In section IV.A.4.e of this final rule, we are finalizing our proposal to add these measures as Medicare CQMs to the APP measure set for Shared Savings Program ACOs beginning with performance year 2024 and subsequent performance years.

#### d. Modifications to the Health Equity Adjustment Underserved Multiplier

##### (1) Background

Consistent with our goal of rewarding ACOs that include a higher proportion of underserved beneficiaries while delivering high quality care, we finalized in the CY 2023 PFS final rule (87 FR 69836 through 69857) the application of a health equity adjustment that adds up to 10 bonus points to an ACO's MIPS Quality performance category score based on certain criteria. The health equity adjustment is applied to an ACO's MIPS quality performance category score when the ACO reports the three all-payer eCQMs/MIPS CQMs in performance year 2023 and, as proposed in section III.G.2.b.(4) of this final rule, the three eCQMs/MIPS CQMs/Medicare CQMs starting in performance year 2024. To qualify for the health equity adjustment, the ACO must also meet the data completeness requirement at § 414.1340 and administer the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B)). The health equity adjustment is conditional on (1) high quality measure performance and (2) providing care for a proportion of underserved populations greater than or equal to a predetermined floor.

The goal of the health equity adjustment is to reward ACOs with high performance scores on quality measures and that serve a high proportion of underserved beneficiaries.

Correspondingly, the health equity adjustment bonus points are calculated by multiplying the ACO's performance scaler by the ACO's underserved multiplier. An ACO's performance scaler is designed to identify top performance among ACOs reporting all-payer eCQMs/MIPS CQMs

in performance year 2023 and, as proposed in section III.G.2.b.(4) of this final rule, eCQMs/MIPS CQMs/Medicare CQMs in performance year 2024. The performance scaler is an aggregated value across all eCQM/MIPS CQM measures and is determined based on if the ACO's measure performance was in the top, middle, or bottom third of ACO performance for that performance year. We refer readers to section III.G.4.b.(7).(c) of the CY 2023 PFS final rule (87 FR 69843 through 69845) for more details on the performance scaler calculation.

The underserved multiplier is designed to identify ACOs serving high proportions of underserved beneficiaries. As described in the CY 2023 PFS final rule (87 FR 69845 through 69849), the underserved multiplier is a proportion, ranging from zero to one, of the ACO's assigned beneficiary population for the performance year that is considered underserved based on the highest of: (1) the proportion of the ACO's assigned beneficiaries residing in a census block group with an Area Deprivation Index (ADI) national percentile rank of at least 85; or (2) the proportion of the ACO's assigned beneficiaries who are enrolled in Medicare Part D low-income subsidy (LIS) or are dually eligible for Medicare and Medicaid. The use of both the ADI and Medicare and Medicaid dual eligibility or LIS status to assess underserved populations in the health equity adjustment allows CMS to consider both broader neighborhood level characteristics and individual characteristics among CMS beneficiaries.

The CY 2023 PFS final rule did not state how CMS intended to compute the proportion of beneficiaries with an ADI national percentile rank of at least 85 with respect to beneficiaries for whom a numeric national percentile rank value is not available. We do not believe it is appropriate to assign a zero to the beneficiaries without an ADI national percentile rank in the calculation. Doing so would unfairly disadvantage ACOs with such beneficiaries vis-à-vis those ACOs with beneficiaries that all have an ADI national percentile rank by lowering their scores. The CY 2023 PFS final rule (87 FR 69846) stated that the proportion of the ACO's assigned beneficiaries residing in a census block group with an ADI national percentile rank of at least 85 is computed using the number of assigned beneficiaries. A footnote stated that in

computing the proportion of beneficiaries dually eligible for Medicare and Medicaid, we would use for each beneficiary the fraction of the year (referred to as person years) in which they were eligible for the aged/dual eligible enrollment type or for which they were eligible for the ESRD or disabled enrollment type and dually eligible for Medicare and Medicaid. In response to public comment, we finalized the proposal to include LIS as a modification to the calculation of the underserved multiplier (87 FR 69849). In calculating the LIS proportion, CMS uses the same methodology it adopted for calculating dually eligible beneficiaries: person years.

## (2) Revisions

In the CY 2024 PFS proposed rule (88 FR 52429 through 52430), we proposed to revise the underserved multiplier calculation to specify the calculations in more detail and bring greater consistency between the calculation of the proportion of ACOs' assigned beneficiaries residing in a census block group with an ADI national percentile rank of at least 85 and the proportion of ACOs' assigned beneficiaries who are enrolled in Medicare Part D LIS or are dually eligible for Medicare and Medicaid. Specifically, we proposed to remove beneficiaries who do not have a numeric national percentile rank available for ADI from the health equity adjustment calculation for performance year 2023 and subsequent performance years. Beneficiaries without a national percentile ADI rank would appear neither in the numerator nor in the denominator of the proportion.

While we established a policy for the treatment of aligned beneficiaries for whom an ADI national percentile rank could not reasonably be calculated for use in the AIPs risk factors-based score (87 FR 69796 through 69797), we neither proposed nor finalized a policy for such beneficiaries with respect to the calculation of the health equity adjustment underserved multiplier—nor do we believe the policy we finalized for AIP is appropriate for calculating the health equity adjustment. In the CY 2023 PFS final rule (87 FR 69800), we finalized the use of imputing a value of 50 for the ADI national percentile rank if there is insufficient data to match a beneficiary to an ADI national percentile rank for calculating AIP risk factors-based scores.

There are important differences in the implications of using an imputed value of 50 for calculating the AIP risk factors-based scores and for calculating the underserved multiplier. The imputed ADI ranking of 50 corresponds to the average national ADI ranking and would be the most neutral imputed value and would avoid biasing an ACO's payments in either direction for risk factor-based scores in the AIP calculation. The use of an ADI ranking of 50 in the underserved multiplier, however, would result in that beneficiary not counting in the numerator of the underserved multiplier proportion because only beneficiaries with an ADI of at least 85 are counted in the numerator. Therefore, we proposed to exclude beneficiaries without a national percentile ADI rank from the health equity adjustment underserved multiplier (88 FR 52429). This approach is more equitable because it will remove a beneficiary without an ADI rank from the denominator and the numerator of the calculation of an ACO's underserved multiplier instead of penalizing ACOs that have such beneficiaries.

It is in the public interest to apply this change starting with performance period 2023. Section 1871(e)(1)(A)(ii) of the Act authorizes the Secretary to retroactively apply a substantive change in Medicare regulations if the Secretary determines that failure to apply the change retroactively would be contrary to the public interest. Here, applying this change starting with performance period 2023 is in the public interest because, absent further specification of how to treat beneficiaries without a national percentile ADI rank current policy may unfairly penalize ACOs for reasons beyond their control. Current policy counts beneficiaries with missing ADI ranks in the underserved multiplier denominator and contributes zero to the numerator, thereby reducing the health equity adjustment for ACOs with such beneficiaries and harming their ability to meet the quality performance standard and receive shared savings.

Separately, in the CY 2024 PFS proposed rule (88 FR 52430), we proposed to modify the calculation of the proportion of assigned beneficiaries dually eligible for Medicare and Medicaid and the calculation of the proportion of assigned beneficiaries enrolled in LIS to use the number of beneficiaries rather than person years for calculating the proportion of the ACO's assigned

beneficiaries who are enrolled in LIS or who are dually eligible for Medicare and Medicaid starting in performance year 2024. For example, when calculating the underserved multiplier component of the health equity adjustment to an ACO's quality performance score for ACOs that report the three eCQMs/MIPS CQMs/Medicare CQMs, the proportion would be equal to the number of assigned beneficiaries with any months enrolled in LIS or dually eligible for Medicare and Medicaid divided by total number of assigned beneficiaries. We did not propose to alter the calculation of the proportion of beneficiaries residing in a census block group with an ADI national percentile rank of at least 85, which is already based on the number of assigned beneficiaries. Person years would continue to be used in financial calculations where beneficiary experience is stratified by Medicare enrollment type (ESRD, disabled, aged/dual eligible, and aged non/dual eligible) and where it is important to account for partial year enrollment to ensure accuracy. This policy change will bring greater consistency between the two proportions used in determining the underserved multiplier. It also acknowledges that beneficiaries with partial year as compared to full year LIS enrollment or dual eligibility are also socioeconomically vulnerable and strengthens incentives for ACOs to serve this population. Further, inclusion of beneficiaries with partial year LIS enrollment in the underserved multiplier provides increased incentive for ACOs to help facilitate LIS enrollment for beneficiaries who meet eligibility criteria.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Most commenters supported our proposed modifications to the health equity adjustment underserved multiplier. Several commenters expressed their appreciation for CMS's continued focus on health equity and providing access and accountable care to underserved patients. Other commenters stated that the health equity adjustment encourages providers to continue providing high quality care to underserved beneficiaries. One commenter stated that the modifications to the underserved multiplier would improve efficacy and consistency in identifying ACOs' underserved populations.

*Response:* We appreciate the comments in support of the proposed modifications to the health equity adjustment underserved multiplier. As we discussed in the proposed rule, the goal of the health equity adjustment is to reward ACOs with high performance scores on quality measures and that serve a high proportion of underserved beneficiaries. We agree with the commenters that these modifications will specify the calculations in more detail and bring greater consistency between the calculation of the proportion of ACOs' assigned beneficiaries residing in a census block group with an ADI national percentile rank of at least 85 and the proportion of ACOs' assigned beneficiaries who are enrolled in Medicare Part D LIS or are dually eligible for Medicare and Medicaid.

*Comment:* Several commenters expressed concern that the national ADI rank score is inadequate in identifying underserved beneficiaries living in high cost-of-living areas. Commenters' concerns with the national ADI rank score included that it overly relies on income and home values, can mask urban poverty, and may not be a good proxy for patient-level social risk factors. One commenter gave the example that all the District of Columbia has a National ADI less than the 85<sup>th</sup> percentile. Another commenter stated that an ACO in San Francisco or Seattle will be disadvantaged by any index that uses rent and mortgage expenses to calculate a score but does not account for the large population of unhoused individuals. Two commenters recommended to remove the ADI from the health equity adjustment underserved multiplier calculation because it is weighted toward income and home values. One commenter recommended exploring other data sources as they become available for revisions to the underserved multiplier. Other commenters recommended incorporating a regional approach to identifying underserve beneficiaries such as including or replacing the National ADI rank score with State ADI rank scores in the underserved multiplier calculation. Two commenters noted that CMS Innovation models, including the ACO Realizing Equity, Access, and Community Health (REACH) and the Making Care Primary models, have announced inclusion of the State ADI rank score in their health equity adjustments for upcoming performance years.

*Response:* We did not propose any changes to the previously finalized policy of using the national ADI rank score in the health equity adjustment underserved multiplier; rather, we proposed to exclude beneficiaries without a national percentile ADI rank from the health equity adjustment underserved multiplier. Therefore, these comments are considered to be out of scope. However, we are continuing to assess the impact of using the national ADI in the health equity adjustment in the Shared Savings Program and the use of state ADI in the health equity adjustments used in CMS innovation models. Additionally, we note that for the purposes of the underserved multiplier, we use the “greater of” the percentage of individuals who are dually eligible or receiving low-income subsidies, or live in an area with an ADI of 85 or above. This means that for areas with lower average ADIs, if the ACO still serves a low-income population with a higher percentage of individuals who are dually eligible or receiving low-income subsidies, the ACO could still qualify for an upwards adjustment. CMS will continue to examine the learnings from the CMS Innovation Models and external researchers to contemplate improvements to the measures of geographic deprivation over time. We may consider these and other suggestions in future rulemaking.

*Comment:* Several commenters requested CMS to consider allowing all ACOs to be eligible for the health equity adjustment regardless of quality measure collection type. Specifically, commenters requested that ACOs reporting via the CMS Web Interface be eligible for the health equity adjustment.

*Response:* We direct commenters to our response to similar comments regarding the eCQMs/MIPS CQMs reporting requirement for health equity adjustment eligibility in the CY 2023 PFS final rule (87 FR 69841 through 69842). Specifically, we explained that while we understand the concerns raised by commenters regarding the eCQMs/MIPS CQMs reporting criteria for being eligible to receive a health equity adjustment, the health equity adjustment is designed to upwardly adjust the ACO's quality performance score and will not financially penalize ACOs that are not eligible for the adjustment such as those that do not report using

eCQMs/MIPS CQMs. We further explained that as the transition to reporting all-payer eCQMs/MIPS CQMs continues, with this reporting mechanism becoming mandatory starting in PY 2025, the health equity adjustment would reinforce the timeline while supporting ACOs that may be experiencing challenges with the new quality reporting requirement and providing an incentive for ACOs not to seek to avoid underserved populations during the transition to reporting eCQMs/MIPS CQMs.

*Comment:* One commenter requested that CMS monitor the impact of the proposed change of dropping beneficiaries without a National ADI rank score to ensure it does not negatively affect rural ACOs already struggling to succeed in the Shared Savings Program.

*Response:* We acknowledge the commenter's concern. As we stated in the CY 2023 PFS final rule (87 FR 69841), the inclusion of National ADI, Medicare and Medicaid eligibility, and LIS status in the underserved multiplier calculation provides opportunity for identifying underserved populations for all providers, whether in rural or urban areas. Further, as we noted in the CY 2023 PFS final rule (87 FR 69796) in a preliminary review of Medicare beneficiary information, less than 2 percent of Medicare beneficiaries could not be matched to a census block group due to missing or insufficient mailing address data, and approximately 1 percent of Medicare beneficiaries had sufficient address data but were in a U.S. census block group without a national percentile rank due to data suppression criteria. Based on the statistical analysis provided, we do not anticipate a significant impact of the proposed change on ACOs in rural areas. We will assess the impacts of the policy in rural areas and may make refinements as needed in future rulemaking.

*Comment:* One commenter requested CMS clarify what is being identified as health equity in the context of performance, as well as what is being measured.

*Response:* We refer readers to CY 2022 PFS final rule (86 FR 65382 through 65384) for a detailed explanation of health care outcome inequities and health equity. In the CY 2022 PFS final rule, we used the definition of health equity established in Executive Order 13985, issued

on January 25, 2021, as “the consistent and systematic fair, just, and impartial treatment of all individuals, including individuals who belong to underserved communities who have been denied such treatment, such as Black, Latino, and Indigenous and Native American persons, Asian Americans and Pacific Islanders and other persons of color; members of religious minorities; lesbian, gay, bisexual, transgender, and queer (LGBTQ+) persons; persons with disabilities; persons who live in rural areas; and persons otherwise adversely affected by persistent poverty or inequality.” In response to the question of what is being measured, we direct readers to section III.G.4.b.(7)(d) of the CY 2023 PFS final rule (86 FR 69845 through 69849) where we finalized the inputs for the calculation of the underserved multiplier.

Specifically, we state that we use the higher value of either the proportion of an ACO’s assigned beneficiary population that is considered underserved based on beneficiaries who are from underserved neighborhoods, identified using ADI data, or the proportion of an ACO’s assigned beneficiary population that are dually eligible for Medicare and Medicaid or enrolled in Medicare Part D Low-Income Subsidy (LIS).

*Comment:* Some commenters requested CMS consider changes that were not related to the proposals included in this section of the proposed rule. The requests included: increase the health equity adjustment bonus points to have a greater and faster impact on the lives of the most at-risk beneficiaries; instead of using Medicare Part D LIS enrolled status in the underserved multiplier calculation, CMS should use Medicare Part D LIS eligible to account for those beneficiaries who have not enrolled, but whose income is lower than 150 percent of the federal poverty level; expand the number of diagnoses allowed on Medicare claims to accommodate the use of Z-codes or otherwise allow documentation of Z-codes in addition to the current limit of diagnosis codes on Medicare claims.

*Response:* We note that we did not propose any changes to these previously finalized policies in the proposed rule, and therefore, these comments are considered to be out of scope.

In conclusion, after review of the public comments received, we are finalizing at 42 CFR

425.512(b)(2)(iv)(A) our proposal to remove beneficiaries who do not have a numeric national percentile rank available for ADI from the health equity adjustment calculation for PY 2023 and subsequent performance years and to use the number of beneficiaries, rather than person years, for calculating the proportion of the ACO's assigned beneficiaries who are enrolled in LIS or who are dually eligible for Medicare and Medicaid, starting in PY 2024.

e. Use of Historical Data to Establish the 40th Percentile MIPS Quality Performance Category Score

(1) Background

In the CY 2023 PFS final rule (87 FR 69858), we finalized that beginning performance year 2024, one of the ways for an ACO to meet the Shared Savings Program quality performance standard and share in savings at the maximum rate under its track (or payment model within a track) is for the ACO to achieve a health equity adjusted quality performance score that is equivalent to or higher than the 40th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility based-scoring.

In the CY 2022 PFS proposed and final rules (86 FR 39274 and 86 FR 65271), we stated that, for a given performance year, the 30th or 40th percentile across all MIPS Quality performance category scores would be calculated after MIPS final scoring is complete based on the distribution across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring. Therefore, we are not able to provide performance rate information prior to or during the performance year. Nevertheless, we stated that we believe that publicly displaying prior year performance scores that equate to the 30th and 40th percentile across all MIPS Quality performance category scores for the applicable performance year would still provide helpful information for ACOs to determine what level of quality performance they would need to meet in order to satisfy the quality performance standard under the Shared Savings Program. We stated that we would release this historical information on the Shared Savings Program website when it becomes available.

In the CY 2022 PFS proposed rule (86 FR 39274), we also explained that interested parties have expressed concerns regarding the lack of information on the level of quality performance that would equate to the 30th or 40th percentile MIPS Quality performance category score and that would enable an ACO to be eligible to share in savings or to avoid maximum shared losses, if applicable. We noted that interested parties have expressed concern that these data are not publicly available prior to the start of a performance year and that they do not believe that ACOs have a way of determining what quality score they would need to achieve to meet the quality performance standard.

In the CY 2022 PFS proposed rule (86 FR 39274), we also solicited comments on whether publicly displaying prior year performance scores that equate to the 30th or 40th MIPS Quality performance category scores would help to address ACOs' concerns regarding the lack of advance information regarding the quality performance score they must meet in order to satisfy the quality performance standard under the Shared Savings Program. Several commenters supported publicly displaying prior year performance scores that equate to the 30th or 40th percentile across all MIPS Quality category performance scores, and one commenter expressed concern that publicly displaying prior year performance scores is not the optimal way to address concerns of interested parties and indicated that performance is volatile and the 30th (or 40th) percentile may change significantly from year to year depending upon changes in quality performance in MIPS (86 FR 65271).

We clarified in the CY 2023 PFS proposed rule (87 FR 46148) and final rule (87 FR 69867) that we use the submission-level MIPS Quality performance category scores (unweighted distribution of scores) to determine the 30th percentile and 40th percentile MIPS Quality performance category scores for purposes of establishing the applicable quality performance standard under the Shared Savings Program. In the CY 2024 PFS proposed rule (88 FR 52430 and 52431), we stated that in light of public comments and concerns about the predictability of the 40th percentile MIPS Quality performance category score due to changes in MIPS scoring

policies over time – including MIPS scoring changes impacting measures that lack a benchmark or case minimum as described at § 414.1380(b)(1)(i)(A), measure achievement points as described at paragraph (b)(1)(i), new measures (years 1 and 2 of a measure’s use) as described at paragraph (b)(1)(i)(C), new sub-group reporting option as described at § 414.1318(a), and MIPS High Priority and End to End Bonus Points as described at § 414.1380(b)(1)(v) – and as a result of the concerns expressed by ACOs and other interested parties and as we gain experience with aligning Shared Savings Program reporting and scoring policies with MIPS, we believe that a revised methodology is needed to calculate the 40th percentile MIPS Quality performance category score for the quality performance standard for performance year 2024 and subsequent performance years.

Additionally, we stated in the CY 2024 PFS proposed rule (88 FR 52431) that as MIPS scoring policies evolve over time, changes in MIPS scoring policy have the potential to adjust the year-to-year comparability of MIPS Quality performance category scores. Between performance years 2022 and 2023, there were MIPS policy changes to measures that lack a benchmark or case minimum as described at § 414.1380(b)(1)(i)(A), measure achievement points as described at paragraph (b)(1)(i), new measures (years 1 and 2 of a measure’s use) as described at paragraph (b)(1)(i)(C), and a new sub-group reporting option as described at § 414.1318(a). Additionally, MIPS High Priority and End to End Bonus Points were sunset in performance year 2022 as described at § 414.1380(b)(1)(v). The projected 40th percentile MIPS Quality performance category score for performance year 2023 does not reflect these proposed methodological changes. To minimize reliance on a single year of performance data, the use of multiple years of historical data could be used to “smooth” out the impact of MIPS scoring policy changes on the quality performance standard in any 1 year. At the same time, using too many years of data to average scores may include a greater number of years that do not reflect current policies.

