of MDPP has limited supplier instruction or beneficiary success, as defined by achievement of the 5 percent weight loss goal. However, it is too early to determine the impact of synchronous virtual delivery of MDPP on other outcomes such as cost-savings or incidence of diabetes. MDPP has been fundamentally limited by low beneficiary participation and corresponding small sample sizes. We believe that an increase in supplier uptake, which may be accomplished through our proposal to maintain more options of MDPP delivery modalities, will result in an increase in beneficiary enrollment. This will be critical to conducting robust programmatic evaluations, including a potential future certification of the synchronous virtual delivery of MDPP.

To assist with our ability to improve monitoring and evaluation of the synchronous virtual delivery of MDPP, we have proposed a new HCPCS G-code specific to distance learning. Additionally, extending the flexibilities allowed during the PHE for COVID-19 by 4 years will

improve MDPP eligible organizations' MDPP service delivery opportunities due to the use of multiple modalities.

b. Effects on the Market

While we acknowledge that additional changes will likely be necessary to improve beneficiary access to MDPP, we anticipate that the enhancements proposed in this rule are likely to result in an increase of MDPP suppliers and increased beneficiary access to the Set of MDPP services. We anticipate that this will assist in contributing to a reduction of the incidence of diabetes among eligible Medicare beneficiaries, and in particular, those residing in underserved communities. Currently, there are approximately 786 in-person organizations nationally that are eligible to become MDPP suppliers based on their preliminary or full CDC Diabetes Prevention Recognition Program (DPRP) status. However, only 25 percent of eligible in-person organizations are participating in MDPP, and only one-third of MDPP suppliers have submitted MDPP-related claims. Through updating the payment structure to one that is similar to those of existing CMS Medicare Preventive Services such as the Intensive Behavioral Counseling for Obesity, the MDPP claims submission process may be more intuitive for existing Medicare suppliers. In addition, we anticipate that simplifying the MDPP payment structure will address some of the complexities related to the process for submitting claims, while encouraging more suppliers to submit claims for MDPP due to a reduced set of codes.

Since MDPP was established through the CY 2017 PFS, we have consistently heard from interested parties that we should include virtual delivery of MDPP as part of the expanded model test, which would increase beneficiary access to the Set of MDPP services while providing flexibility of where both a beneficiary may take the course and from where a supplier may deliver the course. Although we did not allow for a fully virtual delivery of MDPP until the COVID-19 PHE, we did allow a limited number of virtual make-up sessions, which could be delivered either synchronously or asynchronously. The rationale for allowing a limited number of virtual make-up sessions was due to the fact that the data used to certify MDPP were based

upon in-person delivery, thereby fully virtual delivery was arguably outside the scope of certification.

The COVID-19 PHE led CMS to establish MDPP flexibilities that allowed fully virtual delivery of the Set of MDPP services by suppliers. We established several emergency flexibilities within the IFC-1 that removed the limit on the number of virtual makeup sessions, and in the CY 2021 PFS, we finalized the MDPP flexibilities from the IFC-1 while establishing the MDPP Emergency Policy that allowed for virtual delivery of MDPP, including virtual weight collection. However, the CY 2021 PFS stated that MDPP suppliers must retain the capacity to deliver the Set of MDPP services in-person, precluding organizations with CDC DPRP recognition solely in the distance learning or online modalities from participating in MDPP during the COVID-19 PHE. Interested parties commented that some beneficiaries may have limited access or ability to use the technology required for participation in virtual MDPP sessions.

In the CY 2022 PFS, although outside the scope of rule, interested parties recommended that we continue the virtual option following the end of the COVID-19 PHE to assist in increasing access to MDPP, especially for those with transportation needs as well as for beneficiaries in rural and low-income communities, who may suffer from a lack of in-person suppliers. As a result of these recommendations, in this rule, we proposed to extend the PHE flexibilities, specific to allowing synchronous virtual delivery of MDPP, also known as distance learning.

Currently, there are numerous large geographic gaps of MDPP supplier locations, and synchronous virtual delivery may be part of the solution to increasing the accessibility of MDPP to more beneficiaries. It is unclear how the market will respond to the extension of the PHE flexibilities allowed during the COVID-19 PHE, especially since we are still requiring suppliers to have and maintain an in-person DPRP recognition, but we believe organizations will be ready to engage in the delivery of the Set of MDPP services either in-person, through distance learning,

or through a combination of in-person and distance learning. We also believe that having more flexibility in how the Set of MDPP services are delivered will make MDPP more accessible to beneficiaries, particularly those who live in rural areas or in communities with gaps in MDPP supplier locations.

c. Payment for MDPP Services

Regulations at § 414.84 specify MDPP suppliers may be eligible to receive payments for furnishing MDPP services and meeting performance targets related to beneficiary weight loss and/or attendance. However, we have consistently heard from suppliers and interested parties that the MDPP performance-based payment structure has been confusing to some suppliers, including those new to Medicare as well as existing suppliers. Approximately 37 percent of MDPP suppliers have submitted FFS claims for MDPP.<sup>572</sup> Confusion with claims submission has been due, in part, to the MDPP payment structure, which pays for performance-based milestones versus paying for traditional fee-for-service. The performance-based payment structure requires 15 HCPCS G-codes if including ongoing maintenance sessions, and 11 G-codes for the 12-month MDPP service period. Therefore, we proposed to shift this payment structure to pay for attendance on a fee-for-service basis while retaining the diabetes risk reduction performance milestones, for example 5 percent and 9 percent weight loss as well as the maintenance of the 5 percent weight loss in months 7-12. This streamlined payment structure will allow suppliers to receive a more consistent set of payments for their delivery of the Set of MDPP services and reduce the number of G-codes for easier billing.

We anticipate that this updated payment structure will reduce the upfront beneficiary retention costs while motivating eligible suppliers to enroll in Medicare to become MDPP suppliers and provide the Set of MDPP services to eligible Medicare beneficiaries. In the current MDPP payment structure, suppliers submit claims after the 1<sup>st</sup>, 4<sup>th</sup>, and 9<sup>th</sup> sessions attended during the core sessions interval, and following attendance of the two (2) sessions during each of

---

<sup>572</sup> Unpublished data from Acumen LLC, Quarter 4 2022 Quarterly Monitoring Report to CMS.

the core maintenance intervals. Although the per session payment of \$25 is less than the current per session payment of \$38, suppliers will receive up to 22 payments for attendance in the payment structure compared to seven attendance-based payments, for participants who began participation in 2022 or later, or 11 attendance-based payments for participants whose first core session was in 2021 or earlier. The total attendance-based payments will increase by \$54 to \$550 in the payment structure, compared to \$496 in the current one.

This payment schedule will not only eliminate gaps in payment by providing smaller but more frequent per-session payments, it will also reduce or eliminate some of the coding challenges related to the number of existing HCPCS codes. We proposed to decrease the one-time performance payments for beneficiary achievement of the 5 percent and 9 percent weight loss goals as well as proposed a new HCPCS G-code for the maintenance of the 5 percent weight loss during months 7-12. The total maximum payment of \$768 consists of the attendance-based payments and the weight loss performance payments. Although the maximum payment of \$768 over a one-year service period is the same as the current maximum payment, we believe this simplified payment structure will lead to fewer claims rejections while encouraging more suppliers to submit MDPP claims for the beneficiaries they serve, as well as motivate more eligible organizations enroll in Medicare to participate in MDPP.

#### d. Effects on the Medicare Program

##### (a) Estimated 10-Year Impact of MDPP

There are two changes to the Medicare Diabetes Prevention Program (MDPP) which are relevant to this impact analysis. Both changes will be implemented in 2024: Simplifying the MDPP payment schedule; and allowing specified Public Health Emergency (PHE) flexibilities to continue for 4 years after the PHE ends—namely, allowing for synchronous virtual delivery of the Set of MDPP services.

Table 127 shows the estimated impact (in millions) of these two changes on Medicare spending:

**TABLE 127: Estimated Impact (in millions) of the Two Changes on Medicare Spending**

Year	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	Total
Impact on Medicare Spending	\$0.3	\$0.3	\$0.1	\$0.0	-\$0.2	-\$0.8	-\$0.7	-\$0.6	-\$0.5	-\$0.3	-\$2.4

(b) Assumptions/Notes

- Simplifying the payment schedule will lead to fewer claim denials and more participation from MDPP suppliers. For example, only 55-62 percent of FFS participants listed in the supplier crosswalks have an associated MDPP claim over the past 2 years, meaning that organizations have submitted data to the CDC as part of their Diabetes Prevention Recognition Program (DPRP) requirements, and also have FFS claims submitted for the same participants for the same sessions recorded in the DPRP data. The payment schedule will reduce the number of HCPCS codes to from 15 to 6 and eliminate some of the coding issues. It will also eliminate the gaps in payment by providing smaller but more frequent per-session payments.

- The average payment per MDPP participant will increase by \$150. The new payment schedule will likely lead to more successful claim payment submissions and will motivate MDPP providers to retain participating beneficiaries for longer periods of time.

- In 2022, 551 FFS claims were paid for the initial MDPP session, compared with 514 in 2021. According to counts of new FFS participants, there have been about 700 new entrants per year in recent years. With the implementation of a simpler payment schedule and the extension of PHE flexibilities, we assume that new participation will be more in line with claim payments for HCPCS code G9873 and will increase to 1,000 in 2024 and 1,250 during the following years until the extended flexibilities end. We estimated that there will be 500 new (in-person only) participants each year starting in 2029.

- Since the start of the PHE, synchronous virtual delivery of MDPP services has been more prevalent than in-person delivery. However, given the coding/reporting issues during the PHE, it is difficult to determine how many beneficiaries are still receiving MDPP services in-

person. Without the changes, we assume that new participation will be capped at 400 beneficiaries per year.

- For preventing diabetes progression, synchronous virtual delivery of the Set of MDPP services has the same level of effectiveness as in-person delivery. Following 3 years of delivering MDPP almost solely virtually, suppliers and beneficiaries have become adept at utilizing virtual delivery, as many providers in numerous healthcare settings have shifted to utilizing technology. Furthermore, preliminary MDPP data collected during the PHE indicates that beneficiaries have achieved similar weight loss and attendance goals as participants in both the in-person DPP test and MDPP participants who enrolled in MDPP prior to the pandemic. This assumption is revisited in the Sensitivity Analysis section.

### (c) Sensitivity Analysis

On March 14, 2016, the Office of the Actuary (OACT) published a certification memorandum setting out the conditions for expansion of the Medicare Diabetes Prevention Program (MDPP), which can be found at <https://www.cms.gov/Research-Statistics-Data-and-Systems/Research/ActuarialStudies/Downloads/Diabetes-Prevention-Certification-2016-03-14.pdf>. Assumptions about the 10-year cost impacts of virtual delivery of MDPP services takes into account the assumptions of the original certification, and adjusts for diabetes costs in 2023 dollars, and trends those costs over the next 10 years.

Since both the effectiveness and the future participation level of synchronous virtual delivery of MDPP services are largely unknown, Table 128 shows 10-year cost impacts (in millions) of varying levels of effectiveness of the virtual delivery of the Set of MDPP services relative to the in-person delivery of the Set of MDPP services, paired with varying levels of virtual MDPP participation.

**TABLE 128: 10-year Cost Impacts (in millions) of Virtual Delivery of MDPP Services**

<b>Virtual Beneficiaries Per Year/Effectiveness</b>	<b>25%</b>	<b>50%</b>	<b>75%</b>
1,000	\$0.7	-\$0.8	-\$2.3
2,000	\$1.3	-\$1.6	-\$4.6
3,000	\$2.0	-\$2.4	-\$6.9

As indicated in Table 128, virtual delivery of MDPP services is estimated to produce savings when it is at least 50 percent as effective as in-person delivery.

### 13. Appropriate Use Criteria for Advanced Diagnostic Imaging

Section 1834(q)(2) of the Act, as added by section 218(b) of the Protecting Access to Medicare Act (Pub. L. 113-93, April 1, 2014) (PAMA), directs CMS to establish a program to promote the use of appropriate use criteria (AUC) for applicable imaging services furnished in an applicable setting.

As discussed in detail in section III.J. of this final rule, since 2015, we have taken a thoughtful, stepwise approach that maximized engagement and involvement of interested parties to implement the statutory provisions set forth in section 1834(q), as added by section 218(b) of the PAMA, using notice and comment rulemaking. As codified at § 414.94, we established the first two components of the AUC statutory requirements - establishment of AUC and mechanisms for consultation. We began to build the parameters for the fourth component, outlier identification and prior authorization, leading to prior authorization, by establishing the priority clinical areas (PCAs). We began implementing the third component, the AUC consultation and reporting requirement, using the ongoing educational and operations testing period. However, as explained previously in this final rule, at this time, we have exhausted all reasonable options for fully operationalizing the AUC program consistent with the statutory provisions as prescribed in section 1834(q)(B) of the Act directing CMS to require real-time claims-based reporting to collect information on AUC consultation and imaging patterns for advanced diagnostic imaging services to ultimately inform outlier identification and prior authorization. As a result, we are finalizing our proposal to pause implementation of the AUC program for reevaluation and to rescind and reserve for future use the current AUC program regulations at § 414.94.

In the CY 2019 PFS final rule (83 FR 59452), we performed an RIA for this program and updated that RIA in the CY 2022 PFS final rule (86 FR 64996). The estimated impacts in the CY

2022 PFS final rule were as follows:

- Cost to ordering clinicians of required AUC consultation: \$51,039,109 annually.
- Cost to Medicare beneficiaries for additional office visit time: \$54,789,518 annually.
- Cost to ordering clinicians of transmitting consultation information: \$94,495,192

annually.

- Cost to furnishing clinicians to update processes to report AUC information:

\$1,851,356,888 (one time).

- Potential savings to Medicare program from decrease in imaging utilization:

\$700,000,000 annually.

The prior savings estimate is no longer an accurate reflection of savings that could be achieved and CMS will not realize the estimated \$700,000,000 annual savings because, as described in section III.J. of this final rule, the AUC program cannot be implemented as written in statute; therefore, expected savings are negligible.

Table 129 includes the previous AUC program-related activities and their corresponding impact estimates from the CY 2022 PFS rule.

**TABLE 129: AUC Program Related Activities with Impact Estimates From CY2022 PFS**

<b>AUC Program Related Activity</b>	<b>CY 2022 PFS Rule Impact Estimate</b>
Impact of required AUC consultations by ordering professional	\$51,039,109
Impact to Medicare beneficiaries	\$54,789,518
Impact on transmitting orders for advanced diagnostic imaging services	\$94,495,192
AUC automated solution	\$1,851,356,888
Medicare program impacts associated with advanced diagnostic imaging services	\$700,000,000

Note: These previously estimated costs and savings are no longer accurate and will not be realized because we cannot implement the program as written in statute as described in section III.J. of this final rule; because the statute cannot be implemented, the savings are negligible.

#### 14. Medicare and Medicaid Provider and Supplier Enrollment Changes

In this section, we outline the impact of our Medicare provider enrollment revocation provisions and our Medicaid termination database proposal. For all provider enrollment

proposals not referenced in this section, we have determined that they will not have an economic impact.

a. Medicare Revocation Reasons

As outlined in section III.K. of this final rule, we proposed several new or expanded revocation reasons in § 424.535(a).

First, we proposed to expand § 424.535(a)(1) to include instances where the provider or supplier is non-compliant with the enrollment requirements in Title 42. Paragraph (a)(1) would no longer be restricted to non-compliance with the provisions of 42 CFR part 424, subpart P.

Second, new § 424.535(a)(15) will give CMS the authority to revoke enrollment if the provider or supplier, an owning or managing employee or organization thereof, or an officer or director thereof has had a civil judgment under the False Claims Act (31 U.S.C. §§ 3729 – 3733) imposed against them within the previous 10 years.

Third, we proposed in new § 424.535(a)(23) that CMS may revoke an IDTF's, DMEPOS supplier's, OTP's, or HIT supplier's, or MDPP's enrollment based on a violation of any standard or condition in, respectively, §§ 410.33(g), 424.57(c), 424.67(b) or (e), 424.68(c) or (e), or 424.205(b) or (d).

Fourth, § 424.535(a)(16) would permit CMS to revoke enrollment if a provider or supplier, or any owner, managing employee or organization, officer, or director thereof, has been convicted of a misdemeanor under Federal or State law within the previous 10 years that CMS deems detrimental to the best interests of the Medicare program and its beneficiaries.

For reasons outlined in section III.K. of this final rule, we are finalizing the first three revocation proposals, but not proposed § 424.535(a)(16).

Based on CMS statistics concerning the average annual amount of Medicare payments a provider or supplier receives, we project a figure of \$50,000. We note that we have recently used this figure when estimating the potential savings associated with several new revocation

reasons.<sup>573</sup> For purposes of consistency and accuracy, we will use this \$50,000 amount in this final rule.

Table 130 outlines the estimated annual number of revocations that would ensue with these three revocation proposals:

**TABLE 130: Annual Number of Revocations**

<b>Revocation Reason</b>	<b>Number of Revocations</b>
§ 424.535(a)(1)	5
§ 424.535(a)(15)	5
§ 424.535(a)(23)	5
Total	15

These revocations will represent a savings to the Federal Government because Trust Fund dollars will no longer be paid to the revoked providers and suppliers. Accordingly, we projected an annual savings to the Federal Government of \$750,000 (\$50,000 x 15 revocations).

b. Medicaid Termination Database

As outlined in section III.K. of this final rule, we proposed certain provisions in 42 CFR part 455 concerning the length of time a provider remains in the Medicaid termination database and how this interacts with the termination periods that States impose upon terminated providers. We do not believe these proposals involve any additional impact or burden on providers or States. In fact, it could result in a reduction of burden because a provider's potential length of time in the termination database would be capped at 10 years, although we have no data available with which to assist us in calculating the possible burden reduction. As a result, since we are uncertain of how much of the burden will be reduced, we solicited public comments from the public to aid in understanding how to measure said burden reduction.

We received no comments regarding our revocation savings estimate or any burden reduction associated with our Medicaid termination database proposals.

---

<sup>573</sup> For example, see the final rule published in the Federal Register on November 18, 2022 (87 FR 69404), titled Medicare and Medicaid Programs; CY 2023 Payment Policies Under the Physician Fee Schedule and Other Changes to Part B Payment and Coverage Policies; Medicare Shared Savings Program Requirements; Implementing Requirements for Manufacturers of Certain Single-dose Container or Single-use Package Drugs To Provide Refunds With Respect to Discarded Amounts; and COVID-19 Interim Final Rules”.

## 15. Expand Diabetes Screening and Diabetes Definitions

As outlined in section III.L. in this final rule, we are finalizing our proposal to: (1) expand coverage of diabetes screening tests to include the Hemoglobin A1C test (HbA1c) test, (2) expand and simplify the frequency limitations for diabetes screening, and (3) simplify the regulatory definition of “diabetes” for diabetes screening, Medical Nutrition Therapy (MNT) and Diabetes Outpatient Self-Management Training Services (DSMT).

As we described in the PFS proposed rule, we anticipate that expanding coverage of diabetes screening to include the HbA1c test and expanding and simplifying the frequency limitations for diabetes screening to result in some additional service utilization, but we also anticipate the additional utilization may be balanced, in part, by potential long term benefits and savings resulting from increased prevention and early detection (allowing for less invasive and more effective treatment). As outlined earlier, Medicare currently covers the Fasting Plasma Glucose (FPG) test and the Glucose Tolerance Test (GTT) for diabetes screening. The HbA1c test does not require fasting and is more convenient than the currently covered FPG and GTT. We also proposed to expand and simplify the frequency limitations for diabetes screening by aligning to the statutory limitation of “not more often than twice within the 12-month period following the date of the most recent diabetes screening test of that individual.”

As described in the PFS proposed rule, we estimate our final rule to expand diabetes screening to result in approximately \$68.5 million in additional annual expenditures for the Medicare Program. Our estimate is based on the following assumptions. Based on calendar year 2022 actual experience, approximately 27.3 percent of beneficiaries had a blood panel test that did not include the HbA1c test. Medicare currently pays approximately \$9.50 per HbA1c test for diabetes management. The Medicare statutory and regulatory eligibility factors for an individual at risk for diabetes (section 1861(yy)(2) of the Act, 42 CFR 410.18(e)) cover much of the current Medicare beneficiary population. We assume that approximately 7.6 million potential additional HbA1c tests for diabetes screening to be billed under our proposal in calendar year 2024 and that

the HbA1c test would be billed with a blood panel 95 percent of the time. Our estimate does not reflect secondary effects of the policies, such as increased utilization of preventive screening services, additional follow-up services, and potential offsetting savings (including prevention and more effective treatment through early detection) that may result from these coverage expansions. Secondary effects are difficult to predict, may materialize many years after the intervention and may, in part, offset one another.

As described in the PFS proposed rule, we do not anticipate that our proposal to simplify and expand the regulatory definition of “diabetes” for diabetes screening, MNT and DSMT to result in a significant economic impact on the Medicare program. As outlined earlier, we proposed to remove the regulatorily codified clinical test requirements from the definition of “diabetes” for diabetes screening, MNT and DSMT and proposed a shortened version of the existing definition that will simply define diabetes as diabetes mellitus, a condition of abnormal glucose metabolism. We believe that our proposal will empower health care professionals to apply clinically accurate and appropriate criteria and that we can ensure certain safeguards through medical coding and claims processing instructions. We do not anticipate our proposal to simplify and expand the regulatory definition of “diabetes” for diabetes screening, MNT and DSMT to result in a significant economic impact on the Medicare Program because the regulatory simplification will not otherwise change requirements or conditions of coverage and payment.

#### 16. Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug under a Prescription Drug Plan or an MA-PD Plan (section 2003 of the SUPPORT Act)

In section III.M. of this final rule, we finalized several updates to the CMS EPCS Program. We removed the same entity exception at § 423.160(a)(5)(i) from the CMS EPCS Program and to add “subject to the exemption in paragraph (a)(3)(iii) of this section” to § 423.160(a)(5). Under this provision, prescriptions that are prescribed and dispensed within the same legal entity are included in CMS EPCS Program compliance calculations as part of the 70

percent compliance threshold at § 423.160(a)(5). This provision provides flexibility to prescribers and dispensing pharmacies that are the same entity to choose either of the electronic standards available at § 423.160(a)(3)(iii) to conduct e-prescribing appropriate for their internal systems without us having to exclude these prescriptions completely from the CMS EPCS Program. This provision will affect prescriptions where the prescriber and the dispensing pharmacy are part of the same legal entity. Due to the limitations in identifying these prescriptions in the Prescription Drug Event (PDE) data, the ability to quantify the impact of this proposal is unknown. Please see section III.M. of this final rule for additional discussion of this provision.

We specified how we count prescriptions for the compliance calculation by using the unique identifier given to a prescription by the pharmacy in the measurement year and included in the Part D claims data. We will count renewals as an additional prescription in the CMS EPCS Program compliance threshold calculation, and we will not count refills as an additional prescription in the CMS EPCS Program compliance threshold calculation unless the refill is the first occurrence of the unique prescription in the measurement year. If each refill included on the original prescription were counted as a separate prescription, we believe there will be an incremental impact on small prescribers. Preliminary analysis of 2021 Part D data shows that approximately 23,000 prescribers will no longer qualify for the small prescriber exception and that approximately 6,900 additional prescribers will be noncompliant.

We finalized updates to the CMS EPCS Program recognized emergency exception and waiver exception previously found at § 423.160(a)(5)(iii) and (iv), and now codified at § 423.160(a)(5)(ii) and § 423.160(a)(5)(iii) respectively (as finalized in this final rule). We finalized the proposal to have discretion to determine which emergencies trigger the recognized emergency exception starting in the 2024 measurement year and specified that prescribers to whom the exception applies will be excepted from the CMS EPCS Program requirements for the entire measurement year. We modified how we have previously defined “extraordinary

circumstance” for purposes of the waiver exception. We finalized that an “extraordinary circumstance” means a situation outside of the control of a prescriber that prevents the prescriber from electronically prescribing a Schedule II-V controlled substance that is a Part D drug and does not exclude “cases of an emergency or disaster.” In cases of extraordinary circumstances, we finalized the timeframe that would be covered by a waiver authorized under the CMS EPCS Program to be the entire measurement year. We finalized that a prescriber has a period of 60 days from the date of the notice of non-compliance to request a waiver. Approved waivers will apply to prescriptions written by a prescriber for the entire measurement year, and the waiver will expire on December 31 of the applicable measurement year.

Although we are modifying the situations in which a prescriber can apply for an extraordinary circumstances waiver and limiting the recognized emergencies exception that applies to the CMS EPCS Program, we do not anticipate these proposals to affect many clinicians compared to the current policies. First, we believe that the provision for CMS to identify which emergencies trigger the recognized emergency exception will still capture the vast majority of emergencies or disasters that affect a prescriber's ability to achieve EPCS compliance and will remove any need for additional prescribers to apply for a waiver. Second, some prescribers who experience an emergency may still meet the 70 percent compliance threshold by the end of the emergency period and will not need to apply for a waiver exception. Finally, we are unable to quantify the additional number of potential disasters or emergencies prescribers might experience due to variability in the number of disasters and emergencies in a given measurement year. Therefore, we are not increasing our assumption that 100 waiver requests will be submitted to the CMS EPCS program, as we outlined in the CY 2022 PFS final rule (86 FR 65562).

We finalized our policy to continue sending non-compliance notices to prescribers identified as non-compliant with the CMS EPCS Program for any individual measurement year, and we do not believe that causes additional costs or will require additional time. Please see

section III.M. of this final rule for additional discussion on this provision. We do not anticipate the provisions to have any incremental impact on the cost or time associated with prescriber compliance with the electronic prescribing for controlled substances requirement or the cost to interested parties. We did not receive any public comments on our impact assumptions.

#### 17. Changes to the Regulations Associated with the Ambulance Fee Schedule and the Medicare Ground Ambulance Data Collection System (GADCS)

As outlined in section III.N. of this final rule, section 4103 of the CAA amended section 1834(l)(12)(A) and (l)(13) of the Act to extend the payment add-ons set forth in those subsections through December 31, 2024. The ambulance extender provisions are enacted through legislation that is self-implementing. A plain reading of the statute requires only a ministerial application of the mandated rate increase and does not require any substantive exercise of discretion on the part of the Secretary. As a result, there are no policy proposals associated with these legislative provisions. We have estimated cost of these provisions to be \$50 million in 2023, \$100 million in 2024, and \$40 million in 2025 and the Congressional Budget Office (CBO)'s estimated cost of these provisions was \$55 million in 2023, \$91 million in 2024, and \$29 million in 2025 ([https://www.cbo.gov/system/files/2023-01/PL117-328\\_1-12-23.pdf](https://www.cbo.gov/system/files/2023-01/PL117-328_1-12-23.pdf), p. 17).

We did not receive any public comments on the impacts of the ambulance extender provisions. In this final rule, we are finalizing our proposals only to revise the dates in § 414.610(c)(1)(ii) and (c)(5)(ii) to conform the regulations to these self-implementing statutory requirements.

In addition, as outlined in section III.N. of this final rule, we proposed the following changes to the Medicare Ground Ambulance Data Collection Instrument: Adding the ability to address partial year responses from ground ambulance organizations, introducing a minor edit to improve the reporting consistency of hospital-based ambulance organizations, and four technical

corrections to typos. The changes and clarifications aimed to reduce burden on respondents, improve data quality, or both.

While we believe that these changes and clarifications will be well received by the ground ambulance interested parties, we do not believe that these changes will have any substantive impact on the cost or time associated with completing the Medicare Ground Ambulance Data Collection Instrument. We noted that the overall length of the Medicare Ground Ambulance Data Collection Instrument will be the same as previously finalized (84 FR 62888) with these changes. Additionally, some of the instructions which we proposed to add are intended to improve clarity and may therefore reduce the time the ground ambulance organizations spend addressing the questions.

We did not receive any public comments on the impacts of our proposed changes to the Medicare Ground Ambulance Data Collection Instrument. In this final rule, we are finalizing our proposed changes to the Medicare Ground Ambulance Data Collection Instrument.

#### 18. Hospice CoP Changes

##### a. Permitting MFT and MCH to serve as members of the interdisciplinary group (IDG)

Under the Medicare Program in accordance with Subtitle C, Section 4121 of the CAA 2023, we proposed conforming regulations text changes to permit MFT or MHC to serve as members of the IDG. These changes will require hospices to include one SW, MFT or MHC to serve as a member of the IDG. Hospices will have the flexibility to determine which discipline(s) are appropriate to serve on the IDG.

##### b. Modification of the hospice personnel requirements with the addition of MFT and MHC

Under the Medicare Program in accordance with Subtitle C, Section 4121 of the CAA 2023, we proposed conforming regulations text changes to permit MFT or MHC to serve as members of the IDG. With the addition of MFT and MHC into the hospice CoPs, it is important to include these new disciplines into the personnel qualifications at § 418.114. However, in section III.C. of this rule, we proposed to add both MHC and MFT to the provider requirements

under 42 CFR subpart B Medical and Other Health Services at §§ 410.53 and 410.54. Therefore, to avoid duplication and confusion between the CoP and the provider requirements under the Medical and Other Health Services provision, we added both MFT and MHC to the requirements at § 418.114(b)(9) and (10) and referencing the new requirement at §§ 410.53 and 410.54 respectively. We do not expect any increase in burden for this modification. In addition, we do not expect the changes for this provision to cause any appreciable amount of expense or anticipated saving and we do not believe this standard will impose any additional regulatory burden.

#### 19. RFI: Histopathology, Cytology, and Clinical Cytogenetics Regulations under the Clinical Laboratory Improvement Amendments (CLIA) of 1988

We published this RFI in the proposed rule to seek comments from interested parties. There is no impact for this RFI.

#### 20. Basic Health Program Provisions

In this final rule, we updated the requirements for a BHP Blueprint revision. We also are finalizing our proposal to allow a State with a BHP to suspend its BHP, if a State elects and specified conditions are met, and are providing requirements related to a BHP suspension. We also finalized our proposal to update the annual report content and timing, if a BHP is suspended. We finalized our proposal for accessible notices. Finally, we finalized our proposed changes related to an individual's appeals rights. We do not anticipate that these provisions will impose any additional regulatory burden.

#### 21. A Social Determinants of Health Risk Assessment in the Annual Wellness Visit

As described in section III.S., we are finalizing our proposal to exercise our authority in section 1861(hhh)(2)(I) of the Act to add elements to the Annual Wellness Visit (AWV) by adding a new Social Determinants of Health (SDOH) Risk Assessment as an optional, additional element with an additional payment. We proposed that the SDOH Risk Assessment be separately payable with no beneficiary cost sharing when furnished as part of the same visit with the same

date of service as the AWW. Our final rule builds upon our separate proposal described earlier to establish a stand-alone G code (G0136) for SDOH Risk Assessment furnished in conjunction with an Evaluation and Management (E/M) visit. See sections III.E. and III.S. of this final rule for additional information on coding, pricing, and additional conditions of payment for the new SDOH Risk Assessment service. As described in the proposed rule, we anticipate our final policy to add a SDOH Risk Assessment as an optional, additional element with additional payment within the AWW to result in some additional service utilization, but we also anticipate the additional utilization may be balanced, in part or in whole, by potential long term benefits and savings resulting from a more effective AWW and increased prevention and early detection (allowing for less invasive and more effective treatment). We do not anticipate that the addition of an optional SDOH Risk Assessment to the AWW will result in a significant impact to the Medicare Program.

## 22. Updates to the Quality Payment Program

In this section, we estimated the overall and incremental impacts of the Quality Payment Program policies in this rule. We estimated participation, final scores, and payment adjustment for clinicians participating through traditional MIPS, MVPs, and the Advanced APMs. We also presented the incremental impacts to the number of expected Qualified Participants (QPs) and associated APM Incentive Payments that result from our policies relative to a baseline model that reflects the status quo in the absence of any modifications to the previously finalized policies.

### a. Overall MIPS Modeling Approach and Data Assessment

#### (1) MIPS Modeling Approach

For this final rule, we used a similar modeling approach as the CY 2024 PFS proposed rule (88 FR 52717 through 52718). We created two MIPS RIA models: a baseline and final policy model. Our baseline model includes previously finalized policies that will be in effect for the CY 2024 performance period/2026 MIPS payment year in the absence of any of the newly finalized policies in this final rule. Examples of previously finalized policies included in the

baseline model are an updated methodology for calculating the complex patient bonus, and an increase in the data completeness threshold for quality measures. The final policies model builds off the baseline model and incorporates the MIPS policies that we are finalizing for the CY 2024 performance period/2026 MIPS payment year included in this final rule. The aim of the baseline and policy models is to estimate the incremental impacts of the specific policies in this final rule.

Our modeling approach utilizes the same scoring engine that is used to determine MIPS payment adjustments. This modeling approach enables our model to align as much as possible with actual MIPS scoring and minimizes differences between our projections and policy implementation. There are still some limitations to our model due to data limitations and assumptions. These limitations are discussed later in this RIA.

## (2) Data Used to Estimate Future MIPS Performance

In the CY 2024 PFS proposed rule (88 FR 52718) we indicated that once the CY 2022 performance period submissions data became available, we would assess if it were an appropriate source of data to use to estimate participation, final scores, and payment adjustments in this RIA.

After reviewing the CY 2022 performance period data we determined that it was the most appropriate and accurate source to use for our estimation of clinician performance for several reasons. First, the data is the most recently available data and is more likely to reflect current physician performance and behaviors in the program. Secondly, during the CY 2022 performance period we did not apply an automatic EUC policy, and this data is the most likely to reflect post-PHE participation in the program. Finally, in the CY 2024 PFS proposed rule (88 FR 52719) we indicated our use of a “2019 data supplement to our 2021 data to estimate participation more accurately. We indicated that this approach had several limitations. Specifically, while using the “2019 data supplement” allowed us to estimate participation we relied on the 2021 data to estimate performance. In this final rule, by using the data from the 2022 MIPS performance period we avoid the need to use this supplement, present the most

current data, and align our participation, final scoring, and payment adjustment analysis around the same common data set. For these reasons we used 2022 MIPS performance period data as the basis of our RIA baseline and final policies models.

b. APM Incentive Payments to QPs in Advanced APMs and Other Payer Advanced APMs

For payment years from 2019 through 2025, through the Medicare Option, eligible clinicians who have a sufficient percentage of their Medicare Part B payments for covered professional services or Medicare patients through Advanced APMs will be QPs for the applicable QP Performance Period for a year and the corresponding payment year. In payment years 2019 through 2024 these QPs will receive a lump-sum APM Incentive Payment equal to 5 percent of their estimated aggregate paid amounts for covered professional services furnished during the calendar year immediately preceding the payment year. In payment year 2025, QPs will receive a lump-sum APM Incentive Payment equal to 3.5 percent payment of their estimated aggregate paid amounts for covered professional services furnished during CY 2024. Beginning in payment year 2021, in addition to the Medicare Option, eligible clinicians may become QPs through the All-Payer Combination Option. The All-Payer Combination Option allows eligible clinicians to become QPs by meeting the QP payment amount or patient count threshold through a pair of calculations that assess a combination of both Medicare Part B covered professional services furnished or patients through Advanced APMs and services furnished or patients through Other Payer Advanced APMs. Eligible clinicians who become QPs for a year are not subject to MIPS reporting requirements and payment adjustments. Eligible clinicians who do not become QPs but meet a lower threshold to become Partial QPs for the year may elect to report to MIPS and, if they elect to report, will then be scored under MIPS and receive a MIPS payment adjustment. Partial QPs are not eligible to receive the APM Incentive Payment.

If an eligible clinician does not attain either QP or Partial QP status, and is not excluded from MIPS on another basis, the eligible clinician will be subject to the MIPS reporting requirements and will receive the corresponding MIPS payment adjustment.

Beginning in payment year 2026, the update to the PFS CF for services that are furnished by clinicians who achieve QP status for a year is 0.75 percent, while the update to the PFS CF for services that are furnished by clinicians who do not achieve QP status for a year is 0.25 percent. Thus, eligible clinicians who are QPs for the year will receive differentially higher PFS payment rates than those who are not QPs. We incorporated this change in our baseline and final policies model.

In addition, the thresholds to achieve QP status beginning in the 2024 QP Performance Period will increase to 75 percent for the payment amount method, and 50 percent for the patient count method. Overall, we estimated that for the 2024 QP Performance Period between 316,767 and 407,272 eligible clinicians will become QPs, and therefore be excluded from MIPS reporting requirements and payment adjustments.

In section the CY 2023 proposed rule (88 FR 52617), we proposed to make QP determinations at the individual level for each unique NPI associated with an eligible clinician participating in an Advanced APM. In section IV.A.4.m.(2) of this final rule we stated that we were not finalizing this policy as proposed. Therefore, we do not implement this change in either the baseline or final policies models.

We projected the number of eligible clinicians that will be QPs, and thus excluded from MIPS, using several sources of information. First, the projections are anchored in the most recently available public information on Advanced APMs. The projections reflect Advanced APMs that will be operating during the 2024 QP Performance Period, as well as some Advanced APMs anticipated to be operational during the 2024 QP Performance Period. The projections also reflect an estimated number of eligible clinicians that will attain QP status through the All-Payer Combination Option. The following APMs are expected to be Advanced APMs for the 2024 QP Performance Period:

- Bundled Payments for Care Improvement Advanced Model;
- Comprehensive Care for Joint Replacement Payment Model (CEHRT Track);

- ACO REACH Model (formerly Global and Professional Direct Contracting) Model;
- Kidney Care Choices Model (Comprehensive Kidney Care Contracting Options, Professional Option and Global Option);
- Maryland Total Cost of Care Model (Care Redesign Program; Maryland Primary Care Program);
- Medicare Shared Savings Program (Level E of the BASIC Track and the ENHANCED Track);
- Primary Care First (PCF) Model; and,
- Vermont All-Payer ACO Model (Vermont Medicare ACO Initiative).
- Making Care Primary (MCP) tracks 2 and 3

We used the Participation Lists and Affiliated Practitioner Lists, as applicable, (see 42 CFR 414.1425(a) for information on the APM Participant Lists and QP determinations) for the 2022 QP performance period third snapshot QP determination date to estimate the number of QPs, total Part B paid amounts for covered professional services, and the aggregate total of APM Incentive Payments for the 2024 QP Performance Period. We examined the extent to which Advanced APM participants will meet the QP Thresholds of having at least 75 percent of their Part B covered professional services or at least 50 percent of their Medicare beneficiaries furnished Part B covered professional services through the APM Entity.

c. Estimated Number of MIPS Eligible Clinicians in the CY 2024 Performance Period/2026 MIPS Payment Year

(1) Initial Population of Clinicians Included in the RIA Baseline and Final Policies Models

For this final rule, we applied the same assumptions as in the CY 2024 PFS proposed rule (88 FR 52719) to estimate our initial population of clinicians based on CY 2022 performance period/2024 MIPS payment year data.

Our analysis found that there were 1,820,899 clinicians who had PFS claims in this initial population.

In the CY 2024 PFS proposed rule (88 FR 52719), we explained our use of the CY 2021 final reconciled eligibility determination file. This file reconciles eligibility from two determination periods and aligns with the CY 2022 performance period submissions data on which we based this model. In this final rule, we used the final reconciled 2022 eligibility determination file which aligns with CY 2022 performance period submissions data.

This initial population of clinicians was used to determine eligibility using the processes described in the following sections.

## (2) Estimated Number of MIPS Eligible Clinicians after Applying Eligibility Assumptions

### (a) Methods and Assumptions Used to Estimate Eligibility

After identifying the clinician population with PFS claims we applied the same eligibility assumptions and determination process described in the CY 2024 PFS proposed rule (88 FR 52719) except that we did not use the “2019 data supplement” and instead we based eligibility determinations on the CY 2022 performance period data.

In the CY 2024 PFS proposed rule (88 FR 52617) we proposed calculate QP determinations at the individual level for each unique NPI associated with an eligible clinician participating in an Advanced APM. As discussed in section IV.A.4.m.(2) of this final rule, we are not finalizing this policy as proposed. Therefore, we are not finalizing any modifications to MIPS eligibility requirements and the same eligibility assumptions apply to both the baseline and final policies model.

For our RIA model, we established the “required eligibility” category, which means the clinician exceeds the low-volume threshold in all three criteria and is subject to a payment adjustment. We base this estimate on the CY 2022 performance period data described above which includes the three low volume criteria. Within this category we divide clinicians into two groups- clinicians who report data and clinicians who do not report data.

Our next two eligibility assumptions concern clinicians and groups who may participate in MIPS but are not required to. First, we estimate group eligibility. These are the clinicians who,

in our data, have a group submission and their group exceeds the low-volume threshold in all three criteria. Next, we apply our opt-in eligibility assumptions. Individuals or groups who exceed the low-volume threshold in one criterion but not all three may elect to opt-in. Based on the 2022 data described above we determine which individuals opted-in to MIPS and for the purposes of our model estimate that these clinicians will continue to opt-in to MIPS.

After applying the criteria mentioned above, we next estimate the number of “Potentially MIPS Eligible” clinicians. These clinicians are not included in our total number of MIPS eligible clinicians. These are clinicians who are not MIPS eligible individually but who could either opt-in because they exceed the low volume threshold in at least one criterion but not all three or who could report as part of a group which exceeds all three low volume criteria.

Finally, we estimate the number of clinicians who are neither MIPS eligible nor potentially MIPS eligible. First, we estimate the number of MIPS eligible clinicians who are below all three low-volume criteria (both as an individual and as a group) again using the CY 2022 performance period data as described above.

Next, we estimate the number of QPs who are not MIPS eligible. In section VI.E.22.b. of this final rule, we estimated a range of QPs. For the purposes of our RIA population, we estimate a specific number of QPs. This is because it is necessary to establish a specific population of clinicians to use to simulate the impacts of our final policies on participation, final scores, and payment adjustments. Finally, we estimate the number of clinicians who are excluded for other reasons including that they are a non-eligible clinician type, or newly enrolled in Medicare.

After applying these assumptions to our initial population, we estimate 686,650 MIPS eligible clinicians with \$4.90 billion in allowed charges. However, this number could be as high as 1,270,806 MIPS eligible clinicians and \$6.25 billion allowed charges if *all potentially* MIPS

eligible<sup>574</sup> clinicians either opt-in or report as a group. This is an extremely unlikely scenario, but it quantifies the range of possible MIPS eligible clinicians in our initial population.

(b) MIPS Eligibility Estimates

Eligibility among many clinicians is contingent on submission to MIPS as a group or election to opt-in: therefore, we will not know the number of MIPS eligible clinicians who submit until the submission period for the CY 2023 performance period is closed. For the remaining analysis, we use the estimated population of 686,650 MIPS eligible clinicians described in previously in this section of the final rule. Table 131 summarizes our eligibility estimates for the final policies model after applying our assumptions discussed previously.

---

<sup>574</sup> We define potentially MIPS eligible clinicians as those clinicians who are not required to participate in MIPS but *may* either opt-in or join a group that exceeds the low-volume threshold in all three criteria.

**TABLE 131: Description of MIPS Eligibility Status for CY 2023 Performance Period/2025 MIPS Payment Year Using the CY 2023 PFS Final Rule Assumptions\*\***

Eligibility Status	Predicted Participation Status in MIPS Among Clinicians *	CY 2024 PFS <u>Final Rule</u> estimates	
		Number of Clinicians	PFS allowed charges (\$ in mil)**
<b>MIPS Eligible Clinicians</b>			
<b>MIPS eligible</b> (always subject to a MIPS payment adjustment because individual clinicians exceed the low-volume threshold in all 3 criteria)	Reported to MIPS	104,757	\$26,305
	Did not Report to MIPS	41,899	\$10,634
<b>Group eligibility</b> (only subject to payment adjustment because clinicians' groups exceed low-volume threshold in all 3 criteria)	Had a group submission	533,440	\$11,776
<b>Opt-In eligibility assumptions</b> (only subject to a positive, neutral, or negative adjustment because the individual or group exceeds the low-volume threshold in at least 1 criterion but not all 3, and they elect to opt-in to MIPS)	Opted-in To MIPS	6,554	\$318
<b>Total Number of MIPS Eligible Clinicians and the associated PFS allowed charges</b>		<b>686,650</b>	<b>\$49,034</b>
<b>Not MIPS Eligible Clinicians</b>			
<b>Potentially MIPS Eligible</b> (not subject to payment adjustment for non-participation; could be eligible for one of two reasons: (1) meet group eligibility; or (2) opt-in eligibility criteria)	Opt-in Eligible; Do not opt-in	178,216	\$4,958
	Group Eligible; Did not Report	405,940	\$8,539
<b>Below the low-volume threshold</b> (never subject to payment adjustment; both individual and group is below all 3 low-volume threshold criteria)	Not applicable	129,806	\$714
<b>Excluded for other reasons</b> (Non-eligible clinician type, newly enrolled)	Not applicable	60,471	\$450
Qualified Participant (QP)***	Not applicable	359,816	\$15,817
<b>Total Number of Clinicians Not MIPS Eligible</b>		<b>1,134,249</b>	<b>\$30,479</b>
<b>Total Number of Clinicians (MIPS and Not MIPS Eligible)</b>		<b>1,820,899</b>	<b>\$79,513</b>

\* Participation excludes facility-based clinicians who do not have scores in the 2021 MIPS submission data.

\*\* Allowed charges estimated in 2021 dollars. Low-volume threshold is calculated using allowed charges. MIPS payment adjustments are applied to the paid amount.

\*\*\* Our QP estimate differs from that reported in section VI.E.22.b. of this final rule because, for purposes of establishing the population used in our modeling, we estimate an absolute number of QPs rather than a range.

d. Modeling Approach and Methods for MIPS Value Pathways (MVPs) and Traditional MIPS

(1) Summary of Approach

In this final rule, we present several proposals which impact the measures and activities, the performance category scores, final score calculation, and the MIPS payment adjustment of MIPS eligible clinicians. We outline these changes in more detail in section VII.E.22.d. of this final rule as we describe our methodology to estimate MIPS payments for the CY 2024 performance period/2026 MIPS payment year. We then present the impact of the finalized policies in the CY 2024 performance period/2026 MIPS payment year and then compare select metrics to the baseline model, which only incorporates previously finalized policies for the CY 2024 performance period/2026 MIPS payment year. By comparing the baseline model to the policies model, we are able to estimate the incremental impact of the policies for the CY 2024 performance period/2026 MIPS payment year.

MIPS eligible clinician's final scores are calculated based on the clinician's performance on measures and activities under the four MIPS performance categories: quality, cost, improvement activities, and Promoting Interoperability. MIPS eligible clinicians can participate in the four MIPS performance categories as an individual, group, virtual group, APM Entity, clinicians participating in MIPS through the APM Performance Pathway (APP), or through an MVP. MIPS APM participants can participate in the APP as an individual, group, virtual group, APM Entity and are only scored on three MIPS performance categories: quality, improvement activities, and Promoting Interoperability. For each of the performance categories we construct a simulation which applies the final policies for those performance periods as applicable to the CY 2022 MIPS performance period/2024 MIPS payment year data on which we base our model.

In the CY 2022 PFS final rule (86 FR 65394 through 65397), we finalized policies at § 414.1365 for implementing MIPS Value Pathways beginning in the CY 2023 performance period/2025 MIPS payment year. We incorporate MVP participation and scoring rules in this RIA where applicable as described in the following section.

## (2) Methodology to Assess Impact for MIPS Value Pathways

In this RIA, we take a similar approach to modeling MVP participation and scoring as

described in the CY 2022 PFS final rule (87 FR 70204), incorporating changes to our policies model as described in this section.

(a) MVP Participant Assumptions

At § 414.1365(b), we require MVP Participants (which can be a group, individual, subgroup, or APM entity) to register prior to submitting an MVP. As we do not yet have information on who will register, we assume for purposes of this model, that MVP Participants are MIPS eligible individual clinicians or groups that currently submit at least four quality measures that are in an MVP. For these MVP Participants, we calculate both an MVP and a traditional MIPS score and take the highest score consistent with the existing scoring hierarchy which was finalized in the CY 2023 PFS final rule (86 FR 65537). For the baseline model, we used the quality measures finalized for MVPs in the CY 2023 PFS final rule Appendix 3: MVP Inventory.

In section IV.A.4.a. and Appendix 3: MVP Inventory of this final rule, we finalized modifications to the 12 existing MVPs finalized in the CY 2022 PFS final rule (86 FR 65998 through 66031) and CY 2023 PFS final rule (87 FR 70037) and the consolidation of the previously finalized Promoting Wellness and Optimizing Chronic Disease Management MVPs into a single consolidated primary care MVP titled Value in Primary Care.

In Appendix 3: MVP Inventory of this final rule, we finalized the inclusion of 5 new MVPs:

- Focusing on Women’s Health;
- Prevention and Treatment of Infectious Disease Including Hepatitis C and HIV;
- Quality Care in Mental Health and Substance Use Disorder;
- Quality Care for Ear, Nose, and Throat (ENT); and
- Rehabilitative Support for Musculoskeletal Care

For the policies model, we incorporated the quality measure revisions for the existing MVPs and use the quality measures to model scores for the new MVPs in Appendix 3: MVP

Inventory of this final rule.

Our MVP Participant assumptions have limitations: we are not incorporating subgroups due to a lack of data, not all of the assumed participants may elect to register for an MVP, and we may have additional clinicians or groups register for an MVP. However, we believe this is a reasonable approach to simulate the impact of MVPs and we sought comment on this assumption but did not receive any feedback.

#### (b) MVP Scoring Methods and Assumptions

We simulate an MVP score using the same data sources as we did for traditional MIPS. We scored according to § 414.1365(d) and (e) using the MVP reporting requirements listed in § 414.1365(c) with one exception. We did not restrict the improvement activities to the activities listed in the MVP inventory. We believed this would lower our estimated MVP score as clinicians and groups were not required to select from a limited inventory in the CY 2021 performance period (upon which our model is based). Therefore, we scored any improvement activities the MVP Participants submitted in 2021 as if those improvement activities are in the MVP inventory.

#### (3) Methodology to Assess Impact for Traditional MIPS

To estimate the impact of the policies on MIPS eligible clinicians, we generally used the CY 2022 performance period's submissions data, including data submitted or calculated for the quality, cost, improvement activities, and Promoting Interoperability performance categories.

We supplemented this information with the most recent data available for CAHPS for MIPS and CAHPS for ACOs, administrative claims data for the new quality performance category measures, and other data sets. We calculated a hypothetical final score for the CY 2024 performance period/2026 MIPS payment year for the baseline and policies scoring models for each MIPS eligible clinician using score estimates for quality, cost, Promoting Interoperability, and improvement activities performance categories, and our final scoring policies.

#### (a) Methodology to Estimate the Quality Performance Category Score

We estimated the quality performance category score using a methodology like the one described in the CY 2023 PFS final rule (87 FR 70205) for the baseline and policies RIA models for the CY 2024 performance period/2026 MIPS payment year.

To create the baseline policies RIA model, which does not reflect the policies that we are finalizing in this rule, we made the following modifications to the CY 2023 PFS final rule final policies model to reflect the previously finalized quality performance category policies for the CY 2024 performance period/2026 MIPS payment year:

- As outlined in the CY 2023 PFS final rule (87 FR 70049), we increased the data completeness criteria threshold to at least 75 percent for CY 2024 and CY 2025 performance periods/2026 and 2027 MIPS payment years.

For the policies model, we did not implement any changes to the quality performance category relative to the baseline model because we use 2021 data and cannot simulate the addition of new measures.

#### (b) Methodology to Estimate the Cost Performance Category Score

We estimated the cost performance category score using a methodology similar to the methodology described in the CY 2023 PFS final rule (87 FR 70205) for the baseline and the proposed policies RIA models.

For this final rule, the baseline policies RIA model included the same method used for the final policies RIA model in the CY 2023 PFS final rule (87 FR 70205). The policies finalized in the CY 2023 PFS final rule are now part of the CY 2024 proposed rule baseline. The final policies RIA model incorporated and implemented the following changes:

- In section IV.A.4.f.(2)(a) of this final rule, we are finalizing the addition of 5 new episode-based cost measures and the removal of the Simple Pneumonia with Hospitalization measure, from the cost performance category beginning with CY 2024 performance period/2026 MIPS payment year.

- In section IV.A.4.g.(1)(d)(i) of this final rule, we are finalizing the proposed cost improvement scoring methodology in CY 2024 PFS proposed rule (88 FR 52595 through 52596).

For the RIA models we:

- Calculated the current year (PY 2024) cost performance category score,
- Calculated the cost improvement score over the previous year's cost performance category score

Calculated the final individual MIPS-eligible clinicians and groups' cost performance category score by adding the cost improvement score to the current year (PY 2024) cost performance category score.

#### (c) Methodology to Estimate the Facility-Based Measurement Scoring

A limitation of using data from the CY 2021 performance period is that we are not able to estimate facility-based scores because there are no Hospital Value-Based Purchasing total performance scores calculated for the performance period due the COVID-19 PHE. However, for clinicians who did not participate in MIPS during the CY 2021 performance period, we did use the 2019 data supplement to identify final scores based on the CY 2019 performance period submission and these scores include facility-based scores.

#### (d) Methodology to Estimate the Promoting Interoperability Performance Category Score

We estimated the baseline Promoting Interoperability performance category score by using the same methodology that we used in the CY 2023 PFS final rule (87 FR 70206) final policies. We incorporated the final policies model from that rule into our baseline model. In section IV.A.4.f.(4)(f) of this final rule, we proposed to only continue reweighting Clinical Social Workers in the promoting interoperability category. On this basis, we removed reweighting for the following clinicians: Audiologist (Billing Independently), Certified Clinical Nurse Specialist, Certified Registered Nurse Anesthetist (CRNA), Clinical Psychologist, Nurse Practitioner, Occupational Therapist in Private Practice, Physical Therapist in Private Practice,

Physician Assistant, Registered Dietician/Nutrition Professional, and Speech Language Pathologists. This is incorporated into our policies model. We used the following scoring weights for the Promoting Interoperability objectives and measures:

- ePrescribing objective is worth a total of 20 maximum points,
- Health Information Exchange (HIE) objective is worth a total of 30 total maximum points,
- Provider to Patient Exchange measure is worth a total of 25 maximum points, and
- Public Health and Clinical Data Exchange objective is worth a total of 25 maximum points.

We did not incorporate changes to the performance period or measure level changes because we are not able to model this using data for the CY 2021 performance period.

(e) Methodology to Estimate the Improvement Activities Performance Category Score

For the baseline and policies model we used the same method to estimate the improvement activities performance category score as described in the CY 2023 PFS final rule (87 FR 70206).

(f) Methodology to Estimate the Complex Patient Bonus Points

For the baseline and policies RIA model, we used the previously established method to calculate the complex patient bonus as described in the CY 2022 PFS final rule (86 FR 64996).

(g) Methodology to Estimate the Final Score

We did not propose any changes for how we calculated the MIPS final score. Our baseline and policies RIA models assigned a final score for each TIN/NPI by multiplying each estimated performance category score by the corresponding performance category weight, adding the products together, multiplying the sum by 100 points, adding the complex patient bonus, and capping at 100 points.

For the baseline policies RIA model, we applied the performance category weights and redistribution weights finalized in the CY 2022 PFS final rule (86 FR 65519 through 65524).

For both models, after adding any applicable bonus for complex patients, we reset any final scores that exceeded 100 points to equal 100 points. For MIPS eligible clinicians who were assigned a weight of zero percent for any performance category, we redistributed the weights according to § 414.1380(c).

For the purposes of this model, if a clinician received a reweighting of their final score under our extreme and uncontrollable in the CY 2022 performance period (which was the performance period of the data source used in our model) we continue to apply that reweighting in the CY 2023 performance period by assigning them a neutral score equal to the performance threshold. Although it is unlikely (but possible) that the exact same clinicians will apply for and receive EUC reweighting in both the CY 2022 MIPS performance period / CY 2024 MIPS payment year (which our data is based on) and the CY 2024 MIPS performance period/ CY 2026 payment year (which we are simulating) we believe that this assumption accurately reflects future clinician behavior for two reasons. First, while the exact same clinicians may not receive EUC reweighting 2 years in a row, we believe that this assumption allows us to quantify the impact of the EUC on a population level. In other words, even if the same clinicians do not apply for and receive EUC reweighting 2 years in a row, the absolute number of EUC reweighting and the characteristic of practices who receive an EUC reweighting is likely to remain similar. Secondly, if we were to not assign reweighting to those clinicians many of them would receive a very low final score because they did not submit data during the year in which they received an EUC reweighting. We do not believe that it is realistic to assume that, in the absence of an EUC reweighting, those clinicians would continue to not submit data. For these reasons, clinicians who received an EUC reweighting in the CY 2022 MIPS performance period/ CY 2024 MIPS payment year also are assigned an EUC reweighting in our CY 2024 MIPS performance period/ CY 2026 MIPS payment year. These clinicians are assigned a score of the performance threshold (75) in our model because this corresponds with a neutral (0 percent) payment adjustment.

(h) Methodology to Estimate the MIPS Payment Adjustment

For the baseline and proposed policies RIA models, we applied the hierarchy as finalized in the CY 2022 PFS final rule (86 FR 65536 through 65537) to determine which final score should be used for the payment adjustment for each MIPS eligible clinician when more than one final score is available. We then calculated the parameters of an exchange function in accordance with the statutory requirements related to the linear sliding scale, budget neutrality, and minimum and maximum adjustment percentages.

For the baseline model, we applied the performance threshold of 75 points finalized in the CY 2023 PFS final rule (87 FR 70097). In the CY 2024 proposed rule (88 FR 52598 through 52600), we proposed a performance threshold of 82 points for the CY 2024 performance period/2026 MIPS payment year; however, as described in section IV. of this final rule, we are not finalizing that policy as proposed. Therefore, for both the baseline and final policies models we used a performance threshold of 75 to calculate the exchange function used for MIPS payment adjustments. We note that the results of this exchange are not identical between the baseline and final policies model. This is because the scaling factor used to determine positive adjustments is dependent on the total dollar amount of negative payment adjustments and those adjustments differ slightly as final scores are not identical between both models.

For both the baseline and policies models, we used these resulting parameters to estimate the positive or negative MIPS payment adjustment based on the estimated final score and the allowed charges for covered professional services furnished by the MIPS eligible clinician.

#### (4) Simulation Results and Projected Impact to MIPS Eligible Clinicians

Based on the methodology described in the preceding sections we created a baseline and final policies simulation. Using this simulation, we estimate the impact of the policies finalized in this rule on clinician eligibility, final scores, and payment adjustments

##### (a) Impact to Clinician Eligibility

In section VI.E.22.c.(2)(a) of this final rule, we noted that we are not proposing any modification to clinician eligibility and therefore there is no difference in the total number of MIPS eligible clinicians between our models.

(b) Impact to Clinician’s Final Scores

Table 132 shows the median final score by practice size and the percentage of MIPS eligible clinicians of each practice size with a positive or neutral or negative adjustment.

**TABLE 132: CY 2024 Final Score Estimates by Practice Size**

<b>Practice Size*</b>	<b>Total Number of MIPS Eligible Clinicians</b>	<b>Median Final Score Estimate***</b>	<b>Percent Eligible Clinicians with Positive or Neutral Payment Adjustment</b>	<b>Percent Eligible Clinicians with Negative Payment Adjustment</b>
<b>Baseline</b>				
1) Solo	18,867	75.00	53.72%	46.28%
2) Small (2-15)	71,908	82.36	76.35%	23.65%
3) Medium (15-99)	150,382	82.33	76.11%	23.89%
4) Large (99+)	445,493	84.55	80.55%	19.45%
Overall	686,650	83.46	78.40%	21.60%
<b>Final Rule Policies</b>				
1) Solo	18,867	75.00	53.72%	46.3%
2) Small (2-15)	71,908	82.36	76.36%	23.6%
3) Medium (15-99)	150,382	82.33	76.09%	23.9%
4) Large (99+)	445,493	84.52	80.51%	19.5%
Overall	686,650	83.40	78.37%	21.6%

\*Practice size is the total number of TIN/NPIs in a TIN.

\*\*2022 data used to estimate 2024 performance period payment adjustments. Payments estimated using 2022 dollars trended to 2024. The percentage represents the total adjustments after taking all the positive adjustments and subtracting the negative adjustments for all MIPS eligible clinicians in the same respective practice size.

\*\*\* The median final score includes clinicians who receive reweighting under the Extreme and Uncontrollable Circumstances (EUC) Policy. These clinicians are assigned a score of 75 (neutral payment adjustment) in our model.

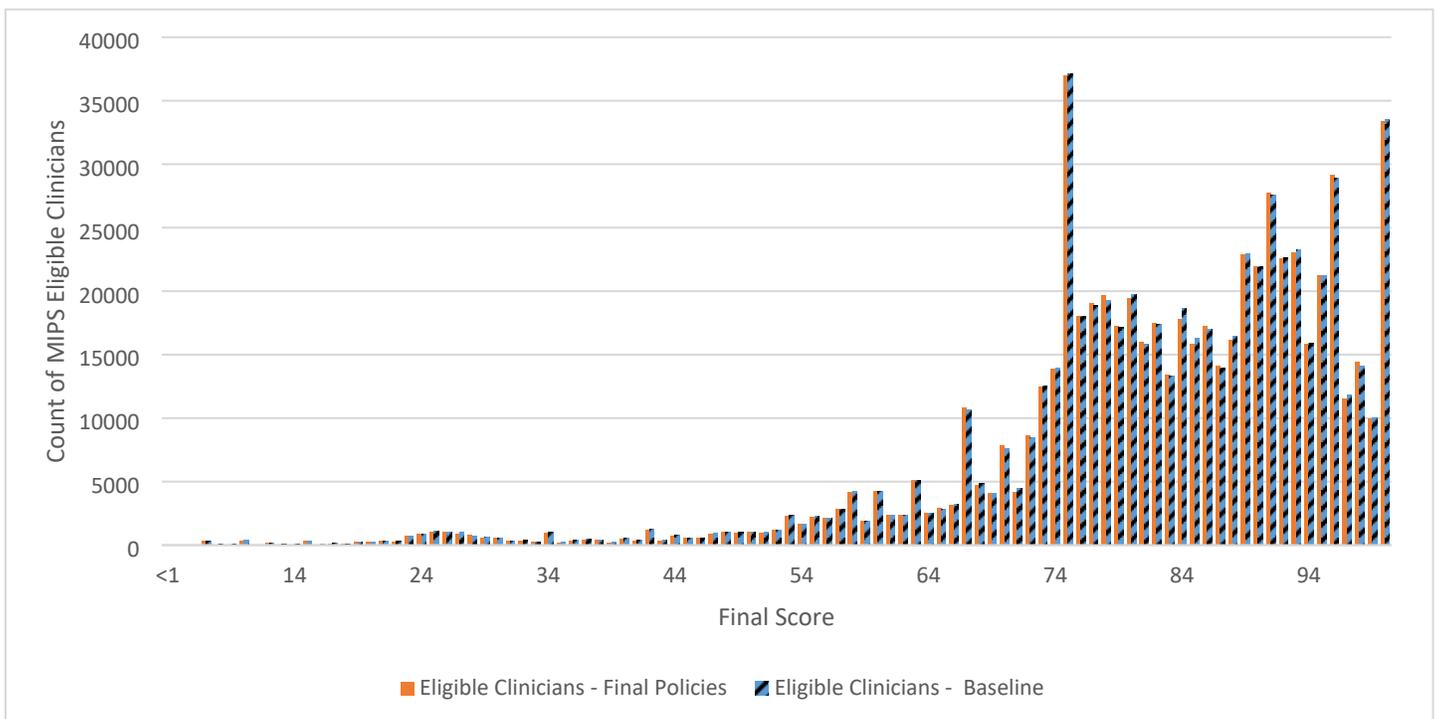

The median final score is 83.46 in our baseline model and 83.40 in our final policies model.

Across all practices sizes there is minimal to no difference in median final scores for the baseline and final policies model. Additionally, the percentage of clinicians receiving a positive or neutral adjustment<sup>575</sup> varies little between the two models with slight variation for medium and large practices. We project that 78.40 percent of clinicians will receive a positive or neutral adjustment in the baseline model and 78.37 percent of clinicians will receive a positive or neutral adjustment

<sup>575</sup> In other words, clinicians who received a score between the performance threshold (75) and 100.

in the final policies model. The largest difference (0.03 percentage points) in the proportion of clinicians with a positive or neutral adjustment between the baseline and final policies model occurs among large practices. Figure 4 shows the distribution of final scores for all clinicians. Note that there are a relatively large number of MIPS eligible clinicians with a final score of 75. As stated in section VI.E.22.d.(3)(g) of this final rule, clinicians who have their final score reweighted under our extreme and uncontrollable circumstances (EUC) policy are assigned a final score of exactly the performance threshold (75). Overall, the distribution is skewed to the right indicating that clinicians tend to receive final scores on the higher end of the distribution.

**FIGURE 4: Count of MIPS Eligible Clinicians by Final Score**

(i) Impact to Small and Solo Practices

18,867 MIPS eligible clinicians or 2.7 percent of all MIPS eligible clinicians are solo practitioners in both the baseline and final policies models. The median final score for solo practitioners is exactly equal to the performance threshold in both the baseline and final policies model. As stated in section VI.E.22.d.(3)(g) of this final rule, clinicians receiving reweighting under our extreme and uncontrollable circumstances policy are assigned a final score exactly

equal to the performance threshold. These clinicians are why the median final score for solo practitioners is exactly 75.

While the proportion of solo practitioners receiving a negative payment adjustment and the median final score of solo practitioners does not vary much between the baseline and final policies models, these practitioners do have a lower median final score than other practice sizes. This is largely due to the fact that many of these solo practitioners do not submit data to MIPS despite being MIPS eligible clinicians. Our analysis indicates that 49.55 percent of solo practitioners submit data to MIPS<sup>576</sup> compared to 93.70 percent of all clinicians. The median final score in our final policies model is 75.00 for all solo practitioner but for solo practitioners who submit data the median final score is 85.28 which is slightly higher than the median final score for all clinicians who submit data which is 84.75. These findings indicate that the lower final scores among solo practitioners is likely due to not reporting data to MIPS.

Small practices, defined as groups with a range between 2 and 15 clinicians, have a median final score of 82.36 in both the baseline and final policies model. This is slightly but not substantially less than the overall median final score of 83.40. Among small practices who submit data the median final score is 87.29 in the final policies model (and 87.30 in the baseline). This is significantly higher than the median final score for all clinicians who submit data which is 84.74. This indicates that small practices perform similarly to other practice sizes but may have slightly more clinicians who do not submit data than medium and large practices. Table 133 shows the percentage of clinicians by practice size who either do or do not submit data to MIPS and the corresponding median final score. Note that the median final score for non-engaged clinicians is 75 for all practice sizes except solos for whom it is 0. This indicates that many of the clinicians who belong to a small, medium, or large practice do not submit data to MIPS possibly because they are being reweighted under our extreme and uncontrollable

---

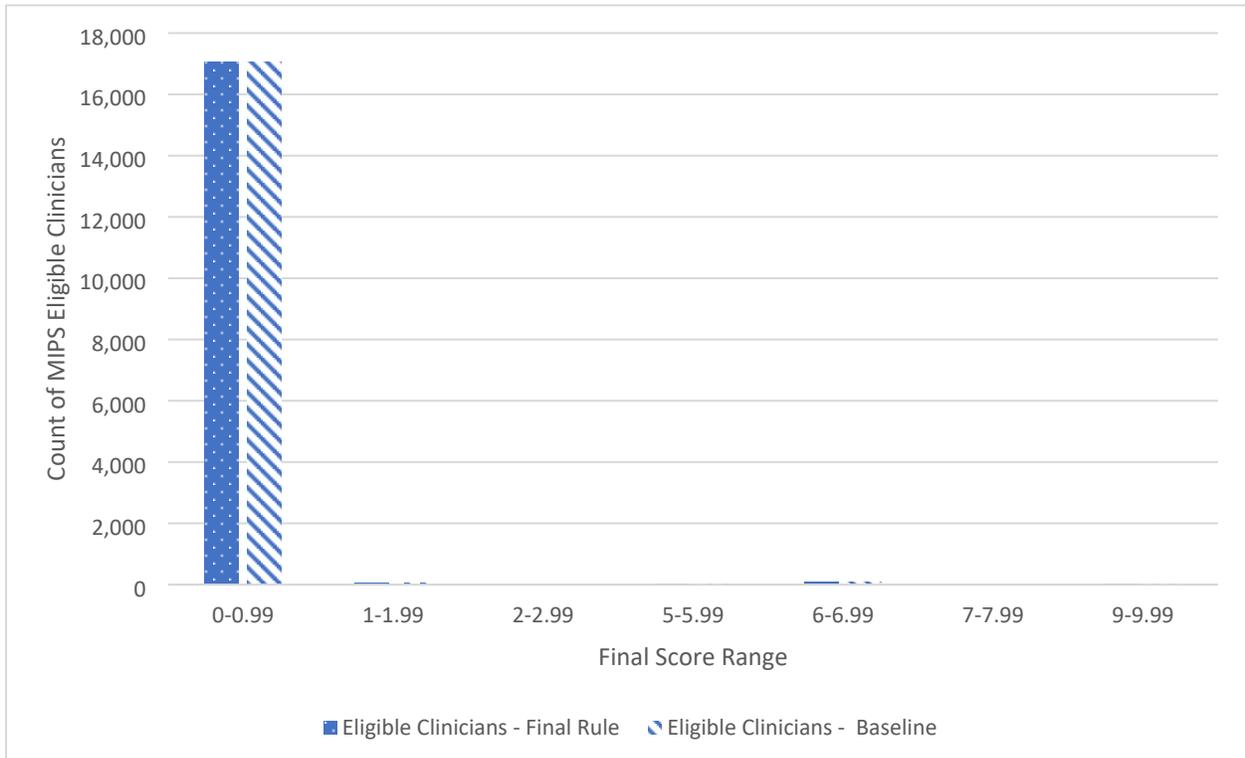

<sup>576</sup> Submitting data to MIPS is defined as any interaction with MIPS. Including beginning a submission but not finishing.

circumstances policy but that many solo practitioners who do not submit data are doing so despite not being eligible for the EUC reweighting policy. A large majority of all practice sizes except solo practitioners do submit data to MIPS. It is possible that the small percentage who do not are primarily clinicians who have received reweighting under our extreme and uncontrollable circumstances policy. As shown in Figure 5 clinicians who do not submit data have a final score tend to either have a final score of 0 or a final score of exactly 75. This indicates that there are two “types” of clinicians who do not submit data: those who receive reweighting under the EUC policy and those who do not and receive a final score of approximately zero. This is true across all practice sizes, however solo practitioners are the only practice size where more clinicians receive a score of 0 than of 75 which is why the median final score of MIPS eligible clinicians for that group is 0.

**TABLE 133: Percentage of MIPS Eligible Clinicians who Submit Data and Median Final Score**

	Percentage of MIPS Eligible Clinicians who Submit Data (by practice size)	Median Final Score of MIPS Eligible Clinicians who Submit Data	Median Final Score of MIPS Eligible Clinicians who Do not submit data.
<b>Baseline</b>			
1) Solo	49.44%	85.32	0
2) Small (2-15)	79.41%	87.3	75
3) Medium (16-99)	91.96%	84.11	75
4) Large(100+)	98.48%	84.83	75
<b>Overall</b>	93.70%	84.86	75
Final Policies			
1) Solo	49.44%	85.32	0
2) Small (2-15)	79.41%	87.29	75
3) Medium (16-99)	91.96%	84.09	75
4) Large(100+)	98.48%	84.71	75
<b>Overall</b>	93.70%	84.75	75

**FIGURE 5: Final Score Distribution for MIPS Eligible Clinicians That Do Not Submit Data**

**(ii) Impact to Rural Providers**

In our data we assign rural practitioners a special status. Analysis of this group of clinicians indicates that their final scores are similar to the overall population of MIPS Eligible Clinicians across all practice sizes. Table 134 shows the median final score and the percentage of eligible clinicians with a positive or neutral or negative adjustment by practice size.

**TABLE 134: Percentage of MIPS Eligible Clinicians who Submit Data and Median Final Score for Rural Practitioners Only**

<u>Practice Size</u>	<u>Total Number of MIPS Eligible Clinicians</u>	<u>Median Final Score</u>	<u>Percent Eligible Clinicians with Positive or Neutral Payment Adjustment</u>	<u>Percent Eligible Clinicians with Negative Payment Adjustment</u>
<b>Baseline</b>				
1) Solo	2,694	75.00	64.85%	35.15%
2) 2-15	11,760	84.03	76.79%	23.21%
3) 16-99	30,445	85.41	79.66%	20.34%
4) 100+	43,286	80.99	75.50%	24.50%
<b>Overall</b>	88,184	82.58	76.41%	23.59%
<b>Final Rule Policies</b>				
1) Solo	2,694	75.00	64.85%	35.15%
2) 2-15	11,760	84.00	76.79%	23.21%
3) 16-99	30,445	85.33	79.66%	20.34%
4) 100+	43,286	80.98	75.50%	24.50%
<b>Overall</b>	88,184	82.57	76.41%	23.59%

The median final score for all rural practitioners is 82.58 in our baseline model and 82.57 in our final policies model. This is slightly lower than the median final score for all practitioners which is 84.86 in our baseline model and 84.75 in our final policies model. A larger portion of Solo rural practitioners receive a positive adjustment than solo practitioners generally. As shown in Table 135, 53.72 percent of all solo practitioners receive a positive or neutral adjustment. Among rural practitioners 64.85 percent of solo practitioners receive a positive adjustment. A similar proportion of medium practices receive a positive adjustment among rural practitioners and our overall population but medium practices have a slightly larger median payment adjustment. Large practices are the only practice size where rural practitioners score measurably worse in our model. Among large rural practices 75.50 percent of MIPS eligible clinicians receive a positive or neutral payment in our final policies model compared 80.51 percent of all large practices. Overall rural practitioners perform similarly or better in our simulation compared to all practitioners with the exception of larger rural practitioners who perform slightly worse.

(iii) Impact to Safety Net Providers

In the CY 2023 PFS final rule (87 FR 70094) we finalized our complex patient bonus methodology. This bonus is composed of two distinct calculations which are added together: Medical Complexity and Social Risk. Medical Complexity is determined based on a MIPS

eligible clinicians Hierarchical Conditions Categories risk score and social risk is determined based on the proportion of a MIPS eligible clinicians Medicare patient population who are dually eligible for both Medicare and Medicaid.

To assess the impact of our finalized polices on these clinicians we compared the performance of clinicians who received the complex patient bonus with our overall population. We refer to this group of clinicians (those who have received the complex patient bonus) as “safety net providers” for the purpose of this analysis. The results of this analysis are in Table 135.

**TABLE 135: Percentage of MIPS Eligible Clinicians who Submit Data and Median Final Score for *Safety Net Practitioners Only***

<u>Practice Size*</u>	<u>Total Number of MIPS Eligible Clinicians</u>	<u>Median Final Score</u>	<u>Percent Eligible Clinicians with Positive or Neutral Payment Adjustment</u>	<u>Percent Eligible Clinicians with Negative Payment Adjustment</u>
<b>Baseline</b>				
1) Solo	11,464	75.00	52.41%	47.59%
2) 2-15	37,872	81.98	75.23%	24.67%
3) 16-99	99,945	83.58	78.69%	21.31%
4) 100+	306,476	84.71	81.38%	18.62%
<b>Overall</b>	455,757	83.96	79.56%	20.44%
<b>Final Rule Policies</b>				
1) Solo	11,464	75.00	52.41%	47.59%
2) 2-15	37,873	81.98	75.31%	24.68%
3) 16-99	99,947	83.58	78.67%	21.32%
4) 100+	306,476	84.71	81.38%	18.62%
<b>Overall</b>	455,767	83.93	79.56%	20.44%

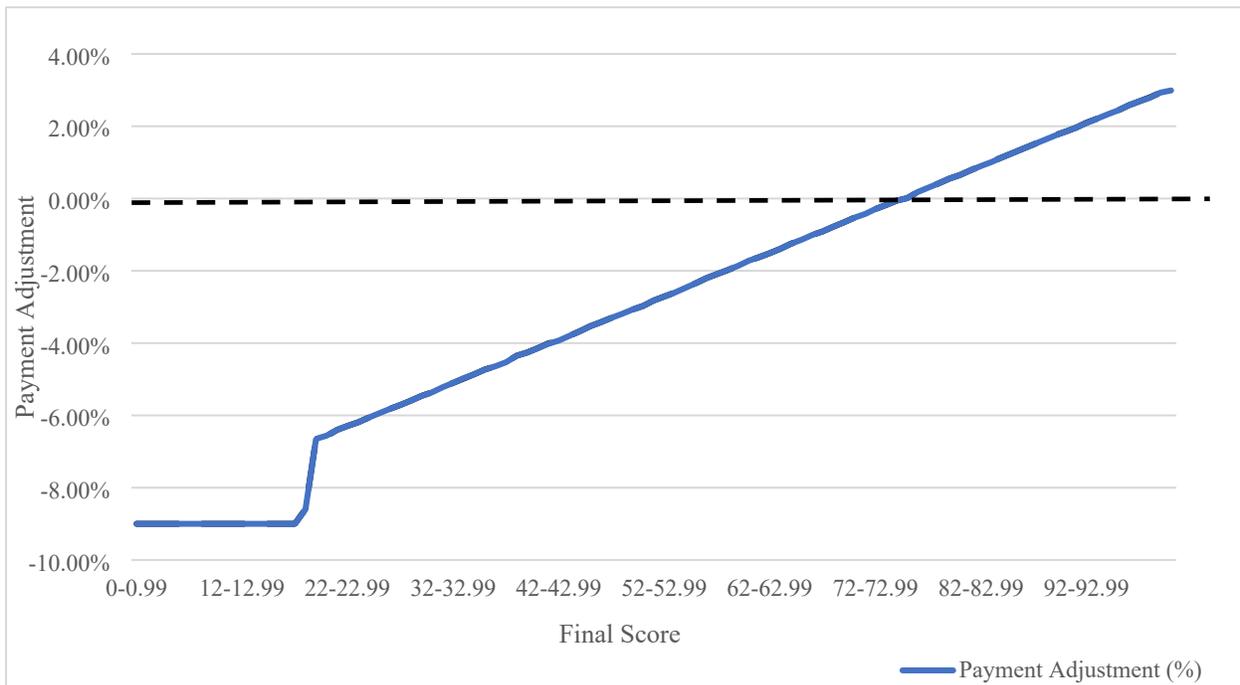

Across every practice size safety net provers perform very similarly to our overall population of MIPS eligible clinicians.

(c) Impact to Clinicians Payment Adjustments

In section IV.A.4.h.(2) of this final rule we state that we are not finalizing an increase in the performance threshold. However, payment adjustments still differ slightly between the baseline and final policies model. This is because final scores are slightly different, and the parameters of the exchange function used to determine payment adjustments depends on the final score distribution of MIPS eligible clinicians. However, the difference between the payment adjustment function in the baseline and final rule is negligible. Figure 6 shows the payment

adjustment function for the baseline and final rule. Since these functions are virtually identical these two lines overlap.

**FIGURE 6: Payment Adjustment Function**

Payment adjustments range from -9 percent to a maximum of 2.985 percent in the baseline and 2.989 percent in our final policies model. We project redistributing \$491 million in both the baseline and final policies models.

We also report the median positive and negative payment adjustments by practice size.

**TABLE 136: CY 2024 Median Positive and Negative Payment Adjustment Estimates By Practice Size**

<u>Practice Size</u>	<u>Median Positive Payment Adjustment*</u>	<u>Median Negative Payment Adjustment*</u>
<u>Baseline</u>		
Solo (1)	2.08%	-9.00%
Small (2-15)	1.83%	-5.17%
Medium (16-99)	1.69%	-1.32%
Large (>99)	1.73%	-0.95%
Overall	1.73%	-1.24%
<u>Final Rule Policies Model</u>		
Solo (1)	2.08%	-9.00%
Small (2-15)	1.83%	-5.18%
Medium (16-99)	1.69%	-1.34%
Large (>99)	1.73%	-0.95%
Overall	1.74%	-1.24%

\*The median positive payment adjustment is defined as the medium payment adjustment among clinicians with a final score above the performance threshold. The median negative adjustment is defined as the medium payment

adjustment among clinicians with a final score below the performance threshold. Neither median includes clinicians with a final score equal the performance threshold.

For solo practitioners the median negative payment adjustment is equal to the maximum negative adjustment of -9.00 percent. As discussed in section VI.E.22.(4)(b)(i) of this final rule, this is largely due to the fact that many of these solo practitioners do not submit data to MIPS despite being MIPS eligible clinicians. Our analysis indicates that 49.55 percent of solo practitioners submit data to MIPS<sup>577</sup> compared to 93.70 percent of all clinicians. In Table 137, we report the proportion of clinicians with either did or did not submit data with the maximum negative adjustment (-9 percent)

**TABLE 137: CY 2024 CY 2024 Clinicians With The Maximum Negative Adjustment**

Practice Size	Percent of Clinicians who Did NOT Submit Data with Maximum Negative Adjustment	Percent of Clinicians Who Submit Data With Maximum Negative Adjustment
<u>Baseline (-9%)</u>		
Solo (1)	67.17%	2.86%
Small (2-15)	49.00%	0.83%
Medium (16-99)	24.52%	0.38%
Large (>99)	15.43%	0.12%
Overall	40.86%	0.28%
<u>Final Policies Model (-9%)</u>		
Solo (1)	67.17%	2.86%
Small (2-15)	49.00%	0.83%
Medium (16-99)	24.52%	0.38%
Large (>99)	15.43%	0.12%
Overall	40.86%	0.28%

While the median negative adjustment is the maximum (-9 percent) for solo practitioners only 2.86 percent of solo practitioners who submit data receive the maximum negative adjustment. In contrast, 67.17 percent of solo practitioners who do not submit data receive the maximum negative adjustment.

The median positive adjustment for solo practitioners is 2.08 percent which is higher than the median positive adjustment for any other practice size. This indicates that, while many solo practitioners do not submit data to MIPS, those solo practitioners who do report data to MIPS

<sup>577</sup> Submitting data to MIPS is defined as any interaction with the MIPS program.

and receive a positive adjustment receive a higher median adjustment than other practice sizes.

As shown in Table 138, 11.97 percent of solo practitioners who submit data to MIPS receive the maximum positive adjustment. This is larger than the other practice sizes which indicates that the solo practitioners who do submit data perform as well or better than the rest of the population of clinicians who submit data.

**TABLE 138: CY 2024 CY 2024 Clinicians With The Maximum Positive Adjustment**

<u>Practice Size</u>	<u>Percent of Clinicians who Did NOT Submit Data with Maximum Positive Adjustment</u>	<u>Percent of Clinicians Who Submit Data With Maximum Positive Adjustment</u>
<u>Baseline (2.98%)</u>		
Solo (1)	0%	11.97%
Small (2-15)	0%	10.08%
Medium (16-99)	0%	5.62%
Large (>99)	0%	4.30%
Overall	0%	5.21%
<u>Final Rule Policies Model (2.99%)</u>		
Solo (1)	0%	11.95%
Small (2-15)	0%	9.99%
Medium (16-99)	0%	5.61%
Large (>99)	0%	4.29%
Overall	0%	5.19%

e. Additional Impacts from Outside Payment Adjustments

(1) Burden Overall

In addition to policies affecting the payment adjustments, we are finalizing several policies that have an impact on burden in the CY 2024 performance period/2026 MIPS payment year. In section V.B.11. of this final rule, we outline estimates of the costs of data collection that includes both the effect of policy updates and adjustments due to the use of updated data sources. For each provision included in this final rule which impacts our estimate of collection burden, the incremental burden for each is summarized in Table 139. We also provided additional burden discussions that we are not able to quantify.

**TABLE 139: Incremental Burden from Associated Finalized Policies**

<b>Burden Description and associated finalized provisions</b>	<b>Burden Hours</b>	<b>Burden Dollars</b>
Total burden associated with the provision to continue the policies and ICRs set forth in the CY 2023 PFS final rule into the CY 2024 performance period/2026 MIPS payment year with updated data and assumptions (as outlined in section V.B.11.p. of this final rule).	728,359	\$81,799,657
Burden change for MVP registration ICR due to the provision of additional MVPs (as outlined in section V.B.11.e.(7)(a)(i) of this final rule). *	+341	+\$35,285
Burden change for Quality Data Submission by Clinicians: Medicare Part B Claims-Based Collection Type ICR for capturing reduced number of quality submissions due to the provision of additional MVPs (as outlined in section V.B.11.e.(4) of this final rule). *	-4,430	-\$495,550
Burden change for Quality Data Submission by Clinicians: CQM/QCDR Collection Type ICR for capturing reduced number of quality submissions due to the provision of additional MVPs (as outlined in section V.B.11.e.(5) of this final rule). *	-3,506	-\$401,263
Burden change for Quality Data Submission by Clinicians: eCQM Collection Type ICR for capturing reduced number of quality submissions due to the provision of additional MVPs (as outlined in section V.B.11.e.(6) of this final rule). *	-5,336	-\$618,682
Burden change for MVP Quality Submission ICR submissions due to the provision of additional MVPs (as outlined in section V.B.11.e.(7)(a)(iii) of this final rule). *	+8,784	+\$1,003,109
Total change in burden due to policy for CY 2024	-4,147	-\$477,101
Total burden set forth in the CY 2024 PFS final rule	724,212	\$81,322,556

\* The total change in burden due to this provision includes an increase in burden due to an anticipated increase in the number of respondents that will participate in MVP reporting based on the proposed addition of new MVPs. Therefore, there will be a decrease in burden in the “Quality Data Submission: MIPS CQM and QCDR collection type,” “Quality Data Submission: eCQM collection type,” and “Quality Data Submission: Claims collection type” ICRs due to respondents who previously submitted MIPS through those collection types submitting data with reduced Quality submission requirements as a MVP participant. Total change in burden also includes the increase in submission burden due to the increase in the number of respondents for “MVP registration.” See section V.B.11.e. of this final rule.

## (2) Additional Impacts to Clinicians

### (a) Impact on Third Party Intermediaries

In section IV.A.4.k. of this final rule, we proposed to: (1) add requirements for third party intermediaries to obtain documentation; (2) add requirements for third party intermediaries to submit data in the form and manner specified by CMS; (3) specify the use of a simplified self-nomination process for existing QCDRs and qualified registries; (4) add requirements for QCDRs and qualified registries to provide measure numbers and identifiers for performance categories; (5) Add a requirement for QCDRs and qualified registries to attest that information on the qualified posting is correct; (6) Modify requirements for QCDRs and qualified registries to support MVP reporting; (7) Specify requirements for a transition plan for QCDRs and

qualified registries; (8) Specify requirements for data validation execution reports; (9) Add additional criteria for rejecting QCDR measures; (10) Add a requirement for QCDR measure specifications to be displayed throughout the performance period and data submission period; (10) eliminate the Health IT vendor category; (11) Add failure to maintain updated contact information as criteria for remedial action; (12) Revise corrective action plan requirements; (13) Specify the process for publicly posting remedial action; and (14) Specify the criteria for audits. Due to the technical nature of these changes, we are unable to quantify the burden for third party intermediaries during the CY 2024 performance period/2026 MIPS payment year. We refer readers to section IV.A.4.k. of this final rule for additional information on changes to the third party intermediary requirements.

(b) Compare Tools: Public Reporting

As discussed in section IV.A.4.1. of this final rule, we are finalizing our proposals to: (1) use the most recent codes at the time the data are refreshed that identify a clinician as furnishing services via telehealth; (2) update the PDC Utilization Data File Policy, remove the PUF subset file from the PDC and only keep the utilization data file that reflects the information on clinician profile pages in the PDC; (3) modify the Procedure Grouping Policy for Publicly Reporting Utilization Data as proposed. Specifically, in addition to Restructured BETOS and code sources used in MIPS, we may use alternate sources to create clinically meaningful and appropriate procedural categories, particularly when no relevant grouping exists; and (4) incorporate Medicare Advantage data to FFS procedure volume counts and amend § 422.310(f)(3) to add a new paragraph (iv) authorizing CMS to release aggregated risk adjustment data before the reconciliation for the applicable payment year has been completed if CMS determines that releasing aggregated data is necessary and appropriate for activities to support administration of the Medicare program. While the Compare tool provisions do not increase the burden of collections, we note that the PRA package may require relevant modification to reflect the

Compare tool's new uses and public display. We refer readers to section IV.A.4.l. of this final rule for additional details on the changes to public reporting on Compare tools.

(c) Data Completeness Criteria for the Quality Measures, Excluding the Medicare CQMs

As discussed in section IV.A.4.f.(1)(d) of this final rule, we are finalizing to maintain the data completeness criteria threshold at 75 percent for the CY 2025 and 2026 performance periods/2027 and 2028 MIPS payment years. We are not finalizing our proposal to increase the data completeness criteria threshold by 5 percent from 75 percent to 80 percent for the CY 2027 performance period/2029 MIPS payment year. We believe that the policy to maintain the threshold for data completeness at 75 percent for the CY 2025 and 2026 performance periods/2027 and 2028 MIPS payment years is consistent with the existing data completeness criteria and therefore, will not result in additional burden to the applicable interested parties. We refer readers to section IV.A.4.f.(1)(d) of this final rule for additional information on the data completeness threshold criteria.

(d) Modifications to the Improvement Activities Inventory

As discussed in section IV.A.4.f.(2)(b)(ii) of this final rule, we are finalizing changes to the improvement activities Inventory for the CY 2024 performance period/2026 MIPS payment year and future years as follows: adding five new improvement activities; modifying one existing improvement activity; and removing three previously adopted improvement activities. We refer readers to Appendix 2: Improvement Activities of this final rule for further details. We do not believe these changes to the improvement activities inventory will significantly impact time or financial burden on interested parties because MIPS eligible clinicians are still required to submit the same number of activities and the per response time for each activity is uniform. We do not expect these changes to the improvement activities inventory to affect our currently approved information collection burden estimates in terms of neither the number of estimated respondents nor the burden per response. We anticipate most clinicians performing improvement activities, to comply with existing MIPS policies, will continue to perform the same activities

under the policies in this final rule because previously finalized improvement activities continue to apply for the current and future years unless otherwise modified per rulemaking (82 FR 54175). Most of the improvement activities in the Inventory remain unchanged for the CY 2024 performance period/2026 MIPS payment year. We refer readers to section IV.A.4.f.(3)(b)(ii) of this final rule for additional information on changes to the improvement activities Inventory.

### (3) Update to CEHRT Definition for the Medicare Promoting Interoperability Program and the Quality Payment Program

As discussed in section III.R. of this final rule, we are finalizing our proposal to update the definitions of CEHRT for the Medicare Promoting Interoperability Program for eligible hospitals and CAHs and for the MIPS Promoting Interoperability performance category. Under this provision, we will revise the definitions of CEHRT for the Medicare Promoting Interoperability Program at § 495.4, and for the Quality Payment Program at § 414.1305. Specifically, we are finalizing the proposal to add a reference to the “Base EHR Definition” where the regulatory text refers to the “2015 Edition Base EHR definition,” remove “2015 Edition” where we reference “2015 Edition health IT certification criteria,” and add a cross-reference to health IT certification criteria at § 170.315. We also are finalizing the proposal to specify that technology meeting the CEHRT definitions must meet ONC’s certification criteria at § 170.315, “as adopted and updated by ONC.” We believe that these revisions to the CEHRT definitions will ensure that updates to the definition at § 170.102 and updates to applicable health IT certification criteria in § 170.315 will be incorporated into CEHRT definitions, without requiring additional regulatory action by CMS. Finally, we noted that while this provision is consistent with the approach in ONC’s HTI-1 proposed rule (88 FR 23746 through 23917), we do not believe that ONC must finalize their proposed revisions for us to be able to finalize the changes in this section for our regulatory definitions of CEHRT. These changes will not impact EHR requirements in the CY 2024 EHR reporting period or the CY 2024 performance period, and therefore we predict that it will have no impact on clinicians.

## f. Assumptions & Limitations

In our MIPS eligible clinician assumptions, we assumed that clinicians who elected to opt-in for the CY 2021 Quality Payment Program and submitted data will continue to elect to opt-in for the CY 2023 performance period/2025 MIPS payment year. It is difficult to predict whether clinicians will elect to opt-in to participate in MIPS with the policies.

As discussed in section VI.E.22.c. of this final rule, we are unable to predict which specific clinicians would receive reweighting under our extreme and uncontrollable circumstances policies in the CY 2024 Performance period/ CY 2026 Payment Year and so we make the assumption that those clinicians who received the reweighting under our extreme and uncontrollable circumstances policy are representative of the number and attributes of clinicians who will receive reweighting under this policy in the future.

In addition to the limitations described throughout the methodology sections, to the extent that there are year-to-year changes in the data submission, volume, and mix of services provided by MIPS eligible clinicians, the actual impact on total Medicare revenues will be different from those shown in Table 132.

We received public comments on the Regulatory Impact Analysis for the Quality Payment Program.

The following is a summary of the comments we received and our responses.

*Comment:* Several commenters requested that CMS analyze the impact of QP policy changes, including the QP determination policy proposal and proposed change to the QP threshold, in the Regulatory Impact Analysis of the rule. Commenters were interested in how these policy changes would impact the engagement of specific types of practices and patient populations such as rural clinicians, ACOs, and specialists in the program.

*Response:* We thank these commenters for their feedback on the regulatory impact analysis. We note that our analysis incorporates QP policy changes. This is described in more detail in section VI.E.22.c.(2) of this final rule. We also note that, as stated in section

IV.A.4.m.(2) of this final rule we are not finalizing the change in individual level QP determination proposed in the CY 2024 PFS proposed rule. We note that we describe the overall impact to rural clinicians in section VI.E.22.d.(4)(b)(ii) of this final rule. We are continuously refining and improving the model used for this regulatory impact analysis and will consider the specific suggestions raised by these commenters in future iterations.

#### *F. Alternatives Considered*

This final rule contains a range of policies, including some provisions related to specific statutory provisions. The preceding preamble provides descriptions of the statutory provisions that are addressed, identifies those policies when we exercise agency discretion, presents rationale for our policies, and, where relevant, alternatives that were considered. For purposes of the payment impact on PFS services of the policies contained in this final rule, we present above the estimated impact on total allowed charges by specialty.

##### 1. Alternatives Considered Related to the O/O E/M Visit Inherent Complexity Add-on Separate Payment

We considered alternatives to our policy to make separate payment for the O/O E/M visit inherent complexity add-on code, including proposing to maintain our current utilization assumptions. Maintaining our current utilization assumption as finalized in CY 2021 would result in an estimated impact or change to the CF of -3.2 percent (Table 140). However, maintaining the CY 2021 policy utilization assumption would not reflect our limitation on billing of the O/O E/M visit inherent complexity add-on code for services billed with modifier 25 which is used to indicate that the service is billed on the same day as a minor procedure or another E/M visit by the same practitioner. It seems likely that visits reported with payment modifiers have resources sufficiently distinct from stand-alone office/outpatient E/M visits (85 FR 84571). Interested parties unlikely to bill for the O/O E/M visit inherent complexity add-on code have continued to express concerns about potential associated reductions to the CF and redistributive impacts among specialties. Our proposal to better target the add-on code would partially allay

those concerns. Under our proposed utilization assumption for CY 2024, we estimated the effect of making separate payment for the O/O E/M visit complexity add-on code to be -2.0 percent.

**TABLE 140: Conversion Factor Effect Attributable to the Inherent Complexity Add-on Code**

As finalized for CY 2021	-3.2%
As proposed for CY 2024	-2.0%

We also considered proposing not to make separate payment for the O/O E/M visit inherent complexity add-on code for CY 2024, continuing to consider the utilization data, and solicited comment on not making separate payment until CY 2025 instead of CY 2024.

While doing so would reduce the change to the CF and the redistributive impacts among specialties our concerns about capturing the work associated with visits that are part of ongoing, comprehensive primary care and/or care management for patients with a single, serious, or complex chronic condition would remain present.

We received public comments on these proposals. Generally, commenters who believed that E/M visits that are associated with medical care services that serve as the continuing focal point for all needed health care services or with medical care services that are part of ongoing care related to a patient's single, serious or complex condition expressed support for our proposal. Commenters who believed that the code was duplicative or some who believed that the negative impact on the conversion factor outweighed the benefit opposed the code. Many commenters across the board recommended lowering utilization estimates in the proposed rule. For a summary of the comments we received and our responses see section II.F.2, of this final rule. After consideration of public comments, we are finalizing as proposed.

We believe separate payment for the O/O E/M visit inherent complexity add-on code will improve accuracy in payment for resource costs inherent to primary care and other medical care services that are part of ongoing care for a patient's single, serious or complex condition in the office setting. This will be particularly important for people without access to such care. We also believe that utilizing high-value preventive services and promoting healthy behaviors leveraged

by these kinds of longitudinal patient relationships could result in positive patient outcomes and positive health equity impacts. Primary care practitioners and other practitioners who rely heavily on these visit codes and will use the add-on code will likely raise strong objections if CMS does not propose to make separate payment for a code that is intended to address long-standing distortions in PFS payment that CMS has repeatedly acknowledged through notice and comment rulemaking.

## 2. Alternatives to Provider Enrollment Provisions

We did not consider alternatives to our provider enrollment provisions. We believe these changes are necessary to help ensure that payments are made only to qualified providers and suppliers and/or to increase the efficiency of the Medicare and Medicaid provider enrollment processes.

## 3. Alternatives Considered Medicare Diabetes Prevention Program

No alternatives were considered. The MDPP flexibilities resulting from the PHE for COVID-19 lasted over 3 years of the initial 5 years of the expanded model. During this time, supplier and beneficiary expectations changed, resulting in the synchronous virtual delivery of healthcare services becoming normalized. Requiring the MDPP expanded model to return to primarily in-person services following over 3 years of synchronous virtual delivery may have an extremely negative impact for both MDPP suppliers and beneficiaries, which could threaten the success of the entire expanded model.

## 4. Alternatives Considered for the Quality Payment Program

For purposes of the payment impact on the Quality Payment Program, we view the performance threshold as a critical factor affecting the distribution of payment adjustments. We ran separate policies RIA models based on the actual mean for the CY 2019 performance period/2021 MIPS payment year with a performance threshold of 86. This model has the same mean and median final score as our policies RIA model since the performance threshold does not change the final score. In our analysis of the alternative performance threshold of 86, 56.09

percent of all MIPS eligible clinicians who submitted data will receive a negative payment adjustment.

In the CY 2024 PFS proposed rule (88 FR 52598 through 52598), we proposed to increase the performance threshold to 82 points. In section IV.A.4.h.(2) of this final rule, we indicated that we are not finalizing this increase. Under the performance threshold of 82 we project that 46.67 percent of all MIPS eligible clinicians would receive a negative payment adjustment.

We also reported the findings for the baseline RIA model which describes the impact for the CY 2024 performance period/2026 MIPS payment year if this proposal is not finalized. The baseline RIA model has a median final score of 83.46. We estimated that \$491 million will be redistributed based on the budget neutrality requirement. The baseline includes a maximum payment adjustment of 2.98 percent. In addition, 21.60 percent of MIPS eligible clinicians would receive a negative payment adjustment.

## G. Impact on Beneficiaries

### 1. Medicare Shared Savings Program Provisions

As noted previously in this final rule, the cap on an ACO's regional service area risk score growth is expected to increase the incentive for ACOs to participate in regions with high risk score growth, improving the incentive for ACOs to join and/or sustain participation when serving regions with increasingly medically complex beneficiaries. Similarly, the use of a uniform approach to calculating both BY and PY prospective HCC risk scores using the same CMS-HCC risk adjustment model(s) is anticipated to increase participation (and reduce the potential for attrition) particularly from ACOs serving greater proportions of complex beneficiaries exhibiting high risk scores. Mitigating the impact of the negative regional adjustments on benchmarks is expected to increase participation from ACOs serving up to 500,000 new assigned beneficiaries per year. The revised definition of assignable beneficiary is expected to allow more than 760,000 additional beneficiaries to be included in the population of

assignable beneficiaries, many of whom would be eligible to be assigned to ACOs. Taken together, these provisions are expected to increase participation in the Shared Savings Program over the 2024-2033 period by roughly 10 to 20 percent.

ACOs have been found to perform better on certain patient-experience and performance measures than physician groups participating in the MIPS. In addition, ACOs continued to achieve better average performance rates than comparably sized MIPS group practices on all 10 of the CMS WI measures and had higher scores on the CAHPS for MIPS patient experience survey in PY 2022. ACO performance was statistically better on 6 out of 10 CMS WI measures compared to comparably sized MIPS group practice reporters in PY 2022. Those measures include diabetes control, blood pressure control, breast cancer screening, colorectal cancer screening, depression screening and follow-up, and tobacco screening and cessation intervention.

Increased participation in the Shared Savings Program will extend ACO care coordination and quality improvement to segments of the beneficiary population that potentially have more to benefit from care management.

## 2. Quality Payment Program

There are several changes in this final rule that are expected to have a positive effect on beneficiaries. In general, we believe that many of these changes, including the MVP and subgroup provisions, if finalized, will lead to meaningful feedback to beneficiaries on the type and scope of care provided by clinicians. Additionally, beneficiaries could use the publicly reported information on clinician performance in subgroups to identify and choose clinicians in multispecialty groups relevant to their care needs. Consequently, we anticipate the policies in this final rule will improve the quality and value of care provided to Medicare beneficiaries. For example, several of the new quality measures include patient-reported outcome-based measures, which may be used to help patients make more informed decisions about treatment options. Patient-reported outcome-based measures provide information on a patient's health status from the patient's point of view and may also provide valuable insights on factors such as quality of

life, functional status, and overall disease experience, which may not otherwise be available through routine clinical data collection. Patient-reported outcome-based measures are factors frequently of interest to patients when making decisions about treatment.

### 3. Medicare Diabetes Prevention Program

The changes will have a positive impact on eligible MDPP beneficiaries, as it increases the accessibility of MDPP, particularly among beneficiaries residing in rural and underserved areas of the US, where access to a supplier offering in-person Set of MDPP services may not exist or be geographically feasible.

#### H. Estimating Regulatory Familiarization Costs

If regulations impose administrative costs on private entities, such as the time needed to read and interpret this rule, we should estimate the cost associated with regulatory review. Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assumed that the total number of unique commenters on this year's proposed rule will be the number of reviewers of last year's proposed rule. We acknowledged that this assumption may understate or overstate the costs of reviewing this rule. It is possible that not all commenters will review this year's proposed rule in detail, and it is also possible that some reviewers will choose not to comment on the proposed rule. For these reasons we believe that the number of commenters will be a fair estimate of the number of reviewers of this year's proposed rule.

We also recognized that different types of entities are in many cases affected by mutually exclusive sections of this rule, and therefore for the purposes of our estimate we assume that each reviewer reads approximately 50 percent of the rule.

Using the wage information from the BLS for medical and health service managers (Code 11-9111), we estimate that the cost of reviewing this rule is \$123.06, including overhead and fringe benefits [https://www.bls.gov/oes/current/oes\\_nat.htm](https://www.bls.gov/oes/current/oes_nat.htm). Assuming an average reading speed, we estimate that it would take approximately 8.0 hours for the staff to review half of this

rule. For each facility that reviews the rule, the estimated cost is \$984.48 (8.0 hours x \$123.06). Therefore, we estimated that the total cost of reviewing this regulation is 21,677,265 (\$984.48 x 22,019 reviewers on this year’s proposed rule).

As for the Medicare Diabetes Prevention Program, given that we tried to align this rule as much as possible with the CDC DPRP Standards, there should be minimal regulatory familiarization costs. This rule impacts only enrolled MDPP suppliers and eligible beneficiaries who have started the MDPP program or are interested in enrolling in MDPP.

I. Accounting Statement

As required by OMB Circular A-4 (available at [https://www.whitehouse.gov/wp-content/uploads/legacy\\_drupal\\_files/omb/circulars/A4/a-4.pdf](https://www.whitehouse.gov/wp-content/uploads/legacy_drupal_files/omb/circulars/A4/a-4.pdf)), in Tables 138 through 140 (Accounting Statements), we have prepared an accounting statement. This estimate includes growth in incurred benefits from CY 2023 to CY 2024 based on the FY 2024 President’s Budget baseline.

**TABLE 141: Accounting Statement: Classification of Estimated Expenditures**

CATEGORY	TRANSFERS
CY 2024 Annualized Monetized Transfers	Estimated decrease in expenditures of \$2.4 billion for PFS CF update.
From Whom To Whom?	Federal Government to physicians, other practitioners and providers and suppliers who receive payment under Medicare.

**TABLE 142: Accounting Statement: Classification of Estimated Costs, Transfer, and Savings**

CATEGORY	TRANSFER
CY 2024 Annualized Monetized Transfers of beneficiary cost coinsurance.	-\$0.6billion
From Whom to Whom?	Beneficiaries to Federal Government.

**TABLE 143: Accounting Statement for Provisions for Medicare Shared Savings Program  
(CYs 2024-2033)**

Category	Primary Estimate	Minimum Estimate	Maximum Estimate	Source Citation
<b>Transfers From the Federal Government to ACOs</b>				
Annualized monetized: Discount rate: 7%	-15 million	-171 million	174 million	Tables 120 through 123
Annualized monetized: Discount rate: 3%	-25 million	-189 million	172 million	

Notes: Negative values reflect reduction in Federal net cost resulting from care management by ACOs. Estimates may be a combination of benefits and transfers. To the extent that the incentives created by Medicare payments change the amount of resources society uses in providing medical care, the more accurate categorization of effects will be as costs (positive values) or benefits/cost savings (negative values), rather than as transfers.

**J. Conclusion**

The analysis in the previous sections, together with the remainder of this preamble, provided an initial Regulatory Flexibility Analysis. The previous analysis, together with the preceding portion of this preamble, provides an RIA. In accordance with the provisions of Executive Order 12866, this regulation was reviewed by the Office of Management and Budget.

Chiquita Brooks-LaSure, Administrator of the Centers for Medicare & Medicaid Services, approved this document on October 27, 2023.

## **List of Subjects**

### *42 CFR Part 405*

Administrative practice and procedure, Diseases, Health facilities, Health professions, Medical devices, Medicare, Reporting and recordkeeping requirements, Rural areas, and X-rays.

### *42 CFR Part 410*

Diseases, Health facilities, Health professions, Laboratories, Medicare, Reporting and recordkeeping requirements, Rural areas, X-rays.

### *42 CFR Part 411*

Diseases, Medicare, Reporting and recordkeeping requirements.

### *42 CFR Part 414*

Administrative practice and procedure, Biologics, Diseases, Drugs, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

### *42 CFR Part 415*

Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

### *42 CFR Part 418*

Health facilities, Hospice care, Medicare, Reporting and recordkeeping requirements.

### *42 CFR 422*

Administrative practice and procedure, Health facilities, Health maintenance organizations (HMO), Medicare, Penalties, Privacy, Reporting and recordkeeping requirements.

### *42 CFR Part 423*

Administrative practice and procedure, Emergency medical services, Health facilities, Health maintenance organizations (HMO), Health professionals, Medicare, Penalties, Privacy, Reporting and recordkeeping requirements.

### *42 CFR Part 424*

Health facilities, Health professions, Medicare Reporting and recordkeeping requirements.

*42 CFR Part 425*

Administrative practice and procedure, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

*42 CFR Part 455*

Fraud, Grant programs—health, Health facilities, Health professions, Investigations, Medicaid, Reporting and recordkeeping requirements.

*42 CFR Part 489*

Health facilities, Medicare, Reporting and recordkeeping requirements.

*42 CFR Part 491*

Grant programs-health, Health facilities, Medicaid, Medicare, Reporting and recordkeeping requirements, Rural areas.

*42 CFR Part 495*

Administrative practice and procedure, Health facilities, Health maintenance organizations (HMO), Health professions, Health records, Medicaid, Medicare, Penalties, Privacy, Reporting and recordkeeping requirements.

*42 CFR Part 498*

Administrative practice and procedure, Health facilities, Health professions, Medicare Reporting and recordkeeping requirements.

*42 CFR Part 600*

Administrative practice and procedure, Health care, Health insurance, Intergovernmental relations, Penalties, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services amends 42 CFR chapter IV as set forth below:

**PART 405-FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED**

1. The authority citation for part 405 continues to read as follows:

**Authority:** 42 U.S.C. 263a, 405(a), 1302, 1320b-12, 1395x, 1395y(a), 1395ff, 1395hh, 1395kk, 1395rr, and 1395ww(k).

2. Section 405.400 is amended by revising the definition of “Practitioner” to read as follows:

**§ 405.400 Definitions.**

\* \* \* \* \*

*Practitioner* means a physician assistant, nurse practitioner, clinical nurse specialist, certified registered nurse anesthetist, certified nurse midwife, clinical psychologist, clinical social worker, marriage and family therapist, mental health counselor, registered dietitian or nutrition professional, who is currently legally authorized to practice in that capacity by each State in which he or she furnishes services to patients or clients.

\* \* \* \* \*

3. Section 405.800 is amended by adding paragraph (d) to read as follows:

**§ 405.800 Appeals of CMS or a CMS contractor.**

\* \* \* \* \*

(d) *Scope of supplier.* For purposes of this subpart, the term “supplier” includes all of the following:

- (1) The individuals and entities that qualify as suppliers under § 400.202 of this chapter.
- (2) Physical therapists in private practice.
- (3) Occupational therapists in private practice.
- (4) Speech-language pathologists.

4. In § 405.2401 amend paragraph (b) by adding the definitions of “Marriage and family

therapist (MFT)” and “Mental health counselor (MHC)” in alphabetical order to read as follows:

**§ 405.2401 Scope and definitions.**

\* \* \* \* \*

(b) \* \* \*

*Marriage and family therapist (MFT)* means an individual who meets the applicable education, training, and other requirements of § 410.53 of this chapter.

\* \* \* \* \*

*Mental health counselor (MHC)* means an individual who meets the applicable education, training, and other requirements of § 410.54 of this chapter.

\* \* \* \* \*

5. Section 405.2411 is amended by revising paragraphs (a)(4), (a)(6), and (b)(2) to read as follows:

**§ 405.2411 Scope of benefits.**

(a) \* \* \*

(4) Services and supplies furnished as incident to the services of a nurse practitioner, physician assistant, certified nurse midwife, clinical psychologist, clinical social worker, marriage and family therapist, or mental health counselor.

\* \* \* \* \*

(6) Clinical psychologist, clinical social worker, marriage and family therapist, and mental health counselor services as specified in § 405.2450.

(b) \* \* \*

(2) Covered when furnished during a Part A stay in a skilled nursing facility only when provided by a physician, nurse practitioner, physician assistant, certified nurse midwife, clinical psychologist, clinical social worker, marriage and family therapist, or mental health counselor employed or under contract with the RHC or FQHC at the time the services are furnished;

\* \* \* \* \*

6. Section 405.2413 is amended by revising paragraph (a)(5) to read as follows:

**§ 405.2413 Services and supplies incident to a physician's services.**

(a) \* \* \*

(5) Furnished under the direct supervision of a physician, except that services and supplies furnished incident to Transitional Care Management, General Care Management, the Psychiatric Collaborative Care Model, and behavioral health services can be furnished under general supervision of a physician when these services or supplies are furnished by auxiliary personnel, as defined in § 410.26(a)(1) of this chapter.

\* \* \* \* \*

7. Section 405.2415 is amended by--

- a. Revising paragraphs (a) introductory text, (a)(3), and (a)(5) and
- b. Adding paragraphs (b)(6) and (7).

The revisions and additions read as follows:

**§ 405.2415 Incident to services and direct supervision.**

(a) Services and supplies incident to the services of a nurse practitioner, physician assistant, certified nurse midwife, clinical psychologist, clinical social worker, marriage and family therapist, or mental health counselor are payable under this subpart if the service or supply is all of the following:

\* \* \* \* \*

(3) Furnished as an incidental, although integral part of professional services furnished by a nurse practitioner, physician assistant, certified nurse-midwife, clinical psychologist, clinical social worker, marriage and family therapist, or mental health counselor.

\* \* \* \* \*

(5) Furnished under the direct supervision of a nurse practitioner, physician assistant, or certified nurse-midwife, except that services and supplies furnished incident to Transitional Care Management, General Care Management, the Psychiatric Collaborative Care model, and

behavioral health services can be furnished under general supervision of a nurse practitioner, physician assistant, or certified nurse-midwife, when these services or supplies are furnished by auxiliary personnel, as defined in § 410.26(a)(1) of this chapter.

(b) \* \* \*

(6) Marriage and family therapist.

(7) Mental health counselor.

\* \* \* \* \*

8. Section 405.2446 is amended by revising paragraphs (b)(5) and (6) to read as follows:

**§ 405.2446 Scope of services.**

\* \* \* \* \*

(b) \* \* \*

(5) Clinical psychologist, clinical social worker, marriage and family therapist, and mental health counselor services specified in § 405.2450.

(6) Services and supplies furnished as incident to the services of a clinical psychologist, clinical social worker, marriage and family therapist, or mental health counselor, as specified in § 405.2452.

\* \* \* \* \*

9. Section § 405.2448 is amended by revising paragraphs (a)(2) introductory text and (a)(2)(i) to read as follows:

**§ 405.2448 Preventive primary services.**

(a) \* \* \*

(2) Are furnished by a or under the direct supervision of a physician, nurse practitioner, physician assistant, certified nurse midwife, clinical psychologist, clinical social worker, marriage and family therapist, or mental health counselor employed by or under contract with the FQHC.

(i) By a or under the direct supervision of a physician, nurse practitioner, physician

assistant, certified nurse midwife, clinical psychologist, clinical social worker, marriage and family therapist, or mental health counselor; or

\* \* \* \* \*

10. Section 405.2450 is amended by revising the section heading and paragraphs (a) introductory text, (a)(2), (a)(3), and (c) to read as follows:

**§ 405.2450 Clinical psychologist, clinical social worker, marriage and family therapist, and mental health counselor services.**

(a) For clinical psychologist, clinical social worker, marriage and family therapist, or mental health counselor professional services to be payable under this subpart, the services must be -

\* \* \* \* \*

(2) Of a type that the clinical psychologist, clinical social worker, marriage and family therapist, or mental health counselor who furnishes the services is legally permitted to perform by the State in which the service is furnished;

(3) Performed by a clinical social worker, clinical psychologist, marriage and family therapist, or mental health counselor who is legally authorized to perform such services under State law or the State regulatory mechanism provided by the law of the State in which such services are performed; and

\* \* \* \* \*

(c) The services of clinical psychologists, clinical social workers, marriage and family therapist, or mental health counselors are not covered if State law or regulations require that the services be performed under a physician's order and no such order was prepared.

11. Section 405.2452 is amended by revising the section heading, and paragraphs (a) introductory text, (a)(3), (a)(5) and (b) to read as follows:

**§ 405.2452 Services and supplies incident to clinical psychologist, clinical social worker, marriage and family therapist, and mental health counselor services.**

(a) Services and supplies incident to a clinical psychologist's, clinical social worker's, marriage and family therapist's, and mental health counselor's services are reimbursable under this subpart if the service or supply is –

\* \* \* \* \*

(3) Furnished as an incidental, although integral part of professional services furnished by a clinical psychologist, clinical social worker, marriage and family therapist, or mental health counselor;

\* \* \* \* \*

(5) Furnished under the direct supervision of a clinical psychologist, clinical social worker, marriage and family therapist, or mental health counselor.

(b) The direct supervision requirement in paragraph (a)(5) of this section is met only if the clinical psychologist, clinical social worker, marriage and family therapist, or mental health counselor is permitted to supervise such services under the written policies governing the FQHC.

12. Section 405.2463 is amended by—

- a. Adding paragraphs (a)(1)(i)(I) and (a)(1)(i)(J);
- b. Revising paragraph (b)(3) introductory text;
- c. Redesignating paragraph (b)(3)(iii) as paragraph (b)(3)(v); and
- d. Adding paragraphs (b)(3)(iii) and (b)(3)(iv).

**§ 405.2463 What constitutes a visit.**

(a) \* \* \*

(1) \* \* \*

(i) \* \* \*

(I) Marriage and family therapist.

(J) Mental health counselor.

\* \* \* \* \*

(b) \* \* \*

(3) *Visit-Mental health.* A mental health visit is a face-to-face encounter or an encounter furnished using interactive, real-time, audio and video telecommunications technology or audio-only interactions in cases where the patient is not capable of, or does not consent to, the use of video technology for the purposes of diagnosis, evaluation or treatment of a mental health disorder, including an in-person mental health service, beginning January 1, 2025, furnished within 6 months prior to the furnishing of the telecommunications service and that an in-person mental health service (without the use of telecommunications technology) must be provided at least every 12 months while the beneficiary is receiving services furnished via telecommunications technology for diagnosis, evaluation, or treatment of mental health disorders, unless, for a particular 12-month period, the physician or practitioner and patient agree that the risks and burdens outweigh the benefits associated with furnishing the in-person item or service, and the practitioner documents the reasons for this decision in the patient's medical record, between an RHC or FQHC patient and one of the following:

\* \* \* \* \*

(iii) Marriage and family therapist.

(iv) Mental health counselor.

\* \* \* \* \*

13. Section 405.2464 is amended by revising paragraph (c) to read as follows:

**§ 405.2464 Payment rate.**

\* \* \* \* \*

(c) *Payment for care management services.* For chronic care management services furnished between January 1, 2016 and December 31, 2017, payment to RHCs and FQHCs is at the physician fee schedule national non-facility payment rate. For care management services furnished between January 1, 2018 and December 31, 2023, payment to RHCs and FQHCs is at the rate set for each of the RHC and FQHC payment codes for care management services. For general care management services furnished on or after January 1, 2024, the payment amount is

based on a weighted average of the services that comprise HCPCS code G0511 using the most recently available PFS utilization data.

\* \* \* \* \*

14. Section 405.2468 is amended by revising paragraphs (b)(1), (b)(3), and (d)(2)(ii) to read as follows:

**§ 405.2468 Allowable costs.**

\* \* \* \* \*

(b) \* \* \*

(1) Compensation for the services of a physician, physician assistant, nurse practitioner, certified nurse-midwife, visiting registered professional or licensed practical nurse, clinical psychologist, clinical social worker, marriage and family therapist, and mental health counselor who owns, is employed by, or furnishes services under contract to a FQHC or RHC.

\* \* \* \* \*

(3) Costs of services and supplies incident to the services of a physician, physician assistant, nurse practitioner, nurse-midwife, qualified clinical psychologist, clinical social worker, marriage and family therapist, or mental health counselor.

\* \* \* \* \*

(d) \* \* \*

(2) \* \* \*

(ii) Services of physicians, physician assistants, nurse practitioners, nurse-midwives, visiting nurses, qualified clinical psychologists, clinical social workers, marriage and family therapists, and mental health counselors.

\* \* \* \* \*

15. Section 405.2469 is amended by revising paragraph (d) to read as follows:

**§ 405.2469 FQHC supplemental payments.**

\* \* \* \* \*

(d) *Per visit supplemental payment.* A supplemental payment required under this section is made to the FQHC when a covered face-to-face encounter or an encounter furnished using interactive, real-time, audio and video telecommunications technology or audio-only interactions in cases where beneficiaries do not wish to use or do not have access to devices that permit a two-way, audio/video interaction for the purposes of diagnosis, evaluation or treatment of a mental health disorder occurs between a MA enrollee and a practitioner as set forth in § 405.2463. Additionally, beginning January 1, 2025, there must be an in-person mental health service furnished within 6 months prior to the furnishing of the telecommunications service and that an in-person mental health service (without the use of telecommunications technology) must be provided at least every 12 months while the beneficiary is receiving services furnished via telecommunications technology for diagnosis, evaluation, or treatment of mental health disorders, unless, for a particular 12-month period, the physician or practitioner and patient agree that the risks and burdens outweigh the benefits associated with furnishing the in-person item or service, and the practitioner documents the reasons for this decision in the patient's medical record.

**PART 410—SUPPLEMENTARY MEDICAL INSURANCE (SMI) BENEFITS**

16. The authority citation for part 410 continues to read as follows:

**Authority:** 42 U.S.C. 1302, 1395m, 1395hh, 1395rr, and 1395ddd.

17. Section 410.10 is amended by revising paragraph (l) and adding paragraphs (z) and (aa) to read as follows:

**§ 410.10 Medical and other health services: Included services.**

\* \* \* \* \*

(l) Pneumococcal, influenza, and COVID-19 vaccines (or monoclonal antibodies used for preexposure prophylaxis of COVID-19) and their administration.