(2) Revisions

In the CY 2024 PFS proposed rule (88 FR 52431), we proposed to use historical submission-level MIPS Quality performance category scores to calculate the 40th percentile MIPS Quality performance category score for performance year 2024 and subsequent performance years. Specifically, we proposed to use a rolling 3-performance year average with a lag of 1-performance year (for example, the 40th percentile MIPS Quality performance category score used for the quality performance standard for performance year 2024 would be based on averaging the 40th percentile MIPS Quality performance category scores from performance years 2020 through 2022). We believe that our proposal to use a 3-year historical average is consistent with the proposal under section IV.A.4.h.(2) of the CY 2024 proposed rule that would permit, for purposes of establishing a performance threshold as identified in § 414.1405(b), a time span of up to 3 consecutive performance periods for performance year 2024 and subsequent performance years.

We would provide ACOs with the performance score that equates to the 40th percentile MIPS Quality performance category score that would be used as the quality performance standard for a given performance year prior to the start of the performance year (for example, the 40th percentile MIPS Quality performance category score based on historical data and applicable for performance year 2024 would be released on the Shared Savings Program website in December 2023).

The use of 3 historical base years would mitigate issues that may arise from using a single year historical reference such as scoring, policy, and/or performance anomalies, such as a pandemic, specific to the historical base year. Additionally, the use of historical data would allow additional time for data availability and limit the potential impact of MIPS Targeted Review as described at § 414.1385 and other MIPS scoring corrections. This approach is also responsive to the concerns ACOs, and other interested parties have with the predictability of the current method of calculating the 40th percentile MIPS Quality performance category score. However, we acknowledged that by using historical benchmarks, the benchmark would not

reflect the most recent policies, measure specifications, and scores (88 FR 52431). For example, the historical base years are 2-4 years removed from the performance year and could reflect data that may have anomalies specific to the base year that would render those data inconsistent with the performance year's quality performance. Additionally, changes to measure specifications for measures included in the APP measure set may result in the historical base period including measures that are different than the corresponding measures that were applicable during the performance year. This could further reduce the comparability of historic base year data with the performance year's quality performance data.

Table 29 in the CY 2024 PFS proposed rule (88 FR 52432) shows the 40th percentile MIPS Quality performance category scores for performance years 2018 through 2021 based on the current methodology as published in the CY 2023 PFS final rule (87 FR 69868). The proposed methodology would be effective for performance year 2024 and subsequent performance years. We have added to Table 30 the projected 40th percentile MIPS Quality performance category scores for performance years 2022 and 2023 based on the proposed methodology for illustrative purposes. The projected 40th percentile MIPS Quality performance category score used for the quality performance standard for performance year 2022 is based on the average of the 40th percentile MIPS Quality performance category scores from performance years 2018 through 2020, and the projected 40th percentile MIPS Quality performance category score used for the quality performance standard for performance year 2023 is based on the average of the 40th percentile MIPS Quality performance category scores from performance years 2019 through 2021. The years are averaged at equal weights. For example, we would calculate the projected 40th percentile MIPS Quality performance category score used for the quality performance standard for performance year 2022 by first summing the 2018 (70.80), 2019 (70.82), and 2020 (75.59) 40th percentile Quality performance category score values to arrive at a value of 217.21 [ $70.80+70.82+75.59=217.21$ ]. We would then divide the value of 217.21 by three (the number of years included in the historical reference period) to arrive at a

projected 40th percentile MIPS Quality performance category score of 72.40 for 2022  $[217.21 \div 3=72.40]$ . Note that this example illustrates averaging the 2018, 2019, and 2020 40th percentile MIPS Quality performance category score values.

In the CY 2024 PFS proposed rule (88 FR 52432), we solicited comments on our proposal to use a 3-performance year rolling average with a lag of 1-performance year to calculate the 40th percentile MIPS Quality performance category score used for the quality performance standard for performance year 2024 and subsequent performance years. Using a 1-year lag would help ensure the availability of base period data by limiting the possibility that data availability is negatively impacted by scoring, policy, and/or performance anomalies from the prior performance year. In the development of our proposal to use a 3-performance year rolling average with a lag of 1-performance year to calculate the 40th percentile MIPS Quality performance category score used for the quality performance standard for performance year 2024 and subsequent performance years, we considered another alternative methodology, which was to establish a historical quality performance standard based on the year immediately prior to the performance year's quality performance score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring (88 FR 52432). We also solicited comments on other alternative methodologies we should consider to calculate the 40th percentile MIPS Quality performance category score for the quality performance standard.

The following is a summary of the comments we received on our proposal to use historical data to establish the 40th percentile MIPS Quality performance category score and our responses.

*Comment:* Several commenters supported our proposal to use historical submission-level MIPS Quality performance category scores to calculate the 40th percentile MIPS Quality performance category score for performance year 2024 and subsequent performance years and to provide ACOs with the 40th percentile MIPS Quality performance category score that would be used as the quality performance standard for a given performance year prior to the start of the

performance year. Several commenters noted that the proposal would provide ACOs with more certainty and predictability regarding what the quality targets are in advance of the performance period starting and mitigate the potential impact of annual program changes affecting the MIPS Quality performance category scores. A few commenters stated that basing the threshold on historical data will provide transparency around the threshold calculation. One commenter stated that the proposal would alleviate issues with scoring and performance anomalies as was seen during the COVID-19 pandemic and limit the impact of the MIPS Targeted Review and MIPS scoring corrections; however, the commenter noted using historical benchmarks will not reflect the most recent scores and measure specifications.

*Response:* We appreciate commenters' support and agree that providing ACOs with the 40th percentile MIPS Quality performance category score that would be used as the quality performance standard for a given performance year prior by the start of the performance year supports ACOs' ability to understand and meet quality goals, allocate resources effectively, and ultimately support patients and improve quality outcomes.

*Comment:* A few commenters that supported the proposal also expressed concerns that data from performance years 2020 to 2022 are not likely to yield a meaningful comparison given the impact of the COVID-19 pandemic and the extreme and uncontrollable circumstances policies applied in those years and suggested that CMS could consider a weighted average approach that gives more credit to the most recent year (that is, performance year 2022). Another commenter supportive of the proposal recommended that CMS assess whether a longer or potentially different lookback period would be more appropriate for performance year 2024, given that the lookback period for performance year 2024 will reflect years heavily impacted by the COVID-19 pandemic. Another commenter supportive of the proposal stated that implementation of the proposed methodology should be delayed until after the CMS Web Interface sunsets and transition to eCQMs/MIPS CQMs/Medicare CQMs reporting occurs. The commenter further stated that the rolling 3-year performance average with a lag of 1-

performance year will eventually help solve for changes in scoring policies; however, in the first year that scores are based on eCQMs/MIPS CQMs/Medicare CQMs, the historical submission-level MIPS Quality performance category score will be predominantly based on CMS Web Interface measures. Should CMS finalize the proposal, the commenter recommended CMS set guardrails during the transition period to ensure that ACOs transitioning to the eCQMs/MIPS CQMs/Medicare CQMs are not unfairly penalized against historical MIPS Quality performance standards that do not adequately consider historical eCQM/MIPS CQM/Medicare CQM submission data.

*Response:* The methodology we are finalizing provides a guardrail by minimizing the reliance on a single year of performance data that may have anomalies specific to the performance year, such as a pandemic, and by using multiple years of historical data to prevent a cliff and “smooth” out the impact of MIPS scoring policy changes on the quality performance standard in any one year. As explained in the CY 2024 PFS proposed rule, as MIPS scoring policies evolve over time, changes in MIPS scoring policy have the potential to adjust the year-to-year comparability of MIPS Quality performance category scores (88 FR 52431).

*Comment:* One commenter opposed the proposal stating that it creates the potential for an unlevel playing field because the benchmark would not reflect the most recent policies, measure specifications, and scores as the base years used would be 2-4 years prior, and there may be significant anomalies making it more difficult to achieve that score years later. The commenter noted that in performance year 2025, when all organizations will be reporting using eCQMs, the historic percentiles, based largely on CMS Web Interface measures reported in performance years 2021 to 2023, would be more difficult to achieve with eCQM reporting. Additionally, the commenter stated that the playing field would not completely level out until performance year 2029 when all historic years used in the calculation require reporting via eCQMs, and only if there were no other significant changes to the measures and reporting requirements.

*Response:* In the CY 2021 PFS final rule (85 FR 84720 through 84722), we aligned the Shared Savings Program quality reporting requirements with the APP and have worked over time to align with MIPS scoring policies (see 86 FR 65253 and 65254; 87 FR 69779 and 69780 for a summary of certain finalized policies); however, we acknowledged that MIPS scoring changes could occur that may impact the predictability of the 40th percentile MIPS Quality performance category score. We acknowledged in the CY 2024 PFS proposed rule (88 FR 52431) that by using historical benchmarks, the benchmark would not reflect the most recent policies, measure specifications, and scores.

As we stated in the CY 2024 PFS proposed rule (88 FR 52431), and some commenters agreed, the use of 3 historical base years would mitigate issues that may arise from using a single year historical reference such as scoring, policy, and/or performance anomalies, such as a pandemic, that are specific to the historical base year. Additionally, the use of historical data would allow additional time for data availability. While we understand concerns about the transition from the CMS Web Interface in performance year 2024 and the historical data changing over time with more ACOs increasingly submitting eQMs/MIPS CQMs/Medicare CQMs data, delaying the proposal to use a rolling 3-performance year average with a lag of 1-performance year to calculate the 40th percentile MIPS Quality performance category score would result in a delay to mitigate potential MIPS scoring policy changes and a delay in providing ACOs with their benchmark target prior to the start of the performance year. For these reasons, the implementation of the proposed methodology should not be delayed until after the CMS Web Interface sunsets.

Additionally, the 40th percentile MIPS Quality performance category score is not based solely on Shared Savings Program ACOs. Out of the 30,000-40,000 MIPS eligible clinicians and APM entities in the MIPS Quality performance category score unweighted distribution, less than 500 are ACOs. As stated in the CY 2023 PFS final rule (87 FR 69867), the unweighted distribution of Quality performance category scores is based on the Quality performance

category scores of the submitting MIPS eligible clinicians and APM entities (for example, ACOs, other APM entities, group practices, and individual clinicians). For illustrative purposes, we are providing an example using the average (instead of the 30th or 40th percentile) for the quality performance standard. In this example, there are three submitting entities: an ACO, a MIPS eligible clinician that is a group practice, and an individual MIPS eligible clinician. The MIPS Quality performance category scores for these submitting entities are 90 for the ACO, 70 for the group practice, and 50 for the individual clinician. The average of the unweighted distribution of scores is  $(90 + 70 + 50)/3 = 70$  where each submitting entity contributes one score. The weighted distribution of scores takes into account the number of individual providers from each submitting entity. The ACO has 10 providers, the MIPS Group has four providers, and the individual MIPS provider has one provider. The average of the weighted distribution is  $((90 \times 10) + (70 \times 4) + (50 \times 1))/15 = 82$ . Thus, by using a weighted distribution of scores when calculating the 40th percentile MIPS Quality performance category score for the quality performance standard, each of the ACO's individual providers would be contributing to the calculation rather than the ACO itself, and the ACO's score would be counted once. As noted in the CY 2023 PFS final rule (87 FR 69867 and 69868), we use the submission-level MIPS Quality performance category scores (unweighted distribution of scores) to determine the 30th percentile and 40th percentile MIPS Quality performance category scores for purposes of establishing the applicable quality performance standard. The use of the unweighted distribution of scores aligns with the MIPS and Shared Savings Program benchmarking policies.

Furthermore, not all MIPS eligible clinicians and APM entities report the CMS Web Interface measures, and for performance years 2023 and 2024, the CMS Web Interface collection type is only available for APM Entities reporting the APM Performance Pathway, such as Shared Savings Program ACOs. Historical benchmark years are thus likely to reflect eCQM and MIPS CQM reporting more quickly than if they were based on Shared Savings Program ACOs alone, even as the CAHPS for MIPS Survey measure and the two administrative claims measures also

contribute to an ACO's MIPS Quality performance category score.

*Comment:* One commenter noted that they supported an alternative methodology we considered during the development of our proposal, which was to establish a historical quality performance standard based on the year immediately prior to the performance year's quality performance score across all MIPS Quality performance category scores. They noted that the playing field would then be leveled in performance year 2026 under this methodology.

*Response:* We appreciate the commenter's response to our request for comment on alternative methodologies for consideration in calculating the historical submission-level MIPS Quality performance category score. Prior to the publication of the CY 2024 PFS proposed rule, in addition to our proposed methodology, we evaluated two alternative methodologies for calculating a historical MIPS Quality performance category score: establishing the historical quality performance standard based on the year immediately prior to the performance year; and also based on a 2-performance year rolling average with a lag of 1-performance year. Of the methodologies we considered, the 3-year historical benchmark with a 1-year lag best accounts for the anticipated learning curve that ACOs may encounter as they transition to eCQM/MIPS CQM/Medicare CQM reporting. This methodology allows ACOs to know in advance what MIPS 40th percentile Quality performance category score they will need to achieve in order to meet the quality performance standard for performance year 2024 and subsequent performance years. With this predictability, ACOs can work to meet this target as they evaluate and develop strategies to continue to improve their quality performance for performance year 2024 and subsequent performance years.

*Comment:* One commenter requested that CMS provide better scoring toolkits, methodologies, and sample scoring calculations to ACOs and QCDRs, similar to the MIPS scoring toolkits released annually, in advance of and during the performance period so that clear scoring predictions and calculations can support ACOs in improving their quality of care. A few commenters suggested that CMS provide prospective information on both the quality score that

would qualify an ACO for savings and the methodology used to calculate the benchmarks.

*Response:* We thank the commenters for their feedback. We plan to provide updates to the APP Toolkit available at <https://qpp.cms.gov/resource-library> and other educational documents for ACOs to include Medicare CQM guidance and specifications and associated policies as close to the start of the performance as possible.

For information on how shared savings and shared losses are calculated, please refer to the Medicare Shared Savings Program Shared Savings and Losses and Assignment Methodology and Quality Performance Standard Specifications, available on the Shared Savings Program website under Program Guidance & Specifications (for example, in Version 11 (PDF, 1.9MB), refer to Section 4.3 Performance Year Financial Reconciliation Calculations). Version 11 is available at <https://www.cms.gov/files/document/medicare-shared-savings-program-shared-savings-and-losses-and-assignment-methodology-specifications.pdf-2>.

*Comment:* Several commenters requested that CMS publish MIPS Quality performance category scores in the Public Use Files (PUF) to bring greater transparency to the calculation of the 40th percentile MIPS Quality performance category score calculation.

*Response:* We appreciate the commenters' feedback. In the Medicare Shared Savings Program Performance Year Financial and Quality Results PUF, we provided several ACO-specific variables related to quality performance results including the ACO's quality score, an indicator whether the ACO met the quality performance standard, indicators for each of the three measure reporting options (that is, Web Interface, eCQM, MIPS CQM), and an indicator whether the ACO did not completely report quality for any of the reporting options. We may consider adding additional ACO-specific variables in future years. ACOs can review their measure-specific performance used to calculate their MIPS Quality performance category score along with their final MIPS Quality performance category score in their MIPS performance feedback report. ACOs are also required to publicly report their quality measure scores on their websites per § 425.308(b)(5). We also provide quality measure benchmarks for the current performance

year on the Shared Savings Program website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/program-guidance-and-specifications>.

*Comment:* One commenter requested that CMS publish the percentile performance thresholds for the individual quality measures prior to the performance year.

*Response:* For measures that have historical benchmarks, we generally publish them around the start of each performance year at <https://www.cms.gov/medicare/payment/fee-for-service-providers/shared-savings-program-ssp-acos/guidance-regulations>. Measures with performance period benchmarks – which include the administrative claims measures: Measure# 479 Hospital-Wide, 30-Day, All-Cause Unplanned Readmission (HWR) Rate for MIPS Groups and Measure# 484 Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions – are published after the submission period for the applicable performance year. Benchmark resources are published in the Quality Payment Program resource library and are updated for each performance year at <https://qpp.cms.gov/resources/resource-library>.

*Comment:* One commenter stated that if Medicare CQMs are established as proposed, there will not be any historical data for these measures. Therefore, the commenter requested that CMS clarify how the proposal to use a rolling 3-performance year average with a lag of 1 performance year will incorporate Medicare CQMs to calculate the 40th percentile MIPS Quality performance category score.

*Response:* We acknowledge that Medicare CQM data will not be part of the performance year 2024 and 2025 historic reference periods, but the 2026 historic reference period will be inclusive of MIPS Quality performance category scores that are based on Medicare CQMs reported in performance year 2024. As finalized in section III.G.2.b of this final rule, performance year 2024 will be the first year that Medicare CQMs will be available for Shared Savings Program ACOs under the APP. As a result, historical Medicare CQM data will not be available at the time the 40th percentile MIPS Quality performance category score is calculated

for performance years 2024 and 2025; however, the historical data will be available at the time the 40th percentile MIPS Quality performance category score is calculated for performance year 2026 (based on the average of the 40th percentile MIPS Quality performance category score from performance years 2022 through 2024). With the sunset of the CMS Web Interface at the end of performance year 2024 and as more ACOs transition to reporting eCQMs/MIPS CQMs/Medicare CQMs, the historic 3-year performance average of the MIPS Quality Performance Category Score will gradually incorporate additional Medicare CQM data in each subsequent performance year.

After consideration of the public comments, we are finalizing our proposal to use historical submission-level MIPS Quality performance category scores to calculate the 40th percentile MIPS Quality performance category score for performance year 2024 and subsequent performance years. Specifically, we will use a rolling 3-performance year average with a lag of 1-performance year (for example, the 40th percentile MIPS Quality performance category score used for the quality performance standard for performance year 2024 will be based on averaging the 40th percentile MIPS Quality performance category scores from performance years 2020 through 2022). We will provide ACOs with the performance score that equates to the 40th percentile MIPS Quality performance category score that would be used as the quality performance standard for a given performance year prior to the start of the performance year (for example, the 40th percentile MIPS Quality performance category score based on historical data and applicable for performance year 2024 would be released on the Shared Savings Program website in December 2023).

Table 30 shows the 40th percentile MIPS Quality performance category scores for performance years 2018 through 2021 based on the current methodology as published in the CY 2023 PFS final rule (87 FR 69868). The methodology we are finalizing in this final rule will be effective for performance year 2024 and subsequent performance years. We added the projected 40th percentile MIPS Quality performance category scores for performance year 2022 based on

the methodology we are finalizing for illustrative purposes to Table 30. We note that Table 30 is same as Table 29 that was included in the CY 2024 PFS proposed rule (88 FR 52432). Based on the actual 40th percentile MIPS Quality performance category score values in Table 30, we can provide, for illustrative purposes, the 40th percentile MIPS Quality performance category score value for the quality performance standard for performance year 2024. We calculate the projected 40th percentile MIPS Quality performance category score used for the quality performance standard for performance year 2024 by first summing the 2020 (75.59), 2021 (77.83), and 2022 (77.73) 40th percentile Quality performance category score values to arrive at a value of 231.15 [75.59+77.83+77.73=231.15]. Note that performance year 2023 is skipped for the one-year lag. We then divide the value of 231.15 by three (the number of years included in the historical reference period) to arrive at a 40th percentile MIPS Quality performance category score value of 77.05 for performance year 2024 [231.15 ÷ 3=77.05].

**TABLE 30: 40th Percentile MIPS Quality Performance Category Scores Using Current and Finalized Methodology**

Performance Year	Actual 40 <sup>th</sup> percentile MIPS Quality performance category score*	40th percentile MIPS Quality performance category score using historical methodology
2018	70.80*	--
2019	70.82*	--
2020	75.59*	--
2021	77.83*	--
2022	77.73 <sup>^</sup>	72.40 (estimated for illustrative purposes) **

\* As published in Table 64 of the CY 2023 PFS final rule (87 FR 69868). The 40th percentile MIPS Quality performance category score was calculated by taking the 40th percentile of all submission-level MIPS Quality performance category scores (the unweighted distribution of scores), excluding entities/providers eligible for facility-based scoring.