\* \* \* \* \*

(z) Marriage and Family Therapist services, as provided in § 410.53.

(aa) Mental Health Counselor services, as provided in § 410.54.

18. In § 410.15 amend paragraph (a) by:

a. In the definition of “First annual wellness visit providing personalized prevention plan services”:

i. Redesignating paragraph (xiii) as paragraph (xiv); and

ii. Adding a new paragraph (xiii).

b. In the definition of “Subsequent annual wellness visit providing personalized prevention plan services”:

i. Redesignating paragraph (xi) as paragraph (xii); and

ii. Adding a new paragraph (xi).

The additions read as follows:

**§ 410.15 Annual wellness visits providing Personalized Prevention Plan Services:**

**Conditions for and limitations on coverage.**

(a) \* \* \*

*First annual wellness visit providing personalized prevention plan services* \* \*

\*

(xiii) At the discretion of the health professional and beneficiary, furnish a Social Determinants of Health Risk Assessment that is standardized, evidence-based, and furnished in a manner that all communication with the patient is appropriate for the beneficiary’s educational, developmental, and health literacy level, and is culturally and linguistically appropriate.

\* \* \* \* \*

*Subsequent annual wellness visit providing personalized prevention plan services* \*

\* \*

(xi) At the discretion of the health professional and beneficiary, furnish a Social Determinants of Health Risk Assessment that is standardized, evidence-based, and furnished in a

manner that all communication with the patient is appropriate for the beneficiary’s educational, developmental, and health literacy level, and is culturally and linguistically appropriate.

\* \* \* \* \*

19. Amend § 410.18 by:

a. In paragraph (a):

(i) Revising the definition of “Diabetes”; and

(ii) Removing the definition of “Pre-diabetes”.

b. Redesignating paragraph (c)(3) as paragraph (c)(4) and adding a new paragraph (c)(3);

and

c. Revising paragraph (d).

The revisions and addition read as follows:

**§ 410.18 Diabetes screening tests.**

(a) \* \* \*

*Diabetes* means diabetes mellitus, a condition of abnormal glucose metabolism.

\* \* \* \* \*

(c) \* \* \*

(3) Hemoglobin A1C test.

\* \* \* \* \*

(d) *Amount of testing covered.* Medicare covers two tests within the 12-month period following the date of the most recent diabetes screening test of that individual.

\* \* \* \* \*

20. Section 410.32 is amended by revising paragraphs (a)(2) and (b)(3)(ii) to read as follow:

**§ 410.32 Diagnostic x-ray tests, diagnostic laboratory tests, and other diagnostic tests:**

**Conditions.**

(a) \* \* \*

(2) *Application to nonphysician practitioners.* Nonphysician practitioners (that is, clinical nurse specialists, clinical psychologists, clinical social workers, marriage and family therapists, mental health counselors, nurse-midwives, nurse practitioners, and physician assistants) who furnish services that would be physician services if furnished by a physician, and who are operating within the scope of their authority under State law and within the scope of their Medicare statutory benefit, may be treated the same as physicians treating beneficiaries for the purpose of this paragraph.

\* \* \* \* \*

(b) \* \* \*

(3) \* \* \*

(ii) *Direct supervision* in the office setting means the physician (or other supervising practitioner) must be present in the office suite and immediately available to furnish assistance and direction throughout the performance of the procedure. It does not mean that the physician (or other supervising practitioner) must be present in the room when the procedure is performed. Through December 31, 2024, the presence of the physician (or other practitioner) includes virtual presence through audio/video real-time communications technology (excluding audio-only).

\* \* \* \* \*

21. Section § 410.33 is amended by revising paragraph (g)(2) to read as follows:

**§ 410.33 Independent diagnostic testing facility.**

\* \* \* \* \*

(g) \* \* \*

(2) Provides complete and accurate information on its enrollment application. Changes in ownership, changes of location (including additions and deletions of locations), changes in general supervision, and adverse legal actions must be reported to the Medicare fee-for-service

contractor on the Medicare enrollment application within 30 calendar days of the change. All other changes to the enrollment application must be reported within 90 days.

\* \* \* \* \*

22. Amend § 410.47 by:

a. In paragraph (a):

i. Adding the definition of “Nonphysician practitioner” in alphabetical order;

ii. Revising the definitions of “Pulmonary rehabilitation”

iii. Removing the definition of “Supervising physician” and adding, in alphabetical order, a definition for “Supervising practitioner”;

b. Revising paragraphs (b)(3)(ii)(A) and (d) introductory text; and

c. Removing paragraph (d)(3).

The addition and revisions read as follows:

**§ 410.47 Pulmonary rehabilitation program: Conditions of coverage.**

(a) \* \* \*

*Nonphysician practitioner* means a physician assistant, nurse practitioner, or clinical nurse specialist as those terms are defined in section 1861(aa)(5)(A) of the Act.

\* \* \* \* \*

*Pulmonary rehabilitation* means a physician or nonphysician practitioner supervised program for COPD and certain other chronic respiratory diseases designed to optimize physical and social performance and autonomy.

*Supervising practitioner* means a physician or nonphysician practitioner that is immediately available and accessible for medical consultations and medical emergencies at all times items and services are being furnished to individuals under pulmonary rehabilitation programs.

(b) \* \* \*

(3) \* \* \*

(ii) \* \* \*

(A) A physician or nonphysician practitioner immediately available and accessible for medical consultations and emergencies at all times when items and services are being furnished under the program. This provision is satisfied if the physician or nonphysician practitioner meets the requirements for direct supervision for physician office services, at § 410.26 of this subpart; and for hospital outpatient services at § 410.27 of this subpart.

\* \* \* \* \*

(d) *Supervising practitioner standards.* Physicians or nonphysician practitioners acting as the supervising practitioner must possess all of the following:

\* \* \* \* \*

23. Amend § 410.49 by:

a. In paragraph (a):

- i. Revising the definitions of “Cardiac rehabilitation” and “Intensive cardiac rehabilitation (ICR) program”;
- ii. Adding the definition of “Nonphysician practitioner” in alphabetical order; and
- iii. Removing the definition of “Supervising physician” and adding, in alphabetical order, the definition of “Supervising practitioner”;

b. Revising paragraphs (b)(3)(ii) and (e) introductory text; and

c. Removing paragraph (e)(3).

The revisions and addition read as follows:

**§ 410.49 Cardiac rehabilitation program and intensive cardiac rehabilitation program:**

**Conditions of coverage.**

(a) \* \* \*

*Cardiac rehabilitation (CR)* means a physician or nonphysician practitioner supervised program that furnishes physician prescribed exercise, cardiac risk factor modification, psychosocial assessment, and outcomes assessment.

\* \* \* \* \*

*Intensive cardiac rehabilitation (ICR) program* means a physician or nonphysician practitioner supervised program that furnishes cardiac rehabilitation and has shown, in peer-reviewed published research, that it improves patients' cardiovascular disease through specific outcome measurements described in paragraph (c) of this section.

\* \* \* \* \*

*Nonphysician practitioner* means a physician assistant, nurse practitioner, or clinical nurse specialist as those terms are defined in section 1861(aa)(5)(A) of the Act.

\* \* \* \* \*

*Supervising practitioner* means a physician or nonphysician practitioner that is immediately available and accessible for medical consultations and medical emergencies at all times items and services are being furnished to individuals under cardiac rehabilitation and intensive cardiac rehabilitation programs.

(b) \* \* \*

(3) \* \* \*

(ii) All settings must have a physician or nonphysician practitioner immediately available and accessible for medical consultations and emergencies at all times when items and services are being furnished under the program. This provision is satisfied if the physician or nonphysician practitioner meets the requirements for direct supervision for physician office services, at § 410.26 of this subpart; and for hospital outpatient services at § 410.27 of this subpart.

\* \* \* \* \*

(e) *Supervising practitioner standards.* Physicians or nonphysician practitioners acting as the supervising practitioner must possess all of the following:

\* \* \* \* \*

24. Add § 410.53 to subpart B to read as follows:

**§ 410.53 Marriage and family therapist services.**

(a) *Definition: marriage and family therapist.* For purposes of this part, a marriage and family therapist is defined as an individual who -

(1) Possesses a master's or doctor's degree which qualifies for licensure or certification as a marriage and family therapist pursuant to State law of the State in which such individual furnishes the services defined as marriage and family therapist services;

(2) After obtaining such degree, has performed at least 2 years or 3,000 hours of post master's degree clinical supervised experience in marriage and family therapy in an appropriate setting such as a hospital, SNF, private practice, or clinic; and

(3) Is licensed or certified as a marriage and family therapist by the State in which the services are performed.

(b) *Covered marriage and family therapist services.* Medicare Part B covers marriage and family therapist services.

(1) *Definition: marriage and family therapist services* means services furnished by a marriage and family therapist (as defined in paragraph (a) of this section) for the diagnosis and treatment of mental illnesses (other than services furnished to an inpatient of a hospital), which the marriage and family therapist is legally authorized to perform under State law (or the State regulatory mechanism provided by State law) of the State in which such services are furnished. The services must be of a type that would be covered if they were furnished by a physician or as an incident to a physician's professional service and must meet the requirements of this section.

(2) *Exception.* The following services are not marriage and family therapist services for purposes of billing Medicare Part B under the MFT and MHC statutory benefit category:

(i) Services furnished by a marriage and family therapist to an inpatient of a Medicare-participating hospital.

(ii) [Reserved]

(c) *Prohibited billing.* (1) A marriage and family therapist may not bill Medicare for the services specified in paragraph (b)(2) of this section.

(2) A marriage and family therapist or an attending or primary care physician may not bill Medicare or the beneficiary for the consultation that is required under paragraph(b)(2) of this section.

25. Add § 410.54 to subpart B to read as follows:

**§ 410.54 Mental health counselor services.**

(a) *Definition: mental health counselor.* For purposes of this part, a *mental health counselor* is defined as an individual who -

(1) Possesses a master's or doctor's degree which qualifies for licensure or certification as a mental health counselor, clinical professional counselor, professional counselor under the State law of the State in which such individual furnishes the services defined as mental health counselor services;

(2) After obtaining such a degree, has performed at least 2 years or 3,000 hours of post master's degree clinical supervised experience in mental health counseling in an appropriate setting such as a hospital, SNF, private practice, or clinic; and

(3) Is licensed or certified as a mental health counselor, clinical professional counselor, professional counselor by the State in which the services are performed.

(b) *Covered mental health counselor services.* Medicare Part B covers mental health counselor services.

(1) *Definition: Mental health counselor services* means services furnished by a mental health counselor (as defined in paragraph (a) of this section) for the diagnosis and treatment of mental illnesses (other than services furnished to an inpatient of a hospital), which the mental health counselor is legally authorized to perform under State law (or the State regulatory mechanism provided by State law) of the State in which such services are furnished. The services

must be of a type that would be covered if they were furnished by a physician or as an incident to a physician's professional service and must meet the requirements of this section.

(2) *Exception.* The following services are not mental health counselor services for purposes of billing Medicare Part B:

(i) Services furnished by a mental health counselor to an inpatient of a Medicare-participating hospital.

(ii) [Reserved]

(c) *Prohibited billing.* (1) A mental health counselor may not bill Medicare for the services specified in paragraph (b)(2) of this section.

(2) A mental health counselor or an attending or primary care physician may not bill Medicare or the beneficiary for the consultation that is required under paragraph(b)(2) of this section.

26. Section 410.57 is amended by revising paragraph (c) to read as follows:

**§ 410.57 Preventive vaccines.**

\* \* \* \* \*

(c) Medicare Part B pays for the COVID-19 vaccine (or monoclonal antibodies used for pre-exposure prophylaxis of COVID-19) and its administration.

\* \* \* \* \*

27. Section 410.59 is amended by revising paragraphs (a)(3)(ii) and (c)(2) to read as follows:

**§ 410.59 Outpatient occupational therapy services: Conditions.**

\* \* \* \* \*

(a) \* \* \*

(3) \* \* \*

(ii) By, or under the direct supervision (or as specified otherwise) of, an occupational therapist in private practice as described in paragraph (c) of this section; or

\* \* \* \* \*

(c) \* \* \*

(2) *Supervision of occupational therapy services.* Except as otherwise provided in this paragraph, occupational therapy services are performed by, or under the direct supervision of, an occupational therapist in private practice. All services not performed personally by the therapist must be performed by employees of the practice, directly supervised by the therapist, and included in the fee for the therapist's services. Remote therapeutic monitoring services may be performed by an occupational therapy assistant under the general supervision of the occupational therapist in private practice; services performed by an unenrolled occupational therapist must be under the direct supervision of the occupational therapist.

\* \* \* \* \*

28. Section 410.60 is amended by revising paragraphs (a)(3)(ii) and (c)(2) to read as follows:

**§ 410.60 Outpatient physical therapy services: Conditions.**

\* \* \* \* \*

(a) \* \* \*

(3) \* \* \*

(ii) By, or under the direct supervision (or as specified otherwise) of, a physical therapist in private practice as described in paragraph (c) of this section; or

\* \* \* \* \*

(c) \* \* \*

(2) *Supervision of physical therapy services.* Except as otherwise provided in this paragraph, physical therapy services are performed by, or under the direct supervision of, a physical therapist in private practice. All services not performed personally by the therapist must be performed by employees of the practice, directly supervised by the therapist, and included in the fee for the therapist's services. Remote therapeutic monitoring services may be performed by

a physical therapist assistant under the general supervision of the physical therapist in private practice; services performed by an unenrolled physical therapist must be under the direct supervision of the physical therapist.

\* \* \* \* \*

**§ 410.67 [Amended]**

29. In § 410.67 in paragraph (b) amend paragraph (vii) in the definition of “Opioid use disorder treatment service” by removing the reference “through the end of CY 2023” and adding in its place the reference “through the end of CY 2024”.

30. Section 410.72 is amended by revising paragraph (d) to read as follows:

**§ 410.72 Registered dietitians’ and nutrition professionals’ services.**

\* \* \* \* \*

(d) *Professional services.* Except for DSMT services furnished as, or on behalf of, an accredited DSMT entity, registered dietitians and nutrition professionals can be paid for their professional MNT services only when the services have been directly performed by them.

\* \* \* \* \*

31. Section 410.78 is amended by—

- a. Adding paragraphs (b)(2)(x) through (xii);
- b. Revising paragraphs (b)(3)(xiv) introductory text, (b)(4)(iv)(D), and (e)(1); and
- c. Adding paragraph (e)(3).

The additions and revisions read as follows:

**§ 410.78 Telehealth services.**

\* \* \* \* \*

- (b) \* \* \*
- (2) \* \* \*

(x) Any distant site practitioner who can appropriately bill for diabetes self-management training services may do so on behalf of others who personally furnish the services as part of the DSMT entity.

(xi) A marriage and family therapist as described in 410.53.

(xii) A mental health counselor as described in 410.54.

(3) \* \* \*

(xiv) The home of a beneficiary for the purposes of diagnosis, evaluation, and/or treatment of a mental health disorder for services that are furnished during the period beginning on the first day after the end of the emergency period as defined in our regulation at § 400.200 and ending on December 31, 2024 except as otherwise provided in this paragraph. Payment will not be made for a telehealth service furnished under this paragraph unless the following conditions are met:

(4) \* \* \*

(iv) \* \* \*

(D) Services furnished on or after January 1, 2025 for the purposes of diagnosis, evaluation, and/or treatment of a mental health disorder. Payment will not be made for a telehealth service furnished under this paragraph unless the physician or practitioner has furnished an item or service in person, without the use of telehealth, for which Medicare payment was made (or would have been made if the patient were entitled to, or enrolled for, Medicare benefits at the time the item or service is furnished) within 6 months prior to the initial telehealth service and within 6 months of any subsequent telehealth service.

\* \* \* \* \*

(e) \* \* \*

(1) A clinical psychologist and a clinical social worker, a marriage and family therapist (MFT), and a mental health counselor (MHC) may bill and receive payment for individual

psychotherapy via a telecommunications system, but may not seek payment for medical evaluation and management services.

\* \* \* \* \*

(3) The distant site practitioner who reports the DSMT services may bill and receive payment when a professional furnishes injection training for an insulin-dependent patient using interactive telecommunications technology when such training is included as part of the DSMT plan of care referenced at § 410.141(b)(2).

\* \* \* \* \*

32. Amend § 410.79 by:

a. In paragraph (b):

- i. Adding the definition of “Combination delivery” in alphabetical order;
  - ii. Removing the definition of “Core maintenance session interval”;
  - iii. Adding the definitions of “Distance learning”, “Extended flexibilities”, “Extended flexibilities period”, and “Full-Plus CDC DPRP recognition” in alphabetical order;
  - iv. Revising the definitions of “Make-up session”, “MDPP services period”, and “MDPP session”
  - v. Adding the definition “Online delivery” in alphabetical order;
  - vi. Removing the definition of “Ongoing maintenance sessions”;
  - vii. Adding the definition of “Virtual session” in alphabetical order.
- b. Removing paragraphs (c)(1)(ii) and (iii);
- c. Redesignating paragraph (c)(1)(iv) as paragraph (c)(1)(ii);
- d. Revising paragraphs (c)(2)(i)(A) and (B);
- e. Removing and reserving paragraph (c)(2)(ii);
- f. Revising paragraph (c)(3)(i);
- g. Removing and reserving paragraph (c)(3)(ii); removing paragraph (c)(3)(iii), removing and reserving paragraphs (d)(2)(iii)(B) and (d)(3)(ii);

h. Revising paragraphs (e)(3)(iv) introductory text, (e)(3)(iv)(D), (e)(3)(iv)(F)(I) and (2).

The additions and revisions read as follows:

**§ 410.79 Medicare Diabetes Prevention Program expanded model: Conditions of coverage.**

\* \* \* \* \*

(b) \* \* \*

*Combination delivery.* MDPP sessions that are delivered by trained Coaches and are furnished in a manner consistent with the DPRP Standards for distance learning and in-person sessions for each individual participant.

\* \* \* \* \*

*Distance learning* refers to an MDPP session that is delivered by trained Coaches via remote classroom and is furnished in a manner consistent with the DPRP Standards for distance learning sessions. The Coach provides live (synchronous) delivery of session content in one location and participants call-in or video-conference from another location.

*Extended flexibilities* refer to the flexibilities as described in paragraphs (e)(3)(iii) and (iv) of this section.

*Extended flexibilities period* refers to the 4-year period (January 1, 2024 to December 31, 2027) for the Extended flexibilities to apply.

\* \* \* \* \*

*Full-Plus CDC DPRP recognition* refers to organizations that have met the Full CDC DPRP recognition, and at the time full recognition is achieved, has met the following retention criterion: Eligible participants in the evaluation cohort must have been retained at the following percentages: A minimum of 50 percent at the beginning of the fourth month since the cohorts held their first sessions; A minimum of 40 percent at the beginning of the seventh month since the cohorts held their first sessions; and A minimum of 30 percent at the beginning of the tenth month since the cohorts held their first sessions.

\* \* \* \* \*

*Make-up session* means a core session or a core maintenance session furnished to an MDPP beneficiary when the MDPP beneficiary misses a regularly scheduled core session or core maintenance session.

*MDPP services period* means the time period, beginning on the date an MDPP beneficiary attends his or her first core session, over which the Set of MDPP services is furnished to the MDPP beneficiary, to include the core services period described in paragraph (c)(2)(i) and, subject to paragraph (c)(3) of this section.

*MDPP session* means a core session or a core maintenance session.

\* \* \* \* \*

*Online delivery* refers to an MDPP session that is delivered online for all participants and is furnished in a manner consistent with the DPRP Standards for online sessions. The program is experienced through the Internet via phone, tablet, laptop, in an asynchronous classroom where participants are experiencing the content on their own time without a live Coach teaching the content. However, live Coach interaction should be provided to each participant no less than once per week during the first 6 months and once per month during the second 6 months. E-mails and text messages can count toward the requirement for live coach interaction as long as there is bi-directional communication between coach and participant.

\* \* \* \* \*

*Virtual session* refers to an MDPP session that is not furnished in person and that is furnished in a manner consistent with the DPRP standards for distance learning sessions.

(c) \* \* \*

(2) \* \* \*

(i) \* \* \*

(A) Up to 16 core sessions offered at least 1 week apart during months 1 through 6 of the MDPP services period; and

(B) Up to 6 core maintenance sessions offered at least 1 month apart during months 7 through 12 of the MDPP services period

(ii) [Reserved]

(3) \* \* \*

(i) The MDPP services period ends upon completion of the core services period described in paragraph (c)(2)(i) of this section.

\* \* \* \* \*

(e) \* \* \*

(3) \* \* \*

(iv) The virtual session limits described in paragraphs (d)(2) and (d)(3)(i) and (ii) of this section do not apply, and MDPP suppliers may provide all MDPP sessions virtually, through distance learning or a combination of in-person or distance learning, during the PHE as defined in § 400.200 of this chapter or applicable 1135 waiver event. If the beneficiary began the MDPP services period virtually, or changed from in-person to virtual services during the Extended flexibilities period, a PHE as defined in § 400.200 of this chapter or applicable 1135 waiver event, he/she may continue to receive the Set of MDPP services virtually even after the PHE or 1135 waiver event has concluded, until the end of the beneficiary's MDPP services period, so long as the provision of virtual services complies with all of the following requirements:

\* \* \* \* \*

(D) Virtual sessions are furnished in a manner consistent with the DPRP standards for distance learning sessions.

\* \* \* \* \*

(F) \* \* \*

(I) Up to 16 virtual sessions offered weekly during the core session period, months 1 through 6 of the MDPP services period;

(2) Up to 6 virtual sessions offered monthly during the core maintenance session interval periods, months 7 through 12 of the MDPP services period.

\* \* \* \* \*

**§ 410.130 [Amended]**

33. Amend § 410.130 in the definition of “Diabetes” by removing the text “diagnosed using the following criteria: A fasting blood sugar greater than or equal to 126 mg/dL on two different occasions; a 2 hour post-glucose challenge greater than or equal to 200 mg/dL on 2 different occasions; or a random glucose test over 200 mg/dL for a person with symptoms of uncontrolled diabetes”.

**§ 410.140 [Amended]**

34. Amend § 410.140 in the definition of “Diabetes” by removing the text “diagnosed using the following criteria: A fasting blood sugar greater than or equal to 126 mg/dL on two different occasions; a 2-hour post-glucose challenge greater than or equal to 200 mg/dL on 2 different occasions; or a random glucose test over 200 mg/dL for a person with symptoms of uncontrolled diabetes”.

35. Amend § 410.150 by adding paragraphs (b)(21) and (22) to read follows:

**§ 410.150** To whom payment is made.

\* \* \* \* \*

(b) \* \*

(21) To a marriage and family therapist on the individual’s behalf for marriage and family therapist services.

(22) To a mental health counselor on the individual’s behalf for mental health counseling services.

36. Section 410.152 is amended by:

a. Revising paragraphs (b) introductory text, (h)(2) and (h)(3), (h)(4) introductory text, (h)(5); and

b. Adding paragraphs (m) and (n).

The revisions and additions read as follows:

**§ 410.152 Amounts of payment.**

\* \* \* \* \*

(b) *Basic rules for payment.* Except as specified in paragraphs (c) through (h) and (m) and (n) of this section, Medicare Part B pays the following amounts:

\* \* \* \* \*

(h) \* \* \*

(2) For the administration of a COVID-19 vaccine:

(i) Effective January 1, 2022, for administration of a COVID-19 vaccine, \$40 per dose.

(ii) For services furnished on or after January 1 of the year following the year in which the Secretary ends the March 27, 2020 Emergency Use Authorization declaration for drugs and biologicals (issued at 85 FR 18250) pursuant to section 564 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 360bbb-3), for administration of a COVID-19 vaccine, an amount equal to the amount that would be paid for the administration of a preventive vaccine described in paragraph (h)(1) of this section.

(3) Subject to conditions specified in this paragraph, in addition to the payment described in paragraph (h)(1) or (2) of this section, an additional payment for preventive vaccine administration in the patient's home:

(i) Effective January 1, 2022 for administration of a COVID-19 vaccine in the home, an additional payment of \$35.50.

(ii) Effective January 1, 2024, for the administration of one or more of the preventive vaccines described in paragraphs (h)(1) and (2) of this section in the home, a payment equal to that of the payment in paragraph (h)(3)(i) of this section.

(iii) An additional payment for preventive vaccine administration in the home can be made if:

(A) The patient has difficulty leaving the home, or faces barriers to getting a vaccine in settings other than their home.

(B) The sole purpose of the visit is to administer one or more preventive vaccines.

(C) The home is not an institution that meets the requirements of sections 1861(e)(1), 1819(a)(1), or 1919(a)(1) of the Act, or §§ 409.42(a) of this subchapter.

(4) The payment amount for the administration of a preventive vaccine described in paragraphs (h)(1) and (2) of this section, and the additional payment for the administration of a preventive vaccine in the home as described in paragraph (h)(3) of this section, is adjusted to reflect geographic cost variations:

\* \* \* \* \*

(5) For services furnished on or after January 1, 2023, the payment amount for administration of a preventive vaccine described in paragraphs (h)(1) and (2) of this section, and the additional payment for the administration of a preventive vaccine in the home as described in paragraph (h)(3) of this section, is updated annually using the percentage change in the Medicare Economic Index (MEI), as described in section 1842(i)(3) of the Act and § 405.504(d) of this subchapter.

\* \* \* \* \*

(m) *Amount of payment: Rebatable drugs.* In the case of a rebatable drug (as defined in section 1847A(i)(2)(A) of the Act), including a selected drug (as defined in section 1192(c) of the Act), furnished by providers on or after April 1, 2023, in a calendar quarter during which the payment amount for such drug as specified in section 1847A(i)(3)(A)(ii)(I)(aa) or (bb), as applicable, exceeds the inflation-adjusted amount (as defined in section 1847A(i)(3)(C) of the Act) for such drug, Medicare Part B pays, subject to the deductible, the difference between the allowed payment amount determined under section 1847A of the Act and 20 percent of the inflation-adjusted amount, which is applied as a percent to the payment amount for such calendar quarter.

(n) *Amount of payment: Insulin furnished through an item of durable medical equipment.*

For insulin furnished on or after July 1, 2023 through an item of durable medical equipment (as defined in § 414.202), Medicare Part B pays the difference between the applicable payment amount for such insulin and the coinsurance amount, with the coinsurance amount not to exceed \$35 for a month's supply.

**PART 411 - EXCLUSIONS FROM MEDICARE AND LIMITATIONS ON MEDICARE PAYMENT**

37. The authority citation for part 411 continues to read as follows:

**Authority:** 42 U.S.C. 1302, 1395w-101 through 1395w-152, 1395hh, and 1395nn.

38. Section 411.15 is amended by:

- a. Revising paragraph (i)(3)(i)(A); and
- b. Adding paragraph (i)(3)(i)(E).

The revision and addition read as follows:

**§ 411.15 Particular services excluded from coverage.**

\* \* \* \* \*

(i) \* \* \*

(3) \* \* \*

(i) \* \* \*

(A) Dental or oral examination performed as part of a comprehensive workup prior to, and medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with, the following Medicare-covered services: organ transplant, hematopoietic stem cell transplant, bone marrow transplant, cardiac valve replacement, valvuloplasty procedures, chemotherapy when used in the treatment of cancer, chimeric antigen receptor (CAR) T-cell therapy when used in the treatment of cancer, and administration of high-dose bone-modifying agents (antiresorptive therapy) when used in the treatment of cancer.

\* \* \* \* \*

(E) Dental or oral examination performed as part of a comprehensive workup prior to, medically necessary diagnostic and treatment services to eliminate an oral or dental infection prior to or contemporaneously with, and medically necessary diagnostic and treatment services to address dental or oral complications after, treatment of head and neck cancer using radiation, chemotherapy, surgery, or any combination of these.

\* \* \* \* \*

#### **PART 414 - PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES**

39. The authority citation for part 414 continues to read as follows:

**Authority:** 42 U.S.C. 1302, 1395hh, and 1395rr(b)(1).

40. Section 414.53 is added to read as follows:

#### **§ 414.53 Fee schedule for clinical social worker, marriage and family therapist, and mental health counselor services.**

The fee schedule for clinical social worker, marriage and family therapist, and mental health counselor services is set at 75 percent of the amount determined for clinical psychologist services under the physician fee schedule.

41. Amend § 414.84 by:

a. In paragraph (a):

i. Adding the definition of “Attendance payment” in alphabetical order;

ii. Revising the definition of “Performance goal”;

b. Revising paragraph (b) introductory text;

c. Removing paragraphs (b)(1) through (5);

d. Redesignating paragraphs (b)(6) and (7) as paragraphs (b)(1) and (2), respectively;

e. Revising newly redesignated paragraphs (b)(1) paragraph heading and (b)(1)(i);

f. Adding paragraph (b)(1)(iii);

g. Revising newly redesignated paragraphs (b)(2) paragraph heading and (b)(2)(i);

h. Redesignating paragraphs (c) and (d) as paragraphs (d) and (e), respectively;

- i. Adding new paragraph (c); and
- j. Revising newly redesignated paragraphs (d)(1) and (e).

The additions and revisions read as follows:

**§ 414.84 Payment for MDPP Services.**

(a) \* \* \*

*Attendance payment* means a payment that is made to an MDPP supplier for furnishing services to an MDPP beneficiary when the MDPP beneficiary attends an MDPP core or core maintenance session. CMS will allow up to 22 sessions (alone or in combination with other codes, not to exceed 22 sessions in a 12- month timeframe).

\* \* \* \* \*

*Performance goal* means a weight loss goal that an MDPP beneficiary must achieve during the MDPP services period for an MDPP supplier to be paid a performance payment.

\* \* \* \* \*

(b) *Performance payment.* CMS makes one or more types of performance payments to an MDPP supplier as specified in this paragraph (b). Each type of performance payment is made only if the beneficiary achieves the applicable performance goal. Certain performance goals are allowed only once per MDPP beneficiary and include the performance goals in paragraphs (b)(1)(i) and (b)(2)(i) of this section. A performance payment is made only on an assignment-related basis in accordance with § 424.55 of this chapter, and MDPP suppliers must accept the Medicare allowed charge as payment in full and may not bill or collect from the beneficiary any amount. CMS will make a performance payment only to an MDPP supplier that complies with all applicable enrollment and program requirements and only for MDPP services that are furnished by an eligible coach, on or after his or her coach eligibility start date and, if applicable, before his or her coach eligibility end date. As a condition of payment, the MDPP supplier must report the NPI of the coach who furnished the session on the claim for the MDPP session. The two types of performance payments are as follows:

(1) *Performance Goal 1: Achieves the required minimum 5-percent weight loss.* \* \* \*

(i) For a core session or core maintenance session, as applicable, furnished January 1, 2024 through December 31, 2024 the amount is \$145.

\* \* \* \* \*

(iii) If the beneficiary maintains the required minimum weight loss during a core maintenance session, as measured in-person or described in § 410.79(e)(3)(iii) the amount is \$8.

(2) *Performance Goal 2: Achieves 9-percent weight loss.* \* \* \*

(i) For a core session or core maintenance session, as applicable, furnished January 1, 2024 through December 31, 2024. \$25.

\* \* \* \* \*

(c) *Attendance payment: Attends a core session or core maintenance session.* CMS makes a payment to an MDPP supplier if an MDPP beneficiary attends a core session or core maintenance session. An attendance payment is made only on an assignment-related basis in accordance with § 424.55 of this chapter, and MDPP suppliers must accept the Medicare allowed charge as payment in full and may not bill or collect from the beneficiary any amount. CMS will make an attendance payment only to an MDPP supplier that complies with all applicable enrollment and program requirements and only for MDPP services that are furnished by an eligible coach, on or after his or her coach eligibility start date and, if applicable, before his or her coach eligibility end date. As a condition of payment, the MDPP supplier must report the NPI of the coach who furnished the session on the claim for the MDPP session.

(1) The first core session attended, which initiates the MDPP services period, and that first core session was furnished by that supplier.

(2) For the Extended flexibilities period described in § 410.79(e)(2)(iii), the distance learning HCPCS G-code applies for any Set of MDPP services that are delivered by distance learning, as described in § 410.79(b).

(3) Medicare pays for up to 22 sessions in a 12-month period. The amount of this payment is determined as follows:

(i) For a core session or core maintenance session furnished January 1, 2024 through December 31, 2024. \$25.

(ii) [Reserved]

(d) \* \* \*

(1) For core session or core maintenance session, as applicable, furnished January 1, 2024 through December 31, 2024 the amount is \$25.

\* \* \* \* \*

(e) *Updating performance payments, attendance payments, and the bridge payment.* The performance payments, attendance payments, and bridge payment will be adjusted each calendar year by the percent change in the Consumer Price Index for All Urban Consumers (CPI-U) (U.S. city average) for the 12-month period ending June 30th of the year preceding the update year. The percent change update will be calculated based on the level of precision of the index as published by the Bureau of Labor Statistics and applied based on one decimal place of precision. The annual MDPP services payment update will be published by CMS transmittal.

**§ 414.94 [Removed and Reserved]**

42. Remove and reserve § 414.94.

43. Amend § 414.502 by revising the definitions of “Data collection period” and “Data reporting period” to read as follows:

**§ 414.502 Definitions.**

\* \* \* \* \*

*Data collection period* is the 6 months from January 1 through June 30, during which applicable information is collected and that precedes the data reporting period, except that for the data reporting period of January 1, 2024 through March 31, 2024, the data collection period is January 1, 2019 through June 30, 2019.

*Data reporting period* is the 3-month period, January 1 through March 31, during which a reporting entity reports applicable information to CMS and that follows the preceding data collection period, except that for the data collection period of January 1, 2019 through June 30, 2019, the data reporting period is January 1, 2024 through March 31, 2024.

\* \* \* \* \*

**§ 414.504 [Amended]**

44. Amend § 414.504 in paragraph (a)(1) by removing the reference “January 1, 2023” and adding in its place the reference “January 1, 2024”.

45. Amend § 414.507 by—

- a. Revising paragraph (d) introductory text and paragraph (d)(6); and
- b. Adding paragraph (d)(9).

The revisions and addition read as follows:

**§ 414.507 Payment for clinical diagnostic laboratory tests.**

\* \* \* \* \*

(d) *Phase-in of payment reductions.* For years 2018 through 2026, the payment rates established under this section for each CDLT that is not a new ADLT or new CDLT, may not be reduced by more than the following amounts for—

\* \* \* \* \*

(6) 2023 – 0.0 percent of the payment rate established in 2022.

\* \* \* \* \*

(9) 2026 - 15 percent of the payment rate established in 2025.

\* \* \* \* \*

**§ 414.610 [Amended]**

46. In § 414.610 amend paragraphs (c)(1)(ii) introductory text and (c)(5)(ii) by removing the date “December 31, 2022” and adding in its place the date “December 31, 2024”

47. Section 414.902 is amended by adding the definitions of “Applicable five-year

period”, “Low volume dose”, “New refund quarter”, “Qualifying biosimilar biological product”, and “Updated refund quarter” in alphabetical order to read as follows:

**§ 414.902 Definitions.**

\* \* \* \* \*

*Applicable five-year period* means:

(1) For a qualifying biosimilar biological product for which payment has been made under section 1847A(b)(8) of the Act as of September 30, 2022, the 5-year period beginning on October 1, 2022; and

(2) For a qualifying biosimilar biological product for which payment is first made under section 1847A(b)(8) of the Act during a calendar quarter during the period beginning October 1, 2022 and ending December 31, 2027, the 5-year period beginning on the first day of such calendar quarter during which such payment is first made.

\* \* \* \* \*

*Low volume dose* means, with respect to determination of whether an increased applicable percentage is warranted, an FDA-labeled dose of a drug for which the volume removed from the vial or container containing the labeled dose does not exceed 0.4 mL.

\* \* \* \* \*

*New refund quarter* means a calendar quarter that is included in a report described in § 414.940(a) that is sent in the first year following the year in which the calendar quarter occurs.

\* \* \* \* \*

*Qualifying biosimilar biological product* means a biosimilar biological product (as described in section 1847A(b)(1)(C) of the Act) with an average sales price (as described in section 1847A(b)(8)(A)(i) of the Act) less than the average sales price of the reference biological for a calendar quarter during the applicable 5-year period.

\* \* \* \* \*

*Updated refund quarter* means a calendar quarter that is included in a report described in

§ 414.940(a) that is sent in the second year following the year in which the calendar quarter occurs.

\* \* \* \* \*

48. Section 414.904 is amended by revising paragraphs (e)(4) and (j) to read as follows:

**§ 414.904 Average sales price as the basis for payment.**

\* \* \* \* \*

(e) \* \* \*

(4) *Payment amount in a case where the average sales price during the first quarter of sales is unavailable.* During an initial period (not to exceed a full calendar quarter) in which data on the prices for sales of the drug are not sufficiently available from the manufacturer to compute an average sales price:

(i) *In general.* Except as provided in paragraph (e)(4)(ii) of this section,

(A) For dates of service before January 1, 2019, the payment amount for the drug is based on the wholesale acquisition cost or the Medicare Part B drug payment methodology in effect on November 1, 2003.

(B) For dates of service on or after January 1, 2019, the payment amount for the drug is an amount not to exceed 103 percent of the wholesale acquisition cost or based on the Medicare Part B drug payment methodologies in effect on November 1, 2003.

(ii) *Limitation on payment amount for biosimilar biological products during initial period.* For dates of service on or after July 1, 2024, the payment amount for a biosimilar biological product (as defined in § 414.902) during the initial period is the lesser of the following:

(A) The payment amount for the biosimilar biological product as determined under clause (e)(4)(i)(B) of this section or

(B) 106 percent of the amount determined under section 1847A(b)(1)(B) of the Act for the reference biological product (as defined in § 414.902).

\* \* \* \* \*

(j) *Biosimilar biological products*--(1) *In general.* Except as provided in paragraph (j)(2), effective January 1, 2016, the payment amount for a biosimilar biological product (as defined in § 414.902), for all NDCs assigned to such product, is the sum of the average sales price of all NDCs assigned to the biosimilar biological products included within the same billing and payment code as determined under section 1847A(b)(6) of the Act, and 6 percent of the amount determined under section 1847A(b)(4) of the Act for the reference biological product (as defined in § 414.902).

(2) *Temporary increase in Medicare Part B payment for qualifying biosimilar biological products.* In the case of a qualifying biosimilar biological product (as defined in § 414.902) that is furnished during the applicable 5-year period (as defined in § 414.902) for such product, the payment amount for such product with respect to such period is the sum determined under as determined under section 1847A(b)(6) of the Act and 8 percent of the amount determined under section 1847A(b)(4) of the Act for the reference biological product (as defined in § 414.902).

49. Section 414.940 is amended by—

- a. Redesignating paragraph (a)(1)(iii) as paragraph (a)(1)(iv).
- b. Adding new paragraph (a)(1)(iii).
- c. Revising paragraphs (a)(3), (b)(1) and (2), (c), and (d);
- d. Redesignating paragraphs (e) and (f) as paragraphs (f) and (g), respectively; and
- e. Adding new paragraph (e).

The revisions and additions read as follows:

**§ 414.940 Refund for certain discarded single-dose container or single-use package drugs.**

- (a) \* \* \*
- (1) \* \* \*

(iii) Reports will include information in paragraphs (a)(1)(i) and (ii) of this section for new refund quarters and updated refund quarters (as defined at § 414.902).

\* \* \* \* \*

(3) *Report Timing.* Reports are sent once annually.

(b) \* \* \*

(1) Refund amounts for which the manufacturer is liable, pursuant to this paragraph, must be paid by December 31 of the year in which the report described in paragraph (a) of this section is sent, except that refund amounts for which the manufacturer is liable, pursuant to this paragraph, for amounts in the initial report for calendar quarters in 2023 must be paid no later than February 28, 2025.

(2) In the case that a disputed report results in a refund amount due, refund amounts that the manufacturer is liable for pursuant to this paragraph shall be paid no later than the dates specified in paragraph (b)(1) of this section or 30 days following the resolution of the dispute, whichever is later.

\* \* \* \* \*

(c) *Refund amount.* The amount of the refund specified in this paragraph is with respect to a refundable single-dose container or single-use package drug of a manufacturer assigned to a billing and payment code (except as provided in paragraph (c)(4) of this section) for:

(1) A new refund quarter (as defined at § 414.902) beginning on or after January 1, 2023, an amount equal to the estimated amount (if any) by which:

(i) The product of the total number of units of the billing and payment code for such drug that were discarded during such new refund quarter; and the amount of payment determined for such drug or biological under section 1847A(b)(1)(B) or (C) of the Act, as applicable, for such new refund quarter;

(ii) Exceeds an amount equal to the applicable percentage of the estimated total allowed charges for such drug for the new refund quarter.

(2) The refund amount owed by a manufacturer for an updated refund quarter (as defined at § 414.902) beginning on or after January 1, 2023, an amount equal to the estimated amount (if any) by which:

(i) The product of the total number of units of the billing and payment code for such drug that were discarded during such updated refund quarter; and the amount of payment determined for such drug or biological under section 1847A(b)(1)(B) or (C) of the Act, as applicable, for such quarter.

(ii) Exceeds the difference of:

(A) An amount equal to the applicable percentage of the estimated total allowed charges for such a drug during the updated refund quarter; and

(B) The refund amount already paid for such refundable drug for such quarter.

(3) Negative refund amount for an updated refund quarter. If the refund amount described in paragraph (c)(2) of this section is negative, the amount will be netted from refunds owed for other updated and new refund quarters included in the same report as such updated refund quarter.

(4) Exception when there are multiple manufacturers. If there is more than one manufacturer of a refundable single-dose container or single-use package drug for a quarter, the refund amount for which a manufacturer is liable is an amount equal to the estimated amount (if any) by which –

(i) The product of the amount calculated in paragraph (c)(1) of this section and the percentage of billing unit sales (of the applicable billing and payment code attributed to the National Drug Code; exceeds:

(ii) The product of the amount in paragraph (c)(2) of this section and percentage of billing unit sales of the applicable billing and payment code attributed to the National Drug Code.

(iii) The number of billing unit sales for each NDC is the reported number of NDCs sold

(as submitted in the ASP report to CMS each quarter) multiplied by the billing units per package for such NDC.

(d) *Applicable percentage.* For purposes of paragraph (c) of this section, and except as provided in paragraph (e) of this section, the applicable percentage is:

(1) 10 percent, unless specified otherwise in this section.

(2) 35 percent for a drug that is reconstituted with a hydrogel and has variable dosing based on patient-specific characteristics.

(3) 90 percent for a drug with a low volume dose (as defined at § 414.902) contained within 0.1 mL or less.

(4) 45 percent for a drug with a low volume dose (as defined in § 414.902) contained within 0.11 mL up to 0.4 mL.

(5) 26 percent for a drug designated an orphan drug under section 526 of the Federal Food, Drug, and Cosmetic Act for a rare disease or condition (or diseases or conditions) and approved by the FDA only for one or more indications within such designated rare disease or condition (or diseases or conditions) and is furnished to fewer than 100 unique beneficiaries per calendar year. A drug is furnished to fewer than 100 unique beneficiaries per calendar year when one of the following two conditions is met:

(i) The number of unique beneficiaries to whom the drug is furnished is less than 100 during the calendar year in which the refund quarter occurs; or

(ii) Either:

(A) In the case of a drug for which 3 or more years of data is available, the average of unique beneficiaries per year to whom the drug is furnished during the calendar year in which the refund quarter occurs and the 2 previous calendar years is less than 100; or

(B) In the case of a drug for which at least 2 but less than 3 years of data is available, the average of unique beneficiaries per year to whom the drug is furnished during the calendar year in which the refund quarter occurs and the previous calendar year is less than 100.

(e) *Application process for increased applicable percentage.* Manufacturers may submit an application to CMS requesting consideration of an increased applicable percentage for purposes of paragraph (c) of this section because of the drug’s unique circumstances. The process for submitting such an application is as follows:

(1) *Application.* An application must include:

(i) A written request that a drug be considered for an increased applicable percentage based on its unique circumstances;

(ii) FDA-approved labeling for the drug, or, if the drug is not approved by the February 1 application deadline described in paragraph (e)(2) of this section, documentation of FDA acceptance of the application for review;

(iii) Justification for the consideration of an increased applicable percentage based on such unique circumstances; and

(iv) Justification for the requested applicable percentage.

(2) *Application timeline.* An application must be submitted in a form and manner specified by CMS by February 1 of the calendar year prior to the year the increased applicable percentage would apply. An application for a drug that is not FDA-approved by February 1 must have FDA approval by August 1 and the manufacturer must notify and submit the FDA-approved label to CMS by September 1 of the calendar year prior to the year the increased applicable percentage would apply.

(3) *Application processing.* Following a review of timely applications, CMS will summarize its analyses of applications and propose appropriate increases in rulemaking. If adopted, the increased applicable percentage will be the applicable percentage for purposes of paragraph (c) of this section beginning as of the following January 1.

\* \* \* \* \*

50. Section 414.1305 is amended by—

a. In the definition of “Attestation”, by removing the term “MIPS eligible clinician or

group” and adding in its in place the term “MIPS eligible clinician, subgroup, or group”.

b. In the definition of “Certified Electronic Health Record Technology (CEHRT)”, by revising paragraphs (2) introductory text and (2)(ii) introductory text, and adding paragraph (3);

c. By revising the definition of “Collection type”;

d. By adding the definition of “Qualified posting”.

e. In the definition of “Submitter type”, by removing both instances of the term “MIPS eligible clinician, group, Virtual Group, APM Entity” and adding in their places the term “MIPS eligible clinician, group, Virtual Group, subgroup, APM Entity”.

The revisions and addition read as follows:

**§ 414.1305 Definitions.**

\* \* \* \* \*

*Certified Electronic Health Record Technology (CEHRT) \*\*\**

\* \* \* \* \*

(2) For 2019 and subsequent years, EHR technology (which could include multiple technologies) certified under the ONC Health IT Certification Program that meets the 2015 Edition Base EHR definition, or subsequent Base EHR definition (as defined in 45 CFR 170.102), and has been certified to the ONC health IT certification criteria as adopted and updated in 45 CFR 170.315 –

\* \* \* \* \*

(ii) Necessary to report on applicable objectives and measures specified for MIPS including the following:

\* \* \* \* \*

(3) For purposes of determinations under §§ 414.1415 and 414.1420, beginning for CY 2024, EHR technology (which could include multiple technologies) certified under the ONC Health IT Certification Program that meets—

(i) The 2015 Edition Base EHR definition, or subsequent Base EHR definition (as defined in 45 CFR 170.102); and

(ii) Any such ONC health IT certification criteria adopted or updated in 45 CFR 170.315 that are determined applicable for the APM, for the year, considering factors such as clinical practice area, promotion of interoperability, relevance to reporting on applicable quality measures, clinical care delivery objectives of the APM, or any other factor relevant to documenting and communicating clinical care to patients or their health care providers in the APM.

\* \* \* \* \*

*Collection type* means a set of quality measures with comparable specifications and data completeness criteria, as applicable, including, but not limited to: Electronic clinical quality measures (eCQMs); MIPS clinical quality measures (MIPS CQMs); QCDR measures; Medicare Part B claims measures; CMS Web Interface measures (except as provided in paragraph (1) of this definition, for the CY 2017 through CY 2022 performance periods/2019 through 2024 MIPS payment years); the CAHPS for MIPS survey measure; administrative claims measures; and Medicare Clinical Quality Measures for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQMs).

\* \* \* \* \*

*Qualified posting* means the document made available that lists qualified registries or QCDRs available by CMS for use by MIPS eligible clinicians, groups, subgroups, virtual groups, and APM Entities.

\* \* \* \* \*

51. Section 414.1320 is amended by—

- a. Revising paragraph (h) introductory text; and
- b. Adding paragraph (i).

The addition and revision read as follow:

**§ 414.1320 MIPS performance period.**

\* \* \* \* \*

(h) For purposes of the 2024 MIPS payment year and the 2025 MIPS payment year, the performance period for:

\* \* \* \* \*

(i) For purposes of the 2026 MIPS payment year and each subsequent payment year, the performance period for:

(1) The Promoting Interoperability performance category is a minimum of a continuous 180-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year.

(2) [Reserved]

52. Section 414.1325 is amended by revising paragraphs (a)(1), (c) introductory text, and (d) to read as follows.

**§ 414.1325 Data submission requirements.**

(a) \* \* \*

(1) Except as provided in paragraph (a)(2) of this section, or under § 414.1370 or § 414.1365(c), as applicable, individual MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities must submit data on measures and activities for the quality, improvement activities, and Promoting Interoperability performance categories in accordance with this section. Except for the Medicare Part B claims submission type, the data may also be submitted on behalf of the individual MIPS eligible clinician, group, virtual group, subgroup, or APM Entity by a third party intermediary described at § 414.1400.

\* \* \* \* \*

(c) *Data submission types for groups, virtual groups, subgroups, and APM Entities.*

Groups, virtual groups, subgroups, and APM Entities may submit their MIPS data using:

\* \* \* \* \*

(d) *Use of multiple data submission types.* Beginning with the 2021 MIPS payment year as applicable to MIPS eligible clinicians, groups, and virtual groups, beginning with the 2023 MIPS payment year as applicable to APM Entities, and beginning with the 2025 MIPS payment year as applicable to subgroups, MIPS eligible clinicians, groups, virtual groups, APM Entities, and subgroups may submit their MIPS data using multiple data submission types for any performance category described in paragraph (a)(1) of this section, as applicable; provided, however, that the MIPS eligible clinician, group, virtual group, APM Entity, or subgroup uses the same identifier for all performance categories and all data submissions.

53. Section 414.1335 is amended by—

- a. Revising paragraphs (a) introductory text, (a)(1), (a)(3) paragraph heading, and (a)(3)(i); and
- b. Adding paragraph (a)(4).

The revisions and additions read as follows:

**§ 414.1335 Data submission criteria for the quality performance category.**

(a) *Criteria.* A MIPS eligible clinician, group, virtual group, subgroup, or APM Entity must submit data on MIPS quality measures in one of the following manners, as applicable:

(1) *For Medicare Part B claims measures, MIPS CQMs, eCQMs, or QCDR measures.* (i) Except as provided in paragraph (a)(1)(ii) of this section, submits data on at least six measures, including at least one outcome measure. If an applicable outcome measure is not available, reports one other high priority measure. If fewer than six measures apply to the MIPS eligible clinician, group, virtual group, or APM Entity, reports on each measure that is applicable.

(A) For eCQMs, the submission of data requires the utilization of CEHRT, as defined at § 414.1305.

(B) [Reserved]

(ii) A MIPS eligible clinician, group, virtual group, and APM Entity that report on a specialty or subspecialty measure set, as designated in the MIPS final list of quality measures

established by CMS through rulemaking, must submit data on at least six measures within that set, including at least one outcome measure. If an applicable outcome measure is not available, report one other high priority measure. If the set contains fewer than six measures or if fewer than six measures within the set apply to the MIPS eligible clinician, group, virtual group, or APM Entity, report on each measure that is applicable.

(A) For eCQMs, the submission of data requires the utilization of CEHRT, as defined at § 414.1305.

(B) [Reserved]

\* \* \* \* \*

(3) *For the CAHPS for MIPS survey measure.* (i) For the 12-month performance period, a group, virtual group, subgroup, or APM Entity that participates in the CAHPS for MIPS survey must use a survey vendor that is approved by CMS for the applicable performance period to transmit survey measures data to CMS.

\* \* \* \* \*

(4) *For Medicare CQMs.* (i) A MIPS eligible clinician, group, and APM Entity reporting on the Medicare CQMs (reporting quality data on beneficiaries eligible for Medicare CQMs as defined at § 425.20) within the APP measure set and administering the CAHPS for MIPS Survey as required under the APP.

(ii) [Reserved]

\* \* \* \* \*

54. Section 414.1340 is amended by—

- a. Revising paragraphs (a) introductory text, (a)(2), (3), and (4);
- b. Revising paragraph (b) introductory text;
- c. Adding paragraphs (b)(2)(i) and (ii) and (b)(3)(i) and (ii);
- d. Revising paragraphs (b)(4) and (d); and
- e. Adding paragraph (e).

The revisions and additions read as follows:

**§ 414.1340 Data completeness criteria for the quality performance category.**

(a) MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities submitting quality measures data on QCDR measures, MIPS CQMs, or eCQMs must submit data on:

\* \* \* \* \*

(2) At least 60 percent of the MIPS eligible clinician, group, and virtual group's patients that meet the measure's denominator criteria, regardless of payer for MIPS payment years 2020 and 2021.

(3) At least 70 percent of the MIPS eligible clinician, group, and virtual group's patients that meet the measure's denominator criteria, regardless of payer for MIPS payment years 2022, 2023, 2024, and 2025.

(i) Applicable to an APM Entity for MIPS payment years 2023, 2024, and 2025.

(ii) Applicable to a subgroup for MIPS payment year 2025.

(4) At least 75 percent of the MIPS eligible clinician, group, virtual group, subgroup, and APM Entity's patients that meet the measure's denominator criteria, regardless of payer for MIPS payment years 2026, 2027, and 2028.

(b) MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities submitting quality measure data on Medicare Part B claims measures must submit data on:

\* \* \* \* \*

(2) \* \* \*

(i) Applicable to virtual groups starting with MIPS payment year 2020.

(ii) [Reserved]

(3) \* \* \*

(i) Applicable to APM Entities starting with MIPS payment year 2023 and subgroups starting with MIPS payment year 2025.

(ii) [Reserved].

\* \* \* \* \*

(4) At least 75 percent of the applicable Medicare Part B patients seen during the performance period to which the measure applies for MIPS payment years 2026, 2027, and 2028.

\* \* \* \* \*

(d) APM Entities, specifically Medicare Shared Savings Program Accountable Care Organizations meeting reporting requirements under the APP, submitting quality measure data on Medicare CQMs must submit data on:

(1) At least 75 percent of the applicable beneficiaries eligible for the Medicare CQM, as defined at § 425.20, who meet the measure’s denominator criteria for MIPS payment years 2026, 2027, and 2028.

(2) [Reserved]

(e) If quality data are submitted selectively such that the submitted data are unrepresentative of a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity's performance, any such data would not be true, accurate, or complete for purposes of § 414.1390(b) or § 414.1400(a)(5).

55. Section 414.1350 is amended by revising paragraphs (c)(4) through (6) and adding paragraph (c)(7) to read as follows:

**§ 414.1350 Cost performance category.**

\* \* \* \* \*

(c) \* \* \*

(4) For the procedural episode-based measures specified beginning with and after the CY 2019 performance period/2021 MIPS payment year, the case minimum is 10, unless otherwise specified for individual measures. Beginning with the CY 2022 performance period/2024 MIPS payment year, the case minimum for Colon and Rectal Resection procedural episode-based measure is 20 episodes.

(5) For the acute inpatient medical condition episode-based measures specified beginning with and after CY 2019 performance period/2021 MIPS payment year, the case minimum is 20, unless otherwise specified for individual measures.

(6) For the chronic condition episode-based measures specified beginning with and after the CY 2022 performance period/2024 MIPS payment year, the case minimum is 20, unless otherwise specified for individual measures.

(7) For the care setting episode-based measures specified beginning with and after the CY 2024 performance period/2026 MIPS payment year, the case minimum is 20, unless otherwise specified for individual measures.

\* \* \* \* \*

56. Section 414.1360 is amended by revising paragraph (a) introductory text to read as follows:

**§ 414.1360 Data submission criteria for the improvement activities performance category.**

(a) For purposes of the transition year of MIPS and future years, MIPS eligible clinicians, subgroups, or groups must submit data on MIPS improvement activities in one of the following manners:

\* \* \* \* \*

57. Section 414.1365 is amended by--

- a. Revising paragraphs (e)(2)(ii) introductory text and (e)(3); and
- b. Adding paragraphs (e)(4)(i) and (ii).

The revisions and addition read as follow:

**§ 414.1365 MIPS Value Pathways.**

\* \* \* \* \*

(e) \* \* \*

(2) \* \* \*

(ii) *Subgroups*. For an MVP Participant that is a subgroup, any reweighting applied to its

affiliated group will also be applied to the subgroup. In addition, for the CY 2023 performance period/2025 MIPS payment year, if reweighting is not applied to the affiliated group, the subgroup may receive reweighting in the following circumstances independent of the affiliated group:

\* \* \* \* \*

(3) *Facility-based scoring.* If an MVP Participant, that is not an APM Entity or a subgroup, is eligible for facility-based scoring, a facility-based score also will be calculated in accordance with § 414.1380(e).

(4) \* \* \*

(i) For subgroups, the affiliated group’s complex patient bonus will be added to the final score.

(ii) [Reserved]

58. Section 414.1375 is amended by revising paragraph (b)(2)(ii)(C), and adding paragraph (b)(2)(ii)(D) to read as follows:

**§ 414.1375 Promoting Interoperability (PI) performance category.**

\* \* \* \* \*

(A) \* \* \*

(B) \* \* \*

(C) Beginning with the 2024 MIPS payment year through the 2025 MIPS payment year, submit an attestation, with either an affirmative or negative response, with respect to whether the MIPS eligible clinician completed the annual self-assessment under the SAFER Guides measure during the year in which the performance period occurs.

(D) Beginning with the 2026 MIPS payment year, submit an affirmative attestation regarding the MIPS eligible clinician’s completion of the annual self-assessment under the SAFER Guides measure during the year in which the performance period occurs.

\* \* \* \* \*

59. Section 414.1380 is amended by—

a. Revising paragraphs (a)(1)(i) and (ii), (b)(1)(v)(A), (b)(2)(iv)(A), (B), (C) and (E), (b)(3)(i), and (c)(2)(i)(A)(4)(iii);

b. Adding paragraphs (c)(2)(iv);

c. In paragraph (c)(3)(v) removing the term “MIPS eligible clinicians, groups, subgroups, APM Entities and virtual groups” and adding in its place the term “MIPS eligible clinicians, groups, APM Entities and virtual groups;” and

d. In paragraph (c)(3)(vi) removing the term “MIPS eligible clinicians, groups, and subgroups” and adding in its place the term “MIPS eligible clinicians and groups”.

The revisions and additions read as follow:

**§ 414.1380 Scoring.**

(a) \* \* \*

(1) \* \* \*

(i) For the quality performance category, measures are scored between zero and 10 measure achievement points. Performance is measured against benchmarks. Prior to the CY 2023 performance period/2025 MIPS payment year, measure bonus points are available for submitting high-priority measures and submitting measures using end-to-end electronic reporting. Measure bonus points are available for small practices that submit data on at least 1 quality measure. Beginning with the 2020 MIPS payment year, improvement scoring is available in the quality performance category.

(ii) For the cost performance category, measures are scored between 1 and 10 points. Performance is measured against a benchmark. Beginning with the 2025 MIPS payment year, improvement scoring is available in the cost performance category.

\* \* \* \* \*

(b) \* \* \*

(1) \* \* \*

(v) \* \* \*

(A) *High priority measures.* Subject to paragraph (b)(1)(v)(A)(I) of this section, for the CY 2017 through 2021 MIPS performance periods/2019 through 2023 MIPS payment years, MIPS eligible clinicians receive 2 measure bonus points for each outcome and patient experience measure and 1 measure bonus point for each other high priority measure. Beginning in the 2021 MIPS payment year, MIPS eligible clinicians do not receive such measure bonus points for CMS Web Interface measures. Beginning in the 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians will no longer receive these measure bonus points.

\* \* \* \* \*

(2) \* \* \*

(iv) \* \* \*

(A) The cost improvement score is determined at the category level for the cost performance category.

(B) The cost improvement score is calculated only when data sufficient to measure improvement are available. Sufficient data are available when a MIPS eligible clinician or group participates in MIPS using the same identifier in 2 consecutive performance periods and is scored on the cost performance category for 2 consecutive performance periods. If the cost improvement score cannot be calculated because sufficient data are not available, then the cost improvement score is zero.

(C) The cost improvement score is determined at the category-level by subtracting the cost performance category score from the previous performance period from the cost performance category score from the current performance period, then by dividing the difference by the cost performance category score from the previous performance period, and multiplying the result with the maximum available cost improvement score..

\* \* \* \* \*

(E) The maximum cost improvement score for the 2020, 2021, 2022, 2023, and 2024 MIPS payment year is zero percentage points. The maximum cost improvement score beginning with the 2025 MIPS payment year is 1 percentage point.

\* \* \* \* \*

(3) \* \* \*

(i) For MIPS eligible clinicians participating in APMs, the improvement activities performance category score is at least 50 percent. MIPS eligible clinicians participating in APMs must attest to having completed an improvement activity or submit data for the quality and Promoting Interoperability performance categories in order to receive such credit.

\* \* \* \* \*

(c) \* \* \*

(2) \* \* \*

(i) \* \* \*

(A) \* \* \*

(4) \* \* \*

(iii) For the 2024 through 2026 MIPS payment years, the MIPS eligible clinician is a clinical social worker. In the event that a MIPS eligible clinician submits data for the Promoting Interoperability performance category, the scoring weight specified in paragraph (c)(1) of this section will be applied and its weight will not be distributed.

\* \* \* \* \*

(iv) If CMS has granted an application for a hardship exception or any other type of exception to a MIPS eligible clinician under paragraph (c)(2)(i)(A)(6) or (c)(2)(i)(C)(2) of this section, or has identified a MIPS eligible clinician in a CMS-designated region as being affected by an automatic extreme and uncontrollable circumstances event under paragraph (c)(2)(i)(A)(8) or (c)(2)(i)(C)(3) of this section, CMS will not apply the improvement activities score described in paragraph (b)(3)(i) of this section to the MIPS eligible clinician's score.

\* \* \* \* \*

60. Section 414.1385 is amended—

a. In paragraph (a) by removing the term “MIPS eligible clinician or group” and adding in its place the term “MIPS eligible clinician, virtual group, subgroup, or group;”

b. In paragraph (a)(1) by removing the term “MIPS eligible clinician or group” and adding in its place the term “MIPS eligible clinician, virtual group, subgroup, or group;”

c. By revising paragraph (a)(2);

d. In paragraph (a)(3) by removing the term “MIPS eligible clinician or group” and adding in its place the term “MIPS eligible clinician, virtual group, subgroup, or group;”

e. By revising paragraph (a)(5); and

f. In paragraph (a)(6) by removing the term “MIPS eligible clinician or group” and adding in its place the term “MIPS eligible clinician, virtual group, subgroup, or group”.

The revisions read as follows:

**§ 414.1385 Targeted review and review limitations.**

(a) \* \* \*

(2) All requests for targeted review must be submitted during the targeted review request submission period, which begins on the day CMS makes available the MIPS final score, and ends 30 days after publication of the MIPS payment adjustment factors for the MIPS payment year. The targeted review request submission period may be extended as specified by CMS.

\* \* \* \* \*

(5) A request for a targeted review may include additional information in support of the request at the time it is submitted. If CMS requests additional information from the MIPS eligible clinician, virtual group, subgroup, or group that is the subject of a request for a targeted review, the information must be provided and received by CMS within 15 days of CMS’ request. Non-responsiveness to CMS’ request for additional information may result in a final decision

based on the information available, although another non-duplicative request for targeted review may be submitted before the end of the targeted review request submission period.

\* \* \* \* \*

61. Section 414.1400 is amended by—

- a. Revising paragraphs (a)(1)(iii), (a)(2)(i), (a)(2)(ii)(A), (a)(3), and (b)(1)(ii);
- b. Adding paragraphs (b)(1)(iii);
- c. Revising paragraphs (b)(2), (b)(3)(v)(E)(I) and (2);
- d. Adding paragraphs (b)(3)(ix) through (xvii);
- e. Revising paragraph (b)(4)(i)(B);
- f. Adding paragraphs (b)(4)(i)(C) and (b)(4)(iv)(O) and (P);
- g. Revising paragraph (e)(1) introductory text;
- h. Adding paragraph (e)(1)(i)(F);
- i. Revising paragraph (e)(1)(ii);
- j. Adding paragraphs (e)(2)(iv) and (v);
- k. Revising paragraphs (e)(3) and (4) and (f).

The additions and revisions read as follows:

**§ 414.1400 Third party intermediaries.**

(a)\* \* \*

(1)\* \* \*

(iii) Before the CY 2025 performance period/2027 payment year, Health IT vendor;

\* \* \* \* \*

(2) \* \* \*

(i) To be approved as a third party intermediary, an organization must meet the following requirements:

(A) The organization’s principal place of business and the location in which it stores data must be in the U.S.

(B) The organization must have the ability to indicate the source of any data it will submit to CMS if the data will be derived from CEHRT, a QCDR, qualified registry, or health IT vendor.

(C) The organization must certify that it intends to provide services throughout the entire performance period and applicable data submission period.

(ii) \* \* \*

(A) Whether the organization failed to comply with the requirements of this section for any prior MIPS payment year for which it was approved as third party intermediary, including past compliance; and

\* \* \* \* \*

(3) For third-party intermediary program requirements:

(i) All data submitted to CMS by a third party intermediary on behalf of a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity must be certified by the third party intermediary as true, accurate, and complete to the best of its knowledge. Such certification must be made in a form and manner and at such time as specified by CMS.

(ii) All data submitted to CMS by a third party intermediary must be submitted in the form and manner specified by CMS.

(A) The submission of data on measures by a third party intermediary to CMS must include data on all of the MIPS eligible clinician's patients, regardless of payer, unless otherwise specified by the collection type.

(B) [Reserved]

(iii) If the clinician chooses to opt-in to participate in MIPS in accordance with § 414.130, the third party intermediary must be able to transmit that decision to CMS.

(iv) Prior to discontinuing services to any MIPS eligible clinician, group, virtual group, subgroup, or APM Entity during a performance period, a third party intermediary must support the transition of such MIPS eligible clinician, group, virtual group, subgroup, or APM Entity to

an alternate third party intermediary, submitter type, or, for any measure on which data has been collected, collection type according to a CMS approved transition plan by a date specified by CMS. The transition plan must address the following issues, unless different or additional information is specified by CMS:

(A) The issues that contributed to the withdrawal mid-performance period or discontinuation of services mid-performance period.

(B) Impacted entities:

(1) The number of clinicians, groups, virtual groups, subgroups or APM entities (inclusive of MIPS eligible, opt-in and voluntary participants) that would need to find another way to report.

(2) As applicable, identify any QCDRs that were granted licenses to QCDR measures which would no longer be available for reporting due to the transition.

(C) The steps the third party intermediary will take to ensure that the clinicians, groups, virtual groups, subgroups, or APM Entities identified in paragraph (a)(3)(iv)(B)(1) of this section are notified of the transition in a timely manner, and successfully transitioned to an alternate third party intermediary, submitter type, or, for any measure or activity on which data has been collected, collection type, as applicable.

(D) A detailed timeline that outlines timing for communications, the start of the transition, and completion of the transition of these clinicians, groups, virtual groups, subgroups, or APM Entities.

(E) The third party intermediary must communicate to CMS that the transition was completed by the date included in the detailed timeline.

(v) As a condition of its qualification and approval to participate in MIPS as a third party intermediary, a third party intermediary must:

(A) Make available to CMS the contact information of each MIPS eligible clinician, group, virtual group, subgroup, or APM Entity on behalf of whom it submits data. The contact

information must include, at a minimum, the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity phone number, address, and, if available, email.

(B) Retain all data submitted to CMS for purposes of MIPS for 6 years from the end of the MIPS performance period.

(C) Upon request, provide CMS with any records or data retained in connection with its operation as a third party intermediary for up to 6 years from the end of the MIPS performance period.

(vi) Beginning with the 2023 MIPS payment year, third party intermediaries must attend and complete training and support sessions in the form and manner, and at the times, specified by CMS.

(b) \* \* \*

(1)\* \* \*

(ii) Beginning with the CY 2023 performance period/2025 MIPS payment year, QCDRs and qualified registries must support MVPs that are applicable to the MVP participant on whose behalf they submit MIPS data. QCDRs and qualified registries may also support the APP. A QCDR or qualified registry must support all measures and activities included in the MVP with the following exceptions:

(A) If an MVP is intended for reporting by multiple specialties, a QCDR or a qualified registry are required to report those measures pertinent to the specialty of its MIPS eligible clinicians.

(B) If an MVP includes a QCDR measure, it is not required to be reported by a QCDR other than the measure owner.

(iii) Beginning with the CY 2023 performance period/2025 MIPS payment year, A QCDR or qualified registry must support subgroup reporting.

(2) *Self-nomination*. For the CY 2019 performance period/2021 MIPS payment year and future years, an existing QCDR or qualified registry that is in good standing may use the

Simplified Self-Nomination process form during the self-nomination period, from July 1 and September 1 of the CY preceding the applicable performance period.

(3) \* \* \*

(v) \* \* \*

(E) \* \* \*

(I) Uses a sample size of at least 3 percent of a combination of the individual MIPS eligible clinicians, groups, virtual groups, subgroups and APM entities for which the QCDR or qualified registry will submit data to CMS, except that the sample size may be no fewer than a combination of 10 individual clinicians, groups, virtual groups, subgroups and APM entities, no more than a combination of 50 individual clinicians, groups, virtual groups, subgroups and APM entities.

(2) Uses a sample that includes at least 25 percent of the patients of each individual clinician, group, virtual group, subgroup or APM entity in the sample, except that the sample for each individual clinician, group, virtual group, subgroup or APM entity must include a minimum of 5 patients and need not include more than 50 patients.

\* \* \* \* \*

(ix) During the self-nomination period, a QCDR or a qualified registry must submit to CMS quality measure numbers, Promoting Interoperability identifiers, improvement activity identifiers and MVP titles.

(x) A QCDR or a qualified registry must be able to submit to CMS data for at least six quality measures including at least one outcome measure.

(A) If no outcome measure is available, a QCDR or qualified registry must be able to submit to CMS results for at least one other high priority measure.

(B) [Reserved]

(xi) A QCDR or a qualified registry must submit to CMS risk-adjusted measure results when submitting data for measures that include risk adjustment in the measure specification.

(xii) A QCDR or qualified registry must enter into appropriate Business Associate Agreements with MIPS eligible clinicians to collect and process their data.

(xiii) A QCDR or a qualified registry must maintain records of their authorization to submit data to CMS for the purpose of MIPS participation for each NPI whom the QCDR or qualified registry will submit data to CMS for. The records must:

(A) Be annually obtained by the QCDR or qualified registry at the time the clinician or group enters into an agreement with the QCDR or qualified registry for the submission of MIPS data to the QCDR or qualified registry.

(B) Be signed by an eligible clinician, if reporting individually, or by an authorized representative of the reporting group, subgroup, Virtual Group, or APM Entity.

(C) Records of the authorization must be maintained for 6 years after the performance period ends.

(xiv) A QCDR or a qualified registry must attest that the information listed on the qualified posting is accurate.

(xv) A QCDR or a qualified registry must provide to CMS, upon request, the data submitted by the QCDR or qualified registry *for purposes of MIPS*.

(xvi) A QCDR or qualified registry must attest to the following:

(A) A QCDR or a qualified registry must attest that it has required each MIPS eligible clinician on whose behalf it reports to provide the QCDR or qualified registry with all documentation necessary to verify the accuracy of the data on quality measures that the eligible clinician submitted to the QCDR or qualified registry.

(B) A QCDR or qualified registry must also attest that it has required each MIPS eligible clinician to permit the QCDR or qualified registry to provide the information described in paragraph (b)(3)(xviii)(A) of this section to CMS upon request.

(xvii) A QCDR or a qualified registry must accept and maintain clinician data by January 1 of the applicable performance period.

(4)\* \* \*

(i)\* \* \*

(B) For a QCDR measure, the entity must submit for CMS approval measure specifications including: Name/title of measure, descriptions of the denominator, numerator, and when applicable, denominator exceptions, denominator exclusions, risk adjustment variables, and risk adjustment algorithms. In addition, no later than 15 calendar days following CMS posting of all approved specifications for a QCDR measure, the entity must publicly post the CMS-approved measure specifications for the QCDR measure (including the CMS-assigned QCDR measure ID) and provide CMS with a link to where this information is posted. The approved QCDR measure specifications must remain published through the performance period and data submission period.

(C) For a QCDR measure, the QCDR must provide, if available, data from years prior before the start of the performance period.

\* \* \* \* \*

(iv) \* \* \*

(O) QCDR measures submitted after self-nomination.

(P) More than 30 QCDR measures are submitted by a single QCDR.

\* \* \* \* \*

(e)\* \* \*

(1) If CMS determines that a third party intermediary has ceased to meet one or more of the applicable criteria for approval, failed to comply with the program requirements of this section, has submitted a false certification under paragraph (a)(3) of this section, or has submitted data that are inaccurate, unusable, or otherwise compromised, CMS may take one or more of the following remedial actions after providing written notice to the third party intermediary:

(i)\* \* \*

(F) Once the issue has been resolved, the detailed final resolution and an update , if any, to the monitoring plan provided pursuant to § 414.1400(e)(1)(i)(C).

(ii) Publicly disclose as follows:

(A) For the purposes of the CY 2025 performance period/2027 MIPS payment year and prior reporting periods and payment years, publicly disclose the entity's data error rate on the CMS website until the data error rate falls below 3 percent.

(B) Beginning with the CY 2025 performance period/2027 MIPS payment year, publicly disclose on the CMS website that CMS took remedial action against or terminated the third party intermediary.

(2)\* \* \*

(iv) The third party intermediary has not maintained current contact information for correspondence.

(v) The third party intermediary is on remedial action for 2 consecutive years.

(3) A data submission that contains data inaccuracies affecting the third party intermediary's clinicians may lead to remedial action/termination of the third party intermediary for future program year(s) based on CMS discretion.

(4) For purposes of this paragraph (e), CMS may determine that submitted data are inaccurate, unusable, or otherwise compromised, if the submitted data includes, without limitation, TIN/NPI mismatches, formatting issues, calculation errors, or data audit discrepancies.

\* \* \* \* \*

(f) *Auditing of entities submitting MIPS data.* Third party intermediaries may be randomly selected for compliance evaluation or may be selected at the suggestion of CMS if there is an area of concern regarding the third party intermediary. For example, areas of concern could include, but are not limited to: high data errors, support call absences, delinquent deliverables, remedial action status, clinician concerns regarding the third party intermediary, a

continuing pattern of Quality Payment Program Service Center inquiries or support call questions, and/or CMS concerns regarding the third party intermediary.

62. Section 414.1405 is amended by adding paragraph (b)(9)(iii) to read as follows:

**§ 414.1405 Payment.**

\* \* \* \* \*

(b) \* \* \*

(9) \* \* \*

(iii) The performance threshold for the 2025 MIPS payment year is 75 points. The prior period to determine the performance threshold is the 2019 MIPS payment year.

\* \* \* \* \*

63. Section 414.1415 is amended by revising paragraph (a) to read as follows:

**§ 414.1415 Advanced APM criteria.**

(a) *Use of certified electronic health record technology (CEHRT)*—(1) *Required use of CEHRT.* To be an Advanced APM, an APM must:

(i) For QP Performance Periods ending with 2018, require at least 50 percent, or for QP Performance Periods beginning with 2019 and ending with 2024, 75 percent, of eligible clinicians in each participating APM Entity group, or for APMs in which hospitals are the APM Entities, each hospital, to use CEHRT to document and communicate clinical care to their patients or health care providers;

(ii) For QP Performance Periods prior to 2019, for the Shared Savings Program, apply a penalty or reward to an APM Entity based on the degree of the use of CEHRT of the eligible clinicians in the APM Entity; and

(iii) For QP Performance Periods beginning with 2025, require use of CEHRT as defined at paragraph (3) under CEHRT at § 414.1305.

(2) [Reserved].

\* \* \* \* \*

64. Section 414.1420 is amended by revising paragraph (b) to read as follows:

**§ 414.1420 Other payer advanced APM criteria.**

\* \* \* \* \*

(b) *Use of CEHRT*. To be an Other Payer Advanced APM:

(1) CEHRT must be used, for QP Performance Periods ending with 2019, by at least 50 percent; and for QP Performance Periods for 2020 through 2024, by at least 75 percent, of participants in each participating APM Entity group, or each hospital if hospitals are the APM Entities, in the other payer arrangement to document and communicate clinical care; and

(2) For QP Performance Periods beginning on or after January 1, 2024, use of CEHRT (as defined in § 414.1305, paragraph (3) in the definition of “Certified Electronic Health Record Technology (CEHRT)”), must be a requirement of participation in the APM.

\* \* \* \* \*

65. Section 414.1430 is amended by—

- a. Revising paragraph (a)(1)(iv);
- b. Adding paragraph (a)(1)(v);
- c. Revising paragraph (a)(2)(iv);
- d. Adding paragraph (a)(2)(v);
- e. Revising paragraph (a)(3)(iv);
- f. Adding paragraph (a)(3)(v);
- g. Revising paragraph (a)(4)(iv);
- h. Adding paragraph (a)(4)(v); and
- i. Revising paragraph (b)(1)(i)(A) and (B), (b)(2)(i)(A) and (B), (b)(3)(i)(A) and (B), (b)(4)(i)(A) and (B).

The revisions and additions read as follows:

**§ 414.1430 Qualifying APM participant determination: QP and partial QP thresholds.**

(a) \* \* \*

(1) \* \* \*

(iv) 2025: 50 percent.

(v) 2026 and later: 75 percent.

(2) \* \* \*

(iv) 2025: 40 percent.

(v) 2026 and later: 50 percent.

(3) \* \* \*

(iv) 2025: 35 percent.

(v) 2026 and later: 50 percent.

(4) \* \* \*

(iv) 2025: 25 percent.

(v) 2026 and later: 35 percent.

(b) \* \* \*

(1) \* \* \*

(i) \* \* \*

(A) 2021 through 2025: 50 percent.

(B) 2026 and later: 75 percent.

\* \* \* \* \*

(2) \* \* \*

(i) \* \* \*

(A) 2021 through 2025: 40 percent.

(B) 2026 and later: 50 percent.

\* \* \* \* \*

(3) \* \* \*

(i) \* \* \*

(A) 2021 through 2025: 35 percent.

(B) 2026 and later: 50 percent.

\* \* \* \* \*

(4) \* \* \*

(i) \* \* \*

(A) 2021 through 2025: 25 percent.

(B) 2026 and later: 35 percent.

\* \* \* \* \*

66. Section 414.1450 is amended by—

a. Adding paragraphs (a)(1)(i) and (ii); and

b. Revising paragraph (b)(1).

The addition and revision read as follows:

**§ 414.1450 APM incentive payment.**

(a) \* \* \*

(i) For payment years 2019 through 2025, CMS makes a lump sum payment to QPs in the amount described in paragraph (b) of this section in the manner described in paragraphs (d) and (e) of this section.

(ii) [Reserved]

\* \* \* \* \*

(b) \* \* \*

(1) For payment years 2019 through 2024, the amount of the APM Incentive Payment is equal to 5 percent or, with respect to payment year 2025, 3.5 percent of the estimated aggregate payments for covered professional services as defined in section 1848(k)(3)(A) of the Act furnished during the calendar year immediately preceding the payment year. CMS uses the paid amounts on claims for covered professional services to calculate the estimated aggregate payments on which CMS will calculate the APM Incentive Payment.

\* \* \* \* \*

**PART 415--SERVICES FURNISHED BY PHYSICIANS IN PROVIDERS,  
SUPERVISING PHYSICIANS IN TEACHING SETTINGS, AND RESIDENTS IN  
CERTAIN SETTINGS**

67. The authority for part 415 continues to read as follows:

**Authority:** 42 U.S.C. 1302 and 1395hh.

68. Amend § 415.140 in paragraph (a) by revising the definition of “Substantive portion” to read as follows:

**§ 415.140 Conditions of payment: Split (or shared) visits.**

(a) \* \* \*

*Substantive portion* means more than half of the total time spent by the physician and nonphysician practitioner performing the split (or shared) visit, or a substantive part of the medical decision making except as otherwise provided in this paragraph. For critical care visits, substantive portion means more than half of the total time spent by the physician and nonphysician practitioner performing the split (or shared) visit.

\* \* \* \* \*

**PART 418—HOSPICE CARE**

69. The authority citation for part 418 continues to read as follow:

**Authority:** 42 U.S.C. 1302 and 1395hh.

70. Section 418.56 is amended by revising paragraph (a)(1)(iii) to read as follows:

**§ 418.56 Condition of participation: Interdisciplinary group, care planning, and coordination of services.**

\* \* \* \* \*

(a) \* \* \*

(1) \* \* \*

(iii) A social worker, marriage and family therapist, or a mental health counselor.

\* \* \* \* \*

71. Section 418.114 is amended by adding paragraphs (b)(9) and (10) to read as follows:

**§ 418.114 Condition of participation: Personnel qualifications.**

\* \* \* \* \*

(b) \* \* \*

(9) Marriage and family counselor as defined at § 410.53.

(10) Mental health counselor as defined at § 410.54.

\* \* \* \* \*

**PART 422-MEDICARE ADVANTAGE PROGRAM**

72. The authority citation for part 422 is revised to read as follows:

**Authority:** 42 U.S.C. 1302, 1306, 1395w-22 through 1395w-28, and 1395hh.

73. Section 422.310 is amended by adding paragraph (f)(3)(iv) to read as follows:

**§422.310 Risk adjustment data.**

\* \* \* \* \*

(f) \* \* \*

(3) \* \* \*

(iv) CMS determines that releasing aggregated data before reconciliation is necessary and appropriate to support activities or authorized uses under paragraph (f)(1)(vii) of this section.

\* \* \* \* \*

**PART 423—VOLUNTARY MEDICARE PRESCRIPTION DRUG BENEFIT**

74. The authority citation for part 423 continues to read as follows:

**Authority:** 42 U.S.C. 1302, 1306, 1395w-101 through 1395w-152, and 1395hh.

75. Section 423.160 is amended by--

- a. Revising paragraph (a)(5) introductory text;
- b. Removing paragraph (a)(5)(i);
- c. Redesignating paragraphs (a)(5)(ii) through (iv) as paragraphs (a)(5)(i) through (iii), respectively and revising newly redesignated paragraph (a)(5)(ii).

The revisions read as follows:

**§ 423.160 Standards for electronic prescribing.**

(a) \* \* \*

(5) Beginning on January 1, 2021, prescribers must, except in the circumstances described in paragraphs (a)(5)(i) through (iii) of this section, conduct prescribing for at least 70 percent of their Schedule II, III, IV, and V controlled substances that are Part D drugs electronically using the applicable standards in paragraph (b) of this section, subject to the exemption in paragraph (a)(3)(iii) of this section. Prescriptions written for a beneficiary in a long-term care facility will not be included in determining compliance until January 1, 2025. Compliance actions against prescribers who do not meet the compliance threshold based on prescriptions written for a beneficiary in a long-term care facility will commence on or after January 1, 2025. Compliance actions against prescribers who do not meet the compliance threshold based on other prescriptions will commence on or after January 1, 2023. Prescribers will be exempt from this requirement in the following situations:

\* \* \* \* \*

(ii) Prescriber has an address in PECOS in the geographic area of an emergency or disaster declared by a Federal, State, or local government entity. If a prescriber does not have an address in PECOS, prescriber has an address in NPPES in the geographic area of an emergency or disaster declared by a Federal, State, or local government entity. Starting in the 2024 measurement year, CMS will identify which emergencies or disasters qualify for this exception.

\* \* \* \* \*

**PART 424-CONDITIONS FOR MEDICARE PAYMENT**

76. The authority for part 424 continues to read as follows:

**Authority:** 42 U.S.C. 1302 and 1395hh.

77. Section 424.205 is amended by—

- a. In paragraph (a), by removing the definition of “MDPP interim preliminary recognition”;
- b. Revising paragraph (b)(1);
- c. Removing paragraph (c);
- d. Redesignating paragraphs (d) through (i) as paragraphs (c) through (h), respectively;

and

- e. Revising newly designated paragraph (c)(1);
- f. Removing newly redesignated paragraph (c)(10)(iii);
- g. Revising newly redesignated paragraph (c)(14);
- h. Revising newly redesignated paragraphs (f)(2)(i);
- i. Removing newly redesignated paragraph (f)(5)(iii);
- j. Redesignating newly redesignated paragraphs (f)(5)(iv) and (v) as paragraphs (f)(5)(iii)

and (iv), respectively;

- k. Revising newly redesignated paragraph (f)(5)(iii) and paragraph (g)(1)(i)(C).

The revisions read as follows:

**§ 424.205 Requirements for Medicare Diabetes Prevention Program suppliers.**

\* \* \* \* \*

(b) \* \* \*

(1) Has either preliminary, full, full plus CDC DPRP recognition.

\* \* \* \* \*

(c) \* \* \*

(1) The MDPP supplier must have and maintain preliminary, full, or full plus CDC DPRP recognition.

\* \* \* \* \*

(14) The MDPP supplier must submit performance data for MDPP beneficiaries who ever attended ongoing maintenance sessions with data elements consistent with the CDC's DPRP standards for data elements required for the core services period.

\* \* \* \* \*

(f) \* \* \*

(2) \* \* \*

(i) Documentation of the type of session, whether a core session, a core maintenance session, an in-person make-up session, or a virtual make-up session.

\* \* \* \* \*

(5) \* \* \*

(iii) Has achieved at least a 9-percent weight loss percentage as measured in accordance with § 410.79(e)(3)(iii) of this chapter during a core session or core maintenance session furnished by that supplier, if the claim submitted is for a performance payment under § 414.84(b)(7) of this chapter.

\* \* \* \* \*

(g) \* \* \*

(1) \* \* \*

(i) \* \* \*

(C) An MDPP supplier that does not satisfy the requirements in paragraph (b)(1) of this section may become eligible to bill for MDPP services again if it successfully achieves preliminary, full, or full plus CDC DPRP recognition, and successfully enrolls again in Medicare as an MDPP supplier after any applicable reenrollment bar has expired.

\* \* \* \* \*

78. Section 424.210 is amended by revising paragraphs (b)(2) and (d)(1) to read as follows:

**§ 424.210 Beneficiary engagement incentives under the Medicare Diabetes Prevention**

**Program expanded model.**

\* \* \* \* \*

(b) \* \* \*

(2) The item or service must be reasonably connected to the CDC-approved National Diabetes Prevention Program curriculum furnished to the MDPP beneficiary during a core session or core maintenance session furnished by the MDPP supplier.

\* \* \* \* \*

(d) \* \* \*

(1) Attendance at core sessions or core maintenance sessions.

\* \* \* \* \*

79. Section 424.502 is amended by—

- a. Revising the definition of “Authorized official”; and
- b. Adding the definitions of "Indirect ownership interest,” and “Supplier” in alphabetical order.

The revision and additions read as follows:

**§ 424.502 Definitions.**

\* \* \* \* \*

*Authorized official* means an appointed official (for example, chief executive officer, chief financial officer, general partner, chairman of the board, or direct owner) to whom the organization has granted the legal authority to enroll it in the Medicare program, to make changes or updates to the organization's status in the Medicare program, and to commit the organization to fully abide by the statutes, regulations, and program instructions of the Medicare program. For purposes of this definition only, the term “organization” means the enrolling entity as identified by its legal business name and tax identification number.

\* \* \* \* \*

*Indirect ownership interest* means as follows:

(1)(i) Any ownership interest in an entity that has an ownership interest in the enrolling or enrolled provider or supplier.

(ii) Any ownership interest in an indirect owner of the enrolling or enrolled provider or supplier.

(2) The amount of indirect ownership interest is determined by multiplying the percentages of ownership in each entity. For example, if A owns 10 percent of the stock in a corporation that owns 80 percent of the provider or supplier, A's interest equates to an 8 percent indirect ownership interest in the provider or supplier and must be reported on the enrollment application. Conversely, if B owns 80 percent of the stock of a corporation that owns 5 percent of the stock of the provider or supplier, B's interest equates to a 4 percent indirect ownership interest in the provider or supplier and need not be reported.

\* \* \* \* \*

*Supplier* means, for purposes of this subpart, all of the following:

(1) The individuals and entities that qualify as suppliers under § 400.202.

(2) Physical therapists in private practice.

(3) Occupational therapists in private practice.

(4) Speech-language pathologists.

\* \* \* \* \*

80. Section 424.516 is amended by revising paragraphs (d)(1)(iii) and (e)(1) to read as follows:

**§ 424.516 Additional provider and supplier requirements for enrolling and maintaining active enrollment status in the Medicare program.**

\* \* \* \* \*

(d) \* \* \*

(1) \* \* \*

(iii) A change, addition, or deletion of a practice location.

\* \* \* \* \*

(e) \* \* \*

(1) Within 30 days for a change of ownership or control (including changes in authorized official(s) or delegated official(s)) or a change, addition, or deletion of a practice location;

\* \* \* \* \*

81. Section 424.530 is amended by revising paragraph (a)(1) and adding paragraphs (a)(16), (17) and (18) to read as follows:

**§ 424.530 Denial of enrollment in the Medicare program.**

(a) \* \* \*

(1) *Noncompliance.* The provider or supplier is determined to not be in compliance with the enrollment requirements described in this title 42, or in the enrollment application applicable for its provider or supplier type, and has not submitted a plan of corrective action as outlined in part 488 of this chapter.

\* \* \* \* \*

(16) [Reserved]

(17) *False Claims Act (FCA).* (i) The provider or supplier, or any owner, managing employee or organization, officer, or director of the provider or supplier, has had a civil judgment under the FCA (31 U.S.C. 3729 through 3733) imposed against them within the previous 10 years.

(ii) In determining whether a denial under this paragraph is appropriate, CMS considers the following factors:

(A) The number of provider or supplier actions that the judgment incorporates (for example, the number of false claims submitted).

(B) The types of provider or supplier actions involved.

(C) The monetary amount of the judgment.

(D) When the judgment occurred.

(E) Whether the provider or supplier has any history of final adverse actions (as that term is defined in § 424.502 of this chapter).

(F) Any other information that CMS deems relevant to its determination.

(18) *Supplier standard or condition violation.* (i) The independent diagnostic testing facility is non-compliant with any provision in § 410.33(g).

(ii) The DMEPOS supplier is non-compliant with any provision in § 424.57(c).

(iii) The opioid treatment program is non-compliant with any provision in § 424.67(b).

(iv) The home infusion therapy supplier is non-compliant with any provision in § 424.68(c).

(v) The Medicare diabetes prevention program is non-compliant with any provision in § 424.205(b) or (d).

\* \* \* \* \*

82. Section 424.535 is amended by—

a. Revising paragraphs (a)(1) introductory text;

b. Adding paragraph (a)(15);

c. Revising paragraph (a)(17) introductory text;

d. Redesignating paragraphs (a)(17)(i) through (vi) as paragraphs (a)(17)(i)(A) through (F);

e. Adding paragraph (a)(17)(ii);

f. Adding paragraph (a)(23); and

g. Revising paragraphs (e) and (g).

The additions and revisions read as follows:

**§ 424.535 Revocation of enrollment in the Medicare program.**

(a) \* \* \*

(1) *Noncompliance.* The provider or supplier is determined to not be in compliance with the enrollment requirements described in this title 42, or in the enrollment application applicable for its provider or supplier type, and has not submitted a plan of corrective action as outlined in part 488 of this chapter. The provider or supplier may also be determined not to be in compliance if it has failed to pay any user fees as assessed under part 488 of this chapter.

\* \* \* \* \*

(15) *False Claims Act (FCA).* (i) The provider or supplier, or any owner, managing employee or organization, officer, or director of the provider or supplier, has had a civil judgment under the FCA (31 U.S.C. 3729 through 3733) imposed against them within the previous 10 years.

(ii) In determining whether a revocation under this paragraph is appropriate, CMS considers the following factors:

(A) The number of provider or supplier actions that the judgment incorporates (for example, the number of false claims submitted).

(B) The types of provider or supplier actions involved.

(C) The monetary amount of the judgment.

(D) When the judgment occurred.

(E) Whether the provider or supplier has any history of final adverse actions (as that term is defined in § 424.502).

(F) Any other information that CMS deems relevant to its determination.

\* \* \* \* \*

(17) *Debt referred to the United States Department of Treasury.* (i) The provider or supplier failed to repay a debt that CMS appropriately referred to the United States Department of Treasury. In determining whether a revocation under this paragraph (a)(17) is appropriate, CMS considers the following factors:

\* \* \* \* \*

(ii) Paragraph (17)(i) of this paragraph does not apply to the following situations:

(A) The provider's or supplier's Medicare debt has been discharged by a bankruptcy court; or

(B) The administrative appeals process concerning the debt has not been exhausted or the timeframe for filing such an appeal (at the appropriate level of appeal) has not expired.

\* \* \* \* \*

(23) *Supplier standard or condition violation.* (i) The independent diagnostic testing facility is non-compliant with any provision in 42 CFR 410.33(g).

(ii) The DMEPOS supplier is non-compliant with any provision in § 424.57(c).

(iii) The opioid treatment program is non-compliant with any provision in § 424.67(b) or (e).

(iv) The home infusion therapy supplier is non-compliant with any provision in § 424.68(c) or (e).

(v) The Medicare diabetes prevention program is non-compliant with any provision in § 424.205(b) or (d).

\* \* \* \* \*

(e) *Reversal of revocation.* If the revocation was due to adverse activity (sanction, exclusion, or felony) against the provider's or supplier's owner, managing employee, managing organization, officer, director, authorized or delegated official, medical director, supervising physician, or other health care or administrative or management services personnel furnishing services payable by a Federal health care program, the revocation may be reversed if the provider or supplier terminates and submits proof that it has terminated its business relationship with that party within 15 days of the revocation notification.

\* \* \* \* \*

(g) *Effective date of revocation.* (1) Except as described in paragraphs (g)(2) and (g)(3) of this section, a revocation becomes effective 30 days after CMS or the CMS contractor mails notice of its determination to the provider or supplier.

(2) Except as described in paragraph (g)(3) of this section, the revocation effective dates in the situations identified in this paragraph (g)(2) are as follows:

(i) For revocations based on a Federal exclusion or debarment, the date of the exclusion or debarment.

(ii) For revocations based on a felony conviction, the date of the felony conviction.

(iii) For revocations based on a State license suspension or revocation, the date of the license suspension or revocation.

(iv) For revocations based on a CMS determination that the provider's or supplier's practice location is non-operational, the date on which the provider's or supplier's practice location was no longer operational (per CMS' or the CMS contractor's determination).

(v) For revocations based on a State license surrender in lieu of further disciplinary action, the date of the license surrender.

(vi) For revocations based on termination from a Federal health care program other than Medicare (for example, Medicaid), the date of the termination.

(vii) For revocations based on termination of a provider agreement under part 489 of this chapter, and as applicable to the type of provider involved, the later of the following:

(A) The date of the provider agreement termination; or

(B) The date that CMS establishes under § 489.55.

(viii) For revocations based on § 424.535(a)(23), the effective dates are as follows:

(A) If the standard or condition violation involves the suspension, revocation, or termination (or surrender in lieu of further disciplinary action) of the provider's or supplier's Federal or State license, certification, accreditation, or MDPP recognition, the effective date is

the date of the license, certification, accreditation, or MDPP recognition suspension, revocation, termination, or surrender.

(B) If the standard or condition violation involves a non-operational practice location, the effective date is the date the non-operational status began.

(C) If the standard violation involves a felony conviction of an individual or entity described in § 424.67(b)(6)(i), the effective date is the date of the felony conviction.

(D) For all standard violations not addressed in paragraphs (A) through (C), the effective date in paragraph (g)(1) applies if the effective date in paragraph (g)(3) does not.

(3) If the action that resulted in the revocation occurred prior to the effective date of the provider's or supplier's enrollment, the effective date of the revocation is the same as the effective date of enrollment.

\* \* \* \* \*

83. Section 424.541 is added to read as follows:

**§ 424.541 Stay of enrollment.**

(a)(1) CMS may stay an enrolled provider's or supplier's enrollment if the provider or supplier:

(i) Is non-compliant with at least one enrollment requirement in Title 42; and

(ii) Can remedy the non-compliance via the submission of, as applicable to the situation, a Form CMS-855, Form CMS-20134, or Form CMS-588 change of information or revalidation application.

(2) During the period of any stay imposed under this section, the following apply:

(i) The provider or supplier remains enrolled in Medicare;

(ii)(A) Except as stated in paragraph (a)(2)(ii)(B) of this section, claims submitted by the provider or supplier with dates of service within the stay period will be rejected.

(B) Notwithstanding paragraph (a)(2)(ii)(A), claims submitted by the provider or supplier with dates of service within the stay period are eligible for payment (and may be resubmitted by the provider or supplier within applicable timeframes specified in Title 42) if:

(1) CMS or its contractor determines that the provider or supplier has resumed compliance with all Medicare enrollment requirements in Title 42; and

(2) The stay ends (as described in subsection (a)(5) of this section) on or before the 60<sup>th</sup> day of the stay period.

(3) A stay of enrollment lasts no longer than 60 days from the postmark date of the notification letter, which is the effective date of the stay.

(4) CMS notifies the affected provider or supplier in writing of the imposition of the stay.

(5) A stay of enrollment ends on the date on which CMS or its contractor determines that the provider or supplier has resumed compliance with all Medicare enrollment requirements in Title 42 or the day after the 60-day stay period expires, whichever occurs first.

(b)(1) If a provider or supplier receives written notice from CMS or its contractor that the provider or supplier is subject to a stay under this section, the provider or supplier has 15 calendar days from the date of the written notice to submit a rebuttal to the stay as described in paragraph (b) of this section.

(2) CMS may, at its discretion, extend the 15-day time-period referenced in paragraph (b)(1) of this section.

(3) Any rebuttal submitted pursuant to paragraph (b) of this section must:

(i) Be in writing.

(ii) Specify the facts or issues about which the provider or supplier disagrees with the stay's imposition and/or the effective date, and the reasons for disagreement.

(iii) Submit all documentation the provider or supplier wants CMS to consider in its review of the stay.

(iv) Be submitted in the form of a letter that is signed and dated by the individual supplier (if enrolled as an individual physician or nonphysician practitioner), the authorized official or delegated official (as those terms are defined in § 424.502), or a legal representative (as defined in 42 CFR 498.10). If the legal representative is an attorney, the attorney must include a statement that he or she has the authority to represent the provider or supplier; this statement is sufficient to constitute notice of such authority. If the legal representative is not an attorney, the provider or supplier must file with CMS written notice of the appointment of a representative; this notice of appointment must be signed and dated by, as applicable, the individual supplier, the authorized official or delegated official, or a legal representative.

(4) The provider's or supplier's failure to submit a rebuttal that is both timely under paragraph (b)(1) of this section and fully compliant with all of the requirements of paragraph (b)(3) of this section constitutes a waiver of all rebuttal rights under this section.

(5) Upon receipt of a timely and compliant stay rebuttal, CMS reviews the rebuttal to determine whether the imposition of the stay and/or the effective date thereof are correct.

(6) A determination made under paragraph (b) of this section is not an initial determination under 42 CFR 498.3(b) and therefore not appealable.

(7) Nothing in paragraph (b) of this section requires CMS to delay the imposition of a stay pending the completion of the review described in paragraph (b)(5) of this section.

(8)(i) Nothing in paragraph (b) of this section requires CMS to delay the imposition of a deactivation or revocation, pending the completion of the review described in paragraph (b)(5) of this section.

(ii)(A) If CMS deactivates the provider or supplier during the stay, any rebuttal to the stay that the provider or supplier submits that meets the requirements of paragraph (b) of this section is combined and considered with the provider's or supplier's rebuttal to the deactivation under § 424.546 if CMS has not yet made a determination on the stay rebuttal pursuant to this section.

(B) In all cases other than that described in paragraph (b)(8)(ii)(A) of this section, a stay rebuttal that was submitted in compliance with the requirements of paragraph (b) of this section is considered separately and independently of any review of any other rebuttal or, for revocations, appeal under 42 CFR part 498.

84. Section 424.555 is amended by revising paragraph (b) to read as follows:

**§ 424.555 Payment liability.**

\* \* \* \* \*

(b) No payment may be made for otherwise Medicare covered items or services furnished to a Medicare beneficiary by a provider or supplier if the billing privileges of the provider or supplier are deactivated, denied, or revoked, or if the provider or supplier is currently under a stay of enrollment (except as stated in § 424.541(a)(2)(ii)(B)). The Medicare beneficiary has no financial responsibility for expenses, and the provider or supplier must refund on a timely basis to the Medicare beneficiary any amounts collected from the Medicare beneficiary for these otherwise Medicare covered items or services.

\* \* \* \* \*

**PART 425—MEDICARE SHARED SAVINGS PROGRAM**

85. The authority citation for part 425 continues to read as follows:

**Authority:** 42 U.S.C. 1302, 1306, 1395hh, and 1395jjj.

86. Section 425.20 is amended—

- a. By revising the definitions of “Assignable beneficiary” and “Assignment window”;
- b. In the definition of “At-risk beneficiary” by—
  - i. Removing the periods at the end of paragraphs (5) and (6), and adding in their places semicolons; and
  - ii. Revising paragraph (7);
- c. By adding the definitions of “Beneficiary eligible for Medicare CQMs” and “Expanded window for assignment” in alphabetical order;

- d. In the definition of “Experienced with performance-based risk Medicare ACO initiatives” by revising paragraph (2);
- e. In the definition of “Inexperienced with performance-based risk Medicare ACO initiatives” by revising paragraph (2);
- f. In the definition of “Rural health center” by—
  - i. Removing the word “center” and adding in its place the word “clinic”; and
  - ii. Removing the phrase “under § 405.2401(b)” and adding in its place the phrase “under § 405.2401(b) of this chapter”.

The revisions and additions read as follows:

**§ 425.20 Definitions.**

\* \* \* \* \*

*Assignable beneficiary* means a Medicare fee-for-service beneficiary who receives at least one primary care service with a date of service during a specified 12-month assignment window from a Medicare-enrolled physician who is a primary care physician or who has one of the specialty designations included in § 425.402(c). For performance year 2025 and subsequent performance years, a Medicare fee-for-service beneficiary who does not meet this requirement but who meets both of the following criteria will also be considered an assignable beneficiary—

(1) Receives at least one primary care service with a date of service during a specified 24-month expanded window for assignment from a Medicare-enrolled physician who is a primary care physician or who has one of the specialty designations included in § 425.402(c).

(2) Receives at least one primary care service with a date of service during a specified 12-month assignment window from a Medicare-enrolled practitioner who is one of the following:

- (i) A physician assistant (as defined at § 410.74(a)(2) of this chapter).
- (ii) A nurse practitioner (as defined at § 410.75(b) of this chapter).
- (iii) A clinical nurse specialist (as defined at § 410.76(b) of this chapter).

\* \* \* \* \*

*Assignment window* means the 12-month period used to assign beneficiaries to an ACO, or to identify assignable beneficiaries, or both.

*At-risk beneficiary* \* \* \*

(7) Is entitled to Medicare because of disability; or

\* \* \* \* \*

*Beneficiary eligible for Medicare CQMs* means a beneficiary identified for purposes of reporting Medicare CQMs for ACOs participating in the Medicare Shared Savings Program (Medicare CQMs), who is either of the following:

(1) A Medicare fee-for-service beneficiary (as defined at § 425.20) who –

(i) Meets the criteria for a beneficiary to be assigned to an ACO described at § 425.401(a); and

(ii) Had at least one claim with a date of service during the measurement period from an ACO professional who is a primary care physician or who has one of the specialty designations included in § 425.402(c), or who is a physician assistant, nurse practitioner, or clinical nurse specialist.

(2) A Medicare fee-for-service beneficiary who is assigned to an ACO in accordance with § 425.402(e) because the beneficiary designated an ACO professional participating in an ACO as responsible for coordinating their overall care.

\* \* \* \* \*

*Expanded window for assignment* means the 24-month period used to assign beneficiaries to an ACO, or to identify assignable beneficiaries, or both that includes the applicable 12-month assignment window and the preceding 12 months.

*Experienced with performance-based risk Medicare ACO initiatives* \* \* \*

(2) Forty percent or more of the ACO's ACO participants participated in a performance-based risk Medicare ACO initiative, or in an ACO that deferred its entry into a second Shared Savings Program agreement period under a two-sided model under § 425.200(e), in any of the 5

most recent performance years. An ACO participant is considered to have participated in a performance-based risk Medicare ACO initiative if the ACO participant TIN was or will be included in financial reconciliation for one or more performance years under such initiative during any of the 5 most recent performance years.

\* \* \* \* \*

*Inexperienced with performance-based risk Medicare ACO initiatives* \* \* \*

(2) Less than 40 percent of the ACO's ACO participants participated in a performance-based risk Medicare ACO initiative, or in an ACO that deferred its entry into a second Shared Savings Program agreement period under a two-sided model under § 425.200(e), in each of the 5 most recent performance years. An ACO participant is considered to have participated in a performance-based risk Medicare ACO initiative if the ACO participant TIN was or will be included in financial reconciliation for one or more performance years under such initiative during any of the 5 most recent performance years.

\* \* \* \* \*

87. Section 425.106 is amended by revising paragraph (c)(5) to read as follows:

**§ 425.106 Shared governance.**

\* \* \* \* \*

(c) \* \* \*

(5)(i) In cases in which the composition of the ACO's governing body does not meet the requirements of paragraph (c)(2) of this section, the ACO must describe why it seeks to differ from these requirements and how the ACO will provide meaningful representation in ACO governance by Medicare beneficiaries.

(ii) For agreement periods beginning before January 1, 2024, in cases in which the composition of the ACO's governing body does not meet the requirements of paragraph (c)(3) of this section, the ACO must describe why it seeks to differ from these requirements and how the ACO will involve ACO participants in innovative ways in ACO governance.

\* \* \* \* \*

88. Section 425.204 is amended by—

a. In paragraph (c)(3)(ii), by removing the reference “(c)(2)” and adding in its place the reference “§ 425.106(c)(2)”; and

b. Revising paragraph (c)(3)(iii).

The revision reads as follows:

**§ 425.204 Content of the application.**

\* \* \* \* \*

(c) \* \* \*

(3) \* \* \*

(iii) If seeking an exception to the requirement at § 425.106(c)(3), for agreement periods beginning before January 1, 2024, why the ACO is unable to meet the requirement and how it will involve ACO participants in innovative ways in ACO governance.

\* \* \* \* \*

89. Section 425.302 is amended by revising paragraph (a)(3)(iii) to read as follows:

**§ 425.302 Program requirements for data submission and certifications.**

(a) \* \* \*

(3) \* \* \*

(iii) For performance years starting on January 1, 2019 through 2024, the percentage of eligible clinicians participating in the ACO that use CEHRT to document and communicate clinical care to their patients or other health care providers meets or exceeds the applicable percentage specified by CMS at § 425.506(f).

\* \* \* \* \*

90. Section 425.308 is amended by adding paragraph (b)(9) to read as follows:

**§ 425.308 Public reporting and transparency.**

\* \* \* \* \*

(b) \* \* \*

(9) For performance year 2025 and subsequent performance years, the total number of ACO participants, ACO providers/suppliers, and ACO professionals that are MIPS eligible clinicians, Qualifying APM Participants (QPs), or Partial Qualifying APM Participants (Partial QPs) (each as defined at § 414.1305 of this chapter) that earn a MIPS performance category score for the MIPS Promoting Interoperability performance category as set forth in § 425.507 that is comprised of the following –

(i) The number of ACO participants, ACO providers/suppliers, and ACO professionals that meet the requirements of § 425.507(a) and are not excluded under § 425.507(b) for the applicable performance year; and

(ii) The number of ACO participants, ACO providers/suppliers, and ACO professionals that are excluded under § 425.507(b) that voluntarily reported and received a MIPS Promoting Interoperability performance category score for the applicable performance year.

\* \* \* \* \*

91. Section 425.316 is amended by revising paragraphs (e)(2) introductory text and (e)(2)(i) to read as follows:

**§ 425.316 Monitoring of ACOs.**

\* \* \* \* \*

(e) \* \* \*

(2) If CMS determines that an ACO participating in advance investment payments became experienced with performance-based risk Medicare ACO initiatives during its first or second performance year of its agreement period or that the ACO became a high revenue ACO during any performance year of its agreement period, CMS—

(i) Will cease payment of advance investment payments no later than the quarter after the ACO became experienced with performance-based risk Medicare ACO initiatives or became a high revenue ACO.

\* \* \* \* \*

92. Section 425.400 is amended—

a. By revising paragraph (a)(2)(ii);

b. In paragraph (a)(3)(i), by removing the phrase “most recent 12 months” and adding in its place the phrase “most recent 12 or 24 months, as applicable,”;

c. By revising paragraph (c)(1)(vii) introductory text;

d. By adding paragraph (c)(1)(viii); and

e. By revising paragraphs (c)(2)(i) introductory text and (c)(2)(ii).

The revisions and addition read as follows:

**§ 425.400 General.**

(a) \* \* \*

(2) \* \* \*

(ii) Assignment will be updated quarterly based on the most recent 12 or 24 months of data, as applicable, under the methodology described in §§ 425.402 and 425.404.

\* \* \* \* \*

(c) \* \* \*

(1) \* \* \*

(vii) For the performance year starting on January 1, 2023 as follows:

\* \* \* \* \*

(viii) For the performance year starting on January 1, 2024, and subsequent performance years as follows:

(A) CPT codes:

(1) 96160 and 96161 (codes for administration of health risk assessment).

(2) 96202 and 96203 (codes for caregiver behavior management training).

(3) 97550, 97551, and 97552 (codes for caregiver training services).

(4) 99201 through 99215 (codes for office or other outpatient visit for the evaluation and

management of a patient).

(5) 99304 through 99318 (codes for professional services furnished in a nursing facility; professional services or services reported on an FQHC or RHC claim identified by these codes are excluded when furnished in a SNF).

(6) 99319 through 99340 (codes for patient domiciliary, rest home, or custodial care visit).

(7) 99341 through 99350 (codes for evaluation and management services furnished in a patient's home).

(8) 99354 and 99355 (add-on codes, for prolonged evaluation and management or psychotherapy services beyond the typical service time of the primary procedure; when the base code is also a primary care service code under this paragraph (c)(1)(viii)).

(9) 99406 and 99407 (codes for smoking and tobacco-use cessation counseling services).

(10) 99421, 99422, and 99423 (codes for online digital evaluation and management).

(11) 99424, 99425, 99426, and 99427 (codes for principal care management services).

(12) 99437, 99487, 99489, 99490 and 99491 (codes for chronic care management).

(13) 99439 (code for non-complex chronic care management).

(14) 99483 (code for assessment of and care planning for patients with cognitive impairment).

(15) 99484, 99492, 99493 and 99494 (codes for behavioral health integration services).

(16) 99495 and 99496 (codes for transitional care management services).

(17) 99497 and 99498 (codes for advance care planning; services identified by these codes furnished in an inpatient setting are excluded).

(B) HCPCS codes:

(1) G0019 and G0022 (codes for community health integration services).

(2) G0023 and G0024 (codes for principal illness navigation services).

(3) G0101 (code for cervical or vaginal cancer screening).

(4) G0136 (code for social determinants of health risk assessment services).

(5) G0317, G0318, and G2212 (codes for prolonged office or other outpatient visit for the evaluation and management of a patient).

(6) G0402 (code for the Welcome to Medicare visit).

(7) G0438 and G0439 (codes for the annual wellness visits).

(8) G0442 (code for alcohol misuse screening service).

(9) G0443 (code for alcohol misuse counseling service).

(10) G0444 (code for annual depression screening service).

(11) G0463 (code for services furnished in ETA hospitals).

(12) G0506 (code for chronic care management).

(13) G2010 (code for the remote evaluation of patient video/images).

(14) G2012 and G2252 (codes for virtual check-in).

(15) G2058 (code for non-complex chronic care management).

(16) G2064 and G2065 (codes for principal care management services).

(17) G2086, G2087, and G2088 (codes for office-based opioid use disorder services).

(18) G2211 (code for visit complexity inherent to evaluation and management services add-on).

(19) G2214 (code for psychiatric collaborative care model).

(20) G3002 and G3003 (codes for chronic pain management).

(C) Primary care service codes include any CPT code identified by CMS that directly replaces a CPT code specified in paragraph (c)(1)(viii)(A) of this section or a HCPCS code specified in paragraph (c)(1)(viii)(B) of this section, when the assignment window (as defined in § 425.20) for a benchmark or performance year includes any day on or after the effective date of the replacement code for payment purposes under FFS Medicare.

(2) \* \* \*

(i) Except as otherwise specified in paragraph (c)(2)(i)(A)(2) of this section, when the

assignment window or applicable expanded window for assignment (as defined in § 425.20) for a benchmark or performance year includes any month(s) during the COVID-19 Public Health Emergency defined in § 400.200 of this chapter, in determining beneficiary assignment, we use the primary care service codes identified in paragraph (c)(1) of this section, and additional primary care service codes as follows:

\* \* \* \* \*

(ii) Except as otherwise specified in paragraph (c)(2)(i)(A)(2) of this section, the additional primary care service codes specified in paragraph (c)(2)(i) of this section are applicable to all months of the assignment window or applicable expanded window for assignment (as defined in § 425.20), when the assignment window or applicable expanded window for assignment includes any month(s) during the COVID-19 Public Health Emergency defined in § 400.200 of this chapter.

93. Section 425.402 is amended—

- a. By revising paragraph (b)(1);
- b. By adding paragraph (b)(5);
- c. By revising paragraph (c) introductory text; and
- d. In paragraph (e)(2)(ii)(A), by removing the reference “§ 425.400(a)(4)(ii)” and adding in its place the reference “§ 425.226(a)(1)”.

The revisions and addition read as follows:

**§ 425.402 Basic assignment methodology.**

\* \* \* \* \*

(b) \* \* \*

(1) Identify all beneficiaries that had at least one primary care service during the applicable assignment window with a physician who is an ACO professional in the ACO and who is a primary care physician as defined under § 425.20 or who has one of the primary specialty designations included in paragraph (c) of this section.

\* \* \* \* \*

(5) For performance year 2025 and subsequent performance years, CMS employs the following third step to assign Medicare fee-for-service beneficiaries who were not identified by the criterion specified in paragraph (b)(1) of this section:

(i) Identify all beneficiaries who had at least one primary care service with a non-physician ACO professional in the ACO during the applicable assignment window.

(ii) For the beneficiaries identified in paragraph (b)(5)(i) of this section, identify those beneficiaries that had at least one primary care service with a physician who is an ACO professional in the ACO and who is a primary care physician as defined under § 425.20 or who has one of the primary specialty designations included in paragraph (c) of this section during the applicable expanded window for assignment.

(iii) Identify all primary care services furnished to beneficiaries identified in paragraph (b)(5)(ii) of this section by ACO professionals in the ACO who are primary care physicians as defined under § 425.20, non-physician ACO professionals, and physicians with specialty designations included in paragraph (c) of this section during the applicable expanded window for assignment.

(iv) A beneficiary identified in paragraph (b)(5)(ii) of this section is assigned to the ACO if the allowed charges for primary care services furnished to the beneficiary by ACO professionals in the ACO who are primary care physicians, physicians with specialty designations included in paragraph (c) of this section, or non-physician ACO professionals during the applicable expanded window for assignment are greater than the allowed charges for primary care services furnished by primary care physicians, physicians with specialty designations as specified in paragraph (c) of this section, nurse practitioners, physician assistants, and clinical nurse specialists who are—

(A) ACO professionals in any other ACO; or

(B) Not affiliated with any ACO and identified by a Medicare-enrolled billing TIN.

(c) ACO professionals considered in the second and third step of the assignment methodology in paragraphs (b)(4) and (5) of this section include physicians who have one of the following primary specialty designations:

\* \* \* \* \*

94. Section 425.506 is amended by revising paragraph (f) introductory text to read as follows:

**§ 425.506 Incorporating reporting requirements related to adoption of certified electronic health record technology.**

\* \* \* \* \*

(f) For performance years starting on January 1, 2019 through 2024, ACOs in a track that—

\* \* \* \* \*

95. Section 425.507 is added to subpart F to read as follows:

**§ 425.507 Incorporating Promoting Interoperability requirements related to the Quality Payment Program for performance years beginning on or after January 1, 2025.**

(a) For performance years beginning on or after January 1, 2025, unless otherwise excluded under paragraph (b) of this section, an ACO participant, ACO provider/supplier, and ACO professional that is a MIPS eligible clinician, Qualifying APM Participant (QP), or Partial Qualifying APM Participant (Partial QP) (each as defined at § 414.1305 of this chapter) must satisfy all of the following:

(1) Report the MIPS Promoting Interoperability performance category measures and requirements to MIPS according to 42 CFR part 414 subpart O at the individual, group, virtual group, or APM entity level.

(2) Earn a performance category score for the MIPS Promoting Interoperability performance category at the individual, group, virtual group, or APM entity level.

(b) An ACO participant, ACO provider/supplier, or ACO professional is excluded from

the requirements specified in paragraph (a) of this section in accordance with applicable policies that exclude or otherwise exempt eligible clinicians from reporting the MIPS Promoting Interoperability performance category as set forth in 42 CFR part 414 subpart O, provided however, that an ACO participant, ACO provider/supplier, or ACO professional cannot be excluded from the requirements specified in paragraph (a) solely on the basis of being a QP or Partial QP. Applicable exclusions may include:

(1) Low volume threshold as set forth at § 414.1310(b)(1)(iii) of this chapter.

(2) Eligible clinician as defined at § 414.1305 of this chapter who is not a MIPS eligible clinician as set forth in § 414.1310(b)(2) of this chapter.

(3) Reweighting of the MIPS Promoting Interoperability performance category to zero percent of the final score in accordance with applicable policies set forth at § 414.1380(c)(2) of this chapter.

96. Section 425.512 is amended—

a. By revising paragraph (a)(2);

b. In paragraph (a)(5)(i) introductory text, by removing the phrase “paragraph (a)(2) of this section” and adding in its place the phrase “paragraphs (a)(2) and (a)(7) of this section”;

c. By revising paragraphs (a)(5)(i)(A)(2), (a)(5)(iii)(A) and (B);

d. By adding paragraph (a)(7);

e. In paragraph (b)(1)—

i. By adding a new first sentence;

ii. By removing the reference “paragraph (b)(2)” and adding in its place the reference “paragraph (b)(3)”;

f. By redesignating paragraphs (b)(2) and (3) as paragraphs (b)(3) and (4), respectively;

g. By adding new paragraph (b)(2);

h. By revising the newly redesignated paragraph (b)(3)(ii)(B);

i. In newly redesignated paragraph (b)(3)(iii), by removing the phrase “paragraph

(b)(2)(ii) of this section” and adding in its place the phrase “paragraph (b)(3)(ii) of this section”;

j. By revising newly redesignated paragraph (b)(3)(iv)(A);

k. In newly redesignated paragraph (b)(3)(iv)(B), by removing the phrase “paragraph (b)(2)(iv)(A) of this section” and adding in its place the phrase “paragraph (b)(3)(iv)(A) of this section”;

l. In newly redesignated paragraph (b)(3)(v)—

i. By removing the phrase “paragraph (b)(2)(iv)(B) of this section” and adding in its place the phrase “paragraph (b)(3)(iv)(B) of this section”;

ii. By removing the phrase “paragraph (b)(2)(iii) of this section” and adding in its place the phrase “paragraph (b)(3)(iii) of this section”;

iii. By removing the phrase “paragraph (b)(2)(iv) of this section” and adding in its place the phrase “paragraph (b)(3)(iv) of this section”;

m. In newly redesignated paragraph (b)(4) introductory text, by removing the phrase “paragraphs (b)(1) and (b)(2) of this section” and adding in its place the phrase “paragraphs (b)(1) through (b)(3) of this section”;

n. By revising newly redesignated paragraph (b)(4)(i); and

o. By revising paragraph (c)(3).

The revisions and additions read as follows:

**§ 425.512 Determining the ACO quality performance standard for performance years beginning on or after January 1, 2021.**

(a) \* \* \*

(2) For the first performance year of an ACO's first agreement period under the Shared Savings Program, the ACO will meet the quality performance standard if it meets the requirements under this paragraph (a)(2).

(i) For performance years 2022 and 2023. If the ACO reports data via the APP and meets the data completeness requirement at § 414.1340 of this subchapter and the case minimum

requirement at § 414.1380 of this subchapter on the ten CMS Web Interface measures or the three eCQMs/MIPS CQMs, and the CAHPS for MIPS survey, for the applicable performance year.

(ii) For performance year 2024. If the ACO reports data via the APP and meets the data completeness requirement at § 414.1340 of this subchapter on the ten CMS Web Interface measures or the three eCQMs/MIPS CQMs/Medicare CQMs, and the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter), and receives a MIPS Quality performance category score under § 414.1380(b)(1) of this subchapter, for the applicable performance year.

(iii) For performance year 2025 and subsequent performance years. If the ACO reports data via the APP and meets the data completeness requirement at § 414.1340 of this subchapter on the three eCQMs/MIPS CQMs/Medicare CQMs, and the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter), and receives a MIPS Quality performance category score under § 414.1380(b)(1) of this subchapter, for the applicable performance year.

\* \* \* \* \*

(5) \* \* \*

(i) \* \* \*

(A) \* \* \*

(2) If the ACO reports the three eCQMs/MIPS CQMs in the APP measure set, meeting the data completeness requirement at § 414.1340 of this subchapter for all three eCQMs/MIPS CQMs, and achieving a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP measure set and a quality performance score equivalent to or higher than the 40th percentile of the performance benchmark on at least one of the remaining five measures in the APP measure set.

\* \* \* \* \*

(iii) \* \* \*

(A) For performance year 2024, the ACO does not report any of the ten CMS Web Interface measures, any of the three eCQMs/MIPS CQMs/Medicare CQMs and does not administer a CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter) under the APP.

(B) For performance year 2025 and subsequent years, the ACO does not report any of the three eCQMs/MIPS CQMs/Medicare CQMs and does not administer a CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter) under the APP.

\* \* \* \* \*

(7) For performance years 2024 and subsequent performance years, if an ACO reports all of the required measures, meeting the data completeness requirement at § 414.1340 of this subchapter for each measure in the APP measure set and receiving a MIPS Quality performance category score as described at § 414.1380(b)(1) of this subchapter, CMS will use the higher of the ACO's health equity adjusted quality performance score or the equivalent of the 40th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year when the ACO meets either of the following:

(i) The ACO's total available measure achievement points used to calculate the ACO's MIPS Quality performance category score is reduced under § 414.1380(b)(1)(vii)(A) of this subchapter.

(ii) At least one of the eCQMs/MIPS CQMs/Medicare CQMs does not have a benchmark as described at § 414.1380(b)(1)(i)(A) of this subchapter.

(b) \* \* \*

(1) For performance year 2023. \* \* \*

(2) For performance year 2024 and subsequent performance years. For an ACO that

reports the three eCQMs/MIPS CQMs/Medicare CQMs in the APP measure set, meeting the data completeness requirement at § 414.1340 of this subchapter for all three eCQMs/MIPS CQMs/Medicare CQMs, and administers the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter), CMS calculates the ACO's health equity adjusted quality performance score as the sum of the ACO's MIPS Quality performance category score for all measures in the APP measure set and the ACO's health equity adjustment bonus points calculated in accordance with paragraph (b)(3) of this section. The sum of these values may not exceed 100 percent.

(3) \* \* \*

(ii) \* \* \*

(B) Values of zero for each measure that CMS does not evaluate because the measure is unscored or the ACO does not meet the case minimum or the minimum sample size for the measure.

\* \* \* \* \*

(iv) \* \* \*

(A) (I) CMS determines the proportion ranging from zero to one of the ACO's assigned beneficiary population for the performance year that is considered underserved based on the highest of either of the following:

(i) The proportion of the ACO's assigned beneficiaries residing in a census block group with an Area Deprivation Index (ADI) national percentile rank of at least 85. An ACO's assigned beneficiaries without an available numeric ADI national percentile rank are excluded from the calculation of the proportion of the ACO's assigned beneficiaries residing in a census block group with an ADI national percentile rank of at least 85.

(ii) The proportion of the ACO's assigned beneficiaries who are enrolled in the Medicare Part D low-income subsidy (LIS); or are dually eligible for Medicare and Medicaid.

(2) CMS calculates the proportions specified in paragraph (b)(3)(iv)(A)(I)(ii) of this

section as follows:

(i) For performance year 2023, the proportion of the ACO's assigned beneficiaries who are enrolled in the Medicare Part D LIS or are dually eligible for Medicare and Medicaid divided by the total number of the ACO's assigned beneficiaries' person years.

(ii) For performance year 2024 and subsequent performance years, the proportion of the ACO's assigned beneficiaries with any months enrolled in LIS or dually eligible for Medicare and Medicaid divided by the total number of the ACO's assigned beneficiaries.

\* \* \* \* \*

(4) \* \* \*

(i) In determining whether the ACO meets the quality performance standard as specified under paragraphs (a)(4)(i)(A), (a)(5)(i)(A)(I), (a)(5)(i)(B), and (a)(7) of this section.

\* \* \* \* \*

(c) \* \* \*

(3) If CMS determines the ACO meets the requirements of paragraph (c)(1) of this section and the ACO reports quality data via the APP, CMS calculates the ACO's quality score as follows:

(i) For performance years 2021 and 2022, if the ACO reports quality data via the APP and meets data completeness and case minimum requirements, CMS will use the higher of the ACO's quality performance score or the equivalent of the 30th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

(ii) For performance year 2023, if the ACO reports quality data via the APP and meets data completeness and case minimum requirements, CMS will use the higher of the ACO's health equity adjusted quality performance score or the equivalent of the 30th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

(iii) For performance year 2024 and subsequent performance years, if the ACO reports quality data via the APP and meets the data completeness requirement at § 414.1340 of this subchapter and receives a MIPS Quality performance category score under § 414.1380(b)(1) of this subchapter, CMS will use the higher of the ACO's health equity adjusted quality performance score or the equivalent of the 40th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

\* \* \* \* \*

**§ 425.600 [Amended]**

97. Amend § 425.600 in paragraph (f)(4)(ii) by removing the reference “425.656(d)” and adding in its place the reference “425.656(e)”.

**§ 425.601 [Amended]**

98. Amend § 425.601 in paragraph (a) introductory text by removing the reference “§ 425.226(a)(1)” and adding in its place the reference “§ 425.400(a)(4)(ii)”.

**§ 425.611 [Amended]**

99. Amend § 425.611 in paragraph (c)(2)(iii) by removing the reference “§ 425.652(a)(8)(iv)” and adding in its place the reference “§ 425.658(c)(1)(ii)”.

100. Section 425.630 is amended—

- a. By revising paragraphs (b)(2) and (3), (e)(3), (f) introductory text, and (g)(4);
- b. In paragraph (h)(1)(i), by removing “or” at the end of the paragraph;
- c. In paragraph (h)(1)(ii), by removing “.” at the end of the paragraph, and adding in its place “; or”; and
- d. By adding paragraph (h)(1)(iii) and paragraph (i).

The revisions and additions read as follows:

**§ 425.630 Option to receive advance investment payments.**

\* \* \* \* \*

(b) \* \* \*

(2) CMS has determined that the ACO is eligible to participate in the Shared Savings Program.

(3) The ACO is inexperienced with performance-based risk Medicare ACO initiatives during its first 2 performance years and participates in the BASIC track's glide path as follows:

(i) For performance year 1, the ACO must participate in Level A of the BASIC track's glide path.

(ii) For performance year 2, the ACO may participate in Level A of the BASIC track's glide path (in accordance with § 425.600(a)(4)(i)(C)(3)) or Level B.

(iii) For performance years 3 through 5, the ACO may participate in Level A of the BASIC track's glide path (in accordance with § 425.600(a)(4)(i)(C)(3)), or Levels B through E.

\* \* \* \* \*

(e) \* \* \*

(3) *Duration for spending payments.* An ACO may spend an advance investment payment over its entire agreement period. An ACO must repay to CMS any unspent funds remaining at the end of the ACO's agreement period, except if the ACO terminated its current participation agreement under § 425.220 at the end of performance year 2 or later and immediately enters a new agreement period to continue its participation in the Shared Savings Program, the ACO must spend its advance investment payments within 5 performance years of when it first received advance investment payments and repay to CMS any unspent funds remaining at the end of that fifth performance year.

\* \* \* \* \*

(f) *Payment methodology.* An ACO receives two types of advance investment payments: a one-time payment of \$250,000 and quarterly payments calculated pursuant to the methodology defined in paragraph (f)(2) of this section. CMS notifies in writing each ACO of its determination of the amount of advance investment payment and the notice will inform the ACO

of its right to request reconsideration review in accordance with the procedures specified in subpart I of this part. If CMS does not make any advance investment payment, the notice will specify the reason(s) why and inform the ACO of its right to request reconsideration review in accordance with the procedures specified in subpart I of this part.

\* \* \* \* \*

(g) \* \* \*

(4) If an ACO terminates its participation agreement during the agreement period in which it received an advance investment payment, the ACO must repay all advance investment payments it received, unless the ACO terminated its current participation agreement under § 425.220 at the end of performance year 2 or later during the agreement period in which it received advance investment payments and immediately enters a new agreement period to continue its participation in the program. CMS will provide written notification to the ACO of the amount due and the ACO must pay such amount no later than 90 days after the receipt of such notification.

\* \* \* \* \*

(h) \* \* \*

(1) \* \* \*

(iii) Voluntarily terminates its participation agreement in accordance with § 425.220(a).

\* \* \* \* \*

(i) *Reporting information on advance investment payments.* The ACO must report information on its receipt of and use of advance investment payments, as follows:

(1) The ACO must publicly report information about the ACO's use of advance investment payments for each performance year, in accordance with § 425.308(b)(8).

(2) In a form and manner and by a deadline specified by CMS, the ACO must report to CMS the same information it is required to publicly report under § 425.308(b)(8).

**§ 425.650 [Amended]**

101. Amend § 425.650 in paragraph (a) by removing the references “§§ 425.601, 425.602, and 425.603” and adding in their place the references “§§ 425.601, 425.602, 425.603, and 425.659”.

102. Section 425.652 is amended—

a. In paragraph (a) introductory text, by removing the reference “§ 425.226(a)(1)” and adding in its place the reference “§ 425.400(a)(4)(ii)”;

b. By revising paragraphs (a)(5)(v)(A), (a)(8), (a)(9) introductory text, and (a)(9)(ii);

c. In paragraph (a)(9)(iv), by removing the reference “§ 425.400(a)(4)(ii)” and adding in its place the reference “§ 425.226(a)(1)”;

d. In paragraph (a)(9)(v), by removing the phrase “, or a combination of these two adjustments”;

e. By adding paragraphs (a)(9)(vi) and (b)(2)(ii)(C); and

f. By revising paragraph (b)(2)(iv)(A).

The revisions and additions read as follows:

**§ 425.652 Establishing, adjusting, and updating the benchmark for agreement periods beginning on January 1, 2024, and in subsequent years.**

(a) \* \* \*

(5) \* \* \*

(v) \* \* \*

(A) Calculating the county-level share of assignable beneficiaries that are assigned to the ACO for each county in the ACO's regional service area. The assignable population of beneficiaries is identified for BY3 using the assignment window or expanded window for assignment that is consistent with the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.400(a)(4)(ii).

\* \* \* \* \*

(8) Except as provided in paragraph (a)(8)(iii) of this section, adjusts the historical

benchmark based on the ACO's regional service area expenditures (as specified under § 425.656), or for savings generated by the ACO, if any, in the 3 most recent years prior to the start of the agreement period (as specified under § 425.658). CMS does all of the following to determine the adjustment, if any, applied to the historical benchmark:

(i) Computes the regional adjustment in accordance with § 425.656 and the prior savings adjustment in accordance with § 425.658.

(ii) If an ACO is not eligible to receive a prior savings adjustment under § 425.658(b)(3)(i), and the regional adjustment, expressed as a single value as described in § 425.656(d), is positive, the ACO will receive an adjustment to its benchmark equal to the positive regional adjustment amount. The adjustment will be calculated as described in § 425.656(c) and applied separately to the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(iii) If an ACO is not eligible to receive a prior savings adjustment under § 425.658(b)(3)(i), and the regional adjustment, expressed as a single value as described in § 425.656(d), is negative or zero, the ACO will not receive an adjustment to its benchmark.

(iv) If an ACO is eligible to receive a prior savings adjustment and the regional adjustment, expressed as a single value as described in § 425.656(d), is positive, the ACO will receive an adjustment to its benchmark equal to the higher of the following:

(A) The positive regional adjustment amount. The adjustment will be calculated as described in § 425.656(c) and applied separately to the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(B) The prior savings adjustment. The adjustment will be calculated as described in § 425.658(c) and applied as a flat dollar amount to the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual

eligible Medicare and Medicaid beneficiaries.

(v) If an ACO is eligible to receive a prior savings adjustment and the regional adjustment, expressed as a single value as described in § 425.656(d), is negative or zero, the ACO will receive an adjustment to its benchmark equal to the prior savings adjustment. The adjustment will be calculated as described in § 425.658(c) and applied as a flat dollar amount to the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

(9) For the first performance year during the term of the agreement period, the ACO's benchmark is adjusted for the following, as applicable: For changes in values used in benchmark calculations in accordance with § 425.316(b)(2)(ii)(B) or (C) due to compliance action to address avoidance of at-risk beneficiaries or as a result of issuance of a revised initial determination under § 425.315. For the second and each subsequent performance year during the term of the agreement period, the ACO's benchmark is adjusted for the following, as applicable: For the addition and removal of ACO participants or ACO providers/suppliers in accordance with § 425.118(b), for a change to the ACO's beneficiary assignment methodology selection under § 425.226(a)(1), for a change to the beneficiary assignment methodology specified in subpart E of this part, for a change in the CMS-HCC risk adjustment methodology used to calculate prospective HCC risk scores under § 425.659, and for changes in values used in benchmark calculations in accordance with § 425.316(b)(2)(ii)(B) or (C) due to compliance action to address avoidance of at-risk beneficiaries or as a result of issuance of a revised initial determination under § 425.315. To adjust the benchmark, CMS does the following:

\* \* \* \* \*

(ii) Redetermines the regional adjustment amount under § 425.656 according to the ACO's assigned beneficiaries for BY3, and based on the assignable population of beneficiaries identified for BY3 using the assignment window or expanded window for assignment that is consistent with the beneficiary assignment methodology selected by the ACO for the

performance year according to § 425.400(a)(4)(ii).

\* \* \* \* \*

(vi) Redetermines factors based on prospective HCC risk scores calculated for benchmark years by calculating the prospective HCC risk scores using the CMS-HCC risk adjustment methodology that applies for the calendar year corresponding to the applicable performance year in accordance with § 425.659(b)(1).

\* \* \* \* \*

(b) \* \* \*

(2) \* \* \*

(ii) \* \* \*

(C) Multiply the growth rate calculated in this paragraph (b)(2)(ii) by a regional risk score growth cap adjustment factor computed as described in § 425.655.

\* \* \* \* \*

(iv) \* \* \*

(A) Calculating the county-level share of assignable beneficiaries that are assigned to the ACO for each county in the ACO's regional service area. The assignable population of beneficiaries is identified for the performance year using the assignment window or expanded window for assignment that is consistent with the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.400(a)(4)(ii).

\* \* \* \* \*

103. Section 425.654 is amended by revising paragraph (a)(1)(i) to read as follows:

**§ 425.654 Calculating county expenditures and regional expenditures.**

(a) \* \* \*

(1) \* \* \*

(i) Determines average county fee-for-service expenditures based on expenditures for the assignable population of beneficiaries in each county in the ACO's regional service area. The

assignable population of beneficiaries is identified for the relevant benchmark or performance year using the assignment window or expanded window for assignment that is consistent with the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.400(a)(4)(ii).

\* \* \* \* \*

104. Section 425.655 is added to subpart G to read as follows:

**§ 425.655 Calculating the regional risk score growth cap adjustment factor.**

(a) *General.* This section describes the methodology for calculating the regional risk score growth cap adjustment factor that will be applied to the regional growth rate component of the three-way blend used to update the historical benchmark as described in § 425.652(b) for agreement periods beginning on January 1, 2024, and in subsequent years.

(b) *Calculating county risk scores.* CMS does all of the following to determine county prospective HCC and demographic risk scores for use in calculating the ACO's regional risk scores:

(1) Determines average county prospective HCC and demographic risk scores for the assignable population of beneficiaries in each county in the ACO's regional service area. The assignable population of beneficiaries is identified for the relevant benchmark or performance year using the assignment window or expanded window for assignment that is consistent with the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.400(a)(4)(ii).

(2) Makes separate risk score calculations for each of the following populations of beneficiaries:

(i) ESRD.

(ii) Disabled.

(iii) Aged/dual eligible Medicare and Medicaid beneficiaries.

(iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(c) *Calculating regional risk scores.* CMS calculates an ACO's regional prospective HCC and demographic risk scores by:

(1) Weighting the county-level risk scores determined under paragraph (b) of this section according to the ACO's proportion of assigned beneficiaries in the county, determined by the number of the ACO's assigned beneficiaries in the applicable population (according to Medicare enrollment type) residing in the county in relation to the ACO's total number of assigned beneficiaries in the applicable population (according to Medicare enrollment type) for the relevant benchmark or performance year for each of the following populations of beneficiaries:

(i) ESRD.

(ii) Disabled.

(iii) Aged/dual eligible Medicare and Medicaid beneficiaries.

(iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(2) Aggregating the values determined under paragraph (c)(1) of this section for each population of beneficiaries (according to Medicare enrollment type) across all counties within the ACO's regional service area.

(d) *Determining aggregate growth in regional risk scores.* CMS determines aggregate growth in regional prospective HCC and demographic risk scores by:

(1) Determining growth in regional prospective HCC and demographic risk scores determined in paragraph (c) of this section (expressed as a ratio of the performance year regional risk score to the BY3 regional risk score) for each of the following populations of beneficiaries:

(i) ESRD.

(ii) Disabled.

(iii) Aged/dual eligible Medicare and Medicaid beneficiaries.

(iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(2) Determines the aggregate growth in regional risk scores by calculating a weighted average of the growth in regional prospective HCC risk scores or demographic risk scores, as

applicable, across the populations described in paragraph (d)(1) of this section. When calculating the weighted average growth in prospective HCC risk scores or demographic risk scores, as applicable, the weight applied to the growth in risk scores for each Medicare enrollment type is equal to the product of the ACO's regionally adjusted historical benchmark expenditures for that enrollment type and the ACO's performance year assigned beneficiary person years for that enrollment type.

(e) *Determining the cap on regional risk score growth.* CMS determines the cap on regional prospective HCC risk score growth by:

(1) Computing the sum of the aggregate growth in regional demographic risk scores as determined in paragraph (d)(2) of this section and 3 percentage points.

(2) Calculating the ACO's aggregate market share by calculating the weighted average of the share of assignable beneficiaries in the ACO's regional service area that are assigned to the ACO for the performance year as determined in § 425.652(b)(2)(iv) across the populations described in § 425.652(b)(1). In calculating this weighted average, the weight applied to the share for each Medicare enrollment type is equal to the ACO's performance year assigned beneficiary person years for that enrollment type.

(3) Adding to the sum computed in paragraph (e)(1) of this section an amount equal to the product of:

(i) The ACO's aggregate market share as determined in paragraph (e)(2) of this section.

(ii) The difference between the aggregate growth in regional prospective HCC risk scores as determined in paragraph (d)(2) of this section and the sum determined in paragraph (e)(1) of this section. This difference is subject to a floor of zero.

(f) *Determining the regional risk score growth cap adjustment factor.* CMS determines the regional risk score growth cap adjustment factor for each Medicare enrollment type to be applied in calculating the regional growth rate described in § 425.652(b) by comparing the aggregate growth in regional prospective HCC risk scores determined in paragraph (d)(2) of this

section and, if applicable, the growth in regional prospective HCC risk scores for individual Medicare enrollment types as determined in paragraph (d)(1) of this section with the cap determined in paragraph (e) of this section.

(1) If the aggregate growth in regional prospective HCC risk scores determined in paragraph (d)(2) of this section does not exceed the cap on regional risk score growth determined in paragraph (e) of this section, CMS will set the regional risk score growth cap adjustment factor equal to 1 for each of the following populations of beneficiaries:

(i) ESRD.

(ii) Disabled.

(iii) Aged/dual eligible Medicare and Medicaid beneficiaries.

(iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(2) If the aggregate growth in regional prospective HCC risk scores determined in paragraph (d)(2) of this section exceeds the cap determined in paragraph (e) of this section, CMS will compare the growth in regional prospective HCC risk scores for each Medicare enrollment type as determined in paragraph (d)(1) of this section with the cap on regional risk score growth determined in paragraph (e) of this section.

(i) If the growth in regional prospective HCC risk scores for the enrollment type determined in paragraph (d)(1) of this section does not exceed the cap on regional risk score growth determined in paragraph (e) of this section, CMS will set the regional risk score growth cap adjustment factor for that enrollment type equal to 1.

(ii) If the growth in regional prospective HCC risk scores determined in paragraph (d)(1) for the enrollment type exceeds the cap on regional risk score growth determined in paragraph (e) of this section, CMS will set the regional risk score growth cap adjustment factor for that enrollment type equal to the growth in regional prospective HCC risk scores for the enrollment type determined in paragraph (d)(1) of this section divided by the cap on regional risk score growth determined in paragraph (e) of this section.

105. Section 425.656 is amended—

- a. By revising paragraph (b)(3);
- b. In paragraph (c)(2), by removing the phrase “paragraph (d) of this section” and adding in its place the phrase “paragraph (e) of this section”;
- c. By redesignating paragraphs (d) and (e) as paragraphs (e) and (f), respectively;
- d. By adding new paragraph (d);
- e. In newly redesignated paragraph (e)(5)(ii), by removing the phrase “paragraph (d)(5)(i) of this section” and adding in its place the phrase “paragraph (e)(5)(i) of this section”;
- f. In newly redesignated paragraph (e)(5)(iv), by removing the phrase “paragraphs (d)(1) through (3)” and adding in its place the phrase “paragraphs (e)(1) through (3)”; and
- g. In newly redesignated paragraph (f) introductory text, by removing the phrase “paragraphs (b) through (d)” and adding in its place the phrase “paragraphs (b) through (e)”.

The revision and addition read as follows:

**§ 425.656 Calculating the regional adjustment to the historical benchmark.**

\* \* \* \* \*

(b) \* \* \*

(3) Adjusts for differences in severity and case mix between the ACO’s assigned beneficiary population for BY3 and the assignable population of beneficiaries for the ACO’s regional service area for BY3. The assignable population of beneficiaries is identified for BY3 using the assignment window or expanded window for assignment that is consistent with the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.400(a)(4)(ii).

\* \* \* \* \*

(d) *Expression of the regional adjustment as a single value.* (1) CMS expresses the regional adjustment as a single value by taking a person-year weighted average of the Medicare enrollment type-specific regional adjustment values determined in paragraph (c) of this section.

(2) CMS uses the regional adjustment expressed as a single value for purposes of determining the adjustment, if any, that will be applied to the benchmark in accordance with § 425.652(a)(8).

\* \* \* \* \*

106. Section 425.658 is amended—

a. In paragraph (b)(3)(i), by removing the sentence “The ACO will receive the regional adjustment to its benchmark as described in § 425.656.”;

b. By revising paragraph (c) and adding paragraphs (d) and (e).

The revision and additions read as follows:

**§ 425.658 Calculating the prior savings adjustment to the historical benchmark.**

\* \* \* \* \*

(c) *Calculate the per capita prior savings adjustment.* (1) If an ACO is eligible for the prior savings adjustment as determined in paragraph (b)(3) of this section, the prior savings adjustment will equal the lesser of the following:

(i) 50 percent of the pro-rated average per capita amount computed in paragraph (b)(3)(ii) of this section.

(ii) 5 percent of national per capita expenditures for Parts A and B services under the original Medicare fee-for-service program in BY3 for assignable beneficiaries identified for the 12-month calendar year corresponding to BY3 using data from the CMS Office of the Actuary and expressed as a single value by taking a person-year weighted average of the Medicare enrollment type-specific values.

(2) [Reserved]

(d) *Applicability of the prior savings adjustment.* CMS compares the per capita prior savings adjustment determined in paragraph (c)(1) of this section with the regional adjustment, expressed as a single value as described in § 425.656(d), to determine the adjustment, if any, that will be applied to the ACO’s benchmark in accordance with § 425.652(a)(8).

(e) *Recalculation of the prior savings adjustment during an agreement period.* (1) The ACO's prior savings adjustment is recalculated for changes to the ACO's savings or losses for a performance year used in the prior savings adjustment calculation in accordance with § 425.316(b)(2)(ii)(B) or (C) due to compliance action to address avoidance of at-risk beneficiaries or as a result of issuance of a revised initial determination under § 425.315.

(2) For a new ACO identified as a re-entering ACO, the prior savings adjustment is recalculated for changes to savings or losses for a performance year used in the prior savings adjustment calculation, if the savings or losses of the ACO in which the majority of the new ACO's participants were participating change in accordance with § 425.316(b)(2)(ii)(B) or (C) due to compliance action to address avoidance of at-risk beneficiaries or as a result of issuance of a revised initial determination under § 425.315.

107. Section 425.659 is added to subpart G to read as follows:

**§ 425.659 Calculating risk scores used in Shared Savings Program benchmark calculations.**

(a) *General.* CMS accounts for differences in severity and case mix of the ACO's assigned beneficiaries and assignable beneficiaries (as defined under § 425.20) in calculations used in establishing, adjusting, and updating the ACO's historical benchmark.

(b) *Prospective Hierarchical Condition Category (HCC) risk score calculation.* In determining Medicare FFS beneficiary prospective HCC risk scores for a performance year and each benchmark year of the ACO's agreement period, CMS does the following:

(1) CMS specifies the CMS-HCC risk adjustment methodology used to calculate prospective HCC risk scores for Medicare FFS beneficiaries (as defined under § 425.20) for use in Shared Savings Program calculations as follows:

(i) In calculating risk scores for Medicare FFS beneficiaries for a performance year, CMS applies the CMS-HCC risk adjustment methodology applicable for the corresponding calendar year.

(ii) For agreement periods beginning before January 1, 2024, CMS applies the CMS-HCC risk adjustment methodology for the calendar year corresponding to the benchmark year in calculating risk scores for Medicare FFS beneficiaries for each benchmark year of the agreement period.

(iii) For agreement periods beginning on January 1, 2024, and in subsequent years, CMS applies the CMS-HCC risk adjustment methodology for the calendar year corresponding to the performance year, as specified under paragraph (b)(1)(i) of this section, in calculating risk scores for Medicare FFS beneficiaries for each benchmark year of the agreement period.

(2) CMS does the following to calculate the prospective HCC risk scores identified in paragraph (b)(1) of this section for a benchmark or performance year:

(i) Removes the Medicare Advantage coding intensity adjustment, if applicable.

(ii) Renormalizes prospective HCC risk scores by Medicare enrollment type (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries) based on the national assignable FFS population for the relevant benchmark or performance year.

(iii) Calculates the average prospective HCC risk score by Medicare enrollment type (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries).

108. Section 425.702 is amended—

a. In paragraph (c)(1)(ii) introductory text, by removing the phrase “process development” and adding in its place the phrase “protocol development”;

b. By revising paragraph (c)(1)(ii)(A)(3); and

c. By adding paragraph (c)(1)(iii).

The revision and addition read as follows:

**§ 425.702 Aggregate reports.**

\* \* \* \* \*

(c) \* \* \*

(1) \* \* \*

(ii) \* \* \*

(A) \* \* \*

(3) Beneficiary identifier.

\* \* \* \* \*

(iii) For performance year 2024 and subsequent performance years, CMS, upon the ACO’s request for the data for purposes of population-based activities relating to improving health or reducing growth in health care costs, protocol development, case management, and care coordination, provides the ACO with information about its fee-for-service population.

(A) The following information is made available to ACOs regarding beneficiaries eligible for Medicare CQMs as defined at § 425.20:

(1) Beneficiary name.

(2) Date of birth.

(3) Beneficiary identifier.

(4) Sex.

(B) Information in the following categories, which represents the minimum data necessary for ACOs to conduct health care operations work, is made available to ACOs regarding beneficiaries eligible for Medicare CQMs as defined at § 425.20:

(1) Demographic data such as enrollment status.

(2) Health status information such as risk profile and chronic condition subgroup.

(3) Utilization rates of Medicare services such as the use of evaluation and management, hospital, emergency, and post-acute services, including the dates and place of service.

\* \* \* \* \*

**PART 455---PROGRAM INTEGRITY: MEDICAID**

109. The authority citation for part 455 continues to read as follows:

**Authority:** 42 U.S.C. 1302.

110. Section 455.416 is amended by revising paragraph (c) to read as follows:

**§ 455.416 Termination or denial of enrollment.**

\* \* \* \* \*

(c) Must deny enrollment or terminate the enrollment of any provider that is terminated on or after January 1, 2011, under title XVIII of the Act and under the Medicaid program or CHIP of any other State, and is currently included in the termination database under § 455.417.

\* \* \* \* \*

111. Section 455.417 is added to read follows:

**§ 455.417 Termination periods and termination database periods.**

(a)(1) Subject to paragraph (c) of this section, a provider remains in the termination notification database referenced in section 1902(l) of the Act for a period that is the lesser of:

(i) The length of the termination period imposed by the State that initially terminated the provider or the reenrollment bar (as described in § 424.535(c) of this chapter) imposed by the Medicare program in the case of a Medicare revocation; or

(ii) 10 years (for those Medicaid or CHIP terminations that are greater than 10 years).

(2) All other State Medicaid agencies or CHIPs must terminate or deny the provider from their respective programs (pursuant to § 455.416(c)) for at least the same length of time as the termination database period described in paragraph (a)(1) of this section.

(b)(1) Nothing in paragraph (a) of this section prohibits:

(i) The initially terminating State from imposing a termination period of greater than 10 years consistent with that State's laws, or

(ii) Another State from terminating the provider, based on the original State's termination, for a period:

(A) Of greater than 10 years; or

(B) That is otherwise longer than that imposed by the initially terminating State.

(2) The period established under paragraph (b)(1)(ii) of this section must be no shorter than the period in which the provider is to be included in the termination database under paragraph (a) of this section.

(c)(1) If the initially terminating State agency or the Medicare program reinstates the provider prior to the end of the termination period originally imposed by the initially terminating State agency or Medicare, CMS removes the provider from the termination database after the reinstatement has been reported to CMS.

(2) If the provider is removed from the database pursuant to paragraph (c)(1), CMS may immediately reinclude the provider in the database (with no interval between the 2 periods) if a basis for doing so exists under part 455 or 424 of this chapter.

(d) For purposes of this section only, terminations under § 455.416(c) are not considered “for cause” terminations and therefore need not be reported to CMS for inclusion in the termination database.

**PART 489—PROVIDER AGREEMENTS AND SUPPLIER APPROVAL**

112. The authority citation for part 489 continues to read as follows:

**Authority:** 42 U.S.C. 1302, 1395i-3, 1395x, 1395aa(m), 1395cc, 1395ff, and 1395hh.

113. Section 489.30 is amended by---

- a. Revising paragraph (b)(1); and
- b. Adding paragraphs (b)(6) and (7).

The revision and additions read as follows:

**§ 489.30 Allowable charges: Deductibles and coinsurance.**

\* \* \* \* \*

(b) \* \* \*

(1) The basic allowable charges are the Part B annual deductible and 20 percent of the customary (insofar as reasonable) charges in excess of that deductible, except as specified in paragraphs (b)(6) and (7) of this section.

\* \* \* \* \*

(6) In the case of a rebatable drug (as defined in section 1847A(i)(2)(A) of the Act), including a selected drug (as defined in section 1192(c) of the Act), furnished on or after April 1, 2023, in a calendar quarter in which the payment amount for such drug as specified in section 1847A(i)(3)(A)(ii)(I)(aa) or (bb), as applicable, exceeds the inflation-adjusted amount (as defined in section 1847A(i)(3)(C) of the Act) for such drug, the basic allowable charges are the Part B annual deductible and 20 percent of the inflation-adjusted payment amount for the rebatable drug in excess of that deductible, which is applied as a percent to the payment amount for such calendar quarter.

(7) In the case of insulin furnished on or after July 1, 2023 through an item of durable medical equipment covered under section 1861(n) of the Act, the coinsurance amount shall not exceed \$35 for a month's supply of such insulin each calendar month. This limitation on the coinsurance amount shall apply for the duration of the calendar month in which the date of service (or services) occurs. In addition, the coinsurance amount shall not exceed \$105.00 for 3 months' supply of insulin. This limitation on the coinsurance amount shall apply for the duration of the calendar month in which the date of service (or services) occurs and the 2 following calendar months.

## **PART 491-CERTIFICATION OF CERTAIN HEALTH FACILITIES**

114. The authority citation for part 491 continues to read as follows:

**Authority:** 42 U.S.C. 263a and 1302.

115. Section 491.2 is amended by—

a. Adding the definitions of “Certified nurse-midwife (CNM)”, “Clinical psychologist (CP)”, “Clinical social worker”, “Marriage and family therapist”, and “Mental health counselor” in alphabetical order; and

b. Revising the definition of “Nurse practitioner”.

The additions and revisions read as follows:

**§ 491.2 Definitions.**

\* \* \* \* \*

*Certified nurse-midwife (CNM)* means an individual who meets the applicable education, training, and other requirements at § 410.77(a) of this chapter.

*Clinical psychologist (CP)* means an individual who meets the applicable education, training, and other requirements of § 410.71(d) of this chapter.

*Clinical social worker* means an individual who meets the applicable education, training, and other requirements at § 410.73(a) of this chapter.

\* \* \* \* \*

*Marriage and family therapist* means an individual who meets the applicable education, training, and other requirements at § 410.53 of this chapter.

*Mental health counselor* means an individual who meets the applicable education, training, and other requirements at § 410.54 of this chapter.

*Nurse practitioner* means a person who meets the applicable State requirements governing the qualifications for nurse practitioners, and who meets at least one of the following conditions:

(1) Is certified as a nurse practitioner by a recognized national certifying body that has established standards for nurse practitioners and possesses a master's or doctoral degree in nursing practice; or

(2) Has satisfactorily completed a formal 1 academic year educational program that:

(i) Prepares registered nurses to perform an expanded role in the delivery of primary care;

(ii) Includes at least 4 months (in the aggregate) of classroom instruction and a component of supervised clinical practice; and

(iii) Awards a degree, diploma, or certificate to persons who successfully complete the program; or

(3) Has successfully completed a formal educational program (for preparing registered nurses to perform an expanded role in the delivery of primary care) that does not meet the requirements of paragraph (2) of this definition, and has been performing an expanded role in the delivery of primary care for a total of 12 months during the 18-month period immediately preceding the effective date of this subpart.

\* \* \* \* \*

116. Section 491.8 is amended by revising paragraphs (a)(3) and (6) to read as follows:

**§ 491.8 Staffing and staff responsibilities.**

(a) \* \* \*

(3) The physician assistant, nurse practitioner, certified nurse-midwife, clinical social worker, clinical psychologist, marriage and family therapist, or mental health counselor member of the staff may be the owner or an employee of the clinic or center, or may furnish services under contract to the clinic or center. In the case of a clinic, at least one physician assistant or nurse practitioner must be an employee of the clinic.

\* \* \* \* \*

(6) A physician, nurse practitioner, physician assistant, certified nurse-midwife, clinical social worker, clinical psychologist, marriage and family therapist, or a mental health counselor is available to furnish patient care services at all times the clinic or center operates. In addition, for RHCs, a nurse practitioner, physician assistant, or certified nurse-midwife is available to furnish patient care services at least 50 percent of the time the RHC operates.

\* \* \* \* \*

**PART 495—STANDARDS FOR THE ELECTRONIC HEALTH RECORD  
TECHNOLOGY INCENTIVE PROGRAM**

117. The authority citation for part 495 continues to read as follows:

**Authority:** 42 U.S.C. 1302 and 1395hh.

118. In § 495.4 amend the definition of “Certified electronic health record technology (CEHRT)” by revising paragraph (2) introductory text to read as follows:

**§ 495.4 Definitions.**

\* \* \* \* \*

*Certified electronic health record technology (CEHRT) \* \* \**

(2) For 2019 and subsequent years, EHR technology (which could include multiple technologies) certified under the ONC Health IT Certification Program that meets the 2015 Edition Base EHR definition, or subsequent Base EHR definition (as defined at 45 CFR 170.102) and has been certified to the ONC health IT certification criteria, as adopted and updated in 45 CFR 170.315—

\* \* \* \* \*

**PART 498 - APPEALS PROCEDURES FOR DETERMINATIONS THAT AFFECT PARTICIPATION IN THE MEDICARE PROGRAM AND FOR DETERMINATIONS THAT AFFECT THE PARTICIPATION OF ICFs/IID AND CERTAIN NFs IN THE MEDICAID PROGRAM**

119. The authority citation for part 498 continues to read as follows:

**Authority:** 42 U.S.C. 1302, 1320a-7j, and 1395hh.

120. In § 498.2 amend the definition of “Supplier” by revising paragraph (6) to read as follows:

**§ 498.2 Definitions.**

\* \* \* \* \*

*Supplier \* \* \**

(6) For purposes of this part, a physical therapist in private practice, an occupational therapist in private practice, or a speech-language pathologist.

\* \* \* \* \*

**PART 600 - ADMINISTRATION, ELIGIBILITY, ESSENTIAL HEALTH BENEFITS, PERFORMANCE STANDARDS, SERVICE DELIVERY REQUIREMENTS, PREMIUM AND COST SHARING, ALLOTMENTS, AND RECONCILIATION**

121. The authority citation for part 600 continues to read as follows:

**Authority:** Section 1331 of the Patient Protection and Affordable Care Act of 2010 (Pub. L. 111-148, 124 Stat. 119), as amended by the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111 – 152, 124 State. 1029).

122. Section 600.125 to revised read as follows:

**§ 600.125 Revisions to a certified BHP Blueprint.**

(a) *Submission of revisions.* A State may seek to revise its certified Blueprint in whole or in part at any time through the submission of a revised Blueprint to HHS. A State must submit a revised Blueprint to HHS whenever necessary to reflect--

(1) Changes in Federal law, regulations, policy interpretations, or court decisions that affect provisions in the certified Blueprint;

(2) Significant changes that alter core program operations under 600.145(f) or the BHP benefit package; or

(3) Changes to enrollment, disenrollment, and verification policies described in the certified Blueprint.

(b) *Submission and effective dates.* The effective date of a revised Blueprint may not be earlier than the first day of the quarter in which an approvable revision is submitted to HHS. A revised Blueprint is deemed received when HHS receives an electronic copy of a cover letter signed by the Governor or Governor's designee and a copy of the currently approved Blueprint with proposed changes in track changes.

(c) *Timing of HHS review.* (1) A revised Blueprint will be deemed approved unless HHS, within 90 calendar days after receipt of the revised Blueprint, sends the State-

(i) Written notice of disapproval; or

(ii) Written notice of additional information it needs in order to make a final determination.

(2) If HHS requests additional information, the 90-day review period for HHS action on the revised Blueprint-

(i) Stops on the day HHS sends a written request for additional information or the next business day if the request is sent on a Federal holiday or weekend; and

(ii) Resumes on the next calendar day of the original 90-day review period after HHS receives a complete response from the State including all the requested additional information, unless the information is received after 5 p.m. eastern standard time on a day prior to a non-business day or any time on a non-business day, in which case the review period resumes on the following business day.

(3) The 90-day review period cannot stop or end on a non-business day. If the 90th calendar day falls on a non-business day, HHS will consider the 90th day to be the next business day.

(4) HHS may send written notice of its need for additional information as many times as necessary to obtain the complete information necessary to review the revised Blueprint.

(5) HHS may disapprove a Blueprint that is not consistent with section 1331 of the ACA or the regulations set forth in this Part at any time during the review process, including when the 90-day review clock is stopped due to a request for additional information.

(d) *Continued operation.* The State is responsible for continuing to operate under the terms of the existing certified Blueprint until and unless -

(1) The State adopts a revised Blueprint by obtaining approval by HHS under this section;

(2) The State follows the procedures described in § 600.140(a) for terminating a BHP;

(3) The State follows the procedures described in § 600.140(b) for suspending a BHP;

(4) The Secretary withdraws certification of a BHP under 600.142.

(e) *Withdrawal of a revised Blueprint.* A State may withdraw a proposed Blueprint revision during HHS' review if the State has not yet implemented the proposed changes and provides written notice to HHS.

(f) *Reconsideration of decision.* HHS will accept a State request for reconsideration of a decision not to certify a revised Blueprint and provide an impartial review against the standards for certification if requested.

(g) *Public health emergency.* For the Public Health Emergency, as defined in § 400.200 of this chapter, the State may submit to the Secretary for review and certification a revised Blueprint, in the form and manner specified by HHS, that makes temporary significant changes to its BHP that are directly related to the Public Health Emergency and would increase enrollee access to coverage. Such revised Blueprints may have an effective date retroactive to the first day of the Public Health Emergency and through the last day of the Public Health Emergency, or a later date if requested by the State and certified by HHS. Such revised Blueprints are not subject to the public comment requirements under § 600.115(c).

123. Section 600.135 is amended by revising the section heading and paragraph (a) to read as follows:

**§ 600.135 Notice and timing of HHS action on an initial BHP Blueprint submission.**

(a) *Timely response.* HHS will act on all initial Blueprint certification requests in a timely manner.

\* \* \* \* \*

124. Section 600.140 is amended by adding introductory text and paragraphs (b) and (c) to read as follows:

**§ 600.140 State termination or suspension of a BHP.**

A State that no longer wishes to operate a BHP may terminate or suspend its BHP.

\* \* \* \* \*

(b) If a State decides to suspend its BHP, or to request an extension of a previously-approved suspension, the State must:

(1) Submit to the Secretary a suspension application or a suspension extension application, as applicable. The suspension or suspension extension application must:

(i) Demonstrate that the benefits BHP-eligible individuals will receive during the suspension are at least equal to the benefits provided under the certified BHP Blueprint in effect on the effective date of suspension;

(ii) Demonstrate that the median actuarial value of the coverage provided to the BHP-eligible individuals during the suspension is no less than the median actuarial value of the coverage under the certified BHP Blueprint in effect on the effective date of suspension;

(iii) Demonstrate that the premiums imposed on BHP-eligible individuals during the suspension are no higher than the premiums charged under the certified BHP Blueprint in effect on the effective date of suspension, except that premiums imposed during the suspension may be adjusted for inflation, as measured by the Consumer Price Index;

(iv) Demonstrate that the eligibility criteria for coverage during the suspension is not more restrictive than the criteria described in § 600.305;

(v) Describe the period, not to exceed 5 years, that the State intends to suspend its BHP or to extend a previously-approved suspension;

(vi) Be submitted at least 9 months in advance of the proposed effective date of the suspension or extension, except States seeking to suspend a BHP in 2024 must submit an application within 30 days of the effective date of this provision; and

(vii) Include an evaluation of the coverage provided to BHP eligible individuals during the suspension period, if the State is seeking an extension.

(2) Resolve concerns expressed by HHS and obtain approval by the Secretary of the suspension or suspension extension application. Suspensions may not be in effect prior to approval by HHS, except for States seeking to suspend a BHP in 2024.

(3) At least 90 days prior to the effective date of the suspension, provide written notice to all enrollees and participating standard health plan offerors that it intends to suspend the program, if the enrollees will experience a change in coverage, or standard health plan offerors will experience a change in the terms of coverage. The notices to enrollees must include information regarding the State's assessment of their eligibility for all other insurance affordability programs in the State. Notices must meet the accessibility and readability standards at 45 CFR 155.230(b).

(4) Within 12 months of the suspension effective date, submit to HHS the data required by § 600.610 to complete the financial reconciliation process with HHS.

(5) Submit the annual report required by § 600.170(a)(2), describing the balance of the trust fund, and any interest accrued on such amount.

(6) Annually, remit to HHS any interest that has accrued on the balance of the BHP trust fund during the suspension period in the form and manner specified by HHS.

(7) At least 9 months before the end of the suspension period described in paragraph (b)(1)(iv) of this section, or earlier date elected by the State, the State must submit to HHS a transition plan that describes how the State will reinstate its BHP consistent with the requirements of this part, or terminate the program in accordance with paragraph (a) of this section. The State must meet the noticing requirements of paragraph (b)(3) of this section prior to terminating or reinstating the BHP.

(c) The Secretary may withdraw approval of the suspension plan, if the terms of paragraph (b) of this section are not met, if the State ends implementation of the alternative coverage program for any reason, or if HHS finds significant evidence of beneficiary harm, financial malfeasance, fraud, waste, or abuse by the BHP agency or the State consistent with § 600.142 of this part. If HHS withdraws the approved suspension plan, the State must reinstate its BHP under the terms of this part, or terminate the program under paragraph (a) of this section.

(1) The Secretary may withdraw approval of a suspension under this section only after the Secretary provides the State with notice of the findings upon which the Secretary is basing the withdrawal; a reasonable period for the State to address the finding; and an opportunity for a hearing before issuing a final finding.

(2) The Secretary must make every reasonable effort to work with the State to resolve proposed findings without withdrawing approval of a suspension and in the event of a decision to withdraw approval, will accept a request from the State for reconsideration.

(3) The effective date of an HHS determination withdrawing approval of the suspension plan shall not be earlier than 120 days following issuance of a final finding under paragraph (d)(1) of this section.

(4) Within 30 days following a final finding under paragraph (d)(1) of this section, the State must submit a transition plan to HHS.

125. Section 600.145 is amended by revising paragraphs (a) and (f)(2) to read as follows:

**§ 600.145 State program administration and operation.**

(a) *Program operation.* The State must implement its BHP in accordance with:

(1) The approved and fully certified State BHP Blueprint, any approved modifications to the State BHP Blueprint and the requirements of this chapter and applicable law; or

(2) The approved suspension application described in § 600.140.

\* \* \* \*

(f) \* \* \*

(2) Eligibility and health services appeals as specified in 600.335.

\* \* \* \*

126. Section 600.170 amended by revising paragraph (a) to read as follows:

**§ 600.170 Annual report content and timing.**

(a) *Content.* (1) The State that is operating a BHP must submit an annual report that includes any evidence of fraud, waste, or abuse on the part of participating providers, plans, or

the State BHP agency known to the State, and a detailed data-driven review of compliance with the following:

(i) Eligibility verification requirements for program participation as specified in § 600.345.

(ii) Limitations on the use of Federal funds received by the BHP as specified in § 600.705.

(iii) Requirements to collect quality and performance measures from all participating standard health plans focusing on quality of care and improved health outcomes as specified in sections 1311(c)(3) and (4) of the Affordable Care Act and as further described in § 600.415.

(iv) Requirements specified by the Secretary at least 120 days prior to the date of the annual report as requiring further study to assess continued State compliance with Federal law, regulations and the terms of the State's certified Blueprint, based on a Federal review of the BHP pursuant to § 600.200, and/or a list of any outstanding recommendations from any audit or evaluation conducted by the HHS Office of Inspector General that have not been fully implemented, including a statement describing the status of implementation and why implementation is not complete.

(2) A State that has suspended its BHP under § 600.140(b) of this part must submit an annual report that includes the following:

(i) The balance of the BHP trust fund and any interest accrued on that balance;

(ii) An assurance that the coverage provided to individuals who would be eligible for a BHP under § 600.305 of this part continues to meet the standards described in § 600.140(b)(1)(i), (ii), and (iii) of this part; and

(iii) Any additional information specified by the Secretary at least 120 days prior to the date of the annual report.

\* \* \* \* \*

127. Section 600.330 is amended by adding paragraph (f) to read as follows:

**§ 600.330 Coordination with other insurance affordability programs.**

\* \* \* \* \*

(f) *Accessibility.* Eligibility notices must be written in plain language and be provided in a manner which ensures individuals with disabilities are provided with effective communication and takes steps to provide meaningful access to eligible individuals with limited English proficiency.

128. Section 600.335 is amended by—

- a. Revising paragraph (b);
- b. Redesignating paragraph (c) as paragraph (d); and
- c. Adding new paragraph (c).

The revision and addition read as follows:

**§ 600.335 Appeals.**

\* \* \* \* \*

(b) *Appeals process.* Individuals must be given the opportunity to appeal the following actions through the appeals rules of the State’s Medicaid program, unless granted an exception under paragraph (c) of this section:

(1) BHP eligibility determinations; and

(2) Delay, denial, reduction, suspension, or termination of health services, in whole or in part, including a determination about the type or level of service, after individuals exhaust appeals or grievances through the BHP standard health plans

(c) *Exception.* Subject to HHS approval, a state may request to follow an appeals process for BHP eligibility determinations and health service matters that differs from the State’s Medicaid program. In its request, the State must provide a clear description of the responsibilities and functions delegated to such an entity and ensure that:

(1) The State has oversight of any entity delegated the authority to administer appeals;

(2) The agency to which eligibility determinations or appeals decisions are delegated complies with all relevant Federal and State law, regulations and policies; and

(3) The agency to which eligibility determinations or appeals decisions are delegated informs applicants and beneficiaries how they can directly contact and obtain information from the agency.

\* \* \* \* \*

---

**Xavier Becerra,**

Secretary,

Department of Health and Human Services.

Note: The following appendices will not appear in the Code of Federal Regulations.

## APPENDIX 1: MIPS QUALITY MEASURES

**NOTE:** Except as otherwise noted in this final rule, previously finalized measures, and specialty measures sets will continue to apply for the CY 2024 performance period/2026 MIPS payment year and future years. Previously finalized measures and specialty measures sets are located in the CY 2017 through CY 2023 PFS final rules: 81 FR 77558 through 77816, 82 FR 53966 through 54174, 83 FR 60097 through 60285, 84 FR 63205 through 63513, 85 FR 85045 through 85369, 86 FR 65687 through 65968, and 87 FR 70250 through 70633. In addition, electronic clinical quality measures (eCQMs) that are endorsed by a consensus-based entity (CBE) are shown in Table A of this Appendix as follows: CBE # / eCQM CBE #.

**Table Group A: New Quality Measures Finalized and Not Finalized for the CY 2024 Performance Period/2026 MIPS Payment Year and Future Years**

### A.1. Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Clinician Level)

Category	Description
<b>CBE # / eCQM CBE #:</b>	CBE 3633e (clinician level) CBE 3662e (clinician group level)
<b>Quality #:</b>	494 eCQM ID CMS1056v1
<b>Description:</b>	This measure provides a standardized method for monitoring the performance of diagnostic CT to discourage unnecessarily high radiation doses, a risk factor for cancer, while preserving image quality. It is expressed as a percentage of CT exams that are out-of-range based on having either excessive radiation dose or inadequate image quality relative to evidence-based thresholds based on the clinical indication for the exam. All diagnostic CT exams of specified anatomic sites performed in inpatient, outpatient and ambulatory care settings are eligible. This eCQM requires the use of additional software to access primary data elements stored within radiology electronic health records and translate them into data elements that can be ingested by this eCQM. Additional details are included in the Guidance field.
<b>Measure Steward:</b>	Alara Imaging, Inc. in collaboration with the University of California, San Francisco (UCSF)
<b>Numerator:</b>	Calculated CT size-adjusted dose greater than or equal to a threshold specific to the CT dose and Image Quality Category, or Calculated CT Global Noise value greater than or equal to a threshold specific to the CT Dose and Image Quality Category.
<b>Denominator:</b>	All CT scans in adults aged 18 years and older at the start of the measurement period that have a CT Dose and Image Quality Category and were performed during the measurement period.
<b>Exclusions:</b>	Denominator, where a CT scan with a CT Dose and Image Quality Category = full body.
<b>Measure Type:</b>	Intermediate Outcome
<b>High Priority Measure:</b>	Yes
<b>Collection Type:</b>	eCQM Specifications
<b>Measure-Specific Case Minimum/Performance Period:</b>	N/A for this measure
<b>Rationale:</b>	<p>We proposed this measure to enhance patient safety and drive quality care in diagnostic radiology and assess outcomes of care for patients undergoing diagnostic CT imaging. This measure will improve patient safety by supporting clinician actions that are associated with a reduction in population-level cancer risks, in addition to associated cancer-related morbidity and mortality. As a result, this measure may also reduce the cost of caring for these patients.</p> <p>In the U.S., over 80 million CT scans are performed annually, and the radiation doses associated with these exams are a safety issue, as unnecessarily high radiation doses lead to harm by exposing patients to elevated cancer risk.<sup>1</sup> Numerous consensus-based clinical recommendations and guidelines ask radiologists to track, optimize, and lower the radiation doses they use for CT. These recommendations and guidelines are based on evidence that radiation doses are highly variable across institutions, higher than needed for diagnosis, and can lead to excessive patient harm. These recommendations and guidelines also indicate that physicians collect and compare their doses to benchmarks and reduce their doses if they are found to routinely exceed these benchmarks.<sup>2,3</sup></p> <p>This measure will support radiologists with a clinically relevant outcome measure within MIPS and meet the high priority definition for MIPS reporting as an outcome and patient safety measure. This measure received support for rulemaking from the Measure Applications Partnership (MAP) and was endorsed by a CBE (CBE 3633e/3662e).</p> <p>This measure will enhance the accessibility of data contained in electronic clinical data systems for increased efficiency, which could decrease clinician burden. Using electronic and standardized data already collected as part of routine clinical care, this measure assesses the radiation dose for every exam with complete information and assessment of imaging quality to ensure that efforts to reduce radiation dose do not result in poor image quality. It is also consistent with our emphasis on expanding the use of digital quality measures. The measure steward has created “as low as reasonably achievable” (ALARA) translation software that ingests radiology variables from Picture Archiving and Communication System (PACS), Radiology Information System (RIS), and electronic health records (EHR) systems for use with this quality measure. The software translates data from these systems into new variables that are specified in Logical Observation Identifiers Names and Codes (LOINC®), reflecting radiation dose and image quality information for each scan, that can then be used for</p>

reporting this measure. This translation software will be available to all clinicians and sites without cost, including any updates that need to be completed. Additionally, software tutorials, training, and webinars will also be provided at no cost.

This measure is more robust than measure Q436: Radiation Consideration for Adult CT: Utilization of Dose Lowering Techniques, which is finalized for removal with a 1-year delay to the CY 2025 performance period/2027 MIPS payment year and future years under Table C.12 of this Appendix to reduce duplication concurrent to the adoption of this measure. This measure assesses actual radiation dosing in patients undergoing diagnostic CT imaging, whereas the current measure assesses only utilization of dose optimization techniques (that is, a radiologist's choice of protocol) as documented within the final report. This measure is an intermediate outcome measure of radiation dose, which is strongly associated with cancer risk. This measure covers the two key process of care components that determine the radiation doses: a) the choice of imaging protocol; and b) decisions regarding the technical settings used for that type of CT exam. It assesses radiation dose according to thresholds determined by the underlying clinical indication for imaging and not based upon radiologists' choice of protocol. In addition, this measure includes assessment of image quality as a means of thereby protecting the diagnostic value of CT imaging from unintended consequences of excessive dose reduction. Minimizing dose by adherence to these factors will reduce the number of future cancers that may result from the radiation exposure, and that could in turn lead to a reduction in morbidity, mortality, and health care costs.<sup>4,5,6</sup>

Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at <https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports>.

*Comment:* Many commenters supported the addition of the new Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Clinician Level) measure. The commenters agreed that the measure will have a large, positive impact on patients by reducing unnecessary radiation exposure and cancer risk, without compromising diagnostic image quality. A couple of these commenters indicated the proposed measure is well designed, well tested, and feasible, as well as endorsed by the Consensus-based Entity (CBE). One commenter appreciated CMS' efforts to implement this measure across incentive programs in various settings – inpatient, outpatient, and physician – as it will encourage synergy across entities and lead to greater quality improvement for CT overall. One commenter indicated that testing found this measure to be highly feasible with satisfactory feedback on the measure performance.

*Response:* We thank the commenters for supporting this new measure in MIPS.

*Comment:* A few commenters expressed concern about the lack of national consensus of interested parties and practitioners and endorsed benchmarks on this measure.

*Response:* We disagree that there is a lack of national consensus of interested parties and practitioners on this measure and the guidelines used for determination of performance. The measure relies on epidemiological and biological evidence and consensus-based clinical guidelines for optimizing CT radiation doses, including guidelines developed by the American College of Radiology,<sup>7</sup> the Society of Interventional Radiology,<sup>8</sup> the Society of Cardiovascular CT,<sup>9</sup> cardiovascular imaging societies,<sup>10</sup> Image Wisely 2020,<sup>11</sup> and the Food and Drug Administration.<sup>12</sup> This measure was submitted to the CBE by the measure developer for endorsement review at both the clinician and clinician group-level (CBE 3633e, CBE 3662e) and was endorsed on August 2, 2022, through a process that is intended to build consensus on the measure. Endorsement is intended to ensure a measure is evidence-based, reliable, valid, verifiable, relevant to enhanced health outcomes, actionable at the caregiver level, feasible to collect and reportable. This measure allows clinicians to be responsive to variations in patient characteristics, such as health status, language capabilities, race or ethnicity, and income level, and is consistent across types of health care providers, including hospitals and physicians.

*Comment:* One commenter indicated the measure was inappropriate to be added as an eCQM and does not align with the definition of an eCQM. Another commenter suggested having the measure as a type of hybrid: one that relies partially on EHR data and partially on another entity/software to calculate.

*Response:* This measure is suitable for eCQM reporting. As set forth in the eCQI Resource Center, we define an eCQM as a measure specified in a standard electronic format that uses data electronically extracted from EHRs and/ or health IT systems to measure the quality of health care provided (<https://ecqi.healthit.gov/glossary>). Because this measure uses patients' radiology data that exist in a structured and standard electronic format that can be electronically extracted from radiology IT data systems, this measure is an eCQM. The Alara Imaging software links primary data elements, assesses CT scans for eligibility for inclusion in the measure, and generates three data elements mapped to a clinical terminology for use within the eCQM logic. The measure derives standardized data elements from structured fields within both the EHR and the radiology electronic clinical data systems. This eCQM requires the use of additional software (translation software) to access the primary data elements required for measure computation and translate them into data elements that can be ingested by this eCQM. The purpose of this translation software is to access and link these primary data elements with minimal site burden, assess each CT exam for eligibility based on initial population criteria, and generate the three data elements mapped to a clinical terminology for eCQM consumption, which are required and can be stored in the EHR.

*Comment:* A few commenters expressed concern on limited testing supporting the measure. Commenters also noted the CT size-adjusted dose and CT global noise have not been adequately assessed and validated. There were concerns that if the measure defines quality based on noise it leaves out other considerations such as contrast resolution, lesion detection ability, and physician preference. One commenter noted that as radiation exposure is cumulative over a lifespan, age and prior or anticipated radiation exposure history, including therapeutic irradiation for malignancies, are also crucial considerations not currently considered within the measure. The commenter supported the overall goals of the measure but opposed the finalization of the measure as stated until further testing in oncology settings can be conducted.

*Response:* This measure has been fully developed and tested at the clinician level with adequate reliability and validity and has received CBE endorsement, which reviewed the measure's testing and validity. Measure testing by the measure developer across 16 inpatient and outpatient hospitals showed that availability, accuracy, validity, and reproducibility were high for all of the measure's required data elements and that the variables were calculated by the translation software. The purpose of the Excessive Radiation Dose eCQM is to ensure the radiation dose and image quality fall within thresholds that are safe and appropriate. It is not intended to oversimplify the relationship between noise and radiation. The image quality component is included in the measure as a balancing component to the radiation dose thresholds, to ensure the CT image quality does not decrease as an unintended consequence of the measure. Clinicians should use the measure as a guideline for conducting CT scans while also adjusting noise and radiation doses when necessary to provide quality patient care in special circumstances, such as for oncology patients. The measure seeks to reduce harm from excessive radiation for the vast majority of patients and is not a substitute for appropriate clinical judgement.

*Comment:* Many commenters expressed concerns related to the measure construction, including:

- Concerns on actionability and usability of the measure.
- Scientific limitations that will impact the measure's safety and practical value and may even negatively impact image quality, patient safety, and patient outcomes.
- Lack of clarity on what is being measured and how good imaging quality will be determined, as well as any requirements for maintaining data over time. Also, concerns raised with measure not being standardized, and gross under-representation of image quality.
- Improper estimation of radiation risk. In terms of dose length product (DLP) adjusted by patient size, not the actual patient dose, the commenter indicated that radiation risk estimation is explicitly prohibited by the American Association of Physicists in Medicine (AAPM) standard.
- Over-simplified stratification of CT categories and substantial oversimplified representation of implementation, including not addressing the implementation challenges.
- Emphasis on dose reduction instead of dose optimization.
- Concern that term "excessive radiation dose" is an imprecise and inaccurate term.
- Test substitution (for example, stress echocardiography for stress nuclear perfusion imaging) may result solely for the purpose of metric performance rather than proceeding forward with what might be the better test for a particular patient.

*Response:* We disagree. The measure information is highly actionable as it encourages clinicians to review and optimize imaging practices that directly affect patient safety. The measure is designed to be easily used. To further improve its actionability, the measure developer has made a tool publicly available to facilitate the use of data extracted directly from the mostly commonly used imaging formats. The Alara software accepts a wide range of Fast Healthcare Interoperability Resources (FHIR), Health Level (HL) 7 formats for EHR data, as well as Digital Imaging and Communications in Medicine (DICOM) CT radiation dose and image data. This measure is ready for implementation as proposed, as it has undergone rigorous testing and received endorsement from a CBE and is based upon evidence-based guidelines. However, we acknowledge that the implementation of this measure within a clinician/group's existing systems for reporting may require more time and resources; therefore, we are delaying finalization of this measure for one year to allow time to complete these updates.

This is a measure of size-adjusted radiation dose greater than or equal to a threshold specific to the CT dose and Image Quality Category or Calculated CT Global Noise value greater than or equal to a threshold specific to the CT Dose and Image Quality Category. More details regarding the measure's specifications were posted on the eCQI Resource Center in conjunction with our proposal ([https://ecqi.healthit.gov/ecqm/ec/pre-rulemaing/2024/cms1056v1#quicktabs-tab-tabs\\_pre\\_rule\\_measure-0](https://ecqi.healthit.gov/ecqm/ec/pre-rulemaing/2024/cms1056v1#quicktabs-tab-tabs_pre_rule_measure-0)). The scientific limitations alluded to within the comment are addressed by the use of image quality as a balancing factor, basing image quality and CT category-specific radiation dose on a study of radiologists' satisfaction, and basing performance on clinical indication for imaging and not on the exam performed.

The measure uses dose length product (DLP), which gives the total radiation imparted to the patient by the CT machine. This is a standardized data element, generated by virtually (>99%) all CT machines, that is well validated and used broadly to reflect the radiation dose delivered to the patient.<sup>2,4</sup> It is also commonly used in benchmarking in the U.S. and globally (ACR–AAPM–SPR: Practice parameter, European Commission: Radiation Protection No. 185, ICRP Publication 135 (<https://pubmed.ncbi.nlm.nih.gov/29065694/>)). The proposed measure adjusts DLP for patient size to ensure that differences in patient mix would not result in differences in measure scores across reporting entities. By adjusting DLP for patient size, the measure will attribute patients by this parameter to create congruency for the purposes of performance calculation. This is not intended to change current dosing guidelines or best practices. The measure is adjusted to allow equitable comparisons between clinicians/groups that may otherwise be biased due to potential variance in patient demographic. When radiation dose is unadjusted for patient size, failure rates are strongly associated with size, with almost all failures occurring in larger patients. When radiation dose is adjusted for size, there is no association.

The measure optimizes radiation dose; it does not minimize radiation dose. The image quality component balances the radiation dose thresholds, to ensure the CT image quality does not decrease as a consequence of the measure. The thresholds for radiation doses are size adjusted to accommodate patients of all sizes. We emphasize that clinicians should use the measure as a guideline for conducting CT scans while also adjusting noise and radiation doses when necessary to provide quality patient care. The measure seeks to reduce harm from excessive radiation for the vast majority of patients and does not replace appropriate clinical judgement.

We encourage the commenters to reach out to the measure steward to address potential changes to terminology used within the measure; however, this title, which includes the term "excessive radiation dose", aligns with the CBE version of the measure. With respect to test substitution, we note above that compliance with this measure is not a substitute for clinical judgement. We expect clinicians to choose the most appropriate diagnostic test for the patient.

*Comment:* Many commenters cited concerns with attributing performance to clinicians, specifically diagnostic radiologists. Reporting this measure at the clinician level will be difficult for radiology groups without collaboration, coordination, or implementation support at hospitals, especially when CT equipment and systems are primarily owned by the hospital or imaging facility. Commenters stated the measure is better suited for healthcare system level performance.

*Response:* The measure is intended to reflect patient care and safety provided by diagnostic radiologists. It is CBE endorsed at both the clinician and clinician group-levels of reporting. MIPS eligible clinicians are not required to report this measure because they have the flexibility to choose measures that are relevant and meaningful to their practice.

*Comment:* One commenter cited concern related to different timeframes for adoption and reporting within each of the three quality programs (Inpatient Quality Reporting, Hospital Outpatient Quality Reporting, and MIPS), and different timeframes for when this measure will become mandatory reporting in other settings. In addition, there were requests to delay this measure by one year or longer. A few commenters indicated they provided similar comments on the Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Hospital Level—Inpatient) eCQM measure finalized in the Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year 2024 Rate final rule (<https://www.govinfo.gov/content/pkg/FR-2023-08-28/pdf/2023-16252.pdf>) beginning with the 2025 reporting period (see 88 FR 59154 through 59161).

*Response:* We thank the commenters for their feedback and will delay implementation for one year. This will align implementation timeframes across CMS programs. This measure is ready for implementation as proposed, as it has undergone rigorous testing and received endorsement from a CBE. However, based upon feedback received, we are delaying implementation of this measure to allow time for

reporters to perform system updates. This will allow for timely and proper implementation of the software in preparation for successful reporting.

*Comment:* One commenter expressed concern over the additional burden for hospitals, imaging centers, and groups supporting rural or underserved communities with implementing the measure than larger, integrated hospital systems. This is due to their older equipment and lack of in-house physicists. The measure will be difficult or infeasible for many radiology practices who do not control the equipment or its data. Since many practices serve multiple locations, that may not be related, collecting the data would need to be done in a disjointed fashion.

*Response:* As previously noted, MIPS eligible clinicians will not be required to report this measure because they have the flexibility to choose measures that are relevant and meaningful to their practice. Using the UCSF International CT Dose Registry, which contains over 8 million CT exams from more than 160 imaging facilities, the measure developer has determined the important contributors to radiation dose and its variation.<sup>13</sup> This is the best information currently available to understand drivers of dose. The results show that patient size, the reason for the CT scan, and the machine (make and model) do influence doses, but do not drive the variation in dose. The dose variation remains after accounting for these factors. The most important determinant of dose is not the machine, but the local decisions by radiologists, medical physicists, and radiology technologists about how to perform the exam and the choice of technical parameters. Appropriately dosed scans can be obtained on all patients and on all machine types.

*Comment:* A few commenters indicated concern related to the timing for this measure and it encourages installation of 3rd party software that interfaces with integral healthcare system platforms. Organizations need time to review, analyze, and safely implement the recommended software tools.

*Response:* We stress the importance of balancing the patient safety concerns presented by exposure to excessive radiation while still providing clinicians with enough time to implement the measure. This measure is ready for implementation as proposed, as it has undergone rigorous testing and received endorsement from the CBE. The CBE endorsement process included review by the CBE-convened MAP Health Equity Advisory Group and Rural Health Advisory Group, which supported the measure.<sup>14</sup> However, based upon feedback received, we are delaying implementation of this measure to allow time for reporters to perform system updates. This will allow for timely and proper implementation of the software.

*Comment:* A couple of commenters cited concerns related to coding issues. One commenter indicated that Logical Observation Identifier Names and Codes (LOINC) codes created for the measure calculated fields exist but may not necessarily be used by every facility or group. Capturing data for the new codes will need to be configured and it may be difficult to extract these data elements and transform them into calculated fields with accuracy or consistency. In addition, the accuracy and specificity of CPT/ICD-10 codes to determine the true indication for an exam at the time of order was a cause for concern. Another commenter also mentioned the unintended consequences of the measure should be monitored over time, such as the inappropriate shifting of care or coding/billing practices, or increased patient morbidity and mortality.

*Response:* As previously noted, this measure is voluntary, and MIPS eligible clinicians have the flexibility to choose measures that are relevant and meaningful to their practice. The measure derives standardized data elements from structured fields within both the EHR and the radiology electronic clinical data systems, including the Radiology Information System (RIS) and the Picture Archiving and Communication System (PACS). This eCQM may require the use of additional software (translation software) to access the primary data elements required for measure computation and translate them into data elements that can be ingested by this eCQM. The purpose of this translation software is to access and link these primary data elements with minimal site burden, assess each CT exam for eligibility based on initial population criteria, and generate the three data elements mapped to a clinical terminology for eCQM consumption, which are required and can be stored in the EHR. As with all eCQMs, it would be expected the measure is implemented in accordance with the measure specification and published logic. The measure will be maintained and updated as appropriate through the established annual update (AU) process. We do not intend for clinicians to shift billing practices to accommodate MIPS quality measure reporting, but rather to choose measures that drive quality of care and can be integrated in their workflow.

*Comment:* A few commenters expressed concerns on this new measure related to privacy and security issues, as well as the need for data agreements. These included:

- Transmitting data to a private vendor raises concerns related to privacy and security, as well as connectivity issues between different systems (EHR, RIS, and PACS).
- Potential for information system vulnerability (cybercrime) warrants consideration.
- Concerns on potential data breaches or security protocols and third-party business arrangements with data sharing.
- Lack of clarity on what type of agreements need to be signed between health IT vendors and the private vendor, and/or between hospitals and this private vendor.

*Response:* We appreciate the commenters' concerns. The Alara Imaging Software for CMS Measure Compliance does not require the transmission of data to a new vendor and thus does not require the execution of new data use agreements. The software is installed and computes the measure's elements on the system of the measure reporter's choice, behind their own firewall. Measure-related activities, including calculation, do not require the transmission of any data to outside entities as the software only works to create data elements for use with the current EHR system. Nonetheless, we note that the measure steward's security aligns with industry standards, including HIPAA and Systems and Organization Controls (SOC) 2 certification verified via ongoing third-party audits.

*Comment:* Many commenters expressed concern related to cost issues. These included:

- Concerns on other associated costs for the free Alara software, such as hardware, application support, and maintenance. There is an additional burden in implementing the proprietary program and ensuring compatibility within system IT networks. Due to software configuration, coding and billing issues, radiation dose, and global noise issues, costs could be high.
- Concern on costs because the software for implementing this measure was created and maintained by a single commercial vendor, in conjunction with the measure steward.
- Burden of depending on a third-party software to upload data and retrieve and integrate the results for measure reporting.

*Response:* We acknowledged the cost of measure implementation is a factor when choosing which quality measures to submit; however, MIPS eligible clinicians have the flexibility to choose measures that are relevant and meaningful to their practice. The Alara software accepts a wide range of FHIR, HL7 formats for EHR data, as well as DICOM CT radiation dose and image data to decrease burden. Similar to other eCQMs, the measure has also been developed using proven formats: Quality Data Model (QDM) for immediate implementation and FHIR when adopted in the future, in accordance with our aim of encouraging interoperability based on the FHIR Application Programming Interface (API). Thus, the overall burden is comparable to that of existing eCQMs. The Alara software links

primary data elements, assesses CT scans for eligibility for inclusion in the measure, and generates three data elements mapped to clinical terminology for measure computation and can be stored in the EHR.

*Comment:* One commenter did not support this measure unless it was voluntary for eligible hospitals, critical access hospitals, and eligible clinicians.

*Response:* This measure is voluntary in MIPS and MIPS eligible clinicians have the flexibility to report on the measures most applicable and meaningful to their practice.

We appreciate the comments received and concerns regarding MIPS implementation of this eCQM. Based in part of the comments we received regarding the time necessary to test and integrate the software that MIPS eligible clinicians will use to calculate this measure, we agree a 1-year delay in measure implementation would improve clinician and system readiness to report the measure. The delay would also align with implementation timelines across other CMS programs.

After consideration of public comments, we are finalizing the *Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Clinician Level)* measure with modification. While we proposed to adopt the measure for the CY 2024 performance period/2026 MIPS payment year, we are instead finalizing this new measure with a 1-year delay. The measure will be available for the CY 2025 performance period/2027 MIPS payment year and future years.

## A.2. Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood

Category	Description
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	495
<b>Description:</b>	The percentage of top-box responses among patients aged 18 years and older who had an ambulatory palliative care visit and report feeling heard and understood by their palliative care clinician and team within 2 months (60 days) of the ambulatory palliative care visit.
<b>Measure Steward:</b>	American Academy of Hospice and Palliative Medicine (AAHPM)
<b>Numerator:</b>	The Feeling Heard and Understood (HU) survey is calculated using top-box scoring within 2 months (60 days) of the ambulatory palliative care visit. Numerator 1: Patient felt heard and understood by this provider and team. Numerator 2: Patient felt this provider and team put my best interests first when making recommendations about my care. Numerator 3: Patient felt this provider and team saw me as a person, not just someone with a medical problem. Numerator 4: Patient felt this provider and team understood what is important to me in my life.
<b>Denominator:</b>	Denominator 1, 2, 3, and 4: All patients aged 18 years and older who had an ambulatory palliative care visit between January 1 – October 31.
<b>Exclusions:</b>	Patients who did not complete at least one of the four patient experience HU survey items and return the HU survey within 60 days of the ambulatory palliative care visit. Patients who respond on the patient experience HU survey that they did not receive care by the listed ambulatory palliative care provider in the last 60 days (disavowal). Patients who were deceased when the HU survey reached them. Patients for whom a proxy completed the entire HU survey on their behalf for any reason (no patient involvement).
<b>Measure Type:</b>	Patient-Reported Outcome-based Performance Measure (PRO-PM)
<b>High Priority Measure:</b>	Yes
<b>Collection Type:</b>	MIPS CQMs Specifications
<b>Measure-Specific Case Minimum/Performance Period:</b>	N/A for this measure
<b>Rationale:</b>	<p>We proposed this patient-reported outcome measure because it will fill a gap in the current quality measure inventory for patients receiving palliative care. The Feeling Heard and Understood survey was developed to capture patients' assessment of their care for ongoing quality reporting and improvement. This survey measures patients' satisfaction of their ambulatory palliative care experience based on how well they felt heard and understood by physicians, nurses, and other hospital staff. This measure captures the patient's voice and experience of care by assessing communication and shared decision making with his or her clinician. Assessment of how well patients feel heard and understood complements and adds an important dimension to existing quality measures of care planning by including patient experience of care for this unique patient population.<sup>15</sup></p> <p>This measure is intended to facilitate and improve effective patient-provider communication that better engenders trust, acknowledgement, and a whole-person orientation to the care that is provided. The outcome of this measure is that the patient feels heard and understood by the ambulatory palliative care provider and team. Through the benefits of enhanced patient-provider communication, this measure will improve the quality of care received and outcomes for patients receiving palliative care.</p> <p>This measure received conditional support for rulemaking from the MAP pending CBE endorsement. While we agree that CBE endorsement is preferred, this measure should nonetheless be added to MIPS, and it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. This measure is predicated on existing guidelines including the National Consensus Project Clinical Practice Guidelines for Quality Palliative Care and supported by a systematic review of current evidence for palliative care interventions.<sup>16</sup> Evidence from the systematic review supports advanced care planning. Studies have shown that quality palliative care and communication between patients and providers are associated with increased preference-concordant care.<sup>16</sup></p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at <a href="https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports">https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports</a>.</p>
<p><i>Comment:</i> One commenter supported the new Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood measure, because patient-autonomy and access to information and choice is core to palliative care. The ability to assess patient experience of feeling heard and understood is essential for clinicians to assess whether they are providing quality care.</p> <p>Another commenter supported and thanked CMS for the inclusion of this important measure in MIPS, and further recommended that CMS include this measure in relevant MVPs. This rigorously tested measure holds clinicians accountable for ensuring that they understand what matters most to patients and their caregivers and is a critical component of developing patient-centered care plans. The commenter stated that while this measure has been tested in palliative care programs, the concept of patients feeling heard and understood should not be limited to this patient population. The commenter encouraged CMS to consider inclusion of this measure concept in other quality reporting programs that address care for patients with serious illness.</p> <p>Another commenter supported this new measure and stated the patient experience of feeling heard and understood is a key goal and benefit of palliative care. Patients want to be treated as an individual and have their symptoms and goals of care managed effectively, which may be challenging at times given clinician time constraints. Another commenter supported this new measure, stating that palliative care, which focuses on optimizing the quality of life and reducing suffering among people with chronic and terminal illness, is essential as the number of Americans suffering with at least one chronic disease continues to grow.</p> <p><i>Response:</i> We thank the commenters for supporting this new measure in MIPS. We will take the recommendation to include this measure concept in other quality reporting programs under advisement.</p>	

Category	Description
	<p><i>Comment:</i> One commenter was supportive of this measure’s development and was pleased to see its addition in relevant specialty sets. The commenter requested that although the measure was developed and endorsed for home-based palliative care programs, the measure should be considered for all specialties, as it focuses on communication between the person and their clinician.</p> <p><i>Response:</i> We thank the commenter for supporting this new measure in MIPS. We encourage the commenter to request this measure be added to other specialty sets through the Solicitation for Specialty Sets process.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 52768), we are finalizing the <i>Ambulatory Palliative Care Patients’ Experience of Feeling Heard and Understood</i> measure as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>

**A.3. Cardiovascular Disease (CVD) Risk Assessment Measure - Proportion of Pregnant/Postpartum Patients that Receive CVD Risk Assessment with a Standardized Instrument**

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	496
Description:	Percentage of pregnant or postpartum patients who received a cardiovascular disease (CVD) risk assessment with a standardized instrument.
Measure Steward:	University of California, Irvine
Numerator:	Patients who are assessed for CVD risk via California Maternal Quality Care Collaborative (CMQCC) standardized algorithm. A completed CVD risk assessment will determine the patient to be at low risk or high risk of CVD. Patients will be assessed at their initial encounter with their healthcare provider for pregnancy-related care [prenatal visit, L&D, postpartum visit] and may need to repeat assessments if new symptoms develop.
Denominator:	Patients who have an office visit for prenatal or postpartum care, regardless of gestational age or prior prenatal care at other sites, for any age (including pregnant and postpartum minors), within outpatient obstetric (OB) visit at the hospital or in affiliated clinics; and labor and delivery (L&D)
Exclusions:	Patients who have another reason for visiting the clinic [not prenatal or postpartum care] and have a positive pregnancy test but have not established the clinic as OB provider (e.g., plan to terminate the pregnancy or seek prenatal services elsewhere). Prior history of known CVD.
Measure Type:	Process
High Priority Measure:	No
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	<p>We proposed this measure because it will fill a high priority clinical gap area under the wellness and prevention domain for maternal health. This process measure will address screening and care for pregnant/postpartum patients by assessing for the completion of a standardized CVD risk assessment for this high-risk population. This measure will represent a new quality measure clinical concept for maternal health.</p> <p>CVD is the leading cause of maternal mortality in the U.S., accounting for over one-third of all pregnancy-related deaths.<sup>17</sup> Peripartum cardiomyopathy (PPCM) constitutes the largest group among CVD-related deaths. About 24 percent of all CVD pregnancy-related deaths (and 31 percent of cardiomyopathy deaths) were determined to be potentially preventable.<sup>18</sup> CVD also accounts for many folds higher maternal morbidity, a longer length of hospital stays, intensive care unit (ICU) admissions, and future pregnancy risks.<sup>19</sup></p> <p>This measure will monitor follow-up to universal cardiovascular risk assessment in all pregnant patients at their first encounter with an obstetrics provider.<sup>20</sup> The measure facilitates clinicians to evaluate pregnant or postpartum patients presenting with symptoms such as shortness of breath, cough, or excessive fatigue in the context of risk factors, vital sign abnormalities, and abnormal physical examination findings.<sup>21</sup></p> <p>Normal physiological changes in pregnancy lead to signs and symptoms that may be indistinguishable from those of CVD. The overlap of signs and symptoms of normal pregnancy with those of CVD further complicates timely diagnosis. Most women who died from CVD during pregnancy and/or the postpartum period were not suspected of having a cardiac diagnosis and symptoms were attributed to an alternate diagnosis. Roughly 84 percent of pregnant patients who died from CVD presented with symptoms concerning for cardiopulmonary disease. However, only 61.1 percent of these patients were referred to cardiologists, and, of those, only 7 percent were referred antenatally. Given the large proportion of pregnancy-related mortality attributed to cardiovascular disease, these data suggest that an implementation of universal screening may improve overall maternal outcomes and lower overall healthcare costs.<sup>22</sup> Use of this measure will promote improvement in the screening of pregnant and postpartum women for the accurate diagnosis of heart failure or CVD versus attributing symptoms of pneumonia or other clinical side effects from pregnancy such as persistent cough, shortness of breath, and/or bilateral infiltrates on a chest x-ray.</p> <p>The intent of assessing the CVD risk during pregnancy/postpartum care is to increase education and awareness in this population and will empower patients to seek early medical care if new signs and symptoms develop that may be suggestive of CVD. It may have implications for long-term health outcomes with improvements in the CVD risk factor profile in the future. The use of a standardized CVD measure to risk-stratify pregnant and postpartum patients may improve the timely identification of CVD, thereby decreasing maternal morbidity and/or mortality.</p> <p>This measure received conditional support for rulemaking from the MAP pending CBE endorsement. While we agree that CBE endorsement is preferred, this measure should nonetheless be added to MIPS, and it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. The Alliance for Innovation on Maternal Health (AIM) identified the California Maternal Quality Care Collaborative (CMQCC) CVD Assessment Algorithm for Pregnant and Postpartum Patients as an emerging best practice and an important tool for assessing symptoms and risk in a standardized way and advocated for the use of the tool in its Cardiac Conditions in Obstetrical Care Bundle (CCOC).<sup>23</sup></p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at <a href="https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports">https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports</a>.</p>
Comment:	One commenter supported the new Cardiovascular Disease (CVD) Risk Assessment Measure - Proportion of Pregnant/ Postpartum Patients that Receive CVD Risk Assessment with a Standardized Instrument because it will help promote education and awareness of CVD

Category	Description
	<p>risk in pregnant and post-partum patients. Another commenter indicated this new measure fills a high-priority gap in care and that assessing CVD risk during pregnancy/postpartum care promotes timely assessment of and intervention for CVD risk factors.</p> <p><i>Response:</i> We thank the commenters for supporting this new measure in MIPS.</p> <p><i>Comment:</i> One commenter supported this new measure to evaluate the proportion of pregnant and postpartum patients who receive a CVD risk assessment with a standardized instrument. The commenter suggested, however, that the measure be agnostic to the specific assessment tool required and instead encourage use of widely used and recommended CVD risk calculation tools (such as CMQCC standardized algorithm, AHA/ACC ASCVD Risk Estimator Plus, Framingham Risk Score Calculator, etc.).</p> <p><i>Response:</i> As currently specified, the measure utilizes the CMQCC standardized algorithm as it is currently the only pregnancy specific algorithm and was used during measure development and testing. The easy use (takes less than one minute to complete CVD risk assessment) of the tool allows for integration into the clinic flow. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.</p> <p><i>Comment:</i> One commenter requested this new measure be modified to include two CVD risk assessments, antepartum and postpartum, and confirm the reliability and validity of the measure for individual clinician reporting.</p> <p><i>Response:</i> The intent of the measure is to have all pregnant and/or postpartum patients undergo CVD risk assessment at least once during the pregnancy episode. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. Measure reliability and validity testing was completed, with individual clinician level analysis breakdowns in addition to patient/encounter level testing.</p> <p><i>Comment:</i> One commenter did not support this new measure because it did not achieve endorsement by the CBE due to concerns over the inadequacy of the evidence.</p> <p><i>Response:</i> While we agree that CBE endorsement is preferred, this measure should nonetheless be added to MIPS, and it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. The Alliance for Innovation on Maternal Health (AIM) identified the California Maternal Quality Care Collaborative (CMQCC) CVD Assessment Algorithm for Pregnant and Postpartum Patients as an emerging best practice and an important tool for assessing symptoms and risk in a standardized way and advocated for the use of the tool in its Cardiac Conditions in Obstetrical Care Bundle (CCOC).<sup>23</sup> Evidence substantiates the attribution of a large proportion of pregnancy-related mortality to cardiovascular disease, and these data suggest that an implementation of universal screening may improve overall maternal outcomes and lower overall healthcare costs.<sup>22</sup></p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 52769 through 52770), we are finalizing the <i>Cardiovascular Disease (CVD) Risk Assessment Measure - Proportion of Pregnant/Postpartum Patients that Receive CVD Risk Assessment with a Standardized Instrument</i> measure as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>

#### A.4. First Year Standardized Waitlist Ratio (FYSWR)

Category	Description
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	N/A
<b>Description:</b>	The number of incident (newly initiated on dialysis) patients in a practitioner (inclusive of physicians and advanced practice providers) group who are under the age of 75, and were listed on the kidney or kidney-pancreas transplant waitlist or received a living donor transplant within the first year of initiating dialysis. The measure is calculated to compare the observed number of waitlist events in a practitioner group to its expected number of waitlist events. The measure uses the expected waitlist events calculated from a Cox model, adjusted for age, patient comorbidities, and other risk factors at incidence of dialysis.
<b>Measure Steward:</b>	Centers for Medicare & Medicaid Services
<b>Numerator:</b>	Patients in the practitioner group's denominator listed on the kidney or kidney-pancreas transplant waitlist or who received living donor transplants within the first year following initiation of dialysis.
<b>Denominator:</b>	The denominator for the First Year Standardized Waitlist Ratio (FYSWR) is the expected number of waitlist or living donor transplant events in the practitioner group according to each patient's treatment history for patients within the first year following initiation of dialysis, adjusted for age, incident comorbidities, dual Medicare-Medicaid eligibility, Area Deprivation Index (from patient's residence zip code) and transplant center characteristics, among patients under 75 years of age who were not already waitlisted and did not have kidney transplantation prior to the initiation of end-stage renal disease (ESRD) dialysis. The number of days at risk (time from start of dialysis to the earliest of being placed on the waitlist, receiving a living donor transplant, death, or one year from start of dialysis) for each patient is used to calculate the expected waitlist or living donor transplant events.
<b>Exclusions:</b>	Patients age 75 or older on their initiation of dialysis date. Patients admitted to a skilled nursing facility (SNF). Patients in hospice on their initiation of dialysis date or during the month of evaluation. Patients that were on the kidney or kidney-pancreas waitlist prior to initiation of dialysis. Patients who had a transplant prior to initiation of dialysis.
<b>Measure Type:</b>	Process
<b>High Priority Measure:</b>	No
<b>Collection Type:</b>	MIPS CQMs Specifications
<b>Measure-Specific Case Minimum/Performance Period:</b>	If a dialysis practitioner group has fewer than 11 patients or 2 expected events, then the dialysis practitioner group is excluded from reporting outcomes.
<b>Rationale:</b>	<p>We proposed this measure because it will address a CMS high priority clinical topic: patients with ESRD. ESRD affects nearly 786,000 Americans, and dialysis for ESRD patients represents a significant portion of annual Medicare expenditures (<a href="https://www.niddk.nih.gov/health-information/health-statistics/kidney-disease">https://www.niddk.nih.gov/health-information/health-statistics/kidney-disease</a>). While dialysis is a treatment for ESRD, it is associated with increased mortality and lower quality of life for ESRD patients when compared to kidney transplant (<a href="https://pubmed.ncbi.nlm.nih.gov/34783494/">https://pubmed.ncbi.nlm.nih.gov/34783494/</a>). This measure assesses whether patients that are in their first year of dialysis were placed on the kidney or kidney-pancreas transplant waitlist or received a living donor kidney transplant. Data submitted by the measure developer indicated a performance gap for a process that can be directly linked to improved patient outcomes. This measure is separate from the other transplant waitlist measure, found under Table A.5 of this Appendix, as it is limited to assessing the first year after initiation of dialysis and the timely addition of those patients to the transplant waitlist—a crucial step in driving positive outcomes in the patient population.</p> <p>National and large regional studies provide strong empirical support for the association between processes within the clinical scope and control of dialysis practitioners and subsequent patient transplant wait listing. For example, the clinical assessments, provisions and/or referrals made by a dialysis practitioner are contributing factors for consideration in patient transplant wait listing. In one large regional study conducted on facilities in the state of Georgia, a standardized dialysis facility referral ratio was developed, adjusted for age, demographics, and comorbidities.<sup>24</sup> There was substantial variability across dialysis facilities in referral rates, and a Spearman correlation performed between ranking on the referral ratio and dialysis facility waitlist rates was highly significant (<math>r=0.35</math>, <math>p&lt;0.001</math>).<sup>24</sup> A national study using registry data (United States Renal Data System) from 2005-2007 examined the association between whether patients were informed about kidney transplantation (based on reporting on the Medical Evidence Form 2728 (<a href="https://www.cms.gov/Medicare/CMS-Forms/CMS-Forms/Downloads/CMS2728.pdf">https://www.cms.gov/Medicare/CMS-Forms/CMS-Forms/Downloads/CMS2728.pdf</a>) and subsequent access to kidney transplantation (wait listing or receipt of a live donor transplant).<sup>25</sup> Approximately 30 percent of patients were uninformed about kidney transplantation, and this was associated with half the rate of access to transplantation compared to patients who were informed.<sup>17</sup> In a related survey study of 388 hemodialysis patients, whether provision of information about transplantation by nephrologists or dialysis staff occurred was directly confirmed with patients.<sup>26</sup> The provision of such information was associated with a near threefold increase in likelihood of wait listing.<sup>26</sup></p> <p>The intent of this measure is to track the initial placement on the kidney or kidney-pancreas transplantation waitlist or receipt of a living donor transplant within the first year after dialysis initiation, with the intended objective of improving the overall health of patients on dialysis. Being waitlisted or receiving a living donor kidney transplant represents a desirable change in health status for patients on dialysis, indicating achievement of a health condition conducive to kidney transplantation. Being waitlisted for kidney transplantation is the culmination of a variety of preceding preparatory activities and may include education of patients about the option of transplantation, referral of patients to a transplant center for evaluation, completion of the evaluation process, and optimizing the health of the patient while on dialysis. These efforts depend heavily and, in many cases, primarily, on dialysis practitioner groups. Aspects that are not directly in the clinician/groups control can be influenced through coordination of care, strong communication with transplant centers, and advocacy for patients. All clinicians should be involved and actively work towards providing patients with high quality care including ensuring placement on the transplant list as quickly as possible.</p> <p>The MAP did not support this measure for rulemaking with the potential for mitigation. The Renal Standing</p>

Category	Description
	<p>Committee raised concerns regarding the evidence base and specifications and recommended that this measure be resubmitted for endorsement by a CBE. While we agree that CBE endorsement is preferred, this measure should nonetheless be added to MIPS, and it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. As discussed above, studies suggested a significant association between the clinician activities described above and the addition of patients to a transplant waitlist, which is necessary for patients to receive the improved outcomes associated with kidney transplant.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at <a href="https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports">https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports</a>.</p>
	<p><i>Comment:</i> One commenter supported the new First Year Standardized Waitlist Ratio (FYSWR) measure (in addition to supporting the Percentage of Prevalent Patients Waitlisted (PPPW) and Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW) under Table A.5 of this Appendix). The commenter stated that these measures will help payers understand if clinicians are connecting patients who have ESRD with the additional care and support they need to prepare for organ transplant. The commenter agreed that measures are needed to understand if patients are being referred to transplantation and if they are being appropriately supported while they are on the waiting list for an organ. These measures could help ensure clinicians are working with patients to help them access transplant waitlists and if facilities are proactively reaching out to patients on the waitlist. Another commenter supported these new measures that address the CMS high priority clinical topic of patients with ESRD. Another commenter supported this new measure and advocated for all patients to have access to the treatment modality of their choice and experience minimal time on the transplant waitlist or receive a living donor kidney transplant if circumstances permit.</p> <p><i>Response:</i> We thank the commenters for supporting this new measure in MIPS.</p> <p><i>Comment:</i> A few commenters requested clarification regarding the intent of this measure in addition to the Percentage of Prevalent Patients Waitlisted (PPPW) and Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW) measure (under Table A.5 of this Appendix). The commenters encouraged development and implementation of measures that support medications such as sodium-glucose cotransporter-2 (SGLT2) inhibitor therapy, and other measures to delay CKD progression.</p> <p><i>Response:</i> We thank the commenters for their feedback and encourage them to reach out to measure developers/stewards to develop additional CKD measures that may fill the gap areas for submission to the Call for Measures for possible future implementation. The intent of measure First Year Standardized Waitlist Ratio (FYSWR) is to track the initial patient placement on the kidney or kidney-pancreas transplantation waitlist, or receipt of a living donor transplant, within the first year after dialysis initiation, with the intended objective of timely inclusion on the waitlist, improving the overall health of patients on dialysis. Being waitlisted or receiving a living donor kidney transplant represents a desirable change in health status for patients on dialysis, indicating achievement of a health condition conducive to kidney transplantation. The intent of measure Percentage of Prevalent Patients Waitlisted (PPPW) and Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW) is to assess monthly wait listing in active status of patients, as well as evaluate and encourage maintenance of patients on the waitlist over the entirety of the patient's time on the waitlist. This measure is a single assessment during a defined timeframe, whereas the PPPW and aPPPW measure follows the patient throughout their dialysis journey.</p> <p><i>Comment:</i> One commenter did not support this measure because it was not endorsed by the CBE Renal Standing Committee, citing concerns regarding exclusions and attribution. In particular, the CBE Renal Standing Committee raised concerns about how the measure developer identified the physician caring for the patient. The CBE Consensus Standards Approval Committee upheld the decisions of the Renal Standing Committee during their review and voted not to reconsider this measure during the appeals process.</p> <p><i>Response:</i> While we agree CBE endorsement is preferred, this measure should nonetheless be added to MIPS, as it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. Being waitlisted for kidney transplantation is the culmination of a variety of preceding preparatory activities and may include education of patients about the option of transplantation, referral of patients to a transplant center for evaluation, completion of the evaluation process, and optimizing the health of the patient while on dialysis. There is a significant association between the clinician activities described in this measure and the addition of patients to a transplant waitlist, which is necessary for patients to receive the improved health outcomes associated with kidney transplant. See the studies cited in the rationale, above. Additionally, this measure would be implemented at the practitioner group level and not the individual clinician level.</p> <p>We appreciate the public comments on this proposed new measure. However, due to potential implementation challenges within MIPS regarding timing and application of the risk adjustment methodology, we are not finalizing the <i>First Year Standardized Waitlist Ratio (FYSWR)</i> measure as proposed for the CY 2024 performance period/2026 MIPS payment year to allow further refinement and streamlining of the measure analytic for future MIPS implementation.</p>

**A.5. Percentage of Prevalent Patients Waitlisted (PPPW) and Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW)**

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	N/A
Description:	The percentage of patients in each dialysis practitioner group practice who were on the kidney or kidney-pancreas transplant waitlist (all patients or patients in active status). Results are averaged across patients prevalent on the last day of each month during the reporting year. The measure is a directly standardized percentage, which is adjusted for covariates (e.g., age and risk factors).
Measure Steward:	Centers for Medicare & Medicaid Services
Numerator:	Numerator 1: Percentage of Prevalent Patients Waitlisted (PPPW): The adjusted count of patient months in which the patient at the dialysis practitioner or practitioner group practice is on any kidney or kidney-pancreas transplant waitlist as of the last day of each month during the reporting year. Numerator 2: Percentage of Prevalent Patients Waitlisted in Active (aPPPW): The adjusted count of patient months in which the patient at the dialysis practitioner or practitioner group practice is on any kidney or kidney-pancreas transplant waitlist in an active status as of the last day of each month during the reporting year.
Denominator:	Denominator 1 and 2: All patient-months for patients who are under the age of 75 in the reporting month and who are assigned to a dialysis practitioner or practitioner group practice according to each patient’s treatment history on the last day of each reporting month during the performance year. If a dialysis practitioner group has fewer than 11 patients during the performance year, the dialysis practitioner group is excluded from reporting outcomes.
Exclusions:	Patients who were admitted to a skilled nursing facility (SNF) during the month of evaluation were excluded from that month. Patients who were admitted to a skilled nursing facility (SNF) within one year of dialysis initiation according to the CMS-2728 form. Patients determined to be in hospice were excluded from month of evaluation and the remainder of reporting period. Patients with dementia at any time prior to or during the month.
Measure Type:	Process
High Priority Measure:	No
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	If a dialysis practitioner group has fewer than 11 patients during the performance year, the dialysis practitioner group is excluded from reporting outcomes.
Rationale:	<p>We proposed this measure because it will address a CMS priority clinical topic: patients with ESRD. ESRD affects nearly 786,000 Americans, and dialysis for ESRD patients represents a significant portion of annual Medicare expenditures (<a href="https://www.niddk.nih.gov/health-information/health-statistics/kidney-disease">https://www.niddk.nih.gov/health-information/health-statistics/kidney-disease</a>). While dialysis is a treatment for ESRD, it is associated with increased mortality and lower quality of life for ESRD patients when compared to kidney transplant (<a href="https://pubmed.ncbi.nlm.nih.gov/34783494/">https://pubmed.ncbi.nlm.nih.gov/34783494/</a>). This measure captures the adjusted count of patient months on the kidney and kidney-pancreas transplant waitlist for all dialysis patients in a dialysis practitioner or group practice by assessing patient status on the last day of each month during the reporting year and those on the transplant waitlist in active status as of the last day of the month during the reporting year. This process measure is directly linked to driving positive outcomes and measure data indicated a performance gap.</p> <p>Most ESRD patients have to wait to eventually access a deceased donor transplant (national median of roughly 4 years).<sup>27</sup> Maintenance of ‘active status’ on the transplant list requires ongoing collaboration between dialysis practitioners, transplant centers, and transplant networks, thereby ensuring sustained suitability for a transplant while optimizing the health of patients.<sup>28</sup> This maintenance process is associated with higher transplantation rates and lowered mortality rates while on the waitlist.<sup>28</sup> In addition, the maintenance of ‘active status’ is an important health equity issue. Research has found disparities in access to kidney transplant by race.<sup>29</sup> Race-neutral efforts by clinicians to encourage maintenance of patients on the waitlist may reduce such disparities while improving their performance on this measure.<sup>29</sup></p> <p>This measure assesses monthly wait listing in active status of patients. It also evaluates and encourages maintenance of patients on the waitlist. This is an important area to which dialysis practitioners can contribute through ensuring patients remain healthy and complete any ongoing testing activities required to remain active on the waitlist. In contrast to this measure, the First Year Standardized Waitlist Ratio measure found under Table A.4 of this Appendix focuses solely on new wait listings and living donor kidney transplants to incentivize early action, rather than ongoing maintenance on the waitlist, which this measure assesses.</p> <p>The MAP conditionally supported this measure for rulemaking pending an update of the measure’s specifications to include only the PPPW (CBE 3695) rate that was recommended for endorsement by the CBE’s Renal Standing Committee. While we agree that full CBE endorsement is preferred, this measure should nonetheless be added to MIPS, and it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. The CBE recommended endorsement for the PPPW subset of this measure. It is important to include the aPPPW rate in this measure as well to capture patients in active waitlist status and the full scope of the transplant list and the movement of patients between active and inactive status. The studies cited above provide the evidentiary basis for the adoption of this measure.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at <a href="https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports">https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports</a>.</p>
Comment:	A few commenters supported the new Percentage of Prevalent Patients Waitlisted (PPPW) and Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW) measure that will help ensure that clinicians are working with patients to help them access transplant waitlists.

Category	Description
	<p><i>Response:</i> We thank the commenters for supporting this new measure in MIPS.</p> <p><i>Comment:</i> One commenter opposed this new measure and stated the measure was not endorsed by a CBE or the Renal Standing Committee. The commenter stated that while nephrologists have a role in referring patients for transplantation, they have nothing to do with the selection of patients from the waitlist and the measure is not an accurate reflection of the quality care provided by nephrologists. The commenter indicated there were also concerns with the testing data, which showed extreme variation in the transplant center practice. The commenter was concerned that two measures were combined into this measure with no evidence of review or testing, or feasibility and reliability, as a composite measure.</p> <p><i>Response:</i> While we agree full CBE endorsement is preferred, this measure should nonetheless be added to MIPS, and it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. Maintenance of active status requires ongoing attention by dialysis practitioners to optimizing the health of patients, to ensure sustained suitability for transplant waitlisting. Maintenance of active status on the waitlist is additionally important given demonstrated disparities<sup>29</sup> and positive association with subsequent transplantation.<sup>28</sup> The CBE recommended endorsement for the PPPW subset of this measure. This measure assesses monthly wait listing in active status of patients, encouraging maintenance of patients to remain in active status. It also evaluates and encourages maintenance of patients on the waitlist. We acknowledged that patient selection from the waitlist for transplantation is not determined by the nephrologist and as such, this measure is not assessing this aspect of the transplant workflow. This is an important area to which dialysis practitioners can contribute by ensuring patients remain healthy and complete any ongoing testing activities required to remain active on the waitlist. The testing provided by the measure steward was reviewed and demonstrated statistically sufficient results for the reliability and validity of each of the numerator actions, meeting requirements described within the CMS MMS Hub (<i>mmsub.cms.gov</i>) regarding quality measure testing. The measure will utilize two submission criteria to assess performance across dialysis clinician groups, creating a robust quality measure driving positive outcomes for ESRD patients.</p> <p>We appreciate the public comments on this proposed new measure. However, due to potential implementation challenges within MIPS regarding timing and application of the risk adjustment methodology, we are not finalizing the <i>Percentage of Prevalent Patients Waitlisted (PPPW)</i> and <i>Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW)</i> measure as proposed for the CY 2024 performance period/2026 MIPS payment year to allow further refinement and streamlining of the measure analytic for future MIPS implementation.</p>

**A.6. Preventive Care and Wellness (composite)**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	497
<b>Description:</b>	Percentage of patients who received age- and sex-appropriate preventive screenings and wellness services. This measure is a composite of seven component measures that are based on recommendations for preventive care by the U.S. Preventive Services Task Force (USPSTF), Advisory Committee on Immunization Practices (ACIP), American Association of Clinical Endocrinology (AACE), and American College of Endocrinology (ACE).
<b>Measure Steward:</b>	Centers for Medicare & Medicaid Services
<b>Numerator:</b>	<p>Numerator 1: Patients who received an influenza immunization OR who reported previous receipt of an influenza immunization.</p> <p>Numerator 2: Patients who were administered any pneumococcal conjugate vaccine or polysaccharide vaccine on or after their 19<sup>th</sup> birthday and before the end of the measurement period.</p> <p>Numerator 3: Women with one or more mammograms any time on or between October 1 two years prior to the measurement period and the end of the measurement period.</p> <p>Numerator 4: Patients with one or more screenings for colorectal cancer. Appropriate screenings are defined by any one of the following criteria: - Fecal occult blood test (FOBT) during the measurement period. – Flexible sigmoidoscopy during the measurement period or the four years prior to the measurement period. – Colonoscopy during the measurement period or the nine years prior to the measurement period. – Computed tomography (CT) colonography during the measurement period or the four years prior to the measurement period. – Stool DNA (sDNA) with Fecal immunochemical test (FIT) during the measurement period or the two years prior to the measurement period.</p> <p>Numerator 5: Patients with a documented BMI during the encounter or during the previous twelve months, AND when the BMI is outside of normal parameters, a follow-up plan is documented during the encounter or during the previous twelve months of the encounter.</p> <p>Numerator 6: - Patients who were screened for tobacco use at least once within the measurement period. – Patients who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period. – Patients who were screened for tobacco use at least once within the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.</p> <p>Numerator 7: Patient visits where patients were screened for high blood pressure AND have a recommended follow-up plan documented, as indicated, if the blood pressure is elevated or hypertensive.</p>
<b>Denominator:</b>	<p>Denominator 1: All patients aged 6 months and older seen for a visit during the measurement period.</p> <p>Denominator 2: Patients 65 years of age and older with a visit during the measurement period.</p> <p>Denominator 3: Women 41 – 74 years of age with a visit during the measurement period.</p> <p>Denominator 4: Patients 45-75 years of age with a visit during the measurement period.</p> <p>Denominator 5: All patients aged 18 and older on the date of the encounter with at least one qualifying encounter during the measurement period.</p> <p>Denominator 6: - All patients aged 12 years and older seen for at least two visits or at least one preventive visit during the measurement period. – All patients aged 12 years and older seen for at least two visits or at least one preventive visit who were screened for tobacco use during the measurement period and identified as a tobacco user. – All patients aged 12 years and older seen for at least two visits or at least one preventive visit during the measurement period.</p> <p>Denominator 7: All patient visits for patients aged 18 years and older at the beginning of the measurement period.</p>
<b>Exclusions:</b>	<p>Denominator Exclusion Population 1: - Hospice services provided to patient any time during the measurement period. - Anaphylaxis due to the vaccine on or before the date of the encounter.</p> <p>Denominator Exclusion Population 2: - Patient received hospice services any time during the measurement period. - Patient had anaphylaxis due to the pneumococcal vaccine any time during or before the measurement period.</p> <p>Denominator Exclusion Population 3: - Women who had a bilateral mastectomy or who have a history of a bilateral mastectomy or for whom there is evidence of a right and a left unilateral mastectomy. - Hospice services used by patient any time during the measurement period. – Palliative care services used by patient any time during the measurement period. - Patients age 66 or older in Institutional Special Needs Plans (SNP) or residing in long term care with POS code 32, 33, 34, 54, or 56 for more than 90 consecutive days during the measurement period. – Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND a dispensed medication for dementia during the measurement period or the year prior to the measurement period. – Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND either one acute inpatient encounter with a diagnosis of advanced illness or two outpatient, observation, ED or nonacute inpatient encounters on different dates of service with an advanced illness diagnosis during the measurement period or the year prior to the measurement period.</p> <p>Denominator Exclusion Population 4: - Patients with a diagnosis or past history of total colectomy or colorectal cancer. – Patient was provided hospice services any time during the measurement period. – Patient was provided palliative care services any time during the measurement period. - Patient age 66 or older in Institutional Special Needs Plans (SNP) or residing in long-term care with POS code 32, 33, 34, 54, or 56 for more than 90 consecutive days during the measurement period. – Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND a dispensed medication for dementia during the measurement period or the year prior to the measurement period. – Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND either one acute inpatient encounter with a diagnosis of advanced illness or two outpatient, observation, ED or nonacute inpatient encounters on different dates of service with an advanced illness diagnosis during the measurement period or the year prior to the measurement period.</p> <p>Denominator Exclusion Population 5: - Documentation stating the patient has received or is currently receiving palliative or hospice care. – Documentation of patient pregnancy anytime during the measurement period prior to and including the current encounter.</p> <p>Denominator Exclusion Population 6: - Hospice services provided to patient any time during the measurement period (applicable to each of the 3 performance rates).</p>

Category	Description
	Denominator Exclusion Population 7: - Patient not eligible due to active diagnosis of hypertension.
Measure Type:	Process
High Priority Measure:	No
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
<b>Rationale:</b>	<p>We proposed this composite measure, which combines seven current preventive care measures with age and sex appropriate preventive screenings and wellness services, to create a robust, broadly encompassing preventive care assessment. The measure developer submitted data demonstrating a performance gap for the composite measure. In testing, the developer identified a performance gap, where median performance on the combined measure was 52.7 percent, with a standard deviation of 11.2 percent.</p> <p>Initially, this measure will be implemented as a weighted average analytic, representing performance for quality actions linked to positive patient outcomes. This measure will set a more stringent performance standard by requiring a comprehensive set of preventive care standards be completed for each patient, working to drive quality care while ensuring more all-inclusive preventive care. By setting a more stringent performance standard through use of a single composite measure compared to the prior framework, under which each quality action was reported through a separate quality measure, we will gain a better picture of overall preventive care practices as each component is important to either prevention of or early detection of disease (<a href="https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4678940/">https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4678940/</a>). This allows for early diagnosis of disease, thereby leading to earlier treatment, improved health outcomes, and a reduction in healthcare associated costs (<a href="https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4265933/">https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4265933/</a>).</p> <p>This measure consists of seven preventive care and screening processes that are consistent with guidelines from the U.S. Preventive Services Task Force (USPSTF), the Advisory Committee on Immunization Practices (ACIP), the American Association of Clinical Endocrinology (AACE), and the American College of Endocrinology (ACE). The seven screening processes are influenza immunization, pneumococcal immunization, breast and colorectal cancer screening, body mass index screening, tobacco use screening and cessation intervention, and screening for high blood pressure with follow-up. Each process received a recommendation of at least “Strong” or an equivalent rating from the corresponding body identified above.<sup>30</sup> The basis for each constituent measure was previously described in our prior rulemaking under the 2013 Physician Quality Reporting System (PQRS) in the CY 2012 PFS final rule (77 FR 69215 through 69267: Table 95 and 77 FR 69269 through 69271: Table 96), and each measure was retained with the implementation of MIPS (81 FR 77558 through 77675).</p> <p>With the addition of this measure, we also finalized to remove measures Q112: Breast Cancer Screening, Q113: Colorectal Cancer Screening, and Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan from traditional MIPS, while retaining those three measures for use in relevant MVPs as discussed under Table Group CC of this Appendix.</p> <p>The MAP conditionally supported this measure for rulemaking pending endorsement of the measure by a CBE. While we agree that full CBE endorsement is preferred, this measure should nonetheless be added to MIPS, and it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. The preventive care and wellness composite measure is supported based upon the evidence discussed and cited within the respective rules in which each constituent measure was proposed and finalized as indicated previously in the rationale. A study of preventive services covered under the Affordable Care Act examined the extent to which lives could be saved if adults over 18 received them, including some addressed by this measure. The authors found preventive services ameliorate 9 of the 10 leading causes of death in America and could save at least 100,000 lives,<sup>31</sup> providing support for this composite measure.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at <a href="https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports">https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports</a>.</p>
	<p><i>Comment:</i> Several commenters supported the new Preventive Care and Wellness (composite) measure in MIPS. Specifically, one commenter stated this measure will set a higher performance standard for primary and family physicians by requiring that a comprehensive set of preventive care tests, immunizations and screenings be completed for each patient. The commenters agreed with CMS that adoption of the new composite measure will increase overall utilization of preventive measures and provide a better overall picture of preventive care practices.</p> <p>Another commenter stated this measure sets a more stringent performance standard and helps ensure more all-inclusive preventive care. The commenter agreed with the numerator/ denominator criteria 5, 6, and 7. The commenter supported the inclusion of BMI screening (population 5), the tobacco screening and cessation intervention (population 6), and the use of blood pressures screening (population 7) as part of the composite measure. Another commenter stated this measure will promote more efficient preventive care improvements at the primary care level.</p> <p><i>Response:</i> We thank the commenters for supporting this new measure in MIPS.</p> <p><i>Comment:</i> One commenter supported this new measure and encouraged CMS to add measure Q493: Adult Immunization Status (AIS) measure as a numerator in the Preventive Care and Wellness (composite) measure. The commenter stated that the proposal to use the standalone pneumococcal and influenza measures for the composite measure is not consistent with CMS goal of promoting alignment across measure sets. Instead of the influenza and pneumococcal standalone measures, the commenter encouraged the use of the AIS measure in the composite measure to include influenza, pneumococcal, zoster, and Td/Tdap vaccines.</p> <p><i>Response:</i> We thank the commenter for supporting this composite measure’s addition to MIPS. Although we appreciate the suggestion to combine composite measures, we note these two measures have different focuses. Measure Q493 provides a comprehensive adult immunization focus. This provides clinicians with an additional option to report a measure within MIPS that may be relevant to their practice.</p>

Category	Description
	<p>The Preventive Care and Wellness (composite) measure encourages engagement between the patient and clinician as a preventive health option.</p> <p><i>Comment:</i> One commenter, in supporting the removal of measure Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-up Plan, suggested CMS align quality measures as part of the Universal Foundation and recommended these quality measures extend to Medicare Advantage plans, Managed Care Organizations, state Medicaid programs, and applicable waivers. A few commenters indicated the current Universal Foundation set of measures does not include an obesity measure.</p> <p><i>Response:</i> This measure combines seven current preventive care measures with age and sex appropriate preventive screenings and wellness services to create a robust, broadly encompassing preventive care assessment. Measure Q128 is available for both the MIPS CQM and eCQM collection type and therefore utilizes all-payer data for reporting. Many of the individual components within this composite are included in the Universal Foundation or are considered core measure concepts that align with the Core Quality Measure Collaborative (CQMC) core measure set(s), and thus have been determined to be an important part of patient health and support healthy outcomes.</p> <p><i>Comment:</i> One commenter supported the inclusion of the concepts from measure Q113: Colorectal Cancer Screening in this composite measure to help ensure all patients receive appropriate screening. The commenter indicated that new modalities of testing, such as blood-based screening, have the potential to overcome many of the access barriers associated with current methods by incorporating screening into routine medical care. The commenter encouraged CMS to work with the National Committee for Quality Assurance (NCQA) and other parties, as appropriate, to update quality measures for colorectal cancer (CRC) screening and the new composite measure, if finalized, to include blood-based CRC screening tests.</p> <p><i>Response:</i> We thank the commenter for their support of including measure Q113 in this composite measure. Quality measures undergo annual review and updates. Guideline updates may be incorporated by the measure developer at that time. The version reviewed by the MAP did not include blood-based CRC screening tests. We thank the commenter for their feedback and will take it into consideration during the annual MIPS quality measure revisions cycle for possible implementation in future years.</p> <p><i>Comment:</i> One commenter expressed concern about the complexity of the composite measure with seven numerators, denominators, and exclusions/exceptions. The commenter also opposed the removal of seven individual measures if this composite is implemented in MIPS. The commenter stated that individual measures address important preventive care activities, and the proposal would eliminate the ability of some specialties to select a subset of the measures such as those vaccinations on which they may be able to report.</p> <p><i>Response:</i> We recognize this measure sets a more stringent performance standard within primary care, than the component measures by requiring a comprehensive set of preventive care standards be completed for each patient, working to drive quality care while ensuring more all-inclusive preventive care. By setting a more stringent performance standard through use of a single composite measure compared to the prior framework, under which each quality action was reported through a separate quality measure, we will gain a better picture of overall preventive care practices as each component is important to either prevention of or early detection of disease (<a href="https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4678940/">https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4678940/</a>). This allows for early diagnosis of disease, thereby leading to earlier treatment, improved health outcomes, and a reduction in healthcare associated costs (<a href="https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4265933/">https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4265933/</a>). Additionally, clinicians have the flexibility to choose which measures to report and performance is not based solely on the reporting outcome of a single measure. We maintained two of the component measures, Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention and Q317: Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented, in select specialty measure sets due to the importance of those clinical concepts to specialties where the composite measure would not be applicable, and we maintained measure Q493: Adult Immunization Status for use within traditional MIPS.</p> <p><i>Comment:</i> One commenter noted that the composite includes measure Q128: Preventive Care and Screening Body Mass Index (BMI) Screening and Follow-up Plan, which the commenter stated is outdated and is longer CBE endorsed and may not be appropriate for elderly patients. The commenter noted they believed these same interoperability challenges could also prevent primary care physicians from reliably receiving data on patients' screening mammograms, which could negatively impact performance on the composite measure.</p> <p><i>Response:</i> Many of the individual components within this composite are included in the Universal Foundation or are considered core measure concepts that align with the CQMC core measure set(s) and have been determined to be an important part of patient health and support healthy outcomes. This includes documenting a patient's BMI and a follow-up plan when the BMI is outside of normal parameters as BMI correlates with health outcomes and cause-specific mortality (<a href="https://pubmed.ncbi.nlm.nih.gov/35308730/">https://pubmed.ncbi.nlm.nih.gov/35308730/</a>); however, we recognize that there are clinical limitations of BMI and, as such, it should not be used as a diagnostic tool but rather as an initial screening (<a href="https://www.cdc.gov/healthyweight/assessing/bmi/index.html">https://www.cdc.gov/healthyweight/assessing/bmi/index.html</a>). As it relates to concerns with system interoperability, the composite measure allows clinicians to capture this information via patient reported outcomes for some components. For example, patient reported mammograms, when recorded in the medical record, are acceptable for meeting the numerator.</p> <p><i>Comment:</i> A couple of commenters opposed the addition of this new measure, stating that combining the current preventive care measures into one composite measure would hurt their current MIPS workflow and likely cause a disruption to patients as they would have to pull staff to learn and train all new workflows.</p> <p><i>Response:</i> We acknowledged the measure will set a more stringent performance standard by requiring assessment of multiple immunization, and preventive care and wellness quality actions in one multi-performance measure and thus may be accompanied by system and workflow updates. However, this measure provides a comprehensive preventive care and wellness assessment for each patient to drive positive health outcomes by utilizing component measures for which many clinicians already have workflows in place. Clinician choice is still allowed for quality measures, and we encourage clinicians to choose measures that are meaningful and applicable to their scope of care and practice.</p> <p><i>Comment:</i> A couple of commenters indicated that removing the component measures and combining into one composite measure would impact specialty practices that are limited to their EHR's quality measure selection, and they would not be able to meet the 6 measures required under traditional MIPS. Another commenter expressed that topping out specialty-agnostic quality measures, removing individual wellness and screening measures, and combining the current seven wellness and screening measures that all specialties commonly use into a composite measure will be detrimental to practices that already have limited quality measure selection.</p> <p><i>Response:</i> We acknowledged the commenters' concerns related to limited quality measure selection and specialties' use of the composite measure. However, this is a more robust measure to drive quality care and ensure a focused Preventive Care and Wellness (composite), as compared to the individual measures alone. This measure is intended for use by primary care clinicians during annual wellness visits. We</p>