<sup>^</sup> As published in the Medicare Shared Savings Program: Performance Scores that Equate to the 30th and 40th Percentile MIPS Quality Performance Category Scores for Performance Years 2018 to 2022 document found at <https://www.cms.gov/files/document/medicare-shared-savings-program-performance-scores-equate-30th-and-40th-percentile-mips-quality.pdf>.

\*\* As estimated for illustrative purposes based on the finalized methodology (as discussed in III.G.2.e. of this final rule). The performance year 2022 projected 40th percentile MIPS Quality performance category score for the quality performance standard is based on the average of the 2018, 2019, and 2020 40th percentile MIPS Quality performance category scores.

f. Apply a Shared Savings Program Scoring Policy for Excluded APP Measures and APP Measures that Lack a Benchmark

## (1) Background

In the CY 2021 PFS final rule (85 FR 84720 through 84734), we finalized an approach that aligns the Shared Savings Program quality performance scoring methodology with the MIPS scoring methodology. We also stated that for each quality measure that an ACO submits that has significant changes, the total available measure achievement points are reduced by 10 points under the APP under current MIPS scoring policy (§ 414.1380(b)(1)(vii)(A)) (85 FR 84725)). In the CY 2021 PFS final rule (85 FR 84901), we finalized policies at § 414.1380(b)(1)(vii)(A) to provide that for each measure under MIPS that is submitted, if applicable, and impacted by significant changes, performance is based on data for 9 consecutive months of the applicable CY performance period. If such data are not available or may result in patient harm or misleading results, the measure is excluded from a MIPS eligible clinician's total measure achievement points and total available measure achievement points. We stated that “significant changes” means changes to a measure that are outside the control of the clinician and its agents and may result in patient harm or misleading results. Significant changes include, but are not limited to, changes to codes (such as ICD-10, CPT, or HCPCS codes), clinical guidelines, or measure specifications. As described at § 414.1380(b)(1)(vii)(A), measures that are excluded due to significant changes are excluded from a MIPS eligible clinician’s total measure achievement points and total available measure achievement points.

In performance year 2022, two of the eQMs/MIPS CQMs that are part of the APP measure set were excluded from MIPS measure achievement points and total available measure achievement points for the MIPS Quality performance category under § 414.1380(b)(1)(vii)(A). Specifically, the eQCM version of the Preventive Care and Screening: Screening for Depression and Follow-up Plan measure (Quality ID #134) and the Controlling High Blood Pressure measure (Quality ID #236) were excluded. Thus, under MIPS scoring policies, ACOs reporting one or both of these measures had their total measure achievement points and total available measure achievement points reduced by 10 (for reporting one measure) or 20 (for reporting both

measures) points, respectively. Under the APP, these ACOs were still required to report all 6 measures; however, their performance year 2022 MIPS Quality performance category score was based on the 4 or 5 non-excluded measures (depending on whether the ACO reported one or both excluded measures) in the APP measure set. Consequently, the resulting MIPS Quality performance category score for an ACO that would have performed well on the excluded quality measures would be lower than it otherwise would have been if those measures were not excluded. Alternatively, if an ACO would have performed poorly on the excluded quality measures, then the resulting MIPS Quality performance category score would be higher than it otherwise would have been if those measures were not excluded. In either scenario, an ACO is required to report quality performance for all measures under the APP and has no control over whether and which measures are excluded.

## (2) Revisions

Given that the Shared Savings Program does not determine which quality measures are excluded and that ACOs do not have a choice of measures they can report under the APP, we do not want to adversely impact shared savings determinations for events outside the ACOs' control, such as in the event a measure is excluded. Therefore, in the CY 2024 PFS proposed rule (88 FR 52432 and 52433), we proposed that, for performance year 2024 and subsequent performance years, if (1) an ACO reports all required measures under the APP and meets the data completeness requirement at § 414.1340 for all required measures and receives a MIPS Quality performance category score under § 414.1380(b)(1), and (2) the ACO's total available measure achievement points used to calculate the ACO's MIPS Quality performance category score for the performance year is reduced due to measure exclusion under § 414.1380(b)(1)(vii)(A), then we would use the higher of the ACO's health equity adjusted quality performance score or the equivalent of the 40th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, to determine whether the ACO meets the quality performance standard

required to share in savings at the maximum rate under its track (or payment model within a track), for the relevant performance year. This policy aims to alleviate the potential adverse impacts to shared savings determinations that may arise in the event that one or more of the quality measures required under the APP is excluded. We also proposed to make conforming changes to the regulation text § 425.512 by revising paragraph (a)(5)(i) and adding paragraph (a)(7).

We finalized in the CY 2023 PFS final rule (87 FR 69845) that unscored measures are removed from the calculation of an ACO's health equity adjustment, effectively receiving a performance scaler of 0 for those measures. However, we inadvertently did not codify this policy in the Code of Federal Regulations. Therefore, in the CY 2024 PFS proposed rule (88 FR 52433), we proposed to codify this policy by revising § 425.512(b)(3)(ii)(B) to state that CMS assigns a value of 0 for each measure that CMS does not evaluate because the measure is unscored. We proposed that the regulation text changes would be effective for performance year 2023 and subsequent performance years as the policy was finalized in the CY 2023 PFS final rule to calculate the health equity adjustment for performance year 2023 and subsequent performance years.

We also proposed that quality measures impacted by the MIPS policy at § 414.1380(b)(1)(vii)(A) are unscored measures for the purposes of calculating the health equity adjustment; therefore, excluded measures would not render an ACO ineligible for the health equity adjustment as long as the ACO reports all required measures under the APP and meets the data completeness requirement at § 414.1340 for all required measures and receives a MIPS Quality performance category score under § 414.1380(b)(1).

We proposed a change to the MIPS policy to remove the 10 percent threshold for changes to codes, clinical guidelines, or measure specifications for all measure types and are finalizing this policy as proposed (88 FR 52592 and 52593). We believe that our proposal to apply a floor to an ACO's Quality performance category score in determining the ACO's quality performance

standard in the event that the ACO's total available measure achievement points used to calculate the ACO's MIPS Quality performance category score for the performance year is reduced under § 414.1380(b)(1)(vii)(A) functions in concert with our proposal being finalized in section IV.A.1.b.(2)(d) of this final rule. We refer readers to section IV.A.1.b.(2)(d) of this final rule for further discussion of the finalized changes to the MIPS scoring policy.

The following is a summary of the comments we received on the proposal to establish a Shared Savings Program scoring policy for excluded APP measures and our response.

*Comment:* All comments we received were in support of the proposal to apply a Shared Savings Program scoring policy for excluded APP measures. Several commenters stated that these changes will ensure that ACOs are not negatively impacted by measure changes or benchmark issues that occur mid-year and are outside the ACO's control.

*Response:* Although several commenters stated that the proposed changes will ensure that ACOs are not negatively impacted by benchmark issues, we did not consider applying the proposed scoring policy to measures with benchmark issues as we were developing the proposals for the CY 2024 PFS proposed rule.

Under § 414.1380(b)(1)(i)(A), beginning with the CY 2023 performance period/2025 MIPS payment year, for eQMs and MIPS CQMs, that meet the MIPS data completeness requirement but do not have a benchmark (for example, a historical or performance period benchmark) will receive zero achievement points (or 3 points for small practices). The scoring policies applicable to eQMs and MIPS CQMs would also be applicable to Medicare CQMs beginning in performance year 2024. Given that the Shared Savings Program does not determine which quality measures do not have a benchmark and that ACOs do not have a choice of measures they can report under the APP, we do not want to adversely impact shared savings determinations for events outside the ACOs' control, such as in the event a measure does not have a benchmark. Therefore, we are finalizing at § 425.512(a)(7) the proposed policy with modification to include eQMs, MIPS CQMs, and Medicare CQMs within the APP measure set

that do not have a benchmark as described at § 414.1380(b)(1)(i)(A). We are also clarifying that this policy will not apply if an ACO's MIPS Quality performance category score is not impacted by measure exclusion or the lack of a benchmark.

We also sought public comment on our proposal to revise § 425.512(b)(3)(ii)(B) to state that, for the purposes of calculating the health equity adjustment to an ACO's quality score, CMS assigns a value of 0 for each measure that CMS does not evaluate because the measure is unscored. We proposed that the regulation text changes would be effective for performance year 2023 and subsequent performance years as the policy to calculate the health equity adjustment for performance year 2023 and subsequent performance years was finalized in the CY 2023 PFS final rule. Additionally, we proposed that quality measures impacted by the MIPS policy at § 414.1380(b)(1)(vii)(A) are unscored measures for the purposes of calculating the health equity adjustment; therefore, excluded measures would not render an ACO ineligible for the health equity adjustment as long as the ACO reports all required measures under the APP and meets the data completeness requirement at § 414.1340 for all required measures and receives a MIPS Quality performance category score under § 414.1380(b)(1). We note that our summary of comment and response for this proposal is not sequential to the policy's placement in our proposed rule. The placement here is not consequential to the finalization of the policy.

We did not receive public comments on these proposals; and therefore, we are finalizing these policies as proposed.

After consideration of the public comments, to determine whether the ACO meets the quality performance standard required to share in savings at the maximum rate under its track (or payment model within a track), we are finalizing at § 425.512(a)(7) that for performance year 2024 and subsequent performance years, if an ACO reports all of the required measures, meeting the data completeness requirement at § 414.1340 of this subchapter for each measure in the APP measure set and receiving a MIPS Quality performance category score as described at § 414.1380(b)(1) of this subchapter, CMS will use the higher of the ACO's health equity adjusted

quality performance score or the equivalent of the 40th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year when the ACO meets either of the following:

(i) The ACO's total available measure achievement points used to calculate the ACO's MIPS Quality performance category score is reduced under § 414.1380(b)(1)(vii)(A) of this subchapter.

(ii) At least one of the eCQMs/MIPS CQMs/Medicare CQMs does not have a benchmark as described at § 414.1380(b)(1)(i)(A) of this subchapter.

We are also finalizing conforming changes to § 425.512 by revising paragraph (a)(5)(i) and adding paragraph (a)(7).

In proposing to bifurcate our scoring policies for the performance year 2024 and subsequent performance years we inadvertently failed to update § 425.512(b)(3)(i) to properly refer to the new § 425.512(a)(7). Among other things, § 425.512(b)(3)(i) applies the health equity adjustment calculated pursuant to § 425.512(b) to performance year 2024 and subsequent performance years.<sup>210</sup> We are finalizing a modification to add the determination of quality performance score for an ACO affected by this Shared Savings Program Scoring Policy to the list of uses of the ACO's health equity adjusted quality performance score. Specifically, we are revising redesignated paragraph (b)(4)(i) to read as follows: In determining whether the ACO meets the quality performance standard as specified under paragraphs (a)(4)(i)(A), (a)(5)(i)(A)(1), (a)(5)(i)(B), and (a)(7) of this section.

g. Require Spanish Language Administration of the CAHPS for MIPS Survey

(1) Background

We have created official translations of the CAHPS for MIPS survey in seven languages, including Spanish, Cantonese, Korean, Mandarin, Portuguese, Russian, and Vietnamese (81 FR

---

<sup>210</sup> Except in the case of an ACO that meets the quality performance standard pursuant to § 425.512(a)(5)(i)(B).

77386), in addition to the required administration of English survey. However, use of these translations is mostly voluntary, with the exception of a requirement to administer the Spanish translation of the CAHPS for MIPS Survey for patients residing in Puerto Rico. Organizations (groups, virtual groups, subgroups, and APM entities) that elect CAHPS for MIPS must contract with a CMS-approved survey vendor to administer the survey and must request survey translations for the vendor to administer the survey in an optional language. Generally, the use of survey translations adds additional survey administration cost to the organization.

## (2) Revisions

As discussed in section IV.A.4.f.(1)(c)(ii) of this final rule, we proposed to require Spanish language administration of the CAHPS for MIPS survey for organizations that elect CAHPS for MIPS. Specifically, we proposed to require organizations to contract with a CMS-approved survey vendor that, in addition to administering the survey in English, will administer the Spanish survey translation to Spanish-preferring patients using the procedures detailed in the CAHPS for MIPS Quality Assurance Guidelines beginning with 2024 survey administration. This proposal is part of our efforts to advance health equity. We refer readers to section IV.A.4.f.(1)(c)(ii) of this final rule for further discussion of our proposal related to the CAHPS for MIPS survey.

The Quality Payment Program proposed Spanish language survey administration requirement for the CAHPS for MIPS Survey can be found in section IV.A.4.f.(1)(c)(ii) of this final rule. Comments received for the Spanish language requirement for the Shared Savings Program are included in section IV.A.4.f.(1)(c)(ii) with comments received by the Quality Payment Program. We refer readers to section IV.A.4.f.(1)(c)(ii) of this final rule, where we finalize this policy as proposed.

## h. Align CEHRT Requirements for Shared Savings Program ACOs with MIPS

### (1) Background

Many of our programs require the use of certified electronic health record (EHR) technology (CEHRT), including the Quality Payment Program, Shared Savings Program, and other value-based payment initiatives. For the Shared Savings Program, section 1899(b)(2)(G) of the Act requires participating ACOs to define processes to report on quality measures and coordinate care, such as through the use of telehealth, remote patient monitoring, and other such enabling technologies. In addition, section 1899(b)(3)(D) of the Act authorizes the Secretary to incorporate reporting requirements and incentive payments from section 1848 of the Act into the Shared Savings Program, such as requirements and payments related to electronic prescribing and electronic health records, including using alternative criteria for determining whether to make such incentive payments. Under these authorities, we have incorporated reporting requirements related to the adoption and use of CEHRT in our regulations, including specifically cross-referencing the Quality Payment Program's definition of CEHRT (§ 414.1305) in our regulatory definition of CEHRT at § 425.20. For the Shared Savings Program and Quality Payment Program, CEHRT currently is defined at § 414.1305 as EHR technology (which could include multiple technologies) certified by the Office of the National Coordinator for Health Information Technology (ONC) under the ONC Health IT Certification Program as meeting the 2015 Edition Base EHR definition, set forth at 45 CFR 170.102, and a designated set of the 2015 Edition health information technology (IT) certification criteria as further provided therein.

The Health Information Technology for Economic and Clinical Health Act (HITECH Act), sections 13001 through 13424 of the American Recovery and Reinvestment Act of 2009 (ARRA) (Pub. L. 111-5, February 17, 2009), established ONC under the Department of Health and Human Services, authorizing ONC to adopt standards for certifying health IT. ONC has codified its standards, implementation specifications, certification criteria, and certification program for health IT under 45 CFR part 170. Specifically, ONC has codified its certification criteria for health IT, including EHRs, at 45 CFR 170.315, which are currently referred to as the "2015 Edition health IT certification criteria." For more information regarding ONC's current

policies, standards, and certification requirements for health IT, please refer to 45 CFR part 170, particularly § 170.315, and the ONC Certification of Health IT website at <https://www.healthit.gov/topic/certification-ehrs/certification-health-it>.

In the CY 2019 PFS final rule (83 FR 59982 through 59988), we adopted three key requirements related to ACOs' use of CEHRT, beginning with the performance years starting on January 1, 2019.

First, ACOs must certify annually, at the end of each performance year, that the percentage of eligible clinicians participating in the ACO who use CEHRT to document and communicate clinical care to their patients or other health care providers meets or exceeds the applicable percentage during the current performance year. The ACO's eligible clinicians must use CEHRT that meets the definition in our regulation at § 425.20, which provides that CEHRT has the same meaning as under the Quality Payment Program at § 414.1305. Specifically, we updated our regulations at § 425.506(f) to reflect that, beginning with the performance years starting on January 1, 2019:

- ACOs in a track that does not meet the financial risk standard to be an Advanced APM, which includes ACOs participating under BASIC track Levels A through D, must certify annually that at least 50 percent of the eligible clinicians participating in the ACO use CEHRT to document and communicate clinical care to their patients or other health care providers.

- ACOs in a track that meets the financial risk standard to be an Advanced APM, which includes ACOs participating under BASIC track Level E or the ENHANCED track, must certify annually that the percentage of eligible clinicians participating in the ACO that use CEHRT to document and communicate clinical care to their patients or other health care providers meets or exceeds the threshold established under the Quality Payment Program at § 414.1415(a)(1)(i). Under this requirement, for performance years beginning in 2019, 75 percent of eligible clinicians must use CEHRT to document and communicate clinical care to their patients or health care providers.

Second, we also revised the Shared Savings Program requirements for data submission and certifications at § 425.302(a)(3)(iii) to require the ACO to certify at the end of each performance year, that the percentage of eligible clinicians participating in the ACO that use CEHRT to document and communicate clinical care to their patients or other health care providers meets or exceeds the applicable percentage specified by CMS at § 425.506(f).

Finally, we updated our regulations at § 425.20 to incorporate the definition of CEHRT at § 414.1305 that applies under the Quality Payment Program. The Quality Payment Program's regulation at § 414.1305 defines CEHRT as EHR technology (which could include multiple technologies) certified under the ONC Health IT Certification Program that meets the 2015 Edition Base EHR definition at § 170.102 and has been certified as meeting certain other criteria set forth in ONC's 2015 Edition health IT certification criteria at § 170.315 as further described in § 414.1305. Applying the Shared Savings Program's definition at § 425.20, ACOs under the Shared Savings Program must use EHR technology meeting the Quality Payment Program's definition of CEHRT at § 414.1305 to meet the requirements set forth in our regulation at § 425.506(f). In the Health Data, Technology, and Interoperability: Certification Program Updates, Algorithm Transparency, and Information Sharing proposed rule (88 FR 23746 through 23917), which appeared in the April 18, 2023, **Federal Register**, ONC has proposed to discontinue the year-themed "editions," which ONC first adopted in 2012, to distinguish between sets of health IT certification criteria finalized in different rules. ONC has proposed to instead maintain a single set of "ONC Certification Criteria for Health IT," which would be updated in an incremental fashion in closer alignment to standards development cycles and regular health information technology (IT) development timelines (88 FR 23757 through 23762).) As further discussed in section IV.A.4.f.(4)(c) of this final rule, we are finalizing our proposal to modify the Quality Payment Program's definition of CEHRT at § 414.1305 to flexibly incorporate any changes by ONC to its definition of Base EHR and its certification criteria for Health IT.

(2) Removing CEHRT Use Threshold Requirements and Requiring Reporting of the MIPS Promoting Interoperability Performance Category

To streamline CEHRT threshold requirements for ACOs and align with the Quality Reporting Program's Merit-Based Incentive Payment System (MIPS), we proposed to sunset the Shared Savings Program CEHRT threshold requirements and modify our regulations at § 425.506(f) to indicate that they will be applicable only through performance year 2023 (88 FR 52433). We further proposed, for performance years beginning on or after January 1, 2024, unless otherwise excluded, to require that all MIPS eligible clinicians, Qualifying APM Participants (QPs), and Partial Qualifying APM Participants (Partial QPs) (each as defined at § 414.1305 of this subchapter) participating in the ACO, regardless of track, satisfy all of the following:

- Report the MIPS Promoting Interoperability (PI) performance category measures and requirements to MIPS according to 42 CFR part 414 subpart O as either of the following --

- ++ All MIPS eligible clinicians, QPs, and partial QPs participating in the ACO as an individual, group, or virtual group; or

- ++ The ACO as an APM entity.

- Earn a MIPS performance category score for the MIPS Promoting Interoperability performance category at the individual, group, virtual group, or APM entity level.

A MIPS eligible clinician, QP, Partial QP, or ACO as an APM entity may be excluded from the requirements proposed at § 425.507(a) if the MIPS eligible clinician, QP, Partial QP, or ACO as an APM entity --

- Does not exceed the low volume threshold set forth at § 414.1310(b)(1)(iii);

- Is an eligible clinician as defined at § 414.1305 who is not a MIPS eligible clinician and has opted to voluntarily report measures and activities for MIPS as set forth in § 414.1310(b)(2); or

- Has not earned a performance category score for the MIPS Promoting Interoperability performance category because the MIPS Promoting Interoperability performance category has been reweighted in accordance with applicable policies set forth at § 414.1380(c)(2).

We proposed to codify this new requirement at § 425.507.

Specifically, we proposed that any requirements applicable to MIPS eligible clinicians reporting on objectives and measures specified by CMS for the MIPS Promoting Interoperability performance category would apply to MIPS eligible clinicians, QPs, and Partial QPs participating in an ACO at § 425.507(a). We further proposed that if any of these requirements for a MIPS eligible clinician reporting for the MIPS Promoting Interoperability performance category, including objectives and measures, are amended through rulemaking (such as adoption, modification, or removal of an objective or measure), then the new or modified requirements will also be applicable to MIPS eligible clinicians, QPs, and Partial QPs participating in an ACO under § 425.507. For instance, in section IV.A.4.f.(4) of this final rule, we proposed several modifications to the MIPS Promoting Interoperability performance category's requirements, including modifying the performance period at § 414.1320, as well as specific measures such as the High Priority Safety Assurance Factors for EHR Resilience (SAFER) Guides measure. To the extent these or other policies are finalized through rulemaking, then these requirements would also be applicable to ACO participants as provided by our proposal here.

To further align with applicable requirements for the MIPS Promoting Interoperability performance category, we proposed that MIPS eligible clinicians, QPs, Partial QPs, and ACOs as APM entities may be exempt from our proposed regulation at § 425.507(a) if the MIPS eligible clinician, QP, Partial QP, or ACO as an APM entity: (1) does not exceed the low volume threshold set forth at § 414.1310(b)(1)(iii); (2) is an eligible clinician as defined at § 414.1305 who is not a MIPS eligible clinician and has opted to voluntarily report measures and activities for MIPS as set forth in § 414.1310(b)(2); or (3) has not earned a performance category score for the MIPS Promoting Interoperability performance category because the MIPS Promoting

Interoperability performance category has been reweighted in accordance with applicable policies set forth at § 414.1380(c)(2). However, if such MIPS eligible clinicians, QPs, and Partial QPs do report the MIPS Promoting Interoperability performance category as an individual, group, or virtual group or the ACO reports MIPS Promoting Interoperability performance category as an APM entity, the MIPS eligible clinicians, QPs, and Partial QP the exemption would not apply for purposes of satisfying our proposed regulation at § 425.507 (88 FR 52433).

Exclusions to MIPS eligible clinicians described at § 414.1310(b)(1)(iii) include eligible clinicians who do not exceed the MIPS low volume threshold. Eligible clinicians who are not MIPS eligible clinicians have the option to voluntarily report measures and activities for MIPS as described at § 414.1310(b)(2). Federally Qualified Health Centers (FQHC) or Rural Health Clinics (RHC) who provide services that are billed exclusively under the FQHC or RHC payment methodologies may voluntarily report the MIPS Promoting Interoperability performance category as a group, virtual group, or APM entity. MIPS eligible clinicians, QPs, and Partial QPs practicing in FQHCs or RHCs who provide services that are billed exclusively under FQHC or RHC payment methodologies may voluntarily report the MIPS Promoting Interoperability performance category as an individual, group, virtual group, or APM entity. It is important to note that exclusions to MIPS eligible clinicians as described at § 414.1310(b)(1)(i) and (ii) are not applicable to our proposal at § 425.507 because QPs and Partial QPs are required to report MIPS Promoting Interoperability performance category for purposes of satisfying the Shared Savings Program proposal at § 425.507. Examples of applicable exclusions under § 414.1380(c)(2) for reweighting of the MIPS Promoting Interoperability performance category include, but are not limited to, the following:

- MIPS eligible clinicians, QPs, and Partial QPs participating in the ACO who are granted a hardship exception under § 414.1380(c)(2)(i)(C) at the individual, group, virtual group, or APM entity level.

- MIPS eligible clinicians, QPs, and Partial QPs that are eligible for reweighting of the Promoting Interoperability performance category at the individual, group, virtual group, or APM entity level as described at § 414.1380(c)(2)(i)(A)(4).

- MIPS eligible clinicians, QPs, and Partial QPs that are eligible for reweighting of the Promoting Interoperability performance category as described at § 414.1380(c)(2)(i)(A)(4).<sup>211</sup>

Incorporating MIPS Promoting Interoperability performance category's requirements into the Shared Savings Program will alleviate the burden that the current policy creates for ACOs. Because the Shared Savings Program CEHRT attestation requirement and the MIPS Promoting Interoperability category requirements are not the same, ACOs have the burden of managing compliance with two different CEHRT program requirements. In finalizing the Shared Savings Program CEHRT attestation in the CY 2019 PFS final rule, we stated our desire to continue to promote and encourage CEHRT use by ACOs and their ACO participants and ACO providers/suppliers, and our desire to better align with the goals of the Quality Payment Program and the criteria for participation in certain alternative payment models tested by the Innovation Center (83 FR 59983). Given our unified goal and vision for the use of CEHRT, our proposal at § 425.507 will allow ACOs to focus on a unified set of program requirements for the use of CEHRT and reduce the administrative burden of managing compliance with a different set of program requirements with the same aim.

While ACOs would be able to report the MIPS Promoting Interoperability category at the individual, group, virtual group, or APM entity level for purposes of satisfying our proposed policy at § 425.507, we encourage ACOs to evaluate reporting the MIPS Promoting Interoperability performance category at the APM entity level for purposes of satisfying the Shared Savings Program regulation proposed at § 425.507. In the CY 2023 PFS final rule, we finalized a policy to introduce a voluntary reporting option for APM entities to report the MIPS

---

<sup>211</sup> In the CY 2024 PFS proposed rule (88 FR 52435), we referenced the exclusion for MIPS eligible clinicians, QPs, and Partial QPs that are eligible for reweighting of the Promoting Interoperability performance category as described at § 414.1380(c)(2)(i)(A)(4) twice in error. This error has been addressed in this final rule.

Promoting Interoperability performance category at the APM entity level beginning with the CY 2023 performance period (87 FR 70033). For purposes of MIPS scoring and payment adjustments, if the ACO reports the MIPS Promoting Interoperability performance category at the APM entity level, the APM entity's score for the MIPS Promoting Interoperability performance category would be the first score identified to generate the APM entity level score. If the ACO does not report the MIPS Promoting Interoperability performance category at the APM entity level, the ACO's individual and group scores would be calculated as a weighted average up to the APM entity level to generate the APM entity level score for purposes of scoring the MIPS Promoting Interoperability performance category. If an eligible clinician reports the MIPS Promoting Interoperability performance category at the individual or group level under traditional MIPS or the APM Performance Pathway (APP) in addition to reporting the MIPS Promoting Interoperability performance at the APM entity level via the APP, for purposes of MIPS scoring and payment adjustments, that eligible clinician would receive the higher of their individual, group, or APM entity Promoting Interoperability performance category score. For more information about reporting the MIPS Promoting Interoperability performance category at the APM entity level, we direct readers to the MIPS Promoting Interoperability User Guide, which is updated each performance year, in the QPP Resource library at <https://qpp.cms.gov/resources/resource-library>. We anticipate releasing subregulatory guidance for ACOs that participate in the Shared Savings Program about voluntarily reporting the MIPS Promoting Interoperability performance category at the APM entity level in future performance years.

We solicited comments on our proposal that, for performance years beginning on or after January 1, 2024, unless otherwise excluded, to require that all MIPS eligible clinicians, Qualifying APM Participants (QPs), and Partial Qualifying APM Participants (Partial QPs) (each as defined at § 414.1305) participating in the ACO, regardless of track, satisfy all of the following:

- Report the MIPS Promoting Interoperability (PI) performance category measures and requirements to MIPS according to 42 CFR part 414 subpart O as either of the following --
  - ++ All MIPS eligible clinicians, QPs, and partial QPs participating in the ACO as an individual, group, or virtual group; or
  - ++ The ACO as an APM entity.
- Earn a MIPS performance category score for the MIPS Promoting Interoperability performance category at the individual, group, virtual group, or APM entity level.

A MIPS eligible clinician, QP, Partial QP, or ACO as an APM entity may be excluded from the requirements proposed at § 425.507(a) if the MIPS eligible clinician, QP, Partial QP, or ACO as an APM entity --

- Does not exceed the low volume threshold set forth at § 414.1310(b)(1)(iii);
- Is an eligible clinician as defined at § 414.1305 who is not a MIPS eligible clinician and has opted to voluntarily report measures and activities for MIPS as set forth in § 414.1310(b)(2); or
- Has not earned a performance category score for the MIPS Promoting Interoperability performance category because the MIPS Promoting Interoperability performance category has been reweighted in accordance with applicable policies set forth at § 414.1380(c)(2).

We proposed to codify this new requirement at § 425.507.

We also solicited comments on an alternative proposal to narrow the proposal to require ACOs to report the measures and requirements under the MIPS Promoting Interoperability performance category, in accordance with our regulations at 42 CFR part 414 subpart O, at the APM entity level. This alternative proposal would remove the option for MIPS eligible clinicians, Qualifying APM Participants (QPs), and Partial Qualifying APM Participants (Partial QPs) (each as defined at § 414.1305) participating in the ACO to report the MIPS Promoting Interoperability performance category at the individual, group, or virtual group level for purposes of satisfying our proposal at § 425.507.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* We received a few comments in support of the proposal to align CEHRT requirements with MIPS, citing the importance of meaningful CEHRT use and of expanding provider participation in Promoting Interoperability. One commenter also stated that the proposal will support CMS' goal of advancing eCQM capabilities among ACO participants, since use of CEHRT includes the ability to standardize the capture and reporting of data relevant for quality reporting. Another commenter supported aligning CEHRT requirements because it would lead to comprehensive reporting requirements across ACOs and facilitate better care coordination.

*Response:* We thank commenters for their support.

*Comment:* Several commenters were opposed to the proposal citing concerns that the proposal would increase administrative burden, especially for small practices, and discourage participation in the Shared Savings Program.

*Response:* We are finalizing with modifications our proposal to align the Shared Savings Program CEHRT requirement with MIPS Promoting Interoperability to clarify the requirement that an ACO participant, ACO provider/supplier, and ACO professional that is a MIPS eligible clinician, Qualifying APM Participant (QP), or Partial Qualifying APM Participant (Partial QP) (each as defined at § 414.1305 of this chapter) satisfy all of the requirements detailed at § 425.507(a). In response to the commenters' concerns that our proposal would increase administrative burden and discourage participation in the Shared Savings Program, our intent is to allow the ACO to exclude an ACO participant, ACO provider/supplier, or ACO professional from reporting MIPS Promoting Interoperability performance category in accordance with applicable policies that exclude or otherwise exempt eligible clinicians from reporting the MIPS Promoting Interoperability performance category as set forth in 42 CFR part 414 subpart O, provided however, that an ACO participant, ACO provider/supplier, or ACO professional cannot be excluded from the requirements specified in § 425.507(a) solely on the basis of being a QP or

Partial QP. We are finalizing our proposal with modifications to make clear the examples of exclusions that would be applicable to the requirements specified at § 425.507(a). Applicable exclusions to paragraph (a) may include the following:

- Low volume threshold as set forth at § 414.1310(b)(1)(iii),
- Eligible clinician as defined at § 414.1305 of this chapter who is not a MIPS eligible clinician as set forth in § 414.1310(b)(2),
- Reweighting of the MIPS Promoting Interoperability performance category to zero percent of the final score in accordance with applicable policies set forth at § 414.1380(c)(2).

These modifications are consistent with our original proposal that the Shared Savings Program's CEHRT requirements fully align with MIPS Promoting Interoperability performance category's requirements (88 FR 52434).

For example, if an ACO has 40 ACO participants that are MIPS eligible clinicians and 10 of the ACO participants do not earn a MIPS Promoting Interoperability performance category score because the ACO participants did not exceed the low volume threshold as set forth at § 414.1310(b)(1)(iii), then the ACO does not count in its public reporting the 10 ACO participants that did not earn a MIPS Promoting Interoperability performance category score because the ACO participants did not exceed the low volume threshold.

In another example, if in the ACO in the example above, 5 of the 10 ACO participants that did not exceed the low volume threshold as set forth at § 414.1310(b)(1)(iii), voluntarily report under the MIPS Promoting Interoperability performance category, those 5 ACO participants must be included in the in the number of ACO participants, ACO providers/suppliers, or ACO professionals that the ACO publicly reports. In this example, the ACO must publicly report the 35 ACO participants [(30 ACO participants without an exclusion) + (5 ACO participants that voluntarily reported) = 35 ACO participants] that earned a MIPS Promoting Interoperability performance category score. The ACO in this example does not count in its public reporting the 5 ACO participants that did not earn a MIPS Promoting

Interoperability performance category score because the ACO participants did not exceed the low volume threshold.

In response to the comment regarding burden to small practices, we are assessing the appropriateness of exemptions to the requirements at § 425.507(a) based on Special status as defined at § 414.1305 and may address this in future rulemaking. We also note that the new reporting option to report MIPS Promoting Interoperability performance category at the ACO level, in addition to group reporting options, will help alleviate individual clinician reporting burden.

ACOs will have access to the MIPS eligibility status of the eligible clinicians that participate in the ACO at our website at <https://qpp.cms.gov>. ACOs are encouraged to check their participant's MIPS eligibility before and during the performance year to ensure that they have the most up to date eligibility information.

*Comment:* Several commenters stated that they believe that this reporting requirement would create a disincentive for ACOs to participate in an Advanced APM and obtain QP status. Many commenters believed that the proposal is at odds with MIPS policies that exclude QPs and Partial QPs from reporting MIPS. One commenter stated that QP determinations at the National Provider Identifier (NPI) level, instead of the ACO entity level, will initiate significant reporting challenges for ACOs that have to report for both QP and non-QP providers. One commenter was concerned that the Advanced APM must require all participating eligible clinicians to use CEHRT, citing that this could have the unintended consequence of limiting non-physician qualified health care professional participation in APMs due to financial constraints.

A few commenters had concerns that this requirement negates the benefit of APM participation for providers that alleviated some of the administrative reporting burden under MIPS. These commenters noted that they believe that aligning ACO reporting to the MIPS Promoting Interoperability requirements undercuts a primary benefit of APM participation for individual providers, thus weakening the incentive to participate in the program.

*Response:* In response to commenters' concerns about additional burden for QPs and Partial QPs, the new reporting option to report the MIPS Promoting Interoperability performance category at the ACO level, in addition to group reporting options, will help alleviate individual clinician's reporting burden.

Regarding commenters' statements that they believe that this reporting requirement would create a disincentive for ACOs to participate in an Advanced APM and obtain QP status, we wish to clarify that QP and Partial QP status are dependent, in part, on the APM being compliant with the Advanced APM criteria set forth at § 414.1415. Our proposal to align the Shared Savings Program's CEHRT requirement with MIPS Promoting Interoperability is compliant with the policy we are finalizing in section IV.A.4.n. of this final rule regarding Advanced APMs' requirement to use CEHRT for PY 2025 and subsequent performance years. This policy will sunset the current 75 percent CEHRT use requirement for Advanced APMs and replace it with a requirement that to be an Advanced APM, the APM must require all eligible clinicians in each participating APM Entity, or for APMs in which hospitals are the participants, each hospital, to use CEHRT. This policy is consistent with section 1833(z)(3)(D)(i)(I) of the Act, which generally requires that Advanced APMs require their participants to use CEHRT as defined in section 1848(o)(4) of the Act (88 FR 52627). As such, for Level E of the BASIC Track and the ENHANCED track of the Shared Savings Program to be eligible to be considered Advanced APMs in PY 2025 and subsequent performance years, the Shared Savings Program needs to update our CEHRT requirement to align with our proposal for CEHRT use for Advanced APMs, as well as maintain compliance with the other Advanced APM criteria detailed at § 414.1415.

*Comment:* Several commenters were concerned about the timeline for the implementation of this requirement given that ACOs must remove practices from their ACO participation list before the final rule is published. Commenters also had concerns that the proposed timeline does not allow ACOs time to bring small practices into compliance with

CEHRT requirements. Many commenters urged CMS to delay the implementation of these proposals.

*Response:* We recognize the concerns raised by commenters that finalizing this requirement for the PY 2024 would limit ACO's ability to work with their new ACO participants, ACO providers/suppliers, and ACO professionals to meet the CEHRT and MIPS Promoting Interoperability performance category reporting requirement. Therefore, after consideration of the public comments we received on this proposal, we have decided to delay implementation of this requirement to performance years beginning on or after January 1, 2025. The proposal would promote consistent CEHRT use across all Shared Savings Program ACOs, advance digital quality measurement, promote interoperability among clinicians through greater availability of digital data, and further align the Shared Savings Program with MIPS.

*Comment:* A few commenters opposed the proposal to align the Shared Savings Program's CEHRT requirements with MIPS, citing the different goals and functions of MIPS, the Shared Savings Program, and APMs. One commenter stated that that MIPS measures quality within point-in-time encounters by clinicians, whereas ACOs coordinate care across the continuum.

*Response:* The MIPS Promoting Interoperability performance category's reporting requirements are more comprehensive than the Advanced APM requirements and address key functions that can facilitate better care coordination and quality measurement and improvement. For example, the MIPS Promoting Interoperability performance category requires clinicians to demonstrate use of CEHRT and attest that they engage in activities to support CEHRT use and health information exchange, as well as activities to prevent information blocking or actions that limit interoperability. In contrast, the Shared Savings Program attestation requirement provides limited insight into CEHRT capabilities and use by ACOs.

MIPS and more advanced value-based arrangements, like the Shared Savings Program, operate on a continuum, with clinicians making decisions annually about whether to continue in

MIPS or join more advanced payment models.<sup>212</sup> As we advance towards our goal to have all people with Traditional Medicare in an accountable care relationship with a health care provider by 2030, as outlined in our Innovation Strategy Refresh which can be accessed at <https://www.cms.gov/priorities/innovation/strategic-direction-whitepaper>, alignment between MIPS and advanced value-based arrangements, like the Shared Savings Program, will ease the transition to accountable care. When value-based models are aligned, it becomes easier for health care providers to understand how they can succeed and provide high quality care, which lowers barriers to participation and accelerates adoption of value-based arrangements.

*Comment:* One commenter sought clarification on the impact on the ACO if individual clinicians within the ACO do not meet the MIPS Promoting Interoperability performance category's reporting requirements.

*Response:* We thank commenters for their comments. We are making an additional modification to paragraph (b) to specify exclusions that may be applicable for purposes of satisfying the Shared Savings Program requirements at § 425.507(a). Specifically, we are clarifying in § 425.507(b) our intention that any applicable policies that exclude or otherwise exempt eligible clinicians from reporting the MIPS Promoting Interoperability performance category as set forth in 42 CFR part 414, subpart O also apply to exclude ACO participants, ACO providers/suppliers, and ACO professionals from meeting the reporting requirement set forth in § 425.507(a). However, we are also clarifying in § 425.507(b), an ACO participant, ACO provider/supplier, or ACO professional cannot be excluded from the requirements specified in § 425.507(a) solely on the basis of being a QP or Partial QP; we expect QPs and Partial QPs in an ACO to report MIPS Promoting Interoperability performance category unless they are excluded or exempt from doing so under another applicable MIPS policy. This is consistent with our original proposal that the Shared Savings Program's CEHRT requirements

---

<sup>212</sup> "The Medicare Value-Based Care Strategy: Alignment, Growth, And Equity", Health Affairs Forefront, July 21, 2022. DOI: 10.1377/forefront.20220719.558038.

fully align with MIPS Promoting Interoperability performance category’s requirements (88 FR 52435). Together, these modifications more clearly delineate the obligations of ACO participants, ACO providers/suppliers, and ACO professionals under this policy.

We refer readers to Table 31 of this final rule for a non-exhaustive list of exclusions for that may be applicable to reporting the MIPS Promoting Interoperability performance category for purposes of satisfying the Shared Savings Program CEHRT policy for performance years beginning on or after January 1, 2025.