Category	Description
	<p>reviewed all specialties to ensure a sufficient number of measures are included in each specialty set as available that would still allow for clinician choice even with removal of the component measures in this composite. However, in some cases certain component measures were maintained in order to continue to assess important clinical concepts within specialties where the new Preventive Care and Wellness (composite) measure is not appropriate. Additionally, clinicians continue to have the flexibility to choose measures to report, and we encourage clinicians to choose measures that are meaningful and applicable to their scope of care and practice. We encourage the development of eCQMs as part of our overall strategy towards digital quality measures (dQMs); however, not all measures are submitted to the Call for Measures with an option for the eCQM collection type as this is not currently a requirement for MIPS. We strive to include measures from different collection types to allow flexibility in reporting but are limited to how the measure is submitted by the measure steward to the Call for Measures. We encourage the commenters to reach out to the measure steward of current measures not available as eCQMs to discuss revisions for possible implementation in futures years.</p> <p><i>Comment:</i> One commenter stated that composite measures should be a complement to individual measures when creating incentives for improvement, but composite measures should not be used alone. Each of the individual measures assesses important aspects of prevention and detection of disease. The commenter was pleased to see that the composite measure specifications have been improved since previous versions of the measure and now include the use of a denominator-weighted score. However, the commenter stated it is unclear if the results of the seven components will be made available to those reporting on the measure as CMS has not done so in the past with multi-component/composite measures.</p> <p><i>Response:</i> This measure’s performance is based on a weighted average of the included components. This measure provides a more comprehensive assessment of preventive care and wellness quality clinical assessments that should be received by each patient. While the MIPS benchmark will be based upon the weighted average for the Preventive Care and Wellness (composite), more granular performance data may be found through Medicare Care Compare or third-party intermediaries.</p> <p><i>Comment:</i> A few commenters expressed that reporting burden would increase under the composite. One commenter indicated that combining the component measures into one composite measure would require the same amount of work and yield less results that would positively impact performance scores. One commenter did not support this new measure because it includes measures that have been removed from MIPS in prior rule making, resulting in process improvement efforts shifting to other areas of concern. The commenter stated a composite measure will add additional burden and non-specialty specific focus, thus may not be feasible for small practices. Another commenter similarly opposed addition of this measure and subsequent removal of the component measures citing there are few quality measures for gastroenterology that are specialty specific and due to human and financial limitations, small practices need to focus on two to three process improvements at a time.</p> <p><i>Response:</i> We acknowledged the composite measure will set a more stringent performance standard by requiring a set of adult immunizations and preventive care and wellness measures in one multi-performance measure compared to the prior framework, under which each quality action was reported through a separate quality measure. Since all of the component measures have been available for reporting in MIPS, clinicians are familiar with the component requirements and systems should in place to capture the data; therefore, we expect reporting burden should be minimal. We acknowledge that due to nuances in clinician specialization and subsequent scope of care, not all measures within a specialty measure set will be applicable or appropriate to all clinicians within that specialty set umbrella. However, no measures within traditional MIPS are required. We allow for clinician choice to account for these nuances, while ensuring clinicians are able to choose measures that are most meaningful to their scope of care and patient case-mix. The goal is to ensure we have a comprehensive set of measures that drive positive health outcomes as well as allow flexibility in clinician choice when determining the appropriateness of each measure. We review all specialty sets to ensure adequate numbers of measures to allow for clinician choice as possible even with removal of the component measures in this composite. We did maintain two of the component measures, Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention and Q317: Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented, in select specialty measure sets due to the importance of those clinical concepts to specialties where the composite measure would not be applicable, and we maintained measure Q493: Adult Immunization Status for use within traditional MIPS. This measure’s performance is based on a weighted average of those measures, and this measure provides a comprehensive preventive care and wellness measure. MIPS measures collect data on all payer sources; therefore, this measure will capture a more robust representation of performance than the individual components.</p> <p><i>Comment:</i> One commenter was concerned about the exclusions of those receiving palliative care services under this measure. While those with an end-stage serious illness receiving palliative care would not benefit from these services, others earlier in an illness receiving palliative care might. Another commenter supported this new measure but also expressed concern about the exclusion of patients receiving palliative care or patients with advanced illness. Palliative services are not always connected to hospice services and, therefore, patients who are early in their diagnosis and could benefit from these services would be excluded. The commenter recommended removal of palliative care services from the exclusions for this measure.</p> <p><i>Response:</i> We agree that palliative care is appropriate at any point in a serious illness and can be provided with any curative, disease modifying treatment. Palliative care is generally provided by an interdisciplinary medical team and focuses on the patient. We encourage clinicians to provide care as they determine best supports all patients during their healthcare journey, even if the patient population is not included within the target denominator of a given specification. For this composite measure, each individual measure contains individualized exceptions/exclusions specific to that measure, so that those patients who may not be appropriate for the quality action will be removed from measure performance. We will take the commenters’ feedback into consideration during the annual MIPS quality measure revisions cycle. We encourage the commenters to reach out to the measure steward of current measures to discuss revisions for possible implementation in future years.</p> <p><i>Comment:</i> Several commenters opposed this proposed measure as a CQM and the subsequent removal of three existing eCQMs under Table Group CC of this Appendix because they did not want the loss of eCQM measures. Another commenter also did not agree with the change of collection type from eCQM to CQM only and recommended that CMS not finalize the composite measure and retain the applicable original component measures in traditional MIPS, including retaining the eCQM collection type. Another commenter similarly expressed concern that the composite measure will not be available as an eCQM and that the options to collect CQM data are comparatively expensive, burdensome, and inefficient as CQMs are not automatically aggregated within certified electronic health record technology (CEHRT). Another commenter was concerned about having to pay for a registry to report measures they have always been able to report directly.</p> <p><i>Response:</i> We encourage the development of eCQMs as part of our overall strategy towards digital quality measures (dQMs); however, not all measures are submitted to the Call for Measures with an option for the eCQM collection type as this is not currently a requirement for MIPS. We strive to include measures from different collection types to allow flexibility in reporting but are limited to how the measure is</p>

Category	Description
	<p>submitted by the measure steward to the Call for Measures, which was a MIPS CQM. We acknowledged the commenters' concerns; however, this measure is being proposed as a MIPS CQM and may be supported by Qualified Registries or QCDRs, meaning that the data for calculation of this measure may be abstracted from multiple medical resources which contributes to the flexibilities in reporting this measure. We acknowledge that the removal of measures available for the eCQM collection type may be an inconvenience; however, continuing to drive quality care through the implementation of more robust, meaningful measures is critically important to continued improvement in quality care provided. We encourage the commenter to reach out to the measure steward of current measures not available as eCQMs to discuss revisions for possible implementation in future years. This is a more robust measure to drive quality care and ensure a comprehensive, focused preventive care and wellness assessment, as compared to the individual measures. We did maintain two of the component measures, Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention and Q317: Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented, in select specialty measure sets due to the importance of those clinical concepts to specialties where the composite measure would not be applicable. Both of these retained measures include the eCQM collection type.</p> <p><i>Comment:</i> One commenter requested CMS clarify how the composite measure will be implemented, stating it is unclear whether a clinician will need to report on all parts of the measure to satisfy the requirements, or if they can report on only the parts that are relevant to their practice. If the measure relies on complete measure reporting to be satisfied, then the commenter did not support the removal of measure Q402: Tobacco Use and Help with Quitting Amongst Adolescents (see Table C.11 of this Appendix).</p> <p><i>Response:</i> The Preventive Care and Wellness (composite) measure combines seven current preventive care measures with age and sex appropriate preventive screenings and wellness services, to create a robust, broadly encompassing preventive care assessment. Because this measure's performance is based on a weighted average of all component measures, the composite provides a comprehensive wellness and prevention measure. As a multiple performance rate measure, it is required for all reporting rates of the measure to be submitted, as many components allow for patient reported quality actions in addition to being appropriate for all patient's preventive health and continued wellness. Any missing data may negatively impact data completeness and/or performance. MIPS measures collect data on all payer sources; therefore, the composite will capture a more robust representation of performance than the individual components.</p> <p>While we acknowledged the commenters' concerns, the Preventive Care and Wellness (composite) measure provides a comprehensive multi-performance measure that utilizes components of measures that have been previously implemented in MIPS, at the individual clinician and group level. Therefore, the composite measure can be successfully implemented in MIPS. After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 52775 through 52777), we are finalizing the <i>Preventive Care and Wellness (composite)</i> measure as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>

### A.7. Connection to Community Service Provider

Category	Description
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	498
<b>Description:</b>	Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.
<b>Measure Steward:</b>	Oregon Community Health Information Network (OCHIN)
<b>Numerator:</b>	Patients who had contact with a CSP for at least one of their HRSNs within 60 days after screening.
<b>Denominator:</b>	Patients aged 18 or older who screened positive for at least 1 of the 5 HRSNs domains (food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety) during the measurement period.
<b>Exclusions:</b>	Patients who are counseled on connection with a CSP and explicitly opt-out.
<b>Measure Type:</b>	Process
<b>High Priority Measure:</b>	Yes
<b>Collection Type:</b>	MIPS CQMs Specifications
<b>Measure-Specific Case Minimum/Performance Period:</b>	N/A for this measure
<b>Rationale:</b>	<p>We proposed this measure because it will address five social and economic determinants we have identified as both a measurement priority and performance gap. Addressing this gap is a central part of our Health Equity strategic plan pillar, as discussed in the 2023 PFS final rule (87 FR 70253 through 70259) for previously finalized measure Q487: Screening for Social Drivers of Health. This measure assesses patients who screen positive for one or more of the five HRSNs for contact with a CSP for at least one of their HRSNs within 60 days of the screening. The five HRSNs are food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety. A CSP is defined as any independent, for-profit, non-profit, state, territorial, or local agency capable of addressing core or supplemental HRSNs. This measure excludes patients who opt out of contact with a CSP.</p> <p>Studies have shown that social needs can create significant barriers to patients receiving and achieving high quality of care and can also contribute to poorer health (<a href="https://doi.org/10.7326/M17-2441">https://doi.org/10.7326/M17-2441</a>). Thus, systematically screening patients for social drivers of health and referring them to community-based resources as needed can result in improved health outcomes (<a href="https://doi.org/10.7326/M17-2441">https://doi.org/10.7326/M17-2441</a>). Furthermore, improving the clinician’s understanding of the social obstacles their patients face beyond the clinical realm – but which may affect their clinical outcomes – can provide critical insights, catalyze prevention and/or early identification and prompt referral, improve a patient’s overall health and well-being (<a href="https://doi.org/10.31478/201705b">https://doi.org/10.31478/201705b</a>). As an example, early findings from the CMMI Accountable Health Communities (AHC) Model shows those patients within the “Assistance Track” (the intervention group offering navigation assistance to connect patients with the community services they need) had 9 percent fewer emergency department visits as compared to their control group counterparts who did not receive navigation assistance during the first year following screening (<a href="https://innovation.cms.gov/data-and-reports/2020/ahc-first-eval-rpt">https://innovation.cms.gov/data-and-reports/2020/ahc-first-eval-rpt</a>).</p> <p>The USPSTF also recently released a technical brief on screening and interventions for social risk factors, which noted that social risk factors are mentioned in two-thirds of USPSTF recommendation statements, and six other professional medical organizations explicitly promote clinician engagement in social risk screening and referrals.<sup>32</sup> The report highlighted that, in studies reporting these outcomes, there were few if any unintended consequences resulting from the implementation of social risk screening and intervention despite perceived barriers to implementation.<sup>32</sup></p> <p>This measure leverages the data and experience from the AHC Model (<a href="https://innovation.cms.gov/innovation-models/ahcm">https://innovation.cms.gov/innovation-models/ahcm</a>), which has screened nearly one million beneficiaries for HRSNs. The AHC Model requires that all AHC-screened beneficiaries with unmet HRSNs receive community referral summaries tailored to their needs (<a href="https://innovation.cms.gov/data-and-reports/2020/ahc-first-eval-rpt">https://innovation.cms.gov/data-and-reports/2020/ahc-first-eval-rpt</a>).</p> <p>This measure is consistent with our priority to advance health equity throughout our various programs. We are working to advance health equity by designing, implementing, and operationalizing policies and programs that support health for all the people served by our programs, eliminating avoidable differences in health outcomes experienced by people who are disadvantaged or underserved, and providing the care and support that our enrollees need to thrive (<a href="https://www.cms.gov/pillar/health-equity">https://www.cms.gov/pillar/health-equity</a>).</p> <p>The MAP conditionally supported this measure for rulemaking pending testing indicating the measure is reliable, valid, and feasible, and endorsement by a CBE. While we agree that the full CBE endorsement is preferred, this measure should nonetheless be added to MIPS, and it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. As discussed above, studies showed that social drivers of health contribute to poorer health. Referrals to CSPs provide a direct means through which clinicians can assist patients in overcoming social drivers of health.</p> <p>As we have previously stated, we requested that interested parties consider when submitting a quality measure for possible inclusion whether the measure is “beyond the measure concept phase of development and [has] started testing, at a minimum, with strong encouragement and preference for measures that have completed or are near completion of reliability and validity testing” (83 FR 53636; 84 FR 62954). While we considered whether or not a measure is fully tested, it is not the only relevant standard. This measure builds upon measure Q487, collecting data on positive screening and subsequent connection to a CSP for assistance. Having both measures in MIPS allows for assessment of two critical steps in addressing health equity; first ensuring that screening is completed on all patients and the second connecting patients who are facing a HRSN with resources that can help address these needs.</p>

Category	Description
	<p>Addressing health equity is a pressing issue which deserves serious focus and rapid action. This measure is an important next step for use of drivers of health (DOH) data, which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Clinicians choosing to report this measure will allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. This is vital to allow further testing and development of additional health equity outcome measures. While we will encourage submission of health equity related measures, MIPS does allow for clinician choice in quality measure selection and will not require submission of this measure.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at <a href="https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports">https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports</a>.</p>
	<p><i>Comment:</i> Several commenters supported the new Connection to Community Service Provider measure because referrals to CSPs provide a direct means through which clinicians can assist patients in addressing DOH. The commenters also requested that CMS include this measure in MVPs. Commenters noted that while screening for HRSNs is an important step, addressing the HRSNs through interventions is the next logical step and appreciated CMS including this option for providers. Another commenter indicated that the addition of this measure to MIPS can also be used as an incentive for collaboration between ACOs, area agencies on aging, or other community-based organizations.</p> <p><i>Response:</i> We thank the commenters for supporting this new measure in MIPS. We will take the recommendation to include this measure in MVPs under consideration.</p> <p><i>Comment:</i> One commenter supported this new measure because connecting patients with identified social needs to service providers in their community is an important step in promoting health equity and will move the currently available measures beyond merely screening for social needs. However, the commenter indicated that CMS should implement this measure cautiously and explore ways to address challenges such as regional variation in the availability of community service providers to ensure safety net providers are not unfairly penalized. The commenter also requested that CMS work with NCQA to harmonize this measure and measure Q487: Screening for Social Drivers of Health to ensure alignment across measures used at the provider and health plan levels to address patients' social needs.</p> <p><i>Response:</i> We understand the concerns provided within the comment. This measure is not mandatory for clinicians to report but provides an opportunity to review current workflows and determine if there are potential changes clinicians can make to positively assess the social needs of their patients. If clinicians can review workflows for potential changes to address identified social needs, patient health can benefit. The Joint Commission, for example, has noted that "correct diagnoses and treatment plans may not be safe and effective if patients cannot afford their medications, do not have a place to live, lack transportation to get to appointments, or have adverse drug reactions because they cannot afford food. Health care organizations should work to understand these needs to provide optimal care."<sup>33</sup> Clinicians may choose to report this measure if they can develop a workflow and process that successfully connects their patients with resources. The use of telehealth and virtual networking may support those clinicians that have limited access to CSP. Regarding harmonization with measure Q487, we will take this feedback into consideration during the public notice and comment cycle for possible implementation in future years.</p> <p><i>Comment:</i> One commenter supported this new measure and recommended shortening the 60-day standard to 7 days to support more responsive connections to care and measuring whether the associated need was resolved. The commenter indicated it is imperative that patients' DOH needs are addressed in a timely manner and in a way that resolves the need and are not just connected to service providers. For example, the measure could capture percent of referrals accepted within 7 days (connection completed) and percent of accepted referrals that are closed with an outcome of "need resolved" (resolution of needs).</p> <p><i>Response:</i> We will take the commenter's feedback into consideration during the annual MIPS quality measure revisions cycle for possible implementation in future years. Additionally, we encourage the commenters to reach out to measure developers/stewards to develop new outcome/high priority measures for submission to the Call for Measures for possible future implementation.</p> <p><i>Comment:</i> One commenter was concerned that providers who serve disadvantaged populations or practice in rural or low socioeconomic status communities may be unfairly penalized by this measure. Providers treating disproportionate numbers of these patients ultimately require additional dedicated resources to implement such interventions. Due to these circumstances, this measure may be more appropriate if reported at a system or regional level and the commenter did not support the measure for use within MIPS at the provider-level.</p> <p><i>Response:</i> We acknowledge the concerns in providing a connection with a CSP for disadvantaged, low socioeconomic status, or rural patient populations. However, these patient populations the commenter describes would benefit most from a clinical workflow that assesses for and addresses positively identified social needs. Including this measure in MIPS encourages clinicians to explore relationships with CSP resources. The goal of this measure is to promote the assessment of patient HRSNs, incorporate information about their HRSNs into their treatment, and facilitate access to CSPs that may be able to ameliorate the HRSN in order to improve health outcomes. Having CSP involvement in the care process may improve health outcomes for those identified with social needs based on current assessment of the patient. Patients with social needs may not have the access to the care recommended by clinicians or the ability to comply with treatment plans, therefore, a CSP could provide the critical assistance needed to ensure health care delivery. "Correct diagnoses and treatment plans may not be safe and effective if patients cannot afford their medications, do not have a place to live, lack transportation to get to appointments, or have adverse drug reactions because they cannot afford food. Health care organizations should work to understand these needs to provide optimal care."<sup>33</sup> We encourage clinicians to seek relationships that drive this innovation in wholistic patient care.</p> <p><i>Comment:</i> A few commenters supported the intent of this measure but did not believe that implementation was appropriate at the individual clinician or group level in MIPS, particularly due to the absence of any resources or tools that would be widely and readily available to clinicians and practices. Measures must be evidence-based and facilitate improvements in patient care. The commenters stated that the measure developer did not provide any evidence to support the five social needs, nor did they sufficiently justify the requirement to connect a patient with a community services provider on at least one need within 60 days. At a minimum, the measure should align with the work of the Health Level 7 Gravity Project and the USCDI. In addition, the measure itself is not yet tested to demonstrate reliability and validity since only data for two screening tools (which are not required) were provided and most of the information outlined is based on the CMMI Accountable Health Communities (AHC) Model (<a href="https://innovation.cms.gov/data-and-reports/2020/ahc-first-eval-rpt">https://innovation.cms.gov/data-and-reports/2020/ahc-first-eval-rpt</a>), which involved community health centers/health systems and therefore does not provide sufficient information on how this measure would perform at the individual clinician level. Furthermore, the commenters noted they believed that it is imperative that this measure has demonstrated links to directly improving patient outcome without any unintended consequence of creating patient harm. The measure has also not been endorsed by a CBE.</p>

Category	Description
	<p><i>Response:</i> We acknowledge that due to nuances in clinician specialization, scope of care, or regional location, not all measures within MIPS will be applicable or appropriate to all clinicians within that specialty set umbrella. However, no measures within traditional MIPS are required. We allow for clinician choice to account for these nuances, while ensuring clinicians can choose measures that are most meaningful to their scope of care and patient case-mix.</p> <p>The measure aligns with the key DOH domains in measures developed through the multi-stakeholder Gravity Project and adopted by the Office of the National Coordinator for Health Information Technology into the US Core Data for Interoperability (USCDI) (<a href="https://www.healthit.gov/sites/default/files/facas/2021-04-08_Gravity_Project_Presentation.pdf">https://www.healthit.gov/sites/default/files/facas/2021-04-08_Gravity_Project_Presentation.pdf</a>). During discussions at the MAP, the steward confirmed that the 60-day time frame was established as a reasonable timeframe in which to expect the connection to resources has taken place. Furthermore, by improving the clinicians understanding of the social obstacles their patients face beyond the clinical realm they can initiate the next steps to help alleviate these social stressors to improve their patients' mental and physical health.</p> <p>Measures selected for the MIPS quality performance category need not be endorsed by a CBE. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. The 5-year Accountable Health Communities (AHC) Model provides evidence of the need for the HRSNs and the positive outcomes by connecting patients with CSPs (<a href="https://www.cms.gov/priorities/innovation/data-and-reports/2023/ahc-second-eval-rpt">https://www.cms.gov/priorities/innovation/data-and-reports/2023/ahc-second-eval-rpt</a>). The AHC Model utilized both Medicare and Medicaid patients to determine if connecting beneficiaries to community resources positively correlated to health outcome improvement and cost of care reduction. Within the AHC Model, clinical delivery sites (CDSs) were involved as partners to engage beneficiaries by participating in screenings and referral summaries, in addition to assisting navigation-eligible beneficiaries connect with navigators who facilitate referrals to community services (<a href="https://www.cms.gov/priorities/innovation/data-and-reports/2020/ahc-first-eval-rpt">https://www.cms.gov/priorities/innovation/data-and-reports/2020/ahc-first-eval-rpt</a>). The AHC Model Evaluation: Second Evaluation Report (December 2020) (<a href="https://www.cms.gov/priorities/innovation/data-and-reports/2023/ahc-second-eval-rpt">https://www.cms.gov/priorities/innovation/data-and-reports/2023/ahc-second-eval-rpt</a>) found that the fee-for-service (FFS) Medicare beneficiaries within the Assistance Track, there was an 8 percent decrease in emergency department (ED) visits over the first three years after screening, driven by a 9 percent decrease in avoidable ED visits. Also, for the FFS Medicare beneficiaries within the Model's Alignment Track, there was a statistically significant decrease in receiving treatment for respiratory illness. In the AHC Model Evaluation: Second Evaluation Report (December 2020), it was also noted that most CSPs reported an increase in community capacity since the beginning of the model, which is how this measure can aid as an important next step for use of drivers of health (DOH) data to allocate supportive resources to patients in an impactful manner while supporting the clinicians treating these patients. A key finding from the AHC Model evaluations was a high acceptance of navigation, supporting the notion that, once a framework for coordination with CSPs has been implemented, patients will be more accepting and receptive to interventions that involve a CSP.</p> <p>Separate from the AHC Model, the Commonwealth Fund completed a review of evidence supporting HRSNs interventions by type of social service need (<a href="https://www.commonwealthfund.org/sites/default/files/2019-07/ROI-EVIDENCE-REVIEW-FINAL-VERSION.pdf">https://www.commonwealthfund.org/sites/default/files/2019-07/ROI-EVIDENCE-REVIEW-FINAL-VERSION.pdf</a>) and found strong evidence that providing supportive housing can significantly lower expensive forms of health care, while providing housing for the elderly can lead to reductions in hospitalizations and ED visits and large decreases in skilled nursing facility and long-term-care days, translating into significant cost savings to Medicare. Regarding food insecurity (nutrition), the review cited two studies based upon the Meals on Wheels program showed a reduction in hospitalizations, ED visits, and overall health care costs for Medicare beneficiaries. Moderate evidence was found to support an increase in the receipt of outpatient, preventive care for low-income people, with certain chronic conditions or dually eligible, that may prevent the necessity of requiring expensive forms of care. There is additional evidence that suggests coordinated efforts to both identify and meet the patient's social needs can lead to decreases in health care use and costs while leading to better outcomes in patients (<a href="https://doi.org/10.1377/hlthaff.2012.0170">https://doi.org/10.1377/hlthaff.2012.0170</a>; <a href="https://doi.org/10.1016/j.amepre.2022.03.011">https://doi.org/10.1016/j.amepre.2022.03.011</a>). We find this to be significant evidence that clinician coordination with and referral to CSPs can improve health outcomes.</p> <p>Clinicians that participated in the AHC Model are analogous to MIPS eligible clinicians and therefore, this measure is appropriate for the MIPS quality performance category. One of the most common types of clinical delivery sites in the AHC Model was the primary care practice. We recognize that patient acceptance is essential to success on this measure. For that reason, the measure includes an exclusion in the instance of a patient explicitly opting out of being connected to a CSP.</p> <p><i>Comment:</i> One commenter opposed this new measure, stating that this measure (along with measure Q487: Screening for Social Drivers of Health) is not well suited for non-patient facing providers who cannot ensure that the patient is being screened. The radiologist's performance is dependent upon the facility conducting the screening and establishing a data sharing process with the radiologist. For many imaging facilities, the radiologist is not even located at the point of patient imaging and the staff at the center are employed by a different organization, such as the affiliated hospital. While the commenter supported these measures' intent, they are impractical for many non-patient-facing providers, such as diagnostic radiologists. See related comment under Table B.10 Addition of this Appendix.</p> <p><i>Response:</i> We agree this measure may not be appropriate for the diagnostic radiology clinician type and, as such, we will not be finalizing this measure for inclusion within that measure set. See Table B.10 for a list of the finalized measures.</p> <p><i>Comment:</i> One commenter requested clarification of what "contact" with a CSP for at least 1 of their HRSNs within 60 days after screening means. The commenter stated the measure should focus on the provider's referral for appropriate services, not whether the patient chooses to complete the contact with the community service provider.</p> <p><i>Response:</i> It is not uncommon for a measure to require patient action. Currently, measure Q374: Closing the Referral Loop: Receipt of Specialist Report, requires a patient to complete the encounter while other measures require adherence to medications, such as measure Q009: Anti-Depressant Medication Management.</p> <p>The measure steward defines contact as "engagement with CSP for the purpose of addressing at least one HRSN, either as reported by patient or acknowledged from CSP." Engagement, for the purposes of this measure, is not limited completion of all interactions, but could be an initial contact with the CSP to get on a resource waitlist or scheduling a meeting, both of which a clinician may be able to facilitate. Ensuring that there is contact is critically important to ensuring that needs are being addressed. The commonality of this measure with other measures that require patient action is that these measures emphasize patients engaging in their own care. Clinicians encouraging engagement with a CSP should support positive health outcomes by supporting identified social needs that impede access to critical health treatments. Therefore, clinicians should be incentivized to follow up with patients to ensure they contacted the CSP as it may support the treatments recommended by the clinician. This measure is process in nature and does not require resolution of the HRSN or any specific interaction between the patient, CSP, and clinician, only that the patient and CSP made contact within the 60 days following the positive screening. However, we will take the commenter's feedback into consideration during the annual MIPS quality measure revisions cycle for possible implementation in future years.</p>

Category	Description
	<p>We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.</p> <p><i>Comment:</i> One commenter supported the intent of this new measure but had concerns that access to CSPs remains extremely variable across the country, and it would be challenging to hold providers accountable for finding resources in communities that lack the full continuum of care. The commenter also stated that this measure does not make a distinction between social risk and social needs screening, which are performed very differently, and is not supported by evidence.</p> <p><i>Response:</i> While we agree availability of resources may be a challenge in some areas, with the increase in telehealth and virtual networking, the CSP need not be in the general area to provide assistance. We acknowledge that “more rigorously designed studies are needed as the field moves forward to clarify cost-effective intervention approaches” (<a href="https://www.ncbi.nlm.nih.gov/pmc/articles/PMC9257553/">https://www.ncbi.nlm.nih.gov/pmc/articles/PMC9257553/</a>). However, we note there are numerous clinicians who already incorporate HRSN screenings and encouraging patients to contact CSPs for additional support. While it is the patients’ choice to act upon the recommendation of connecting with a CSP, clinicians are encouraged to follow up as CSP support has been shown to have an impact patient health outcomes, as discussed above.</p> <p>Through different programs, CSPs can identify and work with the proper resources to reduce social stressors for patients and clinicians. We will take the commenter’s feedback regarding the distinction between social risk and social needs screening into consideration during the annual MIPS quality measure revisions cycle for possible implementation in future years. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 52778 through 52779), we are finalizing the <i>Connection to Community Service Provider</i> measure as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>

### A.8. Appropriate Screening and Plan of Care for Elevated Intraocular Pressure Following Intravitreal or Periocular Steroid Therapy

Category	Description
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	499
<b>Description:</b>	Percentage of patients who had an intravitreal or periocular corticosteroid injection (e.g., triamcinolone, preservative-free triamcinolone, dexamethasone, dexamethasone intravitreal implant, or fluocinolone intravitreal implant) who, within seven (7) weeks following the date of injection, are screened for elevated intraocular pressure (IOP) with tonometry with documented IOP $\leq$ 25 mm Hg for injected eye OR if the IOP was $>$ 25 mm Hg, a plan of care was documented.
<b>Measure Steward:</b>	American Society of Retina Specialists
<b>Numerator:</b>	Number of patients who, within seven (7) weeks following the date of injection, are screened for elevated intraocular pressure (IOP) with tonometry with documented IOP $\leq$ 25 mm Hg for injected eye listed in chart OR if the IOP was $>$ 25 mm Hg, a plan of care was documented.
<b>Denominator:</b>	Patients who had an intravitreal or periocular corticosteroid injection (e.g., triamcinolone, preservative-free triamcinolone, dexamethasone, dexamethasone intravitreal implant, or fluocinolone intravitreal implant) with a patient encounter during the performance period.
<b>Exclusions:</b>	Patients with a diagnosis of hypotony.
<b>Measure Type:</b>	Process
<b>High Priority Measure:</b>	No
<b>Collection Type:</b>	MIPS CQMs Specifications
<b>Measure-Specific Case Minimum/Performance Period:</b>	N/A for this measure
<b>Rationale:</b>	<p>We proposed this process measure because it will address the MIPS priority area of patient safety. Patients treated with corticosteroid therapy are at increased risk for elevated IOP leading to steroid-induced glaucoma and their quality of life may be negatively impacted due to visual impairments.<sup>34</sup> Ensuring that appropriate monitoring is conducted to detect and treat this complication is important to prevent significant visual morbidity. Researchers who completed a systemic review identified that 10.9 percent to 79.0 percent of patients will develop clinically significant IOP elevations and should have a follow-up within 7 weeks, based upon randomized controlled trials.<sup>35</sup> This measure will directly measure IOP after corticosteroid injections. The intent of this measure encourages clinicians to screen and treat patients identified with an elevated IOP in a timely manner. Currently there are no measures in MIPS that address the screening and plan of care for elevated IOP following intravitreal or periocular steroid therapy. This measure will also provide a clinically relevant measure option for retinal specialists.</p> <p>The MAP conditionally supported this measure for rulemaking pending endorsement of the measure by a CBE. While we agree that CBE endorsement is preferred, this measure should nonetheless be added to MIPS, and it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. Current clinical guidelines do not address the need to assess for elevated IOP following corticosteroid injection; however, data has demonstrated that patients treated with corticosteroid therapy are at increased risk for elevated IOP leading to steroid induced glaucoma, visual impairment, and overall poor quality of life.<sup>36,37</sup> Several randomized clinical trials and a systematic review identified that IOPs typically peak around 7 to 9 weeks.<sup>35,38,39</sup></p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at <a href="https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports">https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports</a>.</p>
<p><i>Comment:</i> One commenter supported the new Appropriate Screening and Plan of Care for Elevated Intraocular Pressure Following Intravitreal or Periocular Steroid Therapy measure, stating that retina specialists frequently treat these conditions and use their specialized knowledge to manage these patients with the goal of preventing more serious complications, such as retinal detachment or steroid-induced glaucoma. This measure reflects a higher quality of care that ensures patients are receiving a comprehensive examination and appropriate follow-up. The measure also covers a gap in care for these conditions that will lead to meaningfully improved patient outcomes.</p> <p>A couple of other commenters supported this new measure and the new measures under Tables A.9 and A.10 of this Appendix. One commenter stated these measures take important steps to better align MIPS quality performance with the evidence-based treatment guidelines established by the professional medical societies, which aim to reduce the likelihood of patients facing long-term problems like elevated intraocular pressure, steroid-induced glaucoma, retinal tears, retinal detachment, epiretinal membrane, and loss of vision. New quality measures are an important advancement to better reflect the quality of work of retinal specialists. The follow-up care that is a key part of these measures allows for the prompt identification and mitigation of risk for possible complications.</p> <p><i>Response:</i> We thank the commenters for supporting this new measure in MIPS.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 52780), we are finalizing the <i>Appropriate Screening and Plan of Care for Elevated Intraocular Pressure Following Intravitreal or Periocular Steroid Therapy</i> measure as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>

**A.9. Acute Posterior Vitreous Detachment Appropriate Examination and Follow-up**

Category	Description
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	500
<b>Description:</b>	Percentage of patients with a diagnosis of acute posterior vitreous detachment (PVD) in either eye who were appropriately evaluated during the initial exam and were re-evaluated no later than 8 weeks.
<b>Measure Steward:</b>	American Society of Retina Specialists
<b>Numerator:</b>	Patients who were appropriately evaluated during the initial exam and were re-evaluated no later than 8 weeks.
<b>Denominator:</b>	Patients with a diagnosis of acute PVD in either eye and eligible encounter during measurement period.
<b>Exclusions:</b>	Patients with a post-operative encounter of the eye with the acute PVD within 2 weeks before the initial encounter or 8 weeks after initial acute PVD encounter. - Patients with a diagnosis of acute vitreous hemorrhage.
<b>Measure Type:</b>	Process
<b>High Priority Measure:</b>	No
<b>Collection Type:</b>	MIPS CQMs Specifications
<b>Measure-Specific Case Minimum/Performance Period:</b>	N/A for this measure
<b>Rationale:</b>	<p>We proposed this process measure because it will address the appropriate screening and follow-up for patients with PVD. PVD puts patients at an increased risk of retinal tears.<sup>40</sup> PVD complicated by retinal tear may result in retinal detachment or epiretinal membrane, causing loss of vision.<sup>40</sup> When retinal tears are treated promptly, the risk of detachment decreases driving positive health outcomes. While the onset of PVD is generally not preventable, it is critical to identify and treat any associated retinal tears through a prompt and appropriate initial exam and re-evaluation.<sup>41</sup> Prompt identification of complications will allow for expedient treatment, minimizing the potential for further complications such as retinal detachment improving a patient’s quality of life.<sup>41</sup></p> <p>Currently there are no measures in MIPS that address care improvement for patients at risk of retinal tearing due to PVD. This measure is intended to assess compliance with the current guidelines published by the American Academy of Ophthalmology on PVD and retinal breaks, which calls for re-evaluation of patients within eight weeks of their diagnosis of PVD.<sup>41</sup> Such re-evaluations are associated with prompt identification of complications which will allow for expedient onset of treatment, minimizing the potential for further complications, such as retinal detachment improving a patient’s quality of life.<sup>40</sup> This measure will also provide a clinically relevant measure option for retinal specialists.</p> <p>The MAP conditionally supported this measure for rulemaking pending endorsement of the measure by a CBE, with a specific review of the validity of the measure specifications and performance gap of the measure. While we agree that CBE endorsement is preferred, this measure should nonetheless be added to MIPS, and it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. As stated above, PVD is not preventable; however, with prompt evaluations, and expedited treatment, these complications may be lessened, supporting the need for this measure.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at <a href="https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports">https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports</a>.</p>
<b>Comment:</b>	A couple of commenters supported the new Acute Posterior Vitreous Detachment Appropriate Examination and Follow-up measure for reporting by retinal specialists. Full comments are included under Table A.8 of this Appendix.
<b>Response:</b>	We thank the commenters for supporting this new measure in MIPS.
	After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 52781), we are finalizing the <i>Acute Posterior Vitreous Detachment Appropriate Examination and Follow-up</i> measure as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.

**A.10. Acute Posterior Vitreous Detachment and Acute Vitreous Hemorrhage Appropriate Examination and Follow-up**

Category	Description
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	501
<b>Description:</b>	Percentage of patients with a diagnosis of acute posterior vitreous detachment (PVD) and acute vitreous hemorrhage in either eye who were appropriately evaluated during the initial exam and were re-evaluated no later than 2 weeks.
<b>Measure Steward:</b>	American Society of Retina Specialists
<b>Numerator:</b>	Patients who were appropriately evaluated during the initial exam and were re-evaluated no later than 2 weeks
<b>Denominator:</b>	Patients with a diagnosis of acute PVD and acute vitreous hemorrhage in either eye and eligible encounter during performance period.
<b>Exclusions:</b>	Patients with a post-operative encounter of the eye with the acute PVD within 2 weeks before the initial encounter or 2 weeks after initial acute PVD encounter.
<b>Measure Type:</b>	Process
<b>High Priority Measure:</b>	No
<b>Collection Type:</b>	MIPS CQMs Specifications
<b>Measure-Specific Case Minimum/Performance Period:</b>	N/A for this measure
<b>Rationale:</b>	<p>We proposed this measure because it will address appropriate screening and follow-up for patients with PVD and acute vitreous hemorrhage, due to the increased risk for complications such as retinal tears and subsequent retinal detachment in this population. This measure will address the MIPS priority area of patient safety by incentivizing physicians to see patients in a timely manner. It was found that two-thirds of PVD patients presenting with associated vitreous hemorrhage, had at least one retinal break and therefore, require a more expedient follow-up evaluation. This measure will also provide a clinically relevant measure option for retinal specialists.</p> <p>The MAP conditionally supported this measure for rulemaking pending endorsement of the measure by a CBE. While we agree that CBE endorsement is preferred, this measure should nonetheless be added to MIPS, and it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based.</p> <p>When retinal tears are treated promptly, the risk of detachment decreases driving positive health outcomes. While the onset of PVD is generally not preventable, it is critical to identify and treat any associated retinal tears through a prompt and appropriate evaluation. Prompt identification of complications will allow for expedient onset of treatment, minimizing the potential for further complications such as retinal detachment improving a patient’s quality of life. The current guideline published by the American Academy of Ophthalmology on posterior vitreous detachment (PVD) and retinal breaks supports this measure. The guideline states, “selected patients, particularly those with any degree of vitreous pigment, vitreous or retinal hemorrhage, or visible vitreoretinal traction, should be asked to return for a second examination promptly if they have new symptoms or within 6 weeks following the onset of PVD symptoms.”<sup>41</sup></p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at <a href="https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports">https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports</a>.</p>
	<p><i>Comment:</i> A couple of commenters supported the new Acute Posterior Vitreous Detachment and Acute Vitreous Hemorrhage Appropriate Examination and Follow-up measure for reporting by retinal specialists. Full comments are included under Table A.8 of this Appendix.</p> <p><i>Response:</i> We thank the commenters for supporting this new measure in MIPS.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 52782), we are finalizing the <i>Acute Posterior Vitreous Detachment and Acute Vitreous Hemorrhage Appropriate Examination and Follow-up</i> measure as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>

**A.11. Improvement or Maintenance of Functioning for Individuals with a Mental and/or Substance Use Disorder**

Category	Description
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	502
<b>Description:</b>	The percentage of patients aged 18 and older with a mental and/or substance use disorder who demonstrated improvement or maintenance of functioning based on results from the 12-item World Health Organization Disability Assessment Schedule (WHODAS 2.0) or Sheehan Disability Scale (SDS) 30 to 180 days after an index assessment.
<b>Measure Steward:</b>	American Psychiatric Association
<b>Numerator:</b>	Patients who demonstrated improvement or maintenance of functioning, as demonstrated by results of follow-up assessment using the 12-item WHODAS 2.0 or Sheehan Disability Scale 30 to 180 days after the index assessment during the performance period.
<b>Denominator:</b>	Patients aged 18 and older with a mental and/or substance use disorder and an encounter with an index assessment completed using the 12-item WHODAS 2.0 or Sheehan Disability Scale (SDS) during the denominator identification period.
<b>Exclusions:</b>	Patient situations, at any point during the denominator identification period, where the patient's functional capacity or motivation (or lack thereof) to improve may impact the accuracy of results of validated tools, such as delirium, dementia, intellectual disabilities, and pervasive and specific development disorders, - Patients who died during the performance period.
<b>Measure Type:</b>	Patient-Reported Outcome-based Performance Measure (PRO-PM)
<b>High Priority Measure:</b>	Yes
<b>Collection Type:</b>	MIPS CQMs Specifications
<b>Measure-Specific Case Minimum/Performance Period:</b>	N/A for this measure
<b>Rationale:</b>	<p>We proposed this measure because it will address a high priority specialty area and a high priority clinical topic, mental health and substance use disorders, and is not duplicative of any existing measure within MIPS. The mental and substance use disorders captured by this measure are among the 25 leading causes of years lived with disabilities as well as contributing significantly to the global burden of disease.<sup>42</sup> Twenty-two percent of U.S. adults (57.8 million individuals aged 18 and older) have a mental illness diagnosis and 17.3 percent (44 million individuals aged 18 and older) have a substance use disorder diagnosis (<a href="https://www.samhsa.gov/data/release/2021-national-survey-drug-use-and-health-nsduh-releases#annual-national-report">https://www.samhsa.gov/data/release/2021-national-survey-drug-use-and-health-nsduh-releases#annual-national-report</a>). Individuals with mental disorders are more likely to report severe impairment in functioning when compared to patients with chronic medical conditions.<sup>43</sup> Improvement or maintaining functioning is strongly predictive of a positive outcome.<sup>43</sup> Patients afflicted with mental disorders showed increased rates of morbidity from general medical conditions in addition to a higher risk of premature mortality.<sup>43</sup> Considering these factors and the contribution of mental health disorders to the global burden of disease, gaps persist in healthcare. This necessitates improvement in the overall quality of mental health care.<sup>43 44</sup></p> <p>Outcome measures are critical to evaluating patient improvements based on current patient care, assisting clinicians in planning, monitoring, and adjusting care plans and treatment options.<sup>45</sup> This measure is comprehensive and broadly inclusive of mental health and substance use disorders. It uses a measurement-based care framework for implementation across various settings and populations to assess the outcome of care for patients with mental health and substance use disorders.</p> <p>The MAP conditionally supported this measure for rulemaking pending endorsement of the measure by a CBE. While we agree that CBE endorsement is preferred, this measure should nonetheless be added to MIPS, and it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. A measure focused on functioning is linked to a decrease in negative symptoms and a reduction in resources utilized, making it have the potential to reduce economic burden. Using a screening tool will allow clinicians to better assess patient functioning over time and adjustment treatment accordingly. Measurement-based care with the use of a valid and reliable tool provides valuable information about functioning.<sup>44</sup></p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at <a href="https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports">https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports</a>.</p>
<p><i>Comment:</i> Several commenters supported the new Improvement or Maintenance of Functioning for Individuals with a Mental and/or Substance Use Disorder measure. One commenter stated that the increased adoption of measurement-based care and use of patient-reported outcomes in behavioral health measurement is critical to improving care in this area. Another commenter supported the new behavioral health measures and appreciated their proposal in relevant MVPs.</p> <p><i>Response:</i> We thank the commenters for supporting this new measure in MIPS.</p> <p><i>Comment:</i> One commenter supported this new measure and stated the measure is currently limited to the WHODAS 2 or Sheehan Disability Scale for assessing improvements in functional status. The commenter encouraged CMS to monitor the landscape and consider including additional assessment tools/models that may be found to be more conducive to assessment of certain populations, as evidence becomes available.</p> <p><i>Response:</i> We thank the commenter for supporting this new measure in MIPS and will take their feedback it into consideration during the annual MIPS quality measure revisions cycle for possible implementation in future years. Additionally, we encourage the commenter to reach out to measure developers/stewards to develop new outcome/high priority measures for submission to the Call for Measures for possible future implementation.</p>	

Category	Description
	After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 52783), we are finalizing the <i>Improvement or Maintenance of Functioning for Individuals with a Mental and/or Substance Use Disorder</i> measure as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.

**A.12. Gains in Patient Activation Measure (PAM®) Scores at 12 Months**

Category	Description
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	503
<b>Description:</b>	The Patient Activation Measure® (PAM®) is a 10 or 13 item questionnaire that assesses an individual’s knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.
<b>Measure Steward:</b>	Insignia Health, LLC, a wholly owned subsidiary of Phreesia
<b>Numerator:</b>	Numerator 1: Patients with a Baseline PAM® score and then a second score taken within 12 months of the baseline (but not less than 6 months). Numerator 2: Percentage of eligible patients who achieved a net increase in PAM® score of at least 3 points in a 6 to 12 month period (passing). Numerator 3: Percentage of eligible patients who achieved a net increase in PAM® score of at least 6 points in a 6 to 12 month period (excellent). Numerator 4: The average change (net difference) for all eligible patients between the baseline PAM® score and the second score taken within 12 months of the baseline (but not less than 6 months).
<b>Denominator:</b>	Denominator 1: Patients aged 14 and older with a qualifying visit at least once during the performance period. Denominator 2, 3 and 4: Patients aged 14 years and older with Performance Met for Submission Criteria 1 who had a baseline PAM® score and a second score within 6 to 12 month of baseline PAM® score and who were seen for a qualifying visit at least once during the performance period.
<b>Exclusions:</b>	Denominator 1, 2, 3: Diagnosis of Dementia; Diagnosis of Huntington’s disease; Diagnosis of Cognitive Impairment or Alzheimer’s disease Denominator 4: None
<b>Measure Type:</b>	Patient-Reported Outcome-based Performance Measure (PRO-PM)
<b>High Priority Measure:</b>	Yes
<b>Collection Type:</b>	MIPS CQMs Specifications
<b>Measure-Specific Case Minimum/Performance Period:</b>	1.Clinicians must have collected a follow-up PAM® survey on at least 50 percent of all eligible patients during the performance period 2.Clinicians must have administered a follow-up PAM® survey to a minimum of 50 unique patients
<b>Rationale:</b>	<p>We proposed this measure because this measure, while disease agnostic, will address chronic conditions and patient reported outcomes, both of which are high priority areas for measure consideration for MIPS. This PRO-PM provides a standardized method for clinicians to assess patient activation through the continuum of care. The PAM® survey<sup>46</sup> collects information directly from patients regarding their knowledge, skill, and confidence in managing their health and healthcare. This measure has been used with a wide variety of chronic conditions, as well as with people with no medical diagnosis.</p> <p>The intent of the PAM® is to assess an individual’s ability to manage their own health and health care. According to the measure developer, the PAM® is predictive of most health outcomes, including such diverse outcomes as how a patient fares after orthopedic surgery; remission of depression over time; the likelihood of hospital re-admission or ambulatory care sensitive (ACS) utilization; the trajectory of a chronic disease over time; and even the likelihood of a new chronic disease diagnosis in the coming year.<sup>47 48 49 50</sup> The PAM® surveys the knowledge, skill, and confidence necessary for self-management on a 0-100 point scale that can be broken down into four levels from low activation to high activation. The 13 (or 10) item survey has strong measurement properties and is predictive of most health behaviors and many clinical outcomes.<sup>51</sup> PAM® scores are also predictive of health care costs, with lower scores predictive of higher costs.<sup>46</sup></p> <p>The PAM® is in use both in the U.S. and internationally in research as well as clinical settings and has been translated into more than 30 languages.<sup>46</sup> The measure developer validated the instrument in populations of different racial and ethnic backgrounds and socio-economic levels, owing to the widespread utilization of PAM® by researchers all over the world.<sup>46 51</sup> A version of this measure, as well as the PAM® survey, is used in a number of federal quality and payment programs.<sup>46</sup> Additionally, it is currently a required assessment in the CMMI Kidney Care Choices (KCC) (<a href="https://innovation.cms.gov/innovation-models/kidney-care-choices-kcc-model">https://innovation.cms.gov/innovation-models/kidney-care-choices-kcc-model</a>) and Maternal Opioid Misuse (<a href="https://innovation.cms.gov/innovation-models/maternal-opioid-misuse-model">https://innovation.cms.gov/innovation-models/maternal-opioid-misuse-model</a>) alternative payment models.</p> <p>This measure received support for rulemaking from the MAP. The MAP discussed concerns regarding the potential proprietary nature of the assessment, costs to integrate the measure into EHRs, and the licensing for integration into EHRs. The measure developer clarified the measure will be available without licensing costs for implementation. MAP also raised concerns regarding the specificity of the denominator definition/population. However, this measure is currently implemented in other Federal quality and payment programs. The measure is also aligned with the CBE endorsed measure CBE 2483: Gains in Patient Activation (PAM®) Scores at 12 Months, which is applicable to the “Group/Practice” level of analysis. Overall, the MAP agreed this measure contributes to patient-centered care and supported the measure as a PRO-PM.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at <a href="https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports">https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports</a>.</p>
<b>Comment:</b>	A few commenters supported the new Gains in Patient Activation Measure (PAM®) Scores at 12 Months measure. One commenter noted that nurses are critical to the success and administration of this measure due to their expertise in patient education and care coordination. Another commenter stated that PAM® scores predict most health-related behaviors, regardless of health status or conditions, and interventions designed to increase activation also result in decreased costs and improved clinician burden. The commenter indicated the importance of including the PAM®-PM along with measure Q487: Screening for Social Drivers of Health to improve patient outcomes in populations disproportionately impacted by chronic conditions. The commenter also stated that clinicians should enable patients and arm them with the tools they need to be more active in their care and develop healthy behaviors. Another commenter supported this new measure, stating that the PAM®-PM has been successful as part of the Kidney Care Choices model.

Category	Description
	<p><i>Response:</i> We thank the commenters for supporting this new measure in MIPS. We also appreciate the critical role nurses contribute to the healthcare system.</p> <p><i>Comment:</i> One commenter supported this new measure for use in specialty sets and MVPs. In addition, the measure is already in use by orthopedic surgeons. Given this measure's value, the commenter requested that CMS consider it for inclusion in the Universal Foundation. Several commenters supported this measure in the End-Stage Renal Prospective Payment System Quality Incentive Program and the Universal Foundation.</p>
	<p><i>Response:</i> We thank the commenter for supporting this new measure in MIPS. We will take feedback into consideration regarding inclusion of this measure in the Universal Foundation.</p> <p><i>Comment:</i> One commenter supported this new measure and encouraged CMS to use the performance rate: "percent of patients age 14 years and older who achieved a net increase in PAM® score of at least 3 points in a 6–12-month period" as the benchmarking strata. The commenter noted they believed this stratum would be the most clinically relevant threshold based on existing data and expert clinical feedback. The commenter also recommended that CMS raise the threshold of the minimum number of patients receiving a second PAM® survey from 40 to 50. This threshold has been shown to be the minimum volume necessary for the performance measure to be empirically reliable and valid in its most recent testing.</p>
	<p><i>Response:</i> We thank the commenter for their feedback and agree to make these updates requested by the measure steward to this measure for CY 2024. Under the Measure-Specific Case Minimum/Performance Period row, we have updated the text to read "2. Clinicians must have administered a follow-up PAM® survey to a minimum of 50 unique patients." This update does not change the nature of the measure as proposed and clarifies the expected number of surveys required to meet the threshold for reporting the measure. Other requested changes will occur in the measure specifications.</p> <p><i>Comment:</i> One commenter indicated that while this measure can provide a good assessment of patients who actively participate in their healthcare, it fails to account for socioeconomic status, healthcare access, and comorbidities. Given the challenges in this population, it is highly unlikely that anyone with health-related social needs will be an active participant in their healthcare. Challenges exist with a survey-based tool, such as the possibility of response bias, and time and resource constraints on administration. While the measure can offer valuable insights into self-management in cardiology patients, the commenter noted they believed it should be used in conjunction with other clinical assessments and considerations to provide a more comprehensive evaluation of a patient's cardiac health and overall well-being.</p>
	<p><i>Response:</i> The reliability and validity of the PAM® survey has been demonstrated across patient populations, sociodemographic segments, mode of administration, and across multiple languages. Across all patient populations, lower activation has been shown to be predictive of poor self-management, higher healthcare utilization, and higher costs. The evidence suggests factors such as education, income, ethnicity, and gender account for less than 5 percent of the variance in PAM® scores. Providers are not penalized for having a large percentage of patients with low activation scores, as those patients have the most room for gains. Providers are assessed for increasing activation in patients based upon the completion of an initial and follow-up PAM® survey, which is indicative of patient experience as opposed to healthcare access, as activation is addressing a patient's ability to understand and be an active part of their healthcare journey. Furthermore, evidence shows that all patients can improve in activation and when appropriately supported, patients at the lower levels of activation improve more quickly than other patients. We encourage the commenter to reach out to measure developers/stewards to develop new outcome/high priority measures for submission to the Call for Measures for possible future implementation.</p>
	<p><i>Comment:</i> One commenter had concerns about the broad applicability of the measure and the feasibility and implementation burden the measure would pose. The commenter stated that it was positive that the measure looks at a change score and excludes patients who would not be eligible for the measure. However, the commenter noted they believed the measure should be applied to a narrower set of patients and that the measure does not account for patient preference and where a patient may not need activation. The measure may be burdensome to operationalize for practices that do not already have a system to support patient engagement and patient activation. In addition, the measure developer stated that PAM® scores are higher for patients who have good to excellent health. The measure developer also acknowledged lower scores for a vast majority of patients that make up an internal medicine physician's patient population, causing performance scores to likely skew lower for this specialty.</p>
	<p><i>Response:</i> The addition of this measure enhances clinician choice when they select measures to report. The PAM® is a disease-agnostic measure meant to provide meaningful information about changes in activation across many patient populations and aligns with CMS health priorities of capturing the patient voice, ensuring patients can be partners in healthcare decisions with their clinicians. This will be a valuable tool for all patients within a clinician's scope of practice. Patients with an initial maximum score of four at baseline are addressed within the measure specification, such that this patient population should not inadvertently inflate performance. The evidence suggests factors such as education, income, ethnicity, and gender account for less than 5 percent of the variance in PAM® scores. Furthermore, patients at the lower levels of activation improve more quickly than other patients.<sup>52,53</sup> Evidence shows when patients are appropriately supported by their clinical teams, they typically gain in their ability to self-manage. Research shows that when the least activated (measuring at levels 1 or 2) are provided appropriate support, they will typically gain 6-9 points on the 0-100 scale within 6 months. This level of change in PAM® scores is significant in terms of changing patients' clinical trajectory, as well as their cost trajectory. In a follow up study, it was found that the PAM®-PM was significantly linked with clinician behaviors with regard to supporting the patient role and clinician beliefs about the importance of the patient role in the care process.</p>
	<p><i>Comment:</i> One commenter supported measures that encourage physicians and practices to focus on ensuring that patients are equipped to manage their health and health care but questioned whether this measure had been tested for reliability and validity at the individual clinician level. The data provided during the MAP focused on the reliability and validity of the tool. In addition, the measure has not been reviewed for CBE endorsement for at least 7 years. New data on performance, feasibility of data collection and reporting burden should be available, as well as testing information. Therefore, the commenter stated that the measure must be re-evaluated for continued endorsement prior to inclusion of this measure in MIPS and placed within specialty measure sets.</p>
	<p><i>Response:</i> The steward provided sufficient reliability and validity testing at the clinician level to determine that the measure can be reliably implemented within MIPS. While this measure aligns with the CBE endorsed measure CBE 2483: Gains in Patient Activation (PAM®) Scores at 12 Months, which is applicable to the "Group/Practice" level of analysis, it currently does not have CBE endorsement. While we agree that CBE endorsement is preferred, this measure should nonetheless be added to MIPS, and it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. At this point, there are a sufficient number of studies in the literature</p>

Category	Description
	<p>for multiple systematic reviews to have been published based on existing PAM® studies. For example, a recent systematic review examined utilization among patients with a chronic illness, including ten studies, and found that patients with low PAM® scores were more likely to seek care in an emergency department.<sup>54</sup> Another systematic review concluded that, along with the Health Related Quality of Live (HRQOL), patient activation is one of the most useful measures of self-management for clinicians.<sup>55</sup></p> <p><i>Comment:</i> One commenter expressed that Phreesia does not have a method for licensing the PAM® tool for other vendors to use. If a clinician is not using Phreesia, there is not a way to use the PAM® survey, and therefore they cannot participate in this measure. There are many activation patient-reported outcome measures (PROM) that are free, and others that while not free, have clear licensing processes and associated fee schedules, that allow clinicians to use whatever vendor they choose to administer the survey. The commenter suggested replacing the PAM® survey with an alternate activation survey that is accessible to any electronic PROM vendor/platform.</p> <p><i>Response:</i> The PAM® survey will be made publicly available by the measure steward at no cost to clinicians. This will be available after the 2024 Physician Fee Schedule final rule is released. The current MIPS quality measure inventory does not include an alternate measure based upon an activation survey. We encourage the commenter to reach out to measure developers/stewards to develop additional measures allowing for the use of alternate activation surveys accessible to any ePROM vendor or platform for submission to the Call for Measures for possible future implementation.</p> <p><i>Comment:</i> One commenter stated that gains in patient activation are important but had concerns that the measure specification only uses one qualifying encounter for clinician attribution. The commenter recommended that the measure steward include a requirement for at least two qualifying visits to illustrate a patient-clinician relationship.</p> <p><i>Response:</i> We will take the commenter's feedback into consideration during the annual MIPS quality measure revisions cycle for possible implementation in future years. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 52784 through 52785), we are finalizing the <i>Gains in Patient Activation Measure (PAM®) Scores at 12 Months</i> measure as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>

**A.13. Initiation, Review, And/Or Update To Suicide Safety Plan For Individuals With Suicidal Thoughts, Behavior, Or Suicide Risk**

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	504
Description:	Percentage of adult aged 18 years and older with suicidal ideation or behavior symptoms (based on results of a standardized assessment tool or screening tool) or increased suicide risk (based on the clinician's evaluation or clinician-rating tool) for whom a suicide safety plan is initiated, reviewed, and/or updated in collaboration between the patient and their clinician.
Measure Steward:	American Psychiatric Association
Numerator:	Numerator 1: Patients for whom a completed suicide safety plan is initiated, reviewed, or updated in collaboration between the patient and their clinician at the time the suicidal ideation behavior or risk is identified (concurrent or within 24 hours of index clinical encounter), during the measurement period. Numerator 2: Patients for whom a suicide safety plan is initiated, reviewed, or updated in collaboration between the individual and their clinician at the time the suicidal ideation, behavior or risk is identified (concurrent or within 24 hours of clinical encounter) AND reviewed and updated within 120 days after the index clinical encounter after initiation.
Denominator:	Denominator 1 and 2: Patients aged 18 and older with a mental and/or substance use disorder with suicidal ideation and/or behavior symptoms or suicide risk at a clinical encounter during the denominator identification period.
Exclusions:	Denominator 1 and 2: Patients whose functional capacity or motivation (or lack thereof) to improve may impact the accuracy of results of validated tools such as delirium, dementia, intellectual disabilities, and pervasive and specific development disorders. Patients who died during the measurement period.
Measure Type:	Process
High Priority Measure:	Yes
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	<p>We proposed this measure because it will focus on a process where initiating and reviewing a suicide safety plan with a patient at risk of suicide is a proxy for the clinical outcome of a reduction in suicides, suicide attempts, and suicidal ideation; thereby, addressing behavioral health. Incorporating this measure into MIPS will encourage measure adoption, which will support clinician adherence to clinical guidelines, leading to better symptom control and improved quality of life for patients affected by mental health and substance use disorder. This measure represents a high priority area for MIPS due to its focus on improved outcomes in mental health.</p> <p>The use of standardized patient-reported outcome measures (PROMs) associated with suicide ideation and behavior and clinician-rated assessments of suicide risk, including the use of safety plans, varies within and across behavioral health specialties as well as primary care and emergency care settings, where suicidal persons often present for care. Currently, only hard-copy versions of safety planning documents have been used in most settings, with slow uptake of electronic versions.<sup>56</sup> Hard-copy safety plans provided to patients are prone to misplacement, creating a barrier to their use and follow-up.<sup>56</sup> Even with use of suicide safety plans at an index visit, research has found that less than 50 percent of suicidal persons had explicit evidence of ongoing review or utilization of the safety plan in ongoing treatments.<sup>57</sup> The implementation of this quality measure is intended to incentivize quality care that addresses the low rate of (re)assessment and poor outcomes. This quality measure will help to advance the Zero Suicide initiative set forth in the National Strategy for Suicide Prevention (<a href="https://theactionalliance.org/our-strategy/national-strategy-suicide-prevention">https://theactionalliance.org/our-strategy/national-strategy-suicide-prevention</a>) and ultimately improve the quality of care for patients with suicide ideation, behaviors, or suicide risk.</p> <p>There is one existing measure in MIPS that addresses suicide: measure Q107: Adult Major Depressive Disorder (MDD): Suicide Risk Assessment. Though conceptually related, this measure distinguishes itself from measure Q107 by focusing on a care process that is directly designed to mitigate suicide risk, as opposed to merely completely screening for it. There is an outcome measure in MIPS focused on a related mental health area: measure Q370: Depression Remission at Twelve Months. While the PHQ-9, the assessment used in measure Q370<sup>58</sup>, does include one question about self-harm, measure Q370 is specific to depression. This measure will include patients with other behavioral health conditions who are at risk of suicide and appropriate for assessment of the clinical quality action within the measure.</p> <p>This measure received conditional support for rulemaking from the MAP pending CBE endorsement. While we agree that CBE endorsement is preferred, this measure should nonetheless be added to MIPS, and it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based. This suicide prevention measure will be clinically useful for clinicians treating individuals at increased risk for suicide as it is associated with reduction in suicidal behaviors and may improve quality of care for at risk patients.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at <a href="https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports">https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports</a>.</p>
Comment:	A couple of commenters supported the new Initiation, Review, And/Or Update To Suicide Safety Plan For Individuals With Suicidal Thoughts, Behavior, Or Suicide Risk measure. One commenter stated that the increased adoption of measurement-based care and use of patient-reported outcomes in behavioral health measurement is critical to improving care in this area.
Response:	We thank the commenters for supporting this new measure in MIPS.

Category	Description
	<p><i>Comment:</i> One commenter supported this new measure and in the future encouraged CMS to require a specific and validated, stakeholder-supported screening tool as part of this measure such as the Columbia-Suicide Severity Rating Scale (C-SSRS). The C-SSRS is already incorporated in the proposed Reduction in Suicidal Ideation or Behavior Symptoms measure (See Table A.14 of this Appendix), and the commenter encouraged CMS to adopt this instrument for other suicide-focused measures, as it has been validated, is supported by industry, is available in the public domain, and requires no formal mental health training to administer.</p>
	<p><i>Response:</i> We thank the commenter for their support and will take the commenter’s feedback into consideration during the annual MIPS quality measure revisions cycle for possible implementation in future years. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.</p>
	<p><i>Comment:</i> One commenter was concerned that this new measure is impractical for implementation because it would only be available as a CQM and CQMs are not automatically aggregated within CEHRT. The commenter noted that shifting from meaningful, validated, data-efficient eCQMs to costly CQMs is out of step with CMS’ goals in the transition to digital quality measurement.</p>
	<p><i>Response:</i> We encourage the development of eCQMs as part of our overall strategy towards digital quality measures (dQMs); however, not all measures are submitted to the Call for Measures with an option for the eCQM collection type as this is not currently a requirement for MIPS. We strive to include measures from different collection types to allow flexibility in reporting but are limited to how the measure is submitted by the measures steward to the Call for Measures. We encourage the commenter to reach out to the measure steward of current measures not available as eCQMs to discuss revisions for possible implementation in futures years, This is a robust measure to drive quality care and ensure suicide risk assessment and prevention.</p>
	<p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 52786), we are finalizing the <i>Initiation, Review, And/Or Update To Suicide Safety Plan For Individuals With Suicidal Thoughts, Behavior, Or Suicide Risk</i> measure as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>

**A.14. Reduction in Suicidal Ideation or Behavior Symptoms**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	505
<b>Description:</b>	The percentage of patients aged 18 and older with a mental and/or substance use disorder AND suicidal thoughts, behaviors or risk symptoms who demonstrated a reduction in suicidal ideation and/or behavior symptoms based on results from the Columbia-Suicide Severity Rating Scale (C-SSRS) 'Screen Version' or 'Since Last Visit', within 120 days after an index assessment.
<b>Measure Steward:</b>	American Psychiatric Association
<b>Numerator:</b>	Patients who demonstrated a reduction in suicidal ideation and/or behavior symptoms as demonstrated by results of a follow-up assessment using the C-SSRS within 120 days after the index assessment during the measurement period.
<b>Denominator:</b>	Patients aged 18 and older with a mental and/or substance use disorder with suicidal ideation and/or behavior symptoms OR deemed a suicide risk based on their clinician's evaluation at an encounter with an index assessment completed using the C-SSRS during the denominator identification period.
<b>Exclusions:</b>	Patients whose functional capacity or motivation (or lack thereof) to improve may impact the accuracy of results of validated tools such as delirium, dementia, intellectual disabilities, and pervasive and specific development disorders. Patients who died during the measurement period
<b>Measure Type:</b>	Patient-Reported Outcome-based Performance Measure (PRO-PM)
<b>High Priority Measure:</b>	Yes
<b>Collection Type:</b>	MIPS CQMs Specifications
<b>Measure-Specific Case Minimum/Performance Period:</b>	N/A for this measure
<b>Rationale:</b>	<p>We proposed this PRO-PM because this measure focuses on mental health and substance use disorder (SUD), which are CMS high priority areas for MIPS measure consideration. This measure collects information related to a demonstrated reduction in suicidal ideation and/or behavior symptoms based on results from the Columbia-Suicide Severity Rating Scale (C-SSRS) 'Screen Version' (<a href="https://www.cms.gov/files/document/cssrs-screen-version-instrument.pdf">https://www.cms.gov/files/document/cssrs-screen-version-instrument.pdf</a>) versus 'Since Last Visit', taken within 120 days after an index assessment. Incorporating this measure into MIPS will encourage and support clinician adherence to clinical guidelines, leading to better symptom control and improved quality of life for patients affected by mental health and substance use disorder. This measure will represent another valuable PRO-PM measure for interested parties to report within MIPS, representing the continuum of care and improved health outcomes for individuals with suicidal ideation, behavior, or risk.</p> <p>This clinical outcome measure assesses reductions in suicidal ideation that are likely associated with reductions in suicides and suicide attempts. Suicide is a preventable cause of lost lives, yet each year over 40,000 Americans die by suicide (<a href="https://www.cdc.gov/nchs/products/databriefs/db330.htm">https://www.cdc.gov/nchs/products/databriefs/db330.htm</a>). Safety planning, means reduction, and connecting suicidal persons to treatment are effective and critical elements in suicide prevention (<a href="https://theactionalliance.org/sites/default/files/action_alliance_recommended_standard_care_final.pdf">https://theactionalliance.org/sites/default/files/action_alliance_recommended_standard_care_final.pdf</a>), as discussed in the most updated clinical practice guidelines for assessment and treatment of suicidal persons (<a href="https://www.healthquality.va.gov/guidelines/MH/srb/VADoDSuicideRiskFullCPGFinal5088212019.pdf">https://www.healthquality.va.gov/guidelines/MH/srb/VADoDSuicideRiskFullCPGFinal5088212019.pdf</a>).</p> <p>This measure, which focuses on the reduction of suicidal ideation, conceptually addresses behavioral health, and is a high priority area for MIPS. There is one existing measure in MIPS that addresses suicide: measure Q107: Adult Major Depressive Disorder (MDD): Suicide Risk Assessment. Though conceptually related, this measure distinguishes itself by focusing on the relevant clinical outcome. There is an outcome measure in MIPS focused on a related mental health area: measure Q370: Depression Remission at Twelve Months. The instrument used to assess remission in measure Q370, the PHQ-9, does include one question about self-harm; however, measure Q370 is specific to depression. This measure will include patients with other behavioral health conditions who are at risk of suicide and appropriate for assessment of the clinical quality action within the measure.</p> <p>This measure received conditional support for rulemaking from the MAP pending CBE endorsement. While we agree that CBE endorsement is preferred, this measure should nonetheless be added to MIPS, and it meets the statutory standard for inclusion as a non-endorsed measure. Section 1848(q)(2)(D)(v) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidenced-based.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at <a href="https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports">https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports</a>.</p>
<i>Comment:</i> A couple of commenters supported the new Reduction in Suicidal Ideation or Behavior Symptoms measure.	
<i>Response:</i> We thank the commenters for supporting this new measure in MIPS	
After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 52787), we are finalizing the <i>Reduction in Suicidal Ideation or Behavior Symptoms</i> measure as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

## **Table Group B: Modifications to Previously Finalized Specialty Measures Sets Finalized for the CY 2024 Performance Period/2026 MIPS Payment Year and Future Years**

In the CY 2024 PFS proposed rule (88 FR 52788 through 53073), we proposed to modify the below previously finalized specialty measures sets based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and feedback provided by specialty societies. There may be instances where the quality measures within a specialty set remain static, but the individual measures had proposed substantive changes in Table Group D of this Appendix. In the first column, existing measures with substantive changes described in Table Group D of this Appendix are noted with an asterisk (\*), core measures that align with Core Quality Measure Collaborative (CQMC) core measure set(s) are noted with the symbol (§), and high priority measures are noted with an exclamation point (!). In addition, the Indicator column includes a “high priority type” in parentheses after each high priority indicator (!) to represent the regulatory definition of high priority measures. In addition, electronic clinical quality measures (eCQMs) that are endorsed by a CBE are shown in Table Group B of this Appendix as follows: CBE # / eCQM CBE #.

Under § 414.1305, a high priority measure means an outcome (including intermediate-outcome and patient-reported outcome), appropriate use, patient safety, efficiency, patient experience, care coordination, opioid, or health equity-related quality measure. Further details of these types of measures are located in the CMS Measures Management System Hub ([mmshub.cms.gov](https://mmshub.cms.gov)).

### **NOTE:**

- Updates to measure titles and/or measure descriptions under Table Group B in this final rule may or may not be considered substantive in nature, therefore may not be proposed or updated under Table Group D. If the change was considered substantive in nature, it was finalized under Table Group D.
- Under Table Group B, we responded to comments related to new measures that were proposed for addition to measure sets, as well as measures proposed for removal. Any comments received on previously finalized measures that have no substantive changes are out of scope and not included in this final rule. Commenters who requested additions or removals of quality measures to specific specialty sets should use the Stakeholder Solicitation for Specialty Sets process as these updates must be proposed through rulemaking.
- Measures that were not finalized for removal in this final rule have been added back into the applicable previously finalized specialty set(s) under Table Group B and have been removed from the applicable Removal table. The reason for their retention was addressed under Table Group C.
- For each specialty set, measures in the Previously Finalized tables and any new measures finalized under applicable Addition tables will be available for reporting in CY 2024.

It should be noted for the CY 2024 performance period/2026 MIPS payment year (and prior CY 2023 performance period/2025 MIPS payment year), the CMS Web Interface as a collection type is only available for APM Entities, specifically Medicare Shared Savings Program (Shared Savings Program) Accountable Care Organizations (ACOs), reporting through the APM Performance Pathway (APP) (the CMS Web Interface measures as a collection type is no longer available under traditional MIPS). Thus, the CMS Web Interface collection type is not listed in any specialty set under Table Group B of this Appendix. For further information regarding the Shared Savings Program requirements under the APP and the CMS Web Interface collection type available under the APP, see section III.G.2.c.(2) of this final rule. For information regarding finalized changes to the CMS Web Interface measures available for the CY 2024 performance period/2026 MIPS payment year, see Table Group E of this Appendix.

Note: The following specialty sets had no addition tables, no removal tables, and no substantive changes proposed for the CY 2024 performance period/2026 MIPS payment year: Anesthesiology, Electrophysiology Cardiac Specialist, and Pathology. The following specialty sets had no addition tables or removal tables but did have substantive changes as addressed under Table Group D: Dentistry and Radiation Oncology.

### B.1. Allergy/Immunology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Allergy/Immunology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

### B.1. Allergy/Immunology

PREVIOUSLY FINALIZED MEASURES IN THE ALLERGY/IMMUNOLOGY SPECIALTY SET							
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward
§ ! **B.1. Allergy/Immunology**

MEASURES FINALIZED FOR <b>ADDITION</b> TO THE ALLERGY/IMMUNOLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A / N/A	498	N/A	MIPS CQMs Specifications	Process	<p><b>Connection to Community Service Provider:</b> Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.</p>	OCHIN	<p>We proposed to include this measure in the Allergy/Immunology specialty set as screening for and working to address patient's HRSNs can be a key component to a patient achieving health equity with all clinical settings and clinician types. This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure will allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

**B.1. Allergy/Immunology**

MEASURES FINALIZED FOR ADDITION TO THE ALLERGY/IMMUNOLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Outcome)	NA / N/A	503	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	<b>Gains in Patient Activation Measure (PAM®) Scores at 12 Months:</b> The Patient Activation Measure® (PAM®) is a 10 - or 13 - item questionnaire that assesses an individual's knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia	We proposed to include this measure in the Allergy/ Immunology specialty set as it will be clinically relevant to this clinician type. The addition of this measure to this specialty set will be feasible given its use through the continuum of care and across different clinical settings. This measure addresses chronic conditions and outcomes, both of which are high priority areas for measure consideration for MIPS. It is utilized within the U.S. and internationally in research and has also been shown to be valid and reliable in different clinical settings and under different payment models. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.12 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.
<p>We received no public comments on the measure(s) proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (88 FR 52791 through 52793), we are finalizing the above measure(s) for addition to the <i>Allergy/Immunology Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p>								

**B.1. Allergy/Immunology**

<b>PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE ALLERGY/IMMUNOLOGY SPECIALTY SET</b>							
<p>Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.</p>							
<b>CBE # / eCQM CBE #</b>	<b>Quality #</b>	<b>CMS eCQM ID</b>	<b>Collection Type</b>	<b>Measure Type</b>	<b>Measure Title And Description</b>	<b>Measure Steward</b>	<b>Rationale for Removal</b>
N/A / N/A	402	N/A	MIPS CQMs Specifications	Process	<p><b>Tobacco Use and Help with Quitting Among Adolescents:</b>                      The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.</p>	National Committee for Quality Assurance	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
<p>We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (88 FR 52793), we are finalizing the above measure(s) for removal from the <i>Allergy/Immunology Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC of this Appendix for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.</p>							

## B.2. Anesthesiology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Anesthesiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set and this specialty set had no proposed changes.

## B.2. Anesthesiology

B.3. Audiology

MEASURES FINALIZED FOR ADDITION TO THE AUDIOLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
*	N/A / N/A	317	CMS22 v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	<b>Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented:</b> Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is elevated or hypertensive.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Audiology specialty set. We agreed with interested parties' feedback that adding this measure to this specialty set will help to broaden the patient population being screened for high blood pressure. There is known risk of adverse effects on the auditory system due to high blood pressure making this an important aspect of care for audiologists. Given the close correlation of adverse effects on the auditory system due to hypertension, interdisciplinary care is vital, and it should be the responsibility of all clinician types to address health promotion and wellness, and prevention, delay, or management of acute or chronic diseases and conditions. This measure will support the comprehensive evaluation of compliance of screening for and proper treatment of high blood pressure that can improve quality care and prevent disease for the general population. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule.

B.3. Audiology

MEASURES FINALIZED FOR ADDITION TO THE AUDIOLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A / N/A	498	N/A	MIPS CQMs Specifications	Process	<p><b>Connection to Community Service Provider:</b> Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.</p>	OCHIN	<p>We proposed to include this measure in the Audiology specialty set as screening for and working to address patient’s HRSNs can be a key component to a patient achieving health equity with all clinical settings and clinician types. This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure will allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

### B.3. Audiology

MEASURES FINALIZED FOR ADDITION TO THE AUDIOLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
<p><i>Comment:</i> One commenter supported the addition of measures Q317: Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented and the Connection to Community Service Provider to the Audiology specialty set. A second commenter supported the Connection to Community Service Provider measure.</p> <p><i>Response:</i> We thank the commenters for supporting the additional measures to this specialty set. As noted in the Table Group B Introduction, a commenter who requested additional quality measures be added to this specialty sets should use the Stakeholder Solicitation for Specialty Sets process as these quality measures must be proposed through rulemaking.</p> <p><i>Comment:</i> A couple of commenters did not support adding measure Q317: Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented to the Audiology specialty set. Under current Medicare regulations, audiologists are not classified as “practitioners” (as are other allied health professionals) and thus are not recognized for patient care management. Should Medicare regulations change, the commenter would be pleased to submit further comments on patient management measures at that time. Audiologists are not able to manage and make recommendations to the patient regarding high blood pressure other than recommending the patient see a physician and cannot prescribe medications based on their scope of practice and licensing laws.</p> <p><i>Response:</i> Currently, the Audiology specialty set contains 10 measures allowing clinicians to choose to submit those measures that are most meaningful to their scope of care. While we understand that the treatment of hypertension would fall outside of the audiologist’s scope of care, the measure does not require this for the purposes of meeting the quality action. Hypertension is a prevalent condition and a major risk factor for ischemic heart disease, stroke, and renal failure, among other conditions, with appropriate follow-up after blood pressure measurement being a pivotal component in the prevention of hypertension progression and subsequent development of heart disease. This was requested for inclusion via specialty set solicitation and we agree with the interested party’s request to add this measure as it does not require audiologists to practice outside of their scope, as referral to a physician would suffice for performance.<sup>59</sup></p> <p><i>Comment:</i> One commenter stated the new Connection to Community Service Provider measure was redundant to measure Q487: Screening for Social Drivers of Health: As result, the commenter requested that Q487 be removed from this set if the new measure is added.</p> <p><i>Response:</i> Measure Q487 is an important process measure for clinicians that supports the process of collecting DOH data, which is a foundational step towards defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Measure Q487 focuses on the completion of screening for DOH patient information. The Connection to Community Service Provider measure builds upon measure Q487, ensuring patients who screen positive for one or more of the health-related social needs (HRSNs) are then connected to community service providers that may assist, therefore closing the loop in addressing patients’ HRSNs. Having both measures in MIPS allows for assessment of two critical steps in addressing health equity; first, ensuring that screening is completed on all patients, and second, connecting patients who are facing a HRSN with resources that can help address these needs.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 52797 through 52798), we are finalizing the above measure(s) for addition to the <i>Audiology Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p>								

59. Luehr, D., Woolley, T., Burke, R., Dohmen, F., Hayes, R., Johnson, M.,..., Schoenleber, M. (2012). Hypertension Diagnosis and Treatment; Institute for Clinical Systems Improvement Health Care Guideline. Updated November, 2012.

### B.4a. Cardiology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Cardiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure will allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

**B.4a. Cardiology**

MEASURES FINALIZED FOR ADDITION TO THE CARDIOLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Outcome)	N/A / N/A	503	N/A	MIPS CQMs Specifications	Process	<b>Gains in Patient Activation Measure (PAM®) Scores at 12 Months:</b> The Patient Activation Measure® (PAM®) is a 10 - or 13 - item questionnaire that assesses an individual's knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia	We proposed to include this measure in the Cardiology specialty set as it will be clinically relevant to this clinician type. The addition of this measure to this specialty set will be feasible given its use through the continuum of care and across different clinical settings. This measure addresses chronic conditions and outcomes, both of which are high priority areas for measure consideration for MIPS. It is utilized within the U.S. and internationally in research and has also been shown to be valid and reliable in different clinical settings and under different payment models. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.12 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.
<p><i>Comment:</i> One commenter supported the addition of the Connection to Community Service Provider measure to the Cardiology specialty set to promote health equity and stated that every specialty should be rated on this metric. The commenter indicated that the Gains in Patient Activation Measure (PAM®) Scores at 12 Months measure should be used in conjunction with other clinical assessments and considerations to provide a more comprehensive evaluation of a patient's cardiac health and overall well-being (see related comment under Table A.12 of this Appendix).</p> <p><i>Response:</i> We thank the commenter for supporting the additional measures to this specialty set and for their comment on the PAM® measure.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 52803 through 52805), we are finalizing the above measure(s) for addition to the <i>Cardiology Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p>								

### B.4a. Cardiology

<p align="center"><b>PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE CARDIOLOGY SPECIALTY SET</b></p> <p>Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.</p>

American College of Cardiology Foundation

### B.5. Certified Nurse Midwife

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Certified Nurse Midwife specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

### B.5. Certified Nurse Midwife

	N/A / N/A	496	N/A	MIPS CQMs Specifications	Process	<p><b>Cardiovascular Disease (CVD) Risk Assessment Measure – Proportion of Pregnant/Postpartum Patients that Receive CVD Risk Assessment with a Standardized Instrument:</b> Percentage of pregnant or postpartum patients who received a cardiovascular disease (CVD) risk assessment with a standardized instrument.</p>	University of California, Irvine	<p>We proposed to include this measure in the Certified Nurse Midwife specialty set as it will be clinically relevant to this clinician type. This measure fills a high priority clinical gap area under the wellness and prevention domain for maternal health by addressing screening and care for pregnant/postpartum patients by assessing for a standardized CVD risk assessment for this high-risk population cared for by clinicians in this specialty. Given the close correlation of CVD risks and pregnant/postpartum patients, interdisciplinary care is vital. The addition of this quality measure to this specialty set will incentivize thorough assessment for patient risk and increase education and awareness in this population. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.3 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

**B.5. Certified Nurse Midwife**

This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure will allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

**B.5. Certified Nurse Midwife**

<b>MEASURES FINALIZED FOR ADDITION TO THE CERTIFIED NURSE MIDWIFE SPECIALTY SET</b>								
<b>Indicator</b>	<b>CBE # / eCQM CBE #</b>	<b>Quality #</b>	<b>CMS eCQM ID</b>	<b>Collection Type</b>	<b>Measure Type</b>	<b>Measure Title And Description</b>	<b>Measure Steward</b>	<b>Rationale for Inclusion</b>
! (Outcome)	N/A / N/A	503	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	<b>Gains in Patient Activation Measure (PAM®) Scores at 12 Months:</b> The Patient Activation Measure® (PAM®) is a 10 – or 13 – item questionnaire that assesses an individual’s knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia	We proposed to include this measure in the Certified Nurse Midwife specialty set as it will be clinically relevant to this clinician type. The addition of this measure to this specialty set will be feasible given its use through the continuum of care and across different clinical settings. This measure addresses chronic conditions and outcomes, both of which are high priority areas for measure consideration for MIPS. It is utilized within the U.S. and internationally in research and has also been shown to be valid and reliable in different clinical settings and under different payment models. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.12 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

(Equity)	N/A / N/A	498	N/A	MIPS CQMs Specifications	Process	<p><b>Connection to Community Service Provider:</b> Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.</p>	OCHIN	<p>We proposed to include this measure in the Clinical Social Work specialty set as screening for and working to address patient’s HRSNs can be a key component to a patient achieving health equity with all clinical settings and clinician types. This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure will allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

**B.7. Clinical Social Work**

MEASURES FINALIZED FOR <b>ADDITION</b> TO THE CLINICAL SOCIAL WORK SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Outcome)	N/A / N/A	502	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	<b>Improvement or Maintenance of Functioning for Individuals with a Mental and/or Substance Use Disorder:</b> The percentage of patients aged 18 and older with a mental and/or substance use disorder who demonstrated improvement or maintenance of functioning based on results from the 12-item World Health Organization Disability Assessment Schedule (WHODAS 2.0) or Sheehan Disability Scale (SDS) 30 to 180 days after an index assessment.	American Psychiatric Association	We proposed to include this measure in the Clinical Social Work specialty set. We agreed with interested parties' feedback that this measure will be clinically relevant to this clinician type. Clinical social workers are vital in helping those with mental health and substance use disorders (SUD). Social work practice is in a unique position to influence the delivery of services by addressing the acute and chronic needs of clients with SUDs, including co-occurring disorders and polysubstance patterns. By developing and applying evidence-informed approaches that incorporate established interventions and evolving techniques based on emerging research findings, clinical social workers can markedly improve treatment services for clients and their families. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.11 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

**B.7. Clinical Social Work**

MEASURES FINALIZED FOR <b>ADDITION</b> TO THE CLINICAL SOCIAL WORK SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Safety)	N/A / N/A	504	N/A	MIPS CQMs Specifications	Process	<p><b>Initiation, Review, And/Or Update To Suicide Safety Plan For Individuals With Suicidal Thoughts, Behavior, Or Suicide Risk:</b>                      Percentage of adult aged 18 years and older with suicidal ideation or behavior symptoms (based on results of a standardized assessment tool or screening tool) or increased suicide risk (based on the clinician’s evaluation or clinician-rating tool) for whom a suicide safety plan is initiated, reviewed, and/or updated in collaboration between the patient and their clinician.</p>	American Psychiatric Association	<p>We proposed to include this measure in the Clinical Social Work specialty set as it will be clinically relevant to this clinician type. The incorporation of this measure in this specialty set will help promote interventions and best practices that are effective at symptoms reduction and improving functional status and quality of life. This measure is a high priority area for MIPS and by adding the measure to this specialty set it will encourage measure adoption which will support clinician adherence to clinical guidelines, leading to better symptom control and improved quality of life for patients affected by mental health and substance use disorder, while also reinforcing our commitment that all clinicians should be actively engaging in addressing mental health and substance use disorders across the care continuum. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.13 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

**B.7. Clinical Social Work**

MEASURES FINALIZED FOR ADDITION TO THE CLINICAL SOCIAL WORK SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Outcome)	N/A / N/A	505	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	<b>Reduction in Suicidal Ideation or Behavior Symptoms:</b> The percentage of patients aged 18 and older with a mental and/or substance use disorder AND suicidal thoughts, behaviors or risk symptoms who demonstrated a reduction in suicidal ideation and/or behavior symptoms based on results from the Columbia-Suicide Severity Rating Scale (C-SSRS) 'Screen Version' or 'Since Last Visit', within 120 days after an index assessment.	American Psychiatric Association	We proposed to include this measure in the Clinical Social Work specialty set as it will be clinically relevant to this clinician type. This patient reported outcome measure focuses on mental health and substance use disorder (SUD) and the reduction of suicidal ideation, conceptually addressing behavioral health which are a CMS high priority area. Incorporating this clinical outcome measure in this specialty set will encourage measure adoption which will support clinician adherence to clinical guidelines, leading to better symptom control and improved quality of life for patients affected by mental health and SUD. The addition of this quality measure for this specialty will reinforce our commitment that all clinicians should be actively engaging in addressing mental health and SUDs across the care continuum. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.14 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.
We received no public comments on the measure(s) proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (88 FR 52822 through 52828), we are finalizing the above measure(s) for addition to the <i>Clinical Social Work Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.								

**B.7. Clinical Social Work**

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR <b>REMOVAL</b> FROM THE CLINICAL SOCIAL WORK SPECIALTY SET							
Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	283	N/A	MIPS CQMs Specifications	Process	<b>Dementia Associated Behavioral and Psychiatric Symptoms Screening and Management:</b> Percentage of patients with dementia for whom there was a documented screening for behavioral and psychiatric symptoms, including depression, and for whom, if symptoms screening was positive, there was also documentation of recommendations for management in the last 12 months.	American Academy of Neurology/ American Psychiatric Association	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	402	N/A	MIPS CQMs Specifications	Process	<b>Tobacco Use and Help with Quitting Among Adolescents:</b> The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (88 FR 52829), we are finalizing the above measure(s) for removal from the <i>Clinical Social Work Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC of this Appendix for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.							

**B.8. Dentistry**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Dentistry specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

**B.8. Dentistry**

PREVIOUSLY FINALIZED MEASURES IN THE DENTISTRY SPECIALTY SET							
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title and Description	Measure Steward
* ! (Outcome)	N/A / N/A	378	CMS75 v12	eCQM Specifications	Outcome	<b>Children Who Have Dental Decay or Cavities:</b> Percentage of children, 1 - 20 years of age at the start of the measurement period, who have had tooth decay or cavities during the measurement period as determined by a dentist.	Centers for Medicare & Medicaid Services
*	N/A / N/A	379	CMS 74v13	eCQM Specifications	Process	<b>Primary Caries Prevention Intervention as Offered by Dentists:</b> Percentage of children, 1 – 20 years of age, who received two fluoride varnish applications during the measurement period as determined by a dentist.	Centers for Medicare & Medicaid Services

### B.9. Dermatology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Dermatology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

### B.9. Dermatology

* ! (Equity)	N/A / N/A	498	N/A	MIPS CQMs Specifications	Process	<b>Connection to Community Service Provider:</b> Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.	OCHIN	We proposed to include this measure in the Dermatology specialty set as screening for and working to address patient’s HRSNs can be a key component to a patient achieving health equity with all clinical settings and clinician types. This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure will allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

**B.9. Dermatology**

MEASURES FINALIZED FOR ADDITION TO THE DERMATOLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Outcome)	N/A / N/A	503	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	<b>Gains in Patient Activation Measure (PAM®) Scores at 12 Months:</b> The Patient Activation Measure® (PAM®) is a 10 – or 13 – item questionnaire that assesses an individual’s knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia	We proposed to include this measure in the Dermatology specialty set as it will be clinically relevant to this clinician type. The addition of this measure to this specialty set will be feasible given its use through the continuum of care and across different clinical settings. This measure addresses chronic conditions and outcomes, both of which are high priority areas for measure consideration for MIPS. It is utilized within the U.S. and internationally in research and has also been shown to be valid and reliable in different clinical settings and under different payment models. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.12 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.
<p><i>Comment:</i> One commenter did not support the addition of the Connection to Community Service Provider measure to the Dermatology specialty set, stating that the measure is similar to measure Q487: Screening for Social Drivers of Health. The commenter also did not support the addition of the Gains in Patient Activation Measure (PAM®) Scores at 12 Months measure to this set as it is not relevant to the practice of dermatology.</p> <p><i>Response:</i> Measure Q487 is an important process measure for clinicians that supports the process of collecting DOH data, which is a foundational step towards defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Measure Q487 focuses on the completion of screening for DOH patient information. The Connection to Community Service Provider measure builds upon measure Q487, ensuring patients who screen positive for one or more of the health-related social needs (HRSNs) are then connected to community service providers that may assist, therefore closing the loop in addressing patients’ HRSNs. Having both measures in MIPS allows for assessment of two critical steps in addressing health equity; first, ensuring that screening is completed on all patients, and second, connecting patients who are facing a HRSN with resources that can help address these needs.</p> <p>The PAM® survey will be made publicly available and free by the measure steward to clinicians. The MIPS quality measure inventory does not currently include a measure with an alternate activation survey, and, as such, we are including this measure to fill a gap in care within the Dermatology Specialty Measure Set. Because clinicians have the flexibility to choose which measures to report, the adoption of this measure is not a requirement for clinicians. Instead, the addition of this measure enhances clinician choice when they select which measures to report. The PAM® is a disease-agnostic measure meant to provide meaningful information about changes in activation across many patient populations and aligns with CMS health priorities of capturing the patient voice and ensuring the patients can be partners in healthcare decisions with their clinicians. This will be a valuable tool for all patients within a clinician’s scope of practice.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 52833 through 52834), we are finalizing the above measure(s) for addition to the <i>Dermatology Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p>								

**B.9. Dermatology**

<b>PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE DERMATOLOGY SPECIALTY SET</b>							
<p>Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.</p>							
<b>CBE # / eCQM CBE #</b>	<b>Quality #</b>	<b>CMS eCQM ID</b>	<b>Collection Type</b>	<b>Measure Type</b>	<b>Measure Title And Description</b>	<b>Measure Steward</b>	<b>Rationale for Removal</b>
N/A / N/A	138	N/A	MIPS CQMs Specifications	Process	<p><b>Melanoma: Coordination of Care:</b> Percentage of patient visits, regardless of age, with a new occurrence of melanoma that have a treatment plan documented in the chart that was communicated to the physician(s) providing continuing care within one month of diagnosis.</p>	American Academy of Dermatology	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	402	N/A	MIPS CQMs Specifications	Process	<p><b>Tobacco Use and Help with Quitting Among Adolescents:</b> The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.</p>	National Committee for Quality Assurance	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
<p>We received no public comments on the measure(s) proposed for removal from this specialty set. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>
<p><i>Comment:</i> One commenter did not support the addition of the Connection to Community to Service Provider measure in the Diagnostic Radiology specialty set (along with previously finalized measure Q487: Screening for Social Drivers of Health) because the measure is not suited for a non-patient facing clinician who cannot ensure that the patient is being screened. If these new measures remain in the specialty set, there will be no opportunity to apply for a denominator reduction through the EMA (Eligible Measures Applicability) process. One commenter requested that CMS revise this specialty set to only include measures whose quality actions are within the radiologist’s purview to influence.</p> <p><i>Response:</i> We agreed that the Connection to Community Service Provider measure may not be suited for non-patient facing clinicians and that the quality actions may not be feasible for the diagnostic radiologist. We also agree that measure Q487 is difficult for diagnostic radiologists to report.</p> <p>After consideration of public comments, we are not finalizing measure Q498: Connection to Community Service Provider to the <i>Diagnostic Radiology Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year. In addition, we are removing measure Q487: Screening for Social Drivers of Health from the Previously Finalized table for this specialty set as indicated in the B.10 Diagnostic Radiology Removal table.</p> <p>However, we are finalizing the implementation of measure Q494: Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Clinician Level) to this specialty set with a 1-year delay to the CY 2025 performance period/2027 MIPS payment year and future years as detailed in Table A.1 of this Appendix. As a result, measure Q436: Radiation Consideration for Adult CT: Utilization of Dose Lowering Techniques has been added back to the Previously Finalized table for this specialty set for one more year (see Table C.12 of this Appendix for further information).</p> <p>Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p>								

**B.10. Diagnostic Radiology**

PREVIOUSLY FINALIZED MEASURES FINALIZED AND NOT FINALIZED FOR REMOVAL FROM THE DIAGNOSTIC RADIOLOGY SPECIALTY SET							
Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	147	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	<b>Nuclear Medicine: Correlation with Existing Imaging Studies for All Patients Undergoing Bone Scintigraphy:</b> Percentage of final reports for all patients, regardless of age, undergoing bone scintigraphy that include physician documentation of correlation with existing relevant imaging studies (e.g., x-ray, Magnetic Resonance Imaging (MRI), Computed Tomography (CT), etc.) that were performed.	Society of Nuclear Medicine and Molecular Imaging	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	487	N/A	MIPS CQMs Specifications	Process	<b>Screening for Social Drivers of Health:</b> Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure is being removed from the Diagnostic Radiology specialty set under this final rule as we agree with concerns raised that this measure may not be applicable to non-patient facing clinicians.
<p>We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (88 FR 52839), we are finalizing measure Q147: Nuclear Medicine: Correlation with Existing Imaging Studies for All Patients Undergoing Bone Scintigraphy for removal from the <i>Diagnostic Radiology Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p> <p>We are not finalizing removal of measure Q436: Radiation Consideration for Adult CT: Utilization of Dose Lowering Techniques for the CY 2024 performance period/2026 MIPS payment year and have added this measure back to the Previously Finalized Measures table for this specialty set. However, this measure is finalized for removal with a 1-year delay to the 2025 performance period/2027 MIPS payment year and future years due to the decision to delay the implementation of measure Q494: Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Clinician Level) as detailed in Table A.1 of this Appendix. We are also removing measure Q487 based upon applicability of this measure within a non-patient facing measure specialty set.</p> <p>Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC of this Appendix for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.</p>							

### B.11. Emergency Medicine

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Emergency Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

MEASURES FINALIZED FOR <b>ADDITION</b> TO THE EMERGENCY MEDICINE SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A / N/A	498	N/A	MIPS CQMs Specifications	Process	<b>Connection to Community Service Provider:</b> Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.	OCHIN	We proposed to include this measure in the Emergency Medicine specialty set as screening for and working to address patient’s HRSNs can be a key component to a patient achieving health equity with all clinical settings and clinician types. This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure will allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.
We received no public comments on the measure(s) proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (88 FR 52842), we are finalizing the above measure(s) for addition to the <i>Emergency Medicine Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.								

**B.11. Emergency Medicine**

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR <b>REMOVAL</b> FROM THE EMERGENCY MEDICINE SPECIALTY SET							
Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

! (Outcome)	N/A / N/A	503	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	<b>Gains in Patient Activation Measure (PAM®) Scores at 12 Months:</b> The Patient Activation Measure® (PAM®) is a 10 – or 13 – item questionnaire that assesses an individual’s knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia	We proposed to include this measure in the Endocrinology specialty set as it will be clinically relevant to this clinician type. The addition of this measure to this specialty set will be feasible given its use through the continuum of care and across different clinical settings. This measure addresses chronic conditions and outcomes, both of which are high priority areas for measure consideration for MIPS. It is utilized within the U.S. and internationally in research and has also been shown to be valid and reliable in different clinical settings and under different payment models. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.12 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.
<p>We received no public comments on the measure(s) proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (88 FR 52847 through 52848), we are finalizing the above measure(s) for addition to the <i>Endocrinology Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p>								

**B.12. Endocrinology**

<b>PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE ENDOCRINOLOGY SPECIALTY SET</b>							
<p>Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.</p>							
<b>CBE # / eCQM CBE #</b>	<b>Quality #</b>	<b>CMS eCQM ID</b>	<b>Collection Type</b>	<b>Measure Type</b>	<b>Measure Title And Description</b>	<b>Measure Steward</b>	<b>Rationale for Removal</b>
N/A / N/A	128	CMS6 9v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	<b>Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan:</b> Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if the most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services	This measure was proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the finalized Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix); however, this measure is appropriate and applicable for some MVPs and is therefore finalized for retention for MVP use. See Table Group CC of this Appendix for rationale.
<p>We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (88 FR 52849), we are finalizing the above measure(s) for removal from the <i>Endocrinology Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC of this Appendix for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.</p>							

### B.13. Family Medicine

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Family Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

### B.13. Family Medicine

! (Outcome)	N/A / N/A	495	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	<p><b>Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood:</b> The percentage of top-box responses among patients aged 18 years and older who had an ambulatory palliative care visit and report feeling heard and understood by their palliative care provider and team within 2 months (60 days) of the ambulatory palliative care visit.</p>	American Academy of Hospice and Palliative Medicine (AAHPM)	<p>We proposed to include this measure in the Family Medicine specialty set as it will be clinically relevant to this clinician type. This patient-reported outcome measure will help to fill a gap for patients receiving palliative care by capturing the patient's voice and experience of care by assessing communication and shared decision making with his or her clinician. Patients feeling heard and understood adds an important dimension to the care planning for this unique patient population commonly cared for by clinicians in this specialty. This measure is predicated on existing guidelines and conceptual models. In addition, it can facilitate and improve effective patient-provider communication that engenders trust, acknowledgement, and a whole-person orientation to the care that is provided. This is an important patient-centered measure that helps patients feel heard and understood which can effectively improve the quality of care received and outcomes for patients in palliative care. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.2 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

	N/A / N/A	497	N/A	MIPS CQMs Specifications	Process	<p><b>Preventive Care and Wellness (composite):</b> Percentage of patients who received age- and sex-appropriate preventive screenings and wellness services. This measure is a composite of seven component measures that are based on recommendations for preventive care by the U.S. Preventive Services Task Force (USPSTF), Advisory Committee on Immunization Practices (ACIP), American Association of Clinical Endocrinology (AACE), and American College of Endocrinology (ACE).</p>	Centers for Medicare and Medicaid Services	<p>We proposed to include this measure in the Family Medicine specialty set as it will be clinically relevant to this clinician type. The addition of this quality measure to this specialty set will reinforce our commitment that all clinicians should be actively engaging in activities that address preventive care and wellness and is in alignment with our priorities to support overall patient health. The measure will set a more stringent performance standard by requiring a set of preventive care for the general population in one composite measure and aligns with evidence-based recommendations. The measure will help incentivize a more broadly encompassing preventive care assessment to guide clinicians. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.6 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

**B.13. Family Medicine**

MEASURES FINALIZED FOR ADDITION TO THE FAMILY MEDICINE SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A / N/A	498	N/A	MIPS CQMs Specifications	Process	<p><b>Connection to Community Service Provider:</b> Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.</p>	OCHIN	<p>We proposed to include this measure in the Family Medicine specialty set as screening for and working to address patient's HRSNs can be a key component to a patient achieving health equity with all clinical settings and clinician types. This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure will allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

**B.13. Family Medicine**

MEASURES FINALIZED FOR ADDITION TO THE FAMILY MEDICINE SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Safety)	N/A / N/A	504	N/A	MIPS CQMs Specifications	Process	<p><b>Initiation, Review, And/Or Update To Suicide Safety Plan For Individuals With Suicidal Thoughts, Behavior, Or Suicide Risk:</b>                      Percentage of adult aged 18 years and older with suicidal ideation or behavior symptoms (based on results of a standardized assessment tool or screening tool) or increased suicide risk (based on the clinician's evaluation or clinician-rating tool) for whom a suicide safety plan is initiated, reviewed, and/or updated in collaboration between the patient and their clinician.</p>	American Psychiatric Association	<p>We proposed to include this measure in the Family Medicine specialty set as it will be clinically relevant to this clinician type. The incorporation of this measure in this specialty set will help promote interventions and best practices that are effective at symptoms reduction and improving functional status and quality of life. This measure is a high priority area for MIPS and by adding the measure to this specialty set it will encourage measure adoption which will support clinician adherence to clinical guidelines, leading to better symptom control and improved quality of life for patients affected by mental health and substance use disorder, while also reinforcing our commitment that all clinicians should be actively engaging in addressing mental health and substance use disorders across the care continuum. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.13 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

**B.13. Family Medicine**

MEASURES FINALIZED FOR ADDITION TO THE FAMILY MEDICINE SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Outcome)	N/A / N/A	505	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	<b>Reduction in Suicidal Ideation or Behavior Symptoms:</b> The percentage of patients aged 18 and older with a mental and/or substance use disorder AND suicidal thoughts, behaviors or risk symptoms who demonstrated a reduction in suicidal ideation and/or behavior symptoms based on results from the Columbia-Suicide Severity Rating Scale (C-SSRS) ‘Screen Version’ or ‘Since Last Visit’, within 120 days after an index assessment.	American Psychiatric Association	We proposed to include this measure in the Family Medicine specialty set as it will be clinically relevant to this clinician type. This patient reported outcome measure focuses on mental health and substance use disorder (SUD) and the reduction of suicidal ideation, conceptually addressing behavioral health which are a CMS high priority area. Incorporating this clinical outcome measure in this specialty set will encourage measure adoption which will support clinician adherence to clinical guidelines, leading to better symptom control and improved quality of life for patients affected by mental health and SUD. The addition of this quality measure for this specialty will reinforce our commitment that all clinicians should be actively engaging in addressing mental health and SUDs across the care continuum. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.14 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.
<p><i>Comment:</i> A few commenters noted that many of the seven measures proposed for addition to the Family Medicine specialty set come with good intent and solid clinical purpose and value, but the current health care landscape and fragmented health IT environment do not support easy, seamless reporting of the data elements. Therefore, most clinicians will choose not to report on these measures because the burden associated with reporting is too great (for example, Gains in Patient Activation Measure (PAM®) Scores at 12 Months).</p> <p><i>Response:</i> Currently, the Family Medicine specialty set includes 64 measures. After finalizing seven additional measures and removing eight measures in this final rule, there will be 63 measures available for CY 2024, many of which are broadly applicable. Given that family medicine physicians who participate in traditional MIPS must choose six of these 63 measures (including one outcome measure or high priority measure) there are many options from which to choose that would fall into a family medicine clinician’s scope of care. This allows clinicians to select measures that are the most meaningful and impactful to the patients and communities they serve, while remaining feasible to report using their current health IT capabilities. Our goal is to continuously drive high quality care, which includes addition of new measures that fill current quality measure gaps in care or require more robust quality actions than current quality measures. However, we acknowledge challenges to the implementation and adoption of such measures.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 52860 through 52867), we are finalizing the above measure(s) for addition to the <i>Family Medicine Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p>								

**B.13. Family Medicine**

<b>PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE FAMILY MEDICINE SPECIALTY SET</b>							
<p>Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.</p>							
<b>CBE # / eCQM CBE #</b>	<b>Quality #</b>	<b>CMS eCQM ID</b>	<b>Collection Type</b>	<b>Measure Type</b>	<b>Measure Title And Description</b>	<b>Measure Steward</b>	<b>Rationale for Removal</b>
0654 / N/A	093	N/A	MIPS CQMs Specifications	Process	<b>Acute Otitis Externa (AOE): Systemic Antimicrobial Therapy – Avoidance of Inappropriate Use:</b> Percentage of patients aged 2 years and older with a diagnosis of AOE who were not prescribed systemic antimicrobial therapy.	American Academy of Otolaryngology-Head and Neck Surgery	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	107	CMS161v12	eCQM Specifications	Process	<b>Adult Major Depressive Disorder (MDD): Suicide Risk Assessment:</b> Percentage of all patient visits for those patients that turn 18 or older during the measurement period in which a new or recurrent diagnosis of major depressive disorder (MDD) was identified and a suicide risk assessment was completed during the visit.	Mathematica	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
2372 / N/A	112	CMS125v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	<b>Breast Cancer Screening:</b> Percentage of women 40 – 74 years of age who had a mammogram to screen for breast cancer in the 27 months prior to the end of the measurement period.	National Committee for Quality Assurance	This measure was proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group CC of this Appendix for rationale.
0034 / N/A	113	CMS130v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	<b>Colorectal Cancer Screening:</b> Percentage of patients 45-75 years of age who had appropriate screening for colorectal cancer.	National Committee for Quality Assurance	This measure was proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group CC of this Appendix for rationale.
N/A / N/A	128	CMS69v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	<b>Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan:</b> Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if the most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services	This measure was proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the finalized Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix); however, this measure is appropriate and applicable for some MVPs and is therefore finalized for retention for MVP use. See Table Group CC of this Appendix for rationale.

**B.13. Family Medicine**

<b>PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE FAMILY MEDICINE SPECIALTY SET</b>							
<p>Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.</p>							
<b>CBE # / eCQM CBE #</b>	<b>Quality #</b>	<b>CMS eCQM ID</b>	<b>Collection Type</b>	<b>Measure Type</b>	<b>Measure Title And Description</b>	<b>Measure Steward</b>	<b>Rationale for Removal</b>
N/A / N/A	226	CMS138v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	<b>Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention:</b> Percentage of patients aged 12 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.	National Committee for Quality Assurance	This measure was proposed for removal from the Family Medicine specialty set beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the finalized Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix). The inclusion of both quality measures in this specialty set will be duplicative.
N/A / N/A	317	CMS22v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	<b>Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented:</b> Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is elevated or hypertensive.	Centers for Medicare & Medicaid Services	This measure was proposed for removal from the Family Medicine specialty set beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the finalized Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix). The inclusion of both quality measures in this specialty set will be duplicative.
N/A / N/A	402	N/A	MIPS CQMs Specifications	Process	<b>Tobacco Use and Help with Quitting Among Adolescents:</b> The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
<p>We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (88 FR 52868 through 52871), we are finalizing the above measure(s) for removal from the <i>Family Medicine Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC of this Appendix for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.</p>							

### B.14. Gastroenterology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Gastroenterology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia	We proposed to include this measure in the Gastroenterology specialty set as it will be clinically relevant to this clinician type. The addition of this measure to this specialty set will be feasible given its use through the continuum of care and across different clinical settings. This measure addresses chronic conditions and outcomes, both of which are high priority areas for measure consideration for MIPS. It is utilized within the U.S. and internationally in research and has also been shown to be valid and reliable in different clinical settings and under different payment models. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.12 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.
We received no public comments on the measure(s) proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (88 FR 52874 through 52875), we are finalizing the above measure(s) for addition to the <i>Gastroenterology Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.								

**B.14. Gastroenterology**

<b>PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE GASTROENTEROLOGY SPECIALTY SET</b>							
<p>Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.</p>							
<b>CBE # / eCQM CBE #</b>	<b>Quality #</b>	<b>CMS eCQM ID</b>	<b>Collection Type</b>	<b>Measure Type</b>	<b>Measure Title And Description</b>	<b>Measure Steward</b>	<b>Rationale for Removal</b>
N/A / N/A	128	CMS6 9v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	<b>Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan:</b> Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if the most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services	This measure was proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the finalized Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix); however, this measure is appropriate and applicable for some MVPs and is therefore finalized for retention for MVP use. See Table Group CC of this Appendix for rationale.
N/A / N/A	402	N/A	MIPS CQMs Specifications	Process	<b>Tobacco Use and Help with Quitting Among Adolescents:</b> The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
<p><i>Comment:</i> One commenter did not support the removal of measure Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan from the Gastroenterology specialty set because the measure continues to hold value for quality improvement across multiple specialties (also see comments under Table CC.3 of this Appendix).</p> <p><i>Response:</i> We acknowledged the concerns expressed by the commenters for the removal of measure Q128. However, this measure is duplicative of a component found within the new preventive care and wellness composite measure. It is important to ensure duplicative measures are removed from MIPS to develop an ecosystem of quality measures that drive value-based care, rather than offering duplicate measures. We strive to offer measures with more robust evaluation methods that will continue to drive quality patient outcomes through the clinical care provided.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 52876), we are finalizing the above measure(s) for removal from the <i>Gastroenterology Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC of this Appendix for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.</p>							

### B.15. General Surgery

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the General Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

MEASURES FINALIZED FOR <b>ADDITION</b> TO THE GENERAL SURGERY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A / N/A	498	N/A	MIPS CQMs Specifications	Process	<p><b>Connection to Community Service Provider:</b> Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.</p>	OCHIN	<p>We proposed to include this measure in the General Surgery specialty set as screening for and working to address patient’s HRSNs can be a key component to a patient achieving health equity with all clinical settings and clinician types. This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure will allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>
<p>We received no public comments on the measure(s) proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (88 FR 52879), we are finalizing the above measure(s) for addition to the <i>General Surgery Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p>								

**B.15. General Surgery**

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR <b>REMOVAL</b> FROM THE GENERAL SURGERY SPECIALTY SET							
Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	128	CMS69 v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	<b>Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan:</b> Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if the most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services	This measure was proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the finalized Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix); however, this measure is appropriate and applicable for some MVPs and is therefore finalized for retention for MVP use. See Table Group CC of this Appendix for rationale.
N/A / N/A	402	N/A	MIPS CQMs Specifications	Process	<b>Tobacco Use and Help with Quitting Among Adolescents:</b> The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (88 FR 52880), we are finalizing the above measure(s) for removal from the <i>General Surgery Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC of this Appendix for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.							

### B.16. Geriatrics

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Geriatrics specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

MEASURES FINALIZED FOR ADDITION TO THE GERIATRICS SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
	NA / N/A	497	N/A	MIPS CQMs Specifications	Process	<p><b>Preventive Care and Wellness (composite):</b> Percentage of patients who received age- and sex- appropriate preventive screenings and wellness services. This measure is a composite of seven component measures that are based on recommendations for preventive care by the U.S. Preventive Services Task Force (USPSTF), Advisory Committee on Immunization Practices (ACIP), American Association of Clinical Endocrinology (AACE), and American College of Endocrinology (ACE).</p>	Centers for Medicare and Medicaid Services	<p>We proposed to include this measure in the Geriatrics specialty set as it will be clinically relevant to this clinician type. The addition of this quality measure to this specialty set will reinforce our commitment that all clinicians should be actively engaging in activities that address preventive care and wellness and is in alignment with our priorities to support overall patient health. The measure will set a more stringent performance standard by requiring a set of preventive care for the general population in one composite measure and aligns with evidence-based recommendations. The measure will help incentivize a more broadly encompassing preventive care assessment to guide clinicians. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.6 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

B.16. Geriatrics

See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>
<p>We received no public comments on the measure(s) proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (88 FR 52884 through 52885), we are finalizing the above measure(s) for addition to the <i>Geriatrics Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p>								

**B.16. Geriatrics**

<b>PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE GERIATRICS SPECIALTY SET</b>							
Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
<b>CBE # / eCQM CBE #</b>	<b>Quality #</b>	<b>CMS eCQM ID</b>	<b>Collection Type</b>	<b>Measure Type</b>	<b>Measure Title And Description</b>	<b>Measure Steward</b>	<b>Rationale for Removal</b>
N/A / N/A	226	CMS138v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	<b>Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention:</b> Percentage of patients aged 12 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.	National Committee for Quality Assurance	This measure was proposed for removal from the Geriatrics specialty set beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the finalized Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix). The inclusion of both quality measures in this specialty set will be duplicative.
N/A / N/A	283	N/A	MIPS CQMs Specifications	Process	<b>Dementia Associated Behavioral and Psychiatric Symptoms Screening and Management:</b> Percentage of patients with dementia for whom there was a documented screening for behavioral and psychiatric symptoms, including depression, and for whom, if symptoms screening was positive, there was also documentation of recommendations for management in the last 12 months.	American Academy of Neurology/ American Psychiatric Association	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
<p><i>Comment:</i> One commenter opposed removal of measure Q283: Dementia Associated Behavioral and Psychiatric Symptoms Screening and Management from the Geriatrics specialty set and requested the measure be retained until another measure can be developed.</p> <p><i>Response:</i> We acknowledged the concerns expressed by the commenters. However, the data shows that the measure has reached the end of its topped-out life cycle, which does not allow meaningful benchmarks to be established. Additionally, by removing measures with high performance rates, we are attempting to reduce reporting burden where there is little room for improvement. Removal allows eligible clinicians to maximize their potential quality performance score as this measure's topped out status would limit the score awarded per the 2023 Benchmark File.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 52886), we are finalizing the above measure(s) for removal from the <i>Geriatrics Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC of this Appendix for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.</p>							

**B.17. Hospitalists**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Hospitalists specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

						measurement period who were between 15-65 years old when tested for Human Immunodeficiency Virus (HIV).	
* ! (Equity)	N/A / N/A	487	N/A	MIPS CQMs Specifications	Process	<b>Screening for Social Drivers of Health:</b> Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services
*	3620 / N/A	493	N/A	MIPS CQMs Specifications	Process	<b>Adult Immunization Status:</b> Percentage of members 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.	National Committee for Quality Assurance

**B.18. Infectious Disease**

MEASURES FINALIZED FOR ADDITION TO THE INFECTIOUS DISEASE SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A / N/A	498	N/A	MIPS CQMs Specifications	Process	<p><b>Connection to Community Service Provider:</b> Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.</p>	OCHIN	<p>We proposed to include this measure in the Infectious Disease specialty set as screening for and working to address patient’s HRSNs can be a key component to a patient achieving health equity with all clinical settings and clinician types. This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure will allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>
<p>We received no public comments on the measure(s) proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (88 FR 52890), we are finalizing the above measure(s) for addition to the <i>Infectious Disease Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p>								

### B.19. Internal Medicine

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Internal Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

B.19. Internal Medicine

MEASURES FINALIZED FOR ADDITION TO THE INTERNAL MEDICINE SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Outcome)	N/A / N/A	495	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	<p><b>Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood:</b> The percentage of top-box responses among patients aged 18 years and older who had an ambulatory palliative care visit and report feeling heard and understood by their palliative care provider and team within 2 months (60 days) of the ambulatory palliative care visit.</p>	American Academy of Hospice and Palliative Medicine (AAHPM)	<p>We proposed to include this measure in the Internal Medicine specialty set as it will be clinically relevant to this clinician type. This patient-reported outcome measure will help to fill a gap for patients receiving palliative care by capturing the patient's voice and experience of care by assessing communication and shared decision making with his or her clinician. Patients feeling heard and understood adds an important dimension to the care planning for this unique patient population commonly cared for by clinicians in this specialty. This measure is predicated on existing guidelines and conceptual models. In addition, it can facilitate and improve effective patient-provider communication that engenders trust, acknowledgement, and a whole-person orientation to the care that is provided. This is an important patient-centered measure that helps patients feel heard and understood which can effectively improve the quality of care received and outcomes for patients in palliative care. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.2 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
	N/A / N/A	497	N/A	MIPS CQMs Specifications	Process	<p><b>Preventive Care and Wellness (composite):</b> Percentage of patients who received age- and sex- appropriate preventive screenings and wellness services. This measure is a composite of seven component measures that are based on recommendations for preventive care by the U.S. Preventive Services Task Force (USPSTF), Advisory Committee on Immunization Practices (ACIP), American Association of Clinical Endocrinology (AACE), and American College of Endocrinology (ACE).</p>	Centers for Medicare and Medicaid Services	<p>We proposed to include this measure in the Internal Medicine specialty set as it will be clinically relevant to this clinician type. The addition of this quality measure to this specialty set will reinforce our commitment that all clinicians should be actively engaging in activities that address preventive care and wellness and is in alignment with our priorities to support overall patient health. The measure will set a more stringent performance standard by requiring a set of preventive care for the general population in one composite measure and aligns with evidence-based recommendations. The measure will help incentivize a more broadly encompassing preventive care assessment to guide clinicians. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.6 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

! (Safety)	N/A / N/A	504	N/A	MIPS CQMs Specifications	Process	<p><b>Initiation, Review, And/Or Update To Suicide Safety Plan For Individuals With Suicidal Thoughts, Behavior, Or Suicide Risk:</b>                      Percentage of adult aged 18 years and older with suicidal ideation or behavior symptoms (based on results of a standardized assessment tool or screening tool) or increased suicide risk (based on the clinician's evaluation or clinician-rating tool) for whom a suicide safety plan is initiated, reviewed, and/or updated in collaboration between the patient and their clinician.</p>	American Psychiatric Association	<p>We proposed to include this measure in the Internal Medicine specialty set as it will be clinically relevant to this clinician type. The incorporation of this measure in this specialty set will help promote interventions and best practices that are effective at symptoms reduction and improving functional status and quality of life. This measure is a high priority area for MIPS and by adding the measure to this specialty set it will encourage measure adoption which will support clinician adherence to clinical guidelines, leading to better symptom control and improved quality of life for patients affected by mental health and substance use disorder, while also reinforcing our commitment that all clinicians should be actively engaging in addressing mental health and substance use disorders across the care continuum. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.13 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>
<p>We received no public comments on the measure(s) proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (88 FR 52900 through 52909), we are finalizing the above measure(s) for addition to the <i>Internal Medicine Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p>								

**B.19. Internal Medicine**

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR <b>REMOVAL</b> FROM THE INTERNAL MEDICINE SPECIALTY SET							
Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
0654 / N/A	093	N/A	MIPS CQMs Specifications	Process	<b>Acute Otitis Externa (AOE): Systemic Antimicrobial Therapy – Avoidance of Inappropriate Use:</b> Percentage of patients aged 2 years and older with a diagnosis of AOE who were not prescribed systemic antimicrobial therapy.	American Academy of Otolaryngology-Head and Neck Surgery	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	107	CMS161v12	eCQM Specifications	Process	<b>Adult Major Depressive Disorder (MDD): Suicide Risk Assessment:</b> Percentage of all patient visits for those patients that turn 18 or older during the measurement period in which a new or recurrent diagnosis of major depressive disorder (MDD) was identified and a suicide risk assessment was completed during the visit.	Mathematica	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	128	CMS69v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	<b>Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan:</b> Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if the most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services	This measure was proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the finalized Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix); however, this measure is appropriate and applicable for some MVPs and is therefore finalized for retention for MVP use. See Table Group CC of this Appendix for rationale.
N/A / N/A	226	CMS138v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	<b>Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention:</b> Percentage of patients aged 12 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.	National Committee for Quality Assurance	This measure was proposed for removal from the Internal Medicine specialty set beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the finalized Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix). The inclusion of both quality measures in this specialty set will be duplicative.

**B.19. Internal Medicine**

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR <b>REMOVAL</b> FROM THE INTERNAL MEDICINE SPECIALTY SET							
Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	317	CMS2 2v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	<b>Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented:</b> Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is elevated or hypertensive.	Centers for Medicare & Medicaid Services	This measure was proposed for removal from the Internal Medicine specialty set beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the finalized Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix). The inclusion of both quality measures in this specialty set will be duplicative.
0576 / N/A	391	N/A	MIPS CQMs Specifications	Process	<b>Follow-Up After Hospitalization for Mental Illness (FUH):</b> The percentage of discharges for patients 6 years of age and older who were hospitalized for treatment of selected mental illness or intentional self-harm diagnoses and who had a follow-up visit with a mental health provider. Two rates are submitted: <ul style="list-style-type: none"> <li>• The percentage of discharges for which the patient received follow-up within 30 days after discharge</li> <li>• The percentage of discharges for which the patient received follow-up within 7 days after discharge.</li> </ul>	National Committee for Quality Assurance	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	402	N/A	MIPS CQMs Specifications	Process	<b>Tobacco Use and Help with Quitting Among Adolescents:</b> The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (88 FR 52910 through 52914), we are finalizing the above measure(s) for removal from the <i>Internal Medicine Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC of this Appendix for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.							

### B.20. Interventional Radiology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Interventional Radiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

The incorporation of this measure in this specialty set will help promote interventions and best practices that are effective at symptoms reduction and improving functional status and quality of life. This measure is a high priority area for MIPS and by adding the measure to this specialty set it will encourage measure adoption which will support clinician adherence to clinical guidelines, leading to better symptom control and improved quality of life for patients affected by mental health and substance use disorder, while also reinforcing our commitment that all clinicians should be actively engaging in addressing mental health and substance use disorders across the care continuum. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.13 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

**B.21. Mental/Behavioral Health and Psychiatry**

MEASURES FINALIZED FOR <b>ADDITION</b> TO THE MENTAL/BEHAVIORAL HEALTH AND PSYCHIATRY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Outcome)	N/A / N/A	505	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	<b>Reduction in Suicidal Ideation or Behavior Symptoms:</b> The percentage of patients aged 18 and older with a mental and/or substance use disorder AND suicidal thoughts, behaviors or risk symptoms who demonstrated a reduction in suicidal ideation and/or behavior symptoms based on results from the Columbia-Suicide Severity Rating Scale (C-SSRS) ‘Screen Version’ or ‘Since Last Visit’, within 120 days after an index assessment.	American Psychiatric Association	We proposed to include this measure in the Mental/Behavioral Health and Psychiatry specialty set as it will be clinically relevant to this clinician type. This patient reported outcome measure focuses on mental health and substance use disorder (SUD) and the reduction of suicidal ideation, conceptually addressing behavioral health which are a CMS high priority area. Incorporating this clinical outcome measure in this specialty set will encourage measure adoption which will support clinician adherence to clinical guidelines, leading to better symptom control and improved quality of life for patients affected by mental health and SUD. The addition of this quality measure for this specialty will reinforce our commitment that all clinicians should be actively engaging in addressing mental health and SUDs across the care continuum. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.14 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.
We received no public comments on the measure(s) proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (88 FR 52920 through 52925), we are finalizing the above measure(s) for addition to the <i>Mental/Behavioral Health and Psychiatry Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.								