**TABLE 31: Examples of exclusions for reporting the MIPS Promoting Interoperability performance category for purpose of satisfying the Shared Savings Program CEHRT Alignment policy for performance years beginning on or after January 1, 2025**

Example	Description	MIPS PI reporting for purposes of satisfying the Shared Savings Program CEHRT Alignment policy <sup>a</sup>	ACO Public Reporting <sup>^</sup>
<b>Exclusion to MIPS eligible clinician</b>	An ACO participant, ACO provider/supplier, or ACO professional participating in the ACO that meets one or more of the following* exclusions to MIPS eligible clinician: (herein referred to as “certain exclusions to MIPS eligible clinician”): <ul style="list-style-type: none"> <li>• Does not exceed the low volume threshold (LVT)</li> <li>• Eligible clinicians who are not MIPS eligible clinicians</li> </ul>	An ACO participant, ACO provider/supplier, or ACO professional that meets one or more of the certain exclusions to MIPS eligible clinician for the applicable performance year is <b>not required</b> to report and/or earn a MIPS Promoting Interoperability performance category score for purposes of satisfying the Shared Savings Program CEHRT Alignment policy for that performance year.	The ACO <b>does not count</b> in the number of ACO participants, ACO providers/suppliers, and ACO professionals that the ACO publicly reports, an ACO participant, ACO provider/supplier, or ACO professional participating in the ACO that meets certain exclusions to MIPS eligible clinician unless the ACO participant, ACO provider/supplier, or ACO professional voluntarily reports under the MIPS Promoting Interoperability performance category.
<b>Eligible for reweighting of the MIPS Promoting Interoperability performance category</b>	An ACO participant, ACO provider/supplier, or ACO professional participating in the ACO that does not earn a MIPS Promoting Interoperability performance category score because the MIPS Promoting Interoperability performance category was reweighted to zero percent of the final score.**	An ACO participant, ACO provider/supplier, or ACO professional that does not earn a MIPS Promoting Interoperability performance category score for the applicable performance year because the MIPS Promoting Interoperability performance category was reweighted to zero percent of the final score is <b>not required</b> to report and/or earn a MIPS Promoting Interoperability performance category score for purposes of satisfying the Shared Savings Program CEHRT	The ACO <b>does not count</b> in the number of ACO participants, ACO providers/suppliers, and ACO professionals that the ACO publicly reports, an ACO participant, ACO provider/supplier, or ACO professional participating in the ACO that does not earn a MIPS Promoting Interoperability performance category score because the MIPS Promoting Interoperability performance category was reweighted to zero percent of the final score unless the ACO participant,

Example	Description	MIPS PI reporting for purposes of satisfying the Shared Savings Program CEHRT Alignment policy <sup>a</sup>	ACO Public Reporting <sup>^</sup>
		Alignment policy for that performance year.	ACO provider/supplier, or ACO professional voluntarily reports under the MIPS Promoting Interoperability performance category.
<b>QPs or Partial QPs with an exclusion</b>	An ACO participant, ACO provider/supplier, or ACO professional participating in the ACO that is a QP or Partial QP for the applicable performance year and <b>meets</b> any of the following (herein referred to as “exclusions as described at § 425.507(b)” and as described elsewhere in Table 31 of this final rule): <ul style="list-style-type: none"> <li>● Certain exclusions to MIPS eligible clinician, or</li> <li>● Eligible for reweighting of MIPS Promoting Interoperability performance category to zero percent of the final score</li> </ul>	An ACO participant, ACO provider/supplier, or ACO professional that is a QP or Partial QP for the applicable performance year and meets an exclusion as described at § 425.507(b) are <b>not required</b> to report and/or earn a score in the MIPS Promoting Interoperability performance category for purposes of satisfying the Shared Savings Program CEHRT Alignment policy for that performance year.	The ACO <b>does not count</b> in the number of ACO participants, ACO providers/suppliers, and ACO professionals that the ACO publicly reports, an ACO participant, ACO provider/supplier, or ACO professional participating in the ACO that is a QP or Partial QP for the applicable performance year that meets an exclusion as described at § 425.507(b) unless the ACO participant, ACO provider/supplier, or ACO professional voluntarily reports under the MIPS Promoting Interoperability performance category.
<b>QPs or Partial QPs without an exclusion</b>	An ACO participant, ACO provider/supplier, or ACO professional participating in the ACO that is a QP or Partial QP for the applicable performance year and <b>does not meet</b> any of the exclusions as described at § 425.507(b) and as described in Table 31 of this final rule.	An ACO participant, ACO provider/supplier, or ACO professional that is a QP or Partial QP for the applicable performance year and does not meet an exclusion as described at § 425.507(b) <b>must</b> report and/or earn a score in the MIPS Promoting Interoperability performance category for purposes of satisfying the Shared Savings Program CEHRT Alignment policy for that performance year.	The ACO <b>must count</b> in the number of ACO participants, ACO providers/suppliers, and ACO professionals that the ACO publicly reports, an ACO participant, ACO provider/supplier, or ACO professional participating in the ACO that is a QP or Partial QP for the applicable performance year that does not meet an exclusion as described at § 425.507(b).

<sup>a</sup> MIPS PI Reporting for purposes of satisfying the Shared Savings Program CEHRT Alignment policy is described at § 425.507(a).

<sup>^</sup> ACO Public Reporting is described at § 425.308(b)(9).

\* Certain exclusions to MIPS eligible clinician are described at § 425.507(b)(1) and (b)(2).

\*\* Reweighting of the MIPS Promoting Interoperability performance category are described at § 425.507(b)(3).

It may be helpful to note that an FQHC or RHC that bills exclusively under the FQHC or RHC payment methodologies and that meets one or more of the exclusions described at §

425.507(b) and in Table 31 of this final rule for the applicable performance year are not required to report and/or earn a score in the MIPS Promoting Interoperability performance category for purposes of satisfying the Shared Savings Program CEHRT Alignment policy for that performance year. Similarly, the ACO does not count in the number of ACO participants, ACO providers/suppliers, and ACO professionals that the ACO publicly reports an FQHC or RHC that bills exclusively under the FQHC or RHC payment methodologies and meets one or more of the exclusions described at § 425.507(b) and in Table 31 of this final rule for the applicable performance year, unless that FQHC or RHC voluntarily reports under the MIPS Promoting Interoperability performance category.

Beginning in PY 2025 and subsequent performance years, if an ACO fails to meet the requirements at § 425.507 and § 425.308(b)(9), CMS may take remedial action before termination for noncompliance as described at § 425.216, which includes providing a warning notice, requesting a corrective action plan (CAP) from the ACO, or placing the ACO on a special monitoring plan.

ACOs are required to manage their ACO participant and ACO provider/supplier lists. Additionally, to address noncompliance with the requirements of the Shared Savings Program and other program integrity issues, including those identified by CMS, participant agreements must permit the ACO to take remedial action against the ACO participant, and must require the ACO participant to take remedial action against its ACO providers/suppliers, including imposition of a corrective action plan, denial of incentive payments, and termination of the ACO participant agreement as detailed at § 425.116(a)(7).

*Comment:* One commenter suggested that the goal of this proposal could better be achieved by requesting that EHR developers pull data automatically from CEHRT systems and report this data to provide CMS with data regarding adoption, use, and interoperability of CEHRT with less burden to ACOs.

*Response:* We note that the commenter's suggested approach could lead to under-reporting of the use of CEHRT, which would not support our goal of ensuring that ACO participants have robust CEHRT capabilities, nor would it provide a complete and accurate picture of ACO capabilities and could lead to compliance actions as previously noted. Our proposal to align the Shared Savings Program CEHRT requirement with MIPS Promoting Interoperability is the best way to allow ACOs to focus on a unified set of program requirements for the use of CEHRT. Additionally, the new reporting option to report MIPS Promoting Interoperability performance category at the ACO level, in addition to group reporting options, will help alleviate individual clinician reporting burden.

After consideration of public comments, we are finalizing, with modification and minor technical corrections, our proposal to align the Shared Savings Program's CEHRT requirements with MIPS, to delay the implementation of these amended policies until PY 2025. The modification to delay implementation of this proposal by 1-year is responsive to public feedback raising concerns that finalizing this requirement for the PY 2024 would limit ACO's ability to work with new ACO participants on their CEHRT readiness. This delay will allow ACOs ample time to consider the readiness of ACO participants, ACO providers/suppliers, and ACO professionals that are MIPS eligible clinicians, Qualifying APM Participants (QPs), or Partial Qualifying APM Participants (Partial QPs) to meet the requirements of the MIPS Promoting Interoperability performance category.

We are finalizing our proposal with modification to our new CEHRT reporting policy at § 425.507(a) for performance years beginning on or after January 1, 2025, unless otherwise excluded, an ACO participant, ACO provider/supplier, and ACO professional that is a MIPS eligible clinician, Qualifying APM Participant (QP), or Partial Qualifying APM Participant (Partial QP) (each as defined at § 414.1305), regardless of track, must satisfy all of the following:

- Report the MIPS Promoting Interoperability (PI) performance category measures and requirements to MIPS according to 42 CFR part 414, subpart O at the individual, group, virtual

group, or APM entity level.

- Earn a MIPS performance category score for the MIPS Promoting Interoperability performance category at the individual, group, virtual group, or APM entity level.

We are finalizing at § 425.507(b) that an ACO participant, ACO provider/supplier, or ACO professional is excluded from the requirements specified in § 425.507(a) in accordance with applicable policies that exclude or otherwise exempt eligible clinicians from reporting the MIPS Promoting Interoperability performance category as set forth in 42 CFR part 414, subpart O, provided however, that an ACO participant, ACO provider/supplier, or ACO professional cannot be excluded from the requirements specified at § 425.507(a) solely on the basis of being a QP or Partial QP. Applicable exclusions may include:

- Low volume threshold as set forth at § 414.1310(b)(1)(iii) of this chapter.
- Eligible clinician as defined at § 414.1305 of this chapter who is not a MIPS eligible clinician as set forth in § 414.1310(b)(2) of this chapter.
- Reweighting of the MIPS Promoting Interoperability performance category to zero percent of the final score in accordance with applicable policies set forth at § 414.1380(c)(2) of this chapter.

We are finalizing our proposal with modifications to codify this new requirement at § 425.507.

### (3) Updating Public Reporting Requirements

As described in the CY 2019 final rule (80 FR 32813 through 32815), we believe that one important aspect of patient-centered care is patient engagement and transparency, which can be achieved by the public reporting of ACO quality and cost performance. Public reporting helps to hold ACOs accountable and may improve a beneficiary's ability to make informed health care choices, as well as facilitate an ACO's ability to improve the quality and efficiency of its care. To ensure our public reporting requirements reflect our proposal to require reporting of objectives, measures, and activities under the MIPS Promoting Interoperability performance category as discussed above, in CY 2024 final rule (85 FR 52436) we also proposed to require ACOs to

publicly report the number of MIPS eligible clinicians, Qualifying APM Participants (QPs), and Partial Qualifying APM Participants (Partial QPs) (each as defined at § 414.1305) participating in the ACO that earn a MIPS performance category score for the MIPS Promoting Interoperability performance category at the individual, group, virtual group, or APM entity level as proposed at § 425.507. We proposed to codify this requirement at § 425.308(b)(9).

We proposed that MIPS eligible clinicians, QPs, and Partial QPs who would be excluded from reporting under the proposed regulation at § 425.507(b) as discussed previously may be excluded from the number of MIPS eligible clinicians, QPs, or Partial QPs that the ACO publicly reports under our proposed regulation at § 425.308(b)(9). However, if such MIPS eligible clinicians, QPs, and Partial QPs do report the MIPS Promoting Interoperability performance category as an individual, group, or virtual group, or the ACO reports the MIPS Promoting Interoperability performance category as an APM entity, the MIPS eligible clinicians, QPs, and Partial QPs should be included in the number of MIPS eligible clinicians, QPs, and Partial QPs that the ACO publicly reports under our proposed regulation at § 425.308(b)(9).

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* One commenter supported the proposal to publicly report the number of MIPS eligible clinicians, QPs, and Partial QPs participating in the ACO that earn a MIPS performance category score for the MIPS Promoting Interoperability performance category at the individual, group, virtual group, or APM entity level. This commenter supported the public reporting requirement as a way to hold ACOs more accountable.

*Response:* We thank commenters for their support.

*Comment:* One commenter did not support the public reporting requirement, citing that this information could fluctuate often and would be confusing to Medicare beneficiaries instead of being informative.

*Response:* Public reporting may improve a beneficiary's ability to make informed health

care choices, as well as facilitate an ACO's ability to improve the quality and efficiency of its care. As such, this requirement will ensure that our public reporting requirements reflect our proposal to require reporting of objectives, measures, and activities under the MIPS Promoting Interoperability performance category and promote robust CEHRT use and capabilities by ACOs.

After consideration of public comments, we are finalizing with modifications our proposal to update the Shared Savings Program public reporting requirements to delay the implementation of these revisions until PY 2025. The modification to delay implementation of this proposal by 1-year aligns with our modification to delay the implementation of our proposal to align the Shared Savings Program CEHRT requirement with MIPS. We are also finalizing modifications to our proposal at § 425.308(b)(9) to conform with our language finalized at § 425.507.

Lastly, as we discussed in our proposal if MIPS eligible clinicians, QPs, and Partial QPs that are excluded under § 425.507(b) report the MIPS PI performance category, the MIPS eligible clinicians, QPs, or Partial QPs should be included in the number of MIPS eligible clinicians, QPs, or Partial QPs that the ACO publicly reports under our proposed regulation at § 425.308(b)(9) (88 FR 52436). We are finalizing modifications to our proposal at § 425.308(b)(9) to make clear in our regulation text that ACOs must include in the public reporting the number of ACO participants, ACO providers/suppliers, and ACO professionals that are excluded under § 425.507(b) that voluntarily reported and received a MIPS Promoting Interoperability performance category score for the applicable performance year.

We are finalizing that for performance year 2025 and subsequent performance years, the total number of ACO participants, ACO providers/suppliers, and ACO professionals that are MIPS eligible clinicians, Qualifying APM Participants (QPs), or Partial Qualifying APM Participants (Partial QPs) (each as defined at § 414.1305 of this chapter) that earn a MIPS performance category score for the MIPS Promoting Interoperability performance category as set forth in § 425.507, that is comprised of the following --

- The number of ACO participants, ACO providers/suppliers, and ACO professionals that meet the requirements of § 425.507(a) and are not excluded under § 425.507(b) for the applicable performance year; and

- The number of ACO participants, ACO providers/suppliers, and ACO professionals that are excluded under § 425.507(b) that voluntarily reported and received a MIPS Promoting Interoperability performance category score for the applicable performance year.

#### (4) Updating Annual Certification Requirements

We find that the MIPS Promoting Interoperability performance category's reporting requirements are more comprehensive and better address the key functions that facilitate better care coordination and quality measurement for ACOs. Our proposal to align the Shared Savings Program CEHRT requirements with MIPS would allow for greater insight into CEHRT use among ACO clinicians.

Currently, under § 425.302(a)(3)(iii), at the end of each performance year, ACOs must certify that the percentage of eligible clinicians participating in the ACO that use CEHRT to document and communicate clinical care to their patients or other health care providers meets or exceeds the applicable CEHRT threshold percentage specified at § 425.506(f). As discussed in section III.G.2.h.(2) of this final rule, we proposed to sunset the Shared Savings Program CEHRT threshold requirements and modify § 425.506(f) to indicate that they will end with performance year 2023.

To ensure our certification requirements align with our proposal in section III.G.2.h.(2) of this final rule, we also proposed to revise our regulation at § 425.302(a)(3)(iii) to make the current Shared Savings Program Annual Certification requirement applicable for only performance years 2019 through 2023. That is, we proposed to sunset the CEHRT certification requirement in the Shared Savings Program by amending regulations to no longer require ACO clinicians to report the percentage of eligible clinicians participating in the ACO that use CEHRT

to document and communicate clinical care to their patients or other health care providers meets or exceeds the applicable percentage specified at § 425.506(f).

We solicited comments on our proposal to sunset the CEHRT certification requirement in the Shared Savings Program at §§ 425.302(a)(3)(iii) and 425.506(f) and to add new requirements at § 425.507, as previously discussed. We also solicited comments on our proposal to add a new requirement for public reporting in § 425.308(b)(9), as previously discussed.

We did not receive public comments on our proposal to modify our annual certification requirement at § 425.302(a)(3)(iii). We are finalizing our proposal with modification to delay the alignment of the Shared Savings Program CEHRT requirement with MIPS Promoting Interoperability until PY 2025. Specifically, we are finalizing revisions to our regulation at § 425.302(a)(3)(iii) to make the current Shared Savings Program Annual Certification requirement applicable for only performance years 2019 through 2024.

i. MIPS Value Pathway (MVP) Reporting for Specialists in Shared Savings Program ACOs - Request for Information (RFI)

In the CY 2021 PFS proposed rule (85 FR 50232 and 50233), we proposed that for performance year 2021 and subsequent performance years, ACOs would be assessed on a measure set under the APP for Shared Savings Program ACOs. As part of finalizing the APP measure set (85 FR 34727), we stated that the transition to the APP measure set was intended to reduce reporting burden and eliminate differences in the way ACOs are scored compared to their MIPS eligible clinicians, while also moving toward a more outcome-based, primary care focused measure set. Additionally, we stated that we selected the measures to be included because they are broadly applicable for the primary care population and population health goals that are associated with the Shared Savings Program.

We received public comments raising concerns about the challenges and applicability of these measures to specialists that are part of their ACOs (85 FR 34727). Commenters provided feedback that: reducing the number of ACO quality measures would make specialists less likely

to participate in the Shared Savings Program; the proposed measures are not relevant to ophthalmology specialty practices and suggested that the same measure sets used in MIPS be permitted for reporting through the APP or a protocol be put in place to determine if the measures are relevant to the clinicians reporting under the APP; CMS should work with interested parties to refine the current set of measures to make it more appropriate for ACOs, which are responsible for total cost of care for the populations they serve; CMS should clarify if the outcome measures selected are representative of all of the different types of populations that ACOs treat and recommended that CMS take patient compliance and case mix into consideration when selecting measures because some patients may take longer to achieve health goals and ACOs may not have the same relative volume of patients with diagnoses such as diabetes and hypertension.

In the CY 2022 PFS proposed rule (86 FR 39270), we solicited comments on reporting options for specialist providers within an ACO. Specifically, we stated that we have heard from interested parties that the population health/primary care focused measures in the APP are not applicable for specialist providers within an ACO. We noted in the final rule that we may consider feedback we received to inform future rulemaking (86 FR 65264).

In the CY 2022 PFS final rule (86 FR 65376), MVPs were finalized to be available for reporting beginning with the CY 2023 performance period of MIPS, with the notion that MVPs will be implemented through notice and comment rulemaking over the next few years to offer clinically relevant quality reporting for specialists and more granular specialty data (through subgroup reporting) for patients to make informed decisions about the care they receive. Building upon our commitment to align quality measures across CMS<sup>213</sup>, we refer readers to Appendix 3: MVP Inventory, where we finalize the maintenance changes to the Value in Primary Care MVP. We noted that the primary care MVP would create continuity between the

---

<sup>213</sup> Jacobs D, Schreiber M, Seshamani M, Tsai D, Fowler E, Fleisher L. Aligning Quality Measures across CMS – The Universal Foundation. *New England Journal of Medicine*, March 2, 2023, available at <https://www.nejm.org/doi/full/10.1056/NEJMp2215539>.

primary care measures assessed under MIPS and the measures providers would be accountable for in the Medicare Shared Savings Program.

In the CY 2024 PFS proposed rule (88 FR 52437), we noted that in light of the public comments described above and the finalization and continued development of the MVPs, we believe we need incentives for specialists in Shared Savings Program ACOs to report clinically relevant quality measures and to allow patients, referring clinicians, and ACOs to have more information regarding specialists involved in patient care. We believe that encouraging specialists to report on MVPs will lead to increased specialty engagement in the Shared Savings Program, thereby holding specialists accountable for quality improvement.

Beginning in CY 2023, specialists that report under MIPS, including specialists that participate in Shared Savings Program ACOs, have the option to register to report MVPs for the applicable CY performance period as described at § 414.1365(b) as a group, subgroup, or individual and to report on relevant MVP quality measures as described at § 414.1365(c). In the proposed rule, we solicited comments on scoring incentives that would be applied to an ACO's health equity adjusted quality performance score beginning in performance year 2025 when specialists who participate in the ACO report quality MVPs as described at § 414.1365(c)(1) (88 FR 52437).

We described in the proposed rule that, similar to the health equity adjustment finalized in the CY 2023 PFS final rule (87 FR 69838), we are considering bonus points for ACOs with specialists reporting quality MVPs as described at § 414.1365(c)(1) that would be applied after MIPS scoring is complete (88 FR 52437). ACOs may receive up to a maximum of 10 additional points added to their ACO's health equity adjusted quality performance score if they meet the data completeness requirement at § 414.1340 and receives a MIPS Quality performance category score under § 414.1380(b)(1), in addition to administering the CAHPS for MIPS survey. In addition to specialists that participate in the ACO reporting quality MVPs described at § 414.1365(c)(1), an ACO would be required to report all measures in the APP measure set, meet

the data completeness requirement at § 414.1340 and receive a MIPS Quality performance category score under § 414.1380(b)(1) to be eligible for bonus points.