**B.21. Mental/Behavioral Health and Psychiatry**

<p align="center"><b>PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE MENTAL/BEHAVIORAL HEALTH AND PSYCHIATRY SPECIALTY SET</b></p> <p>Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.</p>							
<b>CBE # / eCQM CBE #</b>	<b>Quality #</b>	<b>CMS eCQM ID</b>	<b>Collection Type</b>	<b>Measure Type</b>	<b>Measure Title And Description</b>	<b>Measure Steward</b>	<b>Rationale for Removal</b>
N/A / N/A	107	CMS 161v12	eCQM Specifications	Process	<b>Adult Major Depressive Disorder (MDD): Suicide Risk Assessment:</b> Percentage of all patient visits for those patients that turn 18 or older during the measurement period in which a new or recurrent diagnosis of major depressive disorder (MDD) was identified and a suicide risk assessment was completed during the visit.	Mathematica	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	128	CMS 69v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	<b>Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan:</b> Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if the most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services	This measure was proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the finalized Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix); however, this measure is appropriate and applicable for some MVPs and is therefore finalized for retention for MVP use. See Table Group CC of this Appendix for rationale.
N/A / N/A	283	N/A	MIPS CQMs Specifications	Process	<b>Dementia Associated Behavioral and Psychiatric Symptoms Screening and Management:</b> Percentage of patients with dementia for whom there was a documented screening for behavioral and psychiatric symptoms, including depression, and for whom, if symptoms screening was positive, there was also documentation of recommendations for management in the last 12 months.	American Academy of Neurology/ American Psychiatric Association	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.

0576 / N/A	391	N/A	MIPS CQMs Specifications	Process	<p><b>Follow-Up After Hospitalization for Mental Illness (FUH):</b>                      The percentage of discharges for patients 6 years of age and older who were hospitalized for treatment of selected mental illness or intentional self-harm diagnoses and who had a follow-up visit with a mental health provider. Two rates are submitted:</p> <ul style="list-style-type: none"> <li>• The percentage of discharges for which the patient received follow-up within 30 days after discharge</li> <li>• The percentage of discharges for which the patient received follow-up within 7 days after discharge.</li> </ul>	National Committee for Quality Assurance	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	402	N/A	MIPS CQMs Specifications	Process	<p><b>Tobacco Use and Help with Quitting Among Adolescents:</b>                      The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.</p>	National Committee for Quality Assurance	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
<p>We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (88 FR 52926 through 52927), we are finalizing the above measure(s) for removal from the <i>Mental/Behavioral Health and Psychiatry Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC of this Appendix for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.</p>							

### B.22. Nephrology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Nephrology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

## B.22. Nephrology

MEASURES FINALIZED AND NOT FINALIZED FOR <b>ADDITION</b> TO THE NEPHROLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
	N/A / N/A	N/A	N/A	MIPS CQMs Specifications	Process	<p><b>First Year Standardized Waitlist Ratio (FYSWR):</b> The number of incident (newly initiated on dialysis) patients in a practitioner (inclusive of physicians and advanced practice providers) group who are under the age of 75, and were listed on the kidney or kidney-pancreas transplant waitlist or received a living donor transplant within the first year of initiating dialysis. The measure is calculated to compare the observed number of waitlist events in a practitioner group to its expected number of waitlist events. The measure uses the expected waitlist events calculated from a Cox model, adjusted for age, patient comorbidities, and other risk factors at incidence of dialysis.</p>	Centers for Medicare & Medicaid Services	<p>We proposed to include this measure in the Nephrology specialty set as it will be clinically relevant to this clinician type. The measure's intended objective consists of improving the overall health of patients on dialysis, with Nephrologists at the forefront of caring for this patient population. Clinicians within this specialty are responsible for the education of patients about the option of transplantation, referral of patients to a transplant center for evaluation, completion of the evaluation process, and optimizing the health of the patient while on dialysis. All clinicians should be involved and actively work towards providing patients with high quality care including ensuring placement on the transplant list as quickly as possible. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.4 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

**B.22. Nephrology**

MEASURES FINALIZED AND NOT FINALIZED FOR ADDITION TO THE NEPHROLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
	N/A / N/A	N/A	N/A	MIPS CQMs Specifications	Process	<p><b>Percentage of Prevalent Patients Waitlisted (PPPW) and Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW):</b>                      The percentage of patients in each dialysis practitioner group practice who were on the kidney or kidney-pancreas transplant waitlist (all patients or patients in active status). Results are averaged across patients prevalent on the last day of each month during the reporting year. The measure is a directly standardized percentage, which is adjusted for covariates (e.g., age and risk factors).</p>	Centers for Medicare & Medicaid Services	<p>We proposed to include this measure in the Nephrology specialty set as will be clinically relevant to this clinician type. The maintenance of end stage renal disease patients on active status on the waitlist is additionally important given demonstrated disparities and positive association with subsequent transplantation. These practices are important for Nephrologists who are at the forefront of caring for this patient population. This is an important area to which dialysis practitioners can contribute through ensuring patients remain healthy and complete any ongoing testing activities required to remain active on the waitlist. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.5 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

**B.22. Nephrology**

MEASURES FINALIZED AND NOT FINALIZED FOR ADDITION TO THE NEPHROLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Outcome)	N/A / N/A	503	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	<b>Gains in Patient Activation Measure (PAM®) Scores at 12 Months:</b> The Patient Activation Measure® (PAM®) is a 10 - or 13 - item questionnaire that assesses an individual's knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia	We proposed to include this measure in the Nephrology specialty set as it will be clinically relevant to this clinician type. The addition of this measure to this specialty set will be feasible given its use through the continuum of care and across different clinical settings. This measure addresses chronic conditions and outcomes, both of which are high priority areas for measure consideration for MIPS. It is utilized within the U.S. and internationally in research and has also been shown to be valid and reliable in different clinical settings and under different payment models. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.12 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.
<p><i>Comment:</i> A few commenters supported the inclusion of the First Year Standardized Waitlist Ratio (FYSWR) and Percentage of Prevalent Patients Waitlisted (PPPW) and Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW) measures in the Nephrology specialty set.</p> <p><i>Response:</i> We thank the commenters for supporting the additional measures to this specialty set. However, due to potential implementation challenges within MIPS regarding timing and application of the risk adjustment methodology, we are not finalizing the First Year Standardized Waitlist Ratio (FYSWR) and Percentage of Prevalent Patients Waitlisted (PPPW) and Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW) measures for addition to the <i>Nephrology Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year to allow further refinement and streamlining of the measures' analytic for future MIPS implementation.</p> <p>We are finalizing measures Q498: Connection to Community Service Provider and Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months for the reasons stated above and in the proposed rule (88 FR 52930 through 52933) for addition to the <i>Nephrology Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p>								

### B.23. Neurology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Neurology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

### B.23. Neurology

! (Equity)	N/A / N/A	498	N/A	MIPS CQMs Specifications	Process	<p><b>Connection to Community Service Provider:</b> Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.</p>	OCHIN	<p>We proposed to include this measure in the Neurology specialty set as screening for and working to address patient’s HRSNs can be a key component to a patient achieving health equity with all clinical settings and clinician types. This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure will allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

**B.23. Neurology**

MEASURES FINALIZED FOR ADDITION TO THE NEUROLOGY SPECIALTY SET

! (Outcome)	N/A / N/A	503	N/A	MIPS CQMS Specifications	Patient-Reported Outcome-Based Performance Measure	<b>Gains in Patient Activation Measure (PAM®) Scores at 12 Months:</b> The Patient Activation Measure® (PAM®) is a 10 - or 13 - item questionnaire that assesses an individual's knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia	We proposed to include this measure in the Neurology specialty set as it will be clinically relevant to this clinician type. The addition of this measure to this specialty set will be feasible given its use through the continuum of care and across different clinical settings. This measure addresses chronic conditions and outcomes, both of which are high priority areas for measure consideration for MIPS. It is utilized within the U.S. and internationally in research and has also been shown to be valid and reliable in different clinical settings and under different payment models. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.12 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.
<p><i>Comment:</i> One commenter supported the measures proposed for addition to this specialty set.</p> <p><i>Response:</i> We thank the commenter for supporting the additional measures to this specialty set.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 52937 through 52938), we are finalizing the above measure(s) for addition to the <i>Neurology Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p>								

**B.23. Neurology**

<p align="center"><b>PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE NEUROLOGY SPECIALTY SET</b></p> <p>Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.</p>							
CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	283	N/A	MIPS CQMs Specifications	Process	<p><b>Dementia Associated Behavioral and Psychiatric Symptoms Screening and Management:</b> Percentage of patients with dementia for whom there was a documented screening for behavioral and psychiatric symptoms, including depression, and for whom, if symptoms screening was positive, there was also documentation of recommendations for management in the last 12 months.</p>	American Academy of Neurology/ American Psychiatric Association	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	402	N/A	MIPS CQMs Specifications	Process	<p><b>Tobacco Use and Help with Quitting Among Adolescents:</b> The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.</p>	National Committee for Quality Assurance	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
<p><i>Comment:</i> One commenter supported the measures proposed for removal from this specialty set.</p> <p><i>Response:</i> We thank the commenter for supporting the removal of measures from this specialty set.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 52939), we are finalizing the above measure(s) for removal from the <i>Neurology Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC of this Appendix for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.</p>							

### B.24. Neurosurgical

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Neurosurgical specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

We agreed with interested parties' feedback that depression continues to be a major public health concern and all Medicare clinicians should be doing their part to address the issue. Screening for depression is often a routine part of the comprehensive nutrition assessment performed by Registered Dietitians/ Nutritionists (RDNs) as nutrition status is closely linked to mental health. Optimizing the nutrition status of an individual with mental illness has been shown to improve both cognitive and emotional functioning. The measure being added to this specialty set will be contingent on applicable coding updates to the measure by the time of the CY 2024 PFS final rule.</p>

**B.25. Nutrition/Dietician**

MEASURES FINALIZED FOR <b>ADDITION</b> TO THE NUTRITION/DIETICIAN SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A / N/A	498	N/A	MIPS CQMs Specifications	Process	<p><b>Connection to Community Service Provider:</b> Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.</p>	OCHIN	<p>We proposed to include this measure in the Nutrition/Dietician specialty set as screening for and working to address patient’s HRSNs can be a key component to a patient achieving health equity with all clinical settings and clinician types. This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure will allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>
<p>We received no public comments on the measure(s) proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (88 FR 52994 through 52945), we are finalizing the above measure(s) for addition to the <i>Nutrition/Dietician Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p>								

**B.25. Nutrition/Dietician**

<b>PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE NUTRITION/DIETICIAN SPECIALTY SET</b>							
Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
<b>CBE # / eCQM CBE #</b>	<b>Quality #</b>	<b>CMS eCQM ID</b>	<b>Collection Type</b>	<b>Measure Type</b>	<b>Measure Title And Description</b>	<b>Measure Steward</b>	<b>Rationale for Removal</b>
N/A / N/A	128	CMS 69v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	<b>Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan:</b> Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if the most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services	This measure was proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the finalized Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix); however, this measure is appropriate and applicable for some MVPs and is therefore finalized for retention for MVP use. See Table Group CC of this Appendix for rationale.
We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (88 FR 52945), we are finalizing the above measure(s) for removal from the <i>Nutrition/Dietician Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC of this Appendix for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.							

### B.26. Obstetrics/Gynecology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Obstetrics/Gynecology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

### B.26. Obstetrics/Gynecology

PREVIOUSLY FINALIZED MEASURES IN THE OBSTETRICS/GYNECOLOGY SPECIALTY SET							
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title and Description	Measure Steward
	0046 / N/A	039	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	<b>Screening for Osteoporosis for Women Aged 65-85 Years of Age:</b> Percentage of female patients aged 65-85 years of age who ever had a central dual-energy X-ray absorptiometry (DXA) to check for osteoporosis.	National Committee for Quality Assurance
! (Care Coordination)	0326 / N/A	047	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	<b>Advance Care Plan:</b> Percentage of patients aged 65 years and older who have an advance care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an advance care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an advance care plan.	National Committee for Quality Assurance
*	N/A / N/A	048	N/A	MIPS CQMs Specifications	Process	<b>Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older:</b> Percentage of female patients aged 65 years and older who were assessed for the presence or absence of urinary incontinence within 12 months.	National Committee for Quality Assurance
! (Patient Experience)	N/A / N/A	050	N/A	MIPS CQMs Specifications	Process	<b>Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older:</b> Percentage of female patients aged 65 years and older with a diagnosis of urinary incontinence with a documented plan of care for urinary incontinence at least once within 12 months.	National Committee for Quality Assurance
§ ! (Patient Safety)	N/A / N/A	130	CMS 68v13	eCQM Specifications, MIPS CQMs Specifications	Process	<b>Documentation of Current Medications in the Medical Record:</b> Percentage of visits for patients aged 18 years and older for which the eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter.	Centers for Medicare & Medicaid Services

**B.26. Obstetrics/Gynecology**

<b>PREVIOUSLY FINALIZED MEASURES IN THE OBSTETRICS/GYNECOLOGY SPECIALTY SET</b>							
<b>Indicator</b>	<b>CBE # / eCQM CBE #</b>	<b>Quality #</b>	<b>CMS eCQM ID</b>	<b>Collection Type</b>	<b>Measure Type</b>	<b>Measure Title and Description</b>	<b>Measure Steward</b>
* § ! (Outcome)	N/A / N/A	236	CMS 165v1 2	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Intermedi ate Outcome	<b>Controlling High Blood Pressure:</b> Percentage of patients 18-85 years of age who had a diagnosis of essential hypertension starting before and continuing into, or starting during the first six months of the measurement period, and whose most recent blood pressure was adequately controlled (<140/90mmHg) during the measurement period.	National Committee for Quality Assurance
§	N/A / N/A	309	CMS 124v1 2	eCQM Specifications	Process	<b>Cervical Cancer Screening:</b> Percentage of women 21-64 years of age who were screened for cervical cancer using either of the following criteria: * Women age 21-64 who had cervical cytology performed within the last 3 years * Women age 30-64 who had cervical human papillomavirus (HPV) testing performed within the last 5 years	National Committee for Quality Assurance
* §	N/A / N/A	310	CMS 153v1 2	eCQM Specifications	Process	<b>Chlamydia Screening in Women:</b> Percentage of women 16-24 years of age who were identified as sexually active and who had at least one test for chlamydia during the measurement period.	National Committee for Quality Assurance
! (Outcome)	N/A / N/A	335	N/A	MIPS CQMs Specifications	Outcome	<b>Maternity Care: Elective Delivery (Without Medical Indication) at &lt; 39 Weeks (Overuse):</b> Percentage of patients, regardless of age, who gave birth during a 12-month period, delivered a live singleton at < 39 weeks of gestation, and had elective deliveries (without medical indication) by cesarean birth or induction of labor.	Centers for Medicare & Medicaid Services
§ ! (Care Coordination)	N/A / N/A	336	N/A	MIPS CQMs Specifications	Process	<b>Maternity Care: Postpartum Follow-up and Care Coordination:</b> Percentage of patients, regardless of age, who gave birth during a 12-month period who were seen for postpartum care before or at 12 weeks of giving birth and received the following at a postpartum visit: breast-feeding evaluation and education, postpartum depression screening, postpartum glucose screening for gestational diabetes patients, family and contraceptive planning counseling, tobacco use screening and cessation education, healthy lifestyle behavioral advice, and an immunization review and update.	Centers for Medicare & Medicaid Services

**B.26. Obstetrics/Gynecology**

<b>PREVIOUSLY FINALIZED MEASURES IN THE OBSTETRICS/GYNECOLOGY SPECIALTY SET</b>							
<b>Indicator</b>	<b>CBE # / eCQM CBE #</b>	<b>Quality #</b>	<b>CMS eCQM ID</b>	<b>Collection Type</b>	<b>Measure Type</b>	<b>Measure Title and Description</b>	<b>Measure Steward</b>
! (Care Coordination)	N/A / N/A	374	CMS 50v12	eCQM Specifications, MIPS CQMs Specifications	Process	<b>Closing the Referral Loop: Receipt of Specialist Report:</b> Percentage of patients with referrals, regardless of age, for which the referring clinician receives a report from the clinician to whom the patient was referred.	Centers for Medicare & Medicaid Services
*	0053 / N/A	418	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	<b>Osteoporosis Management in Women Who Had a Fracture:</b> The percentage of women 50–85 years of age who suffered a fracture and who had either a bone mineral density (BMD) test or prescription for a drug to treat osteoporosis in the six months after the fracture.	National Committee for Quality Assurance
! (Patient Safety)	2063 / N/A	422	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	<b>Performing Cystoscopy at the Time of Hysterectomy for Pelvic Organ Prolapse to Detect Lower Urinary Tract Injury:</b> Percentage of patients who undergo cystoscopy to evaluate for lower urinary tract injury at the time of hysterectomy for pelvic organ prolapse.	American Urogynecologic Society
* §	2152 / N/A	431	N/A	MIPS CQMs Specifications	Process	<b>Preventive Care and Screening: Unhealthy Alcohol Use: Screening &amp; Brief Counseling:</b> Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 12 months AND who received brief counseling if identified as an unhealthy alcohol user.	National Committee for Quality Assurance
! (Outcome)	N/A / N/A	432	N/A	MIPS CQMs Specifications	Outcome	<b>Proportion of Patients Sustaining a Bladder Injury at the Time of any Pelvic Organ Prolapse Repair:</b> Percentage of patients undergoing pelvic organ prolapse repairs who sustain an injury to the bladder recognized either during or within 30 days after surgery.	American Urogynecologic Society
§ ! (Outcome)	N/A / N/A	433	N/A	MIPS CQMs Specifications	Outcome	<b>Proportion of Patients Sustaining a Bowel Injury at the time of any Pelvic Organ Prolapse Repair:</b> Percentage of patients undergoing surgical repair of pelvic organ prolapse that is complicated by a bowel injury at the time of index surgery that is recognized intraoperatively or within 30 days after surgery.	American Urogynecologic Society
* § ! (Appropriate Use)	N/A / N/A	443	N/A	MIPS CQMs Specifications	Process	<b>Non-Recommended Cervical Cancer Screening in Adolescent Females:</b> The percentage of adolescent females 16–20 years of age who were screened unnecessarily for cervical cancer.	National Committee for Quality Assurance

**B.26. Obstetrics/Gynecology**

<b>PREVIOUSLY FINALIZED MEASURES IN THE OBSTETRICS/GYNECOLOGY SPECIALTY SET</b>							
<b>Indicator</b>	<b>CBE # / eCQM CBE #</b>	<b>Quality #</b>	<b>CMS eCQM ID</b>	<b>Collection Type</b>	<b>Measure Type</b>	<b>Measure Title and Description</b>	<b>Measure Steward</b>
* ! (Care Coordination)	N/A / N/A	448	N/A	MIPS CQMs Specifications	Process	<b>Appropriate Workup Prior to Endometrial Ablation:</b> Percentage of patients, aged 18 years and older, who undergo endometrial sampling or hysteroscopy with biopsy and results are documented before undergoing an endometrial ablation.	Centers for Medicare & Medicaid Services
§ ! (Appropriate Use)	N/A / 3475e	472	CMS 249v6	eCQM Specifications	Process	<b>Appropriate Use of DXA Scans in Women Under 65 Years Who Do Not Meet the Risk Factor Profile for Osteoporotic Fracture:</b> Percentage of female patients 50 to 64 years of age without select risk factors for osteoporotic fracture who received an order for a dual-energy x-ray absorptiometry (DXA) scan during the measurement period.	Centers for Medicare & Medicaid Services
* §	N/A / N/A	475	CMS 349v6	eCQM Specifications	Process	<b>HIV Screening:</b> Percentage of patients aged 15-65 at the start of the measurement period who were between 15-65 years old when tested for Human Immunodeficiency Virus (HIV).	Centers for Disease Control and Prevention
* ! (Equity)	N/A / N/A	487	N/A	MIPS CQMs Specifications	Process	<b>Screening for Social Drivers of Health:</b> Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services
*	3620 / N/A	493	N/A	MIPS CQMs Specifications	Process	<b>Adult Immunization Status:</b> Percentage of members 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.	National Committee for Quality Assurance

**B.26. Obstetrics/Gynecology**

MEASURES FINALIZED FOR <b>ADDITION</b> TO THE OBSTETRICS/GYNECOLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
	N/A / N/A	496	N/A	MIPS CQMs Specifications	Process	<p><b>Cardiovascular Disease (CVD) Risk Assessment Measure - Proportion of Pregnant/Postpartum Patients that Receive CVD Risk Assessment with a Standardized Instrument:</b>                      Percentage of pregnant or postpartum patients who received a cardiovascular disease (CVD) risk assessment with a standardized instrument.</p>	University of California, Irvine	<p>We proposed to include this measure in the Obstetrics/ Gynecology specialty set as it will be clinically relevant to this clinician type. This measure fills a high priority clinical gap area under the wellness and prevention domain for maternal health by addressing screening and care for pregnant/postpartum patients by assessing for a standardized CVD risk assessment for this high-risk population cared for by clinicians in this specialty. Given the close correlation of CVD risks and pregnant/ postpartum patients, interdisciplinary care is vital. The addition of this quality measure to this specialty set will incentivize thorough assessment for patient risk and increase education and awareness in this population. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.3 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

**B.26. Obstetrics/Gynecology**

MEASURES FINALIZED FOR ADDITION TO THE OBSTETRICS/GYNECOLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
	N/A / N/A	497	N/A	MIPS CQMs Specifications	Process	<p><b>Preventive Care and Wellness (composite):</b>                      Percentage of patients who received age- and sex-appropriate preventive screenings and wellness services. This measure is a composite of seven component measures that are based on recommendations for preventive care by the U.S. Preventive Services Task Force (USPSTF), Advisory Committee on Immunization Practices (ACIP), American Association of Clinical Endocrinology (AACE), and American College of Endocrinology (ACE).</p>	Centers for Medicare and Medicaid Services	<p>We proposed to include this measure in the Obstetrics/ Gynecology specialty set as it will be clinically relevant to this clinician type. The addition of this quality measure to this specialty set will reinforce our commitment that all clinicians should be actively engaging in activities that address preventive care and wellness and is in alignment with our priorities to support overall patient health. The measure will set a more stringent performance standard by requiring a set of preventive care for the general population in one composite measure and aligns with evidence-based recommendations. The measure will help incentivize a more broadly encompassing preventive care assessment to guide clinicians. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.6 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

**B.26. Obstetrics/Gynecology**

MEASURES FINALIZED FOR <b>ADDITION</b> TO THE OBSTETRICS/GYNECOLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A / N/A	498	N/A	MIPS CQMs Specifications	Process	<p><b>Connection to Community Service Provider:</b> Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.</p>	OCHIN	<p>We proposed to include this measure in the Obstetrics/Gynecology specialty set as screening for and working to address patient’s HRSNs can be a key component to a patient achieving health equity with all clinical settings and clinician types. This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure will allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

**B.26. Obstetrics/Gynecology**

MEASURES FINALIZED FOR ADDITION TO THE OBSTETRICS/GYNECOLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Outcome)	N/A / N/A	503	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	<p><b>Gains in Patient Activation Measure (PAM®) Scores at 12 Months:</b></p> <p>The Patient Activation Measure® (PAM®) is a 10 - or 13 - item questionnaire that assesses an individual's knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.</p>	Insignia Health, LLC, a wholly owned subsidiary of Phreesia	<p>We proposed to include this measure in the Obstetrics/Gynecology specialty set as it will be clinically relevant to this clinician type. The addition of this measure to this specialty set will be feasible given its use through the continuum of care and across different clinical settings. This measure addresses chronic conditions and outcomes, both of which are high priority areas for measure consideration for MIPS. It is utilized within the U.S. and internationally in research and has also been shown to be valid and reliable in different clinical settings and under different payment models. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.12 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

**B.26. Obstetrics/Gynecology**

MEASURES FINALIZED FOR ADDITION TO THE OBSTETRICS/GYNECOLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Safety)	N/A / N/A	504	N/A	MIPS CQMs Specifications	Process	<p><b>Initiation, Review, And/Or Update To Suicide Safety Plan For Individuals With Suicidal Thoughts, Behavior, Or Suicide Risk:</b>                      Percentage of adult aged 18 years and older with suicidal ideation or behavior symptoms (based on results of a standardized assessment tool or screening tool) or increased suicide risk (based on the clinician's evaluation or clinician-rating tool) for whom a suicide safety plan is initiated, reviewed, and/or updated in collaboration between the patient and their clinician.</p>	American Psychiatric Association	<p>We proposed to include this measure in the Obstetrics/Gynecology specialty set as it will be clinically relevant to this clinician type. The incorporation of this measure in this specialty set will help promote interventions and best practices that are effective at symptoms reduction and improving functional status and quality of life. This measure is a high priority area for MIPS and by adding the measure to this specialty set it will encourage measure adoption which will support clinician adherence to clinical guidelines, leading to better symptom control and improved quality of life for patients affected by mental health and substance use disorder, while also reinforcing our commitment that all clinicians should be actively engaging in addressing mental health and substance use disorders across the care continuum. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.13 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

**B.26. Obstetrics/Gynecology**

MEASURES FINALIZED FOR ADDITION TO THE OBSTETRICS/GYNECOLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Outcome)	N/A / N/A	505	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	<p><b>Reduction in Suicidal Ideation or Behavior Symptoms:</b> The percentage of patients aged 18 and older with a mental and/or substance use disorder AND suicidal thoughts, behaviors or risk symptoms who demonstrated a reduction in suicidal ideation and/or behavior symptoms based on results from the Columbia-Suicide Severity Rating Scale (C-SSRS) ‘Screen Version’ or ‘Since Last Visit’, within 120 days after an index assessment.</p>	American Psychiatric Association	<p>We proposed to include this measure in the Obstetrics/ Gynecology specialty set as it will be clinically relevant to this clinician type. This patient reported outcome measure focuses on mental health and substance use disorder (SUD) and the reduction of suicidal ideation, conceptually addressing behavioral health which are a CMS high priority area. Incorporating this clinical outcome measure in this specialty set will encourage measure adoption which will support clinician adherence to clinical guidelines, leading to better symptom control and improved quality of life for patients affected by mental health and substance use disorder. The addition of this quality measure for this specialty will reinforce our commitment that all clinicians should be actively engaging in addressing mental health and substance use disorders across the care continuum. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.14 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>
<p><i>Comment:</i> One commenter did not support the addition of the Preventive Care and Wellness (composite) to the Obstetrics/Gynecology specialty set. The commenter expressed concern that the complexity of the measure would make it difficult for clinicians to report and indicated that maintaining separate measures that are meaningful and useful for relevant specialties will lead to higher rates of reporting and utilization across MIPS. The commenter also noted there is no discussion of risk stratification or adjustment within the composite measure as proposed, in order to further extrapolate the impact of measurement on targeted groups.</p> <p><i>Response:</i> We understand some of these screening and wellness services may not be relevant to, or administered in, certain clinical settings; however, it is important for all clinicians to be actively engaging in activities that address preventive care and wellness. Since all of the component measures have been available for reporting in MIPS, clinicians are familiar with the component requirements and systems should be in place to capture the data. Therefore, we expect reporting burden should be minimal. In addition, many of the components allow for patient reported receipt to meet the numerator. We acknowledge that the removal of component measures may be an inconvenience, however, continuing to drive quality care through the implementation of more robust, meaningful measures is critically important to continued improvement in quality care provided. Currently the Obstetrics/Gynecology specialty set contains 22 measures allowing clinicians to choose to submit those measures that are meaningful to their scope of care. This measure does not require risk adjustment as all of the processes being assessed for are appropriate for each component’s denominator eligible patient population, with exclusions removing patients from components of the measure who would not be appropriate for the quality action. While each component of the measure will have a performance rate, the overall score for the purposes of MIPS will be based upon a weighted average.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 52949 through 52957), we are finalizing the above measure(s) for addition to the <i>Obstetrics/Gynecology Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p>								

**B.26. Obstetrics/Gynecology**

<b>PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE OBSTETRICS/GYNECOLOGY SPECIALTY SET</b>							
<p>Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.</p>							
<b>CBE # / eCQM CBE #</b>	<b>Quality #</b>	<b>CMS eCQM ID</b>	<b>Collection Type</b>	<b>Measure Type</b>	<b>Measure Title And Description</b>	<b>Measure Steward</b>	<b>Rationale for Removal</b>
2372 / N/A	112	CMS1 25v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	<b>Breast Cancer Screening:</b> Percentage of women 40 – 74 years of age who had a mammogram to screen for breast cancer in the 27 months prior to the end of the measurement period.	National Committee for Quality Assurance	This measure was proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group CC of this Appendix for rationale.
N/A / N/A	128	CMS6 9v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	<b>Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan:</b> Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if the most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services	This measure was proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the finalized Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix); however, this measure is appropriate and applicable for some MVPs and is therefore finalized for retention for MVP use. See Table Group CC of this Appendix for rationale.
N/A / N/A	226	CMS1 38v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	<b>Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention:</b> Percentage of patients aged 12 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.	National Committee for Quality Assurance	This measure was proposed for removal from the Obstetrics/Gynecology specialty set beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the finalized Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix). The inclusion of both quality measures in this specialty set will be duplicative.
N/A / N/A	317	CMS2 2v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	<b>Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented:</b> Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is elevated or hypertensive.	Centers for Medicare & Medicaid Services	This measure was proposed for removal from the Obstetrics/Gynecology specialty set beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is as a component of the finalized Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix). The inclusion of both quality measures in this specialty set will be duplicative.

**B.26. Obstetrics/Gynecology**

<b>PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE OBSTETRICS/GYNECOLOGY SPECIALTY SET</b>							
<p>Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.</p>							
<b>CBE # / eCQM CBE #</b>	<b>Quality #</b>	<b>CMS eCQM ID</b>	<b>Collection Type</b>	<b>Measure Type</b>	<b>Measure Title And Description</b>	<b>Measure Steward</b>	<b>Rationale for Removal</b>
N/A / N/A	402	N/A	MIPS CQMs Specifications	Process	<p><b>Tobacco Use and Help with Quitting Among Adolescents:</b>                      The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.</p>	National Committee for Quality Assurance	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
<p>We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (88 FR 52957 through 52959), we are finalizing the above measure(s) for removal from the <i>Obstetrics/Gynecology Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC of this Appendix for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.</p>							

### B.27a. Oncology/Hematology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Oncology/Hematology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

### B.27a. Oncology/Hematology

PREVIOUSLY FINALIZED MEASURES IN THE ONCOLOGY/HEMATOLOGY SPECIALTY SET							
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title and Description	Measure Steward
! (Care Coordination)	0326 / N/A	047	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	<b>Advance Care Plan:</b> Percentage of patients aged 65 years and older who have an advance care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an advance care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an advance care plan.	National Committee for Quality Assurance
§ ! (Appropriate Use)	N/A / N/A	102	CMS1 29v13	eCQM Specifications, MIPS CQMs Specifications	Process	<b>Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low Risk Prostate Cancer Patients:</b> Percentage of patients, regardless of age, with a diagnosis of prostate cancer at low (or very low) risk of recurrence receiving interstitial prostate brachytherapy, OR external beam radiotherapy to the prostate, OR radical prostatectomy who did not have a bone scan performed at any time since diagnosis of prostate cancer.	Centers for Medicare & Medicaid Services
§ ! (Patient Safety)	N/A / N/A	130	CMS6 8v13	eCQM Specifications, MIPS CQMs Specifications	Process	<b>Documentation of Current Medications in the Medical Record:</b> Percentage of visits for patients aged 18 years and older for which the eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter.	Centers for Medicare & Medicaid Services
* §	N/A / N/A	134	CMS2 v13	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	<b>Preventive Care and Screening: Screening for Depression and Follow-Up Plan:</b> Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of or up to two days after the date of the qualifying encounter.	Centers for Medicare & Medicaid Services
§ ! (Patient Experience)	0384 / 0384e	143	CMS1 57v12	eCQM Specifications, MIPS CQMs Specifications	Process	<b>Oncology: Medical and Radiation – Pain Intensity Quantified:</b> Percentage of patient visits, regardless of patient age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy in which pain intensity is quantified.	American Society of Clinical Oncology

**B.27a. Oncology/Hematology**

MEASURES FINALIZED FOR ADDITION TO THE ONCOLOGY/HEMATOLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Outcome)	N/A / N/A	495	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	<b>Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood:</b> The percentage of top-box responses among patients aged 18 years and older who had an ambulatory palliative care visit and report feeling heard and understood by their palliative care provider and team within 2 months (60 days) of the ambulatory palliative care visit.	American Academy of Hospice and Palliative Medicine (AAHPM)	We proposed to include this measure in the Oncology/Hematology specialty set as it will be clinically relevant to this clinician type. This patient-reported outcome measure will help to fill a gap for patients receiving palliative care by capturing the patient's voice and experience of care by assessing communication and shared decision making with his or her clinician. Patients feeling heard and understood adds an important dimension to the care planning for this unique patient population commonly cared for by clinicians in this specialty. This is an important patient-centered measure that helps patients feel heard and understood which can effectively improve the quality of care received and outcomes for patients in palliative care. See Table A.2 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.
! (Equity)	N/A / N/A	498	N/A	MIPS CQMs Specifications	Process	<b>Connection to Community Service Provider:</b> Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.	OCHIN	We proposed to include this measure in the Oncology/Hematology specialty set as screening for and working to address patient's HRSNs can be a key component to a patient achieving health equity with all clinical settings and clinician types. This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure will allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

**B.27a. Oncology/Hematology**

MEASURES FINALIZED FOR ADDITION TO THE ONCOLOGY/HEMATOLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Outcome)	N/A / N/A	503	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	<b>Gains in Patient Activation Measure (PAM®) Scores at 12 Months:</b> The Patient Activation Measure® (PAM®) is a 10 – or 13 – item questionnaire that assesses an individual’s knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia	We proposed to include this measure in the Oncology/ Hematology specialty set as it will be clinically relevant to this clinician type. The addition of this measure to this specialty set will be feasible given its use through the continuum of care and across different clinical settings. This measure addresses chronic conditions and outcomes, both of which are high priority areas for measure consideration for MIPS. It is utilized within the U.S. and internationally in research and has also been shown to be valid and reliable in different clinical settings and under different payment models. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.12 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.
We received no public comments on the measure(s) proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (88 FR 52964 through 52968), we are finalizing the above measure(s) for addition to the <i>Oncology/Hematology Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.								

**B.27a. Oncology/Hematology**

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR <b>REMOVAL</b> FROM THE ONCOLOGY/HEMATOLOGY SPECIALTY SET							
Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	402	N/A	MIPS CQMs Specifications	Process	<b>Tobacco Use and Help with Quitting Among Adolescents:</b> The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (88 FR 52967), we are finalizing the above measure(s) for removal from the <i>Oncology/Hematology Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC of this Appendix for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.							

**B.27b. Radiation Oncology**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Radiation Oncology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

	N/A / N/A	499	N/A	MIPS CQMs Specifications	Process	<p><b>Appropriate Screening and Plan of Care for Elevated Intraocular Pressure Following Intravitreal or Periocular Steroid Therapy:</b>                      Percentage of patients who had an intravitreal or periocular corticosteroid injection (e.g., triamcinolone, preservative-free triamcinolone, dexamethasone intravitreal implant, or fluocinolone intravitreal implant) who, within seven (7) weeks following the date of injection, are screened for elevated intraocular pressure (IOP) with tonometry with documented IOP <math>\leq</math>25 mm Hg for injected eye OR if the IOP was <math>&gt;</math>25 mm Hg, a plan of care was documented.</p>	American Society of Retina Specialists	<p>We proposed to include this measure in the Ophthalmology/Optometry specialty set as it will be clinically relevant to this clinician type. The addition of this measure to this specialty set will be feasible given the high rates that patients are assessed, treated, and managed for this condition in the Ophthalmology and Optometry care setting. This measure addresses the MIPS priority area of patient safety. This measure will help to incentivize timely initiation of the appropriate screening for these patients and ensure there is a plan of care for elevated IOP following intravitreal or periocular steroid therapy. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.8 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

**B.28. Ophthalmology/Optometry**

MEASURES FINALIZED FOR ADDITION TO THE OPHTHALMOLOGY/OPTOMETRY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
	N/A / N/A	500	N/A	MIPS CQMs Specifications	Process	<p><b>Acute Posterior Vitreous Detachment Appropriate Examination and Follow-up:</b> Percentage of patients with a diagnosis of acute posterior vitreous detachment (PVD) in either eye who were appropriately evaluated during the initial exam and were re-evaluated no later than 8 weeks.</p>	American Society of Retina Specialists	<p>We proposed to include this measure in the Ophthalmology/Optometry specialty set as it will be clinically relevant to this clinician type. The addition of this measure to this specialty set will be feasible given the high rates that patients are assessed, treated, and managed for this condition in the Ophthalmology and Optometry care setting. This measure is guideline based and addresses the MIPS priority area of patient safety. It is also linked to health outcomes by appropriate care for acute PVD, which can prevent retinal tears. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.9 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>
	N/A / N/A	501	N/A	MIPS CQMs Specifications	Process	<p><b>Acute Posterior Vitreous Detachment and Acute Vitreous Hemorrhage Appropriate Examination and Follow-up:</b> Percentage of patients with a diagnosis of acute posterior vitreous detachment (PVD) and acute vitreous hemorrhage in either eye who were appropriately evaluated during the initial exam and were re-evaluated no later than 2 weeks.</p>	American Society of Retina Specialists	<p>We proposed to include this measure in the Ophthalmology/Optometry specialty set as it will be clinically relevant to this clinician type. The addition of this measure to this specialty set will be feasible given the high rates that patients are assessed, treated, and managed for this condition in the Ophthalmology and Optometry care setting. In addition, enhancing our ophthalmology related measure inventory could help to ensure retinal specialty coverage by having measures available that are robust and clinically relevant to clinicians within this sub specialization. This measure is guideline based and will help to improve patient safety by incentivizing physicians to see patients in a timely manner. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.10 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>
<p>We received no public comments on the measure(s) proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (88 FR 52972 through 52976), we are finalizing the above measure(s) for addition to the <i>Ophthalmology/Optometry Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p>								

**B.28. Ophthalmology/Optometry**

<b>PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE OPTHALMOLOGY/OPTOMETRY SPECIALTY SET</b>							
<p>Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.</p>							
<b>CBE # / eCQM CBE #</b>	<b>Quality #</b>	<b>CMS eCQM ID</b>	<b>Collection Type</b>	<b>Measure Type</b>	<b>Measure Title And Description</b>	<b>Measure Steward</b>	<b>Rationale for Removal</b>
0087 / N/A	014	N/A	MIPS CQMs Specifications	Process	<p><b>Age-Related Macular Degeneration (AMD): Dilated Macular Examination:</b>                      Percentage of patients aged 50 years and older with a diagnosis of age-related macular degeneration (AMD) who had a dilated macular examination performed which included documentation of the presence or absence of macular thickening or geographic atrophy or hemorrhage AND the level of macular degeneration severity during one or more office visits within the 12-month performance period.</p>	American Academy of Ophthalmology	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
<p>We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (88 FR 52976), we are finalizing the above measure(s) for removal from the <i>Ophthalmology/Optometry Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC of this Appendix for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.</p>							

### B.29. Orthopedic Surgery

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Orthopedic Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

MEASURES FINALIZED FOR <b>ADDITION</b> TO THE ORTHOPEDIC SURGERY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A / N/A	498	N/A	MIPS CQMs Specifications	Process	<p><b>Connection to Community Service Provider:</b> Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.</p>	OCHIN	<p>We proposed to include this measure in the Orthopedic Surgery specialty set as screening for and working to address patient’s HRSNs can be a key component to a patient achieving health equity with all clinical settings and clinician types. This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure will allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>
<p>We received no public comments on the measure(s) proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (88 FR 52984), we are finalizing the above measure(s) for addition to the <i>Orthopedic Surgery Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p>								

**B.29. Orthopedic Surgery**

<b>PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE ORTHOPEDIC SURGERY SPECIALTY SET</b>							
<p>Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.</p>							
<b>CBE # / eCQM CBE #</b>	<b>Quality #</b>	<b>CMS eCQM ID</b>	<b>Collection Type</b>	<b>Measure Type</b>	<b>Measure Title And Description</b>	<b>Measure Steward</b>	<b>Rationale for Removal</b>
N/A / N/A	128	CMS6 9v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	<b>Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan:</b> Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if the most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services	This measure was proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the finalized Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix); however, this measure is appropriate and applicable for some MVPs and is therefore finalized for retention for MVP use. See Table Group CC of this Appendix for rationale.
N/A / N/A	402	N/A	MIPS CQMs Specifications	Process	<b>Tobacco Use and Help with Quitting Among Adolescents:</b> The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
<p><i>Comment:</i> One commenter opposed removal of measure Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan from the Orthopedic Surgery specialty set and expressed that this BMI measure is relevant to many specialties in which there is no MVP and removing this measure is limiting choice for specialists.</p> <p><i>Response:</i> We acknowledged the concerns expressed by the commenters for the removal of measure Q128. However, this measure is duplicative of a component found within the new preventive care and wellness composite measure. It is important to ensure duplicative measures are removed from MIPS to develop an ecosystem of quality measures that drive value-based care, rather than offering duplicate measures. We strive to offer measures with more robust evaluation methods that will continue to drive quality patient outcomes through the clinical care provided.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 52985), we are finalizing the above measure(s) for removal from the <i>Orthopedic Surgery Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC of this Appendix for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.</p>							

### B.30. Otolaryngology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Otolaryngology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

### B.30. Otolaryngology

MEASURES FINALIZED FOR <b>ADDITION</b> TO THE OTOLARYNGOLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A / N/A	498	N/A	MIPS CQMs Specifications	Process	<b>Connection to Community Service Provider:</b> Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.	OCHIN	We proposed to include this measure in the Otolaryngology specialty set as screening for and working to address patient’s HRSNs can be a key component to a patient achieving health equity with all clinical settings and clinician types. This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure will allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.
We received no public comments on the measure(s) proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (88 FR 52989), we are finalizing the above measure(s) for addition to the <i>Otolaryngology Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

N/A / N/A	128	CMS6 9v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	<b>Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan:</b> Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if the most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services	This measure was proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the finalized Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix); however, this measure is appropriate and applicable for some MVPs and is therefore finalized for retention for MVP use. See Table Group CC of this Appendix for rationale.
N/A / N/A	402	N/A	MIPS CQMs Specifications	Process	<b>Tobacco Use and Help with Quitting Among Adolescents:</b> The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
<p>We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (88 FR 52990 through 52991), we are finalizing the above measure(s) for removal from the <i>Otolaryngology Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC of this Appendix for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.</p>							

### B.31. Pathology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Pathology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set and this specialty set had no proposed changes.

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
<b>CBE # / eCQM CBE #</b>	<b>Quality #</b>	<b>CMS eCQM ID</b>	<b>Collection Type</b>	<b>Measure Type</b>	<b>Measure Title And Description</b>	<b>Measure Steward</b>	<b>Rationale for Removal</b>
0576 / N/A	391	N/A	MIPS CQMs Specifications	Process	<b>Follow-Up After Hospitalization for Mental Illness (FUH):</b> The percentage of discharges for patients 6 years of age and older who were hospitalized for treatment of selected mental illness or intentional self-harm diagnoses and who had a follow-up visit with a mental health provider. Two rates are submitted: • The percentage of discharges for which the patient received follow-up within 30 days after discharge • The percentage of discharges for which the patient received follow-up within 7 days after discharge.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	402	N/A	MIPS CQMs Specifications	Process	<b>Tobacco Use and Help with Quitting Among Adolescents:</b> The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (88 FR 52998 through 52999), we are finalizing the above measure(s) for removal from the <i>Pediatrics Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC of this Appendix for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.							

**B.33. Physical Medicine**

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Physical Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

We agreed with interested parties' feedback that this measure will be clinically relevant to this clinician type. Occupational therapy services enable clients to participate in their everyday life occupations in their desired roles, contexts, and life situations through evaluation and treatment related to basic activities of daily living and instrumental activities of daily living. Occupational therapy practitioners use their knowledge and skills to help clients conduct or resume daily life occupations that support function and health throughout the lifespan, including patients with dementia and their caregivers. The addition of this quality measure in this specialty set will make room for more clinician choice by making more measures available that are reflective of the services delivered to this patient population. The measure being added to this specialty set will be contingent on applicable coding updates to the measure by the time of the CY 2024 PFS final rule.</p>

! (Outcome)	N/A / N/A	503	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	<b>Gains in Patient Activation Measure (PAM®) Scores at 12 Months:</b> The Patient Activation Measure® (PAM®) is a 10 - or 13 - item questionnaire that assesses an individual's knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia	We proposed to include this measure in the Physical Therapy/Occupational Therapy specialty set as it will be clinically relevant to this clinician type. The addition of this measure to this specialty set will be feasible given its use through the continuum of care and across different clinical settings. This measure addresses chronic conditions and outcomes, both of which are high priority areas for measure consideration for MIPS. It is utilized within the U.S. and internationally in research and has also been shown to be valid and reliable in different clinical settings and under different payment models. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.12 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.
<p><i>Comment:</i> One commenter supported the addition of the new measures to the Physical Therapy/Occupational Therapy specialty set.</p> <p><i>Response:</i> We thank the commenter for supporting the addition of new measures to the Physical Therapy/Occupational Therapy specialty set. For the commenter's request to add CPT codes to a previously finalized measure, we encourage the commenter to reach out to the measure stewards to communicate possible revisions to be considered for possible future implementation.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53009 through 53013), we are finalizing the above measure(s) for addition to the <i>Physical Therapy/Occupational Therapy Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p>

<p align="center"><b>PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE PHYSICAL THERAPY/OCCUPATIONAL THERAPY SPECIALTY SET</b></p> <p>Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.</p>							
<b>CBE # / eCQM CBE #</b>	<b>Quality #</b>	<b>CMS eCQM ID</b>	<b>Collection Type</b>	<b>Measure Type</b>	<b>Measure Title And Description</b>	<b>Measure Steward</b>	<b>Rationale for Removal</b>
N/A / N/A	128	CMS 69v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	<b>Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan:</b> Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if the most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services	This measure was proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the finalized Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix); however, this measure is appropriate and applicable for some MVPs and is therefore finalized for retention for MVP use. See Table Group CC of this Appendix for rationale.
N/A / N/A	178	N/A	MIPS CQMs Specifications	Process	<b>Rheumatoid Arthritis (RA): Functional Status Assessment:</b> Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) for whom a functional status assessment was performed at least once within 12 months.	American College of Rheumatology	This measure was proposed for removal from the Physical Therapy/Occupational Therapy specialty set beginning with the CY 2024 performance period/2026 MIPS payment year. PT/OT applicable coding has not been added to this measure, so we proposed to remove this measure from this specialty set.
N/A / N/A	283	N/A	MIPS CQMs Specifications	Process	<b>Dementia Associated Behavioral and Psychiatric Symptoms Screening and Management:</b> Percentage of patients with dementia for whom there was a documented screening for behavioral and psychiatric symptoms, including depression, and for whom, if symptoms screening was positive, there was also documentation of recommendations for management in the last 12 months.	American Academy of Neurology/ American Psychiatric Association	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.

### B.34. Physical Therapy/Occupational Therapy

<b>PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE PHYSICAL THERAPY/OCCUPATIONAL THERAPY SPECIALTY SET</b>							
Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
<p><i>Comment:</i> One commenter opposed removal of measure Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan from the Physical Therapy/Occupational Therapy specialty set, stating that it is inconsistent and illogical to remove the measure from the set but retain it for the Rehabilitative Support for Musculoskeletal Care MVP (see Appendix 3: MVP Inventory Table A.5). The commenter stated that BMI is a well utilized and impactful measure among physical therapists regardless of whether they submit MIPS data or MVP data and that physical therapists submitting MIPS data will continue to report measure Q128 because they have denominator eligible instances for the measure. Removing measure Q128 from MIPS will confuse participants and create inconsistencies between MIPS and future MVPs. In addition, QCDR burden increases having to field inquiries from clinicians/groups wondering why the measure was removed from the Physical Therapy/Occupational Therapy specialty set.</p> <p>Several other commenters opposed the removal of measure Q128 from this set with similar concerns that physical therapists can have a significant effect by increasing the patient’s ability to move to control BMI. <i>See</i> Table CC.3 of this Appendix for additional comments on removing measure Q128 from traditional MIPS and retaining the measure for use in MVPs.</p> <p><i>Response:</i> We acknowledged the concerns expressed by the commenters for the removal of measure Q128. This measure is included as a component of the finalized Preventive Care and Wellness (composite) measure. The Preventive Care and Wellness (composite) measure combines seven current preventive care measures with age and sex appropriate preventive screenings and wellness services, to create a robust, broadly encompassing preventive care assessment.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53014), we are finalizing the above measure(s) for removal from the <i>Physical Therapy/Occupational Therapy Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC of this Appendix for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.</p>							

### B.35. Plastic Surgery

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Plastic Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

B.36. Podiatry

MEASURES FINALIZED FOR ADDITION TO THE PODIATRY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Outcome)	N/A / N/A	219	N/A	MIPS CQMs Specifications	Patient-Reported Outcome -Based Performance Measure	<p><b>Functional Status Change for Patients with Lower Leg, Foot or Ankle Impairments:</b></p> <p>A patient-reported outcome measure (PROM) of risk-adjusted change in functional status (FS) for patients 14 years+ with foot, ankle or lower leg impairments. The change in FS is assessed using the FOTO Lower Extremity Physical Function (LEPF) PROM. The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient, individual clinician, and clinic levels to assess quality.</p>	Focus on Therapeutic Outcomes, Inc.	<p>We proposed to include this measure in the Podiatry specialty set as it will be clinically relevant to this clinician type. The addition of this measure will provide this specialty the opportunity to report on an important PRO-PM that will align with their scope of care consisting of the treatment of the lower extremity. Functional deficits are common in the general population and are costly to the individual, their family and society, and improving functional status has been associated with greater quality of life, self-efficacy, improved financial well-being and lower future medical costs (<a href="https://fotoinc.com/science-of-foto/nqf-measure-specifications/">https://fotoinc.com/science-of-foto/nqf-measure-specifications/</a>). Predictive modeling allows for patient-level predictions to help guide treatment decision making and expectations for recovery.</p>

B.36. Podiatry

MEASURES FINALIZED FOR ADDITION TO THE PODIATRY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
*	N/A / N/A	317	CMS 22v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	<p><b>Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented:</b></p> <p>Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is elevated or hypertensive.</p>	Centers for Medicare & Medicaid Services	<p>We proposed to include this measure in the Podiatry specialty set. The addition of this measure to this specialty set will help to broaden the patient population being screened for high blood pressure. There is known risk of adverse effects on the circulatory system due to high blood pressure making this an important aspect of care for podiatrists. Hypertension is often related to atherosclerosis and this buildup of plaque in blood vessels can lead to decreased circulation and peripheral arterial disease (PAD) (<a href="https://www.apma.org/hypertension">https://www.apma.org/hypertension</a>). Patients with decreased circulation in their lower extremities may develop ulcerations that can lead to amputations. Given the close correlation of hypertension and decreased circulation in lower extremities, interdisciplinary care is vital and should be the responsibility of all clinician types. The addition of this measure to the Podiatry specialty set will help to encourage the comprehensive evaluation of compliance of screening for and proper treatment of high blood pressure that can improve quality care and prevent disease for the general population.</p>

B.36. Podiatry

MEASURES FINALIZED FOR ADDITION TO THE PODIATRY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Patient Experience)	N/A / N/A	358	N/A	MIPS CQMs Specifications	Process	<p><b>Patient-Centered Surgical Risk Assessment and Communication:</b>                      Percentage of patients who underwent a non-emergency surgery who had their personalized risks of postoperative complications assessed by their surgical team prior to surgery using a clinical data-based, patient-specific risk calculator and who received personal discussion of those risks with the surgeon.</p>	American College of Surgeons	<p>We proposed to include this measure in the Podiatry specialty set as it will be clinically relevant to this clinician type. Patients undergoing podiatric surgery should receive a thorough perioperative evaluation. Medical "clearance" is no longer sufficient; rather, formal risk assessment should be performed, and risk-reducing strategies communicated. A collaborative, multidisciplinary approach is generally most appropriate, however, expertise and training in this critical dimension of clinical practice varies. Thus, podiatrists should develop independent competence in perioperative evaluation to ensure optimal care for their patients. In preparation for elective foot and ankle surgery, the podiatric surgeon often will refer the patient for a preoperative evaluation. Surgeons rely on the input of that consultant to provide a determination as to the operative risk for the patient                      (<a href="https://pubmed.ncbi.nlm.nih.gov/12776978/">https://pubmed.ncbi.nlm.nih.gov/12776978/</a>).</p>

See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

B.36. Podiatry

MEASURES FINALIZED FOR ADDITION TO THE PODIATRY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Outcome)	N/A / N/A	503	N/A	MIPS CQMs Specifications	Patient-Reported Outcome -Based Performance Measure	<b>Gains in Patient Activation Measure (PAM®) Scores at 12 Months:</b> The Patient Activation Measure® (PAM®) is a 10 - or 13 - item questionnaire that assesses an individual's knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia	We proposed to include this measure in the Podiatry specialty set as it will be clinically relevant to this clinician type. The addition of this measure to this specialty set will be feasible given its use through the continuum of care and across different clinical settings. This measure addresses chronic conditions and outcomes, both of which are high priority areas for measure consideration for MIPS. It is utilized within the U.S. and internationally in research and has also been shown to be valid and reliable in different clinical settings and under different payment models. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.12 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.
<p><i>Comment:</i> One commenter supported the addition of measure Q317: Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented to the Podiatry specialty set, stating there is a close correlation between hypertension and decreased circulation in the lower extremities. Adding this quality measure to this specialty set should lead to higher screening rates for hypertension and increased identification of patients with high blood pressure at risk for peripheral artery disease (PAD) and associated lower extremity amputation. The commenter also requested that CMS develop a new quality measure that would assess rates of lower extremity diabetes-related amputations for at-risk patients.</p> <p><i>Response:</i> We thank the commenter for supporting the addition of measure Q317 to this specialty set. We encourage the commenter to reach out to measure developers/stewards to develop the new quality measure recommended for submission to the Call for Measures for possible future implementation.</p> <p><i>Comment:</i> One commenter supported adding Q219: Functional Status Change for Patients with Lower Leg, Foot, or Ankle Impairments to the Podiatry specialty set as this measure reinforces patient-reported outcome measures (PROMs) for foot care. The commenter also suggested considering the Foot Health Status Questionnaire (FHSQ), which a systematic review provides that this measure is the most fitting PROM for patients with diabetes with foot and ankle pathologies. The commenter supported adding Q317 because podiatrists already screen for high blood pressure. The commenter supported adding Q358: Patient Centered Surgical Risk Assessment and Communication because this measure is already included for orthopedic surgery and general surgery specialties. The commenter supported adding the new Connection to Community Service Provider measure to specialty sets, except for hospitalists. The commenter supported the new Gains in Patient Activation Measure (PAM®) Scores at 12 Months as a validated tool that measures patient activation and helps guide clinicians in assisting their patients to become more self-sufficient.</p> <p><i>Response:</i> We thank the commenter for supporting the additional measures to this specialty set. For the commenter's request to add the Foot Health Status Questionnaire (FHSQ), to a previously finalized measure, we encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. Alternatively, we encourage the commenter to reach out to measure developers/stewards to develop new FHSQ measures for submission to the Call for Measures for possible future implementation.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53020 through 53024), we are finalizing the above measure(s) for addition to the <i>Podiatry Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p>								

**B.36. Podiatry**

<b>PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE PODIATRY SPECIALTY SET</b>							
Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
<b>CBE # / eCQM CBE #</b>	<b>Quality #</b>	<b>CMS eCQM ID</b>	<b>Collection Type</b>	<b>Measure Type</b>	<b>Measure Title And Description</b>	<b>Measure Steward</b>	<b>Rationale for Removal</b>
N/A / N/A	128	CMS 69v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	<b>Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan:</b> Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if the most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services	This measure was proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the finalized Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix); however, this measure is appropriate and applicable for some MVPs and is therefore finalized for retention for MVP use. See Table Group CC of this Appendix for rationale.
We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (88 FR 53025), we are finalizing the above measure(s) for removal from the <i>Podiatry Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC of this Appendix for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.							

### B.37. Preventive Medicine

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Preventive Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

MEASURES FINALIZED FOR <b>ADDITION</b> TO THE PREVENTIVE MEDICINE SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
	N/A / N/A	497	N/A	MIPS CQMs Specifications	Process	<p><b>Preventive Care and Wellness (composite):</b> Percentage of patients who received age- and sex- appropriate preventive screenings and wellness services. This measure is a composite of seven component measures that are based on recommendations for preventive care by the U.S. Preventive Services Task Force (USPSTF), Advisory Committee on Immunization Practices (ACIP), American Association of Clinical Endocrinology (AACE), and American College of Endocrinology (ACE).</p>	Centers for Medicare and Medicaid Services	<p>We proposed to include this measure in the Preventive Medicine specialty set as it will be clinically relevant to this clinician type. The addition of this quality measure to this specialty set will reinforce our commitment that all clinicians should be actively engaging in activities that address preventive care and wellness and is in alignment with our priorities to support overall patient health. The measure will set a more stringent performance standard by requiring a set of preventive care for the general population in one composite measure and aligns with evidence-based recommendations. The measure will help incentivize a more broadly encompassing preventive care assessment to guide clinicians. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.6 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>

**B.37. Preventive Medicine**

Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC of this Appendix for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.</p>							

### B.38. Pulmonology

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Pulmonology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

! (Outcome)	N/A / N/A	503	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	<b>Gains in Patient Activation Measure (PAM®) Scores at 12 Months:</b> The Patient Activation Measure® (PAM®) is a 10 – or 13 – item questionnaire that assesses an individual’s knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia	We proposed to include this measure in the Rheumatology specialty set as it will be clinically relevant to this clinician type. The addition of this measure to this specialty set will be feasible given its use through the continuum of care and across different clinical settings. This measure addresses chronic conditions and outcomes, both of which are high priority areas for measure consideration for MIPS. It is utilized within the U.S. and internationally in research and has also been shown to be valid and reliable in different clinical settings and under different payment models. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.12 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.

### B.39. Rheumatology

MEASURES FINALIZED FOR ADDITION TO THE RHEUMATOLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
<p><i>Comment:</i> One commenter did not support the addition of the Connection to Community Service Provider measure to the Rheumatology specialty set, stating that the numerator actions are outside the scope of a specialty clinician's care. Although extremely meaningful for individual patients, addressing and linking to these services is not achievable in a standard office visit where a focus on evaluation and diagnosis or management of chronic, complex conditions is provided. This is especially true for rheumatology practices in rural areas with significant rheumatology access issues and a lack of community resources. The commenter noted they believed the measure should initially focus on primary and inpatient care.</p> <p><i>Response:</i> The Connection to Community Service Provider measure builds upon measure Q487, ensuring patients who screen positive for one or more of the health-related social needs (HRSNs) are then connected to community service providers that may assist, therefore closing the loop in addressing patients' HRSNs. Having both measures in MIPS allows for assessment of two critical steps in addressing health equity; first, ensuring that screening is completed on all patients, and the second, connecting patients who are facing a HRSN with resources that can help address these needs. Clinicians maintain the flexibility to choose those quality measures that are most meaningful and appropriate to their practice. This is an important next step in addressing HRSNs and are including it allows clinicians the opportunity to report the measure. The American College of Rheumatology (ACR) has made identifying and addressing racial and socioeconomic health disparities a core part of their meeting agendas, highlighting the importance of this topic within this specialty.<sup>60</sup> Studies have shown links and adverse interactions between socioeconomic status (SES) and RA disease activity.<sup>61</sup> We understand that not all measures within the set will be applicable to every clinician's scope of care, which is why we allow choice in which quality measures a clinician may submit, but given the link between SES and some rheumatic conditions, it is important to encourage implementation of clinical workflows to include assessment of HRSNs to positively effect a patient's health outcome. Some rheumatology specialists are advocating for this and providing insight, such as team based approaches, for overcoming roadblocks to enacting this quality action.<sup>62,63</sup></p> <p><i>Comment:</i> One commenter did not support the addition of the Gains in Patient Activation Measure (PAM®) Scores at 12 Months measure to this specialty set given the costs associated with licensing the tool required to implement this measure. The commenter cited the cost of the tool for small and solo practices that participate in their QCDR. As there is a low likelihood of adoption across rheumatology practices, the commenter did not support including the measure in this specialty set.</p> <p><i>Response:</i> We thank the commenter for their feedback. The PAM® survey will be made publicly available and free by the measure steward to clinicians. The MIPS quality measure inventory does not currently include a measure with an alternate activation survey and as such, we are including this measure to fill a gap in care within the Rheumatology Specialty Measure Set. We acknowledge that due to nuances in clinician specialization and subsequent scope of care, not all measures within a specialty measure set will be applicable or appropriate to all clinicians within that specialty set umbrella. However, no measures within traditional MIPS are required. We allow for clinician choice to account for these nuances, while ensuring clinicians are able to choose measures that are most meaningful to their scope of care and patient case-mix. The goal is to ensure we have a comprehensive set of measures that drive positive health outcomes as well as allow flexibility in clinician choice when determining the appropriateness of each measure. Encourage the commenter to reach out to measure developers/stewards to develop additional measures ensuring alternate activations surveys that are accessible to any ePROM vendor or platform for submission to the Call for Measures for possible future implementation.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53043 through 53044), we are finalizing the above measure(s) for addition to the <i>Rheumatology Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p>

<b>PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE RHEUMATOLOGY SPECIALTY SET</b>							
<p>Note: In this final rule, we are removing the following measure(s) below from this specific specialty measures set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.</p>							
<b>CBE # / eCQM CBE #</b>	<b>Quality #</b>	<b>CMS eCQM ID</b>	<b>Collection Type</b>	<b>Measure Type</b>	<b>Measure Title And Description</b>	<b>Measure Steward</b>	<b>Rationale for Removal</b>
N/A / N/A	128	CMS69v12	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	<b>Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan:</b> Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if the most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services	This measure was proposed for removal from traditional MIPS beginning with the CY 2024 performance period/2026 MIPS payment year. This measure is included as a component of the finalized Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix); however, this measure is appropriate and applicable for some MVPs and is therefore finalized for retention for MVP use. See Table Group CC of this Appendix for rationale.
N/A / N/A	402	N/A	MIPS CQMs Specifications	Process	<b>Tobacco Use and Help with Quitting Among Adolescents:</b> The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the CY 2024 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.
<p><i>Comment:</i> One commenter supported removing measure Q402: Tobacco Use and Health with Quitting Among Adolescents from the Rheumatology specialty set.</p> <p><i>Response:</i> We thank the commenter for supporting the removal of this measure from this specialty set.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53045), we are finalizing the above measure(s) for removal from the <i>Rheumatology Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC of this Appendix for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.</p>							

### B.40. Skilled Nursing Facility

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Skilled Nursing Facility specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
*	N/A / N/A	291	N/A	MIPS CQMs Specificat ions	Process	<p><b>Assessment of Cognitive Impairment or Dysfunction for Patients with Parkinson’s Disease:</b> Percentage of all patients with a diagnosis of Parkinson’s Disease (PD) who were assessed for cognitive impairment or dysfunction once during the measurement period.</p>	American Academy of Neurolog y	<p>We proposed to include this measure in the Speech Language Pathology specialty set. We agreed with interested parties’ feedback that SLPs are keenly interested in a measure set that includes quality measures that are more reflective of the types of clinical conditions they treat. While the diagnosis of Parkinson’s disease is made by a medical team, SLPs are trained to assess cognitive-communication deficits related to this condition, and to identify cultural, linguistic, and environmental influences that have an impact on functioning. The services provided by SLPs contribute to improving the safety and well-being of the individual. Therefore, it will be important to consider SLPs as an integral member of the clinical care team working with patients diagnosed with Parkinson’s and include this measure in the speech-language pathology specialty measure set. The addition of this quality measure in this specialty set will make room for more clinician choice by making more measures available that are reflective of the services delivered to this patient population. The measure being added to this specialty set will be contingent on applicable coding updates to the measure by the time of the CY 2024 PFS final rule.</p>

**B.41. Speech Language Pathology**

MEASURES FINALIZED FOR <b>ADDITION</b> TO THE SPEECH LANGUAGE PATHOLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
* ! (Equity)	N/A / N/A	487	N/A	MIPS CQMs Specificat ions	Process	<b>Screening for Social Drivers of Health:</b> Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Speech Language Pathology specialty set as patients' social drivers of health can be a key component to a patient achieving health equity within all clinical settings and clinician types. We agreed with interested parties' feedback that SLPs are committed to addressing health equity and play a key role in screening individuals for social risks. When factors are identified, SLPs consider them when establishing a care plan and modifications are made to create achievable, sustainable, and functional goals that are patient-centered. In response to the interested parties' feedback, we proposed to add this measure to this specialty set if all proposed measures for the specialty set are finalized. This is a screening data collection measure and is voluntary; therefore, clinicians have the flexibility to choose to report this measure and it only looks at the screening of patients. Currently, if all proposed measures for this specialty set are finalized, the SLP specialty set will contain 11 measures allowing clinicians to choose to submit those measures that are most meaningful to their scope of care. Under MIPS, clinicians have the flexibility to choose to report the measures that will work best for their scope of practice and clinical workflow. The measure being added to this specialty set will be contingent on applicable coding updates to the measure by the time of the CY 2024 PFS final rule.

**B.41. Speech Language Pathology**

MEASURES FINALIZED FOR ADDITION TO THE SPEECH LANGUAGE PATHOLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Equity)	N/A / N/A	498	N/A	MIPS CQMs Specifications	Process	<p><b>Connection to Community Service Provider:</b> Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety; and had contact with a Community Service Provider (CSP) for at least 1 of their HRSNs within 60 days after screening.</p>	OCHIN	<p>We proposed to include this measure in the Speech Language Pathology specialty set. We agreed with interested parties' feedback that this measure will be clinically relevant to this clinician type as this profession has historically addressed social needs through screening and evaluation, providing referrals, and connecting patients to community services and falls within their scope of care. This measure addresses our identified social and economic determinants as both a measurement priority and gap and is a central part of our Health Equity strategic plan pillar moving forward. This measure is an important next step for use of DOH data which assists in defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. Choosing to report this measure will allow data capture to expand beyond assessing health inequities by connecting patients with resources within the scope of MIPS reporting. This is a screening measure requiring a connection to the CSP, and is voluntary; therefore, clinicians have the flexibility to choose to report this measure and it only looks at the screening of patients. Currently, if all proposed measures for this specialty set are finalized, the Speech Language Pathology specialty set will contain 11 measures allowing clinicians to choose to submit those measures that are most meaningful to their scope of care. Under MIPS, clinicians have the flexibility to choose to report the measures that will work best for their scope of practice and clinical workflow. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.7 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.</p>
<p><i>Comment:</i> One commenter was supportive of adding measures to the Speech Language Pathology specialty set that address DOH. The commenter also appreciated the addition of measure Q291: Assessment of Cognitive Impairment or Dysfunction for Patients with Parkinson's Disease to this set.</p> <p><i>Response:</i> We thank the commenters for supporting the additional measures to this specialty set. The Call for Measures process can be used to request measures for future consideration to this specialty set as suggested by the commenter.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53050 through 53052), we are finalizing the above measure(s) for addition to the <i>Speech Language Pathology Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.</p>								

### B.42. Thoracic Surgery

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Thoracic Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

MEASURES FINALIZED FOR ADDITION TO THE UROLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Outcome)	N/A / N/A	503	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	<b>Gains in Patient Activation Measure (PAM®) Scores at 12 Months:</b> The Patient Activation Measure® (PAM®) is a 10- or 13-item questionnaire that assesses an individual's knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Phreesia	We proposed to include this measure in the Urology specialty set as it will be clinically relevant to this clinician type. The addition of this measure to this specialty set will be feasible given its use through the continuum of care and across different clinical settings. This measure addresses chronic conditions and outcomes, both of which are high priority areas for measure consideration for MIPS. It is utilized within the U.S. and internationally in research and has also been shown to be valid and reliable in different clinical settings and under different payment models. The measure being added to this specialty set will be contingent on the inclusion of applicable coding by the time of the CY 2024 PFS final rule. See Table A.12 of this Appendix for rationale, including clinical evidence supporting the inclusion of this measure in MIPS.
We received no public comments on the measure(s) proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (88 FR 53066 through 53067), we are finalizing the above measure(s) for addition to the <i>Urology Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

This measure is included as a component of the finalized Preventive Care and Wellness (composite) measure (See Table A.6 of this Appendix); however, this measure is appropriate and applicable for some MVPs and is therefore finalized for retention for MVP use. See Table Group CC of this Appendix for rationale.
<p>We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (88 FR 53068), we are finalizing the above measure(s) for removal from the <i>Urology Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC of this Appendix for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.</p>							

### B.45. Vascular Surgery

In addition to the considerations discussed in the introductory language of Table B of the appendix to this final rule, the Vascular Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

See Table Group C of this Appendix for rationale.
<p>We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (88 FR 53073), we are finalizing the above measure(s) for removal from the <i>Vascular Surgery Specialty Set</i> as proposed for the CY 2024 performance period/2026 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS. See Table Group CC of this Appendix for any comments and responses pertaining to measures finalized for partial removal from traditional MIPS but retained for use in relevant MVPs.</p>							

### **Table Group C: Previously Finalized Quality Measures Finalized and Not Finalized for Removal in the CY 2024 Performance Period/2026 MIPS Payment Year and Future Years**

In this final rule, we are removing 11 of the 12 proposed previously finalized MIPS quality measures from MIPS for the CY 2024 performance period/2026 MIPS payment year and future years as well as removing one previously finalized measure with a 1-year delay to the CY 2025 performance period/2027 MIPS payment year. These measures are discussed in detail below. The CY 2019 PFS final rule (83 FR 59763 through 59765) and CY 2020 PFS final rule (84 FR 62957 through 62959) discusses our incremental approach to removing process measures.

Under our measure removal criteria, consideration is given to the following, but is not limited to:

- Whether the removal of the process measure impacts the number of measures available for a specific specialty.
- Whether the measure addresses a priority area highlighted in the Measure Development Plan at

<https://www.cms.gov/Medicare/Quality-Payment-Program/Measure-Development/Measure-development>.

- Whether the measure promotes positive outcomes in patients.
- Considerations and evaluation of the measure's performance data.
- Whether the measure is designated as high priority or not.
- If they do not meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods.
- After factoring in other considerations (such as, but not limited to: The robustness of the measure; whether it addresses a measurement gap; if the measure is a patient-reported outcomes; consideration of the measure in developing MVPs).
- If we determine the measure is not available for MIPS reporting by or on behalf of all MIPS eligible clinicians.

Under Table Group CC, we finalize to partially remove three additional measures from traditional MIPS and to retain these three measures for MVP use and retain two of these measures for purposes of Shared Savings Program ACOs reporting through the APP.

Further considerations are given in the evaluation of the measure's performance data, to determine whether there is or no longer is variation in performance. As discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763), an additional criterion that we use for the removal of measures includes extremely topped out measures, which means measures are topped out with an average (mean) performance rate between 98-100 percent.

For a measure that is finalized for removal due to criteria relating to the benchmark and performance data, further information regarding MIPS benchmarking data can be located at <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2272/2023%20Quality%20Benchmarks.zip>.

**NOTE:** Since publication of the measures in Table Group C in the CY 2024 PFS proposed rule (88 FR 53074 through 53080), we have determined the following measure will be retained in the CY 2024 performance period/2026 MIPS payment year: Q436 as detailed under Table C.12 of this Appendix. However, measure Q436 is finalized for removal starting in the CY 2025 performance period/2027 MIPS payment year.

As noted in the introduction to Table Group B, measures that were not finalized for removal under Table Group C have been added back to the Previously Finalized tables, where applicable, and removed from the Removal tables, under the appropriate specialty set in Table Group B.

**C.1. Age-Related Macular Degeneration (AMD): Dilated Macular Examination**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	0087 / N/A
<b>Quality #:</b>	014
<b>CMS eCQM ID:</b>	N/A
<b>Collection Type:</b>	MIPS CQMs Specifications
<b>Measure Description:</b>	Percentage of patients aged 50 years and older with a diagnosis of age-related macular degeneration (AMD) who had a dilated macular examination performed which included documentation of the presence or absence of macular thickening or geographic atrophy or hemorrhage AND the level of macular degeneration severity during one or more office visits within the 12 month performance period.
<b>Measure Steward:</b>	American Academy of Ophthalmology
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale for Removal</b>	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure has reached the end of the topped out lifecycle. Given this measure's continued topped out status (82 FR 53640), it has a limited opportunity to improve clinical outcomes. The topped out status is based on the current MIPS benchmarking data located at <a href="https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2272/2023%20Quality%20Benchmarks.zip">https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2272/2023%20Quality%20Benchmarks.zip</a> .
<b>In the Circumstance the Measure Was Retained</b>	There were no substantive changes or specialty set movement proposed for this measure. If the measure was not finalized for removal in the CY 2024 PFS final rule, it would have been added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
<p><i>Comment:</i> One commenter expressed concern about CMS systematically removing relevant measures related to AMD and diabetic retinopathy based on topped out measure policies. Without retina-specific measures, retina specialists are frequently reporting on measures related to vaccine status or documentation of current medications, often for several consecutive years. While these elements are clinically important, they do nothing to assist a patient who has just been diagnosed with a potentially blinding disease select the right physician for treatment.</p> <p><i>Response:</i> We acknowledged the concerns expressed by the commenter; however, the data shows that measure Q014: Age-Related Macular Degeneration (AMD): Dilated Macular Examination has reached the end of its topped-out life cycle, which does not allow a meaningful benchmark. Additionally, by removing measures with high performance rates, we are attempting to reduce reporting burden where there is little room for improvement. Removal allows eligible clinicians to maximize their potential quality performance score as this measure's topped-out status would limit the score awarded per the 2023 Benchmark File. We encourage the commenter to reach out to measure developers/stewards to develop additional retina-specific quality measures for submission to the Call for Measures for possible future implementation. Additionally, we are finalizing the addition of three new measures applicable to retinal specialists.</p> <p><i>Comment:</i> One commenter opposed removal of this measure, stating that it is reported by a substantial number of ophthalmologists and its removal could have negative consequences on patient care. While the measure is currently topped out, the measure is still an important part of high-quality care. An ophthalmologist doing a dilated macular examination can detect multiple sight-threatening conditions, and when these exams are not supported, these conditions may not be caught and the opportunity for early intervention is lost.</p> <p><i>Response:</i> We agree that performing a dilated macular examination is an important barometer of identifying and addressing the severity of AMD; however, as noted above, the data shows that the measure has reached the end of its topped-out life cycle which does not allow a meaningful benchmark. We acknowledge removal of this measure decreases the number of available measures for ophthalmology; however, there are policies in place to account for this when working to meet MIPS quality performance category requirements.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53075), we are finalizing the removal of measure Q014 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

**C.2. Acute Otitis Externa (AOE): Systemic Antimicrobial Therapy – Avoidance of Inappropriate Use**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	0654 / N/A
<b>Quality #:</b>	093
<b>CMS eCQM ID:</b>	N/A
<b>Collection Type:</b>	MIPS CQMs Specifications
<b>Measure Description:</b>	Percentage of patients aged 2 years and older with a diagnosis of AOE who were not prescribed systemic antimicrobial therapy.
<b>Measure Steward:</b>	American Academy of Otolaryngology – Head and Neck Surgery
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale for Removal</b>	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure has reached the end of the topped out lifecycle. Given this measure’s continued topped out status (82 FR 53640), it has a limited opportunity to improve clinical outcomes. The topped out status is based on the current MIPS benchmarking data located at <a href="https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2272/2023%20Quality%20Benchmarks.zip">https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2272/2023%20Quality%20Benchmarks.zip</a> .
<b>In the Circumstance the Measure Was Retained</b>	There were no substantive changes or specialty set movement proposed for this measure. If the measure was not finalized for removal in the CY 2024 PFS final rule, it would have been added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
<p><i>Comment:</i> One commenter supported removal of measure Q093: Acute Otitis Externa (AOE): Systemic Antimicrobial Therapy – Avoidance of Inappropriate Use and agreed that the measure is topped out. The commenter also agreed that quality measures have a certain shelf life, and as clinicians perform better on these measures, they move towards higher benchmarks and topping out.</p> <p><i>Response:</i> We thank the commenter for supporting the removal of this measure from MIPS.</p> <p><i>Comment:</i> One commenter opposed removal of this measure and disagreed with its topped-out status, stating that pediatricians still see too many clinicians giving systemic antibiotics every time a parent asks for an antibiotic for ear pain. The commenter stated there is still the opportunity to improve clinical outcomes with this quality measure. Another commenter did not support removal of this measure and encouraged CMS to consider the repercussions of antimicrobial use. Overtreatment with antibiotics may increase patient harm and can lead to antibiotic resistance. In addition, newly eligible clinicians lose access to these important process measures within a specialty due when topped out measures are removed.</p> <p><i>Response:</i> We acknowledge the commenters’ concerns and agree overtreatment with antibiotics can lead to resistance; however, the data shows the measure has reached the end of its topped-out life cycle which does not allow meaningful benchmarks to be established. Additionally, by removing measures with high performance rates, we are attempting to reduce reporting burden where there is little room for improvement. Removal allows eligible clinicians to maximize their potential quality performance score as this measure’s topped out status would limit the score awarded per the 2023 Benchmark File.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53075), we are finalizing the removal of measure Q093 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

### C.3. Adult Major Depressive Disorder (MDD): Suicide Risk Assessment

Category	Description
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	107
<b>CMS eCQM ID:</b>	CMS161v12
<b>Collection Type:</b>	eCQM Specifications
<b>Measure Description:</b>	Percentage of all patient visits for those patients that turn 18 or older during the measurement period in which a new or recurrent diagnosis of major depressive disorder (MDD) was identified and a suicide risk assessment was completed during the visit.
<b>Measure Steward:</b>	Mathematica
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale for Removal</b>	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure is duplicative to the Initiation, Review, And/Or Update To Suicide Safety Plan For Individuals With Suicidal Thoughts, Behavior, Or Suicide Risk measure being finalized in Table A.13 of this Appendix. Measure Q107 is specific to major depressive disorder whereas the new measure will include patients with other behavioral health conditions who are at risk of suicide. Furthermore, the new measure represents a high priority area for MIPS: mental health. It focuses on a care process that is directly designed to mitigate suicide risk, as opposed to just completing the screening. Studies have shown that clinical interventions aimed at suicide prevention, such as initiating and reviewing a suicide safety plan with a patient at risk of suicide, is a proxy for the clinical outcome of a reduction in suicides, suicide attempts, and suicidal ideation ( <a href="https://pubmed.ncbi.nlm.nih.gov/29998307/">https://pubmed.ncbi.nlm.nih.gov/29998307/</a> ).
<b>In the Circumstance the Measure Was Retained</b>	<p>If the measure was not finalized for removal in the CY 2024 PFS final rule, we proposed to apply the following substantive change to the measure specifications: 1) the measure description, initial patient population and guidance will be updated so that the age description in the narrative matches the Clinical Quality Language (CQL) logic of capturing patients who are 17 years and older. This proposal would have ensured the measure was implemented as specified, and the correct patient population was being captured.</p> <p>If the measure was not finalized for removal in the CY 2024 PFS final rule, it would have been added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix. The substantive changes outlined above would have been applied to the measure specifications.</p>
<p><i>Comment:</i> Several commenters did not support the removal of measure Q107: Adult Major Depressive Disorder (MDD): Suicide Risk Assessment (with a repeat comment for other eCQM measures proposed for removal under Tables C.4, C.5, CC.1, CC.2, and CC.3 of this Appendix) because they noted the CQM collection type of the measure does not serve as an appropriate replacement for an eCQM collection type. Commenters stated that replacing an eCQM with a CQM does not advance the use of digital tools for quality measurement and does not support CMS' objective of moving to digital quality measurement. The use of CQMs as the collection type also does not support the interoperable exchange of quality measurement data. Commenters stated that CMS should prioritize the adoption and use of eCQMs for quality measures to promote greater adoption of interoperable health IT, reduce burden, and improve consistency in quality measurement. Another commenter stated that not all clinicians are willing to pay for use of a registry.</p> <p>A few additional commenters stated that organizations that predominantly report via the eCQM collection type need to have their efforts acknowledged and valued and removing this measure (as well as Q110: Preventive Care and Screening: Influenza Immunization and Q111: Pneumococcal Vaccination Status for Older Adults) could overshadow the hard work improving these crucial areas of patient care.</p> <p><i>Response:</i> The new measure, Initiation, Review, And/Or Update To Suicide Safety Plan For Individuals With Suicidal Thoughts, Behavior, Or Suicide Risk, is more robust and will include patients with other behavioral health conditions who are at risk of suicide. Measure Q107 only focuses on major depressive disorders rather than providing a comprehensive behavioral health evaluation to mitigate suicide risk. More broadly, we encourage the development of eCQMs as part of our strategy toward transition to digital quality measures; however, not all measures are submitted for the eCQM collection type as this is not currently a requirement. We endeavor to include different collection types within our quality measure inventory to allow flexibility in reporting. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.</p> <p><i>Comment:</i> One commenter did not support removal of measure Q107 because the measure is evidence-based, methodologically sound, and clinically meaningful. Another commenter opposed the removal of this measure because it plays a significant role in assessing healthcare quality and patient safety.</p> <p><i>Response:</i> As noted above, the new measure, Initiation, Review, And/Or Update To Suicide Safety Plan For Individuals With Suicidal Thoughts, Behavior, Or Suicide Risk, is more robust, includes patients with other behavioral health conditions who are at risk of suicide, and represents a high priority area for MIPS. It is important to ensure duplicative measures are removed from MIPS to develop an ecosystem of quality measures that drive value-based care, rather than offering duplicate measures. Offering measures with more robust evaluation methods will continue to drive quality patient outcomes through the clinical care provided.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53076), we are finalizing the removal of measure Q107 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

### C.4. Preventive Care and Screening: Influenza Immunization

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	110
CMS eCQM ID:	CMS147v13
Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of patients aged 6 months and older seen for a visit during the measurement period who received an influenza immunization OR who reported previous receipt of an influenza immunization.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
<b>Rationale for Removal</b>	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure is duplicative to a more robust measure Q493: Adult Immunization Status. This measure's clinical concept is included in the Adult Immunization Status measure. Measure Q110 only focuses on the administration of the influenza immunization rather than providing a comprehensive evaluation based on all the recommended age-appropriate immunizations that promote well-being. Furthermore, the measure is currently only available for use within MVPs; however, based upon interested party feedback, measure Q493 is being finalized as a replacement for those MVPs that contain measure Q110. This measure will remain for purposes of the CMS Web Interface collection type available to Shared Savings Program ACOs reporting through the APP.
<b>In the Circumstance the Measure Was Retained</b>	<p>If the measure was not finalized for removal in the CY 2024 PFS final rule, we proposed to apply the following substantive change to the measure specifications: 1) denominator exclusion for all collection types will be updated to include anaphylaxis due to the vaccine as there is new coding available to capture this data. It is clinically appropriate and prudent to refrain from administering the vaccine to patients who experienced anaphylaxis with a previous vaccine administration.</p> <p>If the measure was not finalized for removal in the CY 2024 PFS final rule, it would have been added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix. The substantive changes outlined above would have been applied to the measure specifications.</p>
<p><i>Comment:</i> One commenter stated that clinicians should still have the flexibility to report measure Q110: Preventive Care and Screening: Influenza Immunization individually (same comment for measure Q111 under Table C.5 of this Appendix). Measure Q493, which currently includes these individual measure rates, calculates a combined rate of vaccination, making it difficult to determine where improvement opportunities may be available at the individual vaccination measure level. Another commenter stated that measure Q110 is evidence-based, methodologically sound, and clinically meaningful.</p> <p><i>Response:</i> The removal of measure Q110 (and measure Q111) from traditional MIPS was finalized beginning with the CY2023 performance period/2025 MIPS payment year but retained for use in relevant MVPs. This measure's clinical concept is included in measure Q493 and despite this measure representing four different submission criteria, the calculated weighted average allows for a comprehensive evaluation based on multiple recommended age-appropriate immunizations that promote well-being.</p> <p><i>Comment:</i> One commenter opposed removal of this measure from the Quality inventory (as well as measure Q111), stating that measure Q493 is burdensome and not all vaccination statuses will be of value to clinicians, especially specialists.</p> <p><i>Response:</i> We understand some of these immunizations may not be relevant to, or administered in, certain fields; however, patient reported vaccine receipt, when recorded in the medical record, is acceptable for meeting the numerator. Despite this measure representing four different submission criteria, the measure is calculated using a weighted average. This means all performance data from the four different submission criteria will be used to provide an overall performance rate for the measure. This allows for a comprehensive evaluation based on all the recommended age-appropriate immunizations that promote well-being.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53076), we are finalizing the removal of measure Q110 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

### C.5. Pneumococcal Vaccination Status for Older Adults

Category	Description
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	111
<b>CMS eCQM ID:</b>	CMS127v12
<b>Collection Type:</b>	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications
<b>Measure Description:</b>	Percentage of patients 66 years of age and older who have received a pneumococcal vaccine.
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale for Removal</b>	<p>We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure is duplicative to a more robust measure Q493: Adult Immunization Status. This measure’s clinical concept is included in the Adult Immunization Status measure. Measure Q111 only focuses on the administration of the pneumococcal immunization rather than providing a comprehensive evaluation based on all the recommended age-appropriate immunizations that promote well-being. Furthermore, the measure is currently only available for use within MVPs; however, based upon interested party feedback, measure Q493 is being finalized as a replacement for those MVPs that contain measure Q111.</p>
<b>In the Circumstance the Measure Was Retained</b>	<p>If the measure was not finalized for removal in the CY 2024 PFS final rule, we proposed to apply the following substantive changes to the measure specifications: 1) for the eCQM Specifications collection type, the denominator exclusion will be updated to include anaphylaxis any time before the end of the measurement period due to new coding availability to capture this data; 2) for the Medicare Part B Claims Measure Specifications and MIPS CQMs Specifications collection types, the denominator exclusions for active chemotherapy, bone marrow transplant and history of immunocompromising conditions will be removed; and 3) for all collection types, the initial patient population will be changed from 66 years of age and older to 65 years of age and older while the numerator criteria lookback period will be extended to the 19th birthday for pneumococcal vaccination. These updates would have lent to better alignment with the most recent ACIP guidelines (<a href="https://www.cdc.gov/vaccines/vpd/pneumo/hcp/recommendations.html">https://www.cdc.gov/vaccines/vpd/pneumo/hcp/recommendations.html</a>).</p> <p>If the measure was not finalized for removal in the CY 2024 PFS final rule, it would have been added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix. The substantive changes outlined above would have been applied to the measure specifications.</p>
<p><i>Comment:</i> One commenter supported removal of measure Q111: Pneumococcal Vaccination Status for Older Adults, stating that it had concerns with the reliability and validity of this measure.</p> <p><i>Response:</i> We thank the commenter for supporting the removal of this measure from MIPS.</p> <p><i>Comment:</i> One commenter indicated that measure Q111 is one of its most popular measures and there is value in retaining this measure until care teams gain more experience in implementing measure Q493 and until CMS incentivizes the adoption of the new, more complex measures.</p> <p><i>Response:</i> As mentioned in the response above, measure Q493: Adult Immunization Status, is more robust and will help improve complete vaccination rates for patients. As a result, measure Q111 is being removed as it will be duplicative to measure Q493.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53077), we are finalizing the removal of measure Q111 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

### C.6. Melanoma: Coordination of Care

Category	Description
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	138
<b>CMS eCQM ID:</b>	N/A
<b>Collection Type:</b>	MIPS QCMs Specifications
<b>Measure Description:</b>	Percentage of patient visits, regardless of age, with a new occurrence of melanoma that have a treatment plan documented in the chart that was communicated to the physician(s) providing continuing care within one month of diagnosis.
<b>Measure Steward:</b>	American Academy of Dermatology
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale for Removal</b>	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure has reached the end of the topped out lifecycle. Given this measure's continued topped out status (82 FR 53640), it has a limited opportunity to improve clinical outcomes. The topped out status is based on the current MIPS benchmarking data located at <a href="https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2272/2023%20Quality%20Benchmarks.zip">https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2272/2023%20Quality%20Benchmarks.zip</a> .
<b>In the Circumstance the Measure Was Retained</b>	There were no substantive changes or specialty set movement proposed for this measure. If the measure was not finalized for removal in the CY 2024 PFS final rule, it would have been added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
<p><i>Comment:</i> One commenter opposed removal of measure Q138: Melanoma: Coordination of Care, stating that sudden removals of quality measures could disrupt the progress made in addressing melanoma care coordination. Removing a topped-out measure without allowing time for proper adjustments might overwhelm healthcare clinicians further and divert their focus from responding to urgent patient needs. The commenter requested that measure Q138 be phased out over a defined period to enable clinicians to adjust their care coordination processes and integrate alternative quality measures effectively.</p> <p>Another commenter opposed removal of this measure as it is an important facet of care coordination. While the commenter understood that this measure has reached the end of its topped-out lifecycle, the commenter has seen how CMS' efforts to incentivize care coordination in other measures can meaningfully impact the priorities of practices. Another commenter did not support removal of this measure because measure Q138 is critical as a companion to measure Q397: Melanoma Reporting, to ensure appropriate diagnosis, treatment, and follow-up for patients with melanoma.</p> <p><i>Response:</i> The data shows the measure has reached the end of its topped-out life cycle which does not allow meaningful benchmarks to be established. Additionally, by removing measures with high performance rates, we are attempting to reduce reporting burden where there is little room for improvement. Removal allows eligible clinicians to maximize their potential quality performance score as this measure's topped-out status would limit the score awarded per the 2023 Benchmark File. While we agree the concept is important to quality care, the removal of the measure does not preclude the quality action from continuing. Whether the clinician/group is being assessed for the quality action or not, it should still be completed as a matter of high-quality care. As such, current clinically appropriate workflows should remain in place regardless of the MIPS measure inventory. Additionally, this measure has been in MIPS since the onset of the program, driving care coordination for seven years with continued high performance.</p> <p><i>Comment:</i> One commenter opposed removal of measure Q138, stating that elevated performance rates do not imply that a measure lacks significance in assessing quality of care, thereby justifying its discontinuation from reporting. The commenter stated that CMS should recognize and provide credit to those clinicians sustaining high-quality performance and stated that this measure could be used in a future MVP for dermatology.</p> <p><i>Response:</i> We strive to ensure all measures align with MIPS goals and priorities, including the removal of measures that are at the end of the topped-out lifecycle. We utilize MIPS data to determine the measure's year over year performance and utilize it as a criterion for measure removal, both allowing clinicians to maximize their quality score and to drive submission of measures that are able to produce meaningful benchmarks as applicable.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53077), we are finalizing the removal of measure Q138 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

**C.7. Nuclear Medicine: Correlation with Existing Imaging Studies for All Patients Undergoing Bone Scintigraphy**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	147
<b>CMS eCQM ID:</b>	N/A
<b>Collection Type:</b>	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
<b>Measure Description:</b>	Percentage of final reports for all patients, regardless of age, undergoing bone scintigraphy that include physician documentation of correlation with existing relevant imaging studies (e.g., x-ray, Magnetic Resonance Imaging (MRI), Computed Tomography (CT), etc.) that were performed.
<b>Measure Steward:</b>	Society of Nuclear Medicine and Molecular Imaging
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale for Removal</b>	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure has reached the end of the topped out lifecycle. Given this measure's continued topped out status (82 FR 53640), it has a limited opportunity to improve clinical outcomes. The topped out status is based on the current MIPS benchmarking data located at <a href="https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2272/2023%20Quality%20Benchmarks.zip">https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2272/2023%20Quality%20Benchmarks.zip</a> .
<b>In the Circumstance the Measure Was Retained</b>	There were no substantive changes or specialty set movement proposed for this measure. If the measure was not finalized for removal in the CY 2024 PFS final rule, it would have been added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
<p><i>Comment:</i> A couple of commenters stated that although measure Q147: Nuclear Medicine: Correlation with Existing Imaging Studies for All Patients Undergoing Bone Scintigraphy is topped out, removal of this measure would make it difficult for nuclear medicine clinicians to participate successfully in MIPS due to a lack of applicable measures. Another commenter indicated that the measure remains meaningful given that bone scans are commonly used clinical tools for the detection bone metastasis, evaluation of fractures/trauma, as well as bony infections. Bone scans are also a cost-effective study for the diagnosis and management of bone metastases in a wide range of cancer types.</p> <p><i>Response:</i> As mentioned, the data shows the measure has reached the end of its topped-out life cycle which does not allow a meaningful benchmark. Additionally, by removing measures with high performance rates, we are attempting to reduce reporting burden where there is little room for improvement. Removal allows eligible clinicians to maximize their potential quality performance score as this measure's topped-out status would limit the score awarded per the 2023 Benchmark File. We acknowledged removal of this measure decreases the number of available measures for nuclear medicine; however, there are policies in place to account for this when working to meet MIPS quality performance category requirements.</p> <p><i>Comment:</i> One commenter requested CMS delay removing measure Q147 (and removing measures Q324 and Q436 under Tables C.9 and C.12 of this Appendix) until sufficient replacement measures can be developed and tested. The commenter indicated that the removal of measures would leave most diagnostic radiology groups with only six MIPS measures to report by traditional registry or claims-based reporting. Another commenter opposed removal of measure Q147 because it is difficult to earn an incentive as a diagnostic radiologist in the quality performance category based on the 7-point cap and given that these clinicians are not patient facing.</p> <p><i>Response:</i> As stated above, the data shows the measure has reached the end of its topped-out life cycle which does not allow a meaningful benchmark. We acknowledged that removal of this measure decreases the number of available measures for diagnostic radiologists; however, there are policies in place to account for this when working to meet MIPS quality performance category requirements. Additionally, the removal of measure Q436 is being delayed for 1-year based upon public comments.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53078), we are finalizing the removal of measure Q147 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

**C.8. Dementia Associated Behavioral and Psychiatric Symptoms Screening and Management**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	283
<b>CMS eCQM ID:</b>	N/A
<b>Collection Type:</b>	MIPS CQMs Specifications
<b>Measure Description:</b>	Percentage of patients with dementia for whom there was a documented screening for behavioral and psychiatric symptoms, including depression, and for whom, if symptoms screening was positive, there was also documentation of recommendations for management in the last 12 months.
<b>Measure Steward:</b>	American Academy of Neurology/American Psychiatric Association
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale for Removal</b>	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure has reached the end of the topped out lifecycle. Given this measure's continued topped out status (82 FR 53640), it has a limited opportunity to improve clinical outcomes. The topped out status is based on the current MIPS benchmarking data located at <a href="https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2272/2023%20Quality%20Benchmarks.zip">https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2272/2023%20Quality%20Benchmarks.zip</a> .
<b>In the Circumstance the Measure Was Retained</b>	There were no substantive changes or specialty set movement proposed for this measure. If the measure was not finalized for removal in the CY 2024 PFS final rule, it would have been added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
<p><i>Comment:</i> One commenter opposed removal of measure Q238: Dementia Associated Behavioral and Psychiatric Symptoms Screening and Management, stating that while the measure is topped out, the effectiveness of the interventions has not been examined. The commenter noted this is an opportunity to gauge what type of dementia-associated interventions and measures could replace this topped out measure to continue to encourage evidence-based care that supports patients with dementia remaining in the community, avoiding institutionalization, and receiving appropriate palliation as their disease progresses. The commenter requested that this measure remain in MIPS until a new measure may be developed.</p> <p><i>Response:</i> We acknowledged the commenter's concerns; however, the data shows the measure has reached the end of its topped-out life cycle which does not allow a meaningful benchmark. Additionally, by removing measures with high performance rates, we are attempting to reduce reporting burden where there is little room for improvement. Removal allows eligible clinicians to maximize their potential quality performance score as this measure's topped-out status would limit the score awarded per the 2023 Benchmark File. We encourage the commenter to reach out to measure developers/stewards to develop new dementia specific measures for submission to the Call for Measures for possible future implementation.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53078), we are finalizing the removal of measure Q283 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

**C.9. Cardiac Stress Imaging Not Meeting Appropriate Use Criteria: Testing in Asymptomatic, Low-Risk Patients**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	324
<b>CMS eCQM ID:</b>	N/A
<b>Collection Type:</b>	MIPS CQMs Specifications
<b>Measure Description:</b>	Percentage of all stress single-photon emission computed tomography (SPECT) myocardial perfusion imaging (MPI), stress echocardiogram (ECHO), cardiac computed tomography angiography (CCTA), and cardiovascular magnetic resonance (CMR) performed in asymptomatic, low coronary heart disease (CHD) risk patients 18 years and older for initial detection and risk assessment.
<b>Measure Steward:</b>	American College of Cardiology Foundation
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Efficiency
<b>Rationale for Removal</b>	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because the quality action being measured is considered a standard of care that has limited opportunity to improve clinical outcomes. Performance on this measure is extremely high and unvarying, making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). The average performance for this measure is 0.81 percent for the MIPS CQMs Specifications collection type. As such, the MIPS CQMs Specifications collection type is considered extremely topped out. The average performance rate is based on the current MIPS benchmarking data located at <a href="https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2272/2023%20Quality%20Benchmarks.zip">https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2272/2023%20Quality%20Benchmarks.zip</a> .
<b>In the Circumstance the Measure Was Retained</b>	There were no substantive changes or specialty set movement proposed for this measure. If the measure was not finalized for removal in the CY 2024 PFS final rule, it would have been added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
<p><i>Comment:</i> A few commenters supported removal of measure Q324: Cardiac Stress Imaging Not Meeting Appropriate Use Criteria: Testing in Asymptomatic, Low-Risk Patients. Commenters agreed that the measure is a standard of care and extremely topped out and had concerns with the measure's reliability and validity. One commenter indicated that retirement of a measure with high and unvarying performance is an acceptable common practice and it seemed appropriate to remove this measure.</p> <p><i>Response:</i> We thank the commenters for supporting the removal of this measure from MIPS.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53079), we are finalizing the removal of measure Q324 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

**C.10. Follow-Up After Hospitalization for Mental Illness (FUH)**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	0576 / N/A
<b>Quality #:</b>	391
<b>CMS eCQM ID:</b>	N/A
<b>Collection Type:</b>	MIPS CQMs Specifications
<b>Measure Description:</b>	<p>The percentage of discharges for patients 6 years of age and older who were hospitalized for treatment of selected mental illness or intentional self-harm diagnoses and who had a follow-up visit with a mental health provider. Two rates are submitted:</p> <ul style="list-style-type: none"> <li>• The percentage of discharges for which the patient received follow-up within 30 days after discharge</li> <li>• The percentage of discharges for which the patient received follow-up within 7 days after discharge</li> </ul>
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale for Removal</b>	<p>We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because we received feedback from interested parties that it is analytically challenging to implement this measure at the clinician level. The quality action of this measure is to ensure that patients discharged from an acute setting have outpatient follow ups. However, clinicians have provided feedback that patients who receive inpatient care, and are denominator eligible for this measure, may not always seek follow-up care within the inpatient clinician’s health system which limits the clinician’s or group’s ability to document adequate follow up to outpatient encounters. This limitation makes it difficult to attribute the required numerator actions back to the accountable clinician, creating undue burden for MIPS eligible clinicians.</p>
<b>In the Circumstance the Measure Was Retained</b>	<p>There were no substantive changes or specialty set movement proposed for this measure. If the measure was not finalized for removal in the CY 2024 PFS final rule, it would have been added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.</p>
<p><i>Comment:</i> One commenter supported removal of measure Q391: Follow-Up After Hospitalization for Mental Illness (FUH) because they had concerns with the reliability and validity of this measure.</p> <p><i>Response:</i> We thank the commenter for supporting the removal of this measure from MIPS.</p> <p><i>Comment:</i> One commenter opposed removal of measure Q391 because the measure is used in several clinician and payer performance programs, including CMS’ pediatric Universal Foundation, CMS’ Quality Rating System, NCQA health plan ratings, and the Medicaid and Children’s Health Insurance Program (CHIP) core sets. In addition, multiple states that require clinicians and/or payers to submit measure data have expressed that this measure is valuable to their work. Another commenter did not support removal of this measure because there are a limited number of behavioral health measures available, and the measure is in HEDIS, the CQMC Core sets, the Universal Foundation, and is commonly included in plan contracts.</p> <p><i>Response:</i> While we endeavor to align across CMS programs when feasible and possible, we strive to ensure all measures align with MIPS goals and priorities, including the removal of measures that may be difficult to implement. Ensuring patients discharged from acute care settings have outpatient follow up is a challenge at the clinician-level as patients in the denominator may not always seek follow-up care with clinicians associated with the healthcare system that provided the inpatient care. This makes it difficult to attribute the required numerator actions to the accountable clinician, thereby creating undue burden for MIPS eligible clinicians. Additionally, this measure continues to lack a benchmark due to an insufficient volume of data being submitted, further supporting removal of this measure from MIPS, as implementation for the measure as currently specified is more applicable at the plan-level of analysis.</p> <p><i>Comment:</i> One commenter did not support removal of measure Q391, citing that the lack of continuity of care is a major problem for behavioral healthcare. The commenter noted that although the hospital may not be in the same health system as the community provider, there are many ways that an inpatient setting can facilitate follow-up, such as reaching out through telephone contact. Discharge planners can take more time to ensure that the individual has transportation and has made some contact with the community provider prior to discharge.</p> <p><i>Response:</i> We acknowledged continuity of care is a vital component of quality healthcare outcomes; however, ensuring patients discharged from acute care settings have outpatient follow up is a challenge at the clinician level as patients in the denominator may not always seek follow-up care with clinicians associated with the healthcare system that provided the inpatient care. This makes it difficult to attribute the required numerator actions to the accountable clinician, thereby creating undue burden for MIPS eligible clinicians. As noted above, this measure continues to lack a benchmark due to an insufficient volume of data being submitted, further supporting removal of this measure from MIPS, as implementation for the measure as currently specified is more applicable at the plan-level of analysis.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53079), we are finalizing the removal of measure Q391 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

**C.11. Tobacco Use and Help with Quitting Among Adolescents**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	402
<b>CMS eCQM ID:</b>	N/A
<b>Collection Type:</b>	MIPS CQMs Specifications
<b>Measure Description:</b>	The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale for Removal</b>	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure is duplicative to measure Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention. We are finalizing in Table D.22 of this Appendix substantive changes to measure Q226 that will broaden the denominator by lowering the age to 12 years old and will therefore capture the denominator-eligible patient population for this measure.
<b>In the Circumstance the Measure Was Retained</b>	There were no substantive changes or specialty set movement proposed for this measure. If the measure was not finalized for removal in the CY 2024 PFS final rule, it would have been added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
<p><i>Comment:</i> One commenter supported removal of measure Q402: Tobacco Use and Help with Quitting Among Adolescents as duplicative to measure Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention. Another commenter supported the proposed changes to this measure to streamline tobacco screening by bringing the age for screening down to 12.</p> <p><i>Response:</i> We thank the commenters for supporting removal of this measure from MIPS.</p> <p><i>Comment:</i> One commenter stated that while measure Q402 is similar to measure Q226, measure Q402 captures patients 12 to 20 years of age and is widely applicable for pediatric clinicians. By contrast, measure Q226 captures screening only among patients 18 years and older, making it of limited utility for clinicians providing care in the pediatric setting. Given the importance of tobacco cessation to both lowering the cancer burden and to improving cancer treatment outcomes for patients in active cancer treatment, the commenter urged CMS to retain measure Q402.</p> <p><i>Response:</i> As mentioned, substantive changes have been finalized to measure Q226 under Table D.22 of this Appendix. One of the substantive changes is lowering the age of denominator eligible patients to 12 years old. This change is beneficial to ensuring optimal care outcomes for the pediatric population.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53080), we are finalizing the removal of measure Q402 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

**C.12. Radiation Consideration for Adult CT: Utilization of Dose Lowering Techniques**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	436
<b>CMS eCQM ID:</b>	N/A
<b>Collection Type:</b>	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
<b>Measure Description:</b>	Percentage of final reports for patients aged 18 years and older undergoing computed tomography (CT) with documentation that one or more of the following dose reduction techniques were used: <ul style="list-style-type: none"> <li>• Automated exposure control.</li> <li>• Adjustment of the mA and/or kV according to patient size.</li> <li>• Use of iterative reconstruction technique.</li> </ul>
<b>Measure Steward:</b>	American College of Radiology/ American Medical Association/ National Committee for Quality Assurance
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale for Removal</b>	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from MIPS because this measure is duplicative to the measure Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Clinician Level) being finalized with a 1-year delay in implementation in Table A.1 of this Appendix. This new measure is an outcome and digital measure which supports MIPS' focus on quality measures that assess outcomes and reduce clinician burden. The focus of this measure is to reduce radiation doses from computerized tomography (CT) scans, which may increase the risk of cancer. This new measure is more robust than measure Q436 which represents a process measure.
<b>In the Circumstance the Measure Was Retained</b>	There were no substantive changes or specialty set movement proposed for this measure. If the measure was not finalized for removal in the CY 2024 PFS final rule, it would have been added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.
<p><i>Comment:</i> One commenter opposed removal of measure Q436: Radiation Consideration for Adult CT: Utilization of Dose-Lowering Techniques measure, stating that the measure is not duplicative of new measure Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Clinician Level) proposed in Table A.1 of this Appendix because the new measure was proposed as an eCQM. The commenter indicated that the proposed measure does not measure a quality action that can be attributed to a diagnostic radiologist who has little control over the radiation dose used during a CT exam that is more within the purview of the radiologic technologist and the medical physicist. On the other hand, measure Q436 directly examines whether the radiology report is adequately communicating to referring clinicians and patients whether dose-lowering techniques were used during the CT. While these measures both encourage the use of dose-lowering techniques in CT, only measure Q436 includes a quality action which can be directly attributable to the radiologist and the removal of measure Q436 will negatively affect radiologists who may have difficulty adopting the new measure.</p> <p><i>Response:</i> As mentioned earlier, the proposed new measure, Q494: Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Clinician Level), is more robust than measure Q436 which represents a clinical process. The new measure would support radiologists with a clinically relevant outcome measure within MIPS and meet the high priority definition for MIPS reporting as an outcome and patient safety measure. In addition, the Excessive Radiation Dose measure is a digital measure which supports MIPS' focus on quality measures that assess outcomes and reduce clinician burden. The focus of the new measure is to reduce radiation doses from computerized tomography (CT) scans, which may increase the risk of cancer. Also, it will enhance the accessibility of data contained in electronic clinical data systems for increased efficiency, which could decrease clinician burden. Using electronic and standardized data already collected as part of routine clinical care, this new measure assesses the radiation dose for every exam with complete information and assessment of imaging quality to ensure that efforts to reduce radiation dose do not result in poor image quality. However, to foster clinician/system readiness to report the new Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Clinician Level) measure and align it with implementation timelines across other CMS programs, implementation of the new measure will be delayed for 1-year and measure Q436 will be retained for the CY 2024 performance year/2026 MIPS payment year.</p> <p>After consideration of public comments, we are not finalizing the removal of measure Q436 as proposed for the CY 2024 performance period/2026 MIPS payment year due to the 1-year delay in implementation of measure Q494: Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Clinician Level) as discussed in Table A.1 of this Appendix. Measure Q436, however, is finalized for removal starting with the CY 2025 performance year/2027 MIPS payment year and future years.</p>	

**Table Group CC: Finalized Partial Removal of Three Previously Finalized Quality Measures as Component Measures in Traditional MIPS and Finalized Retention of These Three Measures for Use in Relevant MVPs for the CY 2024 Performance Period/2026 MIPS Payment Year and Future Years**

Beginning with the CY 2024 performance period/2026 MIPS payment year and future years, we proposed to maintain 3 quality measures: Q112: Breast Cancer Screening; Q113: Colorectal Cancer Screening; and Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-up Plan for MVP development and implementation (and maintain quality measures Q112 and Q113 for purposes of the CMS Web Interface collection type available to Shared Savings Program ACOs reporting through the APP). The clinical concepts represented by these MIPS quality measures will support some specialties in a more targeted approach rather than the broader clinical concept of preventive screenings represented within the finalized Preventive Care and Wellness (composite) measure finalized under Table A.6 of Appendix 1: MIPS Quality Measures. The tables within this section offer the rationale for the decision to partially remove quality measures Q112, Q113, and Q128, in which such quality measures are finalized for removal from traditional MIPS but retained for use in MVPs.

Therefore, we are finalizing to remove the three aforementioned previously finalized quality measures from traditional MIPS due to finalizing the addition of the Preventive Care and Wellness (composite) measure in Table A.6 of Appendix 1: MIPS Quality Measures, which includes the concepts of quality measures Q112, Q113, and Q128 as part of the finalized composite Preventive Care and Wellness (composite), and retain measures Q112, Q113, and Q128 for use in MVPs (and retain measures Q112 and Q113 for purposes of the CMS Web Interface collection type available to Shared Savings Program ACOs reporting through the APP as discussed in section III.G.2.c.(2) of this final rule; see Table Group E of this Appendix for the finalized changes to quality measures Q112 and Q113 available within the CMS Web Interface collection type).

Furthermore, measure Q112 is finalized as an available measure within the Focusing on Women's Health MVP (see Appendix 3: MVP Inventory Table A.1).

Measure Q128 is finalized for removal from traditional MIPS with retention in MVPs under Table CC.3 of this Appendix. It is noted that measure Q128 is being finalized as an available measure within the following two finalized MVPs: Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP and Rehabilitative Support for Musculoskeletal Care MVP (see Appendix 3: MVP Inventory Tables A.2 and A.5). Quality measure Q128 is currently an available measure within the following two previously finalized MVPs: Advancing Care for Heart Disease MVP and Improving Care for Lower Extremity Joint Repair MVP (see Appendix 3: MVP Inventory Tables B.5 and B.8).

We solicited comments on this proposal.

### CC.1. Breast Cancer Screening

Category	Description
<b>CBE # / eCQM CBE #:</b>	2372 / N/A
<b>Quality #:</b>	112
<b>CMS eCQM ID:</b>	CMS125v12
<b>Collection Type:</b>	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications
<b>Measure Description:</b>	Percentage of women 50-74 years of age who had a mammogram to screen for breast cancer in the 27 months prior to the end of the measurement period.
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale for Removal</b>	<p>We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from traditional MIPS because we proposed a more robust and comprehensive measure under Table A.6: Preventive Care and Wellness (composite) of this Appendix. This clinical concept is included as one of the components of the Preventive Care and Wellness (composite) measure.</p> <p>Measure Q112 only focuses on a single clinical concept of women who have had a mammogram screening for breast cancer rather than a comprehensive preventive care and wellness approach; however, the clinical quality action assessed within measure Q112 is appropriate and applicable for some MVPs, where other components within the composite measure are not, leaving a potential gap within the quality performance category of these MVPs. Therefore, we proposed the removal of this measure from traditional MIPS but proposed retention of this measure for use in relevant MVPs.</p> <p>Measure Q112 had already been finalized in the Promoting Wellness MVP but is finalized for removal from that MVP due to the finalization of the Preventive Care and Wellness (composite) measure under Table A.6 of this Appendix and finalization of a consolidated MVP titled Value in Primary Care (see Appendix 3: MVP Inventory Table B.11). Measure Q112 is currently finalized as a quality measure within the finalized Focusing on Women's Health MVP (see Appendix 3: MVP Inventory Table A.1). It is also part of the CQMC, Adult Universal Core Set, and in alignment across multiple CMS quality reporting programs. This measure will remain for purposes of the CMS Web Interface collection type available to Share Savings Program ACOs reporting through the APP.</p>
<b>In the Circumstance the Measure Was Retained</b>	<p>If measure A.6: Preventive Care and Wellness (composite) of this Appendix was not finalized for the CY 2024 performance period/2026 MIPS payment year and future years, we would have retained measure Q112 in traditional MIPS in all applicable specialty sets under Table Group B of this Appendix. See Table Group DD of this Appendix for any substantive changes finalized for this measure.</p>
<p><i>Comment:</i> One commenter stated that organizations that predominantly report via the eCQM collection type need to have their efforts acknowledged and valued and did not support the removal of measure Q112: Breast Cancer Screening (in addition to not supporting the removal of the measures in Tables CC.2 and CC.3 of this Appendix). Another commenter opposed removal of this measure, stating that while more comprehensive registry-reported measures are available, clinicians are unlikely to transition from EHR-based reporting to registry-based reporting solely to maintain reporting of those measures. The commenter stated the cost and inconvenience associated with using a registry would force clinicians to opt for less impactful or desirable eCQM measures to fulfill reporting requirements and removing eCQMs in favor of MIPS CQMs or QCDR measures is not a sound approach. A few commenters did not support the removal of this measure as an eCQM and keeping it as a CQM under the Preventive Care and Wellness (composite) measure.</p> <p><i>Response:</i> A more robust and comprehensive measure, Preventive Care and Wellness (composite) has been finalized to replace measure Q112, which only focuses on a single clinical concept of women who have had a mammogram screening for breast cancer. The mammogram screening for breast cancer is included as one of the components of the composite measure. More broadly, we encourage the development of eCQMs as part of our strategy toward transition to digital quality measures; however, not all measures are submitted for the eCQM collection type as this is not currently a requirement. We endeavor to include different collection types within our quality measure inventory to allow flexibility in reporting. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.</p> <p><i>Comment:</i> Congruent with several commenters' recommendation not to finalize the Preventive Care and Wellness (composite) measure, the commenters recommended that CMS retain this individual measure in MIPS (in addition to retaining the measures in Tables CC.2 and CC.3 of this Appendix). One commenter opposed removal of this measure (and measure Q113 in Table CC.2 of this Appendix) because combining multiple rates into one composite measure make it difficult to pinpoint improvement opportunities, and both measures are part of the adult Universal Foundation. The commenter stated that CMS' measure alignment goals should continue to apply, even in traditional MIPS reporting.</p>	

Category	Description
	<p><i>Response:</i> We recognize the new Preventive Care and Wellness (composite) measure sets a more stringent performance standard than the component measures by requiring a comprehensive set of preventive care standards be completed for each patient, working to drive quality care while ensuring more all-inclusive preventive care. By setting a more stringent performance standard through use of a single composite measure compared to the prior framework, under which each quality action was reported through a separate quality measure, we will gain a better picture of overall preventive care practices as each component is important to either prevention of or early detection of disease (<a href="https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4678940/">https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4678940/</a>). This allows for early diagnosis of disease, thereby leading to earlier treatment, improved health outcomes, and a reduction in healthcare associated costs (<a href="https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4265933/">https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4265933/</a>). Additionally, clinicians have the flexibility to choose measures to report and performance is not based solely on the reporting outcome of a single measure. While the MIPS benchmark will be based upon the weighted average for the Preventive Care and Wellness (composite), more granular performance data may be found through Medicare Care Compare or third-party intermediaries.</p> <p><i>Comment:</i> One commenter did not support removal of this measure (in addition to not supporting removal of Q113 in Table CC.2) because these measures are in HEDIS, CQMC core sets, Universal Foundation, and are commonly used in plan contracts.</p> <p><i>Response:</i> While we endeavor to align across CMS programs when feasible and possible, we strive to ensure all measures align with MIPS goals and priorities. The measure will still be available for use within applicable MVPs and the clinical quality action is also still be assessed for within the new composite measure.</p> <p><i>Comment:</i> One commenter appreciated the value of a composite measure in the primary care setting but noted the individual cancer screening measures continue to have value for clinicians specializing in oncology. Ensuring adherence to routine cancer screening is an important component of oncology care for individuals in active cancer treatment, as well as for cancer survivorship. Another commenter did not support the removal of measure Q112 because there are very few relevant breast cancer quality measures available within the MIPS measure inventory and there is still value in measuring the individual components of the proposed composite measure.</p> <p><i>Response:</i> We acknowledged the commenters' concerns; however, it is important to ensure duplicative measures/concepts are removed from MIPS to develop a system of quality measures that drive value-based care. Offering measures with more robust evaluation methods will continue to drive quality patient outcomes through the clinical care provided. The measure will still be available for use within applicable MVPs. We encourage the commenter to reach out to measure developers/stewards to develop new oncology related measures for submission to the Call for Measures for possible future implementation.</p> <p><i>Comment:</i> One commenter requested that the three measures under Table Group CC not be removed until CY 2025 because the timeframe does not provide large practices enough time to be ready by January 1, 2024. Another commenter requested that CMS provide a longer timeframe to sunset these individual measures to allow adequate time to move toward composite measures that are reflective of whole person care rather than individual screening components. The commenter indicated that this same logic should apply to the future development of composite measures. Another commenter stated that removal of measures has made it more difficult to meet the quality performance category and clinicians cannot switch measures at the frequency with which CMS is changing them. The commenter indicated that many specialties use this measure because of their core value to patient wellness.</p> <p><i>Response:</i> While we acknowledged the commenters' concerns, the use of a single composite measure compared to the prior framework, under which each quality action was reported through a separate quality measure, will gain a better picture of overall preventive care practices as each component is important to either prevention of or early detection of disease (<a href="https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4678940/">https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4678940/</a>). This allows for early diagnosis of disease, thereby leading to earlier treatment, improved health outcomes, and a reduction in healthcare associated costs (<a href="https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4265933/">https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4265933/</a>). We thank the commenter for their feedback regarding delaying implementation, however, the current structure of the composite measure still breaks down each component measure to be a separate submission criterion and does not require an 'all or none' analytic. This measure will still be available for use in applicable MVPs.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53082), we are finalizing the partial removal of measure Q112 from traditional MIPS and retaining the measure for use in relevant MVPs as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>

## CC.2. Colorectal Cancer Screening

Category	Description
<b>CBE # / eCQM CBE #:</b>	0034/ N/A
<b>Quality #:</b>	113
<b>CMS eCQM ID:</b>	CMS130v12
<b>Collection Type:</b>	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications
<b>Measure Description:</b>	Percentage of patients 45-75 years of age who had appropriate screening for colorectal cancer.
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale for Removal</b>	<p>We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from traditional MIPS because we proposed a more robust and comprehensive measure under Table A.6: Preventive Care and Wellness (composite) of this Appendix. This clinical concept is included as one of the components of the Preventive Care and Wellness (composite) measure.</p> <p>Measure Q113 only focuses on a single clinical concept of patients who have had an appropriate screening for colorectal cancer rather than a comprehensive preventive care and wellness approach; however, the clinical quality action assessed within measure Q113 is appropriate and applicable for some MVPs, where other components within the composite measure are not, leaving a potential gap in these identified MVPs. Therefore, we proposed the removal of this measure from traditional MIPS but proposed retention of this measure for use in relevant MVPs.</p> <p>This measure had previously been finalized in the Promoting Wellness MVP but is finalized for removal from that MVP due to the finalization of the Preventive Care and Wellness (composite) measure under Table A.6 of this Appendix and finalization of a consolidated MVP titled Value in Primary Care (see Appendix 3: MVP Inventory Table B.11). This measure will remain available for purposes of the CMS Web Interface collection type available to Shared Savings Program ACOs reporting through the APP.</p>
<b>In the Circumstance the Measure Was Retained</b>	<p>If measure A.6: Preventive Care and Wellness (composite) of this Appendix was not finalized for the CY 2024 performance period/2026 MIPS payment year and future years, we would have retained measure Q113 in traditional MIPS in all applicable specialty sets under Table Group B of this Appendix. See Table Group DD of this Appendix for any substantive changes finalized for this measure.</p>
<p><i>Comment:</i> One commenter opposed removal of measure Q113: Colorectal Cancer Screening (in addition to not supporting the removal of measure Q128 under Table CC.3 of this Appendix), stating that while more comprehensive registry-reported measures are available, clinicians are unlikely to transition from EHR-based reporting to registry-based reporting solely to maintain reporting of those measures. The commenter indicated the costs of using a registry would force clinicians to opt for less impactful or desirable eCQM measures to fulfill reporting requirements, and removing eCQMs in favor of CQMs or QCDR measures is not a sound approach.</p> <p><i>Response:</i> A more robust and comprehensive measure, Preventive Care and Wellness (composite) has been finalized to replace measure Q113 which only focuses on a single clinical concept of patients who have had an appropriate screening for colorectal cancer. This clinical concept is included as one of the components of the composite measure. We also encourage the development of eCQMs as part of our strategy toward transition to digital quality measures, however, not all measures are submitted for the eCQM collection type as this is not currently a requirement. We endeavor to include different collection types within our quality measure inventory to allow flexibility in reporting. While the MIPS benchmark will be based upon the weighted average for the Preventive Care and Wellness (composite), more granular performance data may be found through Medicare Care Compare or third-party intermediaries.</p> <p><i>Comment:</i> One commenter did not support the removal of measure Q113 from traditional MIPS because although this measure has been combined into the new Preventive Care and Wellness (composite) geared toward primary care clinicians, measure Q113 continues to hold value for quality improvement across multiple specialties. The commenter was also concerned that the composite measure will produce a single score and based on the current design of this new composite, performance on the individual indicators will not be available.</p> <p><i>Response:</i> As indicated above, the clinical concept from measure Q113 is included as one of the components of the composite measure. It is important to ensure duplicative measures/concepts are removed from MIPS to develop an ecosystem of quality measures that drive value-based care, rather than offering duplicate measures. Offering measures with more robust evaluation methods will continue to drive quality patient outcomes through the clinical care provided.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53083), we are finalizing the partial removal of measure Q113 from traditional MIPS and retaining the measure for use in relevant MVPs as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

**CC.3. Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-up Plan**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	128
<b>CMS eCQM ID:</b>	CMS69v12
<b>Collection Type:</b>	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications
<b>Measure Description:</b>	Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if the most recent BMI was outside of normal parameters
<b>Measure Steward:</b>	Centers for Medicare & Medicaid Services
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale for Removal</b>	<p>We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from traditional MIPS because we proposed a more robust and comprehensive measure under Table A.6: Preventive Care and Wellness (composite) of this Appendix. This clinical concept is included as one of the components of the Preventive Care and Wellness (composite) measure.</p> <p>Measure Q128 only focuses on the clinical concept of a documented BMI and follow-up plan if the BMI was outside of normal parameters, rather than a comprehensive preventive care and wellness approach. However, the clinical quality action assessed within measure Q128 is appropriate and applicable for some MVPs, where other components within the composite measure are not, leaving a potential gap in these identified MVPs. Therefore, we proposed the removal of this measure from traditional MIPS but proposed retention of this measure for use in relevant MVPs.</p> <p>Measure Q128 is also being finalized as a quality measure for use within two finalized MVPs: Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP and Rehabilitative Support for Musculoskeletal Care MVP (see Appendix 3: MVP Inventory Tables A.2 and A.5). Measure Q128 is available within two previously finalized MVPs: Advancing Care for Heart Disease MVP and Improving Care for Lower Extremity Joint Repair MVP (see Appendix 3: MVP Inventory Tables B.5 and B.8). This measure had previously been finalized in the Promoting Wellness MVP but is finalized for removal from that MVP due to the finalization of the Preventive Care and Wellness (composite) measure under Table A.6 of this Appendix and finalization of a consolidated MVP titled Value in Primary Care (see Appendix 3: MVP Inventory Table B.11).</p>
<b>In the Circumstance the Measure Was Retained</b>	<p>If measure A.6: Preventive Care and Wellness (composite) of this Appendix was not finalized for the CY 2024 performance period/2026 MIPS payment year and future years, we would have retained measure Q128 in traditional MIPS in all applicable specialty sets under Table Group B of this Appendix. See Table Group DD of this Appendix for any substantive changes finalized for this measure.</p>
<p><i>Comment:</i> One commenter supported removal of measure 128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-up Plan because the processes and populations addressed in these measures will be evaluated as part of the newly proposed Preventive Care and Wellness (composite). The commenter supported removing the measure from specialty sets and/or MVPs as it is replaced by the new composite measure.</p> <p><i>Response:</i> We thank the commenter for supporting the removal of this measure from traditional MIPS with retention for use in MVPs.</p> <p><i>Comment:</i> One commenter supported removal of measure Q128, indicating that for some specialties, the BMI measure would be replaced by the new Preventive Care and Wellness (composite) measure, which aggregates multiple services into one score. This score allows for a more statistically sound measure, though the commenter sought clarity if a clinician receives partial credit if some of the wellness checks are completed. Research has shown the importance of patients receiving a diagnosis of obesity to be an important factor in patients seeking treatment for their chronic disease. Of individuals who would be identified as having obesity, only 55 percent report being diagnosed with the disease.</p> <p><i>Response:</i> We thank the commenter for supporting the removal of this measure from MIPS.</p> <p><i>Comment:</i> Per comments under Table B.34 Removal Table of this Appendix, several commenters did not support removing this measure from traditional MIPS but retaining the measure for use in the Rehabilitative Support for Musculoskeletal Care MVP.</p> <p><i>Response:</i> We acknowledged the concerns expressed by the commenters for the removal of measure Q128. However, this measure is duplicative of a component found within the new preventive care and wellness composite measure. It is important to ensure duplicative measures are removed from MIPS to develop an ecosystem of quality measures that drive value-based care, rather than offering duplicate measures. Offering measures with more robust evaluation methods will continue to drive quality patient outcomes though the clinical care provided. The Preventive Care and Wellness (composite) measure, which is more robust and comprehensive, has been finalized to replace measure Q128, which only focuses on a documented BMI and follow-up plan if the BMI was outside of normal parameters. This clinical concept is included as one of the components of the new composite measure. The clinical quality action assessed within measure Q128 is appropriate and applicable for some MVPs, where other components within the composite measure are not, leaving a potential gap in these identified MVPs. Therefore, it is being removed from traditional MIPS but being retained for use in relevant MVPs.</p> <p><i>Comment:</i> As indicated under Table A.6 of this Appendix, one commenter requested that if CMS finalizes the new Preventive Care and Wellness (composite) measure, that it retain measure Q128 as a standalone measure to retain available to specialists, especially those who may have limited measures to report. The commenter indicated that its members report that the BMI measure is important as it encourages them to talk to their patients about obesity; spine health and risk of surgery, weight loss strategies, and encourages patients to follow up with their primary care physicians.</p>	

Category	Description
	<p>A couple of commenters stated that the BMI measure is relevant to many specialties and removing the measure is limiting choice for specialists. Other commenters representing rheumatology, interventional cardiology, and psychiatry opposed removal of measure Q128. There were also concerns that clinicians may be penalized for not performing/referring for breast and colon cancer screening or giving influenza and pneumococcal immunizations under the proposed composite structure. In addition, this measure was not proposed for retention in the Quality Care in Mental Health and Substance Use Disorder MVP (See Appendix 3, Table A.4).</p> <p><i>Response:</i> The clinical concept of this measure is included in the new Preventive Care and Wellness (composite) measure, which is more robust and comprehensive. Besides, the historical benchmark data shows that the measure has reached the end of its topped-out life cycle which does not allow meaningful benchmarks to be established. Additionally, by removing measures with high performance rates, we are attempting to reduce reporting burden where there is little room for improvement. Removal allows eligible clinicians to maximize their potential quality performance score as this measure's topped-out status would limit the score awarded per the 2023 Benchmark File.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53084), we are finalizing the partial removal of measure Q128 from traditional MIPS and retaining the measure for use in relevant MVPs as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>

## **Table Group D: Previously Finalized Quality Measures with Substantive Changes Finalized for the CY 2024 Performance Period/2026 MIPS Payment Year and Future Years**

NOTE: Electronic clinical quality measures (eCQMs) that are endorsed by a CBE are shown in Table D of this Appendix as follows: CBE # / eCQM CBE #. In section IV.A.4.f.(1)(b) and section III.G.2. of this final rule, we are finalizing the proposal to establish the following new collection type, Medicare Clinical Quality Measures for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQMs). To operationalize the implementation of Medicare CQMs, specifically the capability to distinguish between the submission of data for a Medicare CQM and a MIPS CQM to CMS, we created an identifier that reflects the Quality number associated with a quality measure (i.e., Q001, Q134, and Q236) followed by the letters “SSP.” For the reporting of Medicare CQMs, the identifiers are as follows: 001SSP, 134SSP, and 236SSP. Such Medicare CQM identifiers must be included in the submission files.

The D Tables within this final rule provide the substantive changes finalized for the quality measures in CY 2024. The changes made to the denominator codes sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2024 may not be identified within this final rule due to the availability of these changes to the public. If coding revisions to the denominator are impacted due to the timing of 2024 CPT and ICD-10 updates and assessment of these codes’ inclusion by the Measure Steward, these changes may be postponed until CY 2025. The 2024 Quality Measure Release Notes provide a comprehensive, detailed reference of exact code changes to the denominators of the quality measures. The Quality Measure Release Notes are available for each of the collection types in the Quality Payment Program website at <https://qpp.cms.gov>.

In addition to the finalized substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature but are important to communicate to interested parties. These changes align with the scope of the current coding; however, though not substantive in nature, these changes will expand or contract the measure’s current eligible population. Therefore, please refer to the current year measure specification and the 2024 Quality Measure Release Notes or the eCQM Technical Release Notes once posted to review all coding changes to ensure correct implementation. Language has also been added, to all applicable 2024 quality measure specifications, in the form of an ‘Instructions Note’ to clarify telehealth encounters are allowed for determination of denominator eligibility. Only where telehealth encounters previously were not allowed as denominator eligible will the D table corresponding to a measure reflect an update to the denominator allowing for telehealth encounters in the ‘Substantive Change’ cell.

The eCQM Technical Release Notes should also be carefully reviewed for revisions within the logic portion of the measure. In addition to the finalized substantive changes, there may be revisions within the logic that are not considered substantive in nature, however, it is important to review to ensure proper implementation of the measure. As not all systems and clinical workflows are the same, it is important to review these changes in the context of a specific system and/or clinical workflow.

Note: For the CY 2024 performance period/2026 MIPS payment year (and prior CY 2023 performance period/2025 MIPS payment year), the CMS Web Interface measures as a collection type is only available for APM Entities, specifically Medicare Shared Savings Program (Shared Savings Program) Accountable Care Organizations (ACOs), reporting through the APM Performance Pathway (APP) (the CMS Web Interface measures as a collection type is no longer available under traditional MIPS). Thus, the CMS Web Interface collection type is not listed in any table under Table Group D of this Appendix. For further information regarding the Shared Savings Program requirements under the APP and the CMS Web Interface collection type available under the APP, see section III.G.2.c.(2) of this final rule. For information regarding finalized changes to the CMS Web Interface measures available for the CY 2024 performance period/2026 MIPS payment year, see Table Group E of this Appendix.

**D.1 Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	0059/ N/A
<b>Quality #:</b>	001
<b>CMS eCQM ID:</b>	CMS122v12
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications   eCQM Specifications   MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c > 9.0% during the measurement period.
<b>Substantive Change:</b>	<p><b>Modified collection type:</b> Medicare CQMs Specifications, Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications collection type.</p> <p><b>Updated denominator exclusion: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Added:</b> Dementia combinations: Donepezil-memantine to the list of dementia medication exclusion medications.</p>
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Intermediate Outcome
<b>Rationale:</b>	<p>We proposed to update the collection types available for this measure to include the Medicare CQMs Specifications collection type to allow choice in submission method for SSP ACOs reporting via the APP. See section IV.A.4.f.(1)(b) and section III.G.2. for further information on the Medicare CQMs Specifications collection type.</p> <p>We proposed to update the denominator exclusion to include Donepezil-memantine in the list of dementia exclusion medications, as this is an applicable medication for the purposes of the denominator exclusion. This medication is used for patients with dementia and therefore aligns with the intent of the measure to exclude patients with this condition from the measure.</p>
<p>We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53085), we are finalizing the changes to measure Q001 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

**D.2 Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Neprilysin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD)**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	0081 / 0081e
<b>Quality #:</b>	005
<b>CMS eCQM ID:</b>	CMS135v12
<b>Current Collection Type:</b>	eCQM Specifications   MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) $\leq$ 40% who were prescribed ACE inhibitor or ARB or ARNI therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge.
<b>Substantive Change:</b>	<b>Updated guidance: For the eCQM Specifications collection type: Added:</b> In order for the Ejection Fraction result pathway to be recognized as below 40%, the result must be reported as a number with unit of %. A text string of "below 40%" or "ejection fraction between 35 and 40%" will not be recognized through electronic data capture. Although, this criteria can also be met using the Diagnosis pathway if specified as "Moderate or Severe."
<b>Measure Steward:</b>	American Heart Association
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to update the guidance for the eCQM Specifications collection type by adding documentation requirements for ejection fraction results to ensure the data is being accurately captured. This added statement in the guidance clarifies that the ejection fraction results must be documented as a percentage (for example, 40%) in order to be recognized through electronic capture.
We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53086), we are finalizing the changes to measure Q005 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

**D.3 Coronary Artery Disease (CAD): Antiplatelet Therapy**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	0067 / N/A
<b>Quality #:</b>	006
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	MIPS QOMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease (CAD) seen within a 12-month period who were prescribed aspirin or clopidogrel.
<b>Substantive Change:</b>	<p><b>Updated denominator exception: Removed:</b> Documentation of system reason(s) for not prescribing aspirin or clopidogrel (e.g., lack of drug availability, other reasons attributable to the health care system).</p> <p><b>Updated denominator criteria: Removed:</b> coding for subsequent myocardial infarction.</p>
<b>Measure Steward:</b>	American Heart Association
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to remove the denominator exception for documentation of system reason(s) as this option is not recommended for this measure due to wide-spread availability of these medications. This will also create alignment within the denominator exceptions across all American Heart Association (AHA) measures.</p> <p>We proposed to remove patients with subsequent myocardial infarction (MI) from the denominator criteria as this patient population is duplicative in nature. For the purposes of this measure, those patients with a subsequent MI will already have a diagnosis of CAD from the initial MI. Therefore, these patients will already be correctly included in the denominator eligible patient population.</p>
<p>We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53086), we are finalizing the changes to measure Q006 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

**D.4 Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF ≤ 40%)**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	0070 / 0070e
<b>Quality #:</b>	007
<b>CMS eCQM ID:</b>	CMS145v12
<b>Current Collection Type:</b>	eCQM Specifications   MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12-month period who also have a prior MI or a current or prior LVEF ≤ 40% who were prescribed beta-blocker therapy.
<b>Substantive Change:</b>	<p><b>Updated guidance: For the eCQM Specifications collection type: Added:</b> In order for the Ejection Fraction result pathway to be recognized as below 40%, the result must be reported as a number with unit of %. A text string of "below 40%" or "ejection fraction between 35 and 40%" will not be recognized through electronic data capture. Although, this criteria can also be met using the Diagnosis pathway if specified as "Moderate or Severe."</p> <p><b>Updated denominator criteria: For the MIPS CQMs Specifications collection type: Removed:</b> For submission criteria 2: coding for subsequent myocardial infarction For all submission criteria: endoscopic procedures on the heart and pericardium.</p> <p><b>Updated denominator exception: For all collection types: Removed:</b> For all submission criteria: Documentation of system reason(s) for not prescribing beta-blocker therapy (e.g., other reasons attributable to the health care system).</p>
<b>Measure Steward:</b>	American Heart Association
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to revise the guidance for the eCQM Specifications collection type by adding documentation requirements for ejection fraction results to ensure the data is being accurately captured. This added statement in the guidance clarifies that the ejection fraction results must be documented as a percentage (for example, 40%) to be recognized through electronic capture.</p> <p>We proposed to remove patients with subsequent MI from the denominator criteria for the MIPS CQMs Specifications collection type as this patient population is duplicative in nature. For the purposes of this measure, those patients with a subsequent MI will already have a diagnosis of CAD from the initial MI. Therefore, these patients will already be correctly included in the denominator eligible patient population. Additionally, we proposed to remove coding for endoscopic procedures of the heart and pericardium for the MIPS CQMs Specifications collection type as the coding is more related to the harvest of the artery and not the cardiac surgery itself and therefore, these patients may not be appropriate for the quality action.</p> <p>We proposed to remove the denominator exception for all collection types for documentation of system reason(s) as this option is not recommended for this measure due to wide-spread availability of beta-blocker therapy. This will also create alignment within the denominator exceptions across all AHA measures.</p>
We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53087), we are finalizing the changes to measure Q007 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

**D.5 Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD)**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	0083 / 0083e
<b>Quality #:</b>	008
<b>CMS eCQM ID:</b>	CMS144v12
<b>Current Collection Type:</b>	eCQM Specifications   MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) $\leq$ 40% who were prescribed beta-blocker therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge.
<b>Substantive Change:</b>	<b>Updated guidance: For the eCQM Specifications collection type: Added:</b> In order for the Ejection Fraction result pathway to be recognized as below 40%, the result must be reported as a number with unit of %. A text string of "below 40%" or "ejection fraction between 35 and 40%" will not be recognized through electronic data capture. Although, this criteria can also be met using the Diagnosis pathway if specified as "Moderate or Severe."
<b>Measure Steward:</b>	American Heart Association
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to revise the guidance for the eCQM Specifications collection type by adding documentation requirements for ejection fraction results to ensure the data is being accurately captured. This added statement in the guidance clarifies that the ejection fraction results must be documented as a percentage (for example, 40%) to be recognized through electronic capture.
We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53087), we are finalizing the changes to measure Q008 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

**D.6 Diabetic Retinopathy: Communication with the Physician Managing Ongoing Diabetes Care**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	019
<b>CMS eCQM ID:</b>	CMS142v12
<b>Current Collection Type:</b>	eCQM Specifications   MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older with a diagnosis of diabetic retinopathy who had a dilated macular or fundus exam performed with documented communication to the physician who manages the ongoing care of the patient with diabetes mellitus regarding the findings of the macular or fundus exam at least once within 12 months.
<b>Substantive Change:</b>	<p><b>The measure description is revised to read: For the MIPS CQMs Specifications collection type:</b> Percentage of patients aged 18 years and older with a diagnosis of diabetic retinopathy who had a dilated macular or fundus exam performed with documented communication to the physician who manages the ongoing care of the patient with diabetes mellitus regarding the findings of the macular or fundus exam at least once during the performance period.</p> <p><b>For the eCQM Specifications collection type:</b> Percentage of patients aged 18 years and older with a diagnosis of diabetic retinopathy who had a dilated macular or fundus exam performed with documented communication to the physician who manages the ongoing care of the patient with diabetes mellitus regarding the findings of the macular or fundus exam at least once during the measurement period.</p> <p><b>The measure numerator is revised to read: For the MIPS CQMs Specifications collection type:</b> Patients with documentation, at least once within the performance period, of the findings of the dilated macular or fundus exam via communication to the physician who manages the patient’s diabetic care.</p> <p><b>For the eCQM Specifications collection type:</b> Patients with documentation, at least once within the measurement period, of the findings of the dilated macular or fundus exam via communication to the physician who manages the patient’s diabetic care.</p>
<b>Measure Steward:</b>	American Academy of Ophthalmology
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to revise the measure description and numerator to clarify that the “reporting period” is the 12-month performance period of January 1 <sup>st</sup> – December 31 <sup>st</sup> and to maintain consistency across measures in MIPS.
We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53088), we are finalizing the changes to measure Q019 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

**D.7 Communication with the Physician or Other Clinician Managing On-Going Care Post-Fracture for Men and Women Aged 50 Years and Older**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	024
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications   MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 50 years and older treated for a fracture with documentation of communication, between the physician treating the fracture and the physician or other clinician managing the patient's on-going care, that a fracture occurred and that the patient was or should be considered for osteoporosis treatment or testing. This measure is submitted by the physician who treats the fracture and who therefore is held accountable for the communication.
<b>Substantive Change:</b>	<b>Updated denominator criteria: For all collection types: Added:</b> coding for initial encounters for age-related osteoporosis with current pathological fractures and periprosthetic fractures around internal prosthetic joints.
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to add coding for initial encounters for age-related or other osteoporosis with current pathological fractures and periprosthetic fractures around internal prosthetic joints to align with codes in the Healthcare Effectiveness Data and Information Set (HEDIS) Fractures Value Set and create consistency in implementation while ensuring the appropriate patient population is identified for numerator compliance assessment.
We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53088), we are finalizing the changes to measure Q024 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

**D.8 Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	048
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of female patients aged 65 years and older who were assessed for the presence or absence of urinary incontinence within 12 months.
<b>Substantive Change:</b>	<b>Updated denominator criteria: For all collection types: Added:</b> coding for physical and occupational therapy clinician types.
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to add coding for physical and occupational therapy clinician types as the measure is appropriate and it will be within their scope of care to complete this assessment.
<p><i>Comment:</i> One commenter supported the addition of occupational therapy (OT) coding proposed for measure Q048: Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older to reflect services provided by OT practitioners to these patient populations.</p> <p><i>Response:</i> We thank the commenter for supporting the substantive changes to this measure.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53088), we are finalizing the changes to measure Q048 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

**D.9 Chronic Obstructive Pulmonary Disease (COPD): Long-Acting Inhaled Bronchodilator Therapy**

Category	Description
<b>CBE # / eCQM CBE #:</b>	0102 / N/A
<b>Quality #:</b>	052
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older with a diagnosis of COPD (FEV1/FVC < 70%) and who have an FEV1 less than 60% predicted and have symptoms who were prescribed a long-acting inhaled bronchodilator.
<b>Substantive Change:</b>	<p><b>The measure title is revised from ‘Chronic Obstructive Pulmonary Disease (COPD): Long-Acting Inhaled Bronchodilator Therapy’ to:</b> Chronic Obstructive Pulmonary Disease (COPD): Spirometry Evaluation and Long-Acting Inhaled Bronchodilator Therapy</p> <p><b>The measure description is revised to read:</b> Percentage of patients aged 18 years and older with a diagnosis of COPD with a documented FEV1/FVC &lt; 70% measured by spirometry, who are symptomatic, and were prescribed a long-acting inhaled bronchodilator.</p> <p><b>Update instructions: Added:</b>  <u><b>This measure will be calculated with 2 performance rates:</b></u>            (1) Percentage of patients aged 18 years and older with a diagnosis of COPD who have a documented airflow obstruction (FEV1/FVC &lt; 70%) as measured by spirometry.            (2) Percentage of patients aged 18 years and older with a diagnosis of COPD who have a documented airflow obstruction (FEV1/FVC &lt; 70%) and are symptomatic, who were prescribed a long-acting inhaled bronchodilator.            A simple average, which is the sum of the performance rates divided by the number of performance rates will be used for performance.</p> <p>THERE ARE TWO SUBMISSION CRITERIA FOR THIS MEASURE:            1. Patients diagnosed with COPD with who have documented airflow obstruction (FEV1/FVC &lt; 70%) as measured by spirometry in the medical record.            2. Patients diagnosed with COPD who have documented airflow obstruction (FEV1/FVC &lt; 70%) and are symptomatic, who were prescribed a long-acting bronchodilator.</p> <p>This measure contains two submission criteria which together ensure that the proper evaluation and treatment is provided for patients with COPD and that patients without COPD are not provided inappropriate therapy. Submission Criteria 1 evaluates whether spirometry was performed for patients diagnosed with COPD and results confirming airflow obstruction are documented. Submission Criteria 2 evaluates whether a long-acting inhaled bronchodilator was prescribed for COPD patients who have symptoms.            NOTE: Submission of the two performance rates is required for this measure. A simple average, which is the sum of the performance rates divided by the number of the performance rates, will be used to calculate performance.</p> <p><b>Updated denominator: Added: DENOMINATOR (SUBMISSION CRITERIA 1):</b>            All patients aged 18 and older with a diagnosis of COPD.  <b>Revised: DENOMINATOR (SUBMISSION CRITERIA 2):</b>            All patients aged 18 years and older with a diagnosis of COPD with spirometry results documented (FEV1/FVC &lt; 70%), and have symptoms (e.g., dyspnea, cough/sputum, wheezing).</p> <p><b>Updated denominator criteria: Added: For Submission Criteria 1:</b>            Denominator Criteria (Eligible Cases):            Patients aged ≥ 18 years on date of encounter            AND            Diagnosis for COPD            AND            Patient encounter during the performance period            WITHOUT            Telehealth Modifier</p> <p><b>Revised: For Submission Criteria 2:</b>            Denominator Criteria (Eligible Cases):            Patients aged ≥ 18 years on date of encounter            AND            Diagnosis for COPD            AND            Spirometry results documented (FEV1/FVC &lt; 70%)            AND            Patient encounter during the performance period            WITHOUT            Telehealth Modifier            AND            Patient has COPD symptoms (e.g., dyspnea, cough/sputum, wheezing)</p> <p><b>Updated numerator: Added: For Submission Criteria 1:</b>            Patients with documented spirometry and confirmed airflow obstruction (FEV1/FVC &lt; 70%).  <b>Revised: For Submission Criteria 2:</b>            Symptomatic COPD patients who were prescribed a long-acting inhaled bronchodilator.</p>

Category	Description
	<p><b>Updated numerator instructions: Added:</b> For Submission Criteria 1: Documentation of spirometry results of (FEV1/FVC &lt; 70%) can take place before the performance period. The intent of Submission Criteria 1 is to ensure accurate diagnosis of COPD in patients with respiratory symptoms such as dyspnea, chronic cough or sputum production, and/or a history of exposure to risk factors for the disease is appropriate by having documentation of spirometry results of FEV1/FVC &lt; 70%, which is required to make the COPD diagnosis.</p> <p><b>Updated numerator note: Added:</b> For Submission Criteria 1: Denominator Exception(s) are determined on the date of the denominator eligible encounter. If there is a diagnosis of COPD, but there is no documented spirometry within five years of the date of the encounter, and the current spirometry result is <math>\geq 70\%</math>, an exception may be reported.</p> <p><b>Updated numerator options: Added:</b> For Submission Criteria 1: <b>Performance Met:</b> Spirometry results with confirmed airflow obstruction (FEV1/FVC &lt; 70%) documented and reviewed. <b>Denominator Exception:</b> Documentation of medical reason(s) for not documenting and reviewing spirometry results (e.g., patients with dementia or tracheostomy). <b>Denominator Exception:</b> No history of spirometry results with confirmed airflow obstruction (FEV1/FVC &lt; 70%) and present spirometry is <math>\geq 70\%</math>. <b>Denominator Exception:</b> Documentation of system reason(s) for not documenting and reviewing spirometry results (e.g., spirometry equipment not available at the time of the encounter). <b>Performance Not Met:</b> No spirometry results with confirmed airflow obstruction (FEV1/FVC &lt; 70%) documented and/or no spirometry performed with results documented during the encounter. <b>Revised:</b> For Submission Criteria 2: <b>Denominator Exception:</b> Documentation of medical reason(s) for not prescribing a long-acting inhaled bronchodilator (e.g., patient intolerance or history of side effects). <b>Denominator Exception:</b> Documentation of system reason(s) for not prescribing a long-acting inhaled bronchodilator (e.g., cost of treatment or lack of insurance). <b>Removed:</b> For Submission Criteria 2: Denominator Exception for patient reason(s).</p>
<b>Measure Steward:</b>	American Thoracic Society
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to revise this measure to add a submission criteria and performance rate so all patients are assessed for spirometry evaluation to ensure that the proper evaluation and subsequent treatment is provided for the patients with COPD. We proposed to add submission criteria one to evaluate whether spirometry was performed and if there were results confirming airflow obstruction. Submission criteria 2 will evaluate whether a long-acting bronchodilator was prescribed for the COPD patient meeting evaluation criteria and having symptoms. The inclusion of submission criteria one “allows potentially wide application of testing to improve recognition and diagnosis of COPD” which is then complimented in submission criteria 2 with the appropriate care of patients diagnosed with COPD.<sup>64</sup></p> <p>Additionally, we proposed to revise the denominator exceptions for submission criteria two to clarify implementation by giving examples of scenarios that meet the denominator exception intent. We proposed to remove the denominator exception for patient reason(s) as it is incumbent upon the clinician to educate the patient on the importance of treatment.</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes will not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.</p>
<p>We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53089 through 53090), we are finalizing the changes to measure Q052 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

64. Johns, D. P., Walters, J. A., & Walters, E. H. (2014). Diagnosis and Early Detection of COPD Using Spirometry. *Journal of Thoracic Disease*, 6(11), 1557–1569. <https://pubmed.ncbi.nlm.nih.gov/25478197/>.

**D.10 Appropriate Treatment for Upper Respiratory Infection (URI)**

Category	Description
<b>CBE # / eCQM CBE #:</b>	0069 / N/A
<b>Quality #:</b>	065
<b>CMS eCQM ID:</b>	CMS154v12
<b>Current Collection Type:</b>	eCQM Specifications   MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of episodes for patients 3 months of age and older with a diagnosis of upper respiratory infection (URI) that did not result in an antibiotic order.
<b>Substantive Change:</b>	<p><b>Updated denominator exclusion: For all collection types: Revised:</b> Exclude URI episodes where the patient is taking antibiotics in the 30 days prior to the episode date.</p> <p><b>Updated value set/coding: For the eCQM Specifications collection type: Added:</b> coding for malignant neoplasms to the “Comorbid Conditions for Respiratory Conditions” value set, and aggressive periodontitis to the “Competing Conditions for Respiratory Conditions” value set.</p> <p><b>Updated denominator: For the MIPS CQMs Specifications collection type: Revised:</b> Outpatient visits, telephone visits, online assessments (i.e., e-visit or virtual check-in), observation stays or emergency department visits with a diagnosis of upper respiratory infection (URI) from January 1 to December 28 for patients 3 months of age and older.</p> <p><b>Updated denominator instructions: For the MIPS CQMs Specifications collection type: Added:</b> An episode is defined as each eligible encounter for patients aged 3 months of age and older with a diagnosis of upper respiratory infection during the measurement period of January 1 to December 28.</p> <p><b>Updated denominator criteria: For the MIPS CQMs Specifications collection type:</b> Table 1 – Antibiotic medications to be utilized for the denominator exclusion:  <b>Added:</b>  Aminoglycosides: Amikacin, Gentamicin, Streptomycin, Tobramycin  To Beta-lactamase inhibitors: Ampicillin-sulbactam, Piperacillin-tazobactam  Fourth-generation cephalosporins: Cefepime  To Lincomycin derivatives: Lincomycin  Miscellaneous antibiotics: Aztreonam, Chloramphenicol, Dalofopristin-quinupristin, Daptomycin, Linezolid, Metronidazole, Vancomycin  To Natural penicillins: Penicillin G benzathine, Penicillin G benzathine procaine, Penicillin G procaine  To Penicillinase-resistant penicillins: Nafcillin, Oxacillin  To Quinolones: Gemifloxacin  Rifamycin derivatives: Rifampin  To Second generation cephalosporins: Cefotetan, Cefoxitin  To Sulfonamides: Sulfadiazine  To Third generation cephalosporins: Cefotaxime, Ceftriaxime  Urinary anti-infectives: Fosfomycin, Nitrofurantoin, Nitrofurantoin macrocrystals-monohydrate, Trimethoprim  <b>Removed:</b>  Folate antagonist  From Macrolides: Erythromycin ethylsuccinate, Erythromycin lactobionate, Erythromycin stearate  From Third generation cephalosporins: Cefditoren</p>
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to revise the denominator exclusion for all collection types to exclude patients who were actively taking antibiotics in the 30 days prior to the encounter. We proposed to remove the clause of actively taking antibiotics on the day of the encounter as the measure logic does not check for antibiotic use of the day of the encounter. The revised denominator exclusion will align the measure logic across antibiotic measures and ensure the appropriate patient population is being assessed for antibiotics prescribed on the date of the encounter.</p> <p>We proposed to update the value set/coding for the eCQM Specifications collection type by adding coding for ‘Aggressive periodontitis’ to the “Competing Conditions for Respiratory Conditions (2.16.840.1.113883.3.464.1003.102.12.1017)” value set and coding for ‘Neoplasms’ to the “Comorbid Conditions for Respiratory Conditions ((2.16.840.1.113883.3.464.1003.102.12.1017)” value set, which will allow clinicians to use the denominator exclusion as it may be appropriate to dispense antibiotics to these patients. Additionally, it will create alignment with the NCQA’s HEDIS measure.</p> <p>We proposed to update the denominator and denominator instructions for the MIPS CQMs Specifications collection type to revise the timeframe for eligible encounters as this will align with the numerator timeframe of ‘on or within 3 days of the eligible encounter’.</p> <p>We proposed to update the list of antibiotic medications for purposes of determining patients appropriate for the denominator exclusion for the MIPS CQMs Specifications collection type by adding and removing prescriptions to align with the current medication table to ensure the appropriate patient population is being identified for denominator eligibility and ensuring the quality action is applicable.</p>
We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53091), we are finalizing the changes to measure Q065 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

### D.11 Appropriate Testing for Pharyngitis

Category	Description
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	066
<b>CMS eCQM ID:</b>	CMS146v12
<b>Current Collection Type:</b>	eCQM Specifications   MIPS CQMs Specifications
<b>Current Measure Description:</b>	The percentage of episodes for patients 3 years and older with a diagnosis of pharyngitis that resulted in an antibiotic order and a group A Streptococcus (Strep) test in the seven-day period from three days prior to the episode date through three days after the episode date.
<b>Substantive Change:</b>	<p><b>Updated denominator exclusion: For all collection types: Revised:</b> Exclude URI episodes where the patient is taking antibiotics in the 30 days prior to the episode date.</p> <p><b>Updated value set/coding: For the eCQM Specifications collection type: Added:</b> coding for malignant neoplasms to the ‘Competing Conditions for Respiratory Conditions’ value set.</p> <p><b>Updated denominator: For the MIPS CQMs Specifications collection type: Revised:</b> Outpatient, telephone, online assessment (i.e., e-visit or virtual check-in), observation, or emergency department (ED) visits with a diagnosis of pharyngitis or tonsillitis from January 1 to December 28 and an antibiotic order on or within 3 days after the episode date among patients 3 years or older.</p> <p><b>Updated denominator instructions: For the MIPS CQMs Specifications collection type: Revised:</b> An episode is defined as each eligible encounter for patients aged 3 years and older with a diagnosis of pharyngitis that resulted in an antibiotic order during the measurement period of January 1 to December 28.</p> <p><b>Updated denominator criteria: For the MIPS CQMs Specifications collection type:</b> Table 1 – Antibiotic medications to be utilized for the denominator exclusion:  <b>Removed:</b>            From macrolides: Erythromycin ethylsuccinate, Erythromycin lactobionate, Erythromycin stearate            Penicillinase resistant penicillins            From Third generation cephalosporins: Cefibuten, Cefditoren</p>
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to revise the denominator exclusion for all collection types to exclude patients who were actively taking antibiotics in the 30 days prior to the encounter. We proposed removal of the clause of actively taking antibiotics on the day of the encounter as the measure logic does not check for antibiotic use of the day of the encounter. The revised denominator exclusion will align the measure logic across antibiotic measures and ensure the appropriate patient population is being assessed for antibiotics prescribed on the date of the encounter.</p> <p>We proposed to update the value set/coding for the eCQM Specifications collection type by adding coding for malignant neoplasms to the “Competing Conditions for Respiratory Conditions (2.16.840.1.113883.3.464.1003.102.12.1025)” value set which will allow clinicians to use the denominator exclusion as it may be appropriate to dispense antibiotics to these patients. Additionally, it creates alignment with NCQA’s HEDIS measure.</p> <p>We proposed to update the denominator and denominator instructions for the MIPS CQMs Specifications collection type to revise the timeframe for eligible encounters as this will align with the numerator timeframe of ‘through 3 days after the eligible encounter’.</p> <p>We proposed to update the list of antibiotic medications for purposes of determining patients appropriate for the denominator exclusion for the MIPS CQMs Specifications collection type by adding and removing prescriptions to align with the current medication table to ensure the appropriate patient population is being identified for denominator eligibility and ensuring the quality action is applicable.</p>
<p>We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53092), we are finalizing the changes to measure Q066 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

**D.12 Prostate Cancer: Combination Androgen Deprivation Therapy for High Risk or Very High Risk Prostate Cancer**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	104
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients, regardless of age, with a diagnosis of prostate cancer at high or very high risk of recurrence receiving external beam radiotherapy to the prostate who were prescribed androgen deprivation therapy in combination with external beam radiotherapy to the prostate.
<b>Substantive Change:</b>	<p><b>The denominator definition is revised to read:</b></p> <p><b>Risk Strata – Very Low, Low, Intermediate, High, or Very High –</b></p> <p><b>Very Low Risk</b> – PSA &lt; 10 ng/mL; AND Gleason score 6 or less/Gleason grade group 1; AND clinical stage T1c; AND presence of disease in fewer than 3 biopsy cores; AND ≤ 50% prostate cancer involvement in each fragment/core; AND PSA density &lt; 0.15 ng/mL/g.</p> <p><b>Low Risk</b> – PSA &lt; 10 ng/mL; AND Gleason score 6 or less/Gleason grade group 1; AND clinical stage T1 to T2a.</p> <p><b>Intermediate Risk</b> – PSA 10 to 20 ng/mL; OR Gleason score 7/Gleason grade group 2-3; OR clinical stage T2b to T2c; AND no high-risk group or very-high-risk group features.</p> <p><b>High Risk</b> – Has one of the following: PSA &gt; 20 ng/mL; OR Gleason score 8 to 10/Gleason grade group 4-5; OR clinically localized stage T3a, without any very-high-risk group features.</p> <p><b>Very High Risk</b> – At least one of the following: Clinical stage T3b to T4; OR primary Gleason pattern 5; OR more than 4 cores with Gleason score 8 to 10/Gleason grade group 4-5 OR 2-3 high-risk features. (NCCN, 2022)</p> <p><b>External beam radiotherapy</b> – “External beam radiotherapy” refers to 3D conformal radiation therapy (3D- CRT), intensity modulated radiation therapy (IMRT), stereotactic body radiotherapy (SBRT), and proton beam therapy.</p>
<b>Measure Steward:</b>	American Urological Association Education and Research
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to revise the denominator definition to better classify risk category for patients receiving treatment for prostate cancer in accordance with revised NCCN guidelines. <sup>65</sup>
<p><i>Comment:</i> One commenter supported the substantive changes proposed to measure Q104: Prostate Cancer: Combination Androgen Deprivation Therapy for High Risk or Very High Risk Prostate Cancer and provided additional edits to fully align with NCCN guidelines.</p> <p><i>Response:</i> We thank the commenter for supporting the substantive changes to this measure. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53093), we are finalizing the changes to measure Q104 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>

**D.13 Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	0058 / N/A
<b>Quality #:</b>	116
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	The percentage of episodes for patients ages 3 months and older with a diagnosis of acute bronchitis/bronchiolitis that did not result in an antibiotic dispensing event.
<b>Substantive Change:</b>	<p><b>Updated denominator criteria: Added:</b> coding for federally qualified health center (FQHC) services.</p> <p><b>Updated denominator criteria: For the MIPS CQMs Specifications collection type:</b> Table 1 – Antibiotic medications to be utilized for the denominator exclusion and numerator components:</p> <p><b>Removed:</b> Ketolides From Third generation cephalosporins: Ceftributen, Cefditoren</p>
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to update the denominator criteria to include coding for FQHC services to standardize codes in the value sets and align with the HEDIS version of this measure (<a href="https://www.ncqa.org/hedis/measures/avoidance-of-antibiotic-treatment-for-acute-bronchitis-bronchiolitis/">https://www.ncqa.org/hedis/measures/avoidance-of-antibiotic-treatment-for-acute-bronchitis-bronchiolitis/</a>).</p> <p>We proposed to update the list of antibiotic medications, found in Table 1 – Antibiotic Medications, used to determine patients who are appropriate for the denominator exclusion and numerator compliance. This update will ensure the appropriate patient population is being identified for denominator eligibility and ensuring the quality action is assessed appropriately by removing antibiotics that may not fully align with the measure intent and standardizing medication names to maintain alignment with the HEDIS measure.</p>
<p>We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53094), we are finalizing the changes to measure Q116 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

### D.14 Diabetes: Eye Exam

Category	Description
<b>CBE # / eCQM CBE #:</b>	0055 / N/A
<b>Quality #:</b>	117
<b>CMS eCQM ID:</b>	CMS131v12
<b>Current Collection Type:</b>	eCQM Specifications   MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients 18-75 years of age with diabetes and an active diagnosis of retinopathy in any part of the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or diabetics with no diagnosis of retinopathy in any part of the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or in the 12 months prior to the measurement period.
<b>Substantive Change:</b>	<p><b>Updated denominator exclusion: For the MIPS CQMs Specifications collection type: Added:</b> Dementia combinations: Donepezil-memantine <b>to</b> list of dementia exclusion medications.</p> <p><b>Updated numerator note: For the MIPS CQMs Specifications collection type: Added:</b> reporting of CPT 92229 meets the intent of the quality action for performance met.</p>
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to update the denominator exclusion for the MIPS CQMs Specifications collection type to include Donepezil-memantine in the list of dementia medication list, as this is an applicable medication for the purposes of the denominator exclusion. This medication is used for patients with dementia and therefore aligns with intent of the measure to exclude patients with this condition from the measure.</p> <p>Additionally for the MIPS CQMs Specifications collection type, we proposed to update the numerator note to indicate that denominator eligible patients who receive services under CPT code 92229 will meet the intent of the measure and should be included in the appropriate performance met numerator option, based on retinopathy findings.</p>
<p><i>Comment:</i> A couple of commenters indicated that clinicians who participate in MIPS have been required to make manual updates to EHR systems to document measure performance, which could prevent access to this vision saving technology for people with diabetes. An update to the CQMs file to include CPT 92229 will ensure consistency with the CY 2022 PFS and the technical specifications published by the measure steward for the Diabetes: Eye Exam measure (NCQA, HEDIS MY 2023 Vol 2 Value Set). The commenters supported the substantive change proposed to measure Q117: Diabetes: Eye Exam to add the following numerator note: “For the MIPS CQMs Specifications collection type: reporting of CPT 92229 meets the intent of the quality action for performance met.” Another commenter also supported the update to include CPT 92229 and CMS’ support in including the use of artificial intelligence in this measure.</p> <p><i>Response:</i> The inclusion of CPT 92229 within the denominator of the measure will bias the measure analytic and prevent it from performing as intended since the code is a direct correlation to numerator compliance. However, after discussion with the measure steward, NCQA, we have provided clarification within the numerator of the measure that allows clinicians to achieve numerator compliance if this code is documented within the medical record.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53094), we are finalizing the changes to measure Q117 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

**D.15 Coronary Artery Disease (CAD): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy - Diabetes or Left Ventricular Systolic Dysfunction (LVEF ≤ 40%)**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	0066 / N/A
<b>Quality #:</b>	118
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12-month period who also have diabetes OR a current or prior Left Ventricular Ejection Fraction (LVEF) ≤ 40% who were prescribed ACE inhibitor or ARB therapy.
<b>Substantive Change:</b>	<p><b>Updated denominator criteria: Removed:</b> For all submission criteria: coding for subsequent myocardial infarction.</p> <p><b>Updated denominator exception: Removed:</b> For all submission criteria: other reasons attributable to the health care system.</p>
<b>Measure Steward:</b>	American Heart Association
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to remove patients with subsequent MI from the denominator criteria as this patient population is duplicative in nature. For the purposes of this measure, those patients with a subsequent MI will already have a diagnosis of CAD from the initial MI. Therefore, these patients will already be correctly included in the denominator eligible patient population.</p> <p>We proposed to remove documentation of system reason(s) from the denominator exception as this option is not recommended for this measure due to wide-spread availability of these medications. This will also create alignment within the denominator exceptions across all AHA measures.</p>
<p>We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53095), we are finalizing the changes to measure Q118 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

**D.16 Preventive Care and Screening: Screening for Depression and Follow-Up Plan**

Category	Description
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	134
<b>CMS eCQM ID:</b>	CMS2v13
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications   eCQM Specifications   MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of or up to two days after the date of the qualifying encounter.
<b>Substantive Change:</b>	<p><b>Modified collection type:</b> Medicare CQMs Specifications, Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications collection type.</p> <p><b>Updated guidance: For the eCQM Specifications collection type: Revised:</b> The intent of the measure is to screen for new cases of depression in patients who have never had a diagnosis of bipolar disorder. Patients who have ever been diagnosed with bipolar disorder prior to the qualifying encounter used to evaluate the <b>numerator</b> will be excluded from the measure regardless of whether the diagnosis is active or not.</p> <p><b>Updated denominator exclusion: For all collection types: Removed:</b> Diagnosis of depression from the denominator exclusion.</p> <p><b>Updated denominator note: For the MIPS CQMs Specifications and Medicare Part B Claims Specifications collection types: Removed:</b> Diagnosis of depression from the denominator note.</p> <p><b>Updated denominator definition: For the MIPS CQMs Specifications and Medicare Part B Claims Specifications collection types: Removed:</b> Diagnosis of depression from the denominator exclusion definition.</p> <p><b>Updated denominator criteria: For all collection types: Added:</b> coding for qualifying encounters for nutritionists/dieticians and home-based health care.</p>
<b>Measure Steward:</b>	Centers for Medicare & Medicaid Services
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to update the collection types available for this measure to include the Medicare CQMs Specifications collection type to allow choice in submission method for SSP ACOs reporting via the APP. See section IV.A.4.f.(1)(b) and section III.G.2. for further information on the Medicare CQMs Specifications collection type.</p> <p>We proposed to revise the guidance for the eCQM Specifications collection type to reflect inclusion of patients with a previous inactive (or resolved) diagnosis of depression as it is important to identify patients who have been treated for depression in the past but may have re-emerging symptoms.</p> <p>We also proposed to revise the denominator exclusion to remove a diagnosis of depression as an applicable exclusion, as patients with a history of depression may require more frequent monitoring and ongoing treatment for reoccurrence of symptoms.</p> <p>We proposed to update the denominator to include encounter codes for nutritionists and dieticians, as well as home-based encounter codes, as it is clinically appropriate to conduct depression screenings during these encounters.</p>
<p><i>Comment:</i> One commenter supported the substantive changes proposed to measure Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan, as removing the pre-existing depression from the exclusions supports measurement-based care.</p> <p><i>Response:</i> We thank the commenter for supporting the substantive changes to this measure.</p> <p><i>Comment:</i> A couple of commenters did not support updating the denominator criteria to add qualifying encounters for nutritionists/dieticians (for all collection types). The commenters noted they did not believe it is clinically appropriate to routinely conduct depression screenings during these encounters and depression screening does not fall within the scope of practice for these clinicians. One commenter stated that patients are traditionally referred to these specialty services by a physician, physician assistant, or nurse practitioner. If the registered dietitian has concerns regarding the patient, they should assess the patient within their scope of practice and contact the referring clinician or follow their organizations guidelines for referral. Organizational processes should be followed regarding any emergency situations.</p> <p><i>Response:</i> We thank the commenters for their feedback. Because clinicians have the flexibility to choose which measures to report, the addition of this measure does not place additional burden on clinicians. We acknowledge that due to nuances in clinician specialization and subsequent scope of care, not all measures will be applicable or appropriate to all clinicians. However, no measures within traditional MIPS are required. We allow for clinician choice to account for these nuances, while ensuring clinicians can choose measures that are most meaningful to their scope of care and patient case-mix. The goal is to ensure we have a comprehensive set of measures that drive positive health outcomes as well as allow flexibility in clinician choice when determining the appropriateness of each measure.</p> <p><i>Comment:</i> One commenter did not support removal of a diagnosis of depression from the denominator exclusion. Patients who have an active diagnosis/active problem on problem list AND who are actively being treated for depression should NOT be screened for depression. The commenter recommended updating the denominator exclusion to state “patients who have current or an active diagnosis of depression during the current measurement period or the year prior to the measurement period.”</p> <p><i>Response:</i> As noted above, patients with a previous inactive or resolved diagnosis of depression are included in the measure as it is important to identify patients who may have re-emerging symptoms. The measure does not include patients who have an active diagnosis of depression and who are actively being treated for depression. We encourage the commenter to reach out to the measure steward to discuss revisions to this measure for possible implementation in future years.</p>	

<b>Category</b>	<b>Description</b>
	After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53095), we are finalizing the changes to measure Q134 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.

**D.17 Primary Open-Angle Glaucoma (POAG): Reduction of Intraocular Pressure (IOP) by 15% OR Documentation of a Plan of Care**

Category	Description
<b>CBE # / eCQM CBE #:</b>	0563 / N/A
<b>Quality #:</b>	141
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications   MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older with a diagnosis of primary open-angle glaucoma (POAG) whose glaucoma treatment has not failed (the most recent IOP was reduced by at least 15% from the pre-intervention level) OR if the most recent IOP was not reduced by at least 15% from the pre-intervention level, a plan of care was documented within the 12 month performance period.
<b>Substantive Change:</b>	<p><b>The measure title is revised from ‘Primary Open-Angle Glaucoma (POAG): Reduction of Intraocular Pressure (IOP) by 15% OR Documentation of a Plan of Care ’ to: Primary Open-Angle Glaucoma (POAG): Reduction of Intraocular Pressure (IOP) by 20% OR Documentation of a Plan of Care.</b></p> <p><b>The measure description is revised to read: For all collection types:</b> Percentage of patients aged 18 years and older with a diagnosis of primary open-angle glaucoma (POAG) whose glaucoma treatment has not failed (the most recent IOP was reduced by at least 20% from the pre-intervention level) OR if the most recent IOP was not reduced by at least 20% from the pre-intervention level, a plan of care was documented within the 12 month performance period.</p> <p><b>The measure numerator is revised to read: For all collection types:</b> Patients whose glaucoma treatment has not failed (the most recent IOP was reduced by at least 20% from the pre- intervention level) OR if the most recent IOP was not reduced by at least 20% from the pre-intervention level, a plan of care was documented within the 12 month performance period.</p> <p><b>Updated definitions: For all collection types: Revised: Glaucoma Treatment Not Failed –</b> The most recent IOP was reduced by at least 20% in the affected eye or if both eyes were affected, the reduction of at least 20% occurred in both eyes from pre-intervention levels.</p> <p><b>Updated numerator instructions: For all collection types: Revised:</b> to reflect an IOP reduction goal of 20% or more from pre-intervention levels.</p> <p><b>Updated numerator options: For all collection types: Revised:</b> to reflect an IOP reduction goal of 20% or more from pre-intervention levels.</p>
<b>Measure Steward:</b>	American Academy of Ophthalmology
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Outcome
<b>Rationale:</b>	We proposed to revise multiple components of this measure for all collection types to align with the latest scientific evidence that shows that 20 percent reduction in pre-intervention IOP optimizes patient outcomes by reducing the rate of worsening visual fields and is used as a benchmark for treatment outcomes. In a recent randomized clinical trial comparing phaco/Kahook Dual Blade to phaco/iStent, success was defined as at least a 20 percent reduction in IOP or reduction of one or more glaucoma medications from baseline. <sup>66</sup> In the only multicenter randomized clinical trial comparing minimally invasive glaucoma surgery standalone procedures, the COMPARE Study defined success as an unmedicated IOP reduction of at least 20 percent from baseline or unmedicated IOP less than or equal to 18 mmHg. <sup>67</sup>
<p><i>Comment:</i> One commenter had no concerns with the substantive changes proposed for measure Q141: Primary Open-Angle Glaucoma (POAG): Reduction of Intraocular Pressure (IOP) by 15% OR Documentation of a Plan of Care. The commenter regularly convenes panels of ophthalmologists with expertise in the guideline topic, a methodologist, and other experts to develop preferred practice patterns to guide practitioners based on the best available scientific evidence. For POAG treatment, its panel agreed with CMS’ suggestion that a “... reasonable initial treatment goal in a POAG patient is to reduce IOP 20 percent to 30 percent below baseline and to adjust up or down as indicated by disease course and severity.” The commenter supported CMS using the most up to date research and studies when working to adjust measures for MIPS.</p> <p><i>Response:</i> We thank the commenter for supporting the substantive changes to this measure.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53096), we are finalizing the changes to measure Q141 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>

### D.18 Functional Outcome Assessment

Category	Description
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	182
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of visits for patients aged 18 years and older with documentation of a current functional outcome assessment using a standardized functional outcome assessment tool on the date of the encounter AND documentation of a care plan based on identified functional outcome deficiencies within two days of the date of the identified deficiencies.
<b>Substantive Change:</b>	<p><b>Updated numerator definition: Revised:</b> Functional Outcome Deficiencies – Impairment, loss of function, or difficulty with participation in daily activities related to physical (e.g., musculoskeletal, cardiovascular, pulmonary, integumentary), sensory, cognitive, behavioral, or visual/perceptual impairments.</p> <p><b>Updated denominator criteria: Added:</b> coding for cognitive assessment.</p>
<b>Measure Steward:</b>	Centers for Medicare & Medicaid Services
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to update the numerator definition to describe assessment areas more accurately and completely for physical therapy and occupational therapy clinicians. We also proposed to add qualifying encounter coding utilized for cognitive assessment, as the quality action will be appropriate for this patient population.
<p><i>Comment:</i> One commenter supported the revisions to the numerator definition describing functional assessment areas as well as the addition of qualifying encounter coding utilized for cognitive assessment for measure Q182: Functional Outcome Assessment.</p> <p><i>Response:</i> We thank the commenter for supporting the substantive changes to this measure.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53097), we are finalizing the changes to measure Q182 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

### D.19 Stroke and Stroke Rehabilitation: Thrombolytic Therapy

Category	Description
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	187
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older with a diagnosis of acute ischemic stroke who arrive at the hospital within 3.5 hours of time last known well and for whom IV thrombolytic therapy was initiated within 4.5 hours of time last known well.
<b>Substantive Change:</b>	<b>Updated denominator exception: Removed:</b> Tenecteplase (TNK) as an example of a denominator exception.
<b>Measure Steward:</b>	American Heart Association
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to remove Tenecteplase (TNK) as one of the examples for the denominator exception as the numerator action is looking at patients for whom IV thrombolytic therapy was initiated within 4.5 hours.
We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53097), we are finalizing the changes to measure Q187 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

**D.20 Cataracts: 20/40 or Better Visual Acuity within 90 Days Following Cataract Surgery**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	0565 / 0565e
<b>Quality #:</b>	191
<b>CMS eCQM ID:</b>	CMS133v12
<b>Current Collection Type:</b>	eCQM Specifications   MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of cataract surgeries for patients aged 18 years and older with a diagnosis of uncomplicated cataract and no significant ocular conditions impacting the visual outcome of surgery and had best-corrected visual acuity of 20/40 or better (distance or near) achieved in the operative eye within 90 days following the cataract surgery.
<b>Substantive Change:</b>	<b>Updated logic and logic definitions: For the eCQM Specifications collection type: Revised:</b> logic to ensure surgeries on Sep 30 are included in the denominator.
<b>Measure Steward:</b>	American Academy of Ophthalmology
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Outcome
<b>Rationale:</b>	We proposed to revise the measure logic for the eCQM Specifications collection type to include cataract surgeries performed on September 30 to align with the measure intent of including all cataract surgeries performed between January 1 <sup>st</sup> and September 30 <sup>th</sup> of the measurement period.
We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53097), we are finalizing the changes to measure Q191 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

**D.21 HIV/AIDS: Sexually Transmitted Disease Screening for Chlamydia, Gonorrhea, and Syphilis**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	205
<b>CMS eCQM ID:</b>	CMS1188v1
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 13 years and older with a diagnosis of HIV/AIDS for whom chlamydia, gonorrhea, and syphilis screenings were performed at least once since the diagnosis of HIV infection.
<b>Substantive Change:</b>	<p><b>Modified collection type:</b> eCQM Specifications, MIPS CQMs Specifications collection type.</p> <p><b>The measure description is revised to read:</b> Percentage of patients 13 years of age and older with a diagnosis of HIV who had tests for syphilis, gonorrhea, and chlamydia performed within the performance period.</p> <p><b>Updated instructions: Removed:</b> Only patients who had at least two visits during the performance period, with at least 90 days between each visit will be counted in the denominator for this measure.</p> <p><b>The denominator is revised to read:</b> All patients 13 years of age and older at the start of the performance period with a diagnosis of HIV before the end of the performance period with an eligible encounter during the performance period.</p> <p><b>Updated denominator criteria: Revised:</b> age determined at start of the performance period.  <b>Removed:</b> At Least Two Denominator Eligible Encounters During the Measurement Year, With at Least 90 days Between Each.  <b>Added:</b> coding for nonphysician, physician, and qualified health care professional (QHP) telephone assessments, residence services, and preventive medicine.  <b>Updated denominator exclusion: Removed:</b> exclusion for patients receiving hospice services.</p> <p><b>The numerator is revised to read:</b> Patients who were tested for each of the following at least once during the performance period: syphilis, gonorrhea, and chlamydia.</p> <p><b>Updated denominator exception: Removed:</b> Chlamydia, gonorrhea, and syphilis screening results not documented (Patient refusal is the only allowed exception).</p>
<b>Measure Steward:</b>	Health Resources and Services Administration
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to update the collection types available for this measure to include the eCQM Specification collection type to allow choice in submission method.</p> <p>We proposed to update the measure to reflect the clinical recommendations<sup>68 69</sup> for annual sexually transmitted infections (STIs) screenings given the prevalence of sexually transmitted co-infections over the course of HIV disease. According to one literature review, the mean prevalence of STI co-infection was 16.3 percent with syphilis, gonorrhea, and chlamydia showing median rates of 9.5 percent, 9.5 percent, and 5 percent respectively.<sup>70</sup> A key takeaway from this review, continued high rates of co-occurring STIs in this patient population will hinder efforts in HIV transmission prevention.</p> <p>We proposed to update the instructions and denominator criteria to remove the requirement for at least two denominator eligible visits to ensure all patients who have been diagnosed with HIV receive appropriate testing. We proposed to revise the age anchor to be at the start of the performance period to reduce burden in implementation and add coding for preventive medicine encounters, nonphysician, physician, and qualified health care professional (QHP) telephone assessments, and home or residence visits as it will be appropriate for patients at these encounters to be assessed for the quality action. We proposed to remove the denominator exclusion for patients who use hospice services as it may still be appropriate to screen for and subsequently treat these infections. Additionally, we proposed to remove the denominator exception for patient refusal as these sexually transmitted diseases can increase the risk for HIV infection through increases in the infectiousness and an individual's susceptibility.<sup>71</sup></p>
<p><i>Comment:</i> A couple of commenters supported the substantive changes proposed to measure Q205: HIV/AIDS: Sexually Transmitted Disease Screening for Chlamydia, Gonorrhea, and Syphilis because they reflected recent updates to the USPSTF clinical guidelines for annual sexually transmitted infections screenings given the prevalence of sexually transmitted co-infections over the course of HIV disease. Additionally, lessening the measure's denominator criteria from two to one denominator-eligible encounter will ensure more patients are included in the measure population and will signal CMS' continued commitment to increase access to high-quality HIV care.</p> <p><i>Response:</i> We thank the commenters for supporting the substantive changes to this measure.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53098), we are finalizing the changes to measure Q205 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>

**D.22 Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	226
<b>CMS eCQM ID:</b>	CMS138v12
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications   eCQM Specifications   MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.
<b>Substantive Change:</b>	<p><b>Updated measure description: For all collection types: Revised:</b> Patient age to 12 years and older.</p> <p><b>Updated instructions: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised:</b> Patient age to 12 years and older.</p> <p><b>Updated initial patient population: For the eCQM Specifications Collection type: Revised:</b> All patients aged 12 years and older seen for at least two visits or at least one preventive visit during the measurement period.</p> <p><b>Updated denominator: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised:</b> For all submission criteria: Patient age to 12 years and older.</p> <p><b>Updated denominator criteria: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised:</b> For all submission criteria: Patient age to 12 years and older.</p> <p><b>Updated measure analytic: For all collection types: Revised:</b> data completeness will be determined utilizing performance rate one.</p>
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed revisions to this measure for all collection types to combine the patient population within Q402: Tobacco Use and Help with Quitting Among Adolescents with that of Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention resulting in a single, more robust measure, by lowering the denominator eligible age to 12 years and older to allow for the inclusion of adolescents into the measure's denominator. Measure Q402 is finalized for removal under Table C.11 of this Appendix.</p> <p>We proposed to update the analytic of the measure to utilize performance rate one for the determination of data completeness to ensure a complete data set is submitted and inclusive of all denominator eligible patients for this measure. As submission criteria two only includes those patients identified as tobacco users, the intent of the measure is to also ensure screening of all patients aged 12 years and older. Assessing data completeness utilizing submission criteria one will ensure that screening information was collected.</p>
<p><i>Comment:</i> A couple of commenters supported the proposed denominator expansion to measure Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention, as it will promote adolescent tobacco screening and tobacco cessation.</p> <p><i>Response:</i> We thank the commenters for supporting the substantive changes to this measure.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53099), we are finalizing the changes to measure Q226 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

### D.23 Controlling High Blood Pressure

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	236
<b>CMS eCQM ID:</b>	CMS165v12
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications   eCQM Specifications   MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients 18-85 years of age who had a diagnosis of essential hypertension starting before and continuing into, or starting during the first six months of the measurement period, and whose most recent blood pressure was adequately controlled (<140/90mmHg) during the measurement period.
<b>Substantive Change:</b>	<p><b>Modified collection type:</b> Medicare CQMs Specifications, Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications collection type.</p> <p><b>The measure guidance is revised to read: For the eCQM Specifications collection type:</b> In reference to the numerator element, only blood pressure readings performed by a clinician or an automated blood pressure monitor or device are acceptable for numerator compliance with this measure. This includes blood pressures taken in person by a clinician and blood pressures measured remotely by electronic monitoring devices capable of transmitting the blood pressure data to the clinician. Blood pressure readings taken by an automated blood pressure monitor or device and conveyed by the patient to the clinician are also acceptable. It is the clinician's responsibility and discretion to confirm the automated blood pressure monitor or device used to obtain the blood pressure is considered acceptable and reliable and whether the blood pressure reading is considered accurate before documenting it in the patient's medical record.</p> <p><b>The measure instructions note and numerator note are revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:</b> In reference to the numerator element, only blood pressure readings performed by a clinician or an automated blood pressure monitor or device are acceptable for numerator compliance with this measure. This includes blood pressures taken in person by a clinician and blood pressures measured remotely by electronic monitoring devices capable of transmitting the blood pressure data to the clinician. Blood pressure readings taken by an automated blood pressure monitor or device and conveyed by the patient to the clinician are also acceptable. It is the clinician's responsibility and discretion to confirm automated blood pressure monitor or device used to obtain the blood pressure is considered acceptable and reliable and whether the blood pressure reading is considered accurate before documenting it in the patient's medical record.</p> <p><b>Updated denominator exclusion: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Added:</b> Dementia combinations: Donepezil-memantine to list of dementia exclusion medications.</p> <p><b>The measure initial patient population is revised to read: For the eCQM Specifications collection type:</b> Patients 18-85 years of age by the end of the measurement period who had a visit during the measurement period and diagnosis of essential hypertension starting before and continuing into, or starting during the first six months of the measurement period.</p>
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Intermediate Outcome
<b>Rationale:</b>	<p>We proposed to update the collection types available for this measure to include the Medicare CQMs Specifications collection type to allow choice in submission method for SSP ACOs reporting via the APP. See section IV.A.4.f.(1)(b) and section III.G.2. for further information on the Medicare CQMs Specifications collection type.</p> <p>We proposed to revise the initial patient population for the eCQM Specifications collection type by specifying the patient visit must occur during the measurement period to clarify the encounter timing.</p> <p>We proposed to revise the measure guidance for the eCQM Specifications collection type and the instructions note and numerator note for the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types around remote monitoring devices for capturing blood pressure readings. Currently, the measure allows patient reported data using most methods of digital collection/reporting and prohibits patient reported data taken with non-digital devices, such as with a manual blood pressure cuff and stethoscope. The measure is agnostic to how the reading gets in and the documentation practice of each office; therefore, whether patient is "conveying the reading to the clinician" by manually entering the BP reading (for example, patient portal) or having the device auto-transmit data directly, it is the clinician's responsibility and discretion to confirm that the automated blood pressure monitor used to obtain the blood pressure is considered acceptable and reliable.</p> <p>Additionally, we proposed to update the denominator exclusion for the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types to include Donepezil-memantine in the list of dementia medication list, as this is an applicable medication for the purposes of the denominator exclusion. This medication is used for patients with dementia and therefore aligns with intent of the measure to exclude patients with this condition from the measure.</p>
<p><i>Comment:</i> One commenter requested for additional specific updates to the measure specifications for measure Q236: Controlling High Blood Pressure. The revised measure guidance states that it is the responsibility of each clinician to confirm the automated blood pressure monitor or device used to measure blood pressure is acceptable and reliable. However, it provides no guidance on how to determine if a device is accurate and reliable. Rather it puts the onus on the clinician to research and identify what device to use to ensure clinically accurate data. The commenter suggested that the measure only include blood pressure readings from devices on the United States Validated Device List (validateBP.org). The commenter agreed that the measure should include both an 'automated blood pressure monitor' and "device" but suggested the word 'device' may be confusing. The commenter suggested that "device" be replaced with "remote monitoring device."</p>	

<b>Category</b>	<b>Description</b>
	<p data-bbox="201 121 1406 174"><i>Response:</i> We encourage the commenter to reach out to the measure steward, NCQA, to communicate potential revisions to this measure for possible implementation in future years.</p> <p data-bbox="201 197 1354 247">After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53100), we are finalizing the changes to measure Q236 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>

**D.24 Use of High-Risk Medications in Older Adults**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	0022 / N/A
<b>Quality #:</b>	238
<b>CMS eCQM ID:</b>	CMS156v12
<b>Current Collection Type:</b>	eCQM Specifications   MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients 65 years of age and older who were ordered at least two high-risk medications from the same drug class.
<b>Substantive Change:</b>	<p><b>Updated numerator definition: For the MIPS CQMs Specifications collection type: Revised:</b>            For Numerator (Submission Criteria 1):            Definitions:            Table 1 - High-Risk Medications at any dose or duration:  <b>Revised:</b>            Antithrombotics – Dipyridamole (oral, excluding extended release)            Cardiovascular, other – Nifedipine (excluding extended release)</p> <p>Table 2 - High-Risk Medications With Days Supply Criteria  <b>Removed:</b>            From Anti-Infectives, other - Nitrofurantoin macrocrystals</p> <p>Table 3 - High-Risk Medications With Average Daily Dose Criteria  <b>Added:</b>            Description: Alpha agonists, central            Description: Cardiovascular, other            Description: Tertiary tricyclic antidepressants (TCAs) (as single agent or as part of combination products)  <b>Removed:</b>            Doxepin hydrochloride</p> <p>For Numerator (Submission Criteria 2):            Definitions:            Table 4 - High-Risk Medications  <b>Added:</b>            To Antipsychotics, first (conventional) and second (atypical) generation - Aripiprazole lauroxil</p> <p><b>The measure numerator is revised to read: For the eCQM Specifications collection type: Submission Criteria/Rate 2:</b>            Patients with at least two orders of high-risk medications from the same drug class (i.e., antipsychotics and benzodiazepines) on different days except for appropriate diagnoses.            a. Patients with two or more antipsychotic prescriptions ordered on different days, and who did not have a diagnosis of schizophrenia, schizoaffective disorder, or bipolar disorder on or between January 1 of the year prior to the measurement period and the IPSD for antipsychotics.            b. Patients with two or more benzodiazepine prescriptions ordered on different days, and who did not have a diagnosis of seizure disorders, rapid eye movement sleep behavior disorder, benzodiazepine withdrawal, ethanol withdrawal, or severe generalized anxiety disorder on or between January 1 of the year prior to the measurement period and the IPSD for benzodiazepines.</p> <p><b>Updated numerator exclusion: For the eCQM Specifications collection type: Removed: Rate 2:</b> For patients with two or more antipsychotic prescriptions ordered on different days, and who did not have a diagnosis of schizophrenia, schizoaffective disorder, or bipolar disorder on or between January 1 of the year prior to the measurement period and the IPSD for antipsychotics.            For patients with two or more benzodiazepine prescriptions ordered on different days, and who did not have a diagnosis of seizure disorders, rapid eye movement sleep behavior disorder, benzodiazepine withdrawal, ethanol withdrawal, or severe generalized anxiety disorder on or between January 1 of the year prior to the measurement period and the IPSD for benzodiazepines.</p> <p><b>Updated numerator logic: For the eCQM Specifications collection type: Revised:</b> for medications ordered on the same day intended to start on different dates.</p>
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to revise the medication tables for the MIPS CQMs Specifications collection type to align with the current guidelines and ensure appropriate high-risk medications are identified. This will align with the intent of the measure and ensure the appropriate patient population is being assessed for the quality action.</p> <p>We proposed to update the numerator for all collection types to clarify and ensure capture of the appropriate patient population. For the eCQM Specifications collection type, this was achieved by removing the standalone numerator exclusion and incorporating the exclusion language in the numerator criteria, to mitigate previous implementation concerns. Additionally, we proposed to add logic for medications ordered on the same day but intended to start on different dates.</p>
<p>We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53100 through 53101), we are finalizing the changes to measure Q238 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

### D.25 Childhood Immunization Status

Category	Description
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	240
<b>CMS eCQM ID:</b>	CMS117v12
<b>Current Collection Type:</b>	eCQM Specifications
<b>Current Measure Description:</b>	Percentage of children 2 years of age who had four diphtheria, tetanus and acellular pertussis (DTaP); three polio (IPV), one measles, mumps and rubella (MMR); three or four H influenza type B (HiB); three Hepatitis B (Hep B); one chicken pox (VZV); four pneumococcal conjugate (PCV); one Hepatitis A (Hep A); two or three rotavirus (RV); and two influenza (flu) vaccines by their second birthday.
<b>Substantive Change:</b>	<b>Updated numerator: Revised:</b> IPV, MMR, VZV, PCV, Hep A, and Flu: to allow for anaphylaxis due to the vaccine to count towards numerator compliance.
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to add language excluding patients with anaphylaxis due to vaccine administration to 6 of the 10 numerator criteria where applicable. A history of a severe allergic reaction to a vaccine should be considered a contraindication to additional doses of the same vaccine ( <a href="https://www.cdc.gov/vaccines/hcp/acip-recs/general-recs/adverse-reactions.html">https://www.cdc.gov/vaccines/hcp/acip-recs/general-recs/adverse-reactions.html</a> ).
We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53101), we are finalizing the changes to measure Q240 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

**D.26 Cardiac Rehabilitation Patient Referral from an Outpatient Setting**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	0643 / N/A
<b>Quality #:</b>	243
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	MIPS QOMs Specifications
<b>Current Measure Description:</b>	Percentage of patients evaluated in an outpatient setting who within the previous 12 months have experienced an acute myocardial infarction (MI), coronary artery bypass graft (CABG) surgery, a percutaneous coronary intervention (PCI), cardiac valve surgery, or cardiac transplantation, or who have chronic stable angina (CSA) and have not already participated in an early outpatient cardiac rehabilitation/secondary prevention (CR) program for the qualifying event/diagnosis who were referred to a CR program.
<b>Substantive Change:</b>	<b>Updated denominator criteria: Removed:</b> From 'Coronary Artery Bypass Graft Surgery' coding for endoscopic procedures on the heart and pericardium.
<b>Measure Steward:</b>	American Heart Association
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to remove coding for endoscopic procedures of the heart and pericardium as the coding is more related to the harvest of the artery and not the cardiac surgery itself and therefore, these patients may not be appropriate for the quality action.
We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53102), we are finalizing the changes to measure Q243 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

**D.27 Ultrasound Determination of Pregnancy Location for Pregnant Patients with Abdominal Pain**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	254
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of pregnant female patients aged 14 to 50 who present to the emergency department (ED) with a chief complaint of abdominal pain or vaginal bleeding who receive a trans-abdominal or trans-vaginal ultrasound to determine pregnancy location.
<b>Substantive Change:</b>	<p><b>Updated denominator criteria:</b>  <b>Revised:</b> Diagnosis of Other Current Condition in the Mother Classifiable Elsewhere but Complicating Pregnancy, Childbirth, or the Puerperium to Current Diagnosis of Pregnancy.  <b>Added:</b> coding for other and unspecified abnormal uterine and vaginal bleeding and current diagnosis of pregnancy.</p> <p><b>Updated denominator exception: Removed:</b> patient has visited the ED multiple times within 72 hours.</p> <p><b>Updated measure instructions and numerator instructions: Revised:</b> submission frequency from each time to each visit.</p>
<b>Measure Steward:</b>	American College of Emergency Physicians
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to update the denominator criteria to include other and unspecified abnormal uterine and vaginal bleeding coding and revised the criteria for pregnancy to ensure all applicable patients are being included in the denominator eligible population and are being appropriately assessed. Additionally, we proposed to remove the exception for those patients that have visited the ED multiple times within 72 hours and revise the measure submission to each denominator eligible visit as it will be clinically appropriate for them to receive an ultrasound with pregnancy location determination at each visit.
We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53102), we are finalizing the changes to measure Q254 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

**D.28 Inflammatory Bowel Disease (IBD): Assessment of Hepatitis B Virus (HBV) Status Before Initiating Anti-TNF (Tumor Necrosis Factor) Therapy**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	275
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients with a diagnosis of inflammatory bowel disease (IBD) who had Hepatitis B Virus (HBV) status assessed and results interpreted prior to initiating anti-TNF (tumor necrosis factor) therapy.
<b>Substantive Change:</b>	<p><b>The measure denominator is revised to read:</b> All patients, regardless of age, with a diagnosis of inflammatory bowel disease who initiated an anti-TNF agent during the performance period.</p> <p><b>Updated denominator definition: Revised:</b> initiated an anti-TNF agent.</p> <p><b>Updated denominator criteria: Revised:</b> initiated an anti-TNF agent.</p>
<b>Measure Steward:</b>	American Gastroenterological Association
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to add initiated an anti-TNF agent during the performance period in order to capture the intended patient population accurately. As the measure is currently written, it will allow patients who initiated treatment prior to the performance period and could inflate the intended population and possibly impact performance negatively with no clinician recourse.
We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53102), we are finalizing the changes to measure Q275 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

**D.29 Sleep Apnea: Assessment of Adherence to Positive Airway Pressure Therapy**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	279
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of visits for patients aged 18 years and older with a diagnosis of obstructive sleep apnea who were prescribed positive airway pressure therapy who had documentation that adherence to positive airway pressure therapy was objectively measured.
<b>Substantive Change:</b>	<p><b>The measure title is revised from ‘Sleep Apnea: Assessment of Adherence to Positive Airway Pressure Therapy’ to:</b> Sleep Apnea: Assessment of Adherence to Obstructive Sleep Apnea (OSA) Therapy.</p> <p><b>The measure description is revised to read:</b> Percentage of patients aged 18 years and older with a diagnosis of obstructive sleep apnea (OSA) that were prescribed an evidence-based therapy that had documentation that adherence to therapy was assessed at least annually through an objective informatics system or through self-reporting (if objective reporting is not available).</p> <p><b>The measure denominator is revised to read:</b> All patients aged 18 years and older with obstructive sleep apnea who were prescribed an evidence-based therapy.</p> <p><b>Updated denominator definition: Added:</b> Evidence-based Therapy – includes positive airway pressure, oral appliances, positional therapies, hypoglossal nerve stimulation, or other devices with monitoring capabilities.</p> <p><b>Updated denominator criteria: Revised:</b> coding to reflect a diagnosis of obstructive sleep apnea. <b>Revised:</b> Evidence-based therapy was prescribed.</p> <p><b>Updated numerator: Revised:</b> Patients with documentation that adherence to therapy was assessed at least annually through an objective informatics system or through self-reporting (if objective reporting is not available).</p> <p><b>Updated numerator definition: Added:</b> Documentation of adherence to therapy – includes a note documented in the patient’s medical record that patient is adherent to the prescribed therapy for obstructive sleep apnea.</p> <p>Objective Informatics – a telemonitoring system that shows data demonstrating patient adherence to the prescribed therapy for obstructive sleep apnea (i.e., CPAP machines with SD cards that store data).</p> <p>Self-Reporting – patient and/or parent/caregiver attests to compliance with prescribed therapy for obstructive sleep apnea, which is documented in the medical record.</p> <p>Objective Reporting – data that are reported from an objective informatics or other data source and is not reported by the patient or parent/caregiver. <b>Removed:</b> Objectively Measured definition.</p> <p><b>Updated numerator options: Revised:</b> Performance Met: Adherence to therapy was assessed at least annually through an objective informatics system or through self-reporting (if objective reporting is not available, documented) Denominator Exception: Documentation of reason(s) for not objectively reporting adherence to evidence-based therapy (e.g., patients who have been diagnosed with a terminal or advanced disease with an expected life span of less than 6 months, patients who decline therapy, patients who do not return for follow-up at least annually, patients unable to access/afford therapy, patient’s insurance will not cover therapy) Performance Not Met: Adherence to therapy was not assessed at least annually through an objective informatics system or through self-reporting (if objective reporting is not available), reason not given.</p>
<b>Measure Steward:</b>	American Academy of Sleep Medicine
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to update multiple components of this measure to reflect on the assessment of patients with obstructive sleep apnea (OSA) who were prescribed an evidence-based therapy by revising the denominator criteria to reflect this patient population. We proposed revisions to this measure to add flexibility in how the numerator is evaluated by allowing self-reporting for patients who do not have access to objective informatics systems or where resources may not be available. Additionally, we proposed to add definitions that will clarify the intended denominator eligible patient population and appropriate clinical action for numerator compliance.
<i>Comment:</i> One commenter supported the substantive changes proposed to measure Q279: Sleep Apnea: Assessment of Adherence to Positive Airway Pressure Therapy.	
<i>Response:</i> We thank the commenter for supporting the substantive changes to this measure.	
After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53103), we are finalizing the changes to measure Q279 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

**D.30 Assessment of Cognitive Impairment or Dysfunction for Patients with Parkinson’s Disease**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	291
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of all patients with a diagnosis of Parkinson’s Disease (PD) who were assessed for cognitive impairment or dysfunction once during the measurement period.
<b>Substantive Change:</b>	<b>Updated denominator criteria: Added:</b> coding for speech language pathology and occupational therapy clinician types.
<b>Measure Steward:</b>	American Academy of Neurology
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to add additional coding for speech language pathology and occupational therapy encounters. This will ensure a more complete denominator patient population is captured as it will be clinically appropriate for these clinician types to complete the quality action.
<p><i>Comment:</i> One commenter supported the addition of occupational therapy (OT) coding to measure Q291: Assessment of Cognitive Impairment or Dysfunction for Patients with Parkinson’s Disease to reflect services provided by OT practitioners to these patient populations.</p> <p><i>Response:</i> We thank the commenter for supporting the substantive changes to this measure.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53104), we are finalizing the changes to measure Q291 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

### D.31 Chlamydia Screening for Women

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	310
<b>CMS eCQM ID:</b>	CMS153v12
<b>Current Collection Type:</b>	eCQM Specifications
<b>Current Measure Description:</b>	Percentage of women 16-24 years of age who were identified as sexually active and who had at least one test for chlamydia during the measurement period.
<b>Substantive Change:</b>	<b>Updated denominator exclusion: Revised:</b> Women who are only eligible for the initial population due to a pregnancy test during the measurement period, and who had an order for an x-ray or for a specified medication on the date of the pregnancy test or the six days after the pregnancy test.
<b>Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to revise the denominator exclusion language to clarify the timing. The original measure language "within 7 days" is ambiguous as it can be interpreted as either "7 days after pregnancy test" or "on the day of pregnancy test and 6 days after". Therefore, clarifying the timeframe within the measure to evaluate a 7-day period better aligns with the measure intent of to include the day of the pregnancy test.
<p><i>Comment:</i> One commenter supported the substantive changes proposed to measure Q310: Chlamydia Screening for Women.</p> <p><i>Response:</i> We thank the commenter for supporting the substantive changes to this measure.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53104), we are finalizing the changes to measure Q310 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

**D.32 Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	317
<b>CMS eCQM ID:</b>	CMS22v12
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications   eCQM Specifications   MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is elevated or hypertensive.
<b>Substantive Change:</b>	<b>Updated denominator: For all collection types: Added:</b> coding for audiology.
<b>Steward:</b>	Centers for Medicare & Medicaid Services
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to update the denominator criteria for all collection types to include audiology codes within the denominator eligible encounter criteria as this measure is applicable to their scope of care. Patients with high blood pressure are at an increased risk of hearing loss as compared to those without hypertension, making this concept important for audiologists to assess. <sup>72</sup>
We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53105), we are finalizing the changes to measure Q317 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

72. Agarwal, S., Mishra, A., Jagade, M., Kasbekar, V., & Nagle, S. K. (2013). Effects of Hypertension on Hearing. *Indian Journal of Otolaryngology and Head and Neck Surgery: Official Publication of the Association of Otolaryngologists of India*, 65(Suppl 3), 614–618. <https://doi.org/10.1007/s12070-013-0630-1>.

**D.33 Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	326
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older with atrial fibrillation (AF) or atrial flutter who were prescribed an FDA-approved oral anticoagulant drug for the prevention of thromboembolism during the measurement period.
<b>Substantive Change:</b>	<b>Updated denominator exception: Revised:</b> Documentation of medical reason(s) for not prescribing an FDA-approved anticoagulant (e.g., present or planned atrial appendage occlusion or ligation or patient being currently enrolled in a clinical trial related to AF/atrial flutter treatment) <b>Removed:</b> documentation of system reasons exception.
<b>Steward:</b>	American Heart Association
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to update the denominator exception to include patients currently being enrolled in a clinical trial related to AF/atrial flutter treatment as a medical reason for exception. Patients that are enrolled into a clinical trial related to AF/atrial flutter treatment may have contraindications for receiving FDA-approved oral anticoagulant drug therapy. Additionally, we proposed to remove the denominator exception for documentation of system reason(s) as this option is not recommended for this measure due to wide-spread availability of these medications. This will also create alignment within the denominator exceptions across all American Heart Association (AHA) measures.
We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53106), we are finalizing the changes to measure Q326 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

**D.34 Adult Sinusitis: Antibiotic Prescribed for Acute Viral Sinusitis (Overuse)**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	331
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients, aged 18 years and older, with a diagnosis of acute viral sinusitis who were prescribed an antibiotic within 10 days after onset of symptoms.
<b>Substantive Change:</b>	<b>Updated instructions: Added:</b> Each unique occurrence is defined as a 90-day period from onset of acute viral sinusitis symptoms. If multiple occurrences are documented within a 90-day period, Merit-based Incentive Payment System (MIPS) eligible clinicians should submit the most recent instance.
<b>Measure Steward:</b>	American Academy of Otolaryngology – Head and Neck Surgery Foundation
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to revise the measure instructions to include additional clarifying language to remove ambiguity related to the definition of an occurrence of acute viral sinusitis. The revisions define a unique occurrence of acute viral sinusitis as a 90-day period from onset of acute viral sinusitis and include guidance in instances where multiple occurrences are documented.
We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53106), we are finalizing the changes to measure Q331 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

### D.35 HIV Viral Load Suppression

Category	Description
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	338
<b>CMS eCQM ID:</b>	CMS314v1
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	The percentage of patients, regardless of age, with a diagnosis of HIV with a HIV viral load less than 200 copies/mL at last HIV viral load test during the measurement year.
<b>Substantive Change:</b>	<p><b>Modified collection type:</b> eCQM Specifications, MIPS CQMs Specifications collection type.</p> <p><b>Updated instructions: Revised:</b> timing for patient encounter to the first 240 days of the performance period.</p> <p><b>The measure description is revised to read:</b> Percentage of patients, regardless of age, diagnosed with HIV prior to or during the first 90 days of the performance period, with an eligible encounter in the first 240 days of the performance period, whose last HIV viral load test result was less than 200 copies/mL during the performance period.</p> <p><b>The measure denominator is revised to read:</b> All patients, regardless of age, diagnosed with HIV prior to or during the first 90 days of the performance period with at least one eligible encounter in the first 240 days of the performance period.</p> <p><b>Updated denominator criteria: Added:</b> coding for nonphysician, physician, and qualified health care professional (QHP) telephone assessments, residence services, and preventive medicine.  <b>Revised:</b> timing for HIV diagnosis to be prior to or during the first 90 days of the performance period.  <b>Revised:</b> timing for the denominator eligible encounter to occur during the first 240 days of the performance period.</p>
<b>Measure Steward:</b>	Health Resources and Services Administration
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Outcome
<b>Rationale:</b>	<p>We proposed to update the collection types available for this measure to include the eCQM Specification collection type to allow choice in submission method.</p> <p>We proposed to revise the measure description and denominator to update the timing of the patient's HIV diagnosis and eligible encounter. Requiring the HIV diagnosis before or with the first 3 months of the performance period in conjunction with limiting the eligible encounter timeframe allows the MIPS eligible clinician time to treat the patient in an effort to achieve numerator compliance. A viral load less than 200 copies/mL is optimal for patients with HIV to stay healthy and reduce transmission to others (<a href="https://www.cdc.gov/hiv/risk/art/index.html">https://www.cdc.gov/hiv/risk/art/index.html</a>). According to the Panel on Antiretroviral Guidelines for Adults and Adolescents, antiretroviral therapy (ART) should be initiated as soon as possible after HIV diagnosis (<a href="https://www.ncbi.nlm.nih.gov/books/NBK586306/">https://www.ncbi.nlm.nih.gov/books/NBK586306/</a>). Furthermore, the Panel on Antiretroviral Guidelines for Adults and Adolescents states indicates that individuals who are adherent to their ARV regimen and do not harbor resistance mutations to the component drugs can generally achieve suppression 8 to 24 weeks after ART initiation; rarely, in some patients it may take longer.</p> <p>Additionally, we proposed to update the measure to include coding for telephone assessments with nonphysician/QHPs, residence services, and preventive medicine visits within the denominator eligible encounter criteria as this measure is applicable to the scope of care given by these clinicians.</p>
<p><i>Comment:</i> One commenter supported the proposed changes to measure Q338: HIV Viral Load Suppression. The commenter agreed that the proposed modifications, requiring the HIV diagnosis before or within the first 3 months of the performance period, allows the clinician the necessary time to treat the patient to achieve numerator compliance.</p> <p><i>Response:</i> We thank the commenter for supporting the substantive changes to this measure.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53107), we are finalizing the changes to measure Q338 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

**D.36 Follow-Up Care for Children Prescribed ADHD Medication (ADD)**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	366
<b>CMS eCQM ID:</b>	CMS136v13
<b>Current Collection Type:</b>	eCQM Specifications
<b>Current Measure Description:</b>	<p>Percentage of children 6-12 years of age and newly prescribed a medication for attention-deficit/hyperactivity disorder (ADHD) who had appropriate follow-up care. Two rates are reported.</p> <p>a) Percentage of children who had one follow-up visit with a practitioner with prescribing authority during the 30-Day Initiation Phase.</p> <p>b) Percentage of children who remained on ADHD medication for at least 210 days and who, in addition to the visit in the Initiation Phase, had at least two additional follow-up visits with a practitioner within 270 days (9 months) after the Initiation Phase ended.</p>
<b>Substantive Change:</b>	<p><b>Updated definition: Added:</b>            Treatment days (covered days): The actual number of calendar days covered with prescriptions during the 301-day period.            Use the following steps to identify and calculate covered days.            Step 1: For same medications that are prescribed on the same day or on different days with overlapping days' supply, the days' supply is summed. The start and end dates are then identified. The start date is the date of service of the earliest prescription event and the first covered day. The end date is the calendar day when the days' supply runs out. The start date through the end date are considered covered days. This rule assumes that the patient will take one prescription at a time (and start taking the next prescription after exhausting the previous prescription). For example:            - If there are three 7-days' supply prescription events for the same medication on January 1, the start date is January 1 and the end date is January 21. Covered days include January 1–21.            - If there are two 7-days' supply prescription events for the same medication on January 1 and January 5, the start date is January 1 and the end date is January 14. Covered days include January 1–14.            - If there are three 7-days' supply prescription events for the same medication on January 1, a 7-days' supply prescription event on January 20 and a 7-days' supply prescription event on January 28, the start date is January 1 and the end date is February 4. Covered days include January 1–February 4.            Step 2: For all other events (multiple prescriptions for the same medication on different days without overlap, multiple prescriptions for different medications on the same or different days, with or without overlap), the covered days are identified by the start and end dates for each prescription event individually. The start date through the end date are considered covered days. This rule assumes the member will take the different medications concurrently.            Step 3: Each calendar day covered by one or more medications is considered one covered day.</p> <p><b>The initial patient population is revised to read:</b>            Initial Population 1: Children 6-12 years of age as of the Intake Period who had an IPSD and who had a visit within 6 months prior to the IPSD including the IPSD. Children are removed if they had an acute inpatient stay with a principal diagnosis of mental, behavioral or neurodevelopmental disorder during the Initiation Phase.            Initial Population 2: Children 6-12 years of age as of the Intake Period who had an IPSD and remained on the medication for at least 210 treatment days during the 301-day period, beginning on the IPSD through 300 days after the IPSD, and who had a visit within 6 months prior to the IPSD including the IPSD. Children are removed if they had an acute inpatient stay with a principal diagnosis of mental, behavioral or neurodevelopmental disorder during the Continuation and Maintenance Phase.</p> <p><b>The measure numerator is revised to read:</b> Numerator 2: Patients who had at least one visit with a practitioner with prescribing authority during the Initiation Phase, and at least two follow-up visits on different dates of service during the 31-300 days after the IPSD.</p>
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed revisions to this measure that will simplify the logic and create definitions to align with the HEDIS measure by identifying the index prescription start date (IPSD) with negative medication history. We also proposed to change the denominator qualifying encounter timeframe from during the measurement year to 6 months prior to the IPSD, which will enable the measure to attribute patients to clinicians who have a greater chance of interacting with the patient and/or prescribing the medication.</p> <p>Additionally, we proposed to revise the numerator to align with the measure intent by clarifying that the two follow-up visits must occur on different dates.</p>
<p>We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53108), we are finalizing the changes to measure Q366 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

**D.37 Depression Remission at Twelve Months**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	0710 / 0710e
<b>Quality #:</b>	370
<b>CMS eCQM ID:</b>	CMS159v12
<b>Current Collection Type:</b>	eCQM Specifications   MIPS CQMs Specifications

<b>Category</b>	<b>Description</b>
<b>Current Measure Description:</b>	The percentage of adolescent patients 12 to 17 years of age and adult patients 18 years of age or older with major depression or dysthymia who reached remission 12 months (+/- 60 days) after an index event date.
<b>Substantive Change:</b>	<b>Updated denominator exclusion: For all collection types: Removed:</b> Exclusion for patients who were permanent nursing home residents during the denominator identification period or the measure assessment period.
<b>Measure Steward:</b>	Minnesota Community Measurement
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Outcome
<b>Rationale:</b>	We proposed to update all collection types to remove the denominator exclusion related to patients who were permanent nursing home residents. This component has an extremely low rate of use, demonstrating that it is not a meaningful exclusion for the measure.
We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53109), we are finalizing the changes to measure Q370 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

**D.38 Functional Status Assessment for Total Hip Replacement**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	376
<b>CMS eCQM ID:</b>	CMS56v12
<b>Current Collection Type:</b>	eCQM Specifications
<b>Current Measure Description:</b>	Percentage of patients 19 years of age and older who received an elective primary total hip arthroplasty (THA) and completed a functional status assessment within 90 days prior to the surgery and in the 270 – 365 days after the surgery.
<b>Substantive Change:</b>	<p><b>The measure description is revised to read:</b> Percentage of patients 19 years of age and older who received an elective primary total hip arthroplasty (THA) and completed a functional status assessment within 90 days prior to the surgery and in the 300 – 425 days after the surgery.</p> <p><b>The measure denominator exclusions are revised to read:</b></p> <ol style="list-style-type: none"> <li>1. Exclude patients who are in hospice care for any part of the measurement period.</li> <li>2. Exclude patients with severe cognitive impairment that starts before or in any part of the measurement period.</li> <li>3. Exclude patients with one or more specific lower body fractures indicating trauma in the 24 hours before or at the start of the total hip arthroplasty.</li> <li>4. Exclude patients with a partial hip arthroplasty procedure on the day of the total hip arthroplasty.</li> <li>5. Exclude patients with a revision hip arthroplasty procedure, an implanted device/prosthesis removal procedure or a resurfacing/supplement procedure on the day of the total hip arthroplasty.</li> <li>6. Exclude patients with a malignant neoplasm of the pelvis, sacrum, coccyx, lower limbs, or bone/bone marrow or a disseminated malignant neoplasm on the day of the total hip arthroplasty.</li> <li>7. Exclude patients with a mechanical complication on the day of the total hip arthroplasty.</li> <li>8. Exclude patients with a second total hip arthroplasty procedure 1 year before or after the original total hip arthroplasty procedure.</li> <li>9. Exclude patients who die on the day of the total hip arthroplasty procedure or in the 300 days after.</li> </ol> <p><b>The initial patient population is revised to read:</b> Patients 19 years of age and older who had a primary THA between November two years prior to the measurement period and October of the year prior to measurement period; and who had an outpatient encounter between November of the year prior to the measurement period and the end of the measurement period.</p> <p><b>Updated numerator: Revised:</b> timeframe for follow-up assessment to 300 – 425 days after the THA procedure.</p>
<b>Measure Steward:</b>	Centers for Medicare & Medicaid Services
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to change the fracture exclusion from two fractures at the time of the procedure to one lower body fracture that will more accurately indicate a non-elective THA. We proposed to add denominator exclusions to remove patients who do not receive elective THA and will not be appropriate for quality action assessment.</p> <p>We also proposed to revise the initial patient population to push back the procedure timing and revise the numerator to extend the follow-up functional status assessment timing. This change harmonizes procedure and follow-up timing with other similar measures within the program reducing clinician burden when submitting similar measures across programs. This revision will also be reflected in the measure description.</p>
<p><i>Comment:</i> One commenter supported adjusting the timeframe for follow-up assessment and the exclusion of all patients who have a fracture diagnosis at the time of the procedure to measure Q376: Functional Status Assessment for Total Hip Replacement. The commenter indicated the exclusion should be broader to exclude patients who have a lower extremity fracture diagnosed during the admission for THA and prior to the start of the surgery. Many patients will have a delay of over 24 hours before getting surgery for a hip fracture and the standard is to operate before 48 hours. The commenter noted that by setting the measure to exclude only those diagnosed within 24 hours of the start of the THA, CMS is effectively excluding the healthiest fracture patients who get a THA and including the sickest.</p> <p><i>Response:</i> We thank the commenter for supporting the substantive changes to this measure. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53109), we are finalizing the changes to measure Q376 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

### D.39 Children Who Have Dental Decay or Cavities

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	378
<b>CMS eCQM ID:</b>	CMS75v12
<b>Current Collection Type:</b>	eCQM Specifications
<b>Current Measure Description:</b>	Percentage of children, 6 months to 20 years of age at the start of the measurement period, who have had tooth decay or cavities during the measurement period as determined by a dentist.
<b>Substantive Change:</b>	<p><b>The measure description is revised to read:</b> Percentage of children, 1 – 20 years of age at the start of the measurement period, who have had tooth decay or cavities during the measurement period as determined by a dentist.</p> <p><b>The measure initial patient population is revised to read:</b> Children, 1 – 20 years of age at the start of the measurement period, with a clinical oral evaluation by a dentist during the measurement period.</p>
<b>Measure Steward:</b>	Centers for Medicare & Medicaid Services
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Outcome
<b>Rationale:</b>	We proposed to revise the age range in the description and the initial patient population, as dental visits before age one are not significantly related to first dental examinations ( <a href="https://pubmed.ncbi.nlm.nih.gov/25422016/">https://pubmed.ncbi.nlm.nih.gov/25422016/</a> ). This change creates alignment with measures across programs such as the Medicaid Child Core set dental measures and the Dental Quality Alliance measures.
We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53110), we are finalizing the changes to measure Q378 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

**D.40 Primary Caries Prevention Intervention as Offered by Dentists**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	379
<b>CMS eCQM ID:</b>	CMS74v13
<b>Current Collection Type:</b>	eCQM Specifications
<b>Current Measure Description:</b>	Percentage of children, 6 months to 20 years of age, who received a fluoride varnish application during the measurement period as determined by a dentist.
<b>Substantive Change:</b>	<p><b>The measure description is revised to read:</b> Percentage of children, 1 – 20 years of age, who received two fluoride varnish applications during the measurement period as determined by a dentist.</p> <p><b>Updated stratification: Revised:</b> Population 1 to reflect patient 1 – 5 years of age.</p> <p><b>The measure initial patient population is revised to read:</b> Children, 1 – 20 years of age at the start of the measurement period, with a clinical oral evaluation by a dentist during the measurement period.</p> <p><b>Updated numerator: Revised:</b> to require two fluoride varnishes on different days during the measurement period.</p>
<b>Measure Steward:</b>	Centers for Medicare & Medicaid Services
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to revise the age range for this measure as dental visits before age one is not significantly related to first dental examinations (<a href="https://pubmed.ncbi.nlm.nih.gov/25422016/">https://pubmed.ncbi.nlm.nih.gov/25422016/</a>). This change creates alignment with measures across programs such as the Medicaid Child Core set dental measures and the Dental Quality Alliance measures.</p> <p>Also, we proposed to update the numerator to require two fluoride applications within the measurement period as opposed to one fluoride application. This change will also align the measure with current evidence, clinical recommendations, and with the Topical Fluoride for Children measure used in the Medicaid Child Core set as well as the Topical Fluoride for Children measure stewarded by the Dental Quality Alliance (<a href="https://jada.ada.org/article/S0002-8177(14)60659-0/fulltext">https://jada.ada.org/article/S0002-8177(14)60659-0/fulltext</a>).</p>
<p>We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53110), we are finalizing the changes to measure Q379 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

**D.41 Child and Adolescent Major Depressive Disorder (MDD): Suicide Risk Assessment**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	382
<b>CMS eCQM ID:</b>	CMS177v12
<b>Current Collection Type:</b>	eCQM Specifications
<b>Current Measure Description:</b>	Percentage of patient visits for those patients aged 6 through 17 years with a diagnosis of major depressive disorder (MDD) with an assessment for suicide risk.
<b>Substantive Change:</b>	<p><b>The measure description is revised to read:</b> Percentage of patient visits for those patients aged 6 through 16 years at the start of the measurement period with a diagnosis of major depressive disorder (MDD) with an assessment for suicide risk.</p> <p><b>The initial patient population is revised to read:</b> All patient visits for those patients aged 6 through 16 at the start of the measurement period with a diagnosis of major depressive disorder.</p>
<b>Measure Steward:</b>	Mathematica
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to revise the measure description and initial patient population for the upper age limit to specify patients should be 16 years of age at the start of the measurement period. This will align with the current measure logic, which does not include patients who are 17 years of age.
We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53110), we are finalizing the changes to measure Q382 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

**D.42 Adherence to Antipsychotic Medications For Individuals with Schizophrenia**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	1879 / N/A
<b>Quality #:</b>	383
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of individuals at least 18 years of age as of the beginning of the performance period with schizophrenia or schizoaffective disorder who had at least two prescriptions filled for any antipsychotic medication and who had a Proportion of Days Covered (PDC) of at least 0.8 for antipsychotic medications during the performance period.
<b>Substantive Change:</b>	<b>Updated denominator criteria: Added:</b> additional outpatient place of service coding. <b>Updated denominator exclusion: Revised:</b> to exclude patients who have ever had a diagnosis of dementia.
<b>Measure Steward:</b>	Centers for Medicare & Medicaid Services
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Intermediate Outcome
<b>Rationale:</b>	We proposed to add additional outpatient place of service coding for use with encounter coding for the outpatient, emergency department, and non-acute inpatient setting as schizophrenia may be diagnosed at encounters within these settings. This will ensure a complete denominator patient population is captured for quality action assessment. Also, we proposed to expand the denominator exclusion so that it applies to patients who have ever had dementia as it is a chronic condition that cannot be resolved, and use of antipsychotics should be reserved for severe symptoms that have failed to respond adequately to nonpharmacological management strategies ( <a href="https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4994396/">https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4994396/</a> ).
We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53111), we are finalizing the changes to measure Q383 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

**D.43 Amyotrophic Lateral Sclerosis (ALS) Patient Care Preferences**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	386
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients diagnosed with Amyotrophic Lateral Sclerosis (ALS) who were offered assistance in planning for end of life issues (e.g., advance directives, invasive ventilation, hospice) at least once annually.
<b>Substantive Change:</b>	<p><b>The description is revised to read:</b> Percentage of patients diagnosed with Amyotrophic Lateral Sclerosis (ALS) who were offered assistance in planning for end of life issues (e.g., advance directives, invasive ventilation, lawful physician-hastened death, or hospice) or whose existing end of life plan was reviewed or updated at least once annually or more frequently as clinically indicated (i.e., rapid progression).</p> <p><b>The numerator is revised to read:</b> Patients who were offered assistance in planning for end of life issues or whose existing end of life plan was reviewed or updated at least once annually or more frequently as clinically indicated (i.e., rapid progression).</p> <p><b>Updated numerator options: Revised:</b> to include the concept of reviewing and updating an existing end of life plan.</p>
<b>Measure Steward:</b>	American Academy of Neurology
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to revise the description, numerator, and numerator options to reflect numerator compliance for reviewing or updating an existing end of life plan. These revisions work to clarify the intent of the measure in regard to end of life issues and frequency, as well as the quality actions that will meet the intent of this measure, continuing to stress the importance of end of life planning.
We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53111), we are finalizing the changes to measure Q386 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

#### D.44 Optimal Asthma Control

Category	Description
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	398
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Composite measure of the percentage of pediatric and adult patients whose asthma is well-controlled as demonstrated by one of three age appropriate patient reported outcome tools and not at risk for exacerbation.
<b>Substantive Change:</b>	<b>Updated denominator exclusion: Removed:</b> Patients who were permanent nursing home residents any time during the performance period.
<b>Measure Steward:</b>	Minnesota Community Measurement
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Outcome
<b>Rationale:</b>	We proposed to update the measure criteria to remove patients who were permanent nursing home residents any time during the performance period from the denominator exclusions and allow these patients to be included within the denominator of this measure. Patients within a nursing home should still be assessed for the quality action within this measure as it supports overall health and quality of life.
We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53111), we are finalizing the changes to measure Q398 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

**D.45 One-Time Screening for Hepatitis C Virus (HCV) for all Patients**

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	400
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients age >= 18 years who received one-time screening for Hepatitis C Virus (HCV) infection.
<b>Substantive Change:</b>	<p><b>The measure title is revised from ‘One-Time Screening for Hepatitis C Virus (HCV) for all patients’ to: One-Time Screening for Hepatitis C Virus (HCV) and Treatment Initiation</b></p> <p><b>The measure description is revised to read:</b> Percentage of patients age &gt;= 18 years have never been tested for Hepatitis C Virus (HCV) infection who receive an HCV infection test AND who have treatment initiated within three months or who are referred to a clinician who treats HCV infection within one month if tested positive for HCV</p> <p><b>The measure instructions are revised to read:</b> This measure is to be submitted a minimum of once per performance period for all patients &gt;=18 years AND who are seen twice for any visits <b>or</b> who have at least one preventive visit through September 30 of the performance period AND who have never received an HCV antibody test. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who perform the quality actions described in the measure based on the services provided and the measure-specific denominator coding.</p> <p><b>This measure will be calculated with 2 performance rates:</b></p> <ol style="list-style-type: none"> <li>1. Percentage of patients age &gt;= 18 years who have never been tested for HCV antibodies and who receive an HCV antibody test.</li> <li>2. Percentage of patients age &gt;= 18 years who have a reactive HCV antibody test, who have a follow up HCV viral test, and if HCV viremia is detected, have treatment initiated within three months or are referred to a clinician who treats HCV infection within one month of the reactive HCV antibody test.</li> </ol> <p>The denominator of submission criteria 2 is a subset of the resulting numerator for submission criteria 1, as submission criteria 2 is limited to assessing if patients who have a reactive HCV antibody test, have a follow up HCV viral test, and if HCV viremia is detected, treatment is initiated within three months or they are referred to a clinician who treats HCV infection within one month of the reactive HCV antibody test. For all patients age &gt;=18 years who have never been tested for HCV antibodies, submission criteria 1 is applicable, but submission criteria 2 will only be applicable for those patients who have a reactive HCV antibody test.</p> <p>A simple average, which is the sum of the performance rates divided by the number of the performance rates will be used to calculate performance.</p> <p><b>NOTE:</b> Include only eligible encounters and HCV antibody test results documented through September 30 of the performance period. This will allow the evaluation of at least 90 days for treatment initiation or documentation of referral made within the performance period.</p> <p><b>Updated denominator: Updated:</b>  <b>THERE ARE TWO SUBMISSION CRITERIA FOR THIS MEASURE:</b></p> <ol style="list-style-type: none"> <li>1. All patients age &gt;= 18 years age who have never been tested for HCV antibodies and who receive an HCV antibody test. AND</li> <li>2. All patients age &gt;= 18 years who have a reactive (positive) HCV antibody test and have a follow up HCV viral test, and if HCV viremia is detected, have treatment initiated within three months or are referred to a clinician who treats HCV infection within one month of the reactive HCV antibody test.</li> </ol> <p>This measure contains two submission criteria that aim to identify patients who are tested for HCV antibodies (submission criteria 1) and patients who have a reactive HCV antibody test and who have a follow up HCV viral test, and if HCV viremia is detected, have treatment initiated within three months or are referred to a clinician who treats HCV infection within one month of the reactive HCV antibody test (submission criteria 2). By separating this measure into various submission criteria, the MIPS eligible clinician will be able to better ascertain where gaps in performance exist and identify opportunities for improvement. For accountability reporting in the CMS MIPS program, the rate for submission criteria 2 is used for performance, however, both performance rates must be submitted.</p> <p><b>Updated denominator/denominator criteria: Revised:</b>  <b>SUBMISSION CRITERIA 1:</b> Patients who have never been tested for HCV antibodies and who receive an HCV antibody test.  <b>DENOMINATOR (Submission Criteria 1):</b>  All patients &gt;= 18 years of age who are seen twice for any visits or who have at least one preventive visit January 1 and September 30 of the performance period.</p> <p><b>Denominator Criteria (Eligible Cases):</b>  Patients aged ≥ 18 years of age  <b>AND</b>  At least one preventive encounter  <b>OR</b>  At least two patient encounters  <b>AND NOT</b></p>

Category	Description
	<p><b>DENOMINATOR EXCLUSION:</b>  Diagnosis for Chronic Hepatitis C  OR  Documentation or patient report of HCV antibody test or HCV RNA test which occurred prior to the performance period.</p> <p><b>Added:</b>  <b>SUBMISSION CRITERIA 2:</b> Patients with a reactive (positive) HCV antibody test with a follow up HCV viral test, and if HCV viremia is detected, treatment is initiated within three months or receives a referral to a clinician who treats HCV infection within one month of the reactive HCV antibody test.</p> <p><b>DENOMINATOR (Submission Criteria 2):</b>  Patients <math>\geq</math> 18 years of age who are seen twice for any visits OR who have at least one preventive visit AND have documentation of a reactive HCV antibody test between January 1 and September 30 of the performance period.</p> <p>Denominator Criteria (Eligible Cases):  Patients aged <math>\geq</math> 18 years of age  <b>AND</b>  All eligible instances when GXXXX is submitted for Performance Met (patient receives HCV antibody test and the test is reactive) in the numerator of Submission Criteria 1  <b>AND</b>  At least one preventive encounter  <b>OR</b>  At least two patient encounters.</p> <p><b>Updated denominator note: Added:</b>  For submission criteria 1: Either documentation of the prior HCV antibody test or HCV RNA test in the medical record or patient self-report of prior HCV antibody test or HCV RNA test is acceptable for this exclusion.</p> <p><b>Updated numerator: Revised:</b>  For submission criteria 1: Patients who receive an HCV antibody test between January 1 and September 30 of the performance period.</p> <p><b>Added:</b>  For submission criteria 2: Patients who have an HCV viral test conducted that (a) does not detect HCV viremia, or (b) detects HCV viremia and treatment is initiated within three months or they are referred to a clinician who treats HCV infection within one month of the reactive HCV antibody test.</p> <p><b>Updated definitions:</b>  <b>Removed:</b> For submission criteria 1: definition for screening for HCV Infection includes current or prior receipt of  <b>Added:</b> For submission criteria 2:  <b>Definition:</b>  Examples of clinicians who treat HCV infection include but are not limited to:  <ul style="list-style-type: none"> <li>• Gastroenterologist</li> <li>• Hepatologist</li> <li>• Infectious disease clinicians</li> </ul> Initiation of treatment definition for clinicians who do not refer patients to specialists for care:  <ul style="list-style-type: none"> <li>• Initiation of antiviral treatment, as appropriate, based on clinical guideline recommendations and patient characteristics.</li> </ul> HCV viral test is defined as a test measuring an established marker of active HCV infection, including:  <ul style="list-style-type: none"> <li>• HCV RNA test</li> <li>• HCV core antigen test</li> </ul> </p> <p><b>Updated numerator options:</b>  <b>Revised:</b> For submission criteria 1:  <b>Performance Met:</b> Patient receives an HCV antibody test with nonreactive result.  <b>Performance Met:</b> Patient receives an HCV antibody test with reactive result.  <b>Denominator Exception:</b> Documentation of medical reason(s) for not receiving HCV antibody test due to limited life expectancy  <b>Performance Not Met:</b> Patient does not receive HCV antibody test OR patient does receive HCV antibody test but results not documented, reason not given.</p> <p><b>Added:</b> For submission criteria 2:  <b>Performance Met:</b> Patient, who has a reactive HCV antibody test, and has a follow up HCV viral test that detected HCV viremia, is referred within 1 month of the reactive HCV antibody test to a clinician who treats HCV infection.  <b>Performance Met:</b> Patient, who has a reactive HCV antibody test, and has a follow up HCV viral test that detected HCV viremia, has HCV treatment initiated within 3 months of the reactive HCV antibody test.  <b>Performance Met:</b> Patient has a reactive HCV antibody test, and has a follow up HCV viral test that does not detect HCV viremia.  <b>Performance Not Met:</b> Patient has a reactive HCV antibody test and does not have a follow-up HCV viral test, OR Patient has a reactive HCV antibody test and has a follow up HCV viral test that detects HCV viremia and is not referred to a clinician who treats HCV infection within 1 month and does not have HCV treatment initiated within 3 months of the reactive HCV antibody test, reason not given.</p>

Category	Description
<b>Measure Steward:</b>	American Gastroenterological Association
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to revise this measure to include follow up testing for HCV and, if viremia is detected, that treatment is initiated, or patients are referred to a clinician who treats HCV infection. This will be accomplished by stratifying the measure to create submission criteria (with corresponding performance rate) for patients who have never been tested for HCV antibodies and who receive an HCV test, and a submission criterion (with corresponding performance rate) for patients who have a reactive HCV antibody test and, if HCV viremia detected, have treatment initiated or referral for treatment. This revision will be reflected within multiple components within the specification. These revisions take the measure one step further to ensure actions are being taken once the screening is completed so patients receive the appropriate care resulting in positive health outcomes. We will continue to monitor this measure throughout the rulemaking process for testing being performed by the measure steward regarding these proposed changes to the measure. Finalization of these revisions were contingent on completion of this testing.</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes will not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.</p>
<p><i>Comment:</i> One commenter recommended for measure Q400: One-Time Screening for Hepatitis C Virus (HCV) for all Patients that CMS define the hepatitis C screening test as hepatitis C antibody testing with reflex to RNA testing in patients with unknown or previously negative antibody status and hepatitis C viral RNA in patients with previously positive antibody and undetected RNA. Additionally, the commenter indicated that hepatitis B screening should be required to conform with CDC screening recommendations.</p> <p><i>Response:</i> We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53112 through 53114), we are finalizing the changes to measure Q400 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

**D.46 Clinical Outcome Post Endovascular Stroke Treatment**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	409
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients with a Modified Rankin Score (mRS) score of 0 to 2 at 90 days following endovascular stroke intervention.
<b>Substantive Change:</b>	<b>Updated denominator exclusion: Added:</b> For Submission Criteria 1: Exclude patients with a baseline mRS > 2
<b>Measure Steward:</b>	Society of Interventional Radiology
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Outcome
<b>Rationale:</b>	We proposed to add a denominator exclusion for Submission Criteria 1 to account for patients who have a baseline mRS of greater than 2 as endovascular stroke intervention will not be clinically indicated for this patient population. <sup>73</sup>
We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53115), we are finalizing the changes to measure Q409 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

73. American Heart Association, American Stroke Association. Acute Ischemic Stroke: Current Treatment Approaches for Acute Ischemic Stroke [PowerPoint slides]. [https://www.stroke.org/-/media/Stroke-Files/Ischemic-Stroke-Professional-Materials/AIS-Toolkit/AIS-Professional-Education-Presentation-ucm\\_485538](https://www.stroke.org/-/media/Stroke-Files/Ischemic-Stroke-Professional-Materials/AIS-Toolkit/AIS-Professional-Education-Presentation-ucm_485538).