As stated in our proposed rule, our overarching intent is to have specialists participate in ACOs in a meaningful way and to collect quality data that is comparable to data reported by other specialty providers in quality MVPs (88 FR 52437). We solicited comments on our overall approach to align quality measures in the Adult Universal Foundation with measures used for evaluation in the Medicare Shared Savings Program. We also solicited comments on the following aspects of MVP reporting for specialists in Shared Savings Program ACOs:

- In order to highlight specialty clinical practice within ACOs, how should we encourage specialist reporting of MVPs?
- How should we encourage the reporting of MVPs to collect quality data that is comparable to data reported by other specialty providers in quality MVPs and to address clinician concerns over measure appropriateness?
- How should we consider encouraging specialists to report the MVP that is most relevant to their clinical practice?
- How should we distinguish bonus points for ACOs that report on a larger volume of patients through MVPs?
- How should we provide ACOs with bonus points to their health equity adjusted quality performance score when an ACO's specialty clinicians report MVPs?
- What concerns and considerations should we be aware of when assessing ACOs for quality performance based on reporting quality measures within MVPs?
- Would incentivizing specialty MVPs create a disincentive for ACOs to report primary care focused APP and/or MVP measures?
- In the event that MIPS quality measures in MVPs are excluded under § 414.1380(b)(1)(vii)(A), should we apply the proposed Shared Savings Program scoring policy for excluded APP measures as described in section III.G.2.f. of this final rule?

As previously noted, providing ACOs with bonus points to their health equity adjusted quality performance score when ACOs' specialty clinicians report MVPs serves to encourage reporting of MVPs. Therefore, we do not intend to establish bonus points as a permanent policy. We solicited comments on how long we should have bonus points in place in order to incentivize MVP reporting. Once specialists are reporting MVPs, overall aggregate specialty performance within an ACO could be assessed. We solicited comments on if and how CMS should consider assessing overall specialty performance as part of the APP in the future.

We noted that in section IV.A.1.b. of this final rule, we included an RFI on how we can leverage MIPS policies to enable more Medicare beneficiaries to benefit from accountable care relationships within APMs and provide rigorous performance standards for those clinicians who report MVPs and remain in MIPS. We appreciate the feedback we received in response to this comment solicitation. We may consider this information to inform future rulemaking.

#### j. Revisions to the Requirement to Meet the Case Minimum Requirement for Quality Performance Standard Determinations

##### (1) Background

For the eCQM/MIPS CQM reporting incentive for performance year 2024 and for the extreme and uncontrollable circumstances policy (§ 425.512(a)(2), (a)(5)(i)(A)(2), (c)(3)), we require ACOs to meet the case minimum requirement at § 414.1380 to determine the quality performance standard for ACOs in the first performance year of their first agreement period.

Section 414.1380 includes policies related to all of MIPS scoring and is not specific to the Quality performance category. Further, the phrase "case minimum" is mentioned in multiple paragraphs at § 414.1380. The broad reference to § 414.1380 under § 425.512(a)(2), (a)(5)(i)(A)(2), and (c)(3) does not specify which paragraph at § 414.1380 is applicable when applying case minimum for purposes of determining an ACO's quality performance standard. We believe that the references to meeting the case minimum requirement at § 414.1380 in the context of determining an ACO's quality performance standard under § 425.512(a)(2),

(a)(5)(i)(A)(2), and (c)(3) is not sufficient in describing our policy's intent, which is to apply the MIPS Quality performance category scoring policies as described at § 414.1380(b)(1) in determining the ACO quality performance standard.

## (2) Revisions

To alleviate confusion regarding the reference to case minimum in determining the ACO quality performance standard for performance year 2024 and subsequent performance years, we proposed to replace the references to meeting the case minimum requirement at § 414.1380 from § 425.512(a)(2), (a)(5)(i)(A)(2), and (c)(3) with the requirement that the ACO must receive a MIPS Quality performance category score under § 414.1380(b)(1) in order to meet the quality performance standard (88 FR 52438). As described in our proposed rule, this revision would correct the purpose of our reference to case minimums by incorporating all of the applications of case minimums in the MIPS Quality performance category scoring policies in our policies to determine an ACO's quality performance standard under the Shared Savings Program (88 FR 52438). For example, under current policy at § 414.1380(b)(1)(i)(A)(2)(ii) in performance year 2024, if an ACO does not meet the case minimum requirement on an administrative claims-based measure, that measure would be excluded from the ACO's MIPS Quality performance category measure achievement points (numerator) and total available measure achievement points (denominator). If the ACO in this example meets the data completeness requirement at § 414.1340 for the ten CMS Web Interface measures or the three eCQMs/MIPS CQMs/Medicare CQMs and administers a CAHPS for MIPS survey, the ACO would receive a MIPS Quality performance category score. The resulting MIPS Quality performance category score in this example would be used to determine the ACO's quality performance standard under the Shared Savings Program.

All ACOs that participated in the Shared Savings Program were affected by an extreme and uncontrollable circumstance as described at § 425.512(c)(1) for performance years 2021, 2022, and 2023 due to the COVID-19 public health emergency. As stated in our proposal, we

believe that any unintended impact of meeting the case minimum requirement at § 414.1380 in evaluating an ACO's quality performance standard for performance years 2021, 2022, and 2023 was mitigated by the application of the extreme and uncontrollable circumstance policy (88 FR 52438). Specifically, we stated that it is not our intent to exclude an ACO who received a MIPS Quality performance category score, but reported less than 20 cases on any measure(s) in the APP measure set from achieving the quality performance standard under § 425.512(a)(2), (a)(5)(i)(A)(2), and (c)(3), if that ACO is otherwise eligible to meet the quality performance standard (88 FR 52438).

Separately, we proposed to address a gap in the current rule regarding the “minimum beneficiary sampling requirement” at § 414.1380(b)(1)(vii)(B) (88 FR 52439). This policy provides for a 10-point reduction in the total available measure achievement points for MIPS eligible clinicians that submit five measures or fewer and register for the CAHPS for MIPS survey but do not meet the minimum beneficiary sampling requirement. As we stated in our proposal, the case minimum is not applicable to the CAHPS for MIPS survey, we did not intend to preclude ACOs that do not meet the minimum beneficiary sampling requirement to field a CAHPS for MIPS survey from meeting the Shared Savings Program quality performance standard or the alternative quality performance standard (88 FR 52439). We proposed revisions to the following regulation text sections:

- At § 425.512(a)(2)(ii) and (iii), we proposed to replace the phrase “case minimum requirement at § 414.1380 of this subchapter” with the phrase “receives a MIPS Quality performance category score under § 414.1380(b)(1) of this subchapter.”

Additionally, we proposed to replace the phrase “CAHPS for MIPS survey” with the phrase “CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter)” (88 FR 52439). To read as follows: For the first performance year of an ACO's first agreement period under the Shared Savings Program, the ACO would meet the quality performance standard under the Shared Savings Program, if:

++ For performance year 2024. If the ACO reports data via the APP and meets the data completeness requirement at § 414.1340 of this subchapter on the ten CMS Web Interface measures or the three eCQMs/MIPS CQMs/Medicare CQMs, and the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter), and receives a MIPS Quality performance category score under § 414.1380(b)(1) of this subchapter, for the applicable performance year.

++ For performance year 2025 and subsequent performance years. If the ACO reports data via the APP and meets the data completeness requirement at § 414.1340 of this subchapter on the three eCQMs/MIPS CQMs/Medicare CQMs and the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter), and receives a MIPS Quality performance category score under § 414.1380(b)(1) of this subchapter, for the applicable performance year.

- At § 425.512(a)(5)(i)(A)(2), we proposed to remove the phrase “and the case minimum requirement at § 414.1380 of this subchapter.” As follows: If the ACO reports the three eCQMs/MIPS CQMs in the APP measure set, meeting the data completeness requirement at § 414.1340 of this subchapter for all three eCQMs/MIPS CQMs, and achieving a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP measure set and a quality performance score equivalent to or higher than the 40th percentile of the performance benchmark on at least one of the remaining five measures in the APP measure set.

++ We are not including a requirement under § 425.512(a)(5)(i)(A)(2) for the ACO to receive a MIPS Quality performance category score under § 414.1380(b)(1). As described at § 414.1380(b)(1)(vii), the MIPS Quality performance category score is the sum of all the measure achievement points divided by the sum of total available measure achievement points for the quality performance category. As stated in our proposal, it would not be appropriate to require an ACO to receive a MIPS Quality performance category score in determining whether

the ACO met the Shared Savings Program quality performance standard based on measure-level performance (such as in the case of the eCQM/MIPS CQM reporting incentive) (88 FR 52439).

- At § 425.512(c)(3)(iii), we proposed to remove the phrase “case minimum” for performance 2024 and subsequent performance years and replace with the phrase “receives a MIPS Quality performance category score under § 414.1380(b)(1) of this subchapter.” To read as follows: For performance year 2024 and subsequent performance years, if the ACO reports quality data via the APP and meets the data completeness requirement at § 414.1340 of this subchapter and receives a MIPS Quality performance category score under § 414.1380(b)(1) of this subchapter, CMS will use the higher of the ACO's health equity adjusted quality performance score or the equivalent of the 40th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

We proposed to revise § 425.512(a)(5)(iii)(A) and (B) to read as follows:

- For performance year 2024, the ACO does not report any of the ten CMS Web Interface measures, any of the three eCQMs/MIPS CQMs/Medicare CQMs and does not administer a CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter) under the APP.

- For performance year 2025 and subsequent years, the ACO does not report any of the three eCQMs/MIPS CQMs/Medicare CQMs and does not administer a CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter) under the APP.

Additionally, we proposed to add clarifying language to the proposed redesignated paragraph (b)(2) of § 425.512 on calculating an ACO's health equity adjusted quality performance score as follows:

- For performance year 2024 and subsequent performance years, CMS would calculate the ACO's health equity adjusted quality performance score as the sum of: the ACO's MIPS Quality performance category score for all measures in the APP measure set, and the ACO's

health equity adjustment bonus points calculated in accordance with paragraph (b)(3) of this section, to which the sum of these values may not exceed 100 percent, if the following requirements are met: (1) The ACO reports the three eCQMs/MIPS CQMs/ Medicare CQMs in the APP measure set; (2) meets the data completeness requirement at § 414.1340 for the three eCQMs/MIPS CQMs/Medicare CQMs; and (3) administers the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B)).

The following is a summary of the comments we received on these proposals and our responses.

*Comment:* Two commenters supported our proposal to revise the requirement to meet the case minimum requirement for quality performance standard determinations. One commenter stated that they believe that this proposal will better incorporate all case minimums in the MIPS Quality performance category scoring policy to determine an ACO's quality performance standard under the Shared Savings Program.

*Response:* We appreciate the commenters' support.

After consideration of public comments, we are finalizing the policies as proposed. For performance year 2024 and subsequent performance years, we are finalizing our proposal to replace the references to meeting the case minimum requirement at § 414.1380 from § 425.512(a)(2), (a)(5)(i)(A)(2), and (c)(3) with the requirement that the ACO must receive a MIPS Quality performance category score under § 414.1380(b)(1) in order to meet the quality performance standard. We are also finalizing our proposal to address a gap in the current rule regarding the "minimum beneficiary sampling requirement" at § 414.1380(b)(1)(vii)(B) (88 FR 52439). We are also finalizing revisions to the following regulation text sections as proposed:

- At § 425.512(a)(2)(ii) and (iii), replace the phrase "case minimum requirement at § 414.1380 of this subchapter" with the phrase "receives a MIPS Quality performance category score under § 414.1380(b)(1) of this subchapter."
- To replace the phrase "CAHPS for MIPS survey" with the phrase "CAHPS for MIPS

survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter).” To read as follows:

For the first performance year of an ACO's first agreement period under the Shared Savings Program, the ACO will meet the quality performance standard if it meets the requirements under this paragraph (a)(2).

++ For performance year 2024. If the ACO reports data via the APP and meets the data completeness requirement at § 414.1340 of this subchapter on the ten CMS Web Interface measures or the three eCQMs/MIPS CQMs/Medicare CQMs, and the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter), and receives a MIPS Quality performance category score under § 414.1380(b)(1) of this subchapter, for the applicable performance year.

++ For performance year 2025 and subsequent performance years. If the ACO reports data via the APP and meets the data completeness requirement at § 414.1340 of this subchapter on the three eCQMs/MIPS CQMs/Medicare CQMs and the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter), and receives a MIPS Quality performance category score under § 414.1380(b)(1) of this subchapter, for the applicable performance year.

- At § 425.512(a)(5)(i)(A)(2), to remove the phrase “and the case minimum requirement at § 414.1380 of this subchapter.” To read as follows: If the ACO reports the three eCQMs/MIPS CQMs in the APP measure set, meeting the data completeness requirement at § 414.1340 of this subchapter for all three eCQMs/MIPS CQMs, and achieving a quality performance score equivalent to or higher than the 10th percentile of the performance benchmark on at least one of the four outcome measures in the APP measure set and a quality performance score equivalent to or higher than the 40th percentile of the performance benchmark on at least one of the remaining five measures in the APP measure set.

- At § 425.512(c)(3)(iii), to remove the phrase “case minimum” for performance 2024 and subsequent performance years and replace with the phrase “receives a MIPS Quality

performance category score under § 414.1380(b)(1) of this subchapter.” To read as follows: For performance year 2024 and subsequent performance years, if the ACO reports quality data via the APP and meets the data completeness requirement at § 414.1340 of this subchapter and receives a MIPS Quality performance category score under § 414.1380(b)(1) of this subchapter, CMS will use the higher of the ACO's health equity adjusted quality performance score or the equivalent of the 40th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

We are finalizing our proposal to revise § 425.512(a)(5)(iii)(A) and (B) to read as follows:

- For performance year 2024, the ACO does not report any of the ten CMS Web Interface measures, any of the three eCQMs/MIPS CQMs/Medicare CQMs and does not administer a CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter) under the APP.

- For performance year 2025 and subsequent years, the ACO does not report any of the three eCQMs/MIPS CQMs/Medicare CQMs and does not administer a CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter) under the APP.

Additionally, we are finalizing the addition of clarifying language to the redesignated paragraph (b)(2) of § 425.512 on calculating an ACO's health equity adjusted quality performance score as follows:

- For performance year 2024 and subsequent performance years. For an ACO that reports the three eCQMs/MIPS CQMs/Medicare CQMs in the APP measure set, meeting the data completeness requirement at § 414.1340 of this subchapter for all three eCQMs/MIPS CQMs/Medicare CQMs, and administers the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter), CMS calculates the ACO's health equity adjusted quality performance score as the sum of the ACO's MIPS Quality performance category score

for all measures in the APP measure set and the ACO's health equity adjustment bonus points calculated in accordance with paragraph (b)(3) of this section. The sum of these values may not exceed 100 percent.

### 3. Determining Beneficiary Assignment Under the Shared Savings Program

#### a. Modifications to the Step-wise Assignment Methodology and Approach to Identifying the Assignable Beneficiary Population

##### (1) Background

##### (a) Background on Assignment Methodology

Section 1899(c)(1) of the Act, as amended by the CURES Act and the Bipartisan Budget Act of 2018, provides that the Secretary shall determine an appropriate method to assign Medicare FFS beneficiaries to an ACO based on their utilization of primary care services provided by physicians in the ACO and, in the case of performance years beginning on or after January 1, 2019, services provided by a FQHC or RHC. As we have explained in earlier rulemaking, the term “assignment” for purposes of the Shared Savings Program in no way implies any limits, restrictions, or diminishment of the rights of Medicare FFS beneficiaries to exercise freedom of choice in the physicians and other health care practitioners from whom they receive covered services. In the context of the Shared Savings Program, “assignment” refers to an operational process by which Medicare will determine whether a beneficiary has chosen to receive a sufficient level of certain primary care services from physicians and other health care practitioners associated with a specific ACO so that the ACO may be appropriately designated as exercising basic responsibility for that beneficiary’s care.<sup>214</sup>

The regulations governing the assignment methodology under the Shared Savings Program are in 42 CFR part 425, subpart E. Under claims-based assignment, we determine a Medicare FFS beneficiary is assigned to an ACO if the beneficiary meets the criteria in § 425.401(a) to be eligible for assignment to an ACO, and the beneficiary’s utilization of

---

<sup>214</sup> See for example, 76 FR 67851, and 83 FR 67863.

primary care services meets the criteria established under the assignment methodology specified in §§ 425.402 and 425.404. Section 425.402 specifies a step-wise assignment methodology for determining an ACO's assigned beneficiary population based on beneficiaries' use of primary care services. In accordance with § 425.402(b)(1), as a "pre-step" in the two-step claims-based assignment process, CMS identifies all beneficiaries who had at least one primary care service furnished by a physician who is an ACO professional in the ACO and who is a primary care physician as defined under § 425.20 or has one of the primary specialty designations specified in § 425.402(c). This pre-step is designed to satisfy the statutory requirement under section 1899(c)(1) of the Act that beneficiaries be assigned to an ACO based on their use of primary care services furnished by physicians participating in the ACO. Beneficiaries who meet the pre-step requirement are then assigned to an ACO through either one of two steps specified in § 425.402(b)(3) and (b)(4).

Under the first step of the assignment process, a beneficiary who is eligible for assignment and meets the pre-step requirement is assigned to an ACO if the allowed charges for primary care services furnished to the beneficiary during the assignment window by primary care physicians, nurse practitioners (NPs), physician assistants (PAs), and clinical nurse specialists (CNSs) who are ACO professionals in the ACO are greater than the allowed charges for primary care services furnished during the assignment window by primary care physicians, NPs, PAs, or CNSs who are ACO professionals in any other ACO, or not affiliated with any ACO and identified by a Medicare-enrolled billing TIN. The second step of the assignment methodology applies to the remainder of the beneficiaries who are eligible for assignment and meet the pre-step requirement, who have not had a primary care service rendered during the assignment window by any primary care physician, NP, PA, or CNS, either inside or outside the ACO. The beneficiary will be assigned to an ACO if the allowed charges for primary care services furnished to the beneficiary during the assignment window by physicians who are ACO professionals with specialty designations specified in § 425.402(c) are greater than the allowed

charges for primary care services furnished during the assignment window by physicians with such specialty designations who are ACO professionals in any other ACO, or who are unaffiliated with an ACO and are identified by a Medicare-enrolled billing TIN.

The Shared Savings Program step-wise assignment process is offered in two similar, but distinct, claims-based assignment methodologies, prospective assignment and preliminary prospective assignment with retrospective reconciliation. Consistent with the requirements of section 1899(c)(2)(A) of the Act, we offer all Shared Savings Program ACOs the opportunity to select their assignment methodology annually, starting with agreement periods beginning on July 1, 2019. We use the same step-wise assignment methodology under § 425.402 to assign beneficiaries to ACOs under prospective assignment and ACOs under preliminary prospective assignment with retrospective reconciliation.

In the June 2015 final rule (80 FR 32699), we finalized the definition of “assignment window” under § 425.20 to mean the 12-month period used to assign beneficiaries to an ACO. As described in the December 2018 final rule (83 FR 67861), the assignment window for ACOs under prospective assignment is a 12-month period offset from the calendar year (for example, October through September preceding the calendar year), while for ACOs under preliminary prospective assignment with retrospective reconciliation, the assignment window is the 12-month period based on the calendar year. Operationally, in determining beneficiary assignment for each performance year and benchmark year, we identify allowed charges for services billed under the HCPCS and CPT codes included in the applicable definition of primary care services under § 425.400(c), and according to the step-wise assignment methodology specified in subpart E of the Shared Savings Program's regulations, during all months of the 12-month period of the assignment window.

The step-wise assignment methodology was initially established with the November 2011 final rule and was modified through subsequent rulemaking. For instance, with the June 2015 final rule, we modified the approach to include claims for primary care services furnished by

non-physician practitioners (NPs, PAs, and CNSs) in step 1 of the assignment methodology rather than in step 2, and to exclude services provided by certain physician specialties from step 2 of the assignment process. We refer readers to the November 2011 final rule (76 FR 67853 through 67858) and the June 2015 final rule (80 FR 32748 through 32755) for a discussion of the relevant background and related considerations. Generally, as we have previously explained in rulemaking (see, for example, 76 FR 67853 through 67855; see also 80 FR 32748 and 32754), the step-wise assignment methodology maintains the statutory requirement to conduct claims-based beneficiary assignment based on beneficiaries' utilization of physician primary care services, recognizing the necessary and appropriate role of certain specialists in providing primary care services, such as in areas with primary care physician shortages. Further, including services furnished by NPs, PAs, and CNSs in determining where a beneficiary has received the plurality of primary care services in step 1 of the assignment methodology helps ensure that a beneficiary is assigned to the ACO whose ACO participants are actually providing the plurality of primary care for that beneficiary, and thus, should be responsible for managing the patient's overall care, or is not assigned to any ACO if the plurality of the beneficiary's primary care is furnished by practitioners in a non-ACO entity (see, for example, 80 FR 32748).