### D.47 Osteoporosis Management in Women Who Had a Fracture

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	0053 / N/A
<b>Quality #:</b>	418
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications   MIPS CQMs Specifications
<b>Current Measure Description:</b>	The percentage of women 50–85 years of age who suffered a fracture and who had either a bone mineral density (BMD) test or prescription for a drug to treat osteoporosis in the six months after the fracture.
<b>Substantive Change:</b>	<b>Updated denominator criteria: Added: For all</b> submission criteria: coding for nonphysician, physician, and qualified health care professional (QHP) telephone assessments, and federally qualified health center (FQHC) visit.
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to update the measure to include coding for telephone assessments with nonphysician/QHPs, and federally qualified health center (FQHC) visits within the denominator eligible encounter criteria as this measure is applicable to the scope of care given by these clinicians.
We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53116), we are finalizing the changes to measure Q418 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

**D.48 Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	2152 / N/A
<b>Quality #:</b>	431
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 12 months AND who received brief counseling if identified as an unhealthy alcohol user.
<b>Substantive Change:</b>	<b>Updated measure analytic: Revised:</b> data completeness will be determined utilizing submission criteria one.
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to update the analytic of the measure to utilize submission criteria one for the determination of data completeness to ensure a complete data submission for all denominator eligible patients for this measure. As submission criteria two only includes those patients identified as unhealthy alcohol users, the intent of the measure is to also ensure screening of all patients aged 18 years and older. Assessing data completeness utilizing submission criteria one will ensure that screening information was collected.
We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53116), we are finalizing the changes to measure Q431 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

**D.49 Statin Therapy for the Prevention and Treatment of Cardiovascular Disease**

Category	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	438
CMS eCQM ID:	CMS347v7
Current Collection Type:	eCQM Specifications   MIPS CQMs Specifications
Current Measure Description:	<p>Percentage of the following patients – all considered at high risk of cardiovascular events – who were prescribed or were on statin therapy during the measurement period:            *All patients who were previously diagnosed with or currently have a diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD), including an ASCVD procedure; OR            *Patients aged <math>\geq 20</math> years who have ever had a low-density lipoprotein cholesterol (LDL-C) level <math>\geq 190</math> mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia; OR            *Patients aged 40-75 years with a diagnosis of diabetes</p>
Substantive Change:	<p><b>The measure description is revised to read: For all collection types:</b>            Percentage of the following patients – all considered at high risk of cardiovascular events – who were prescribed or were on statin therapy during the measurement period:</p> <ul style="list-style-type: none"> <li>• All patients who were previously diagnosed with or currently have a diagnosis clinical atherosclerotic cardiovascular disease (ASCVD) including an ASCVD procedure; OR</li> <li>• Patients aged 20 to 75 years who have ever had a low-density lipoprotein cholesterol (LDL-C) level <math>\geq 190</math> mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia; OR</li> <li>• Patients aged 40-75 years with a diagnosis of diabetes; OR</li> <li>• Patients aged 40 to 75 with a 10-year ASCVD risk score of <math>\geq 20</math> percent.</li> </ul> <p><b>Updated rate aggregation: For the eCQM Specifications collection type:</b>  <b>Revised:</b> Population 2: Patients aged 20 to 75 years at the beginning of the measurement period  <b>Added:</b> Population 4: Patients aged 40 to 75 at the beginning of the measurement period with a 10-year ASCVD risk score of <math>\geq 20</math> percent during the measurement period.  <b>Revised:</b> Performance Rate to aggregate all 4 populations into a single performance rate.</p> <p><b>Updated guidance: For the eCQM Specifications collection type: Revised:</b> the process to prevent counting patients more than once.</p> <p><b>Updated denominator: For all collection types: Revised:</b>            DENOMINATOR (SUBMISSION CRITERIA 2):            Patients aged 20 to 75 years who have ever had a low-density lipoprotein cholesterol (LDL-C) level <math>\geq 190</math> mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia.  <b>Added:</b>            DENOMINATOR (SUBMISSION CRITERIA 4): Patients aged 40 to 75 years at the beginning of the measurement period with a 10-year ASCVD risk score of <math>\geq 20</math> percent during the measurement period.</p> <p><b>Updated instructions: For the MIPS CQMs Specification collection type: Revised:</b> THERE ARE FOUR SUBMISSION CRITERIA FOR THIS MEASURE**:</p> <ol style="list-style-type: none"> <li>1. All patients who were previously diagnosed with or currently have a diagnosis of clinical ASCVD, including an ASCVD procedure. OR</li> <li>2. Patients aged 20 to 75 years at the beginning of the measurement period who have ever had a laboratory result of LDL-C <math>\geq 190</math> mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia. OR</li> <li>3. Patients aged 40 to 75 years at the beginning of the measurement period with Type 1 or Type 2 diabetes. OR</li> <li>4. Patients aged 40 to 75 years at the beginning of the measurement period with a 10-year ASCVD risk score of <math>\geq 20</math> percent.</li> </ol> <p><b>Revised:</b> There is only one performance rate calculated for this measure. Patients can only be counted once and cannot be in more than one <b>submission criteria</b>. When submitting this measure, determine if the patient meets denominator eligibility in order of each risk category defined in the denominator submission criteria. For example, first evaluate if the patient meets denominator Submission Criteria 1. If no, then evaluate if the patient meets denominator Submission Criteria 2. If yes, then the patient will be in Submission Criteria 2 and is not eligible for denominator Submission Criteria 3 and 4.</p> <p><b>Updated initial patient population: For the eCQM Specifications collection type:</b>            Population 1:            All patients who were previously diagnosed with or currently have a diagnosis of clinical ASCVD or ever had, including an ASCVD procedure.            Population 2:            Patients aged <math>\geq 20</math> to 75 years at the beginning of the measurement period who have ever had a laboratory result of LDL-C <math>\geq 190</math> mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia.            Population 3:            Patients aged 40 to 75 years at the beginning of the measurement period with Type 1 or Type 2 diabetes.</p> <p>Population 4: Patients aged 40 to 75 at the beginning of the measurement period with 10-year ASCVD risk score (i.e., 2013 ACC/AHA ASCVD Risk Estimator or the ACC Risk Estimator Plus) of <math>\geq 20</math> percent during the measurement period.</p>

Category	Description
	<p><b>Updated denominator criteria: For the MIPS CQM Specifications collection type:</b>  <b>Revised:</b> For submission criteria 2: Patient aged 20 to 75 years at the beginning of the measurement period.  <b>Added:</b> For submission criteria 4:  Patients aged 40 through 75 years at the beginning of the measurement period  AND  Calculated 10-year ASCVD risk score of <math>\geq 20</math> percent during the measurement period  AND  Patient encounter during the performance period  AND NOT  DENOMINATOR EXCLUSIONS:  Patients who are breastfeeding at any time during the measurement period  OR  Patients who have a diagnosis of rhabdomyolysis at any time during the measurement period</p> <p><b>Updated numerator: For the MIPS CQM Specifications collection type: Added:</b>  (SUBMISSION CRITERIA 4):  Patients who are actively using or who receive an order (prescription) for statin therapy at any time during the measurement period.</p> <p><b>Updated denominator exception: For the MIPS CQMs Specifications collection type: Added:</b> For submission <b>criteria 4:</b> Denominator Exceptions  1. Active Liver or Hepatic Disease or Insufficiency  2. End Stage Renal Disease  3. Statin-Associated Muscle Symptoms (SAMS)</p> <p><b>Updated numerator definition: For the MIPS CQM Specification collection type: Added:</b> For submission criteria 4:  Statin therapy – Administration of one or more of a group of medications that are used to lower plasma lipoprotein levels in the treatment of hyperlipoproteinemia.</p> <p><b>Updated numerator note: For the MIPS CQM Specification collection type: Added:</b> For submission criteria 4: In order to meet the measure, current statin therapy use must be documented in the patient’s current medication list or ordered during the measurement period. Only statin therapy meets the measure Numerator criteria (NOT other cholesterol lowering medications). Prescription or order does NOT need to be linked to an encounter or visit; it may be called to the pharmacy. Statin medication “samples” provided to patients can be documented as “current statin therapy” if documented in the medication list in health/medical record. Patients who meet the denominator criteria for inclusion but are not prescribed or using statin therapy will NOT meet performance for this measure. Adherence to statin therapy is not calculated in this measure. It may not be appropriate to prescribe statin therapy for some patients (see exceptions and exclusions for the complete list).  Intensity of statin therapy in primary and secondary prevention:  The expert panel of the 2018 ACC/AHA/MS Guidelines [1] defines recommended intensity of statin therapy on the basis of the average expected LDL-C response to specific statin and dose. Although intensity of statin therapy is important in managing cholesterol, this measure assesses prescription of ANY statin therapy, irrespective of intensity. Assessment of appropriate intensity and dosage documentation added too much complexity to allow inclusion of statin therapy intensity in the measure at this time.  Denominator Exceptions should be active during the measurement period.</p> <p><b>Updated numerator options: For the MIPS CQM Specification collection type: Added:</b> For submission <b>criteria 4:</b>  <b>Performance Met:</b> Patients who are currently statin therapy users or received an order (prescription) for statin therapy.  <b>Denominator Exception:</b> Documentation of medical reason(s) for not currently being a statin therapy user or receiving an order (prescription) for statin therapy (e.g., patient with statin-associated muscle symptoms or an allergy to statin medication therapy, patients who are receiving palliative or hospice care, patients with active liver disease or hepatic disease or insufficiency, patients with end stage renal disease [ESRD] or other medical reasons).  <b>Performance Not Met:</b> Patients who are not currently statin therapy users or did not receive an order (prescription) for statin therapy</p>
<b>Measure Steward:</b>	Centers for Medicare & Medicaid Services
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed revisions to this measure that will allow it to align more closely with the 2019 ACC/AHA Guideline on the Primary Prevention of Cardiovascular Disease: A Report of the American College of Cardiology/American Heart Association Task Force on Clinical Practice Guidelines.<sup>74</sup> Submission criteria one was updated to reflect a cap in the age denominator criteria to 75. The ACC/AHA 2018 cholesterol guidelines state that in adults older than 75 years with diabetes mellitus, it may be reasonable to initiate statin therapy after a clinician–patient discussion of potential benefits and risks for prevention of ASCVD events.<sup>75</sup> Additionally, we proposed to add submission criteria 4, which specifically assesses statin use for patients that have a 10-year ASCVD risk score of <math>&gt; 20</math> percent. Patients that meet this denominator criteria will be considered high risk and based on the guidelines, should be strongly recommended statin therapy solely based on risk alone and after a clinician patient risk discussion.<sup>76</sup> Furthermore, we proposed to update the description and measure instructions to clearly communicate the changes within submission criteria one and the inclusion of a submission criteria 4. Due to the proposal of submission criteria 4, we proposed to revise the measure instructions to explain to interested parties how this measure will be calculated for the purpose of MIPS.</p>

Category	Description
	<p>In the event the proposed substantive change(s) are finalized, the substantive changes will not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.</p>
	<p><i>Comment:</i> One commenter agreed that the substantive changes proposed to measure Q438: Statin Therapy for the Prevention and Treatment of Cardiovascular Disease are consistent with the most recent AHA/ACC guidelines referenced.</p> <p><i>Response:</i> We thank the commenter for supporting the substantive changes to this measure.</p> <p><i>Comment:</i> One commenter was concerned about the exclusions of those receiving palliative care services from measure Q438. While those with an end-stage serious illness receiving palliative care would not benefit from these services, others earlier in an illness receiving palliative care might.</p> <p><i>Response:</i> We agree palliative care is appropriate at any point in a serious illness and can be provided with any curative, disease-modifying treatment. It is our expectation clinicians and vendors collaborate to understand these concepts and their differences in order to implement them accurately into their systems. Palliative care is generally provided by an interdisciplinary medical team that focuses on the patient as a whole and would be inclusive of the types of services addressed by this measure as needed. Due to the complexities of care required for this population, clinicians that support patients receiving palliative care may inadvertently not perform well from the aspect of producing quality metrics (<a href="https://doi.org/10.1186/s12913-019-3961-0">https://doi.org/10.1186/s12913-019-3961-0</a>). However, we encourage clinicians to provide care as they determine best supports all patients during their healthcare journey even if the patient population is not included within the targeted denominator of a given measure specification.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53117 through 53119), we are finalizing the changes to measure Q438 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>

**D.50 Non-Recommended Cervical Cancer Screening in Adolescent Females**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	443
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	The percentage of adolescent females 16–20 years of age who were screened unnecessarily for cervical cancer.
<b>Substantive Change:</b>	<b>Updated denominator exclusion: Added:</b> coding for Cytokine Release Syndrome.
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to update the denominator exclusions criteria by adding ICD-10-CM codes for Cytokine Release Syndrome, which will allow clinicians to capture and exclude patients with Cytokine Release Syndrome, as it may be appropriate for these patients to receive cervical cancer screening. It will also create alignment with the HEDIS measure.
<p><i>Comment:</i> One commenter supported the substantive changes proposed to measure Q443: Non-Recommended Cervical Cancer Screening in Adolescent Females.</p> <p><i>Response:</i> We thank the commenter for supporting the substantive changes to this measure.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53119), we are finalizing the changes to measure Q443 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

### D.51 Appropriate Workup Prior to Endometrial Ablation

Category	Description
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	448
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients, aged 18 years and older, who undergo endometrial sampling or hysteroscopy with biopsy and results are documented before undergoing an endometrial ablation.
<b>Substantive Change:</b>	<b>Updated denominator criteria: Removed:</b> coding for extraction of endometrium.
<b>Measure Steward:</b>	Centers for Medicare & Medicaid Services
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to remove ICD-10 codes 0UDB7ZZ and 0UDB8ZZ from the denominator criteria as these codes do not represent endometrial ablation, but rather endometrial extraction. This change will ensure that the patients included within the denominator will truly meet the intent of the measure. Additionally, it will ensure all patients undergoing this procedure are included within the denominator to be assessed for the quality action described in the numerator.
<p><i>Comment:</i> One commenter supported the substantive changes proposed to measure Q448: Appropriate Workup Prior to Endometrial Ablation.</p> <p><i>Response:</i> We thank the commenter for supporting the substantive changes to this measure.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53119), we are finalizing the changes to measure Q448 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

**D.52 Functional Status After Primary Total Knee Replacement**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	470
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	For patients age 18 and older who had a primary total knee replacement procedure, functional status is rated by the patient as greater than or equal to 37 on the Oxford Knee Score (OKS) or a 71 or greater on the KOOS, JR tool at one year (9 to 15 months) postoperatively.
<b>Substantive Change:</b>	<b>Updated numerator definition: Revised:</b> Postoperative Assessment Oxford Knee Score (OKS) or KOOS, JR - A postoperative Oxford Knee Score (OKS) or KOOS, JR functional assessment score can be obtained from the patient one year (9 to 15 months) after the date of procedure. Assessment scores obtained prior to 9 months and after 15 months postoperatively will not be used for measure calculation.
<b>Measure Steward:</b>	Minnesota Community Measurement
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Patient-Reported Outcome-Based Performance Measure
<b>Rationale:</b>	We proposed to revise the numerator definition to add KOOS, JR. The “KOOS, JR.” was developed from the original long version of the Knee injury and Osteoarthritis Outcome Score (KOOS) survey using Rasch analysis. The “KOOS, JR.” contains seven items from the original KOOS survey. Items are coded from 0 to 4, none to extreme respectively. “KOOS, JR.” is scored by summing the raw response (range 0-28) and then converting it to an interval score using the table provided below. The interval score ranges from 0 to 100 where 0 represents total knee disability and 100 represents perfect knee health. This short form tool was developed in 2017 ( <a href="https://www.hss.edu/hoos-jr-koos-jr-outcomes-surveys.asp">https://www.hss.edu/hoos-jr-koos-jr-outcomes-surveys.asp</a> ). Additionally, the language has been revised and will allow for assessments completed via telephone.
We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53120), we are finalizing the changes to measure Q470 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

### D.53 HIV Screening

Category	Description
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	475
<b>CMS eCQM ID:</b>	CMS349v6
<b>Current Collection Type:</b>	eCQM Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 15-65 at the start of the measurement period who were between 15-65 years old when tested for Human Immunodeficiency Virus (HIV).
<b>Substantive Change:</b>	<b>Updated denominator exception: Added:</b> Patients who die on or before the end of the measurement period.
<b>Measure Steward:</b>	Centers for Disease Control and Prevention
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to add a denominator exception for patients who die before receiving an HIV screening. Since it is possible that a clinician could advance schedule an HIV test for a patient who potentially may die prior to the test, allowing this denominator exception will preserve performance of reporting clinicians while maintaining the intent of the measure.
We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53120), we are finalizing the changes to measure Q475 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

**D.54 Psoriasis – Improvement in Patient-Reported Itch Severity**

Category	Description
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	485
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	The percentage of patients, aged 18 years and older, with a diagnosis of psoriasis where at an initial (index) visit have a patient reported itch severity assessment performed, score greater than or equal to 4, and who achieve a score reduction of 2 or more points at a follow up visit
<b>Substantive Change:</b>	<p><b>The description is revised to read:</b> The percentage of patients, aged 8 years and older, with a diagnosis of psoriasis where at an initial (index) visit have a patient reported itch severity assessment performed, score greater than or equal to 4, and who achieve a score reduction of 3 or more points at a follow up visit.</p> <p><b>The measure denominator is revised to read:</b> All patients aged 8 years and older, with a diagnosis of psoriasis with an initial (index visit) Numeric Rating Scale (NRS), Visual Rating Scale (VRS), or ItchyQuant assessment score of greater than or equal to 4 who are returning for a follow-up visit.</p> <p><b>Updated denominator definition:</b>  <b>Revised:</b> patient age to 8 years and older on date of service  <b>Added:</b> Visual Rating Scale (VRS) for Pruritis – Note: <b>(This scale is intended for patients 18 years and older)</b></p> <p><b>Updated numerator: Revised:</b> required assessment score change from 2 or more points to 3 or more points.</p> <p><b>Updated numerator options: Revised:</b> required assessment score change from 2 or more points to 3 or more points.</p>
<b>Measure Steward:</b>	American Academy of Dermatology
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Patient-Reported Outcome-Based Performance Measure
<b>Rationale:</b>	<p>We proposed to revise the denominator and the denominator criteria to change the age from 18 years and older to 8 years and older. Also, we proposed to add a note to the Visual Rating Scale (VRS) for Pruritis definition as this tool is only validated for patients 18 years and older. We proposed a reduction in assessment score from 2 or more points to 3 or more points to align with current clinical guidelines. This skin condition has an annual prevalence of up to 0.71 percent within the pediatric patient population. Therefore, inclusion of the pediatric patient population will provide support for this frequently seen chronic inflammatory skin disorder and have significant impact on their overall quality of life (<a href="https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5683294/">https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5683294/</a>).</p>
<p><i>Comment:</i> One commenter supported the substantive changes proposed to measure Q485: Psoriasis – Improvement in Patient-Reported Itch Severity.</p> <p><i>Response:</i> We thank the commenter for supporting the substantive changes to this measure.</p> <p><i>Comment:</i> One commenter opposed the changes to measures Q485 and Q486: Dermatitis – Improvement in Patient-Reported Itch Severity (see Table D.55 of this Appendix) stating that although these measures have been available within a QCDR with actionable feedback for years, 2023 was the first year they were accepted in traditional MIPS measures. The commenter stated these measures should not undergo any substantive changes until the submitting clinicians and groups have a chance to review the peer benchmarking from the 2023 performance year. If any changes are to be made to this measure, the commenter requested they not be put into effect until at least 2025. In addition, any substantive changes made to these measures will eliminate any benchmarks which would have been established by the 2023 submission and therefore would be worth only 3 points for a small practice since there would be no benchmark. If measures Q138: Melanoma: Coordination of Care and Q402: Tobacco Use and Help with Quitting Among Adolescents are finalized for removal, and there is a proposed lack of benchmarks for measures Q485 and Q486, this would have a significant negative impact on dermatology clinicians who already have a limited quality measures set.</p> <p><i>Response:</i> While we acknowledged the commenters’ concerns regarding the benchmark, this is an important high priority measure that should be enhanced to support the pediatric patient population as they are frequently affected by this chronic inflammatory skin disorder which has a significant impact on their lives process. While the benchmark is an important consideration programmatically, we strive to implement quality measures that are meaningful to patients and are applicable to all who would benefit from the quality care described within the measure. However, the changes being finalized within this measure do not necessitate the creation of a new benchmark. In addition, changes in assessment scores are necessary to align with current clinical guidelines.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53121), we are finalizing the changes to measure Q485 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

**D.55 Dermatitis – Improvement in Patient-Reported Itch Severity**

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	486
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	The percentage of patients, aged 18 years and older, with a diagnosis of dermatitis where at an initial (index) visit have a patient reported itch severity assessment performed, score greater than or equal to 4, and who achieve a score reduction of 2 or more points at a follow up visit.
<b>Substantive Change:</b>	<p><b>The description is revised to read:</b> The percentage of patients, aged 8 years and older, with a diagnosis of dermatitis where at an initial (index) visit have a patient reported itch severity assessment performed, score greater than or equal to 4, and who achieve a score reduction of 3 or more points at a follow up visit.</p> <p><b>The measure denominator is revised to read:</b> All patients aged 8 years and older, with a diagnosis of dermatitis with an initial (index visit) Numeric Rating Scale (NRS), Visual Rating Scale (VRS), or ItchyQuant assessment score of greater than or equal to 4 who are returning for a follow-up visit.</p> <p><b>Updated denominator definition: Removed:</b> Visual Rating Scale (VRS) for Pruritis.</p> <p><b>Updated denominator criteria:</b>  <b>Revised:</b> patient age to 8 years and older on date of service  <b>Added:</b> Visual Rating Scale (VRS) for Pruritis – Note: <b>(This scale is intended for patients 18 years and older)</b></p> <p><b>Updated numerator: Revised:</b> required assessment score change from 2 or more points to 3 or more points.</p> <p><b>Updated numerator options: Revised:</b> required assessment score change from 2 or more points to 3 or more points.</p>
<b>Measure Steward:</b>	American Academy of Dermatology
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Patient-Reported Outcome-Based Performance Measure
<b>Rationale:</b>	We proposed to revise the denominator and the denominator criteria to change the age from 18 years and older to 8 years and older. We also proposed to add a note to the VRS for Pruritis definition as this tool is only validated for patients 18 years and older. We proposed a reduction in assessment score from 2 or more points to 3 or more points to align with current clinical guidelines. Optimizing management of dermatitis in pediatric patients is critical to reduce signs of inflammation, alleviate pruritus and sleep disturbance, minimize the development and/or impact of comorbidities, and improve the patient and caregiver’s quality of life ( <a href="https://pubmed.ncbi.nlm.nih.gov/33838839/">https://pubmed.ncbi.nlm.nih.gov/33838839/</a> ).
<p><i>Comment:</i> One commenter supported the substantive changes proposed to measure Q486: Dermatitis – Improvement in Patient-Reported Itch Severity.</p> <p><i>Response:</i> We thank the commenter for supporting the substantive changes to this measure.</p> <p><i>Comment:</i> One commenter opposed the changes to measure Q486 (see Table D.54 of this Appendix for the full comment).</p> <p><i>Response:</i> While we acknowledged the commenters’ concerns regarding the benchmark, this is an important high priority measure that should be enhanced to support the pediatric patient population as they are frequently affected by this chronic inflammatory skin disorder which has a significant impact on their lives process. While the benchmark is an important consideration programmatically, we strive to implement quality measures that are meaningful to patients and are applicable to all who would benefit from the quality care described within the measure. However, the changes being finalized within this measure do not necessitate the creation of a new benchmark. In addition, changes in assessment scores are necessary to align with current clinical guidelines.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53121), we are finalizing the changes to measure Q486 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

### D.56 Screening for Social Drivers of Health

Category	Description
<b>CBE # / eCQM CBE #:</b>	N/A / N/A
<b>Quality #:</b>	487
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.
<b>Substantive Change:</b>	<p><b>Updated denominator criteria: Added:</b> coding for occupational therapy.</p> <p><b>Updated denominator exception: Added:</b>  <b>Denominator Exception:</b> Patient reason for not screening for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety (e.g., patient declined or other patient reasons)</p>
<b>Measure Steward:</b>	Centers for Medicare & Medicaid Services
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to add encounter codes for MIPS eligible occupational therapists based upon interested parties' feedback: "Occupational therapy practitioners across practice settings should consider how current housing status and social determinants of health may impact their clients' occupational performance and ability to manage health conditions" ( <a href="https://pubmed.ncbi.nlm.nih.gov/32007967/">https://pubmed.ncbi.nlm.nih.gov/32007967/</a> ). Also, we proposed to include a denominator exception as some patients may prefer not to discuss this information, however, attempting to screen every patient is important.
<p><i>Comment:</i> One commenter supported the substantive changes to add an exclusion to measure Q487: Screening for Social Drivers of Health to account for patient choice because adding this exclusion would reduce the risk a person would be pressured to complete a screening after declining to do so and ensure clinicians can respect a person's choice and agency without risking their performance on this measure. Another commenter supported the addition of occupational therapy coding to this measure to reflect services provided by OT practitioners to these patient populations.</p> <p><i>Response:</i> We thank the commenters for supporting the substantive changes to this measure.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53122), we are finalizing the changes to measure Q487 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

### D.57 Adult Immunization Status

<b>Category</b>	<b>Description</b>
<b>CBE # / eCQM CBE #:</b>	3620 / N/A
<b>Quality #:</b>	493
<b>CMS eCQM ID:</b>	N/A
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of members 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.
<b>Substantive Change:</b>	<p><b>Updated denominator:</b>  <b>Removed:</b> For all submission criteria: Active chemotherapy during the measurement period OR Bone marrow transplant during the measurement period OR History of immunocompromising conditions, cochlear implants, anatomic or functional asplenia, sickle cell anemia &amp; Hemoglobin (HB)-S disease or cerebrospinal fluid leaks any time during the patient’s history prior to or during the measurement period:</p> <ul style="list-style-type: none"> <li>• Anatomic or Functional Asplenia</li> <li>• Cerebrospinal Fluid Leak</li> <li>• Cochlear Implant</li> <li>• Cochlear Implant Device</li> <li>• Cochlear Implant Diagnosis</li> <li>• Immunocompromising Conditions</li> <li>• Sickle Cell Anemia and HB-S Disease</li> </ul> <p><b>Updated denominator exception:</b>  <b>Added:</b> For submission criteria 3: Documentation that administration of second recombinant zoster vaccine could not occur during the performance period due to the recommended 2-6 month interval between doses (i.e., first dose received after October 31)</p>
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to remove denominator exclusions for all submission criteria for patients receiving active chemotherapy, who have a bone marrow transplant, or history of immunocompromising conditions as these are not contraindications for receiving these vaccines and is in alignment with ACIP recommendations ( <a href="https://www.cdc.gov/vaccines/schedules/hcp/imz/adult.html">https://www.cdc.gov/vaccines/schedules/hcp/imz/adult.html</a> ). We proposed to add a denominator exception if there is a system reason that the second dose of recombinant zoster vaccine could not be administered within the prescribed interval during the performance period, as there is a minimum interval requirement between doses.
<p><i>Comment:</i> One commenter indicated that the substantive changes proposed to measure Q493: Adult Immunization Status (AIS) for zoster vaccine documentation should not have significant implications for clinicians’ reporting of vaccines under this measure. However, the commenter wanted to ensure it is CMS’ goal that the second dose will be captured in the subsequent performance period. It is also important to note that the zoster-component of the AIS measure numerator still includes either two doses of the herpes zoster recombinant vaccine OR one dose of the herpes zoster live vaccine as ways to meet numerator compliance. The inclusion of the zoster live vaccine (ZVL) in the measure numerator is misaligned with recent clinical guidance.</p> <p>The commenter stated that the Advisory Committee on Immunization Practices (ACIP) and the Centers for Disease Control and Prevention (CDC) no longer recommend the ZVL for the prevention of herpes zoster. ACIP has made the following recommendations<sup>77 78</sup>: (1) Recombinant zoster vaccine (RZV) is recommended for the prevention of herpes zoster and related complications for immunocompetent adults aged ≥50 years; (2) RZV is recommended for the prevention of herpes zoster and related complications for immunocompetent adults who previously received ZVL, and (3) RZV is preferred over ZVL for the prevention of herpes zoster and related complications. The commenter also stated that the CDC similarly includes a 2-dose series RZV for adults ages 50 years and older in their vaccine schedule, including for adults who have previously received the ZVL (CDC). Additionally, the ZVL is no longer available for use in the United States. Consequently, there should be serious consideration of re-specification of the measure to align with the latest ACIP and CDC guidance.</p> <p><i>Response:</i> We thank the commenter for their comment regarding ACIP recommendations on the administration of herpes zoster vaccine. The intent of the measure is the patient has received the herpes zoster vaccine. Based on the comment from ACIP, CMS will remove the ZVL vaccine from numerator compliance. Therefore, numerator compliance will be defined as a patient receiving two doses of the herpes zoster recombinant vaccine and will remove all reference to the herpes zoster live vaccine. Additionally based on this update the numerator statement will also be revised for clarification on this clinical intent for receipt of the herpes zoster vaccination.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53122), we are finalizing the changes and in addition to removing ZVL vaccination for numerator compliance to measure Q493 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>

Use of Recombinant Zoster Vaccine in Immunocompromised Adults Aged ≥19 Years: Recommendations of the Advisory Committee on Immunization Practices – United States, 2022. MMWR. Morbidity and mortality weekly report, 71(3), 80–84. <https://doi.org/10.15585/mmwr.mm7103a2>.

**Table Group DD: Previously Finalized Quality Measures with Substantive Changes Finalized for Partial Removal as Component Measures in Traditional MIPS and Finalized for Retention for Use in Relevant MVPs for the CY 2024 Performance Period/2026 MIPS Payment Year and Future Years**

As noted under Table Group CC of this Appendix, beginning with the CY 2024 performance period/2026 MIPS payment year and future years, we finalized to maintain measures Q112: Breast Cancer Screening, Q113: Colorectal Cancer Screening, and Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan for MIPS Value Pathways (MVP) development, and maintain measures Q112 and Q113 for purposes of Shared Savings Program ACOs reporting through the APP as discussed in section III.G.2.c.(2) of this final rule. These measures have finalized substantive changes under Table Group DD and Table Group E of this Appendix.

Note: Electronic clinical quality measures (eCQMs) that are endorsed by a CBE are shown in Table DD of this Appendix as follows: CBE # / eCQM CBE #.

The DD Tables within this final rule provide the substantive changes finalized for the quality measures in CY 2024. The changes that are made to the denominator codes sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2024 may not be identified within this final rule due to the availability of these changes to the public. If coding revisions to the denominator are impacted due to the timing of 2024 CPT and ICD-10 updates and assessment of these codes' inclusion by the Measure Steward, these changes may be postponed until CY 2025. The 2023 Quality Measure Release Notes provide a comprehensive, detailed reference of exact codes changes to the denominators of the quality measures. The Quality Measure Release Notes are available for each of the collection types in the Quality Payment Program website at <https://qpp.cms.gov>.

In addition to the finalized substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature, but they are important to communicate to interested parties. These changes align with the scope of the current coding; however, though not substantive in nature, these changes will expand or contract the measure's current eligible patient population. Therefore, please refer to the current year measure specification and the 2024 Quality Measure Release Notes or the eCQM Technical Release Notes once posted to review all coding changes to ensure correct implementation. Language has also been added, to all applicable 2024 quality measure specifications, in the form of an 'Instructions Note', to clarify that telehealth encounters are allowed for determination of denominator eligibility. Only in the instance telehealth encounters have not been previously allowed as denominator eligible, will the DD table corresponding to that measure reflect an update to the denominator allowing for telehealth encounters in the 'Substantive Change' cell.

The eCQM Technical Release Notes should also be carefully reviewed for revisions within the logic portion of the measure. In addition to the finalized substantive changes, there may be revisions within the logic that are not considered substantive in nature, however, it is important to review to ensure proper implementation of the measure. As not all systems and clinical workflows are the same, it is important to review these changes in the context of a specific system and/or clinical workflow.

Note: For the CY 2024 performance period/2026 MIPS payment year (and prior CY 2023 performance period/2025 MIPS payment year), the CMS Web Interface measures as a collection type is only available for APM Entities, specifically Shared Savings Program ACOs reporting through the APP (the CMS Web Interface measures as a collection type is no longer available under traditional MIPS). Thus, the CMS Web Interface collection type collection type is not listed in any table under Table Group DD of this Appendix. For further information regarding the Shared Savings Program requirements under the APP and the CMS Web Interface collection type available under the APP, see section III.G.2.c.(2) of this final rule. For information regarding finalized changes to the CMS Web Interface measures for the CY 2024 performance period/2026 MIPS payment year, see Table Group E of this Appendix.

We solicited comments on these substantive changes.

### DD.1 Breast Cancer Screening

Category	Description
<b>CBE # / eCQM CBE #:</b>	2372 / N/A
<b>Quality #:</b>	112
<b>CMS eCQM ID:</b>	CMS125v12
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications   eCQM Specifications   MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of women 50 – 74 years of age who had a mammogram to screen for breast cancer in the 27 months prior to the end of the measurement period.
<b>Substantive Change:</b>	<p><b>Updated measure description: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised:</b> Patient age to 40 – 74.</p> <p><b>Updated denominator: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised:</b> Patient age to 41 – 74.</p> <p><b>Updated denominator criteria: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised:</b> Patient age to 41 – 74.</p> <p><b>Updated denominator exclusion: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Added:</b> Dementia combinations: Donepezil-memantine to list of dementia exclusion medications.</p>
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to update the denominator exclusion to include Donepezil-memantine in the list of dementia exclusion medications, as this is an applicable medication for the purposes of the denominator exclusion. This medication is used for patients with dementia and therefore will align with intent of the measure to exclude patients with this condition from the measure.</p> <p>Additionally, we proposed to update the denominator eligible age criteria for this measure to align with the May 2023 draft recommendation statement issued by the USPSTF.<sup>79</sup></p>
<p><i>Comment:</i> The commenter supported updating the eligible age criteria for screening for measure Q112: Breast Cancer Screening, as it aligns with NCCN guidelines that individuals with average risk of breast cancer should have annual mammography screening starting at age 40.</p> <p><i>Response:</i> We thank the commenter for supporting the substantive changes to this measure.</p> <p>After consideration of public comments, and for the reasons stated above and in the proposed rule (88 FR 53124), we are finalizing the changes to measure Q112 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p> <p>Note that under Table CC.1, we are finalizing the partial removal of measure Q112 from traditional MIPS and retaining the measure for use in relevant MVPs as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

79. USPSTF (2023). Task Force Issues Draft Recommendation Statement on Screening for Breast Cancer. [https://www.uspreventiveservicestaskforce.org/uspstf/sites/default/files/file/supporting\\_documents/breast-cancer-screening-draft-rec-bulletin.pdf](https://www.uspreventiveservicestaskforce.org/uspstf/sites/default/files/file/supporting_documents/breast-cancer-screening-draft-rec-bulletin.pdf).

## DD.2 Colorectal Cancer Screening

Category	Description
<b>CBE # / eCQM CBE #:</b>	0034 / N/A
<b>Quality #:</b>	113
<b>CMS eCQM ID:</b>	CMS130v12
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications   eCQM Specifications   MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients 45-75 years of age who had appropriate screening for colorectal cancer.
<b>Substantive Change:</b>	<b>Updated denominator exclusion: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Added:</b> Dementia combinations: Donepezil-memantine to list of dementia exclusion medications.
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to update the denominator exclusion to include Donepezil-memantine in the list of dementia exclusion medications, as this is an applicable medication for the purposes of the denominator exclusion. This medication is used for patients with dementia and therefore will align with intent of the measure to exclude patients with this condition from the measure.
<p>We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53124), we are finalizing the changes to measure Q113 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p> <p>Note that under Table CC.2, we are finalizing the partial removal of measure Q113 from traditional MIPS and retaining the measure for use in relevant MVPs as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

**Table Group E: Previously Finalized CMS Web Interface Quality Measures with Substantive Changes Finalized for the CY 2024 Performance Period/2026 MIPS Payment Year and Future Years**

The E Tables within this final rule provide the substantive changes finalized for the CMS Web Interface quality measures in CY 2024. It should be noted that for the CY 2024 performance period/2026 MIPS payment year (and prior CY 2023 performance period/2025 MIPS payment year), the CMS Web Interface as a collection type is only available for APM Entities, specifically Shared Savings Program (Shared Savings Program) Accountable Care Organizations (ACOs), reporting through the APM Performance Pathway (APP) (the CMS Web Interface measures as a collection type is no longer available under traditional MIPS).

The changes that are made to the code sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2024 may not be identified within the final rule due to the availability of these changes to the public. The 2024 CMS Web Interface Measure Coding Release Notes provide a comprehensive, detailed reference of exact codes changes to the denominators of the quality measures.

In addition to the finalized substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature, but they are important to communicate to stakeholders. These changes align with the scope of the current coding; however, this will expand or contract the current eligible population, therefore, review the current year measure specification and the 2024 CMS Web Interface Measure Coding Release Notes once posted to review all coding changes.

The 2024 eCQM collection type measures had substantive changes that could prove burdensome to collect, therefore, the CMS Web Interface specifications will align with the 2024 MIPS CQMs specifications changes for these measures.

The tables below contain finalized changes for performance year 2024 CMS Web Interface measure specifications to be used in the Shared Savings Program for quality reporting. Note: there are substantive changes for 9 of the 10 CMS Web Interface measures.

**E.1 Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)**

<b>Category</b>	<b>Description</b>
<b>CBE #</b>	0059
<b>Quality #:</b>	001 (as previously associated with a Quality # prior to the sunset of the CMS Web Interface collection type under MIPS that became effective starting with the CY 2023 performance period)
<b>CMS Web Interface ID:</b>	DM-2
<b>Current Collection Type:</b>	CMS Web Interface
<b>Current Measure Description:</b>	Percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c > 9.0% during the measurement period.
<b>Substantive Change:</b>	<b>Updated denominator exclusion: Added:</b> Dementia combinations: Donepezil-memantine to the list of dementia medication exclusion medications.
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Intermediate Outcome
<b>Rationale:</b>	We proposed to update the denominator exclusion to include Donepezil-memantine in the list of dementia exclusion medications, as this is an applicable medication for the purposes of the denominator exclusion. This medication is used for patients with dementia and therefore aligns with intent of the measure to exclude patients with this condition from the measure.
We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53125), we are finalizing the substantive changes to measure Q001 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

## E.2 Preventive Care and Screening: Influenza Immunization

Category	Description
<b>CBE #</b>	0041
<b>Quality #:</b>	110 (as previously associated with a Quality # prior to the sunset of the CMS Web Interface collection type under MIPS that became effective starting with the CY 2023 performance period)
<b>CMS Web Interface ID:</b>	PREV-7
<b>Current Collection Type:</b>	CMS Web Interface
<b>Current Measure Description:</b>	Percentage of patients aged 6 months and older seen for a visit during the measurement period who received an influenza immunization OR who reported previous receipt of an influenza immunization.
<b>Substantive Change:</b>	<b>Updated denominator exclusion criteria: Added:</b> Anaphylaxis due to the vaccine on or before the measurement period.
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to update the denominator exclusion by adding an exclusion for patients who experienced anaphylaxis due to the vaccine. While anaphylaxis due to the flu vaccine is rare, patients who have previously experienced a severe allergic reaction due to the influenza vaccine, regardless of the component suspected of being responsible for the reaction, should not receive additional doses of the vaccine ( <a href="https://www.cdc.gov/flu/prevent/egg-allergies.htm#:~:text=A%20person%20who%20has%20previously,get%20a%20flu%20vaccine%20again">https://www.cdc.gov/flu/prevent/egg-allergies.htm#:~:text=A%20person%20who%20has%20previously,get%20a%20flu%20vaccine%20again</a> ).
<p>We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53126), we are finalizing the substantive changes to measure Q041 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p> <p>We have identified an error in the current measure description. We inadvertently indicated the measure applied to patients seen for a visit between October 31 and March 31. To resolve this error, we clarified that the timeframe is “during the measurement period” as there are no changes to the measure description. We have updated the language for the description as follows:  <b>Current:</b> Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.  <b>Revised to read:</b> Percentage of patients aged 6 months and older seen for a visit during the measurement period who received an influenza immunization OR who reported previous receipt of an influenza immunization.</p>	

### E.3 Breast Cancer Screening

Category	Description
<b>CBE #</b>	2372
<b>Quality #:</b>	112 (as previously associated with a Quality # prior to the sunset of the CMS Web Interface collection type under MIPS that became effective starting with the CY 2023 performance period)
<b>CMS Web Interface ID:</b>	PREV-5
<b>Current Collection Type:</b>	CMS Web Interface
<b>Current Measure Description:</b>	Percentage of women 50 - 74 years of age who had a mammogram to screen for breast cancer in the 27 months prior to the end of the measurement period.
<b>Substantive Change:</b>	<p><b>Updated measure description: Revised:</b> Patient age to 40 – 74.</p> <p><b>Updated denominator: Revised:</b> Patient age to 41 – 74.</p> <p><b>Updated initial population: Revised:</b> Patient age to 41 – 74.</p> <p><b>Updated denominator exclusion: Added:</b> Dementia combinations: Donepezil-memantine to list of dementia exclusion medications.</p>
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to update the denominator exclusion to include Donepezil-memantine in the list of dementia exclusion medications, as this is an applicable medication for the purposes of the denominator exclusion. This medication is used for patients with dementia and therefore aligns with intent of the measure to exclude patients with this condition from the measure.</p> <p>Additionally, we proposed to update the denominator eligible age criteria for this measure to align with the May 2023 draft recommendation statement issued by the USPSTF for breast cancer screening.<sup>80</sup></p>
<p>We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53126), we are finalizing the substantive changes to measure Q112 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

80. USPSTF (2023). Task Force Issues Draft Recommendation Statement on Screening for Breast Cancer. [https://www.uspreventiveservicestaskforce.org/uspstf/sites/default/files/file/supporting\\_documents/breast-cancer-screening-draft-rec-bulletin.pdf](https://www.uspreventiveservicestaskforce.org/uspstf/sites/default/files/file/supporting_documents/breast-cancer-screening-draft-rec-bulletin.pdf).

#### E.4 Colorectal Cancer Screening

Category	Description
<b>CBE #</b>	0034
<b>Quality #:</b>	113 (as previously associated with a Quality # prior to the sunset of the CMS Web Interface collection type under MIPS that became effective starting with the CY 2023 performance period)
<b>CMS Web Interface:</b>	PREV-6
<b>Current Collection Type:</b>	CMS Web Interface
<b>Current Measure Description:</b>	Percentage of adults 45-75 years of age who had appropriate screening for colorectal cancer.
<b>Substantive Change:</b>	<b>Updated denominator exclusion: Added:</b> Dementia combinations: Donepezil-memantine to list of dementia exclusion medications.
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to update the denominator exclusion to include Donepezil-memantine in the list of dementia exclusion medications, as this is an applicable medication for the purposes of the denominator exclusion. This medication is used for patients with dementia and therefore aligns with intent of the measure to exclude patients with this condition from the measure.
<p>We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53127), we are finalizing the substantive changes to measure Q113 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p> <p>We have identified an error in the current measure description. We inadvertently indicated the measure applied to patients 50-75 years of age. To resolve this error, we clarified that the appropriate age range is 45-75 years of age, as there are no changes to the measure description. We have updated the language for the description as follows:</p> <p><b>Current:</b> Percentage of patients 50-75 years of age who had appropriate screening for colorectal cancer.</p> <p><b>Revised to read:</b> Percentage of adults 45 – 75 years of age who had appropriate screening for colorectal cancer.</p>	

### E.5 Preventive Care and Screening: Screening for Depression and Follow-Up Plan

<b>Category</b>	<b>Description</b>
<b>CBE #</b>	N/A
<b>Quality #:</b>	134 (as previously associated with a Quality # prior to the sunset of the CMS Web Interface collection type under MIPS that became effective starting with the CY 2023 performance period)
<b>CMS Web Interface ID:</b>	PREV-12
<b>Current Collection Type:</b>	CMS Web Interface
<b>Current Measure Description:</b>	Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of or up to two days after the date of the qualifying encounter.
<b>Substantive Change:</b>	<p><b>Updated guidance: Revised:</b> The intent of the measure is to screen for new cases of depression in patients who have never had a diagnosis of bipolar disorder prior to the qualifying encounter used to evaluate the numerator. Patients who have ever been diagnosed with bipolar disorder will be excluded from the measure.</p> <p><b>Updated denominator exclusion: Removed:</b> Diagnosis of depression from the denominator exclusion.</p> <p><b>Updated denominator criteria: Added:</b> coding for qualifying encounters for nutritionists/dieticians and home-based health care.</p>
<b>Measure Steward:</b>	Centers for Medicare & Medicaid Services
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to revise the denominator exclusion and applicable measure guidance to remove a previous diagnosis of depression as an exclusion, as patients with a history of depression clinically may require more frequent monitoring and ongoing treatment for reoccurrence of symptoms.</p> <p>We proposed to update the denominator to include encounter codes for nutritionists and dieticians, as well as home-based encounter codes, as it is clinically appropriate to conduct depression screenings during these encounters.</p>
<p>We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53127), we are finalizing the substantive changes to measure Q134 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p> <p>We have identified an error in the current measure description. The current measure description did not include language stating that follow-up plan may be documented on the date of or up to two dates after the date of the qualifying encounter. To resolve this error, we added clarifying language and note there are no substantive changes to the measure description. We have updated the language for the description as follows:</p> <p><b>Current:</b> Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the eligible encounter.</p> <p><b>Revised to read:</b> Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of or up to two days after the date of the qualifying encounter.</p>	

**E.6 Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention**

<b>Category</b>	<b>Description</b>
<b>CBE #</b>	N/A
<b>Quality #:</b>	226 (as previously associated with a Quality # prior to the sunset of the CMS Web Interface collection type under MIPS that became effective starting with the CY 2023 performance period)
<b>CMS Web Interface ID:</b>	PREV-10
<b>Current Collection Type:</b>	CMS Web Interface
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.
<b>Substantive Change:</b>	<p><b>The measure description is revised to read:</b>                      Percentage of patients aged 12 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.                      Three rates are reported:                      a. Percentage of patients aged 12 years and older who were screened for tobacco use one or more times within the measurement period.                      b. Percentage of patients aged 12 years and older who were identified as a tobacco user who received tobacco cessation intervention on the date of the encounter or within the previous 12 months.                      c. Percentage of patients aged 12 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention if identified as a tobacco user on the date of the encounter or within the previous 12 months.</p> <p><b>The initial population is revised to read:</b>                      All patients aged 12 years and older seen for at least two visits or at least one preventive visit during the measurement period</p>
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed revisions to this measure to lower the denominator eligible age to 12 years and older to allow for the inclusion of adolescents into the measure's denominator. Lowering the denominator eligible age aligns with proposed changes for all other collection types, which combine the patient population within measure Q402: Tobacco Use and Help with Quitting Among Adolescents with that of measure Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention resulting in a single, more robust measure.</p> <p>We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53128), we are finalizing the substantive changes to measure Q226 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p> <p>We have identified an error in the current measure description. We inadvertently included the measure description for PREV-12: Preventive Care and Screening: Screening for Depression and Follow-Up Plan. To resolve this error, we revised the description to reflect tobacco use screening, and to clarify that the tobacco cessation intervention may take place during the measurement period or in the 6 months prior to the measurement period. The only revision to the CY 2024 PREV-10 measure is to lower the denominator eligible age to 12 years and older.  <b>Current:</b> Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.  <b>Revised to read:</b> Percentage of patients aged 12 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period if identified as a tobacco user.</p>

### E.7 Controlling High Blood Pressure

<b>Category</b>	<b>Description</b>
<b>CBE #</b>	N/A
<b>Quality #:</b>	236 (as previously associated with a Quality # prior to the sunset of the CMS Web Interface collection type under MIPS that became effective starting with the CY 2023 performance period)
<b>CMS Web Interface ID:</b>	HTN-2
<b>Current Collection Type:</b>	CMS Web Interface
<b>Current Measure Description:</b>	Percentage of patients 18-85 years of age who had a diagnosis of essential hypertension starting before and continuing into, or starting during the first six months of the measurement period, and whose most recent blood pressure was adequately controlled (<140/90mmHg) during the measurement period.
<b>Substantive Change:</b>	<p><b>The measure initial patient population is revised to read:</b> Patients 18-85 years of age who had a visit during the measurement period and diagnosis of essential hypertension starting before and continuing into, or starting during the first six months of the measurement period.</p> <p><b>Updated denominator exclusion: Added:</b> Dementia combinations: Donepezil-memantine to list of dementia exclusion medications.</p> <p><b>Updated guidance: Revised:</b> In reference to the numerator element, only blood pressure readings performed by a clinician or an automated blood pressure monitor or device are acceptable for numerator compliance with this measure. This includes blood pressures taken in person by a clinician and blood pressures measured remotely by electronic monitoring devices capable of transmitting the blood pressure data to the clinician. Blood pressure readings taken by an automated blood pressure monitor or device and conveyed by the patient to the clinician are also acceptable. It is the clinician’s responsibility and discretion to confirm the automated blood pressure monitor or device used to obtain the blood pressure is considered acceptable and reliable and whether the blood pressure reading is considered accurate before documenting it in the patient’s medical record.</p> <p><b>Updated numerator note: Revised:</b> In reference to the numerator element, only blood pressure readings performed by a clinician or an automated blood pressure monitor or device are acceptable for numerator compliance with this measure. This includes blood pressures taken in person by a clinician and blood pressures measured remotely by electronic monitoring devices capable of transmitting the blood pressure data to the clinician. Blood pressure readings taken by an automated blood pressure monitor or device and conveyed by the patient to the clinician are also acceptable. It is the clinician’s responsibility and discretion to confirm automated blood pressure monitor or device used to obtain the blood pressure is considered acceptable and reliable and whether the blood pressure reading is considered accurate before documenting it in the patient’s medical record.</p>
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Intermediate Outcome
<b>Rationale:</b>	<p>We proposed to revise the initial patient population to specify the patient visit must occur during the measurement period. This revision provides clarification of the encounter timing.</p> <p>Additionally, we proposed to update the denominator exclusion to include Donepezil-memantine in the list of dementia medication list, as this is an applicable medication for the purposes of the denominator exclusion. This medication is used for patients with dementia and therefore aligns with intent of the measure to exclude patients with this condition from the measure.</p> <p>We proposed to revise the measure guidance and the numerator note around remote monitoring devices for capturing blood pressure readings. Currently, the measure allows patient reported data using most methods of digital collection/reporting and prohibits patient reported data taken with non-digital devices, such as with a manual blood pressure cuff and stethoscope. The measure is agnostic to how the reading gets in and the documentation practice of each office; therefore, whether patient is “conveying the reading to the clinician” by manually entering the BP reading (for example, patient portal) or having the device auto-transmit data directly, it is the clinician’s responsibility and discretion to confirm that the automated blood pressure monitor used to obtain the blood pressure is considered acceptable and reliable.</p>
<p>We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53129), we are finalizing the substantive changes to measure Q236 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

### E.8 Depression Remission at Twelve Months

Category	Description
<b>CBE #</b>	0710
<b>Quality #:</b>	370 (as previously associated with a Quality # prior to the sunset of the CMS Web Interface collection type under MIPS that became effective starting with the CY 2023 performance period)
<b>CMS Web Interface ID:</b>	MH-1
<b>Current Collection Type:</b>	CMS Web Interface
<b>Current Measure Description:</b>	The percentage of adolescent patients 12 to 17 years of age and adult patients 18 years of age or older with major depression or dysthymia who reached remission 12 months (+/- 60 days) after an index event.
<b>Substantive Change:</b>	<b>Updated denominator exclusion: Removed:</b> Exclusion for patients who were permanent nursing home residents during the denominator identification period or the measure assessment period.
<b>Measure Steward:</b>	Minnesota Community Measurement
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Outcome
<b>Rationale:</b>	We proposed to remove the denominator exclusion related to patients who were permanent nursing home residents. This component has an extremely low rate of use, demonstrating that it is not a meaningful exclusion for the measure.
We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53130), we are finalizing the substantive changes to measure Q370 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.	

### E.9 Statin Therapy for the Prevention and Treatment of Cardiovascular Disease

Category	Description
<b>CBE #</b>	N/A
<b>Quality #:</b>	438 (as previously associated with a Quality # prior to the sunset of the CMS Web Interface collection type under MIPS that became effective starting with the CY 2023 performance period)
<b>CMS Web Interface ID:</b>	PREV-13
<b>Current Collection Type:</b>	CMS Web Interface
<b>Current Measure Description:</b>	<p>Percentage of the following patients - all considered at high risk of cardiovascular events - who were prescribed or were on statin therapy during the measurement period:</p> <ul style="list-style-type: none"> <li>*All patients who were previously diagnosed with or currently have a diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD), including an ASCVD procedure; OR</li> <li>*Patients aged <math>\geq 20</math> years who have ever had a low-density lipoprotein cholesterol (LDL-C) level <math>\geq 190</math> mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia; OR</li> <li>*Patients aged 40-75 years with a diagnosis of diabetes</li> </ul>
<b>Substantive Change:</b>	<p><b>The measure description is revised to read:</b></p> <p>Percentage of the following patients - all considered at high risk of cardiovascular events - who were prescribed or were on statin therapy during the measurement period:</p> <ul style="list-style-type: none"> <li>• All patients who were previously diagnosed with or currently have a diagnosis clinical atherosclerotic cardiovascular disease (ASCVD), including an ASCVD procedure; OR</li> <li>• Patients aged 20 to 75 years who have ever had a low-density lipoprotein cholesterol (LDL-C) level <math>\geq 190</math> mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia; OR</li> <li>• Patients aged 40 to 75 years with a diagnosis of diabetes; OR</li> <li>• Patients aged 40 to 75 with a 10-year ASCVD risk score of <math>\geq 20</math> percent.</li> </ul> <p><b>Updated denominator guidance:</b>  <b>Revised:</b>  Denominator Population Guidance: The denominator population covers four distinct populations. There is only one performance rate calculated for this measure. Use the following process to prevent counting patients more than once.</p> <p>Denominator Population 1: All patients who were previously diagnosed with or currently have a diagnosis of clinical ASCVD, including an ASCVD procedure before the end of the measurement period.  If YES, patient meets Denominator Population 1 risk category.  If NO, screen for next risk category.</p> <p>Denominator Population 2: Patients aged 20 to 75 years at the beginning of the measurement period who have ever had a laboratory result of LDL-C <math>\geq 190</math> mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia.  If YES, patient meets Denominator Population 2 risk category.  If NO, screen for next risk category.</p> <p>Denominator Population 3: Patients aged 40 to 75 years at the beginning of the measurement period with a diagnosis of Type 1 or Type 2 diabetes at any time during the measurement period.  If YES, patient meets Denominator Population 3 risk category.  If NO, screen for next risk category.</p> <p>Denominator Population 4: Patients aged 40 to 75 years at the beginning of the measurement period with a 10-year ASCVD risk score of <math>\geq 20</math> percent during the measurement period.  If YES, patient meets Denominator Population 4 risk category.  If NO, patient does NOT meet denominator criteria and is NOT eligible for measure inclusion.</p> <p><b>Added:</b> For Denominator Population Guidance for Encounter:  To meet Denominator Population 4:  There is no LDL-C result required.</p> <p><b>Removed:</b> For Denominator Population Guidance for Encounter:  Lifestyle modification coaching:  A healthy lifestyle is important for the prevention of cardiovascular disease. However, lifestyle modification monitoring and documentation added too much complexity to allow its inclusion in the measure at this time.</p> <p><b>The initial population is revised to read:</b></p> <p>Population 1:  All patients who were previously diagnosed with or currently have an active diagnosis of clinical ASCVD or ever had, including an ASCVD procedure.</p> <p>Population 2:  Patients aged 20 to 75 years at the beginning of the measurement period who have ever had a laboratory result of LDL-C <math>\geq 190</math> mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia.</p> <p>Population 3:  Patients aged 40 to 75 years at the beginning of the measurement period with Type 1 or Type 2 diabetes.</p> <p>Population 4:  Patients aged 40 to 75 at the beginning of the measurement period with a 10-year ASCVD risk score of <math>\geq 20</math> percent.</p>

Category	Description
	<p><b>Updated denominator:</b>  <b>Revised:</b>  Population 2:  Patients aged 20 to 75 years at the beginning of the measurement period who have ever had laboratory result of LDL-C <math>\geq</math> 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia.  <b>Added:</b>  Population 4:  Patients aged 40 to 75 at the beginning of the measurement period with a 10-year ASCVD risk score of <math>\geq</math> 20 percent during the measurement period.</p> <p><b>Updated numerator definition: Added:</b> 10 Year Risk Assessment - The 10-year ASCVD risk score is calculated using the Pooled Cohort Equations: 1) the 2013 ACC/AHA ASCVD Risk Estimator OR 2) the ACC Risk Estimator Plus. If your EHR does not have either of these risk calculators, we recommend that you use the on-line versions. The 10-year ASCVD risk assessment must be performed during the measurement period.</p> <p><b>Updated submission guidance: Revised:</b>  DENOMINATOR CONFIRMATION, POPULATION 2</p> <ul style="list-style-type: none"> <li>o Determine if the patient is aged 20 to 75 years at the beginning of the measurement period AND has ever had a laboratory result of LDL-C <math>\geq</math> 190 mg/dL OR were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia. <ul style="list-style-type: none"> <li>o If the patient is 20 to 75 years at the beginning of the measurement period AND has ever had a laboratory result of LDL-C <math>\geq</math> 190 mg/dL documented OR were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia select “Yes”.</li> </ul> </li> </ul> <p><b>OR</b></p> <ul style="list-style-type: none"> <li>o If the patient is not 20 to 75 years at the beginning of the measurement period OR has never had a laboratory result of LDL-C <math>\geq</math> 190 mg/dL AND has never been previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia documented select “No – Diagnosis”.</li> </ul> <p><b>Added:</b>  DENOMINATOR CONFIRMATION, POPULATION 4</p> <ul style="list-style-type: none"> <li>o Determine if the patient is aged 40 to 75 years at the beginning of the measurement period with a 10-year ASCVD risk score of <math>\geq</math> 20 percent during the measurement period. <ul style="list-style-type: none"> <li>o If the patient is aged 40-75 years at the beginning of the measurement period with a 10-year ASCVD risk score of <math>\geq</math> 20 percent during the measurement period select “Yes”.</li> </ul> </li> </ul> <p><b>OR</b></p> <ul style="list-style-type: none"> <li>o If the patient is not aged 40 to 75 years at the beginning of the measurement period or does not have a 10-year ASCVD risk score of <math>\geq</math> 20 percent during the measurement period select “No – Risk Assessment”.</li> </ul> <p><b>OR</b></p> <ul style="list-style-type: none"> <li>o If there is a denominator exclusion for patient disqualification from the measure select “Denominator Exclusion”.</li> </ul> <p><b>OR</b></p> <ul style="list-style-type: none"> <li>o If there is an “other” CMS approved reason for patient disqualification from the measure select “No- Other CMS Approved Reason”.</li> </ul>

<b>Measure Steward:</b>	Centers for Medicare & Medicaid Services
-------------------------	--

<b>High Priority Measure:</b>	No
-------------------------------	----

<b>Measure Type:</b>	Process
----------------------	---------

<b>Rationale:</b>	<p>We proposed revisions to this measure that will allow it to align more closely with the 2019 ACC/AHA Guideline on the Primary Prevention of Cardiovascular Disease: A Report of the American College of Cardiology/American Heart Association Task Force on Clinical Practice Guidelines.<sup>81</sup> We proposed to update submission criteria 2 to reflect a cap in the age denominator criteria to 75. The ACC/AHA 2018 cholesterol guidelines state that in adults older than 75 years with diabetes mellitus, it may be reasonable to initiate statin therapy after a clinician–patient discussion of potential benefits and risks for prevention of ASCVD events.<sup>82</sup> Additionally we proposed to add submission criteria 4, which specifically assesses statin use for patients that have a 10-year ASCVD risk score of <math>&gt;</math> 20 percent. Patients that meet this denominator criteria will be considered high risk and based on the guidelines, should be strongly recommended statin therapy solely based on risk alone and after a clinician patient risk discussion.<sup>83</sup> Furthermore, we proposed to update the description and measure instructions to clearly communicate the changes within submission criteria one and the inclusion of a submission criteria 4.</p>
-------------------	---

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (88 FR 53130 through 53132), we are finalizing the substantive changes to measure Q438 as proposed for the CY 2024 performance period/2026 MIPS payment year and future years.

## APPENDIX 2: IMPROVEMENT ACTIVITIES

We refer readers to the CY 2024 Physician Fee Schedule (PFS) proposed rule (88 FR 52576 through 52578 and 88 FR 53132 through 53143), where we proposed for the CY 2024 performance period/2026 MIPS payment year and future years to add five new improvement activities, modify one previously adopted improvement activity, and remove three previously adopted improvement activities. We refer readers to 88 FR 52576 through 52577 of the CY 2024 PFS proposed rule for additional details on the Call for Improvement Activities process.

**Table A: New Improvement Activities for the CY 2024 Performance Period/2026 MIPS Payment Year and for Future Years**

New Improvement Activity	
<b>Proposed Activity ID:</b>	IA_PM_22
Proposed Subcategory:	Population Management
Proposed Activity Title:	Improving Practice Capacity for Human Immunodeficiency Virus (HIV) Prevention Services
Proposed Activity Description:	<p>Establish policies and procedures to improve practice capacity to increase HIV prevention screening, improve HIV prevention education and awareness, and reduce disparities in pre-exposure prophylaxis (PrEP) uptake. Use one or more of the following activities:</p> <ul style="list-style-type: none"> <li>• Implement electronic health record (EHR) prompts or clinical decision support tools to increase appropriate HIV prevention screening;</li> <li>• Require that providers and designated clinical staff take part in at least one educational opportunity that includes components on the importance and application of HIV prevention screening and PrEP initiation in clinical practice; and/or</li> <li>• Assess and refine current policies for HIV prevention screening, including integrated sexually transmitted infection (STI)/HIV testing processes, universal HIV screening, and PrEP initiation.</li> </ul>
Proposed Weighting:	Medium
Rationale:	<p>The Centers for Disease Control and Prevention (CDC) estimates that nearly 1.2 million Americans are living with HIV and that nearly one in eight are not aware that they are infected.<sup>10,11</sup> Social determinants of health (SDOH) factors, including low socioeconomic status, living in poverty, lack of transportation to care services, low health literacy levels to complete medical forms, homelessness, and intimate partner violence can lead to limitations in seeking preventive measures, including accessing healthcare providers or HIV testing sites.<sup>40</sup></p> <p>The CDC recommends that all individuals between the ages of 13 and 64 get tested for HIV at least once as part of routine healthcare.<sup>13</sup> Individuals at greater risk, including gay, bisexual, and other men who have sex with men (MSM), and persons who inject drugs, are recommended for more frequent, annual HIV screening.<sup>12,13</sup> The CDC also recommends that all sexually active adult and adolescent patients should receive information about HIV pre-exposure prophylaxis (PrEP), and recommends PrEP as an effective HIV prevention strategy.<sup>14</sup> Taking PrEP as prescribed reduces the risk of transmitting HIV through sexual contact by about 99 percent, and limits the risk of acquiring HIV by at least 74 percent among people who inject drugs.<sup>14</sup></p> <p>Lack of HIV preventive care and referrals among vulnerable populations in the U.S. leads to inequities in access to HIV prevention treatment.<sup>30,36</sup> One study reported that fewer Black, Hispanic, or Latino people who tested negative for HIV and were eligible for PrEP received a referral for treatment as compared with other racial and ethnic groups.<sup>36</sup> Among both males and females, Black and Hispanic people have far lower PrEP uptake rates relative to their risk than do White males, a disparity that is starkest among Black males.<sup>29</sup> Despite MSM representing the highest proportion of Americans diagnosed with HIV, lack of awareness and understanding of PrEP has led to low rates of PrEP use among this group; in one study conducted among Black/African American and White PrEP-eligible MSM, 61 percent were aware of PrEP, but only 9 percent used it.<sup>36</sup> In</p>

	<p>another study conducted among Black/African American MSM, PrEP awareness was 39 percent, but actual use was less than 5 percent.<sup>36</sup> Barriers to PrEP uptake have contributed to low rates of use, with more than one-half of PrEP-eligible MSM being reported as failing to reach the contemplation stage (for example, willing and self-identified as appropriate candidates) of PrEP adoption.<sup>34</sup> Implementation of an electronic HIV screening alert almost doubled the rates of universal HIV screening in one study of primary care providers in a Midwestern practice and this implementation also reduced racial disparities in care.<sup>38</sup> Provider knowledge about PrEP was associated with both past and potential future initiation of PrEP, and an observed greater willingness to prescribe PrEP was associated with higher PrEP knowledge.<sup>7</sup> HIV diagnoses in MSM in New South Wales, Australia, declined from 295 (cases) in the 12 months before PrEP roll-out to 221 (cases) in the 12 months after roll-out. ; a decline both in recent HIV infections (from 149 cases to 102) and in other HIV-related diagnoses was also noted.<sup>27</sup></p> <p>This HIV prevention-focused activity, including clinician education, will help to narrow gaps and inequities in care related to HIV prevention in clinical practice, and that it will highlight HIV prevention guidelines, including recommendations to enhance prevention screening and PrEP awareness and use.</p> <p>We proposed weighting this activity medium, because this activity may be accomplished by establishing or refining policies and procedures to improve practice capacity to increase HIV prevention screening and linkage to appropriate prevention resources. See the definition of medium weighting in the CY 2019 PFS final rule (83 FR 59780 and 59781).</p>
Comments:	We received several comments in support of this proposed new improvement activity.
Response:	We appreciate commenters' support.
Final Action:	After consideration of the public comments, we are finalizing this activity as proposed.
<b>New Improvement Activity</b>	
<b>Proposed Activity ID:</b>	<b>IA__MVP</b>
Proposed Subcategory:	N/A
Proposed Activity Title:	Practice-Wide Quality Improvement in MIPS Value Pathways
Proposed Activity Description:	<p>Create a quality improvement initiative within your practice and create a culture in which all staff actively participates. Clinicians must be participating in MIPS Value Pathways (MVPs) to attest to this activity.</p> <p>Create a quality improvement plan that involves a minimum of three of the measures within a specific MVP and that is characterized by the following:</p> <ul style="list-style-type: none"> <li>• Train all staff in quality improvement methods, particularly as related to other quality initiatives currently underway in the practice;</li> <li>• Promote transparency and accelerate improvement by sharing practice-level and panel-level quality of care and patient experience and utilization data with staff;</li> <li>• Integrate practice change/quality improvement into all staff duties, including communication and education regarding all current quality initiatives;</li> <li>• Designate regular team meetings to review data and plan improvement cycles with defined, iterative goals as appropriate; or</li> <li>• Promote transparency and engage patients and families by sharing practice-level quality of care and patient experience and utilization data with patients and families, including activities in which clinicians act upon patient experience data.</li> </ul> <p>Optional activities related to this activity (but do not count towards completion of this IA) include the following:</p> <ul style="list-style-type: none"> <li>• Creation of specific plans for recognition of individual or groups of clinicians and staff when they meet certain practice-defined quality goals. Examples include recognition for achieving success in measure reporting and/or a high level of effort directed to quality improvement and practice standardization; and</li> <li>• Participation in the American Board of Medical Specialties (ABMS) Multi-Specialty Portfolio Program.</li> </ul>
Proposed Weighting:	High

Rationale:	<p>Clinical practice quality improvement (QI) activities are commonly limited to staff members directly involved in the performance of the specific activity. Creating a culture of QI among all staff working as a team drives outcomes more effectively than when the work is done in isolation. This collaborative approach allows for a more comprehensive view of QI goals and, in turn, the development of most efficient and effective initiatives. Additionally, the positive and unpredictable ideas that come from a high-functioning collaborative team can be crucial to achieving QI that is more meaningful to both patients and providers. Team-based quality improvement approaches have been found to be highly effective in healthcare.<sup>18,32</sup></p> <p>Creating coordination between the goals of this activity and the goals of the measures within an MVP will create an intuitive focus within a specific clinical area, which will allow clinicians and other staff members to be most productive in their QI efforts. This coordinated clinical focus is likely to lessen the perceived burden of MVP while the effort required will still be sufficiently high.</p> <p>In addition, this activity will incentivize voluntary MVP adoption, which will drive clinician accountability and quality improvement on factors that are more relevant to their practice. For a discussion of the benefits of MVPs, please see the 2021 PFS final rule (85 FR 84844 through 84846).</p> <p>We proposed making this activity high-weighted because MIPS eligible clinicians will need considerable time and resources to implement practice-wide quality improvement via MVPs. See the definition for high weighting in the CY 2019 PFS final rule (83 FR 59780 and 59781).</p> <p>While this MVP-only activity could appear duplicative on the surface, this MVP activity specifically defines the nature of the QI project that clinicians must complete, and it is particular to the measures they are reporting on in the MVP they have chosen. We required that clinicians complete the project focused on three separate measures. In contrast, IA_PSPA_19 requires only a focused single improvement. This is consistent with the work that clinicians will need to complete to be successful with MVPs.</p>
Comments:	<p>We received several comments in support of this proposed new improvement activity. We received one comment that was not supportive of this activity; this commenter stated that since MVPs have the same quality improvement goals as traditional MIPS, an activity linking a formal quality improvement model to an MVP seems unnecessary and potentially confusing.</p>
Response:	<p>We thank the commenters for their support. We disagree that this MVP specific activity is unnecessary and potentially confusing, as conducting the quality improvement initiatives detailed in this MIPS improvement activity will serve to prepare clinicians and staff for adoption of MVPs, which aligns with the CMS goal to allow for a more cohesive participation experience by connecting measures and activities that are most relevant to a clinician's practice. This activity is specifically designed to encourage quality improvement initiatives within the construct and environment of an MVP and therefore is only applicable for clinicians reporting in the MVP program and not traditional MIPS. We will ensure that education with the public about this activity and its connection to MVP reporting will be clear.</p>
Final Action:	<p>After consideration of the public comments, we are finalizing this activity as proposed.</p>
<b>New Improvement Activity</b>	
<b>Proposed Activity ID:</b>	IA_PM_23
Proposed Subcategory:	Population Management
Proposed Activity Title:	Use of Computable Guidelines and Clinical Decision Support to Improve Adherence for Cervical Cancer Screening and Management Guidelines
Proposed Activity Description:	<p>Incorporate the Cervical Cancer Screening and Management (CCSM) Clinical Decision Support (CDS) tool within the electronic health record (EHR) system to provide clinicians with ready access to and assisted interpretation of the most up-to-date clinical practice guidelines in CCSM to ensure adequate screening, timely follow-up, and optimal patient care.</p>

	<p>The CCSM CDS helps ensure that patient populations receive adequate screening and management, according to evidence-based recommendations in the United States Preventive Services Task Force (USPSTF) screening and American Society for Colposcopy and Cervical Pathology (ASCCP) management guidelines for cervical cancer. The CCSM CDS integrates into the clinical workflow a clinician-facing dashboard to support the clinician’s awareness and adoption of and preventive care for cervical cancer, including screening and any necessary follow-up treatment.</p> <p>The CCSM CDS is fully conformant with the HL7 Fast Healthcare Interoperability Resources (FHIR) standard, so it can be used with any Office of the National Coordinator for Health Information Technology (ONC) certified EHR platform. The CDS Hooks and SMART-on-FHIR interoperability interface standards provide two ways to integrate with the clinical workflow in a way that complements existing displays and information pre-visit, during visit, and for post-visit follow-up. CCSM CDS helps the clinician evaluate the patient’s clinical data against existing guidance and displays patient-specific recommendations.</p>
Proposed Weighting:	High
Rationale:	<p>Cervical cancer is largely a disease of health inequity, with higher rates among lower socio-economic groups, immigrant populations, and women in rural settings.<sup>22</sup> Cervical cancer is highly preventable when precancerous lesions are detected early and appropriately managed.<sup>53</sup> However, the complexity of and frequent updates to existing evidence-based clinical guidelines make it challenging for clinicians to stay abreast of the latest recommendations.<sup>53</sup> In addition, limited availability of and accessibility to CDS make it difficult for groups who are medically underserved to receive screening and/or appropriate follow-up care.</p> <p>The CCSM CDS is one solution to help improve cervical cancer outcomes. The CCSM CDS provides clinical guidelines in a shareable, structured, and computer-interpretable format to facilitate meaningful improvements in the number of patients screened and treated for cervical precancer. This includes addressing current gaps in screening uptake and timely follow-up care among populations that are often medically underserved.<sup>22</sup> Analysis of data collected from 1,037 Federally Qualified Health Centers from 2016 to 2021 by the Health Resources and Services Administration (HRSA) Uniform Data System (UDS) found that only about 50 percent of women received recommended cervical cancer screening.<sup>16</sup> Additionally, National Quality Assurance Committee (NCQA) Healthcare Effectiveness and Data Information Set (HEDIS) measures of cervical cancer screening rates show that Medicaid HMOs have rates at least 10% lower than Commercial HMOs.<sup>42</sup></p> <p>The CDC-developed CCSM CDS tool has been developed in a standards-based, EHR-agnostic way.<sup>21,44</sup> The CDS tools are designed to help clinicians more efficiently evaluate patient clinical data against CCSM guidance and display patient-specific recommendations. This reduces the manual workload of monitoring patients who need screening and potential follow-up. Evidence suggests that clinician adherence to the CCSM guidelines can assist clinicians in improving screening and management outcomes and address existing disparities in guideline concordant care.<sup>46</sup></p> <p>This activity will leverage the convenience and efficiency of more sophisticated, standards-based decision support tooling to assist clinicians in applying complex data-driven guidelines.<sup>21</sup> This CCDS CDS can help provide optimal care and better engagement with diverse patient populations, including historically underserved populations.<sup>22,53,16,42</sup></p> <p>We proposed weighting this activity high, because this activity will require integrating the CCSM CDS tool into clinicians’/practices’ EHR dashboards, learning how to use it, and then using it. See the definition of high weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).</p>
Comments:	<p>We received many comments in support of the proposed new improvement activity. We also received a comment suggesting that any CDS tool incorporated into a clinician’s EHR system for this activity should first be found to be valid and reliable, as well as based upon the most current USPSTF recommendations for cervical cancer screening.</p>

	We also received a comment suggesting that this activity not be focused on the CCSM CDS tool exclusively.
Response:	We appreciate commenters' support and feedback. The CCSM CDS tool has been validated and is based on both USPSTF and ASCCP guidance. The CCSM CDS tool is can assist clinicians in applying complex data-driven guidelines to provide patients with optimal care. We will consider commenters' suggestions going forward, including as guidelines are updated.
Final Action:	After consideration of the public comments, we are finalizing this activity as proposed.
<b>New Improvement Activity</b>	
<b>Proposed Activity ID:</b>	<b>IA_BMH_14</b>
Proposed Subcategory:	Behavioral and Mental Health
Proposed Activity Title:	Behavioral/Mental Health and Substance Use Screening & Referral for Pregnant and Postpartum Women
Proposed Activity Description:	Screen for perinatal mood and anxiety disorders (PMADs) and substance use disorder (SUD) in pregnant and postpartum women, and screen and refer to treatment and/or refer to appropriate social services, and document this in patient care plans.
Proposed Weighting:	High
Rationale:	<p>As many as one in five women are affected by perinatal mood and anxiety disorders (PMADs) in their lifetimes<sup>23,24</sup> yet studies estimate that between 50-80 percent of women are not screened during the prenatal or postpartum periods.<sup>6</sup> This highlights barriers to receiving behavioral healthcare in the perinatal period, such as stigma in receiving mental health care, lack of awareness about the prevalence of PMADs, and limited access to affordable behavioral health services.<sup>51</sup> Though all women can experience PMADs, those that are particularly vulnerable include historically underserved racial and ethnic populations, those with lower socioeconomic status, and younger mothers.<sup>51</sup></p> <p>Research has demonstrated a link between untreated PMADs and maternal SUD<sup>3,33,39,43</sup> While there are limited data estimating the prevalence of maternal SUD, opioid use among perinatal women quadrupled between 1998 and 2014, leading to an increase in infants born with Neonatal Abstinence Syndrome (NAS)<sup>2,3</sup>. Methamphetamine and marijuana use among pregnant and postpartum women has also increased.<sup>1,62</sup> The largest disparity in maternal SUD, particularly opioid use disorder, is seen among mothers living in rural areas<sup>61</sup> Increased costs associated with maternal SUD, particularly for infants born with NAS was estimated at approximately \$93,400 per infant in 2012.<sup>43</sup></p> <p>While the effects of untreated PMADs and maternal SUD can lead to increased severity of PMADs (including risk of maternal suicide), initiation or increased substance use behaviors, and pregnancy complications,<sup>5,19</sup> the implications extend beyond mothers. Infants and children can also be impacted by lower rates of mother/infant bonding, breastfeeding, safe sleep and other infant safety practices, and other activities impacting neurodevelopment.<sup>8,51</sup> Infants, children, and partners of mothers who experience PMADs are also more likely to experience a depressive disorder.<sup>35,51</sup> Furthermore, prevalence of maternal substance use disorders is associated with increased number of children entering the foster system and increased risk of substance use among these children.<sup>51,54</sup></p> <p>Rates of screening for PMADs and maternal SUD greatly vary during pregnancy and postpartum.<sup>6</sup> The American College of Obstetricians and Gynecologists (ACOG) recommends that all perinatal women be screened for PMADs, and referred for services upon positive screen.<sup>2</sup> The American Academy of Pediatrics recommends that pediatricians routinely screen mothers of patients for postpartum depression at the one-, two-, four- and six-month well child visits.<sup>17</sup> The U.S. Preventive Services Task Force also recommends that clinicians provide or refer pregnant and postpartum persons who are at increased risk of perinatal depression to counseling interventions and has determined that doing so provides improved outcomes for those at increased risk.<sup>4,7</sup></p> <p>There are several prominent guidelines for screening and treating substance use disorder in pregnant women, including the Substance Abuse and Mental Health Services Administration Clinical Guidance for Treating Pregnant and Parenting Women with</p>

	<p>Opioid Use Disorder and their Infants.<sup>45</sup> The Biden-Harris Administration has also released the National Drug Control Strategy and Substance Use in Pregnancy: Improving Outcomes for Families plan that outlines key steps to “explore, identify barriers, and establish policy to help pregnant women with substance use disorder (SUD) obtain prenatal care and addiction treatment without fear of child removal.”<sup>56,57,58,59</sup> Many of these guidelines describe the need for routine verbal screenings to reduce bias and discrimination in those who are screened using specimens.<sup>25</sup></p> <p>We proposed making this activity high-weighted, because MIPS-eligible clinicians will need considerable time and resources to implement the requirements for this activity to train providers on appropriate screening practices, integrate screenings into clinical workflow, and establish a mechanism for referring, linking, and following up with patients upon positive screen. See the definition for high weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).</p>
Comments:	We received many comments in support of this proposed new improvement activity, many noting the importance of a focus on behavioral and mental health.
Response:	We appreciate commenters’ support.
Final Action:	After consideration of the public comments, we are finalizing this activity as proposed.
<b>New Improvement Activity</b>	
<b>Proposed Activity ID:</b>	<b>IA_BMH_15</b>
Proposed Subcategory:	Behavioral and Mental Health
Proposed Activity Title:	Behavioral/Mental Health and Substance Use Screening & Referral for Older Adults
Proposed Activity Description:	Complete age-appropriate screening for mental health and substance use in older adults, as well as screening and referral to treatment and/or referral to appropriate social services, and document this in patient care plans.
Proposed Weighting:	High
Rationale:	<p>Social isolation in the elderly is associated with depression; anxiety; cognitive decline; physical disabilities; lower self-ratings of health; and premature mortality from all causes.<sup>19,26,41,54</sup> Nearly one-quarter (24 percent) of Americans aged 65 and older living in the community are considered to be socially isolated, and a sizable proportion of adults in the US report feeling lonely (35 percent of adults aged 45 and older and 43 percent of adults aged 60 and older).<sup>34</sup> Also, unhealthy alcohol use and use of other drugs has been increasing rapidly among older adults.<sup>37,63</sup></p> <p>The Substance Abuse and Mental Health Services Administration (SAMHSA), the American Society of Addiction Medicine (ASAM), and the American Psychiatric Association (APA) all recommend routine screening for mental health and substance use issues in elders to identify ongoing concerns or patients at risk for future issues.<sup>39</sup> Many mental health screening tools available for the general adult population, such as the Patient Health Questionnaire (PHQ-9) depression screener and the Generalized Anxiety Disorder 7-item scale (GAD-7), are appropriate for older adults.<sup>38</sup> The APA recommends that “older individuals be referred to treatment settings that offer age-appropriate group therapy and non-confrontational individual therapy focusing on late-life issues of loss and sources of social support. Older adults also deserve to receive full consideration for the potential benefits of medication management for substance use disorders.”<sup>74</sup></p> <p>We proposed making this activity high-weighted, because MIPS eligible clinicians will need considerable time and resources to implement the requirements for this activity. See the definition for high weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).</p>
Comments:	We received many comments in support of this proposed new improvement activity, many noting the importance of a focus on behavioral and mental health.
Response:	We appreciate commenters’ support.
Final Action:	After consideration of the public comments, we are finalizing this activity as proposed.

**Table B: Changes to Previously Adopted Improvement Activities for the CY 2024 Performance Period/2026 MIPS Payment Year and for Future Years**

In this rule, we propose to modify one previously finalized improvement activity for the CY 2024 performance period/2026 MIPS payment year and future years.

Current Improvement Activity	
<b>Current Activity ID:</b>	<b>IA PSPA 16</b>
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Use of Decision Support and Standardized Treatment Protocols
Current Activity Description:	Use decision support and standardized treatment protocols to manage workflow in the team to meet patient needs.
Current Weighting:	Medium
Proposed Change and Rationale:	We proposed to modify this activity’s description, “Use decision support and standardized treatment protocols to manage workflow in the team to meet patient needs,” and its validation criteria to explicitly promote the use of clinical decision support (CDS), particularly open-source, freely available, interoperable CDS. “Moving the needle” to make progress toward interoperability continues to be an essential Federal goal, as demonstrated by new rules that the Office of the National Coordinator for Health Information Technology (ONC) announced on April 11, 2023, that it will be proposing for Cures Act implementation. <sup>1</sup> The urgent importance of interoperability is noted on the HealthIT.gov website: “Interoperability helps clinicians deliver safe, effective, patient-centered care. It also provides new ways for individuals and caregivers to access electronic health information to manage and coordinate care. Advancing interoperability is now an essential part of most health care activities ranging from health equity to public health emergency response.” <sup>2</sup>
Proposed Revised Activity Title:	Use decision support—ideally platform-agnostic, interoperable clinical decision support (CDS) tools—and standardized treatment protocols to manage workflow on the care team to meet patient needs.
Proposed Revised Activity Description:	Use decision support—ideally platform-agnostic, interoperable clinical decision support (CDS) tools—and standardized treatment protocols to manage workflow on the care team to meet patient needs. Clinicians should focus on utilizing open-source, freely available, interoperable CDS in completing the requirements of this activity.
Comments:	We received comments in support of this modification. One commenter recommended against making this modification on the grounds that making the interest in interoperable CDS tools explicit would discourage other types of efforts being made to attest to this activity. This commenter stated that “limiting this activity to interoperable CDS tools would remove incentive for many practices to implement important standardized treatment protocols that improve patient experience and care [and] would reduce the practice's available options to report on this activity and, thus, inhibit the ability of this activity to promote the identification of ways the practice can improve patient safety and care above and beyond what is already in place..”
Response:	We appreciate commenters’ support and feedback. We disagree that encouraging the use of interoperable CDS tools necessarily discourages other efforts that satisfy the requirements of this activity. Here, the language used in the new activity title and description make clear that the use of such tools is preferred but not required.
Final Action:	After consideration of the public comments, we are finalizing this activity as proposed.

<sup>2</sup>Health IT (2022, September 9). Interoperability. <https://www.healthit.gov>. Retrieved May 2, 2023, from <https://www.healthit.gov/topic/interoperability>.

**TABLE C: Improvement Activities Proposed for Removal for the CY 2024 Performance Period/2026 MIPS Payment Year and for Future Years**

In this rule, we proposed to remove three previously finalized improvement activities from the CY 2024 performance period/2026 MIPS payment year and future years. These improvement activities are discussed in detail below. Improvement activity removal factors are discussed in the CY 2020 PFS final rule (84 FR 62568 through 63563).

<b>Current Improvement Activity</b>	
<b>Current Activity ID:</b>	<b>IA_BMH_6</b>
Current Subcategory:	Behavioral and Mental Health
Current Activity Title:	Implementation of co-location PCP and MH services
Current Activity Description:	Integration facilitation and promotion of the colocation of mental health and substance use disorder services in primary and/or non-primary clinical care settings.
Current Weighting:	Medium
Removal Rationale:	<p>We proposed to remove this activity under removal factor two, there is an alternative activity with a stronger relationship to quality care or improvements in clinical practice, and factor three, activity does not align with current clinical guidelines or practice. We have received interested-party feedback expressing concern that this activity is out-of-date, and that IA_BMH_6 substantially overlaps with IA_BMH_7 (Implementation of Integrated Patient Centered Behavioral Health Model). IA_BMH_7 better aligns with evidence supporting improved patient outcomes.<sup>1</sup> Furthermore, IA_BMH_6 focuses on co-location of mental health and substance use disorder services in primary and/or non-primary clinical care settings, which has not been found to consistently improve patient outcomes.<sup>2</sup></p> <p>In the current rulemaking cycle, we proposed two new activities in the Behavioral and Mental Health subcategory. We noted that the removal of IA_BMH_6 was proposed to ensure that the improvement activities Inventory best reflects current clinical practice, and in no way reflects a de-emphasis of the ongoing priority CMS is placing on behavioral and mental health in general, and on substance use disorder in particular.</p>
Comments:	We received comments in support of the proposed removal of this improvement activity. One commenter expressed their support for integrated behavioral health and primary care physicians in treating patients with mental and behavioral health conditions and suggested that we consider not removing this activity. However, the commenter provided no evidence-based rationale for its retention.
Response:	We appreciate commenters' support and feedback. We are removing this activity because the evidence indicates that this activity is no longer in accordance with best practices ( <i>see</i> Wray 2018). We also note that another existing activity, IA_BMH_7, Implementation of Integrated Patient Centered Behavioral Health Model, includes elements related to this activity and is more robust.
Final Action:	After consideration of the public comments, we are finalizing this removal as proposed.
<b>Current Improvement Activity</b>	
<b>Current Activity ID:</b>	<b>IA_BMH_13</b>
Current Subcategory:	Behavioral and Mental Health
Current Activity Title:	Obtain or Renew an Approved Waiver for Provision of Buprenorphine as Medication-Assisted Treatment for Opioid Use Disorder
Current Activity Description:	Complete any required training and obtain or renew an approved waiver for provision of medication-assisted treatment of opioid use disorders using buprenorphine. Note: This activity may be selected once for low-capacity waivers, as these do not expire, and once every 3 years for the expanded waiver, in keeping with renewal requirements.
Current Weighting:	Medium
Removal Rationale:	We proposed to remove this activity under removal factor three, activity does not align with current clinical guidelines or practice. In late December 2022, the end of the "X-waiver" was announced, so doctors/nurse practitioners no longer need to complete training and obtain a waiver from the Drug Enforcement Administration (DEA) to be able to prescribe buprenorphine (medication-assisted treatment; MAT). Section 1262 of the Consolidated Appropriations Act of 2023 (also referred to as the "Omnibus Bill") was passed in December 2022. <sup>3</sup>

	We noted that the removal of IA_BMH_13 is being proposed in order to ensure that the improvement activities Inventory best reflects current clinical practice, and in no way reflects a de-emphasis of the ongoing priority CMS is placing on behavioral and mental health in general, and on substance use disorder in particular. This removal is necessary as the X-waiver is no longer a requirement of MAT prescribing.
Comments:	We received many comments in support of the removal of this improvement activity. We also note that this activity was suspended on 6/14/23 because use of the “X-waiver” has ended.
Response:	We appreciate commenters’ support.
Final Action:	After consideration of the public comments, we are finalizing this removal as proposed.
<b>Current Improvement Activity</b>	
<b>Current Activity ID:</b>	<b>IA_PSPA_29</b>
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Consulting Appropriate Use Criteria (AUC) Using Clinical Decision Support when Ordering Advanced Diagnostic Imaging
Current Activity Description:	Clinicians attest that they are consulting specified applicable AUC through a qualified clinical decision support mechanism for all applicable imaging services furnished in an applicable setting, paid for under an applicable payment system, and ordered on or after January 1, 2018. This activity is for clinicians that are early adopters of the Medicare AUC program (2018 performance year) and for clinicians that begin the Medicare AUC program in future years as specified in our regulation at § 414.94. The AUC program is required under section 218 of the Protecting Access to Medicare Act of 2014. Qualified mechanisms will be able to provide a report to the ordering clinician that can be used to assess patterns of image-ordering and improve upon those patterns to ensure that patients are receiving the most appropriate imaging for their individual condition.
Current Weighting:	High
Removal Rationale:	We proposed to remove this activity under removal factor seven, improvement activity is “obsolete.” We stated in the CY 2024 PFS proposed rule that “The AUC CDS program has ended, so it will no longer be possible to attest to this activity” (88 FR 53142 and 53143). That was not precisely correct. CMS proposed to pause the program for reevaluation at that time (88 FR 52512). The removal of IA_PSPA_29 was proposed in light of that proposal. We are pausing the AUC CDS program and rescinding the regulations, so this activity will be obsolete.
Comments:	We received comments in support of this removal. A few commenters suggested that we consider not removing this activity, citing benefits of AUC and similar advanced diagnostic imaging guidelines. One commenter stated that “consultation of AUC outside of [the AUC CDS] program can be valuable and several CDSMs are already in use by physicians and other health care professionals. It is also important to recognize that clinicians can consult AUC using mechanisms other than a CDSM. Accordingly, [we] recommend[ ]s that this [activity] provide flexibility for the consultation of physician-developed, evidence-based, and transparent AUC or advanced diagnostic imaging guidelines using a mechanism best suited for their practice, specialty, and workflow.” Another commenter stated that the activity “provides CMS an avenue to meet the statutory requirements of the AUC program without adding extra burden to Medicare providers or CMS staff.”
Response:	We appreciate commenters’ support and feedback. We understand commenters’ suggestion to retain this activity due to the benefits of using AUC CDS tools. However, as we are pausing the AUC CDS program and rescinding the regulations, the activity is obsolete. To continue an activity linked to a program that is not available will cause unnecessary confusion. Additionally, there are other activities available that provide credit for the use of CDS, including IA_PSPA_16.
Final Action:	After consideration of the public comments, we are finalizing this removal as proposed.

## APPENDIX 3: MVP INVENTORY

### MVP Development Background

In the CY 2021 PFS final rule (85 FR 84849 through 84854), the CY 2022 PFS final rule (86 FR 65998 through 66031), and the CY 2023 PFS final rule (87 FR 70210 through 70211) we finalized a set of criteria to use in the development of MVPs, including MVP reporting requirements, MVP maintenance, and the selection of measures and activities within an MVP.

This appendix contains two groups of MVP tables: Group A, which includes five new MVPs and Group B, which includes modifications to 12 previously finalized MVPs. We received comments on all Group A and Group B MVPs with the comment summaries and responses embedded in each MVP table.

Each MVP includes measures and activities from the quality performance category, improvement activities performance category, and the cost performance category that are relevant to the clinical theme of the MVP. In addition, each MVP includes a foundational layer comprised of population health measures and Promoting Interoperability performance category measures.

### MVP Development Performance Category Sources

The MVP tables below contain a set of MIPS quality measures, QCDR measures (as applicable), improvement activities, cost measures, and foundational measures based on clinical topics. For further reference, the sources of the measures and activities in the MVP tables are as follows:

- Existing MIPS quality measures considered in developing the MVPs are located in the 2023 MIPS Quality Measures List on the Quality Payment Program website.<sup>578</sup> In addition, see Appendix 1: MIPS Quality Measures of this final rule for any removals, additions, and modifications to the existing quality measures.
- Existing QCDR measures considered in developing the MVPs were based on the most recent publication of the 2023 QCDR Measure Specification file and is located on the Quality Payment Program website.<sup>579</sup> We plan to modify the list of 2024 QCDR measures around December 2023. We refer readers to the to the CY 2022 PFS final rule (86 FR 65405 through 65408) for additional details regarding QCDR measures and selection of measures within an MVP.
- Improvement activities considered in developing the MVPs are located in the 2023 Improvement Activities Inventory, and the 2023 MIPS Data Validation Criteria in the Quality Payment Program website.<sup>580</sup> In addition, see Appendix 2: Improvement Activities of this final rule for any removals, additions, or modifications to existing improvement activities.
- Existing cost measures considered in developing the MVPs are located in the 2023 Cost Measures Inventory.<sup>581</sup> In addition, see section IV.A.4.f.(2) of this final rule for proposals regarding the cost performance category.
- For further details on the population health measures (attributed to the Quality Performance Category) included in the foundational layer, see the CY 2022 PFS final rule (86 FR 65408 through 65409).
- Existing Promoting Interoperability performance category measures adopted in prior rulemaking and included in the foundational layer are located on the Quality Payment Program website.<sup>582</sup> In addition, see section IV.A.4.f.(4) of this final rule for proposals regarding the existing Promoting Interoperability performance category measures.

### MVP Development: Global Inclusion of a Quality Measure and an Improvement Activity

---

<sup>578</sup> See the 2023 MIPS Quality Measures List: <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2217/2023%20MIPS%20Quality%20Measures%20List.xlsx>.

<sup>579</sup> See [https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2174/2023\\_QCDR\\_Measure\\_Specifications.xlsx](https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2174/2023_QCDR_Measure_Specifications.xlsx) for QCDR measures.

<sup>580</sup> See the 2023 Improvement Activities Inventory: <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2237/2023%20Improvement%20Activities%20Inventory.zip> and 2023 MIPS Data Validation Criteria: <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2313/2023%20MIPS%20Data%20Validation%20Criteria.zip> for improvement activity details.

<sup>581</sup> See the 2023 Cost Measures Inventory: <https://qpp.cms.gov/mips/explore-measures?tab=costMeasures&py=2023>.

<sup>582</sup> See the 2023 Promoting Interoperability Measure Specifications: <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2223/2023%20MIPS%20Promoting%20Interoperability%20Measure%20Specifications.zip> for Promoting Interoperability measure details.

- Consistent with the priority to advance health equity throughout various CMS programs, including the Quality Payment Program, we proposed to include Q487: Screening for Social Drivers of Health in both new and previously finalized MVPs. Health equity supports health for all the people served by our programs by designing, implementing, and operationalizing policies and programs that eliminate avoidable differences in health outcomes experienced by people who are disadvantaged or underserved while providing the care and support beneficiaries need to thrive (<https://www.cms.gov/pillar/health-equity>). The measure supports the process of collecting drivers of health (DOH) data, which is a foundational step towards defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians who choose to submit this measure though it is not required. For further details regarding the basis on which CMS determined Q487: Screening for Social Drivers of Health is appropriate to measure clinician performance as well as how it does so, see 87 FR 69872 through 69784. We received several comments in support of this proposal, and we are finalizing our proposal to include Q487: Screening for Social Drivers of Health in both new and previously finalized MVPs as proposed.

- We proposed the addition of IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways, a high weighted activity, to each of the new and previously finalized MVPs. This activity will expand the opportunity for quality improvement (QI) activities across and among practices, ultimately leading to improvements in quality of care and fostering a culture of participation by all staff. In addition, this activity incentivizes voluntary MVP adoption, which is important to the transformation of clinical practice by encouraging participation in payment options such as MVPs and APMs that measure performance in ways more relevant to practice members. We received a couple of comments in support of this proposal, and we are finalizing our proposal to include IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways in both new and previously finalized MVPs as proposed. See Appendix 2: Improvement Activities: Table A of this final rule for detailed information regarding the IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways activity.

### **MVP Table Symbol Information and Definitions**

Please note the following symbols and definitions used within the MVP tables in the Group A and Group B tables below:

- New quality measures, improvement activities, and cost measures finalized for inclusion in MIPS beginning with the CY 2024 performance period/2026 MIPS payment year and future years are identified with a caret symbol (^). See Appendix 1: MIPS Quality Measures: Table Group A of this final rule for further information regarding new MIPS measures. See Appendix 2: Improvement Activities: Table A of this final rule for further information regarding new improvement activities. See section IV.A.4.f.(2) of this final rule for further information regarding new cost measures.
- Quality measures, improvement activities, and cost measures that we are finalizing to add to a previously finalized MVP are identified with a plus sign (+) within the Group B MVP tables in this appendix.
- Existing quality measures and improvement activities with finalized revisions are identified with an asterisk (\*).
- Quality measures identified with a double asterisk (\*\*) are individual measures duplicating a component of the Q497: Preventive Care and Wellness (composite) measure. The quality measures that include the (\*\*) can only be submitted when included in an MVP. Please see Appendix 1: MIPS Quality Measures Table A.6 of this final rule for any additional information regarding the Preventive Care and Wellness (composite) measure.
- Quality measures that are considered high priority (as defined in § 414.1305) are illustrated with an exclamation point (!) and outcome measures (as defined in § 414.1305) are illustrated with a double exclamation point (!!). Further details of these types of measures are located in the CMS Measures Management System Hub.<sup>583</sup>
- To determine whether a QCDR measure may be finalized within an MVP, we requested QCDR measure testing data for review by the end of the self-nomination period (that is, no later than September 1 of the year prior to the applicable performance period). If a QCDR was unable to submit testing data that demonstrated their QCDR measure was fully tested by the end of the self-nomination period or otherwise did not meet our requirements, we were unable to finalize the inclusion of the QCDR measure within an MVP. In this final rule, we are finalizing the QCDR measures within the relevant MVPs where evidence of testing data at the clinician level was received and fully tested. We refer readers to CY 2022 PFS final rule for additional details regarding requirements for QCDR measures within the MVP (86 FR 65407 through 65408).
- Improvement activities that include a health equity component are illustrated with a tilde (~) within the MVP table.
- IA\_PCMH: Electronic submission of Patient Centered Medical Home accreditation is illustrated with a percent (%) to indicate that attestation to this improvement activity provides full credit for the improvement activity performance category within an MVP.

---

<sup>583</sup> See <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf>.

In addition, quality measure collection types are identified in parentheses after each quality measure title within each MVP table and improvement activity medium/high weight designations are identified in parentheses after each improvement activity.

## Group A: New MVPs for the CY 2024 Performance Period/2026 MIPS Payment Year and Future Years

### Focusing on Women's Health MVP

In the CY 2024 PFS proposed rule (88 FR 53148 through 53150), we proposed and solicited comments on the Focusing on Women's Health MVP. The proposed Focusing on Women's Health MVP focuses on the clinical theme of providing treatment and management of women's health. This MVP would be most applicable to clinicians who treat patients within the practice of gynecology, obstetrics, and urogynecology, including nonphysician practitioners (NPPs) such as certified nurse-midwives, nurse practitioners, and physician assistants. The summary of the public comments received and our responses for this MVP are embedded within Table A.1.

#### Quality Measures

We proposed to include 18 MIPS quality measures and one QCDR measure within the quality performance category of this MVP, which are specific to the clinical topic of women's health by assessing three critical areas of care: obstetrics, preventive women's health, and urogynecology. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in women's health:

- Q048: Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older: This MIPS quality measure ensures annual assessment for the presence or absence of urinary incontinence for women.
- Q112: Breast Cancer Screening: This MIPS quality measure ensures women have a mammogram to screen for breast cancer in accordance with clinical guidelines.
- Q309: Cervical Cancer Screening: This MIPS quality measure assesses for the performance of cervical cancer screening in women in accordance with clinical guidelines.
- Q310: Chlamydia Screening for Women: This MIPS quality measure identifies women that are sexually active to ensure that they have had at least one test for chlamydia.
- Q335: Maternity Care: Elective Delivery (Without Medical Indication) at < 39 Weeks (Overuse): This inverse MIPS quality measure identifies patients who have delivered a live singleton at < 39 weeks of gestation and assesses for elective deliveries (without medical indication) by cesarean birth or induction of labor.
- Q336: Maternity Care: Postpartum Follow-up and Care Coordination: This MIPS quality measure ensures the following postpartum care is completed: breast-feeding evaluation and education, postpartum depression screening, postpartum glucose screening for gestational diabetes patients, family and contraceptive planning counseling, tobacco use screening and cessation education, healthy lifestyle behavioral advice, and assurance immunization are reviewed and updated.
- Q400: One-Time Screening for Hepatitis C Virus (HCV) and Treatment Initiation: This MIPS quality measure currently requires that patients have received a one-time screening for hepatitis C virus (HCV) infection. However, this measure has proposed substantive changes that would require treatment initiation or referral within a set timeframe in addition to screening. Please reference Appendix 1: MIPS Quality Measures: Table D.45 for further information.
- Q422: Performing Cystoscopy at the Time of Hysterectomy for Pelvic Organ Prolapse to Detect Lower Urinary Tract Injury: This MIPS quality measure evaluates patients that undergo cystoscopy at the time of hysterectomy for pelvic organ prolapse to evaluate for lower urinary tract injury.
- Q432: Proportion of Patients Sustaining a Bladder Injury at the Time of any Pelvic Organ Prolapse Repair: This MIPS quality measure evaluates for injury, during or within 30 days, to the bladder after surgery for patients that undergoing pelvic organ prolapse repair.
- Q448: Appropriate Workup Prior to Endometrial Ablation: This MIPS quality measure ensures endometrial sampling or hysteroscopy with biopsy with results documented prior to an endometrial ablation.
- Q472: Appropriate Use of DXA Scans in Women Under 65 Years Who Do Not Meet the Risk Factor Profile for Osteoporotic Fracture: This MIPS quality measure ensures women receive an order for a dual-energy x-ray absorptiometry (DXA) scan if they exhibit select risk factors for osteoporotic fracture.
- Q475: HIV Screening: This MIPS quality measure ensures patients receive a one-time test for HIV.
- Q496: Cardiovascular Disease (CVD) Risk Assessment Measure - Proportion of Pregnant/Postpartum Patients that Receive CVD Risk Assessment with a Standardized Instrument: This proposed MIPS quality measure evaluates pregnant or postpartum patients for a completed cardiovascular disease (CVD) risk assessment utilizing a standard instrument.

- UREQA8: Vitamin D level: Effective Control of Low Bone Mass/Osteopenia and Osteoporosis: Therapeutic Level Of 25 OH Vitamin D Level Achieved: This MIPS quality measure ensures patients diagnosed with osteopenia or osteoporosis achieve a serum 25 Hydroxy-Vitamin D result greater than or equal to 30.0 ng/dL.

In addition, we proposed to include the following broadly applicable MIPS quality measures that are relevant to clinicians who specialize in women's health. The quality measures below assess for age-specific screenings, and follow-up actions for select measures, in addition to recommended vaccinations:

- Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan: This MIPS quality measure ensures all patients are screened for depression with a follow-up plan documented for those patients who screen positive.
- Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: This MIPS quality measure screens patients for tobacco use. Any patients that are found to be tobacco users should receive tobacco cessation intervention.
- Q431: Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling: This MIPS quality measure screens patients, aged 18 years and older, for unhealthy alcohol use using a systematic screening method at least once within the last 12 months. If the patient is screened positive for unhealthy alcohol use, then they should receive brief counseling.
- Q487: Screening for Social Drivers of Health: This MIPS quality measure ensures adults are screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.
- Q493: Adult Immunization Status: This MIPS quality measure ensures that adults are up-to-date with the recommended routine vaccines: influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.

### **Improvement Activities**

We reviewed the improvement activity inventory and considered feedback received during the 2024 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We proposed to include 14 improvement activities that reflect actions and processes undertaken by clinicians who specialize in women's health, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care for patients being seen for women's health care. We proposed the following improvement activities for inclusion in this MVP:

- IA\_AHE\_1: Enhance Engagement of Medicaid and Other Underserved Populations
- IA\_AHE\_3: Promote Use of Patient-Reported Outcome Tools
- IA\_AHE\_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols
- IA\_AHE\_12: Practice Improvements that Engage Community Resources to Address Drivers of Health
- IA\_BE\_4: Engagement of patients through implementation of improvements in patient portal
- IA\_BE\_16: Promote Self-management in Usual Care
- IA\_BMH\_11: Implementation of a Trauma-Informed Care (TIC) Approach to Clinical Practice
- IA\_BMH\_14: Behavioral/Mental Health and Substance Use Screening & Referral for Pregnant and Postpartum Women
- IA\_CC\_9: Implementation of practices/processes for developing regular individual care plans
- IA\_EPA\_2: Use of telehealth services that expand practice access
- IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA\_PCMH: Electronic submission of Patient Centered Medical Home accreditation
- IA\_PM\_6: Use of toolsets or other resources to close healthcare disparities across communities
- IA\_PM\_23: Use of Computable Guidelines and Clinical Decision Support to Improve Adherence for Cervical Cancer Screening and Management Guidelines

### **Cost Measures**

We proposed to include two MIPS cost measures within the cost performance category of this MVP, which apply to the clinical topic of women's health. We reviewed the MIPS cost measure inventory and considered feedback received during the 2024 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in women's health and align with other measures and activities within this MVP:

- Medicare Spending Per Beneficiary (MSPB) Clinician: This MIPS cost measure assesses the costs of services provided to a patient for the period immediately prior to, during, and following the patient's hospital stay, with exceptions for services identified as unlikely to be influenced by the clinician's care

decisions. It applies to clinicians providing care in inpatient hospitals, including those providing obstetric and gynecological care.

- **Total Per Capita Cost (TPCC):** This MIPS cost measure captures the overall costs of care after establishing a primary care-type relationship. Obstetricians and gynecologists are included in attribution for the TPCC measure.

Currently, there are no applicable episode-based cost measures available, but one could be considered for development in the future.

**TABLE A.1: Focusing on Women’s Health MVP**

Table A.1 serves to represent the measures and activities that are finalized within the Focusing on Women’s Health MVP.

**Symbol Key:**

Carat symbol (^): when applicable, new MIPS quality measures, improvement activities, and cost measures

Single asterisk (\*): existing quality measures and improvement activities with revisions

Double asterisk (\*\*): quality measures that can be submitted only when included in an MVP

Single exclamation point (!): quality measures that are considered high priority

Double exclamation point (!!): outcome measures

Tilde (~): improvement activities that include a health equity component

Percent (%): indication that attestation to IA\_PCMH: Electronic submission of Patient Centered Medical Home accreditation provides full credit for the improvement activity performance category

ONC Direct Review Attestation

**Comment:** A few commenters expressed support for the following quality measures and improvement activities included in this MVP: Q112: Breast Cancer Screening, Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan, Q431: Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling, Q475: HIV Screening, Q487: Screening for Social Drivers of Health, Q493: Adult Immunization Status, IA\_AHE\_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols, and IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways. Several commenters support the inclusion of this MVP in the MIPS program.

**Response:** We thank the commenters for their support.

**Comment:** Commenters recommended additional quality measures be considered for this MVP. Recommendations included adding measures to address fracture-related care such as Q024: Communication with the Physician or Other Clinician Managing On-Going Care Post-Fracture for Men and Women Aged 50 Years and Older and Q418: Osteoporosis Management in Women Who Had a Fracture. One commenter recommended that measures such as Q465: Uterine Artery Embolization Technique: Documentation of Angiographic Endpoints and Interrogation of Ovarian Arteries be included to ensure they are carried forward as traditional MIPS is sunset. A couple commenters recommended Q498: Connection to Community Service Provider be included and one commenter recommended the inclusion of IA\_PM\_22: Improving Practice Capacity for Human Immunodeficiency Virus (HIV) Prevention Services to this MVP.

**Response:** We may consider the inclusion of additional quality measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

**Comment:** One commenter recommended expanding this MVP to include pelvic health that applies to all patients.

**Response:** We may consider the inclusion of pelvic health measures that meet the inclusion criteria and address a measurement gap through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Currently, the clinical focus of this MVP is women's health.

**Comment:** One commenter stated the statement regarding the rationale for the inclusion of Q472: Appropriate Use of DXA Scans in Women Under 65 Years Who Do Not Meet the Risk Factor Profile for Osteoporotic Fracture is inaccurate. The commenter noted the measure is designed to assess whether a patient under 65 receiving a dual energy x-ray absorptiometry (DXA) scan has documented risk factors. It cannot, therefore, ensure that those with risk factors receive appropriate testing. The commenter stated the effect of this measure is more likely to discourage DXA use since providers face a documentation burden for each DXA provided to a woman under age 65.

**Response:** We agree with the commenters understanding of the measure intent and note that the above statement could have been made clearer by stating "...women, aged 50 – 64, receive an order for a dual-energy x-ray absorptiometry DXA scan **only** if they exhibit select risk factors for osteoporotic fracture." The goal of this measure is to discourage utilization of DXA scanning unless medically indicated for the denominator eligible patient population. This measure is only available for the eCQM collection type and as such would be associated with minimal clinician burden.

**Comment:** One commenter expressed concern that measure UREQA8: Vitamin D level: Effective Control of Low Bone Mass/Osteopenia and Osteoporosis: Therapeutic Level Of 25 OH Vitamin D Level Achieved promotes a standard of care that does not align with current scientific understanding of Vitamin D and its use in treating osteoporosis. The commenter stated clinical guidelines recommend that clinicians select treatments for high-risk patients based on the specific patient's future fracture risk and other patient specific factors. In addition, the commenter noted the measure applies only to clinicians treating osteoporosis in women and will almost certainly delay, precluding patient access to FDA-approved treatments appropriate and necessary to reduce future fracture risk. Furthermore, the commenter believes clinicians treating men for osteoporosis would, assumedly, base their treatment decisions on the standard of care within clinical guidelines.

**Response:** The denominator for measure UREQA8: Vitamin D level: Effective Control of Low Bone Mass/Osteopenia and Osteoporosis: Therapeutic Level Of 25 OH Vitamin D Level Achieved applies to patients aged 65 years and older as of the date of service with an established diagnosis of low bone mass/osteopenia or osteoporosis and an eligible encounter during the performance period. Currently this measure is not limited to women and specifically addresses patients with an established diagnosis; however, this would not preclude clinicians from treating the at-risk patient population accordingly. The National and International Osteoporosis Foundation as well as the Endocrine Society and American Geriatric Society consider a 25-hydroxyvitamin (25 OH D) level of less than 30 ng/mL as vitamin D deficient. The Endocrine Society indicates patients with bone diseases, such as osteoporosis, that may either be improved with vitamin D treatment or who are receiving a treatment where correction of vitamin D deficiency, would be appropriate for receiving this test as it can inform upon vitamin D treatment recommendations.<sup>584</sup> The measure also allows for denominator exceptions including for those patients responding well to treatment and no longer require assessment. This measure does not assess for or dictate treatment, rather it only assesses for an adequate vitamin D level for performance as outlined within the measure. As such, we maintain this measure aligns with the best practices regarding assessment of vitamin D levels.

**Comment:** A few commenters recommended postponing the adoption of this MVP because they noted it does not appropriately distinguish between the maternity care population and the gynecologic population and the measures are not limited, connected, or complementary as emphasized by the current MVP Guiding Principles. One commenter noted it would be logical to have a women's health MVP that is focused on screenings and assessments for gynecologic and the general health needs of women and those seeking gynecologic care entirely separate from services for pregnant persons. Additionally, the commenter believes an MVP for general health and a separate MVP for the pregnancy episode of care better aligns with alternative payment model (APM) development.

**Response:** The MVPs are intentionally broad to allow for broad reporting within the MVP topic and contain measures that represent different aspects of care. Rather than create an MVP for each subspecialty and/or setting, as this would create an unattainable MVP inventory state, these nuances would be captured within the MVP through different measures and activities representative of the reporting

<sup>584</sup> [https://www.endocrinology.org/media/3593/nos\\_vitamin\\_d\\_and\\_bone\\_-health\\_in\\_adults\\_web.pdf](https://www.endocrinology.org/media/3593/nos_vitamin_d_and_bone_-health_in_adults_web.pdf).

clinician's scope of care. We understand that not all quality measures are applicable to all clinicians who would submit this MVP; however, this represents the foundation from which to build the most meaningful MVP addressing women's health and allows for clinician choice in choosing quality measures that best represent their scope of care.

**Comment:** One commenter recommended development of new measures that focus on women's health issues for this MVP. The commenter believes that adding measures to the MVP that more clinicians can report would incentivize interdisciplinary referrals and coordination enabling more clinicians to engage in the MVP indirectly if direct engagement is not possible.

**Response:** We encourage the commenter to reach out to measure developers/stewards to develop additional measures ensuring all important aspects of care are being assessed for submission to the Call for Measures for possible future implementation.

**Comment:** One commenter is opposed to the TPCC cost measure being included in this MVP. The commenter believes that TPCC does not account for the benefit of preventive services in reducing costs in the long term, which would unfairly penalize physicians. The commenter also expressed concerns with the measure's use of outdated CPT coding specifications, which would impact the reliability and validity of the measure and lead to inaccurate results and unintended consequences for physicians and groups.

**Response:** We maintain the TPCC measure is appropriate for use in this MVP. We refer readers to the CY 2022 PFS proposed rule (86 FR 39881 through 39895), CY 2022 PFS final rule (86 FR 66001), CY 2023 PFS proposed rule (87 FR 46814 through 46828), and CY 2023 PFS final rule (87 FR 70038) for more information about previously finalized MVPs including the TPCC cost measure. Additionally, we may consider the addition or removal of cost measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Focusing on Women's Health MVP* as proposed in Table A.1 for the CY 2024 performance period/2026 MIPS payment year and future years.

## Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP

In the CY 2024 PFS proposed rule (88 FR 53151 through 53154), we proposed and solicited comments on Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP. The proposed Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP focuses on the clinical theme of providing care for patients experiencing some of the most common otolaryngology conditions such as, but not limited to: otologic conditions, chronic rhinosinusitis (CRS), age-related hearing loss (ARHL) and otitis media. This MVP would be most applicable to clinicians who treat patients within the practice of otolaryngology, including NPPs such as audiologists, nurse practitioners, and physician assistants. The summary of the public comments received and our responses for this MVP are embedded within Table A.2.

### Quality Measures

We proposed to include eight MIPS quality measures and four QCDR measures within the quality performance category of this MVP, which promote the management and care associated with otolaryngology. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in treating patients with otolaryngology conditions:

- Q277: Sleep Apnea: Severity Assessment at Initial Diagnosis: This MIPS quality measure ensures adults diagnosed with obstructive sleep apnea have an apnea hypopnea index (AHI), a respiratory disturbance index (RDI), or a respiratory event index (REI) documented or measured within 2 months of initial evaluation for suspected obstructive sleep apnea.
- Q331: Adult Sinusitis: Antibiotic Prescribed for Acute Viral Sinusitis (Overuse): This overuse MIPS quality measure assesses for prescribed antibiotics within 10 days after the onset of symptoms for those patients diagnosed with acute viral sinusitis.
- Q332: Adult Sinusitis: Appropriate Choice of Antibiotic: Amoxicillin With or Without Clavulanate Prescribed for Patients with Acute Bacterial Sinusitis (Appropriate Use): This appropriate use MIPS quality measure ensures patients diagnosed with acute bacterial sinusitis are prescribed amoxicillin, with or without clavulanate, as a first line antibiotic at the time of diagnosis.
- Q355: Unplanned Reoperation within the 30 Day Postoperative Period: This MIPS quality measure evaluates for an unplanned reoperation within 30 days of a denominator eligible procedure.
- Q357: Surgical Site Infection (SSI): This MIPS quality measure evaluates for SSI within 30 days of a denominator eligible procedure.
- AAO16: Age-Related Hearing Loss: Comprehensive Audiometric Evaluation: This MIPS quality measure ensures patients aged 60 years and older who have failed a hearing screening and/or who report suspected hearing loss receive, are ordered, or referred for comprehensive audiometric evaluation.
- AAO20: Tympanostomy Tubes: Comprehensive Audiometric Evaluation: This MIPS quality measure ensures pediatric patients diagnosed with otitis media with effusion (OME) receive tympanostomy tube

insertion and a comprehensive audiometric evaluation within 6 months prior to tympanostomy tube insertion.

- AAO21: Otitis Media with Effusion (OME): Comprehensive Audiometric Evaluation for Chronic OME > or = 3 months: This MIPS quality measure ensures pediatric patients diagnosed with otitis media with effusion (OME) including chronic serous, mucoid, or nonsuppurative OME of > or = 3 months duration receive an order or referral for comprehensive audiometric evaluation.
- AAO23: Allergic Rhinitis: Intranasal Corticosteroids or Oral Antihistamines: This MIPS quality measure ensures patients 2 years and older with a diagnosis of allergic rhinitis are prescribed or recommended intranasal corticosteroids (INS) or non-sedating oral antihistamines.

In addition, we proposed to include the following broadly applicable MIPS quality measures that are relevant to otolaryngology. The quality measures below assess for age specific screenings, and follow-up actions for select measures:

- Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan: This MIPS quality measure assesses patients, aged 18 years and older, for a BMI documented with a follow-up plan documented if their most recent documented BMI was outside of normal parameters.
- Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: This MIPS quality measure screens patients for tobacco use. Any patients that are found to be tobacco users should receive tobacco cessation intervention.
- Q487: Screening for Social Drivers of Health: This MIPS quality measure ensures adults are screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.

### **Improvement Activities**

We reviewed the improvement activity inventory and considered feedback received during the 2024 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We proposed to include 11 improvement activities that reflect actions and processes undertaken by clinicians who specialize in treating patients with otolaryngology conditions, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care patients with otolaryngology conditions. We proposed the following improvement activities for inclusion in this MVP:

- IA\_AHE\_3: Promote Use of Patient-Reported Outcome Tools
- IA\_AHE\_5: MIPS Eligible Clinician Leadership in Clinical Trials or CBPR
- IA\_BE\_4: Engagement of patients through implementation of improvements in patient portal
- IA\_BE\_15: Engagement of Patients, Family, and Caregivers in Developing a Plan of Care
- IA\_CC\_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop
- IA\_CC\_13: Practice Improvements to Align with OpenNotes Principles
- IA\_EPA\_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record
- IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA\_PCMH: Electronic submission of Patient Centered Medical Home accreditation
- IA\_PM\_16: Implementation of medication management practice improvements
- IA\_PSPA\_7: Use of QCDR data for ongoing practice assessment and improvements

### **Cost Measures**

We proposed to include one MIPS cost measure within the cost performance category of this MVP, which applies to the clinical topic of otolaryngology. We reviewed the MIPS cost measure inventory and considered feedback received during the 2024 MVP candidate feedback period to determine the cost measure to include in this MVP. The following cost measure provides a meaningful assessment of the clinical care for clinicians who specialize in otolaryngology care and aligns with the other measures and activities within this MVP:

- Medicare Spending Per Beneficiary (MSPB) Clinician: This MIPS cost measure applies to clinicians providing care in inpatient hospitals, including otolaryngologic care. This aligns with the surgical measures within this MVP, including Q355: Unplanned Reoperation within the 30 Day Postoperative Period and Q357: Surgical Site Infection (SSI).

Currently, there are no applicable episode-based cost measures available, but one could be considered for development in the future.

## **TABLE A.2: Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP**

Table A.2 serves to represent the measures and activities that are finalized within the Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP.

**Symbol Key:**

Carat symbol (^): when applicable, new MIPS quality measures, improvement activities, and cost measures

Single asterisk (\*): existing quality measures and improvement activities with revisions

Double asterisk (\*\*): quality measures that can be submitted only when included in an MVP

Single exclamation point (!): quality measures that are considered high priority

Double exclamation point (!!): outcome measures

Tilde (~): improvement activities that include a health equity component

Percent (%): indication that attestation to IA\_PCMH: Electronic submission of Patient Centered Medical Home accreditation provides full credit for the improvement activity performance category

<p><b>Comment:</b> One commenter supported the inclusion of Q487: Screening for Social Drivers of Health in this MVP. Another commenter supported the inclusion of IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways. A few commenters supported the inclusion of this MVP in the MIPS program.</p> <p><b>Response:</b> We thank the commenters for their support.</p> <p><b>Comment:</b> One commenter recommended the addition of Q498: Connection to Community Service Provider to this MVP.</p> <p><b>Response:</b> We may consider the inclusion of Q498: Connection to Community Service Provider through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.</p> <p><b>Comment:</b> A couple of commenters recommended CMS remove audiologists from this MVP, noting the majority of measures are outside the scope of practice of audiology. The commenters stated measures tied to referring patients for comprehensive audiologic evaluation are in scope for referring physicians, not audiologists themselves. The commenters stated that the only measures audiologists can currently report include Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention and Q487: Screening for Social Drivers of Health. In addition, the commenters believe the MSPB Clinician cost measure aligns with the surgical quality measures within this MVP, which are also outside the scope of the practice of audiology.</p> <p><b>Response:</b> We note that while this MVP may not be applicable to all audiologists, there are sufficient quality and QCDR measures contained within this MVP that allow these clinicians to report the MVP and align with historical submission patterns. Our goal is to make it easier for clinicians to identify MVPs to report by distinguishing specialties for which each MVP may be appropriate, though specialties are not required to follow these recommendation. We acknowledge audiologists would need to submit via a QCDR in order to report, and as this is not an ideal dynamic, we will continue to work with interested parties to propose future revisions. However, as reporting of MVPs remains voluntary, we continue to ensure specialties are aware of potential MVP options so they may make decisions based upon appropriateness and applicability of reporting based upon their own situation. Regarding measure Q261: Referral for Otologic Evaluation for Patients with Acute or Chronic Dizziness, we received public comment during CY 2023 QPP rulemaking indicating this was an important audiology-specific measure and is preferably submitted by a physician specifically trained in disorders of the ear. In addition, it is appropriate to include the MSPB Clinician cost measure in this MVP, as it is applicable clinicians who treat patients within the practice of otolaryngology, specifically otolaryngologists who practice in an inpatient setting and provide care such as performing head and neck procedures. At this time, no additional cost measures applicable to audiologists are available for use in MVPs. If a clinician cannot be scored on the MSPB Clinician cost measure, the cost performance category will be reweighted in alignment with existing MIPS scoring policies under 42 CFR 414.1380(b)(2)(v), where the clinician will not be penalized if there is not a cost measure applicable to their practice. Should applicable measure become available for use in MVPs, we will consider the addition of quality and cost measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. Additionally, we encourage the commenters to reach out to measure developers/stewards to develop new outcome/high priority quality measures and cost measures for submission to the Call for Measures for possible future implementation.</p> <p>After consideration of public comments, we are finalizing the <i>Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP</i> as proposed in Table A.2 for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

## Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP

In the CY 2024 PFS proposed rule (88 FR 53155 through 53158), we proposed and solicited comments on Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP. The proposed Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP focuses on the clinical theme of promoting quality care for patients suffering from infectious disorders. This MVP would be most applicable to clinicians who treat patients within the practices of infectious disease and immunology, including NPPs such as nurse practitioners and physician assistants. The summary of the public comments received and our responses for this MVP are embedded within Table A.3.

### Quality Measures

We proposed to include 14 MIPS quality measures within the quality performance category of this MVP, which focus on a variety of infectious disease conditions that may impact patient health. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP candidate feedback period to determine which quality measures to include in this MVP.

The following quality measures would provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in the prevention and treatment of infectious disorders within their patient population:

- Q205: Sexually Transmitted Infection (STI) Testing for People with HIV: This MIPS quality measure ensures patients aged 13 years and older with a diagnosis of HIV/AIDS are screened for chlamydia, gonorrhea, and syphilis at least once during the performance period. Please reference Appendix 1: MIPS Quality Measures: Table D.21 for further information.
- Q310: Chlamydia Screening for Women: This MIPS quality measure identifies women that are sexually active to ensure that they have had at least one test for chlamydia.
- Q338: HIV Viral Suppression: This MIPS quality measure ensures all patients with a diagnosis of HIV annually achieve a HIV viral load less than 200 copies/mL at last HIV viral load test.
- Q340: HIV Medical Visit Frequency: This MIPS quality measure ensures all patients with a diagnosis of HIV had at least one medical visit in each 6 month period within a 24 month measurement period.
- Q387: Annual Hepatitis C Virus (HCV) Screening for Patients who are Active Injection Drug Users: This MIPS quality measure ensures all patients that are identified as active injection drug users receive screening for HCV each year.
- Q400: One-Time Screening for Hepatitis C Virus (HCV) and Treatment Initiation: This MIPS quality measure currently requires that patients have received a one-time screening for hepatitis C virus (HCV) infection. However, this measure has proposed substantive changes that would require treatment initiation or referral within a set timeframe in addition to screening. Please reference Appendix 1: MIPS Quality Measures: Table D.45 for further information.
- Q401: Hepatitis C: Screening for Hepatocellular Carcinoma (HCC) in Patients with Cirrhosis: This MIPS quality measure ensures adult patients with a diagnosis of chronic hepatitis C cirrhosis receive imaging with either ultrasound, contrast enhanced CT or MRI for hepatocellular carcinoma (HCC) at least once each year.
- Q475: HIV Screening: This MIPS quality measure ensures patients receive a one-time test for HIV.

In addition, we proposed to include the following broadly applicable MIPS quality measures that are relevant to infectious disorders. The quality measures below encourage antimicrobial stewardship, medication reconciliation, appropriate immunization receipt and preventive screenings:

- Q065: Appropriate Treatment for Upper Respiratory Infection (URI): This appropriate use MIPS quality measure evaluates that patients 3 months of age and older with a diagnosis of upper respiratory infection (URI) did not receive an antibiotic order.
- Q130: Documentation of Current Medications in the Medical Record: This MIPS quality measure This MIPS quality measure bases performance on clinicians documenting the list of current medications using all immediate resources for capture of this important clinical topic.
- Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan: This MIPS quality measure ensures all patients are screened for depression with a follow-up plan documented for those patients who screen positive.
- Q240: Childhood Immunization Status: This MIPS quality measure ensures children 2 years of age receive four diphtheria, tetanus and acellular pertussis (DTaP); three polio (IPV), one measles, mumps and rubella (MMR); three or four H influenza type B (HiB); three hepatitis B (Hep B); one chicken pox (VZV); four pneumococcal conjugate (PCV); one hepatitis A (Hep A); two or three rotavirus (RV); and two influenza (flu) vaccines by their second birthday.
- Q487: Screening for Social Drivers of Health: This MIPS quality measure ensures adults are screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.

- **Q493: Adult Immunization Status:** This MIPS quality measure ensures that adults are up-to-date with the recommended routine vaccines: influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.

### **Improvement Activities**

We reviewed the improvement activity inventory and considered feedback received during the 2024 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We proposed to include 14 improvement activities that reflect actions and processes undertaken by clinicians who provide prevention and treatment for infectious disorders to patients, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care for patients needing infectious disorder care. We proposed the following improvement activities for inclusion in this MVP:

- IA\_AHE\_1: Enhance Engagement of Medicaid and Other Underserved Populations
- IA\_AHE\_5: MIPS Eligible Clinician Leadership in Clinical Trials or CBPR
- IA\_AHE\_12: Practice Improvements that Engage Community Resources to Address Drivers of Health
- IA\_BE\_4: Engagement of patients through implementation of improvements in patient portal
- IA\_BE\_15: Engagement of patients, family and caregivers in developing a plan of care
- IA\_EPA\_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record
- IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA\_PCMH: Electronic submission of Patient Centered Medical Home accreditation
- IA\_PM\_6: Use of Toolsets or Other Resources to Close Health and Health Care Inequities Across Communities
- IA\_PM\_11: Regular review practices in place on targeted patient population needs
- IA\_PM\_14: Implementation of methodologies for improvements in longitudinal care management for high risk patients
- IA\_PM\_22: Improving Practice Capacity for Human Immunodeficiency Virus (HIV) Prevention Services
- IA\_PSPA\_23: Completion of CDC Training on Antibiotic Stewardship
- IA\_PSPA\_32: Use of CDC Guideline for Clinical Decision Support to Prescribe Opioids for Chronic Pain via Clinical Decision Support

### **Cost Measures**

We proposed to include one MIPS cost measure within the cost performance category of this MVP, which applies to the clinical topic of infectious disorders. We reviewed the MIPS cost measure inventory and considered feedback received during the 2024 MVP candidate feedback period to determine the cost measure to include in this MVP. The following cost measure provides a meaningful assessment of the clinical care for clinicians who specialize in treating infectious disorders and aligns with the other measures and activities within this MVP:

- **Total Per Capita Cost (TPCC):** This MIPS cost measure captures the overall costs of care after establishing a primary care-type relationship. Infectious Disease specialists are included in attribution for the TPCC measure.

Currently, there are no applicable episode-based cost measures applicable to the clinical topics assessed within other components of this MVP, but one could be considered for development in the future.

## **TABLE A.3: Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP**

Table A.3 serves to represent the measures and activities that are finalized within the Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP.

	<p>AND Support Electronic Referral Loops By Receiving and Reconciling Health Information</p> <p><b>OR</b> Health Information Exchange (HIE) Bi-Directional Exchange</p> <p><b>OR</b> Enabling Exchange Under the Trusted Exchange Framework and Common Agreement (TEFCA)</p> <p>Immunization Registry Reporting</p> <p>Syndromic Surveillance Reporting (Optional)</p> <p>Electronic Case Reporting</p> <p>Public Health Registry Reporting (Optional)</p> <p>Clinical Data Registry Reporting (Optional)</p> <p>Actions to Limit or Restrict Compatibility or Interoperability of CEHRT</p> <p>ONC Direct Review Attestation</p>
<p><b>Comment:</b> Various commenters supported the inclusion of the following quality measures and improvement activities: Q205: HIV/AIDS: Sexually Transmitted Disease Screening for Chlamydia, Gonorrhea, and Syphilis, Q338: HIV Viral Load Suppression (VLS), Q340: HIV Medical Visit Frequency, and Q487: Screening for Social Drivers of Health, IA_PM_22: Improving Practice Capacity for Human Immunodeficiency Virus (HIV) Prevention Services, and IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways. Several commenters supported the inclusion of this MVP in the MIPS program.</p> <p><b>Response:</b> We thank the commenters for their support.</p> <p><b>Comment:</b> One commenter requested adding the following quality measures and improvement activities they believe are relevant to the patient population receiving care from infectious disease clinicians in small group practices: Q047: Advance Care Plan, Q048: Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older, and Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan, IA_CC_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop, IA_CC_2: Implementation of improvements that contribute to more timely communication of test results, IA_CC_10: Care transition documentation practice improvements, IA_BE_14: Engage Patients and Families to Guide Improvement in the System of Care, and IA_ERP_4: Implementation of a Personal Protective Equipment (PPE) Plan. One commenter recommended the adoption of the eCQM measures CMS 341: HIV Viral Suppression and CMS 1188: Sexually Transmitted Testing for People with HIV so that alternatives to registry reported measures are readily available in this MVP where possible. Another commenter recommended the addition of quality measure Q498: Connection to Community Service Provider.</p> <p><b>Response:</b> We maintain the current scope of measures and improvement activities proposed in this MVP are appropriate for the clinical intent of this MVP. We also note all the collection types available for each quality measure are available for use within the MVP, including the eCQM measures mentioned above. We may consider the inclusion of additional quality measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Please note that all collection types for each MIPS quality measure finalized through rulemaking will be available for use within the MVP.</p> <p><b>Comment:</b> One commenter stated this MVP is extremely specific for two infectious diseases, but infectious disease specialists treat more than just those two diseases. They believe it would be difficult for them to identify providers that fit this specific MVP.</p> <p><b>Response:</b> This MVP focuses on the clinical theme of promoting quality care for patients suffering from infectious disorders and includes measures within the current inventory that assess for quality actions that can impact health for this patient population. While this MVP may not be applicable to all infectious disease specialists, the MVP allows for clinician choice in choosing quality measures that best represent their scope of care. Understanding infectious disease specialists treat a variety of conditions, it would not be expected that all patients under the clinician's care would be represented by a measure, rather that the clinician could choose those measures that best represent their scope of care and case mix. We may consider the inclusion of additional quality measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Please note that all collection types for each MIPS quality measure finalized through rulemaking will be available for use within the MVP.</p> <p><b>Comment:</b> One commenter opposed the TPCC cost measure being included in this MVP. The commenter noted that TPCC does not account for the benefit of preventive services in reducing costs in the long term, which would unfairly penalize physicians. The commenter also expressed concerns with the measure's use of outdated CPT coding specifications, which would impact the reliability and validity of the measure and lead to inaccurate results and unintended consequences for physicians and groups.</p> <p><b>Response:</b> We maintain the TPCC measure is appropriate for use in this MVP. We refer readers to the CY 2022 PFS proposed rule (86 FR 39881 through 39895), CY 2022 PFS final rule (86 FR 66001), CY 2023 PFS proposed rule (87 FR 46814 through 46828), and CY 2023 PFS final rule (87 FR 70038) for more information about previously finalized MVPs including the TPCC cost measure. We also clarify that the TPCC measure undergoes annual maintenance, where CMS and the measure developer determine whether to make updates to the measure specifications based on new, revised, or deleted CPT codes. The Measure Codes Lists that detail the specific codes used to construct the measures are also updated annually and made publicly available. Additionally, we may consider the addition or removal of cost measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.</p>	

After consideration of public comments, we are finalizing the *Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP* as proposed in Table A.3 for the CY 2024 performance period/2026 MIPS payment year and future years.

## Quality Care in Mental Health and Substance Use Disorders MVP

In the CY 2024 PFS proposed rule (88 FR 53159 through 53162), we proposed and solicited comments on Quality Care in Mental Health and Substance Use Disorders MVP. The proposed Quality Care in Mental Health and Substance Use Disorders MVP focuses on the clinical theme of promoting prevention of and quality care in behavioral health, including mental health and substance use disorders (SUD). This MVP would be most applicable to clinicians who treat patients with mental health and substance use disorders within the practices of mental/behavioral health and psychiatry, including NPPs such as clinical social workers, nurse practitioners, and physician assistants. The summary of the public comments received and our responses for this MVP are embedded within Table A.4.

### Quality Measures

We proposed to include 12 MIPS quality measures and three QCDR measures within the quality performance category of this MVP, which focus on a variety of behavioral health, including mental health and SUDs that may impact patient health. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP candidate feedback period to determine which quality measures to include in this MVP.

The following quality measures within this MVP would provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in treating patients with behavioral health, including mental health and SUDs:

- Q009: Anti-Depressant Medication Management: This MIPS quality measure ensures adult patients diagnosed with major depression treated with antidepressant medication remained on an antidepressant medication treatment. There are two performance rates for this measure that evaluate compliance for at least 84 days or 180 days.
- Q305: Initiation and Engagement of Substance Use Disorder Treatment: This MIPS quality measure ensures patients 13 years of age and older with a new SUD episode have the initiation of intervention or medication within 14 days of the new SUD episode or engage in ongoing treatment, including two additional interventions or short-term medications, or one long-term medication within 34 days of the initiation.
- Q366: Follow-Up Care for Children Prescribed ADHD Medication (ADD): This MIPS quality measure ensures children 6-12 years of age with a newly prescribed a medication for attention-deficit/hyperactivity disorder (ADHD) receive appropriate follow-up care.
- Q370: Depression Remission at Twelve Months: This MIPS quality measure assesses adolescent and adult patients diagnosed with major depression or dysthymia for achieved remission in 12 months (+/- 60 days).
- Q382: Child and Adolescent Major Depressive Disorder (MDD): Suicide Risk Assessment: This MIPS quality measure ensures pediatric patients with a diagnosis of major depressive disorder (MDD) receive an assessment for suicide risk.
- Q383: Adherence to Antipsychotic Medications For Individuals with Schizophrenia: This MIPS quality measure assesses an adult patient diagnosed with schizophrenia or schizoaffective disorder prescribed an antipsychotic medication had a Proportion of Days Covered (PDC) of at least 0.8 for their antipsychotic medications.
- Q468: Continuity of Pharmacotherapy for Opioid Use Disorder (OUD): This MIPS quality measure assesses for the continuous treatment (180 days) of pharmacotherapy treatment for adult patients diagnosed with opioid use disorder.
- Q502: Improvement or Maintenance of Functioning for Individuals with a Mental and/or Substance Use Disorder: This proposed MIPS quality measure assesses patients diagnosed with mental and/or substance use disorder for maintenance or improvement in functioning at 30 to 180 days after index assessment.
- Q504: Initiation, Review, And/Or Update To Suicide Safety Plan For Individuals With Suicidal Thoughts, Behavior, Or Suicide Risk: This proposed MIPS quality measure ensures adult patients with suicidal ideation, behavior symptoms or increased suicide risk have a suicide safety plan initiated, reviewed, and/or updated in collaboration between the patient and their clinician.
- Q505: Reduction in Suicidal Ideation or Behavior Symptoms: This proposed MIPS quality measure assesses patients diagnosed with mental and/or substance use disorder with suicidal thoughts, behaviors, or risk symptoms for a reduction in suicidal ideation and/or behavior symptoms within 120 days of index assessment of the Columbia-Suicide Severity Rating Scale (C-SSRS).
- MBHR2: Anxiety Response at 6-months: This MIPS quality measure ensures adult patients with an anxiety disorder demonstrate a response to treatment at 6-months (+/- 60 days).
- MBHR7: Posttraumatic Stress Disorder (PTSD) Outcome Assessment for Adults and Children: This MIPS quality measure ensures patients with a history of a traumatic event and report symptoms consistent with

PTSD for at least one month following the traumatic event have a symptom improvement based on a standardized symptom monitor in response to treatment in at least six months.

- **MBHR15: Consideration of Cultural-Linguistic and Demographic Factors in Cognitive Assessment:** This MIPS quality measure ensures patients are referred for evaluation due to concerns for cognitive changes or difficulties receive a standardized valid assessment of cognition with results documented, including documentation of provider's consideration of relevant cultural-linguistic and demographic factors that may have affected assessment and resulting assessment.

In addition, we proposed include the following broadly applicable MIPS quality measures that are relevant to behavioral health, including mental health and SUDs. The quality measures below address preventive screenings, which support the capture of the patient's voice and safety for patients who are experiencing behavioral health, including mental health and SUD disorders:

- **Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan:** This MIPS quality measure ensures all patients are screened for depression with a follow-up plan documented for patients who screen positive.
- **Q487: Screening for Social Drivers of Health:** This MIPS quality measure ensures adults are screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.

### **Improvement Activities**

We reviewed the improvement activity inventory and considered feedback received during the 2024 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We proposed to include 18 improvement activities that reflect actions and processes undertaken by clinicians who provide neurological care to patients, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care for patients needing neurological care.

We proposed the following improvement activities for inclusion in this MVP:

- **IA\_AHE\_1:** Enhance Engagement of Medicaid and Other Underserved Populations
- **IA\_AHE\_3:** Promote Use of Patient-Reported Outcome Tools
- **IA\_AHE\_5:** MIPS Eligible Clinician Leadership in Clinical Trials or CBPR
- **IA\_AHE\_9:** Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols
- **IA\_AHE\_12:** Practice Improvements that Engage Community Resources to Address Drivers of Health
- **IA\_BE\_12:** Use evidence-based decision aids to support shared decision-making.
- **IA\_BE\_16:** Promote Self-management in Usual Care
- **IA\_BE\_23:** Integration of patient coaching practices between visits
- **IA\_BMH\_2:** Tobacco use
- **IA\_BMH\_5:** MDD prevention and treatment interventions
- **IA\_BMH\_7:** Implementation of Integrated Patient Centered Behavioral Health Model
- **IA\_BMH\_14:** Behavioral/Mental Health and Substance Use Screening & Referral for Pregnant and Postpartum Women
- **IA\_BMH\_15:** Behavioral/Mental Health and Substance Use Screening & Referral for Older Adults
- **IA\_EPA\_2:** Use of telehealth services that expand practice access
- **IA\_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA\_PCMH:** Electronic submission of Patient Centered Medical Home accreditation
- **IA\_PM\_6:** Use of toolsets or other resources to close healthcare disparities across communities
- **IA\_PSPA\_32:** Use of CDC Guideline for Clinical Decision Support to Prescribe Opioids for Chronic Pain via Clinical Decision Support

### **Cost Measures**

We proposed to include three MIPS cost measures within the cost performance category of this MVP, which apply to the clinical topic behavioral health, including mental health and SUDs. We reviewed the MIPS cost measure inventory and considered feedback received during the 2024 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in mental health and SUDs and align with the other measures and activities within this MVP:

- **Medicare Spending Per Beneficiary (MSPB) Clinician:** This MIPS cost measure applies to clinicians providing care in inpatient hospitals, including hospitalizations for mental health conditions and SUDs.
- **Depression:** This episode-based cost measure evaluates a clinician's risk-adjusted cost to Medicare for patients receiving medical care to manage and treat depression. While interested parties expressed concerns with the inclusion of this measure within this MVP during the 2024 MVP candidate feedback period, this

measure is appropriate for use in MIPS for the reasons described in section IV.A.4.f.(2) of this final rule. This is a new measure that will be used in MIPS beginning in CY 2024 performance period/ 2026 MIPS payment year, as finalized in section IV.A.4.f.(2) of this final rule.

- **Psychoses and Related Conditions:** This episode-based cost measure evaluates a clinician’s risk-adjusted cost to Medicare for patients who receive inpatient treatment for psychoses or related conditions during the performance period. This acute inpatient medical condition measure includes costs of services that are clinically related to the attributed clinician’s role in managing care during each episode, from the clinical event that opens, or “triggers,” the episode through 45 days after the trigger. While interested parties expressed concerns with the inclusion of this measure within this MVP during the 2024 MVP candidate feedback period, this measure is appropriate for use in MIPS for the reasons described in section IV.A.4.f.(2) of this final rule. This measure is a new measure that will be used in MIPS beginning in CY 2024 performance period/ 2026 MIPS payment year, as finalized in section IV.A.4.f.(2) of this final rule.

**TABLE A.4: Quality Care in Mental Health and Substance Use Disorders MVP**

Table A.4 serves to represent the measures and activities that are finalized within the Quality Care in Mental Health and Substance Use Disorders MVP.

**Symbol Key:**

Carat symbol (^): when applicable, new MIPS quality measures, improvement activities, and cost measures

Single asterisk (\*): existing quality measures and improvement activities with revisions

Double asterisk (\*\*): quality measures that can be submitted only when included in an MVP

Single exclamation point (!): quality measures that are considered high priority

Double exclamation point (!!): outcome measures

Tilde (~): improvement activities that include a health equity component

Percent (%): indication that attestation to IA\_PCMH: Electronic submission of Patient Centered Medical Home accreditation provides full credit for the improvement activity performance category

**Comment:** Various commenters supported the inclusion of the following quality measures and improvement activities: Q487: Screening for Social Drivers of Health, IA\_AHE\_3: Promote Use of Patient-Reported Outcome Tools, IA\_AHE\_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols, and IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways. Another commenter expressed appreciation for inclusion of quality measures, cost measures, and improvement activities applicable to the schizophrenia population. Several commenters supported the inclusion of this MVP in the MIPS program.

**Response:** We thank the commenters for their support.

**Comment:** Several commenters noted this MVP includes a wide range of measures and improvement activities, which is helpful in that it gives clinicians the opportunity to select the measures most appropriate for their practices, but it doesn't constitute an approach that is meaningfully different from the traditional MIPS program. In addition, the commenters noted the selection of measures in the MIPS program remains limited and inadequate to cover the major areas of practice for psychologists that are required reporters. The commenters noted this MVP would likely be feasible for only mental/behavioral health providers in certain settings, such as long-term care, or for certain subspecialty providers, such as neuropsychologists. In addition, the commenters believe MVPs like Quality Care in Mental Health and Substance Use Disorders are unlikely to be workable for psychologists in generalist practices who see between 30 – 40 patients per week, presenting with a variety of diagnoses (for example, depression, anxiety, PTSD, psychosis, etc.), and include patients across the lifespan. The commenters don't agree one core measure set, or MVP, would be able to account for the level of heterogeneity of patients whom a generalist psychologist provides treatment, and having to implement multiple different MVPs would increase the burden that eligible clinicians currently experience with traditional MIPS. The commenters noted this would result in the development of separate MVPs for more focused settings/specialties like long-term care or neuropsychology, as opposed to the generalist model represented in the Quality Care in Mental Health and Substance Use Disorders MVP.

**Response:** This MVP has a broad clinical focus and captures performance driving positive clinical outcomes by providing fundamental treatment and management of mental health and substance use disorder. While we understand this MVP may not be applicable to all mental/behavioral health and psychiatry clinicians and NPPs, the goal of this MVP is to focus on different aspects of care that are important for patients with mental health and/or substance use disorders. Therefore, it includes measures focused on treatment and outcomes for conditions such as depression, substance use disorder, anxiety, and PTSD, which are appropriate for those clinicians specializing in mental/behavioral health. As we work through the transition from traditional MIPS to MVPs, we anticipate MIPS eligible clinicians/groups will continue to utilize traditional MIPS in the absence of an appropriate and applicable MVP; however, by utilizing reporting trends and focusing on more specialty-specific quality measures, the MVP works to capture more meaningful data to the clinician's scope of care. Moreover, it would not be expected for every aspect of a clinician's scope of care to be assessed, as the clinician would have choice in which quality measures they find most meaningful and appropriate for their case-mix and scope of care. Please note it is not expected that submission of each quality measure will be required for reporting this MVP. Rather, the intent is to provide clinicians flexibility and choice in reporting by allowing them to select a subset of measures and activities within an MVP. As MVPs continue from year to year, the MVP Maintenance Process can be utilized to update MVPs to ensure they represent priorities in care for the MVP topic and align with care being delivered by the clinicians reporting. We agree our current inventory is limited in areas that are important to mental/behavioral health and psychiatry, thus encourage the commenter to reach out to measure developers/stewards to develop additional measures ensuring all important aspects of care are being assessed for submission to the Call for Measures for possible future implementation. The MVPs are intentionally broad to allow for broad reporting within the MVP topic and contain measures that represent different aspects of care. Rather than create an MVP for each subspecialty and/or setting, as this would create an unattainable MVP inventory state, these nuances would be captured within the MVP through different measures and activities representative of the reporting clinician's scope of care. We understand that not all subspecialties and settings will be covered within the current MVP; however, this represents the foundation from which to build the most meaningful MVP for behavioral/mental health and psychology.

**Comment:** One commenter recommended the addition of Q498: Connection to Community Service Provider to this MVP. Another commenter recommended the addition of IA\_PM\_16: Medication Management. A couple commenters noted this MVP lacks three to four of the quality measures commonly reported by psychiatrists from 2019-2021 (data from PsychPro registry, 2022).

**Response:** We may consider the inclusion of additional quality measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Please note that all collection types for each MIPS quality measure finalized through rulemaking will be available for use within the MVP.

**Comment:** One commenter stated there are several measurement gap areas for ensuring quality for schizophrenia care, including measures of schizophrenia-focused patient-reported outcomes, relapse occurrence/ time to relapse, symptom monitoring, assessment for cognitive impairment and negative symptoms, cost/resource utilization specific to schizophrenia, and evaluation of caregiver support. They stated filling these measure gaps may bolster future versions of this MVP.

**Response:** We may consider the inclusion of additional quality measures through the MVP Maintenance Process and future rulemaking; however, current policy only allows use of current MIPS quality and QCDR measures that meet all requirements within an MVP. We encourage the commenter to reach out to measure developers/stewards to develop new mental/behavioral health specialty focused measures for submission to the Call for Measures for possible future implementation.

**Comment:** Several commenters recommended postponing the adoption of this MVP until a relevant cost measure exists. One commenter noted the Medicare Spending Per Beneficiary (MSPB) measure will continue to be inapplicable to the vast majority of psychologists and other mental health clinicians. The commenter noted the measure is not specific to behavioral health and is focused on episodes triggered only by an inpatient stay. The commenter also noted the majority of psychologists participating in MIPS do not deliver services in an inpatient setting and that episode-based cost measures are triggered by Evaluation and Management (E/M) codes that psychologists do not have access to.

**Response:** The MSPB Clinician global cost measure and the Psychoses and Related Conditions episode-based cost measure are appropriate for use in this MVP as they assess costs associated with inpatient hospitalizations for mental health conditions and substance use disorder. The Depression episode-based cost measure is applicable to mental health clinicians who do not practice in an inpatient setting. The Depression episode-based cost measure is not limited to being triggered by E/M codes, but can also be triggered through other services specific to psychologists and other mental health clinicians, such as behavioral health visits, collaborative care management, chronic care management,

among others. More information about the MSPB Clinician is available in CY 2022 PFS final rule (86 FR 66001) and CY 2023 PFS final rule (87 FR 70038). More information about the Psychoses and Related Conditions measure is in section IV.A.4.f.(2) of this final rule.

Clinicians are only scored on the cost measures within their selected MVP for which they meet the established case minimum. If a clinician cannot be scored on any of the cost measures within an MVP, the cost performance category will be reweighted in alignment with existing MIPS scoring policies under 42 CFR 414.1380(b)(2) and the clinician will not be penalized if there is not a cost measure applicable to their practice.

**Comment:** A couple of commenters questioned whether the cost measures included within this MVP are applicable to most psychologists and other mental health clinicians. The commenters stated MSPB Clinician is only applicable to clinicians practicing in inpatient settings, and questioned whether episode-based cost measures could be triggered by non-Evaluation and Management service codes billed by mental health clinicians. The commenters suggested postponing the adoption of the Quality Care in Mental Health and Substance Use Disorders MVP until there is exists a relevant cost measure.

**Response:** We disagree that there is not cost measure relevant to psychologists and other mental health clinicians. The Depression episode-based cost measure is applicable to mental health clinicians who do not practice in an inpatient setting. Additionally, the Depression episode-based cost measure is not limited to being triggered by E/M codes and can also be triggered through other services specific to psychologists and other mental health clinicians, such as behavioral health visits, collaborative care management, chronic care management, among others.

**Comment:** One commenter recommended either expanding the associated cost measures such that occupational therapy practitioners could report this MVP or develop additional cost measures for mental health that do not expressly restrict occupational therapy engagement.

**Response:** At this time, no additional episode-based cost measures beyond the Depression and Psychoses and Related Conditions cost measures are available for use in MVPs. Should additional applicable cost measures become available for use in MVPs, interested parties are welcome to submit recommended changes to the MVP through the MVP Maintenance Process. Until such time, occupational therapists can still choose to report this MVP. If a clinician cannot be scored on any of the cost measures within an MVP, the cost performance category will be reweighted in alignment with existing MIPS scoring policies under 42 CFR 414.1380(b)(2) and the clinician will not be penalized if there is not a cost measure applicable to their practice.

**Comment:** A couple commenters opposed the inclusion of the Psychoses and Related Conditions cost measure in this MVP, as they believe will have the undesired effect of creating a disincentive for psychiatrists to participate in the Medicare program.

**Response:** We maintain the proposed Psychoses and Related Conditions episode-based cost measure is appropriate for use in this MVP, as it assesses costs associated with inpatient hospitalizations for psychoses or related conditions, which aligns with the intended purpose of this MVP. We thank the commenters for their feedback on the use of the Psychoses and Related Conditions episode-based cost measure in MIPS and have addressed this feedback under section IV.A.4.f.(2) of this final rule.

After consideration of public comments, we are finalizing the *Quality Care in Mental Health and Substance Use Disorders MVP* with modifications in Table A.4 for the CY 2024 performance period/2026 MIPS payment year and future years. Due to QCDCR measure MBHR15: Consideration of Cultural-Linguistic and Demographic Factors in Cognitive Assessment not meeting the testing data requirements it is being removed from the Quality in Mental Health and Substance Use Disorders MVP.

## Rehabilitative Support for Musculoskeletal Care MVP

In the CY 2024 PFS proposed rule (88 FR 55162 through 53166), we proposed and solicited comments on Rehabilitative Support for Musculoskeletal Care MVP. The proposed Rehabilitative Support for Musculoskeletal Care MVP focuses on the clinical theme of promoting quality care for patients. This MVP would be most applicable to clinicians and NPPs who specialize in providing rehabilitative support for musculoskeletal care such as chiropractic, physiatry, physical therapy and occupational therapy, as well as nurse practitioners and physician assistants. The summary of the public comments received and our responses for this MVP are embedded within Table A.5.

### Quality Measures

We proposed to include 10 MIPS quality measures within the quality performance category of this MVP, which promote rehabilitative support for patients. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP candidate feedback period to determine which quality measures to include in this MVP.

The following quality measures within this MVP provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in providing rehabilitative support for musculoskeletal care:

- **Q217: Functional Status Change for Patients with Knee Impairments:** This MIPS quality measure uses the FOTO Lower Extremity Physical Function (LEPF) PROM to assess for the risk-adjusted change in functional status for patients with functional deficit related to the knee. To allow flexibility, the measure was updated to allow for utilization of a crosswalk, potentially reducing burden for clinicians and their patients who prefer an alternative (legacy) PROM for reporting of this quality measure.
- **Q218: Functional Status Change for Patients with Hip Impairments:** This MIPS quality measure uses the FOTO Lower Extremity Physical Function (LEPF) PROM to assess for the risk-adjusted change in functional status for patients with functional deficit related to the hip. To allow flexibility, the measure was updated to allow for utilization of a crosswalk, potentially reducing burden for clinicians and their patients who prefer an alternative (legacy) PROM for reporting of this quality measure.
- **Q219: Functional Status Change for Patients with Lower Leg, Foot or Ankle Impairments:** This MIPS quality measure uses the FOTO Lower Extremity Physical Function (LEPF) PROM to assess for the risk-adjusted change in functional status for patients with functional deficit related to the lower leg, foot or ankle. To allow flexibility, the measure was updated to allow for utilization of a crosswalk, potentially reducing burden for clinicians and their patients who prefer an alternative (legacy) PROM for reporting of this quality measure.
- **Q220: Functional Status Change for Patients with Low Back Impairments:** This MIPS quality measure uses the FOTO Lower Extremity Physical Function (LEPF) PROM to assess for the risk-adjusted change in functional status for patients with functional deficit related to the low back. To allow flexibility, the measure was updated to allow for utilization of a crosswalk, potentially reducing burden for clinicians and their patients who prefer an alternative (legacy) PROM for reporting of this quality measure.
- **Q221: Functional Status Change for Patients with Shoulder Impairments:** This MIPS quality measure uses the FOTO Lower Extremity Physical Function (LEPF) PROM to assess for the risk-adjusted change in functional status for patients with functional deficit related to the shoulder. To allow flexibility, the measure was updated to allow for utilization of a crosswalk, potentially reducing burden for clinicians and their patients who prefer an alternative (legacy) PROM for reporting of this quality measure.
- **Q222: Functional Status Change for Patients with Elbow, Wrist or Hand Impairments:** This MIPS quality measure uses the FOTO Lower Extremity Physical Function (LEPF) PROM to assess for the risk-adjusted change in functional status for patients with functional deficit related to the elbow, wrist or hand. To allow flexibility, the measure was updated to allow for utilization of a crosswalk, potentially reducing burden for clinicians and their patients who prefer an alternative (legacy) PROM for reporting of this quality measure.
- **Q478: Functional Status Change:** This MIPS quality measure uses the FOTO Lower Extremity Physical Function (LEPF) PROM to assess for the risk-adjusted change in functional status for patients with functional deficit related to the neck. To allow flexibility, the measure was updated to allow for utilization of a crosswalk, potentially reducing burden for clinicians and their patients who prefer an alternative (legacy) PROM for reporting of this quality measure.

In addition, we proposed to include the following broadly applicable MIPS quality measures that are relevant to rehabilitative support for musculoskeletal care. The quality measures below address preventive screenings and care plan for falls:

- **Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan:** This MIPS quality measure assesses patients, aged 18 years and older, for a BMI documented with a follow-up plan documented if their most recent documented BMI was outside of normal parameters.

- Q155: Falls: Plan of Care: This MIPS quality measure ensures adult patients, with a history of falls, have a plan of care for falls.
- Q487: Screening for Social Drivers of Health: This MIPS quality measure ensures adults are screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.

### **Improvement Activities**

We reviewed the improvement activity inventory and considered feedback received during the 2024 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We proposed to include 17 improvement activities that reflect actions and processes undertaken by clinicians who provide rehabilitative support for musculoskeletal care to patients, as well as activities that promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care for patients needing rehabilitative support for musculoskeletal care. We proposed the following improvement activities for inclusion in this MVP:

- IA\_AHE\_3: Promote Use of Patient-Reported Outcome Tools
- IA\_AHE\_6: Provide Education Opportunities for New Clinicians
- IA\_AHE\_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols
- IA\_AHE\_12: Practice Improvements that Engage Community Resources to Address Drivers of Health
- IA\_BE\_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA\_BMH\_12: Promoting Clinician Well-Being
- IA\_BMH\_15: Behavioral/Mental Health and Substance Use Screening & Referral for Older Adults
- IA\_CC\_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop
- IA\_CC\_8: Implementation of documentation improvements for practice/process improvements
- IA\_CC\_12: Care coordination agreements that promote improvements in patient tracking across settings
- IA\_EPA\_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record
- IA\_EPA\_2: Use of telehealth services that expand practice access
- IA\_EPA\_3: Collection and use of patient experience and satisfaction data on access
- IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA\_PCMH: Electronic submission of Patient Centered Medical Home accreditation
- IA\_PSPA\_16: Use decision support—ideally platform-agnostic, interoperable clinical decision support (CDS) tools—and standardized treatment protocols to manage workflow on the care team to meet patient needs
- IA\_PSPA\_21: Implementation of fall screening and assessment programs

### **Cost Measures**

We proposed to include one MIPS cost measure within the cost performance category of this MVP, which applies to the clinical topic of rehabilitative support for musculoskeletal care. We reviewed the MIPS cost measure inventory and considered feedback received during the 2024 MVP candidate feedback period to determine the cost measure to include in this MVP. The following cost measure provides a meaningful assessment of the clinical care for clinicians who specialize in rehabilitative support for musculoskeletal care and aligns with the other measures and activities included within this MVP:

- Low Back Pain: This episode-based cost measure evaluates a clinician's or clinician group's risk-adjusted cost to Medicare for patients receiving medical care to manage and treat low back pain. This aligns with Q220: Functional Status Change for Patients with Low Back Impairments. This measure is a new measure that will be used in MIPS beginning in CY 2024 performance period/ 2026 MIPS payment year, as finalized in section IV.A.4.f.(2) of this final rule.

## **TABLE A.5: Rehabilitative Support for Musculoskeletal Care MVP**

Table A.5 serves to represent the measures and activities that are finalized within the Rehabilitative Support for Musculoskeletal Care MVP.

### **Symbol Key:**

Carat symbol (^): when applicable, new MIPS quality measures, improvement activities, and cost measures  
 Single asterisk (\*): existing quality measures and improvement activities with revisions  
 Double asterisk (\*\*): quality measures can be submitted only when included in an MVP  
 Single exclamation point (!): quality measures that are considered high priority

Double exclamation point (!!): outcome measures

Tilde (~): improvement activities that include a health equity component

Percent (%): indication that attestation to IA\_PCMH: Electronic submission of Patient Centered Medical Home accreditation provides full credit for the improvement activity performance category

<p><b>Comment:</b> Various commenters supported the inclusion of the following measures and improvement activities: Q487: Screening for Social Drivers of Health this MVP, IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment, IA_PSPA_21: Implementation of fall screening and assessment programs, IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways, and the Low Back Pain cost measure. Several commenters expressed support for the inclusion of this MVP in the MIPS program with a couple commenters specifically noting it's the first of its kind, one that will allow a subset of physical therapists to meaningfully participate in the Quality Payment Program and be compared with their clinical peers.</p> <p><b>Response:</b> We thank the commenters for their support.</p> <p><b>Comment:</b> A few commenters recommended this MVP not be finalized until 2025, when harmonized Limber/IROMS measures can be proposed, permitting a wider range of available quality measures. They stated 7 of the 10 quality measures available are Focus on Therapeutic Outcomes (FOTO) measures and while free for manual/paper use there is a charge for the electronic survey. Another commenter expressed concern that the FOTO measures included in this MVP are proprietary and not readily available to most physical therapists. The commenter noted that the measures in this MVP should be available to all clinicians without incurring additional costs. Another commenter recommended the inclusion of the IROMS QCDR measures in this MVP given the widespread adoption of the measures in the physical therapy space to measure outcomes.</p> <p><b>Response:</b> We may consider the inclusion of applicable QCDR measures that meet the inclusion criteria and address a measurement gap through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. While QCDR measures may be considered in the future, MVP participation cannot rely solely on QCDR measures as they can only be reported via the QCDR measure owner or borrower of the measures. As this MVP is both feasible and meaningful as proposed, in addition to being voluntary, we do not agree with delaying finalization for potential future changes to QCDR measure inventory. This allows the identified clinician types the opportunity to participate in MVPs as applicable to them. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. The process measures are included in this MVP to provide flexibility of clinician choice and to encompass the comprehensive care provided by clinicians caring for this patient population. Addressing these previously raised concerns, the measure steward updated the FOTO measures for PY2023 to allow for utilization of a crosswalk, potentially reducing burden for clinicians and their patients who prefer an alternative (legacy) PROMs for reporting of these quality measures. Additionally, the measure steward indicates the FOTO's Public Access Survey provides a computer adaptive test (CAT) administration of the survey with scoring results provided on the last screen of the assessment without a fee.</p> <p><b>Comment:</b> A couple commenters expressed concern that the three quality measures included in this MVP that are not FOTO measures are process based measures with one of the three, Q155: Falls: Plan of Care, topped out.</p> <p><b>Response:</b> The process measures are included in this MVP to provide flexibility of clinician choice and to encompass the comprehensive care provided by clinicians caring for this patient population. While we endeavor to include measures that allow for maximum points, we want to ensure important aspects of care within the MVP topic are represented. However, as MVPs are optional and there is still clinician choice</p>		

allowed in quality measures reporting, we would encourage clinicians to review each MVP and the measures and activities within to ensure it is appropriate and applicable to report.

**Comment:** A few commenters noted the limited number of improvement activities for physical therapists and recommended the inclusion of IA\_BMH\_12: Promoting Clinician Well-Being, IA\_EPA\_3: Collection and use of patient experience and satisfaction data on access, and IA\_PM\_13: Chronic Care and Preventative Care Management for Empaneled Patients.

**Response:** We may consider the inclusion of IA\_BMH\_12: Promoting Clinician Well-Being, IA\_EPA\_3: Collection and use of patient experience and satisfaction data on access, and IA\_PM\_13: Chronic Care and Preventative Care Management for Empaneled Patients through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

**Comment:** A couple commenters noted that having a cost measure limited to only Low Back impairment is too focused and not broad enough for general participation.

**Response:** We maintain the Low Back Pain episode-based cost measure is appropriate for use in this MVP. The Low Back Pain episode-based cost measure includes the costs of services provided by physical therapists and occupational therapists, which aligns with the intended purpose of this MVP. Clinicians are only scored on the cost measures within their selected MVP for which they meet the established case minimum. If a clinician cannot be scored on any of the cost measures within an MVP, the cost performance category will be reweighted in alignment with existing MIPS scoring policies under 42 CFR 414.1380(b)(2), which allows for broader participation in the MVP.

**Comment:** A couple commenters recommended adding measures to address fracture-related care such as Q024: Communication with the Physician or Other Clinician Managing On-Going Care Post-Fracture for Men and Women Aged 50 Years and Older and Q418: Osteoporosis Management in Women Who Had a Fracture. One commenter recommended the addition of Q498: Connection to Community Service Provider. An additional commenter recommended expanding the population health measures available in this MVP.

**Response:** We may consider the inclusion of additional quality measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

**Comment:** One commenter doesn't agree this MVP is clinically appropriate to physiatry and recommends development of an additional MVP that would be directly relevant to physiatry. Another commenter is concerned this MVP is specific to only one type of rehabilitative support.

**Response:** The MVPs are intentionally broad to allow for broad reporting within the MVP topic and contain measures that represent different aspects of care. Rather than create an MVP for each subspecialty and/or setting, as this would create an unattainable MVP inventory state, these nuances would be captured within the MVP through different measures and activities representative of the reporting clinician's scope of care. We understand not all quality measures would be applicable to all clinicians who would submit this MVP; however, this represents the foundation from which to build the most meaningful MVP addressing rehabilitative care and allows for clinician choice in choosing quality measures that best represent their scope of care. While we agree specialists who manage chronic pain and physical impairment conditions are distinctive providers, we would encourage those clinicians to choose measures that are more aligned with their scope of care. However, as there may not be specific individual measures that represent every specialty, this consolidated MVP can be reported when appropriate and applicable to the clinician/group. We encourage the commenter to reach out to measure developers/stewards to develop additional measures for submission to the MVP Maintenance process for possible future implementation.

**Comment:** One commenter requested the clinical applicability of this MVP be expanded to be more relevant to spine surgeons. The commenter recommended updating the title by removing the reference to "rehabilitative support". A couple of commenters recommended the addition of measures Q039: Screening for osteoporosis, Q126: Diabetic peripheral neuropathy – neurological evaluation, Q134: Screening for depression and follow-up plan, Q178: Functional status assessment for RA patients, Q226: Tobacco screening and cessation, Q418: Osteoporosis management in women with fracture, Q461: Leg pain after lumbar surgery, and Q471: Functional status after lumbar surgery. Another commenter recommended the addition of Q182: Functional Outcome Assessment and Q431: Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling in order to promote meaningful participation for physical therapists and other nonphysicians.

**Response:** The scope of this MVP is intended for use by professionals who specialize in providing rehabilitative support for musculoskeletal conditions, such as chiropractic, physiatry, physical therapy, and occupational therapy, as well as nurse practitioners and physician assistants. We may consider the inclusion of additional MIPS quality measures that align with the intent of this MVP through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

**Comment:** A couple of commenters recommended the first iteration of this MVP include PROMIS measures associated with physical function, pain interference, and Global Health 10 or 29. The commenter believes including PROMIS measures offers critical options that are not represented in the measures offered in the Rehabilitative Support for Musculoskeletal Care MVP.

**Response:** The current MIPS quality measure inventory does not include any measures that use the PROMIS tool to assess physical function or pain interference. We encourage the commenter to reach out to measure developers/stewards to develop additional measures utilizing the PROMIS tool for submission to the Call for Measures for possible future implementation. We may consider the inclusion of QCDR measures that meet the inclusion criteria and address a measurement gap through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

**Comment:** One commenter expressed concern with the inclusion of the Low Back Pain cost measure in this MVP. The commenter requested that orthopedic surgeons be removed from the list of eligible specialties for attribution to evaluate non-operative, chronic care. The commenter further recommended the creation of longitudinal care episodes specific to orthopedic surgeons and non-operative management of chronic musculoskeletal conditions.

**Response:** We appreciate the commenter's concerns; however, it is appropriate to include the Low Back Pain episode-based measure in this MVP because it assesses the cost of patients receiving care to manage low back pain and aligns with Q220: Functional Status Change for Patients with Low Back Impairments. Additionally, we maintain it is appropriate to attribute this measure to surgeons, as recommended by the Clinical Expert Workgroup that helped to develop this measure. We have addressed this feedback under section IV.A.4.f.(2) of this final rule in further detail. If additional cost measures applicable to musculoskeletal conditions and orthopedic surgeons become available for use in MIPS, we may consider the addition of such measures through future MVP maintenance and rulemaking processes.

**Comment:** A few commenters expressed concerns that having a cost measure limited to only Low Back impairment would be too focused and not broad enough for general participation in the MVP.

**Response:** The Low Back Pain episode-based cost measure is appropriate for use in this MVP because it assesses the cost of patients receiving care to manage low back pain and aligns with Q220: Functional Status Change for Patients with Low Back Impairments. At this time, there are no additional applicable cost measures in the MIPS cost measure inventory that would capture a broader scope of care. Should additional applicable cost measures be implemented in MIPS in the future, we may consider the addition of these measures through the MVP Maintenance Process and future rulemaking. We also note that clinicians are only scored on the cost measures within their selected MVP for which they meet the established case minimum. If a clinician cannot be scored on any of the cost measures within an MVP, the cost performance category will be reweighted in alignment with existing MIPS scoring policies under 42 CFR 414.1380(b)(2), which allows for broader participation in the MVP.

**Comment:** One commenter noted their support for the Low Back Pain cost measure because it allows for chiropractors to be attributed episodes and receive a cost measure score. However, the commenter expressed concerns with chiropractors using E&M codes that are not payable under Medicare, which would limit these clinicians' abilities to demonstrate the true value of their care in the proposed MVP.

**Response:** We appreciate the commenter's support of the Low Back Pain cost measure and its use in the Musculoskeletal MVP. The Low Back Pain episode-based cost measure attributes episodes to clinicians who bill outpatient E&M codes as well as other clinically relevant outpatient services, such as therapy evaluation, chiropractic manipulation, osteopathic manipulation, or therapy services. Additionally, these services are included within the cost measure score calculation as part of assessing the value of care provided for musculoskeletal conditions.

**Comment:** One commenter expressed concerns about the Low Back Pain cost measure included in this MVP, and stated it focuses exclusively on cost without any consideration for the impact of spending or cost reduction on patient outcomes or other measures of quality.

**Response:** We agree with the commenter that it is important to consider quality performance alongside cost performance. The Low Back Pain cost measure and Functional Status Change for Patients with Low Back Pain quality measure use similar service and diagnoses codes to identify the patient populations. The MVP also includes additional quality measures and improvement activities to collectively assess the overall value of musculoskeletal care. Additionally, cost measures aim to promote care coordination and can capture clinicians' cost savings through reduction of poor patient outcomes associated with high costs, such as avoidable hospitalizations or complications.

After consideration of public comments, we are finalizing the *Rehabilitative Support for Musculoskeletal Care MVP* as proposed in Table A.5 for the CY 2024 performance period/2026 MIPS payment year and future years.

## Group B: Modifications to Previously Finalized MVPs for the CY 2023 Performance Period/2025 MIPS Payment Year and Future Years

### Advancing Cancer Care MVP

In the CY 2024 PFS proposed rule (88 FR 53167 through 53169), we proposed and solicited comments on the previously finalized Advancing Cancer Care MVP. Table B.1 represents the measures and activities that were finalized within the Advancing Cancer Care MVP in (87 FR 70653 through 70659) with modifications proposed for the CY 2024 performance period/2026 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are embedded within Table B.1.

#### Quality Measures

We proposed to modify the previously finalized Advancing Cancer Care MVP within the quality performance category of this MVP to include three additional MIPS quality measures and one additional QCDR measure that address appropriate cancer care treatment. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP maintenance period to determine which quality measures to include in this MVP.

The following quality measures proposed within this MVP provide a meaningful and comprehensive assessment of the clinical care for clinicians providing cancer care to patients:

- Q490: Appropriate Intervention of Immune-related Diarrhea and/or Colitis in Patients Treated with Immune Checkpoint Inhibitors: This MIPS quality measure identifies patients diagnosed with cancer who are on immune checkpoint inhibitor therapy and develop grade 2 or above diarrhea and/or colitis to assess for appropriate intervention of managing immune-related diarrhea and colitis.
- PIMSH13: Oncology: Mutation Testing for Stage IV Lung Cancer Completed Prior to the Start of Targeted Therapy: This QCDR measure assesses the use of mutation testing for all actionable biomarkers with appropriate mutation-directed therapy, in accordance with current National Comprehensive Cancer Network (NCCN) guidelines for stage IV non-small cell lung cancer.

For the reasons stated in the introduction of this appendix, we proposed to add a broadly applicable MIPS quality measure, Q487: Screening for Social Drivers of Health, which addresses health equity. In addition, we proposed to add the following broadly applicable MIPS quality measure, which is relevant to patients receiving cancer care and their understanding of their health care treatment journey:

- Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months: This proposed MIPS quality measure ensures capture of the patient voice and experience of care related to the patient's understanding and confidence in their ability to manage their health and be an active partner in their health care journey.

#### Improvement Activities

For the reasons stated in the introduction of this appendix, we proposed to add IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways to this MVP. In addition, we proposed to add six additional improvement activities that address maintenance requests from the public, and that address priority areas including clinician well-being, interoperability, patient safety, and expanding use of telehealth:

- IA\_BMH\_12: Promoting Clinician Well-Being
- IA\_CC\_13: Practice Improvements to Align with OpenNotes Principles
- IA\_EPA\_2: Use of telehealth services that expand practice access
- IA\_ERP\_4: Implementation of a Personal Protective Equipment (PPE) Plan
- IA\_PSPA\_13: Participation in Joint Commission Evaluation Initiative
- IA\_PSPA\_28: Completion of an Accredited Safety or Quality Improvement Program

### TABLE B.1: Advancing Cancer Care MVP

Table B.1 serves to represent the measures and activities that are additions or modifications to the previously finalized measures and activities within the Advancing Cancer Care MVP.

#### **Symbol Key:**

Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures  
Carat symbol (^): when applicable, new proposed MIPS quality measures, improvement activities, and cost measures

Single asterisk (\*): existing quality measures and improvement activities with proposed revisions

Single exclamation point (!): quality measures that are considered high priority

Double exclamation point (!!): outcome measures

Tilde (~): improvement activities that include a health equity component

Percent (%): indication that attestation to IA\_PCMH: Electronic submission of Patient Centered Medical Home accreditation provides full credit for the improvement activity performance category

Quality	Improvement Activities	Cost

**Comment:** One commenter supported the inclusion of Q487: Screening for Social Drivers of Health in this MVP. A few commenters supported the inclusion of Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months and a couple of commenters supported the inclusion of PIMSH13: Oncology: Mutation testing for stage IV lung cancer completed prior to start of targeted therapy in this MVP. One commenter supported the inclusion of IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways.

**Response:** We thank the commenters for their support.

**Comment:** One commenter recommended the addition of Q498: Connection to Community Service Provider and a couple of commenters recommended Q495: Ambulatory Palliative Care Patients’ Experience of Feeling Heard and Understood be added to this MVP. A couple of commenters recommended the inclusion of IA\_AHE\_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols.

**Response:** We may consider the inclusion of additional quality measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

**Comment:** One commenter recommended replacing Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months in this MVP with an alternate activation survey that is accessible to any ePROM vendor or platform.

**Response:** The current MIPS quality measure inventory doesn’t include an alternate measure based upon an activation survey. We encourage the commenter to reach out to measure developers/stewards to develop additional measures allowing for the use of alternate activation surveys that are accessible to any ePROM vendor or platform for submission to the Call for Measures for possible future implementation.

**Comment:** One commenter recommended considering and incorporating future quality measures advancing biomarker testing in cancer care and measures advancing genetic testing for an inherited mutation, or germline testing, in cancer patients.

**Response:** We are finalizing the inclusion of PIMSH13: Oncology: Mutation testing for stage IV lung cancer completed prior to start of targeted therapy. However, we encourage the commenter to reach out to measure developers/stewards to develop additional measures addressing advancing genetic testing and biomarker testing for cancer patients for submission to the Call for Measures for possible future implementation.

**Comment:** One commenter opposed the TPCC cost measure being included in this MVP. The commenter noted that TPCC does not account for the benefit of preventive services in reducing costs in the long term, which would unfairly penalize physicians. The commenter also expressed concerns with the measure's use of outdated CPT coding specifications, which would impact the reliability and validity of the measure and lead to inaccurate results and unintended consequences for physicians and groups.

**Response:** We maintain the TPCC measure is appropriate for use in MVPs, as we outlined in the CY 2023 PFS final rule (87 FR 70653 through 70659). This is because the TPCC measure captures the overall costs of care after establishing a primary care-type relationship, including the care provided to patients by medical, hematological, and gynecological oncologists. The broad focus of the measure, which includes total costs of care for patients with cancer, supports the intent of this MVP to apply to cancer care. Currently, there are no applicable episode-based measures available, but one could be considered for development in the future. We also clarify that the TPCC measure undergoes annual maintenance, where CMS and the measure developer determine whether to make updates to the measure specifications based on new, revised, or deleted CPT codes. The Measure Codes Lists that detail the specific codes used to construct the measures are also updated annually and made publicly available. We refer readers to the CY 2022 PFS proposed rule (86 FR 39881 through 39895), CY 2022 PFS final rule (86 FR 66001), CY 2023 PFS proposed rule (87 FR 46814 through 46828), and CY 2023 PFS final rule (87 FR 70038) for more information about previously finalized MVPs including the TPCC cost measure. Additionally, we may consider the addition or removal of cost measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Advancing Cancer Care MVP* as proposed in Table B.1 for the CY 2024 performance period/2026 MIPS payment year and future years.

## Optimal Care for Kidney Health MVP

In the CY 2024 PFS proposed rule (88 FR 53170 through 53172), we proposed and solicited comments on the previously finalized Optimal Care for Kidney Health MVP. Table B.2 represents the measures and activities that were finalized within the Optimal Care for Kidney Health MVP in (87 FR 70660 through 70664) with modifications proposed for the CY 2024 performance period/2026 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are embedded within Table B.2.

### Quality Measures

We proposed to modify the previously finalized Optimal Care for Kidney Health MVP within the quality performance category of this MVP to include to include six additional MIPS quality measures that encompass the appropriate care for kidney health and assess appropriate inclusion on the transplant waitlist. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP maintenance period to determine which quality measures to include in this MVP.

The following quality measures proposed within this MVP encompass appropriate care for kidney health and assess appropriate inclusion on the transplant waitlist:

- Q488: Kidney Health Evaluation: This MIPS quality measure ensures patients with diabetes receive a kidney health evaluation including both an estimated glomerular filtration rate (eGFR) and a urine albumin-creatinine ratio (uACR).
- N/A: First Year Standardized Waitlist Ratio (FYSWR): This proposed MIPS quality measure ensures patients with end-stage renal disease (ESRD) are placed on the kidney or kidney-pancreas transplant list or that the patient received a living donor transplant in the first year after initiation of dialysis.
- N/A: Percentage of Prevalent Patients Waitlisted (PPPW) and Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW): This proposed MIPS quality measure captures the adjusted count of patient months for dialysis patients on the kidney and kidney-pancreas transplant waitlist and patients on the kidney or kidney -pancreas transplant waitlist in active status.

For the reasons stated in the introduction of this appendix, we proposed to add a broadly applicable MIPS quality measure, Q487: Screening for Social Drivers of Health, which addresses health equity. In addition, we proposed to add the following two broadly applicable MIPS quality measures which address patient's understanding of their health care journey:

- Q493: Adult Immunization Status: This MIPS quality measure ensures that adults are up-to-date with the recommended routine vaccines: influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.
- Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months: This proposed MIPS quality measure ensures capture of the patient voice and experience of care related to the patient's understanding and confidence in the ability to manage their health and be an active partner in their health care journey.

We also proposed to modify the previously finalized Optimal Care for Kidney Health MVP to remove two MIPS quality measures that would be replaced by MIPS quality measure Q493 Adult Immunization Status, which is a more robust measure supporting the comprehensive evaluation of compliance with recommended adult immunizations that improve quality care and prevent disease for this at-risk patient population. The quality actions represented in the below measures would be captured in the composite measure:

- Q110: Preventive Care and Screening: Influenza Immunization
- Q111: Pneumococcal Vaccination Status for Older Adults

### Improvement Activities

For the reasons stated in the introduction of this appendix, we proposed to add IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways to this MVP. In addition, we proposed to add two additional improvement activities that address maintenance requests from the public, and that address priority areas including food insecurity and population health:

- IA\_AHE\_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols
- IA\_PM\_13: Chronic Care and Preventative Care Management for Empaneled Patients

We also proposed to remove the following improvement activity in response to maintenance requested from the public and interested-party feedback and agree with the recommendation that IA\_PM\_13: Chronic Care and Preventative Care Management for Empaneled Patients better targets the MVP population while still advancing care coordination:

- IA\_PM\_14: Implementation of methodologies for improvements in longitudinal care management for high risk patients

## TABLE B.2: Optimal Care for Kidney Health MVP

Table B.2 serves to represent the measures and activities that are additions or modifications to the previously finalized measures and activities within the Optimal Care for Kidney Health MVP.

### Symbol Key:

Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures  
 Carat symbol (^): when applicable, new proposed MIPS quality measures, improvement activities, and cost measures

Single asterisk (\*): existing quality measures and improvement activities with proposed revisions

Single exclamation point (!): quality measures that are considered high priority

Double exclamation point (!!): outcome measures

Tilde (~): improvement activities that include a health equity component

Percent (%): indication that attestation to IA\_PCMH: Electronic submission of Patient Centered Medical Home accreditation provides full credit for the improvement activity performance category.

**Comment:** A couple commenters supported the inclusion of the following quality measures: Q487: Screening for Social Drivers of Health, Q488: Kidney Health Evaluation, Q493: Adult Immunization Status, the proposed First Year Standardized Waitlist Ratio (FYSWR) measure, and the proposed Percentage of Prevalent Patients Waitlisted (PPPW) and Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW) measure in this MVP. One commenter supported the Patient Activation Measure given its use in the Center for Medicare and Medicaid Innovation’s (CMMI) Kidney Care Choices Model to promote alignment with the MVP and advanced alternative payment models. Another commenter supported all proposed changes to the Improvement Activities measures in this MVP. One commenter generally supported all measures aimed at preventing or slowing progression of kidney disease among individuals with CKD, as well as screening for CKD in high risk individuals with diabetes, hypertension, heart disease, and other risk factors. A few commenters supported the inclusion of Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months measure in this MVP. Another commenter supported the inclusion of IA\_AHE\_9 in this MVP. One commenter supported the inclusion of IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways.

**Response:** We thank the commenters for their support.

**Comment:** One commenter recommended the addition of Q498: Connection to Community Service Provider quality measure and a couple of commenters recommended quality measure Q495: Ambulatory Palliative Care Patients’ Experience of Feeling Heard and Understood measure be added to this MVP. Another commenter recommended the inclusion of IA\_AHE\_9 in this MVP.

**Response:** We may consider the inclusion of additional quality measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

**Comment:** One commenter recommended replacing Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months measure in this MVP with an alternate activation survey that is accessible to any ePROM vendor or platform.

**Response:** The current MIPS quality measure inventory doesn’t include an alternate measure based upon an activation survey. We encourage the commenter to reach out to measure developers/stewards to develop additional measures allowing for the use of alternate activation surveys that are accessible to any ePROM vendor or platform for submission to the Call for Measures for possible future implementation.

**Comment:** One commenter asked for clarification as to why the eCQM ID CMS95v1 version of the Kidney Health Evaluation quality measure is not included in this MVP when the MIPS CQM ID Q488 version is available. The commenter believes both should be included.

**Response:** This was an inadvertent omission and Table B.2 has been updated to reflect the eCQM specifications collection type (CMS951v2).

**Comment:** One commenter stated there are several measurement gap areas for ensuring quality for CKD care, including measures of CKD stage at diagnosis, medication adherence, readmissions and hospitalizations, quality of life and symptom burden, patient preparedness, kidney failure/renal replacement therapy planning, and prescription of key medications. They stated filling these measures may bolster future versions of this MVP.

**Response:** We encourage the commenter to reach out to measure developers/stewards to develop additional CKD measures that may fill these gap areas for submission to the Call for Measures for possible future implementation.

**Comment:** A few commenters requested clarification regarding the proposed First Year Standardized Waitlist Ratio (FYSWR) measure and the proposed Percentage of Prevalent Patients Waitlisted (PPPW) and Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW) measure and encouraged development and implementation of measures that support medications such as sodium-glucose cotransporter-2 (SGLT2) inhibitor therapy and other measures to delay CKD progression in this MVP.

**Response:** The intent of the proposed First Year Standardized Waitlist Ratio (FYSWR) measure is to track the initial placement on the kidney or kidney-pancreas transplantation waitlist or receipt of a living donor transplant, within the first year after dialysis initiation, with the intended objective of improving the overall health of patients on dialysis. Being waitlisted or receiving a living donor kidney transplant represents a desirable change in health status for patients on dialysis, indicating achievement of a health condition conducive to kidney transplantation. The intent of the proposed Percentage of Prevalent Patients Waitlisted (PPPW) and Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW) measure is to assess monthly wait listing in active status of patients as well as evaluates and encourages maintenance of patients on the waitlist. We encourage the commenters to reach out to measure developers/stewards to develop additional CKD measures that may fill the gap areas identified for submission to the Call for Measures for possible future implementation. However, due to potential implementation concerns regarding timing and application of the risk adjustment methodology, these measure will not be finalized for the CY 2024 performance period/2026 MIPS payment year.

**Comment:** One commenter opposed the TPCC cost measure being included in this MVP. The commenter noted that TPCC does not account for the benefit of preventive services in reducing costs in the long term, which would unfairly penalize physicians. The commenter also expressed concerns with the measure's use of outdated CPT coding specifications, which would impact the reliability and validity of the measure and lead to inaccurate results and unintended consequences for physicians and groups.

**Response:** We maintain the TPCC measure is appropriate for use in MVPs. We refer readers to the CY 2022 PFS proposed rule (86 FR 39881 through 39895), CY 2022 PFS final rule (86 FR 66001), CY 2023 PFS proposed rule (87 FR 46814 through 46828), and CY 2023 PFS final rule (87 FR 70038) for more information about previously finalized MVPs including the TPCC cost measure. Additionally, we may consider the addition or removal of cost measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Optimal Care for Kidney Health MVP* with. As described in Appendix 1: MIPS Quality Measures Tables A.4 and Table A.5, we are not finalizing the proposed quality measures: First Year Standardized Waitlist Ratio (FYSWR), and Percentage of Prevalent Patients Waitlisted (PPPW) and Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW). As a result, we are not finalizing the inclusion of these measures in the Optimal Care for Kidney Health MVP. We refer readers to Appendix 1: MIPS Quality Measures Table A.4 and A.5 for details..

## Optimal Care for Patients with Episodic Neurological Conditions MVP

In the CY 2024 PFS proposed rule (88 FR 53173 through 53175), we proposed and solicited comments on the previously finalized Optimal Care for Patients with Episodic Neurological Conditions MVP. Table B.3 represents the measures and activities that were finalized within the Optimal Care for Patients with Episodic Neurological Conditions MVP in (87 FR 70665 through 70668) with modifications proposed for the CY 2024 performance period/2026 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are embedded within Table B.3.

### Quality Measures

We proposed to modify the previously finalized Optimal Care for Patients with Episodic Neurological Conditions MVP within the quality performance category of this MVP to include to include two additional MIPS quality measures that address health equity and the patient's understanding of their health care journey. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP maintenance period to determine which quality measures to include in this MVP.

For the reasons stated in the introduction of this appendix, we proposed to add a broadly applicable MIPS quality measure, Q487: Screening for Social Drivers of Health, which addresses health equity. In addition, we proposed to add the following broadly applicable MIPS quality measure, which is relevant to patients receiving care for episodic neurological conditions. The quality measure below addresses the patient's understanding of their health care journey:

- Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months: This proposed MIPS quality measure ensures capture of the patient voice and experience of care related to the patient's understanding and confidence in the ability to manage their health and be an active partner in their health care journey.

We also proposed to modify the previously finalized Optimal Care for Patients with Episodic Neurological Conditions MVP to remove one QCDR measure as it is a process measure with no follow-up or link to a health outcome as doesn't ensure preventive therapies were successful.

- AAN30: Migraine Preventive Therapy Management

### **Improvement Activities**

For the reasons stated in the introduction of this appendix, we proposed to add IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways to this MVP. In addition, we proposed to add one additional improvement activity that addresses a maintenance request from the public and that addresses the priority area of including the patient voice in their health care decision making:

- IA\_BE\_6: Regularly Assess Patient Experience of Care and Follow Up on Findings

### **TABLE B.3: Optimal Care for Patients with Episodic Neurological Conditions MVP**

Table B.3 serves to represent the measures and activities that are additions or modifications to the previously finalized measures and activities within the Optimal Care for Patients with Episodic Neurological Conditions MVP.

<p><b>Comment:</b> One commenter supported the inclusion of Q487: Screening for Social Drivers of Health in both new and previously finalized MVPs. Another commenter agreed with the removal of AAN30: Migraine Preventative Therapy Management from this MVP. One commenter supported the inclusion of IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways. A few commenters supported the inclusion of Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months measure in this MVP.</p> <p><b>Response:</b> We thank the commenters for their support.</p> <p><b>Comment:</b> One commenter recommended the addition of Q498: Connection to Community Service Provider quality measure and a couple of commenters recommended Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood measure be added to this MVP.</p> <p><b>Response:</b> We may consider the inclusion of additional quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.</p>		

**Comment:** One commenter recommended replacing Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months measure in this MVP with an alternate activation survey that is accessible to any ePROM vendor or platform.

**Response:** The current MIPS quality measure inventory doesn't include an alternate measure based upon an activation survey. We encourage the commenter to reach out to measure developers/stewards to develop additional measures allowing for the use of alternate activation surveys that are accessible to any ePROM vendor or platform for submission to the Call for Measures for possible future implementation.

**Comment:** One commenter noted that AAN29: Comprehensive Epilepsy Care Center Referral or Discussion for Patients with Epilepsy will no longer be available beginning January 1, 2024.

**Response:** We acknowledge that AAN29: Comprehensive Epilepsy Care Center Referral or Discussion for Patients with Epilepsy will no longer be available beginning January 1, 2024, and will have no impact on the voluntary reporting of this MVP. As such, this QCDR measure will be removed from the finalized MVP for PY 2024. We may consider the inclusion of additional measures through the MVP Maintenance Process and future rulemaking; however, current policy only allows use of current MIPS quality and QCDR measures that meet all requirements to be included within an MVP.

**Comment:** One commenter didn't agree with the inclusion of Q487: Screening for Social Drivers of Health in this MVP as the measure is a process measure without any follow-up or outcome. The commenter noted that in the past these types of measures for neurology-specific items have been declined. The commenter also noted the measure could be demotivational to the neurology community and is more appropriate for a patient's primary care provider or medical home team as they coordinate care. In addition, the commenter expressed concern with the burden that this measure may place on institutional quality improvement efforts and on Qualified Clinical Data Registries (QCDRs).

**Response:** We maintain this is an important process measure that supports the collection of DOH data, which is a foundational step towards defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. This measure purely focuses on the completion of screening for DOH patient information and is consistent with the priority to advance health equity. We note the information a clinician collects during a DOH screening may be clinically relevant and may not have otherwise been collected by the clinician absent the screening. As such, better scores on this measure are still indicators of the quality of care provided to patients. Because clinicians have the flexibility to choose measures to report, it would be at their discretion whether to report this measure as requirements only include reporting of 4 quality measures. Furthermore, improving the clinician's understanding of the social obstacles their patients face beyond the clinical realm – but which may affect their clinical outcomes – can provide critical insights, catalyze prevention and/or early identification and prompt referral, and improve a patient's overall health and well-being.<sup>585, 586</sup>

After consideration of public comments, we are finalizing the *Optimal Care for Patients with Episodic Neurological Conditions MVP* with modifications in Table B.3 for the CY 2024 performance period/2026 MIPS payment year and future years. Due to QCDR measure AAN29: Comprehensive Epilepsy Care Center Referral or Discussion for Patients with Epilepsy no longer be available beginning January 1, 2024, it is being removed from the *Optimal Care for Patients with Episodic Neurological Conditions MVP*.

---

## Supportive Care for Neurodegenerative Conditions MVP

In the CY 2024 PFS proposed rule (88 FR 53176 through 53177), we proposed and solicited comments on the previously finalized Supportive Care for Neurodegenerative Conditions MVP. Table B.4 represents the measures and activities that were finalized within the Supportive Care for Neurodegenerative Conditions MVP in (87 FR 70669 through 70672) with modifications proposed for the CY 2024 performance period/2026 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are embedded within Table B.4.

### Quality Measures

We proposed to modify the previously finalized Supportive Care for Neurodegenerative Conditions MVP within the quality performance category of this MVP to include one additional MIPS quality measure that addresses health equity. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP maintenance period to determine which quality measures to include in this MVP.

For the reasons stated in the introduction of this appendix, we proposed to add a broadly applicable MIPS quality measure, Q487: Screening for Social Drivers of Health, which addresses health equity.

### Improvement Activities

For the reasons stated in the introduction of this appendix, we proposed to add IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways to this MVP. In addition, we proposed to add one additional improvement activity that addresses a maintenance request from the public, and that addresses the priority area of including patient voices in their health care decision making:

- IA\_BE\_6: Regularly Assess Patient Experience of Care and Follow Up on Findings

## TABLE B.4: Supportive Care for Neurodegenerative Conditions MVP

Table B.4 serves to represent the measures and activities that are additions or modifications to the previously finalized measures and activities within the Supportive Care for Neurodegenerative Conditions MVP.

### **Symbol Key:**

Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures

Carat symbol (^): when applicable, new proposed MIPS quality measures, improvement activities, and cost measures

Single asterisk (\*): existing quality measures and improvement activities with proposed revisions

Single exclamation point (!): quality measures that are considered high priority

Double exclamation point (!!): outcome measures

Tilde (~): improvement activities that include a health equity component

Percent (%): indication that attestation to IA\_PCMH: Electronic submission of Patient Centered Medical Home accreditation provides full credit for the improvement activity performance category

**Comment:** One commenter stated the QCDR measure steward will not permit borrowing of their QCDR measures included in this MVP. They noted this could lead to provider frustration/burden and the selection of only the process measures and/or regular MIPS measures available within the MVP.

**Response:** We acknowledge the commenter's concerns. We note the reporting requirements include reporting four quality measures from the MVP, including one outcome measure. If the only outcome measures available to the clinician are cost burdensome, the clinician may report a high priority measure (86 FR 65417). This MVP as proposed contains seven high priority measures, allowing some flexibility and choice to clinicians in reporting a subset of measures and activities within this MVP. We may consider the inclusion of additional measures through the MVP Maintenance Process and future rulemaking; however, current policy only allows use of current MIPS quality measures and QCDR measures that meet all requirements for inclusion within an MVP. Additionally, we encourage the commenter to reach out to measure developers/stewards to develop new neurodegenerative supportive care measures for submission to the Call for Measures for possible future implementation.

**Comment:** One commenter supported the inclusion of Q487: Screening for Social Drivers of Health in both new and previously finalized MVPs. One commenter supported the inclusion of IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways.

**Response:** We thank the commenter for their support.

**Comment:** One commenter recommended the addition of Q498: Connection to Community Service Provider quality measure and a couple of commenters recommended Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood measure be added to this MVP.

**Response:** We may consider the inclusion of additional quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

**Comment:** One commenter didn't agree with the inclusion of Q487: Screening for Social Drivers of Health in this MVP as the measure is a process measure without any follow-up or outcome. The commenter noted that in the past these types of measures for neurology-specific items have been declined. The commenter also noted the measure could be demotivational to the neurology community and is more appropriate for a patient's primary care provider or medical home team as they coordinate care. In addition, the commenter expressed concern with the burden that this measure may place on institutional quality improvement efforts and on Qualified Clinical Data Registries (QCDRs).

**Response:** We maintain this is an important process measure that supports the collection of DOH data, which is a foundational step towards defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. This measure purely focuses on the completion of screening for DOH patient information and is consistent with the priority to advance health equity. We note the information a clinician collects during a DOH screening may be clinically relevant and may not have otherwise been collected by the clinician absent the screening. As such, better scores on this measure are still indicators of the quality of care provided to patients. Because clinicians have the flexibility to choose measures to report, it would be at their discretion whether to report this measure as requirements only include reporting of 4 quality measures. Furthermore, improving the clinician's understanding of the social obstacles their patients face beyond the clinical realm – but which may affect their clinical outcomes – can provide critical insights, catalyze prevention and/or early identification and prompt referral, and improve a patient's overall health and well-being.<sup>587, 588</sup>

After consideration of public comments, we are finalizing the *Supportive Care for Neurodegenerative Conditions MVP* as proposed in Table B.4 for the CY 2024 performance period/2026 MIPS payment year and future years.

## **Advancing Care for Heart Disease MVP**

In the CY 2024 PFS proposed rule (88 FR 53178 through 53181), we proposed and solicited comments on the previously finalized Advancing Care for Heart Disease MVP. Table B.5 represents the measures and activities that were finalized within the Advancing Care for Heart Disease MVP in (87 FR 70679 through 70683) with modifications proposed for the CY 2024 performance period/2026 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are embedded within Table B.5.

### **Quality Measures**

We proposed to modify the previously finalized Advancing Care for Heart Disease MVP within the quality performance category of this MVP to include four additional MIPS quality that are relevant to patients receiving care for heart disease. We reviewed the quality measure inventory and considered feedback received during the 2024 MVP maintenance period to determine which quality measures to include in this MVP.

The following quality measures proposed within this MVP are relevant to patients receiving care for heart disease. The quality measures below address appropriate medications for patients with coronary artery disease (CAD):

- **Q006: Coronary Artery Disease (CAD): Antiplatelet Therapy:** This MIPS quality measure assesses that patients diagnosed with CAD are prescribed aspirin or clopidogrel.
- **Q118: Coronary Artery Disease (CAD): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy - Diabetes or Left Ventricular Systolic Dysfunction (LVEF  $\leq$  40%):** This MIPS quality measure assesses patients diagnosed with CAD, in addition to a prior myocardial infarction or current or prior LVEF  $\leq$  40%, are prescribed a beta-blocker therapy.

For the reasons stated in the introduction of this appendix, we proposed to add a broadly applicable MIPS quality measure, Q487: Screening for Social Drivers of Health, which addresses health equity. In addition, we proposed to add one additional broadly applicable MIPS quality measure that is relevant to patients receiving care for heart disease. The quality measure below addresses the patient's understanding of their health care journey:

- **Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months:** This proposed MIPS quality measure ensures capture of the patient voice and experience of care related to the patient's understanding and confidence in the ability to manage their health and be an active partner in their health care journey.

### **Improvement Activities**

For the reasons stated in the introduction of this appendix, we proposed to add IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways to this MVP. In addition, we proposed to add two additional improvement activities that address maintenance requests from the public, and that address priority areas including food insecurity and the incorporation of patient voices into health care decision making:

- **IA\_AHE\_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols**
- **IA\_BE\_6: Regularly Assess Patient Experience of Care and Follow Up on Findings**

### **Cost Measures**

We also proposed to add two MIPS cost measures within the cost performance category of this MVP, which apply to the clinical topic of cardiac care. We reviewed the MIPS cost measure inventory and considered feedback received from interested parties through the MVP maintenance process to determine the cost measures to include in this MVP. The following cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in cardiac care and align with the other measures and activities included within this MVP:

- **Medicare Spending Per Beneficiary (MSPB) Clinician:** This MIPS cost measure applies to clinicians providing care in inpatient hospitals, including cardiac care. An interested party recommended that the MSPB Clinician measure replace the TPCC measure. We agree that it is appropriate to include MSPB Clinician within this MVP. However, TPCC is appropriate to include in this MVP for the reasons stated when the measure was initially finalized for use in this MVP (86 FR 66012 through 66103).
- **Heart Failure:** This episode-based cost measure evaluates a clinician's or clinician group's risk-adjusted cost to Medicare for patients receiving medical care to manage and treat heart failure. The addition of this measure aligns with included quality measures, such as Q005: Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Nephrilysin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD) and Q008: Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD). This is a new measure that will be used in MIPS beginning in CY 2024 performance period/ 2026 MIPS payment year, as finalized in section IV.A.4.f.(2) of this final rule.

**TABLE B.5: Advancing Care for Heart Disease MVP**

Table B.5 serves to represent the measures and activities that are additions or modifications to the previously finalized measures and activities within the Advancing Care for Heart Disease MVP.

**Symbol Key:**

Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures  
 Carat symbol (^): when applicable, new proposed MIPS quality measures, improvement activities, and cost measures

Single asterisk (\*): existing quality measures and improvement activities with proposed revisions

Double asterisk (\*\*): quality measures that are proposed for submission only when included in an MVP

Single exclamation point (!): quality measures that are considered high priority

Double exclamation point (!!): outcome measures

Tilde (~): improvement activities that include a health equity component

Percent (%): indication that attestation to IA\_PCMH: Electronic submission of Patient Centered Medical Home accreditation provides full credit for the improvement activity performance category

**Comment:** A couple commenters supported the inclusion of Q487: Screening for Social Drivers of Health in both new and previously finalized MVPs. Another commenter supported the inclusion of IA\_AHE\_9 in this MVP. Another commenter supported the inclusion of IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways. And a few commenters supported the addition of quality measures Q006: Coronary Artery Disease (CAD): Antiplatelet Therapy and Q118: Coronary Artery Disease (CAD): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker-(ARB)-Therapy - Diabetes or Left Ventricular Systolic Dysfunction (LVEF ≤ 40%). A few

commenters supported the inclusion of Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months measure in this MVP. One commenter supported the inclusion of the Heart Failure cost measure in this MVP.

**Response:** We thank the commenters for their support.

**Comment:** One commenter recommended the addition of Q498: Connection to Community Service Provider quality measure and a couple of commenters recommended Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood measure be added to this MVP.

**Response:** We may consider the inclusion of additional quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

**Comment:** One commenter recommended replacing Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months measure in this MVP with an alternate activation survey that is accessible to any ePROM vendor or platform.

**Response:** The current MIPS quality measure inventory doesn't include an alternate measure based upon an activation survey. We encourage the commenter to reach out to measure developers/stewards to develop additional measures allowing for the use of alternate activation surveys that are accessible to any ePROM vendor or platform for submission to the Call for Measures for possible future implementation.

**Comment:** One commenter stated there are several measurement gap areas for ensuring quality for heart failure care, measures of risk assessment, screening, health-related quality of life (beyond functional status), treatment, and medication adherence. They stated filling these measures may bolster future versions of this MVP.

**Response:** We encourage the commenter to reach out to measure developers/stewards to develop additional measures. Interested parties are welcome to submit recommended changes to finalized MVPs on an ongoing basis through the MVP Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

**Comment:** One commenter opposed the TPCC cost measure being included in this MVP. The commenter noted that TPCC does not account for the benefit of preventive services in reducing costs in the long term, which would unfairly penalize physicians. The commenter also expressed concerns with the measure's use of outdated CPT coding specifications, which would impact the reliability and validity of the measure and lead to inaccurate results and unintended consequences for physicians and groups.

**Response:** We thank the commenter for raising these concerns and maintain the TPCC measure is appropriate for use in MVPs. We refer readers to the CY 2022 PFS proposed rule (86 FR 39881 through 39895), CY 2022 PFS final rule (86 FR 66001), CY 2023 PFS proposed rule (87 FR 46814 through 46828), and CY 2023 PFS final rule (87 FR 70038) for more information about previously finalized MVPs including the TPCC cost measure. Additionally, we may consider the addition or removal of cost measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Advancing Care for Heart Disease MVP* as proposed in Table B.5 for the CY 2024 performance period/2026 MIPS payment year and future years.

## Advancing Rheumatology Patient Care MVP

In the CY 2024 PFS proposed rule (88 FR 53182 through 53184), we proposed and solicited comments on the previously finalized Advancing Rheumatology Patient Care MVP. Table B.6 represents the measures and activities that were finalized within the Advancing Rheumatology Patient Care MVP in (87 FR 70687 through 70689) with modifications proposed for the CY 2024 performance period/2026 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are embedded within Table B.6.

### Quality Measures

We proposed to modify the previously finalized Advancing Rheumatology Patient Care MVP within the quality performance category of this MVP to include three additional MIPS quality measures and one QCDR measure that are relevant to patients receiving rheumatology care. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP maintenance period to determine which quality measures to include in this MVP.

The following QCDR measure proposed within this MVP addresses appropriate clinical care for patients with rheumatological conditions:

- UREQA10: Ankylosing Spondylitis: Controlled Disease Or Improved Disease Function: This QCDR outcome measure ensures assessment of disease control or improvement based on Bath Ankylosing Spondylitis Disease Activity Index (BASDAI) score in patients with ankylosing spondylitis.

For the reasons stated in the introduction of this appendix, we proposed to add a broadly applicable MIPS quality measure, Q487: Screening for Social Drivers of Health, which addresses health equity. In addition, we proposed to include two additional broadly applicable MIPS quality measures that are relevant to patients receiving care for rheumatological conditions. The quality measures below address immunization status and the patient's understanding of their health care journey:

- **Q493: Adult Immunization Status:** This MIPS quality measure ensures that adults are up-to-date with the recommended routine vaccines: influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.
- **Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months:** This proposed MIPS quality measure ensures capture of the patient voice and experience of care related to the patient's understanding and confidence in the ability to manage their health and be an active partner in their health care journey.

We also proposed to modify the previously finalized Advancing Rheumatology Patient Care MVP to remove one MIPS quality measure that would be replaced by MIPS quality measure Q493: Adult Immunization Status, which is a more robust measure supporting the comprehensive evaluation of compliance with recommended adult immunizations that improve quality care and prevent disease for this at-risk patient population. The quality actions represented in the below measure would be captured in the composite measure:

- Q111: Pneumococcal Vaccination Status for Older Adults

### **Improvement Activities**

For the reasons stated in the introduction of this appendix, we proposed to add IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways to this MVP. In addition, we proposed to add three additional improvement activities that address maintenance requests from the public, and that address priority areas including incorporating the patient voice into health care decision making:

- IA\_BE\_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA\_BE\_24: Financial Navigation Program
- IA\_BE\_25: Drug Cost Transparency

**TABLE B.6: Advancing Rheumatology Patient Care MVP**

Table B.6 serves to represent the measures and activities that are additions or modifications to the previously finalized measures and activities within the Advancing Rheumatology Patient Care MVP.

#### **Symbol Key:**

Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures  
 Carat symbol (^): when applicable, new proposed MIPS quality measures, improvement activities, and cost measures

Single asterisk (\*): existing quality measures and improvement activities with proposed revisions

Single exclamation point (!): quality measures that are considered high priority

Double exclamation point (!!): outcome measures

Tilde (~): improvement activities that include a health equity component

Percent (%): indication that attestation to IA\_PCMH: Electronic submission of Patient Centered Medical Home accreditation provides full credit for the improvement activity performance category

<p><b>Comment:</b> One commenter supported the inclusion of Q487: Screening for Social Drivers of Health and another supported the inclusion of Q493: Adult Immunization Status in this MVP. A few commenters supported the inclusion of Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months measure in this MVP. Another commenter supported the inclusion of IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways. A couple commenters support the inclusion of IA_BE_24: Financial Navigation Program and IA_BE_25: Drug Cost Transparency improvement activities in this MVP.</p> <p><b>Response:</b> We thank the commenters for their support.</p>		
<p><b>Comment:</b> Commenters recommended additional quality measures be considered for this MVP. Recommendations included adding measures to address fracture-related care such as Q024: Communication with the Physician or Other Clinician Managing On-Going Care Post-Fracture for Men and Women Aged 50 Years and Older and Q418: Osteoporosis Management in Women Who Had a Fracture. One commenter recommended the addition of Q498: Connection to Community Service Provider quality measure to MVP.</p>		

**Response:** We may consider the inclusion of additional quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP

**Comment:** One commenter recommended replacing Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months in this MVP with an alternate activation survey that is accessible to any ePROM vendor or platform.

**Response:** The current MIPS quality measure inventory doesn't include an alternate measure based upon an activation survey. We encourage the commenter to reach out to measure developers/stewards to develop additional measures allowing for the use of alternate activation surveys that are accessible to any ePROM vendor or platform for submission to the Call for Measures for possible future implementation.

**Comment:** One commenter expressed concerns with the topped out quality measures included in this MVP. They noted this will make it difficult to obtain a full quality score. A couple of commenters recommended additional quality measures be added to this MVP. They noted the current selection of measures limits eligible clinicians to achieve optimal scoring in the quality performance category. The measures recommended included the following: Q039: Screening for Osteoporosis for Women Aged 65-85 Years of Age, Q418 Osteoporosis Management in Women Who Had a Fracture, UREQA8: Vitamin D level: Effective Control of Low Bone Mass/Osteopenia and Osteoporosis: Therapeutic Level Of 25 OH Vitamin D Level Achieved, UREQA9: Screening for Osteoporosis for Men Aged 70 Years and Older, UREQA2: Ankylosing Spondylitis: Appropriate Pharmacologic Therapy, ACR10: Hepatitis B Safety Screening, ACR16: Rheumatoid Arthritis Patients with Low Disease Activity or Remission, and Q318: Falls: Screening for Future Fall Risk. Another commenter recommended expanding the population health measures available in this MVP.

**Response:** We may consider the inclusion of additional quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. The process measures are included in this MVP to provide flexibility of clinician choice and to encompass the comprehensive care provided by clinicians caring for this patient population. While we endeavor to include measures that allow for maximum points, we want to ensure important aspects of care within the MVP topic are represented. However, as MVPs are optional and there is still clinician choice allowed in quality measures reporting, we would encourage clinicians to review each MVP and the measures and activities within to ensure it is appropriate and applicable to report.

**Comment:** One commenter didn't support the inclusion of Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months in this MVP. They also recommended delaying the addition of UREQA10: Ankylosing Spondylitis: Controlled Disease Or Improved Disease Function until further information about its potential for unintended consequences is available. In addition, the commenter recommended delaying the removal of Q111: Pneumococcal Vaccination Status for Older Adults and replacing it with Q493: Adult Immunization Status until care teams are more comfortable with the test and development experience using the tradition MIPS pathway measure Q493.

**Response:** The reliability and validity of the PAM® survey has been demonstrated across patient populations, sociodemographic segments, mode of administration, and across multiple languages. Across all patient populations, lower activation has been shown to be predictive of poor self-management, higher healthcare utilization, and higher costs. The evidence suggests that factors such as education, income, ethnicity, and gender account for less than 5% of the variance in PAM® scores. Furthermore, evidence shows that all patients can improve in activation and when appropriately supported, patients at the lower levels of activation actually improve more quickly than other patients.<sup>589, 590, 591, 592, 593</sup>

Currently, there have been no identified unintended consequences during review of measure UREQA10: Ankylosing Spondylitis: Controlled Disease Or Improved Disease Function as the measure is looking at improvement in disease control. Measure Q493: Adult Immunization Status will capture a more robust representation of vaccination status than the individual components and drives complete vaccination rates for patients. As a result, measure Q111 is being removed as it will be duplicative to measure Q493. Additionally, the clinician maintains choice in which quality measures to choose and we encourage reporting of those measures that are the most meaningful and appropriate to their scope of care.

**Comment:** One commenter opposed the TPCC cost measure being included in this MVP. The commenter noted that TPCC does not account for the benefit of preventive services in reducing costs in the long term, which would unfairly penalize physicians. The commenter also expressed concerns with the measure's use of outdated CPT coding specifications, which would impact the reliability and validity of the measure and lead to inaccurate results and unintended consequences for physicians and groups.

**Response:** We maintain the TPCC measure is appropriate for use in this MVP, as we outlined in the CY 2023 PFS final rule (87 FR 70687 through 70689), because it captures the overall costs of care after establishing a primary care relationship, including the care provided by rheumatologists. The TPCC measure assesses ongoing management of rheumatology conditions and aligns with the intent of this MVP. We may consider the addition or removal of cost measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

**Comment:** A couple of commenters expressed concerns with the use of TPCC in this MVP. One commenter questioned whether the TPCC measure appropriately assess the costs of medications, as the measure includes the cost of Part B medications but not Part D medications. The

commenters suggested CMS improve cost measurement for rheumatologists so that clinicians are not penalized if their patient population requires more Part B drugs than Part D drugs.

**Response:** We maintain the TPCC measure is appropriate for use in this MVP. We refer readers to the CY 2022 PFS proposed rule (86 FR 39881 through 39895), CY 2022 PFS final rule (86 FR 66001), CY 2023 PFS proposed rule (87 FR 46814 through 46828), and CY 2023 PFS final rule (87 FR 70038) for more information about previously finalized MVPs including the TPCC cost measure. Additionally, we may consider the addition or removal of cost measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Advancing Rheumatology Patient Care MVP* as proposed in Table B.6 for the CY 2024 performance period/2026 MIPS payment year and future years.

## **Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP**

In the CY 2024 PFS proposed rule (88 FR 53185 through 53187), we proposed and solicited comments on the previously finalized Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP. Table B.7 represents the measures and activities that were finalized within the Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP in (87 FR 70690 through 70692) with modifications proposed for the CY 2024 performance period/2026 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are embedded within Table B.7.

### **Quality Measures**

We proposed to modify the previously finalized Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP to include three additional MIPS quality measures and one QCDR measure that are relevant to patients receiving emergency medical care. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP maintenance period to determine which quality measures to include in this MVP.

The following quality measures proposed within this MVP address appropriate use of medication and diagnostic testing:

- Q065: Appropriate Treatment for Upper Respiratory Infection (URI): This appropriate use MIPS quality measure evaluates that patients 3 months of age and older with a diagnosis of upper respiratory infection (URI) did not receive an antibiotic order.
- Q416: Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 2 Through 17 Years: This appropriate use MIPS quality measure evaluates the appropriate use of head computed tomography (CT) in pediatric patients presenting with minor blunt head trauma.
- H CPR24: Appropriate Utilization of Vancomycin for Cellulitis: This appropriate use QCDR measure evaluates for appropriate antibiotic ordering for patients diagnosed with cellulitis.

For the reasons stated in the introduction of this appendix, we proposed to add a broadly applicable MIPS quality measure, Q487: Screening for Social Drivers of Health, which addresses health equity.

We proposed to modify the previously finalized Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP to remove one QCDR measure as it is a process measure that should be a standard of care as demonstrated by the measure's high performance in the PY2023 MIPS Historical Quality Benchmarks file.

- ACEP21: Coagulation Studies in Patients Presenting with Chest Pain with No Coagulopathy or Bleeding

### **Improvement Activities**

For the reasons stated in the introduction of this appendix, we proposed to add IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways to this MVP. In addition, we proposed to add one additional improvement activity that addresses a maintenance request from the public, and that addresses the priority area of clinician well-being:

- IA\_BMH\_12: Promoting Clinician Well-Being

We also proposed to remove the following improvement activities after consideration of feedback received from the public through the MVP maintenance process:

- IA\_PSPA\_19: Implementation of formal quality improvement methods, practice changes, or other practice improvement processes

### **Cost Measures**

In addition, we proposed to add one MIPS cost measure within the cost performance category of this MVP, which applies to the clinical topic of emergency medicine. The following cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in emergency medicine and aligns with the other measures and activities included within this MVP:

- **Emergency Medicine:** This episode-based cost measure evaluates a clinician’s risk-adjusted cost to Medicare for patients who have an emergency department (ED) visit during the performance period. This measure includes costs of Part A and B services during each episode from the start of the ED visit that opens, or “triggers,” the episode through 14 days after the trigger, excluding a defined list of services for each ED visit type that are unrelated to the ED care. This is a new measure that will be used in MIPS beginning in CY 2024 performance period/ 2026 MIPS payment year, as finalized in section IV.A.4.f.(2) of this final rule.

We also proposed to remove the following cost measure because the Emergency Medicine episode-based cost measure more closely aligns with the measures and activities included in this MVP:

- Medicare Spending Per Beneficiary (MSPB) Clinician

### TABLE B.7: Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP

Table B.7 serves to represent the measures and activities that are additions or modifications to the previously finalized measures and activities within the Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP.

**Symbol Key:**

Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures

Carat symbol (^): when applicable, new proposed MIPS quality measures, improvement activities, and cost measures

**Comment:** One commenter supported the addition of Q65: Appropriate Treatment for Upper Respiratory Infection (URI) and Q416: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 2-17 Years. A couple of commenters supported the inclusion of Q487: Screening for Social Drivers of Health. Another commenter supported the inclusion of IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways in this MVP. One commenter supported the addition of the Emergency Medicine cost measure.

**Response:** We thank the commenter for their support.

**Comment:** One commenter recommended the addition of Q498: Connection to Community Service Provider quality measure to each of the new and previously finalized MVPs. Another commenter recommended the addition of Q066: Appropriate Testing for Pharyngitis, Q187: Stroke and Stroke Rehabilitation: Thrombolytic Therapy, and Q332: Adult Sinusitis: Appropriate Choice of Antibiotic: Amoxicillin With or Without Clavulanate Prescribed for Patients with Acute Bacterial Sinusitis to this MVP. The commenter noted to incentivize movement towards MVPs, the scope of quality measures offered under this MVP must be broadened. The commenter noted providing emergency physicians with a more diverse set of CQMs will help ensure practices of all sizes and levels of resource can take advantage of this new, more streamlined reporting pathway.

**Response:** We may consider the inclusion of additional quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

**Comment:** One commenter didn't support the removal of ACEP21 from this MVP. They noted the historic escalation of the benchmark was primarily due to COVID-19 and as emergency departments have very little post-COVID experience, more information should be gathered before removal of the measure.

**Response:** We endeavor to include measures that allow for the achievement of maximum points and continue to drive quality improvement, establishing meaningful benchmarks. Additionally, this measure has included a denominator exception for COVID-19 since PY2022 and as such this patient population would be a null towards measure performance.

**Comment:** One commenter recommended the MSPB Clinician measure be maintained in this MVP alongside the Emergency Medicine episode-based cost measure until emergency physicians have experience with the new episode-based cost measure. The commenter also recommended that CMS only include the higher of the two measure scores in when calculating clinicians' cost performance category scores.

**Response:** We disagree with the commenter that the MSPB Clinician cost measure should be retained in this MVP. While the MSPB Clinician measure may capture Emergency Medicine clinicians, the measure intent is to assess care provided during inpatient hospitalizations. The Emergency Medicine episode-based cost measure more closely aligns with the intent of the Adopting Best Practices and Promoting Patient Safety within Emergency Medicine. For this reason, it is appropriate to only include the Emergency Medicine episode-based cost measure within this MVP. Additionally, the current MIPS scoring policy is to include all cost measures within an MVP in the cost performance category score calculation. As such, clinicians could be scored on the Emergency Medicine and MSPB Clinician cost measures if both measures were included within the MVP.

After consideration of public comments, we are finalizing the *Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP* as proposed in Table B.7 for the CY 2024 performance period/2026 MIPS payment year and future years.

## Improving Care for Lower Extremity Joint Repair MVP

In the CY 2024 PFS proposed rule (88 FR 53188 through 53189 ), we proposed and solicited comments on the previously finalized Improving Care for Lower Extremity Joint Repair MVP. Table B.8 represents the measures and activities that were finalized within the Improving Care for Lower Extremity Joint Repair MVP in (87 FR 70693 through 70695 ) with modifications proposed for the CY 2024 performance period/2026 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are embedded within Table B.8.

### Quality Measures

We proposed to modify the previously finalized Improving Care for Lower Extremity Joint Repair MVP to include one additional MIPS quality measure that is relevant to patients receiving care for lower extremity joint repair. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP maintenance period to determine which quality measures to include in this MVP.

For the reasons stated in the introduction of this appendix, we proposed to add a broadly applicable MIPS quality measure, Q487: Screening for Social Drivers of Health, which addresses health equity.

### Improvement Activities

For the reasons stated in the introduction of this appendix, we proposed to add IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways to this MVP.

**TABLE B.8: Improving Care for Lower Extremity Joint Repair MVP**

Table B.8 serves to represent the measures and activities that are additions or modifications to the previously finalized measures and activities within the Improving Care for Lower Extremity Joint Repair MVP.

#### **Symbol Key:**

Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures  
 Carat symbol (^): when applicable, new proposed MIPS quality measures, improvement activities, and cost measures

Single asterisk (\*): existing quality measures and improvement activities with proposed revisions

Double asterisk (\*\*): quality measures that are proposed for submission only when included in an MVP

Single exclamation point (!): quality measures that are considered high priority

Double exclamation point (!!): outcome measures

Tilde (~): improvement activities that include a health equity component

Percent (%): indication that attestation to IA\_PCMH: Electronic submission of Patient Centered Medical Home accreditation provides full credit for the improvement activity performance category

<p><b>Comment:</b> One commenter supported the inclusion of Q487: Screening for Social Drivers of Health in this MVP. Another commenter supported the inclusion of IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways.</p> <p><b>Response:</b> We thank the commenter for their support.</p> <p><b>Comment:</b> Commenters recommended additional quality measures be considered for this MVP. Recommendations included adding measures to address fracture-related care such as Q024: Communication with the Physician or Other Clinician Managing On-Going Care Post-Fracture for Men and Women Aged 50 Years and Older and Q418: Osteoporosis Management in Women Who Had a Fracture. One commenter recommended the addition of Q498: Connection to Community Service Provider quality measure while a couple commenters recommended the addition of IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols to this MVP.</p> <p><b>Response:</b> We may consider the inclusion of additional quality measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.</p> <p><b>Comment:</b> One commenter requested clarification regarding Q487: Screening for Social Drivers of Health in this MVP. The commenter questioned if this measure is considered specialty specific to orthopedics and therefore the QCDR will be required to support the measure. If</p>		

Q487 is considered specialty specific, the commenter requested the inclusion of Q487 as well as any future measures be delayed allowing time for the QCDR to update their data capture capacity and IT resources to capture quality data.

**Response:** This is an important process measure that supports the collection of DOH data, which is a foundational step towards defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. This measure purely focuses on the completion of screening for DOH patient information and is consistent with the priority to advance health equity. We note the information a clinician collects during a DOH screening may be clinically relevant and may not have otherwise been collected by the clinician absent the screening. As such, better scores on this measure are still indicators of the quality of care provided to patients. Because clinicians have the flexibility to choose measures to report, it would be at their discretion whether to report this measure as requirements only include reporting of 4 quality measures; allowing clinicians to delay implementation of measures until their systems and workflows allow for complete data capture. Furthermore, improving the clinician's understanding of the social obstacles their patients face beyond the clinical realm – but which may affect their clinical outcomes – can provide critical insights, catalyze prevention and/or early identification and prompt referral, and improve a patient's overall health and well-being.<sup>594, 595</sup>

**Comment:** One commenter stated this MVP is specific to just one portion of an orthopedic provider's scope. They noted it would be helpful if this MVP were broader and included all areas in an orthopedic provider's scope to reduce the administrative burden placed on the health system.

**Response:** We may consider the inclusion of other quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Improving Care for Lower Extremity Joint Repair MVP* as proposed in Table B.8 for the CY 2024 performance period/2026 MIPS payment year and future years.

---

## Patient Safety and Support of Positive Experiences with Anesthesia MVP

In the CY 2024 PFS proposed rule (88 FR 53190 through 53191), we proposed and solicited comments on the previously finalized Patient Safety and Support of Positive Experiences with Anesthesia MVP. Table B.9 represents the measures and activities that were finalized within the Patient Safety and Support of Positive Experiences with Anesthesia MVP in (87 FR 70695 through 70697 ) with modifications proposed for the CY 2024 performance period/2026 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are embedded within Table B.9.

### Quality Measures

We proposed to modify the previously finalized Patient Safety and Support of Positive Experiences with Anesthesia MVP to include one additional MIPS quality measure and two additional QCDR measures that are relevant to patients receiving anesthesia care. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP maintenance period to determine which quality measures to include in this MVP.

The following QCDR measures proposed within this MVP address appropriate utilization of general anesthesia and rates of intraoperative hypotension:

- ABG44: Low Flow Inhalational General Anesthesia: This QCDR measure identifies adult patients undergoing elective procedures, lasting at minimum 30 minutes, that require inhalational general anesthesia to assess for appropriate total fresh gas flow during the maintenance phase of the anesthetic.
- EPREOP31: Intraoperative Hypotension (IOH) among Non-Emergent Noncardiac Surgical Cases: This outcome QCDR measure identifies adult patients undergoing noncardiac, non-emergency surgery requiring general, neuraxial, or regional anesthesia care to evaluate if the patient had a mean arterial pressure (MAP) below 65 mmHg exceeding a cumulative length of 15 minutes.

For the reasons stated in the introduction of this appendix, we proposed to add a broadly applicable MIPS quality measure, Q487: Screening for Social Drivers of Health, which addresses health equity.

We also proposed to modify the previously finalized Patient Safety and Support of Positive Experiences with Anesthesia MVP to remove one QCDR measure as it is a process measure that should be a standard of care as demonstrated by the measure’s high performance in the PY2023 MIPS Historical Quality Benchmarks file.

- AQI69: Intraoperative Antibiotic Redosing

### Improvement Activities

For the reasons stated in the introduction of this appendix, we proposed to add IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways to this MVP.

## TABLE B.9: Patient Safety and Support of Positive Experiences with Anesthesia MVP

Table B.9 serves to represent the measures and activities that are additions or modifications to the previously finalized measures and activities within the Patient Safety and Support of Positive Experiences with Anesthesia MVP.

### **Symbol Key:**

Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures

	<p>Clinical Data Registry Reporting (Optional)</p> <p>Actions to Limit or Restrict Compatibility or Interoperability of CEHRT</p> <p>ONC Direct Review Attestation</p>
<p><b>Comment:</b> A few commenters supported the inclusion of ePreop31: Intraoperative Hypotension (IOH) Among Non-Emergent Noncardiac Surgical Cases in this MVP. One commenter also supported the inclusion of ABG44: Low Flow Inhalational General Anesthesia measure. Another commenter supported the inclusion of Q487: Screening for Social Drivers of Health in both new and previously finalized MVPs. And one commenter supported the inclusion of IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways.</p> <p><b>Response:</b> We thank the commenters for their support.</p> <p><b>Comment:</b> One commenter recommended the addition of Q498: Connection to Community Service Provider to this MVP.</p> <p><b>Response:</b> We may consider the inclusion of Q498: Connection to Community Service Provider measure through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.</p> <p><b>Comment:</b> One commenter noted that with the proposal to include Q487: Screening for Social Drivers of Health in the anesthesia MVP, it would be appropriate that CRNAs be recognized for providing this service in practice. Therefore the commenter is requesting that CRNAs be allowed to Use Stand Alone G Code for Preanesthesia Patient Assessment and Evaluation and as Part of Evaluation and Management for Pain Management Practices.</p> <p><b>Response:</b> We thank the commenter for supporting the addition of measure Q487 to this MVP and feedback regarding coding.</p> <p><b>Comment:</b> One commenter opposed the removal of AQI69: Intraoperative Antibiotic Redosing from this MVP as this measure has implications for preventing surgical site infections and other complications and can lead to wider quality improvement activities locally and across specialties.</p> <p><b>Response:</b> We endeavor to include measures that allow for the achievement of maximum points and continue to drive quality improvement, establishing meaningful benchmarks. Removal of this measure does not preclude clinicians from completing this quality action and clinicians should continue to maintain current standards for quality care.</p> <p><b>Comment:</b> One commenter recommended delaying implementation of Q487: Screening for Social Drivers of Health in this MVP until at least 2025. They are concerned the Q487 measure specifications do not reflect anesthesia workflows and do not include codes that the vast majority of anesthesiologists report.</p> <p><b>Response:</b> This is an important process measure that supports the collection of DOH data, which is a foundational step towards defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. This measure purely focuses on the completion of screening for DOH patient information and is consistent with the priority to advance health equity. We acknowledge that due to nuances in clinician specialization and subsequent scope of care, not all measures within an MVP will be applicable or appropriate to all clinicians who may choose to report. However, no quality measures within the MVP are required. We allow for clinician choice to account for these nuances, while ensuring clinicians are able to choose measures that are most meaningful to their scope of care and patient case-mix. The goal is to ensure we have a comprehensive set of measures to drive positive health outcomes as well as allow flexibility in clinician choice when determining the appropriateness of each measure. We note the information a clinician collects during a DOH screening may be clinically relevant and may not have otherwise been collected by the clinician absent the screening. As such, better scores on this measure are still indicators of the quality of care provided to patients. Furthermore, improving the clinician’s understanding of the social obstacles their patients face beyond the clinical realm – but which may affect their clinical outcomes – can provide critical insights, catalyze prevention and/or early identification and prompt referral, and improve a patient’s overall health and well-being. We will take this feedback into consideration during the annual update process for potential future revisions.</p> <p>After consideration of public comments, we are finalizing the <i>Patient Safety and Support of Positive Experiences with Anesthesia MVP</i> as proposed in Table B.9 for the CY 2024 performance period/2026 MIPS payment year and future years.</p>	

## Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP

In the CY 2024 PFS proposed rule (88 FR 53192 through 53193 ), we proposed and solicited comments on the previously finalized Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP. Table B.10 represents the measures and activities that were finalized within the Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP in (87 FR 70698 through 70700 ) with modifications proposed for the CY 2024 performance period/2026 MIPS payment year and future years. The summary of the public comments received and our responses for this MVP are embedded within Table B.10.

### Quality Measures

We proposed to modify the previously finalized Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP within the quality performance category of this MVP to include to include one additional MIPS quality measure that addresses health equity. We reviewed the MIPS quality measure inventory and considered feedback received during the 2024 MVP maintenance period to determine which quality measures to include in this MVP.

For the reasons stated in the introduction of this appendix, we proposed to add a broadly applicable MIPS quality measure, Q487: Screening for Social Drivers of Health, which addresses health equity.

### Improvement Activities

For the reasons stated in the introduction of this appendix, we proposed to add IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways to this MVP. In addition, we proposed to add three additional improvement activities that address maintenance requests from the public, and that address priority areas including food insecurity, incorporating patient voices into health care decision making, and behavioral and mental health:

- IA\_AHE\_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols
- IA\_BE\_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA\_BMH\_15: Behavioral/Mental Health and Substance Use Screening & Referral for Older Adults

## TABLE B.10: Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP

Table B.10 serves to represent the measures and activities that are additions or modifications to the previously finalized measures and activities within the Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP.

### Symbol Key:

**Comment:** One commenter supported the inclusion of Q487: Screening for Social Drivers of Health in this MVP. A couple of commenters supported the inclusion of IA\_AHE\_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols. Another commenter agreed with the addition of IA\_BE\_6: Regularly Assess Patient Experience of Care and Follow Up on Findings, and IA\_BMH\_15: Behavioral/Mental Health and Substance Use Screening & Referral for Older Adults in this MVP. A couple of commenters supported the inclusion of IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways.

**Response:** We thank the commenters for their support.

**Comment:** One commenter recommended the addition of Q498: Connection to Community Service Provider and a couple of commenters recommended Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood be added to this MVP.

**Response:** We may consider the inclusion of additional quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

**Comment:** One commenter opposed the inclusion of Q487: Screening for Social Drivers of Health in this MVP as the measure is a process measure without any follow-up or outcome. The commenter noted that in the past these types of measures for neurology-specific items have been declined. The commenter also noted the measure could be demotivational to the neurology community and is more appropriate for a patient's primary care provider or medical home team as they coordinate care. In addition, the commenter is concerned with the burden that this measure may place on institutional quality improvement efforts and on Qualified Clinical Data Registries (QCDRs).

**Response:** This is an important process measure that supports the collection of DOH data, which is a foundational step towards defining, addressing, and allocating supportive resources to patients in an impactful manner while supporting the performance of clinicians. This measure purely focuses on the completion of screening for DOH patient information and is consistent with the priority to advance health equity. We note the information a clinician collects during a DOH screening may be clinically relevant and may not have otherwise been collected by the clinician absent the screening. As such, better scores on this measure are still indicators of the quality of care provided to patients. Because clinicians have the flexibility to choose measures to report, it would be at their discretion whether to report this measure as requirements only include reporting of 4 quality measures. Furthermore, improving the clinician's understanding of the social obstacles their patients face beyond the clinical realm – but which may affect their clinical outcomes – can provide critical insights, catalyze prevention and/or early identification and prompt referral, and improve a patient's overall health and well-being.<sup>596, 597</sup>

After consideration of public comments, we are finalizing the *Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP* as proposed in Table B.10 for the CY 2024 performance period/2026 MIPS payment year and future years.

## Value in Primary Care MVP

In the CY 2024 PFS proposed rule (88 FR 53193 through 53197), we proposed and solicited comments on the previously finalized Promoting Wellness and Optimizing Chronic Disease Management MVPs into a single consolidated primary care MVP titled Value in Primary Care MVP. Table B.11 represents the measures and activities that were finalized within the Promoting Wellness MVP (87 FR 70673 through 70678) and the Optimizing Chronic Disease Management MVP (87 FR 70684 through 70686) with modifications proposed for the CY 2024 performance period/2026 MIPS payment year and future years. This MVP also aligns with the Adult Universal Core Set/Patient Care First CMMI Model primary care measures. The summary of the public comments received and our responses for this MVP are embedded within Table B.11.

### Quality Measures

We proposed to modify the previously finalized Promoting Wellness MVP to include six additional MIPS quality measures that are relevant to patients receiving primary or preventive care. The quality measures below address appropriate clinical care for patients receiving primary or preventive care including well visits or condition specific visits in the auspices of primary care:

- Q001: Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%): This inverse outcome MIPS quality measure assesses diabetic patients for poor control of their HbA1c.
- Q236: Controlling High Blood Pressure: This outcome MIPS quality measure assesses patient diagnosed with hypertension for adequately controlled blood pressure.
- Q305: Initiation and Engagement of Alcohol and Other Drug Dependence Treatment: This MIPS quality measure ensures patients 13 years of age and older with a new substance use disorder (SUD) episode have the initiation of intervention or medication within 14 days of the new SUD episode or engage in ongoing treatment, including two additional interventions or short-term medications, or one long-term medication within 34 days of the initiation.
- Q438: Statin Therapy for the Prevention and Treatment of Cardiovascular Disease: This MIPS quality measure identifies patients at high risk of cardiovascular events and ensures they are prescribed or currently on a statin therapy.
- Q497: Preventive Care and Wellness (composite): This composite MIPS quality measure combines 7 current preventive care measures with age and sex appropriate preventive screenings and wellness services, creating a robust, broadly encompassing preventive care assessment. The measure would set a more stringent performance standard by requiring a comprehensive set of preventive care standards be completed for each patient, working to drive quality care, and ensuring more all-inclusive preventive care.
- Q504: Initiation, Review, And/Or Update To Suicide Safety Plan For Individuals With Suicidal Thoughts, Behavior, Or Suicide Risk: This proposed MIPS quality measure ensures adult patients with suicidal ideation, behavior symptoms or increased suicide risk have a suicide safety plan initiated, reviewed, and/or updated in collaboration between the patient and their clinician.

We proposed to modify the previously finalized Promoting Wellness MVP to include two additional broadly applicable MIPS quality measures that are relevant to patients receiving primary or preventive care. The quality measures below address health equity, immunization status, and the patient's wishes:

- Q047: Advance Care Plan: This MIPS quality measure assesses for medical record documentation of an advance care plan or surrogate decisions maker for patients aged 65 years and older.
- Q487: Screening for Social Drivers of Health: This MIPS quality measure ensures adults are screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.

We also proposed to modify the previously finalized Promoting Wellness MVP to remove four MIPS quality measures that would be replaced by MIPS quality measure Q497: Preventive Care and Wellness (composite), which is a more robust measure supporting the comprehensive evaluation of compliance with recommended adult preventive care, improving quality care and preventing/controlling disease for the general patient population. The quality actions represented in the measures below would be captured in the composite measure:

- Q112: Breast Cancer Screening
- Q113: Colorectal Cancer Screening
- Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan
- Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention

Additionally, the following five measures are being proposed for removal to streamline the clinical concepts within the Value in Primary Care MVP to align with the clinical concepts of preventive care, quality chronic disease

management, and alignment with the Adult Universal Foundation measures.<sup>598</sup> The below MIPS quality measures represent important preventive screening and patient voice measures clinical concepts and as such, the measure or concept can be found in other MVPs:

- Q039: Screening for Osteoporosis for Women Aged 65-85 Years of Age
- Q309: Cervical Cancer Screening
- Q310: Chlamydia Screening in Women
- Q400: One-Time Screening for Hepatitis C Virus (HCV) for all Patients
- Q431: Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling

### **Improvement Activities**

For the reasons stated in the introduction of this appendix, we proposed to add IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways to this MVP. In addition, we proposed to add three additional improvement activities that address maintenance requests from the public, and that address priority areas including equity, food insecurity, and clinical decision support (CDS):

- IA\_AHE\_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols
- IA\_PM\_22: Improving Practice Capacity for Human Immunodeficiency Virus (HIV) Prevention Services
- IA\_PM\_23: Use of Computable Guidelines and Clinical Decision Support to Improve Adherence for Cervical Cancer Screening and Management Guidelines

We also proposed to remove the following two improvement activities in response to interested-party feedback:

- IA\_BMH\_9: Unhealthy Alcohol Use for Patients with Co-occurring Conditions of Mental Health and Substance Abuse and Ambulatory Care Patients
- IA\_PSPA\_19: Implementation of formal quality improvement methods, practice changes, or other practice improvement processes

### **Cost Measures**

We proposed to add four MIPS cost measures within the cost performance category of this MVP, which apply to the clinical topic of cardiac care. The additional cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in cardiac care and align with the other measures and activities included within this MVP:

- Asthma/COPD: This episode-based cost measure evaluates a clinician’s or clinician group’s risk-adjusted cost to Medicare for patients receiving medical care to manage and treat asthma or COPD.
- Diabetes: This episode-based cost measure evaluates a clinician’s or clinician group’s risk-adjusted cost to Medicare for patients receiving medical care to manage and treat diabetes.
- Depression: This episode-based cost measure evaluates a clinician’s risk-adjusted cost to Medicare for patients receiving medical care to manage and treat depression.
- Heart Failure: This episode-based cost measure evaluates a clinician’s or clinician group’s risk-adjusted cost to Medicare for patients receiving medical care to manage and treat heart failure. This is a new measure that will be used in MIPS beginning in CY 2024 performance period/ 2026 MIPS payment year, as finalized in section IV.A.4.f.(2) of this final rule.

**TABLE B.11: Value in Primary Care MVP**

Table B.11 serves to represent the measures and activities that are additions or modifications to the previously finalized measures and activities within the Value in Primary Care MVP.

#### **Symbol Key:**

- Plus sign (+): proposed additions of MIPS quality measures, improvement activities, or cost measures
- Carat symbol (^): when applicable, new MIPS quality measures, improvement activities, and cost measures
- Single asterisk (\*): existing quality measures and improvement activities with proposed revisions
- Single exclamation point (!): quality measures that are considered high priority
- Double exclamation point (!!): outcome measures
- Tilde (~): improvement activities that include a health equity component
- Percent (%): indication that attestation to IA\_PCMH: Electronic submission of Patient Centered Medical Home accreditation provides full credit for the improvement activity performance category

**Comment:** A few commenters expressed support for the following quality measures: Q001: Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%), Q236: Controlling High Blood Pressure, Q475: HIV Screening, Q487: Screening for Social Drivers of Health, Q483: Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM), and Q493: Adult Immunization Status. A few commenters also supported the addition of IA\_PM\_22: Improving Practice Capacity for Human Immunodeficiency Virus (HIV) Prevention Services improvement activity in this MVP. A couple commenters supported the inclusion of Q497: Preventive Care and Wellness (composite) measure. One commenter supported the inclusion of IA\_AHE\_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols while another supported the inclusion of IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways. A couple commenters supported inclusion of the following three cost measures: Asthma/COPD, Diabetes, and Heart Failure. Several commenters supported the consolidation of the previously finalized Optimizing Chronic Disease Management and Promoting Wellness MVPs into this primary care MVP.

**Response:** We thank the commenters for their support.

**Comment:** One commenter recommended the addition of Q498: Connection to Community Service Provider quality measure and a couple of commenters recommended Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood measure be added to this MVP. One commenter recommended the addition of several quality measures including Q238: Use of High-Risk Medications in Older Adults, Q472: Appropriate Use of DXA Scans in Women Under 65 Years Who Do Not Meet the Risk Factor Profile for Osteoporotic Fracture, Q065: Appropriate Treatment for Upper Respiratory Infection (URI), and Q130: Documentation of Current Medications in the Medical Record. Another commenter recommended the inclusion of Q488: Kidney Health Evaluation to this MVP. The commenter noted Q488 would encourage physicians to ensure that individuals with diabetes receive an annual kidney health evaluation. An additional commenter recommended adding measures to address fracture-related care such as Q024: Communication with the Physician or Other Clinician Managing On-Going Care Post-Fracture for Men and Women Aged 50 Years and Older and Q418: Osteoporosis Management in Women Who Had a Fracture.

**Response:** We may consider the inclusion of additional quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

**Comment:** Several commenters opposed the inclusion of Q497: Preventive Care and Wellness (composite) measure in this MVP. The commenters noted the measure is not included in the Universal Foundation. In addition, they noted the BMI screening component of the composite measure is outdated, no longer endorsed by a consensus-based entity, and may not be appropriate for elderly patients. The commenters believe there will be interoperability challenges that could prevent primary care physicians from reliably receiving data on patients' screening mammograms, which could negatively impact performance on the composite measure. Furthermore, the commenters shared that reporting the composite measure only counts as one quality measure when it represents the delivery of multiple high-value services. Therefore a physician who elects to report this measure would need to collect and report a total of 10 measures to satisfy the quality requirements for the MVP, which is higher than traditional MIPS and serves as a disincentive to select it. The commenters recommended maintaining the following quality measures in place of Q497: Preventive Care and Wellness (composite) measure; Q112: Breast Cancer Screening, Q113: Colorectal Cancer Screening, and Q226: Preventive Care and Screening: Tobacco Use Screening and Cessation Intervention. Other commenters that were not opposed to the inclusion of Q497: Preventive Care and Wellness (composite) measure recommended retaining the following quality measures because they provide additional collection types: Q112: Breast Cancer Screening, Q113: Colorectal Cancer Screening, Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan, Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention, and Q309: Cervical Cancer Screening.

**Response:** This measure combines seven current preventive care measures with age and sex appropriate preventive screenings and wellness services, to create a robust, broadly encompassing preventive care assessment. Many of the individual components within this composite are either included in the Universal Foundation or are considered core measure concepts that align with the Core Quality Measure Collaborative (CQMC) core measure set(s), thus have been determined to be an important part of patient health and support healthy outcomes. This includes documenting a patient's BMI and a follow-up plan when the BMI is outside of normal parameters as BMI correlates with health

outcomes and cause-specific mortality<sup>599</sup>, however we recognize that there are clinical limitations of BMI and as such it should not be used as a diagnostic tools, but as an initial screening.<sup>600</sup> As it relates to concerns with system interoperability, the composite measure allows clinicians to capture this information via patient reported outcomes for some components. For example, patient reported mammograms, when recorded in the medical record, are acceptable for meeting the numerator.

We recognize this measure sets a more stringent performance standard than the component measures by requiring a comprehensive set of preventive care standards be completed for each patient, working to drive quality care while ensuring more all-inclusive preventive care. By setting a more stringent performance standard through use of a single composite measure compared to the prior framework, under which each quality action was reported through a separate quality measure, we will gain a better picture of overall preventive care practices as each component is important to either prevention of or early detection of disease (<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4678940/>). This allows for early diagnosis of disease, thereby leading to earlier treatment, improved health outcomes, and a reduction in healthcare associated costs (<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4265933/>). Additionally, clinicians have the flexibility to choose measures to report within an MVP, performance isn't based solely on the reporting outcome of a single measure.

**Comment:** A couple commenters opposed the inclusion of Q493: Adult Immunization Status in this MVP. The commenters noted immunization registry challenges create significant administrative burden for primary care physicians reporting Q493, which can result in suboptimal performance on the measure at no fault to the physician. In addition the commenters stated that the use of immunization information systems (IIS), vaccination data from other settings is not consistently or reliably reported back to the primary care physician. The commenters urge CMS to partner with the Centers for Disease Control and Prevention, the Office of the National Coordinator for Health IT, and other federal partners to advance reliable, interoperable sharing of immunization data across the health care system.

**Response:** Because clinicians have the flexibility to choose measures to report within an MVP and this measure's performance is based on a weighted average of those measures, this measure provides a comprehensive adult immunization assessment. Each component measure allows patient reported vaccination to be documented in the medical record to meet performance. MIPS measures collect data on all payer sources and therefore captures a robust representation of performance. Data abstraction for calculation of this measure can be collected from multiple medical resources and isn't necessarily reliant on immunization registries. The measure contains denominator criteria that is specific to the targeted patient population for the vaccination represented in the component measures. Additionally, this composite measure contains denominator exceptions, applicable to all four submission criteria, that assist with identifying patients that may not be appropriate for vaccination.

**Comment:** A couple commenters opposed the inclusion of Q305: Initiation and Engagement of Alcohol and Other Drug Dependence Treatment and Q504: Initiation, Review, And/Or Update To Suicide Safety Plan For Individuals With Suicidal Thoughts, Behavior, Or Suicide Risk in this MVP. The commenters agreed these are important priorities and recognizes their clinical significance. However, the commenters noted the data needed to report on these measures is not discretely captured in EHR systems without a significant investment of time and money which results in administrative and financial burden if the measures are reported.

**Response:** While we understand there may be challenges when opting to report a certain measure, the expectation is your system is able to accurately and securely capture and store patient data. We note clinicians have the flexibility to choose which measures to report within an MVP. If implementation challenges result in the inability to report the measures in question, clinicians may select other measures within the MVP. Given the clinical importance of the quality actions being assessed, we want to allow those clinicians that are able to report these quality measures that opportunity as they are aligned with the MVP clinical topic.

**Comment:** A few commenters opposed the consolidation of the Promoting Wellness MVP and the Optimizing Chronic Disease Management MVP into a single Value in Primary Care MVP. One commenter believes the Optimizing Chronic Disease Management MVP can accommodate other clinician types besides primary care, and that participation in a chronic care management MVP should not be limited to only primary care physicians. The commenter recommends that the Optimizing Chronic Disease Management MVP be maintained to allow specialists who manage chronic conditions to report under this MVP. Another commenter believes there is a distinction between these two critical aspects of a primary care clinician's practice and consolidating the two existing MVPs is untenable.

**Response:** The modified Primary Value in Primary Care MVP isn't limited to a particular specialty and represents measures and activities that were finalized within the Promoting Wellness MVP and the Optimizing Chronic Disease Management MVP. An MVP may be reported by any clinician type if MVP submission requirements can be met. While we agree specialists who manage chronic conditions are distinct from primary care providers, we would encourage those clinicians to choose an MVP that is more aligned with their scope of care. However, as there aren't individual MVPs that represent each specialty, this consolidated MVP can be reported when appropriate and applicable to the clinician/group.

**Comment:** One commenter recommended broader HIV testing due to the growing number of older individuals with HIV/AIDS.

**Response:** We agree that HIV screening and treatment are important clinical topics, and we encourage the commenter to reach out to the measure steward for potential measure revisions for potential future implementation through rulemaking.

**Comment:** Several commenters supported the episode-based cost measures included in this MVP. However, the commenters didn't support the inclusion of the TPCC cost measure and stated it is not designed to capture the long-term cost savings that primary care is known to achieve. The commenters also noted there are numerous variables that can affect cost, many of which primary care physicians cannot control even when providing the best possible care. Additionally, the commenters expressed concerns with potential double counting of costs for participants in this MVP, which is currently proposed to include episode-based cost measures and the TPCC measure.

**Response:** We agree it is appropriate to include episode-based cost measures within this MVP. We maintain the TPCC measure is appropriate for use in this MVP, as we have outlined in the CY 2023 PFS final rule (87 FR 70673 through 70678), because it assesses the cost of care provided for a primary care. We refer readers to the CY 2023 PFS proposed rule (87 FR 46825 through 46828) and the CY 2023 PFS final rule (87 FR 70038) for more information about the use of TPCC in this MVP, which was previously titled Promoting Wellness. Additionally, we may consider the addition or removal of cost measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis through the MVP Maintenance

<sup>599</sup> Khanna D, Peltzer C, Kahar P, Parmar MS. Body Mass Index (BMI): A Screening Tool Analysis. *Cureus*. 2022 Feb 11;14(2):e22119. doi: 10.7759/cureus.22119. PMID: 35308730; PMCID: PMC8920809.

<sup>600</sup> <https://www.cdc.gov/healthyweight/assessing/bmi/index.html>.

Process. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Value in Primary Care MVP* as proposed in Table B.11 for the CY 2024 performance period/2026 MIPS payment year and future years.

[FR Doc. 2023-24184 Filed: 11/2/2023 4:15 pm; Publication Date: 11/16/2023]