Various Shared Savings Program operations are based on the ACO's assigned population, or consider the size of the ACO's assigned population, which are summarized as follows:

- Within the Shared Savings Program's financial methodology:

- ++ CMS determines benchmark and performance year expenditures based on the ACO's assigned population as specified under subpart G of the regulations.

- ++ CMS determines the counties to include in the ACO's regional service area based on the ACO's assigned population (refer to definition of ACO's regional service area in § 425.20), and uses the ACO's assigned population in determining the share of assignable beneficiaries in the ACO's regional service area that are assigned to the ACO (see §§ 425.601(a)(5)(v) and 425.652(a)(5)(v)) which is applied in calculating the two-way blend of national and regional

growth rates used to trend forward BY1 and BY2 expenditures to BY3 according to §§ 425.601(a)(5)(iv) and 425.652(a)(5)(iv) and as part of the blended growth rates used to update the benchmark according to §§ 425.601(b) and 425.652(b)(2). CMS also uses the ACO's regional service area to determine the regional adjustment to the ACO's historical benchmark according to § 425.656.

++ CMS considers the proportion of the ACO's assigned beneficiary population that is dually eligible for Medicare and Medicaid and the difference between the ACO's weighted average prospective HCC risk score for BY3 taken across the four Medicare enrollment types and when calculating the offset factor applied to negative regional adjustments (see § 425.656(c)(4)).

++ CMS considers the size of the ACO's assigned population in calculating the proration factor when determining the ACO's eligibility for the prior savings adjustment (see § 425.658(b)(3)), as well as in determining the minimum savings rate (MSR) / minimum loss rate (MLR) for ACOs that select the option to have their MSR/MLR calculated based on the number of beneficiaries assigned to the ACO (refer to § 425.605(b)(2)(i)(C) (BASIC track) and § 425.610(b)(1)(iii) (ENHANCED track)).

++ CMS determines average prospective HCC risk scores for assigned beneficiaries for purposes of adjusting assigned beneficiary expenditures for severity and case mix (refer to §§ 425.601(a)(3) and (10), 425.605(a)(1), and 425.610(a)(2), (3) and (10)), adjusting for differences in severity and case mix between the ACO's assigned beneficiary population and the assignable beneficiary population for the ACO's regional service area according to §§ 425.601(a)(8)(i)(C) and 425.656(b)(3), and adjusting the flat dollar amount ACPT for differences in severity and case mix between the ACO's BY3 assigned beneficiary population and the national assignable FFS population according to § 425.660(b)(4).

- In determinations related to an ACO's eligibility for participation for the Shared Savings Program:

++ CMS determines expenditures based on the ACO's assigned population when identifying if the ACO is a high revenue or low revenue ACO (as defined under § 425.20).

++ CMS considers whether an ACO meets the requirement to have at least 5,000 Medicare FFS assigned beneficiaries (see § 425.110).

++ CMS uses the ACO's number of assigned beneficiaries in calculating and recalculating the amount of the repayment mechanism required for ACOs participating under a two-sided model (see § 425.204(f)).

- For ACOs eligible to receive AIPs (see § 425.630(b)), CMS considers the size of the ACO's assigned population and the risk factors-based score of those beneficiaries in determining the quarterly payment amount (see § 425.630(f)).

- For ACOs that meet the reporting requirements for receiving a health equity adjusted quality performance score (see § 425.512(b)), CMS considers the proportion of the ACO's assigned beneficiary population that is underserved in determining the ACO's health equity adjustment bonus points (see § 425.512(b)(2)(iv)).

- For ACOs affected by an extreme and uncontrollable circumstance, CMS considers the proportion of the ACO's assigned beneficiaries residing in an area identified under the Quality Payment Program as being affected by an extreme and uncontrollable circumstance in determining the ACO's quality score (see § 425.512(c)(1)(i)). CMS considers the percentage of the ACO's performance year assigned beneficiary population affected by an extreme and uncontrollable circumstance in determining the amount of shared losses owed by ACOs under a two-sided model (refer to §§ 425.605(f)(1) and 425.610(i)(1)).

- For ACOs that have established a beneficiary incentive program, beneficiaries assigned to an ACO who receive a qualifying service are eligible to receive an incentive payment (see § 425.304(c)(3)(ii) through (iv)).

- In accordance with the Shared Savings Program regulations under subpart H, CMS provides ACOs with certain aggregate reports and beneficiary-identifiable claims data on the ACO's assigned beneficiary population.

Further, a non-claims-based process for voluntary alignment applies to all Shared Savings Program ACOs and is used to supplement claims-based assignment. Section 1899(c) of the Act, as amended by section 50331 of the Bipartisan Budget Act of 2018, requires the Secretary to permit a Medicare FFS beneficiary to voluntarily identify an ACO professional as their primary care provider for purposes of assignment to an ACO. In the November 2018 final rule (83 FR 59959 through 59964), we finalized changes to the beneficiary voluntary alignment policies CMS previously established to implement the requirements under section 1899(c)(2)(B) of the Act (refer to § 425.402(e), as revised). In the November 2018 final rule (83 FR 59964), we revised the requirements related to primary care services and practitioner specialties previously established for the voluntary alignment process. As a result of this change, a voluntarily aligned beneficiary is no longer required to receive a primary care service from an ACO professional to be assigned to the ACO in which the beneficiary's designated primary care clinician is participating. Additionally, the revision established that a beneficiary can be voluntarily aligned to an ACO based on their selection of any ACO professional as their primary clinician, regardless of the ACO professional's specialty and including NPs, PAs, and CNSs. As specified in § 425.402(e)(1), and subject to § 425.402(e)(2), assignment under voluntary alignment supersedes any assignment that otherwise may have occurred under claims-based assignment.

#### (b) Background on Identification and Uses of the Assignable Beneficiary Population under the Shared Savings Program

To identify the assignable beneficiary population, which is used in program financial calculations, we apply a similar logic as is used to identify the Medicare beneficiaries who can be assigned to an ACO in the pre-step to the claims-based assignment methodology (see, for example, 81 FR 5843, and 81 FR 37985). In the June 2016 final rule (81 FR 37950), we finalized

policies to use the assignable beneficiary population (a subset of the larger population of Medicare FFS beneficiaries) as the basis of certain calculations that had previously been based on the overall Medicare FFS population, including expenditures used to trend and update ACOs' historical benchmarks and to establish the truncation thresholds used in expenditure calculations. In the June 2016 final rule (see 81 FR 37985 through 37988), we finalized the definition of "assignable beneficiary" under § 425.20 to mean a Medicare FFS beneficiary who receives at least one primary care service with a date of service during a specified 12-month assignment window from a Medicare-enrolled physician who is a primary care physician or who has one of the specialty designations included in § 425.402(c). We specified that the assignable population used to calculate national and regional benchmarking factors was to be identified using the 12-month calendar year assignment window corresponding to the benchmark or performance year for all ACOs, regardless of assignment methodology which applied to the ACO, which at that time was determined by an ACO's track. We explained our belief that using assignable beneficiaries across all program calculations based on national and regional FFS expenditures would result in factors that are generally more comparable to ACO expenditures than factors based on the overall Medicare FFS population, which can include non-utilizers of health care services and other beneficiaries not eligible for assignment (see, for example, 81 FR 5843 and 5844).

In the CY 2023 PFS final rule (87 FR 69929 through 69932), we finalized a modification to this policy, applicable for agreement periods beginning on January 1, 2024, and in subsequent years, to calculate risk-adjusted regional expenditures and the share of assignable beneficiaries assigned to an ACO using county-level values based on the assignable population identified using an assignment window that is consistent with the ACO's assignment methodology selection for the applicable performance year. (Refer to §§ 425.652(a)(5)(v)(A) and (b)(2)(iv)(A), and 425.654(a)(1)(i).) Under this approach, for ACOs selecting prospective assignment, we will use an assignable population of beneficiaries that is identified based on the

offset assignment window (for example, October through September preceding the calendar year) and for ACOs selecting preliminary prospective assignment with retrospective reconciliation, we will use an assignable population of beneficiaries identified based on the calendar year assignment window (87 FR 69930). We also specified in the CY 2023 PFS final rule (87 FR 69931) that we would continue to compute all factors used in calculations that are based on the national assignable FFS population using an assignable population identified based on the calendar year assignment window. For ACOs participating under agreement periods beginning on or after July 1, 2019, and before January 1, 2024, we will continue to identify the assignable population that is the basis for calculating national and regional factors using the 12-month period based on a calendar year, which aligns with the assignment window for preliminary prospective assignment with retrospective reconciliation, regardless of the ACO's assignment methodology. (See § 425.601. See also 87 FR 69929, for a description of relevant background.)

The assignable beneficiary population is used in various calculations under the Shared Savings Program, including the following:

- CMS determines the 99th percentile of national Medicare FFS expenditures for assignable beneficiaries for purposes of truncating beneficiary expenditures in order to minimize variation from catastrophically large claims (see §§ 425.601(a)(4) and (c)(3), 425.605(a)(3), 425.610(a)(4)(ii), 425.652(a)(4), and 425.654(a)(3)).
- CMS determines average county FFS expenditures based on expenditures for the assignable population of beneficiaries in each county of an ACO's regional service area (see §§ 425.601(c) and 425.654(a)) for purposes of calculating the ACO's regional FFS expenditures (see §§ 425.601(d) and 425.654(b)). CMS also determines the share of assignable beneficiaries in the ACO's regional service area that are assigned to the ACO (see §§ 425.601(a)(5)(v) and 425.652(a)(5)(v)). The ACO's regional FFS expenditures and the share of assignable

beneficiaries in the ACO's regional service area that are assigned to the ACO are used in the following calculations:

++ Trend forward BY1 and BY2 expenditures to BY3 according to §§ 425.601(a)(5) and 425.652(a)(5).

++ Determine the blended growth rates used to update the benchmark according to §§ 425.601(b) and 425.652(b)(2).

++ Determine the adjustment to the ACO's benchmark according to §§ 425.601(a)(8) and 425.652(a)(8).

- CMS determines national per capita FFS expenditures for assignable beneficiaries for purposes of capping the regional adjustment to the ACO's historical benchmark according to §§ 425.601(a)(8)(ii)(C) and 425.656(c)(3), capping the prior savings adjustment according to § 425.652(a)(8)(iv), and determining a flat dollar amount ACPT according to § 425.660(b)(3).

- CMS determines national growth rates for assignable beneficiaries that are used to trend forward BY1 and BY2 expenditures to BY3 according to §§ 425.601(a)(5)(ii) and 425.652(a)(5)(ii) and to determine the blended growth rates used update the benchmark according to §§ 425.601(b)(2) and 425.652(b)(2)(i).

- CMS determines average prospective HCC risk scores for assignable beneficiaries for purposes of adjusting county FFS expenditures for severity and case mix of assignable beneficiaries in the county according to §§ 425.601(c)(4) and 425.654(a)(4), calculating the regional adjustment to the historical benchmark by adjusting for differences in severity and case mix between the ACO's assigned beneficiary population and the assignable beneficiary population for the ACO's regional service area according to §§ 425.601(a)(8)(i)(C) and 425.656(b)(3), and adjusting the flat dollar amount ACPT for differences in severity and case mix between the ACO's BY3 assigned beneficiary population and the national assignable FFS population according to § 425.660(b)(4).

(c) Concerns about Beneficiaries Excluded from the Current Assignment Methodology Based on the Pre-Step Requirement and Definition of an Assignable Beneficiary

We have established a goal that 100 percent of beneficiaries enrolled in Original Medicare be involved in a care relationship with accountability for quality and total cost of care by 2030.<sup>215</sup> We have also established health equity as a top priority through our CMS Framework for Health Equity (2022-2032).<sup>216</sup> However, we believe that the assignment pre-step and definition of assignable beneficiary may create barriers for some beneficiaries otherwise eligible for assignment to be assigned to ACOs. Revising the pre-step and definition of assignable beneficiary thus represents an opportunity to expand the assigned and assignable populations.

ACOs and other interested parties have also raised concerns that the current pre-step and definition of assignable beneficiary create barriers for some beneficiaries to be assigned to ACOs. For example, in previous proposed rules, we have received input from commenters that the pre-step requirement, as implemented in the current assignment methodology, systematically excludes from assignment beneficiaries who only received primary care from NPs, PAs, and CNSs. In response to the CY 2023 PFS proposed rule, a commenter noted that the current claims-based assignment methodology creates a barrier for NPs and their patients to participate in ACOs.<sup>217</sup>

Additional analysis by CMS has found that expanding the assignment methodology to allow more opportunities for beneficiaries to be assignable based on their receipt of primary care services provided by NPs, PAs, or CNSs would reduce the barriers for underserved beneficiaries to be assigned to ACOs. As described elsewhere in this section of this final rule, we have modeled the impact of revising the step-wise assignment methodology and expanding the

---

<sup>216</sup> Centers for Medicare & Medicaid Services, *The CMS Framework for Health Equity 2022-2032* (April 2022), available at <https://www.cms.gov/files/document/cms-framework-health-equity.pdf>.

<sup>217</sup> See comment letter from American Association of Nurse Practitioners, to Chiquita Brooks-LaSure, Administrator, CMS (September 6, 2022), available at <https://www.regulations.gov/comment/CMS-2022-0113-21927>.

definition of an assignable beneficiary. We observed that such an approach could add to the ACO-assigned population<sup>218</sup> and the national assignable population<sup>219</sup> identified under current Shared Savings Program policies a population of beneficiaries that are more likely to be disabled, be enrolled in the Medicare Part D low-income subsidy (LIS) and reside in areas with higher ADI scores. The newly added beneficiaries to the ACO-assigned and national assignable populations also had a lower average prospective HCC risk score, lower total per capita-year spending, higher hospice utilization rate, and higher mortality rate than the ACO-assigned and national assignable populations under current Shared Savings Program policies. Therefore, we believe that adjusting the assignment methodology within the flexibility available under the statute so that additional beneficiaries can be included in the population of beneficiaries assigned to ACOs participating in the Shared Savings Program, and modifying the definition of assignable beneficiary to include a broader population, would make meaningful steps toward greater health equity and align with priorities recently emphasized in our CMS Framework for Health Equity (2022-2032).<sup>220</sup>

## (2) Revisions

### (a) Overview of Revisions to Incorporate Use of an Expanded Window for Assignment

Section 1899(c)(1)(A) of the Act requires that claims-based assignment to ACOs be based on beneficiaries' utilization of primary care services furnished by ACO professionals who are physicians. In the CY 2024 PFS proposed rule (88 FR 52440 through 52449), we proposed to use an expanded window for assignment in a new step 3 to the claims-based assignment process to identify additional beneficiaries for ACO assignment (described in section III.G.3.a.(2)(b). of the proposed rule, 88 FR 52444 through 52446), and we proposed to modify the definition of

---

<sup>218</sup> By "ACO-assigned population," we refer to the population of beneficiaries assigned to ACOs pursuant to the Shared Savings Program assignment methodology specified under 42 CFR part 425, subpart E.

<sup>219</sup> By "national assignable population" we refer to the population of beneficiaries that meet the definition of assignable beneficiary under § 425.20, across the national population of Medicare FFS enrollees. We use this term for clarity, in certain contexts, to underscore a reference to the assignable population determined at the national level, across the Medicare FFS population.

<sup>220</sup> Centers for Medicare & Medicaid Services, *The CMS Framework for Health Equity 2022-2032* (April 2022), available at <https://www.cms.gov/files/document/cms-framework-health-equity.pdf>.

“assignable beneficiary” to be consistent with this use of an expanded window for assignment to identify additional beneficiaries to include in the assignable population after application of the existing methodology (described in section III.G.3.a.(2)(c). of the proposed rule, 88 FR 52446 and 52447). We proposed to add a new definition of “Expanded window for assignment” in § 425.20 to mean the 24-month period used to assign beneficiaries to an ACO, or to identify assignable beneficiaries, or both that includes the applicable 12-month assignment window (as defined under § 425.20) and the preceding 12 months (described in section III.G.3.a.(2)(a). of the proposed rule, 88 FR 52443 through 52444).

The following is a brief summary of the proposed uses of the expanded window for assignment, described in greater detail elsewhere within section III.G.3.a of the proposed rule. First, we proposed that beneficiaries would be assigned to ACOs pursuant to the proposed step 3 to the beneficiary assignment methodology only after the current steps 1 and 2 have been carried out, and step 3 would apply only to beneficiaries who do not meet the pre-step requirement but who received at least one primary care service during the proposed expanded window for assignment with an ACO professional who is a primary care physician or a physician who has one of the specialty designations included in § 425.402(c). Beneficiaries qualifying for step 3 would be assigned based on the plurality of allowed charges for primary care services during this expanded window for assignment. Second, the proposed revision to the definition of an assignable beneficiary would similarly include beneficiaries who received at least one primary care service during the proposed expanded window for assignment from a Medicare-enrolled physician who is a primary care physician or who has one of the specialty designations included in § 425.402(c). In combination with using the expanded window for assignment for identifying beneficiaries who received at least one primary care service from a primary care physician or a physician whose specialty designation is used in assignment, under both the proposed step 3 for assignment and proposed revised definition of an assignable beneficiary, we would continue to consider whether beneficiaries received at least one primary care service during the 12-month

assignment window. We proposed that these changes would be effective for the performance year beginning on January 1, 2025, and subsequent performance years.

As we explained in the CY 2024 PFS proposed rule (see 88 FR 52443 through 52444), a number of factors informed our consideration of the duration of the expanded window for assignment. We stated our belief that a 24-month expanded window for assignment, as opposed to a longer period, would prioritize primary care services that were provided more recently. Through the proposed modifications to the assignment methodology and the definition of assignable beneficiary, we sought to better account for beneficiaries who may be receiving their primary care predominantly from non-physician practitioners during the 12-month assignment window, but who received care from a physician in the preceding 12 months, in recognition of the statutory requirement in section 1899(c) of the Act that claims-based assignment be based on receipt of primary care services from physicians who are ACO professionals. We stated our belief that primary care services furnished by NPs, PAs, and CNSs during the 12-month assignment window could reflect their work in clinical teams in collaboration with and under the supervision of physicians, and thereby represent a continuation of the beneficiary's primary care relationship with a physician from the previous year. Furthermore, use of a 24-month expanded window for assignment would build on experience we have gained and lessons learned from testing Medicare ACO initiatives by the Center for Medicare and Medicaid Innovation (Innovation Center), specifically from the use of a 2-year beneficiary alignment period in the ACO Realizing Equity, Access, and Community Health (REACH) Model and the Next Generation ACO (NGACO) Model.<sup>221</sup>

---

<sup>221</sup> See, for example, CMS, Center for Medicare & Medicaid Innovation, ACO Realizing Equity, Access, and Community Health (REACH) Model, PY2023 Financial Operating Guide: Overview, available at <https://innovation.cms.gov/media/document/aco-reach-py2023-financial-op-guide> (refer to Appendix B, Beneficiary Alignment Procedures). See also, CMS, Center for Medicare & Medicaid Innovation, Next Generation ACO Model Benchmarking Methods (December 15, 2015), available at <https://innovation.cms.gov/files/x/nextgenaco-methodology.pdf> (refer to Appendix A, Next Generation ACO Model Alignment Procedures). In summary, under the ACO REACH Model and NGACO Model the alignment period consists of two alignment years. The first alignment year is the 12-month period ending 18 months prior to the start of the relevant performance year or base year. The second alignment year is the 12-month period ending 6 months prior to the start of the relevant performance year or base year.

We also explained our belief that it would be timely to propose modifications to the definition of “assignment window” under § 425.20 for improved clarity and consistency with the programmatic applications of the assignment window. Under the existing definition, assignment window means the 12-month period used to assign beneficiaries to an ACO. However, under existing Shared Savings Program policies and under the proposed changes described in section III.G.3.a of the proposed rule, we use the term assignment window in referencing our identification of assignable beneficiaries. Therefore, we proposed to modify the definition of assignment window to mean the 12-month period used to assign beneficiaries to an ACO, or to identify assignable beneficiaries, or both (88 FR 52443).

We solicited comments on proposed modifications to § 425.20, to revise the definition of “assignable beneficiary,” “assignment window,” and add a new definition of “expanded window for assignment”.

We summarize and respond to public comments we received on these proposals elsewhere in this section of this final rule.

#### (b) Revisions to Add a Step 3 to the Beneficiary Assignment Methodology

For the performance year beginning on January 1, 2025, and subsequent performance years, we proposed to revise the step-wise beneficiary assignment methodology, as described in § 425.402, to include a step 3, which we proposed would utilize the proposed expanded window for assignment to identify additional beneficiaries for assignment among Medicare FFS beneficiaries who were not identified under the existing pre-step. (Refer to 88 FR 52444 through 52446.) Specifically, step 3 would identify all such beneficiaries not identified by the pre-step criterion specified in § 425.402(b)(1), who also meet the following criteria:

(1) Received at least one primary care service with a non-physician ACO professional (NP, PA, or CNS) in the ACO during the applicable 12-month assignment window.

(2) Received at least one primary care service with a physician who is an ACO professional in the ACO and who is a primary care physician as defined under § 425.20 or who

has one of the primary specialty designations included in § 425.402(c) during the applicable 24-month expanded window for assignment.

A beneficiary meeting the aforementioned criteria would then be assigned to the ACO if the allowed charges for primary care services furnished to the beneficiary by ACO professionals in the ACO who are primary care physicians, non-physician ACO professionals, or physicians with specialty designations included in § 425.402(c) during the applicable expanded window for assignment are greater than the allowed charges for primary care services furnished by primary care physicians, physicians with specialty designations included in § 425.402(c), NPs (as defined at § 410.75(b)), PAs (as defined at § 410.74(a)(2)), and CNSs (as defined at § 410.76(b)) who are ACO professionals in any other ACO or not affiliated with any ACO and identified by a Medicare-enrolled billing TIN.

Further, in order to be assigned to an ACO through the step-wise assignment methodology, we proposed that a Medicare FFS beneficiary would continue to need to meet the eligibility criteria in § 425.401(a) for the 12-month assignment window, regardless of whether the beneficiary is assigned to an ACO in step 1 or 2, or proposed step 3. Under the proposed approach, beneficiaries who do not receive any primary care services during the assignment window would continue to be excluded from claims-based assignment as they are under the current assignment methodology. Beneficiaries who meet the pre-step based on a 12-month assignment window (as specified in § 425.402(b)(1)) but are not assigned to an ACO in steps 1 or 2 would also continue to not be assigned to an ACO as these beneficiaries would not be considered for assignment in step 3. The proposed changes also would not change beneficiary voluntary alignment, which would continue to supersede claims-based assignment, as specified in § 425.402(e).

As specified in § 425.400(a)(3)(ii), beneficiaries who are prospectively assigned to an ACO will remain assigned to the ACO at the end of the benchmark or performance year, unless they meet any of the exclusion criteria under § 425.401(b). As a result, under claims-based

assignment, a beneficiary prospectively assigned to an ACO is not eligible for assignment to a different ACO for the same benchmark or performance year.<sup>222</sup> We proposed to continue to apply this approach for beneficiaries prospectively assigned at step 1, step 2, or proposed step 3. In other words, a beneficiary who is assigned to an ACO based on prospective assignment through step 1 or 2 or proposed step 3 would remain assigned to that ACO for the benchmark or performance year (unless they meet any of the exclusion criteria under § 425.401(b)). Under this approach, a beneficiary prospectively assigned to an ACO for a benchmark or performance year would not be assigned to another ACO under prospective assignment or to an ACO under preliminary prospective assignment with retrospective reconciliation, even if the other ACO provides the plurality of the beneficiary's primary care services during the relevant benchmark or performance year.

We explained that the use of a 24-month expanded window for assignment would also require changes to the timeframe for which we recognize additional primary care service codes related to the COVID-19 Public Health Emergency (PHE), as outlined in § 425.400(c)(2). Under § 425.400(c)(2), we use certain additional primary care service codes in determining beneficiary assignment under § 425.400(c)(1) when the assignment window for a benchmark or performance year includes any month(s) during the COVID-19 PHE (as defined in § 400.200). In accordance with § 425.400(c)(2)(ii), the additional primary care service codes are applicable to all months of the assignment window, when the assignment window includes any month(s) during the COVID-19 PHE, with the exception of certain additional CPT codes (99441, 99442, and 99443) which we use in determining assignment until they are longer payable under Medicare FFS payment policies (as specified under § 425.400(c)(2)(i)(A)(2)). We refer readers to discussions in earlier rulemaking for the development of this policy, including 85 FR 84748 through 84755, 85

---

<sup>222</sup> See, for example, Medicare Shared Savings Program, Shared Savings and Losses, Assignment and Quality Performance Standard Methodology Specifications (version #11, January 2023), available at <https://www.cms.gov/files/document/medicare-shared-savings-program-shared-savings-and-losses-and-assignment-methodology-specifications.pdf-2> (see section 2.3.2.2, "Prospective Assignment").

FR 84791 through 84793, and 86 FR 65276. We proposed to modify the regulations at § 425.400(c)(2)(i) and (ii) to incorporate references to the expanded window for assignment, such that we would apply the additional primary care service codes to all months of the assignment window or applicable expanded window for assignment when the assignment window or applicable expanded window for assignment includes any month(s) during the COVID-19 PHE (88 FR 52445). We explained that these proposed changes would be necessary to capture the additional codes related to the COVID-19 PHE when using the expanded window for assignment in determining assignment for a benchmark or performance year.<sup>223</sup>

The proposed use of an expanded window for assignment in an enhanced step-wise assignment methodology would result in a greater overall number of beneficiaries assigned to ACOs. All beneficiaries who are assigned to an ACO under the current methodology would continue to be assigned to an ACO under the proposed methodology. Under the proposed methodology, a beneficiary who does not meet the current pre-step requirement would also be eligible to be assigned to an ACO if they (a) received at least one primary care service from a NP, PA, or CNS who is an ACO professional in the ACO during the applicable assignment window and (b) received at least one primary care service from a primary care physician or physician with a specialty used in assignment who is an ACO professional in the ACO during the applicable expanded window for assignment.

Under proposed changes, the 12-month assignment window would continue to represent the period used to identify allowed charges for primary care services received from ACO professionals and analogous practitioners not participating in an ACO, for purposes of claims-based beneficiary assignment during steps 1 and 2. Thus, most beneficiaries currently assigned to

---

<sup>223</sup> See, for example, HHS Secretary Xavier Becerra Statement on End of the COVID-19 Public Health Emergency (May 11, 2023), available at <https://www.hhs.gov/about/news/2023/05/11/hhs-secretary-xavier-becerra-statement-on-end-of-the-covid-19-public-health-emergency.html>. See also Letter to U.S. Governors from HHS Secretary Xavier Becerra on renewing COVID-19 Public Health Emergency (PHE) (February 9, 2023), available at <https://www.hhs.gov/about/news/2023/02/09/letter-us-governors-hhs-secretary-xavier-becerra-renewing-covid-19-public-health-emergency.html> (specifying the U.S. Department of Health and Human Services was planning for the COVID-19 PHE to end on May 11, 2023).

an ACO under the existing assignment methodology would continue to be assigned to the same ACO under the proposed changes. We anticipated that only a very small share of beneficiaries would be assigned to a different ACO under the proposed assignment methodology, and any change in ACO assignment would be due to the operational order in which assignment is run and the precedence of prospective assignment over preliminary prospective assignment with retrospective reconciliation. Specifically, there may be a small share of beneficiaries who would be prospectively assigned to an ACO under the proposed step 3 for prospective assignment that differs from the retrospective ACO the beneficiary is currently assigned to under steps 1 or 2 for preliminary prospective assignment with retrospective reconciliation. This precedence of prospective assignment follows the current assignment methodology, which currently assigns beneficiaries via steps 1 and 2 of prospective assignment to an ACO that may be different than the ACO to which the beneficiary would have been assigned via steps 1 or 2 if assigned to an ACO under preliminary prospective assignment with retrospective reconciliation. For the average retrospective ACO, the share of assigned beneficiaries affected by this precedence of prospective assignment has historically been very small, approximately 1.3 percent from 2018 through 2021.

The proposed addition of step 3 would add a population of otherwise omitted beneficiaries by using the expanded window for assignment to identify the required physician visit with an ACO professional and to determine the plurality of allowed charges for primary care services. Functionally, the beneficiaries who would be newly assigned are beneficiaries who received a primary care service from an ACO professional who is a primary care physician (as defined under § 425.20) or who has one of the specialty designations included in § 425.402(c) in the 12-month period prior to the assignment window and received a primary care service from a NP (as defined at § 410.75(b)), a PA (as defined at § 410.74(a)(2)), or a CNS (as defined at § 410.76(b)) during the assignment window. Notably, the proposed step 3 would continue to be consistent with section 1899(c)(1)(A) of the Act, because a beneficiary would have to have

received a primary care service from a primary care physician or physician with a specialty used in assignment who is an ACO professional in the ACO during the expanded window for assignment to be eligible for assignment to the ACO.

Similar to any other change that affects beneficiary assignment, the proposed use of an expanded window for assignment in a step 3 could impact downstream aspects of the Shared Savings Program that rely on the assigned population, including the following potential effects:

- Larger populations of assigned beneficiaries could contribute to more ACOs meeting minimum size requirements to participate in the program.
- A larger assigned population would result in lower minimum savings rates for ACOs subject to a variable minimum savings rate (that is, ACOs in a one-sided risk model on the BASIC track's glide path or ACOs in a two-sided risk model that elected a variable minimum savings rate). Lower minimum savings rates reflect a lower threshold for ACOs to meet in order to share in savings. Similarly, a larger assigned population would result in a lower minimum loss rate for ACOs participating in a two-sided risk model with a variable minimum loss rate, which reflects a lower threshold for ACOs participating in a two-sided risk model to meet before they must share in losses.
- A larger assigned population would enable higher performance payment limits, which are based on a percentage of an ACO's total benchmark expenditures. As an ACO's assigned beneficiary population increases, so too do the ACO's total benchmark expenditures. Because the maximum shared savings an ACO can earn is determined as a percentage of total benchmark expenditures, a larger assigned population would result in a higher performance payment limit. Similarly, a larger assigned population would result in larger loss sharing limits for ACOs in two-sided risk models because loss sharing limits are also determined as a percentage of aggregate benchmarks.
- A larger assigned population could affect an ACO's revenue status as the ACO's ACO participants' total Medicare Parts A and B FFS revenue would not change but the ACO's

assigned beneficiary population's total Medicare Parts A and B FFS expenditures would increase. In other words, revenue-to-expenditure ratios would decrease for ACOs that receive a larger assigned beneficiary population. Compared to the current assignment methodology, the proposed assignment methodology change could result in some ACOs being identified as low revenue instead of high revenue. As a result, other program elements tied to revenue status could then be affected by the proposed changes, specifically an ACO's eligibility for AIPs.

- Changes in the assigned population could directly affect ACOs' average risk scores, mix of beneficiaries across enrollment types, regional service area, and total expenditures during benchmark and performance years.

Expected impacts on several other program elements would depend on differences in the changes observed for beneficiaries added to the assignable population versus beneficiaries added to the ACO's assigned beneficiaries. For example, the impact of the proposed change to the assignment methodology on ACO performance would depend in part on the difference in spending levels and trends between those beneficiaries added to the assignable population, nationally and within an ACO's regional service area, versus those beneficiaries added to the ACO's assigned beneficiary population. The data shared with ACOs on their assignable and assigned beneficiaries would change under the proposed policy as the population of assignable and assigned beneficiaries changes.

We proposed modifications to subpart E of the Shared Savings Program regulations to specify the revised beneficiary assignment methodology. We proposed to specify the new step 3 in a new provision at § 425.402(b)(5). We also proposed technical and conforming changes to incorporate the revised methodology. We proposed to amend § 425.402(b)(1), describing the existing pre-step of the assignment methodology that would remain applicable for step 1 and step 2, to refer to the identification of all beneficiaries who had "at least one primary care service *during the applicable assignment window* with a physician who is an ACO professional in the ACO and who is a primary care physician as defined under § 425.20 or who has one of the

primary specialty designations included in [§ 425.402(c)]” (emphasis added to reflect revised text). In § 425.402(c), which indicates the primary specialty designations used in assignment, we proposed to specify that the listed specialties would be considered for ACO professionals in step 2 (as described in § 425.402(b)(4)) and the proposed step 3 (which would become a new provision at § 425.402(b)(5)) of the assignment methodology. In § 425.400(a)(2)(ii), which generally describes quarterly updates to preliminary prospective assignment with retrospective reconciliation, we proposed to specify that assignment would be updated quarterly based on the most recent 12 or 24 months of data, as applicable, under the methodology described in §§ 425.402 and 425.404. Lastly, in § 425.400(a)(3)(i), which generally describes prospective assignment of beneficiaries to ACOs at the beginning of each benchmark or performance year, we proposed to amend the reference that specifies that we base prospective assignment on the beneficiary’s use of primary care services in the most recent 12 months for which data are available, to specify instead the beneficiary’s use of primary care services in the most recent 12 months or 24 months, as applicable, for which data are available, using the assignment methodology described in §§ 425.402 and 425.404.

We summarize and respond to public comments we received on these proposals elsewhere in this section of this final rule.

#### (c) Revisions to the Definition of an Assignable Beneficiary

As described in the CY 2024 PFS proposed rule (88 FR 52446 through 52447), consistent with the previously described proposal to use an expanded window for assignment in an enhanced step-wise assignment methodology, we proposed to revise the definition of Assignable beneficiary in § 425.20 to include additional beneficiaries who would be identified using the expanded window for assignment. Under the proposal, we would continue to utilize the criterion in the existing definition, under which assignable beneficiary means a Medicare FFS beneficiary who receives at least one primary care service with a date of service during a specified 12-month assignment window from a Medicare-enrolled physician who is a primary care physician or who

has one of the specialty designations included in § 425.402(c). Further, for the performance year beginning January 1, 2025 and subsequent performance years, we proposed that a Medicare FFS beneficiary who does not meet this requirement but who meets both of the following criteria would also be considered an assignable beneficiary:

- Receives at least one primary care service with a date of service during a specified 24-month expanded window for assignment from a Medicare-enrolled physician who is a primary care physician or who has one of the specialty designations included in § 425.402(c).

- Receives at least one primary care service with a date of service during a specified 12-month assignment window from a Medicare-enrolled practitioner who is a NP (as defined at § 410.75(b)), PA (as defined at § 410.74(a)(2)), or a CNS (as defined at § 410.76(b)).

We explained that the proposed use of an expanded window for assignment would result in a greater number of beneficiaries included in the assignable population (88 FR 52446). All beneficiaries who are currently assignable would continue to be assignable under the proposed revisions to the definition of an assignable beneficiary. Under the proposed definition, beneficiaries who do not receive any primary care services during the assignment window would continue to be excluded from the population of assignable beneficiaries, just as they are excluded in the current definition of an assignable beneficiary. In other words, the 12-month assignment window would continue to represent the timeframe within which beneficiaries must receive at least one primary care service to be identified as an assignable beneficiary. Moreover, to identify a broader assignable population under this proposed approach, we specified it would be important to consider the criterion for the beneficiary to have received a primary care service during the 12-month assignment window to be met through a service furnished from a non-physician practitioner (NP, PA, and CNS), or from a primary care physician or a physician who has one of the specialty designations included in § 425.402(c) (as is required under the current definition).

The proposed approach to expanding the assignable beneficiary population could impact downstream aspects of the Shared Savings Program that rely on the assignable population, including the following effects:

- Changes in the distribution of expenditures among the national assignable population could affect the thresholds used to truncate expenditures.
- Changes in average per capita expenditures and risk scores among assignable beneficiaries in a given benchmark year could affect the average risk-adjusted spending within ACOs' regional service areas, which could affect regional adjustments.
- Differential changes in average per capita expenditures and risk scores over time could affect trend and update factors that are based on changes in expenditures for the national assignable population and in the risk-adjusted expenditures for the population of assignable beneficiaries in an ACO's regional service area.
- Changes in average prospective HCC risk scores for the national assignable population could affect the factors used to renormalize risk scores each benchmark and performance year and to risk-adjust the flat-dollar ACPT amounts.
- Changes in the number of assignable beneficiaries across ACO regional service areas could affect ACOs' market shares, which determine the weights used for blending the national and regional benchmark trend and update factors.
- Changes in the level of national FFS expenditures for the assignable population could affect the caps applied to the regional adjustment and prior savings adjustment to the historical benchmark and the calculation of the flat-dollar ACPT amount.

Under the current regulations, the time period we use to identify the assignable population that will be used to calculate different factors used in program financial calculations depends on whether it is a national or regional factor, the start date of an ACO's agreement period and, in some cases, an ACO's selected assignment methodology. Under the proposed revised definition of assignable beneficiary, for all ACOs (regardless of agreement period start

date), for the performance year beginning on January 1, 2025, and subsequent performance years, for benchmark year and performance year factors based on the national assignable population, we would identify the assignable population using the 24-month expanded window for assignment comprised of the 12-month calendar year assignment window, which aligns with the assignment window for preliminary prospective assignment with retrospective reconciliation, and the preceding 12 months. We noted that under the proposal we would also use the 24-month expanded window for assignment comprised of the 12-month calendar year assignment window and the preceding 12 months when identifying the assignable population for regional factors for performance year 2025 and subsequent performance years for use in calculations for ACOs that are continuing in agreement periods that began before January 1, 2024 (88 FR 52447).

For ACOs participating in agreement periods beginning on January 1, 2024, and in subsequent years, for performance year 2025 and in subsequent years for regional factors, we would identify the assignable population using the 24-month expanded window for assignment that is consistent with the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.400(a)(4)(ii). That is, for ACOs selecting preliminary prospective assignment with retrospective reconciliation, we would use the 24-month expanded window for assignment comprised of the 12-month calendar year assignment window and the preceding 12 months. For ACOs selecting prospective assignment, the 24-month expanded window for assignment would be comprised of the 12-month, offset assignment window plus the preceding 12 months. For example, we would use October 1, 2022, to September 30, 2024, as the 24-month expanded window for assignment to identify the assignable population for performance year 2025 for ACOs under prospective assignment.

We proposed technical and conforming changes to provisions in subpart G of the Shared Savings Program regulations that refer to the assignment window used to identify the assignable beneficiary population to incorporate references to the proposed approach to using an expanded window for assignment in identifying the assignable population for performance year 2025 and

in subsequent performance years (88 FR 52447). We explained that the regulations establishing the benchmarking methodology for ACOs with agreement periods beginning before January 1, 2024, do not directly reference the assignment window, and thus would not require conforming changes. However, there are benchmarking methodology provisions for ACOs with agreement periods beginning on January 1, 2024, and in subsequent years that directly refer to the assignment window. Thus, we proposed to amend these provisions to specify that the assignable population would be identified for the relevant benchmark year or the performance year (as applicable) using the assignment window or expanded window for assignment that is consistent with the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.400(a)(4)(ii):

- In §§ 425.652(a)(5)(v)(A) and (b)(2)(iv)(A), provisions on calculating the county-level share of assignable beneficiaries who are assigned to the ACO for each county in the ACO's regional service area for purposes of calculating the blended national-regional growth rates used in trending and updating the benchmark (respectively).
- In the provision on redetermination of the regional adjustment for the second or each subsequent performance year during the term of the agreement period in § 425.652(a)(9)(ii).
- In the provision on the calculation of average county FFS expenditures for assignable beneficiaries in each county in the ACO's regional service area in § 425.654(a)(1)(i).
- In the provision on adjusting for differences in severity and case mix between the ACO's assigned beneficiary population for BY3 and the assignable beneficiary population for the ACO's regional service area for BY3, in calculating average per capita expenditures for the ACO's regional service area, in § 425.656(b)(3).

Similarly, we also proposed to specify in the new provision at § 425.655(b)(1) that the assignable population that would be used to calculate average county prospective HCC and demographic risk scores for purposes of calculating the proposed regional risk score growth cap adjustment factor (refer to section III.G.4.b. of this final rule) would be identified for the relevant

benchmark year or the performance year (as applicable) using the assignment window or expanded window for assignment that is consistent with the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.400(a)(4)(ii) (88 FR 52447).

We solicited comments on our proposed modifications to the definition of assignable beneficiary in § 425.20. We also solicited comments on our proposed technical and conforming changes to references to the identification of assignable beneficiaries in subpart G of the Shared Savings Program regulations, as well as in the proposed new regulation at § 425.655 (on calculating the regional risk score growth cap adjustment factor), to incorporate the use of the assignment window or expanded window for assignment in identification of the assignable beneficiary population.

We summarize and respond to public comments we received on these proposals elsewhere in this section of this final rule.

#### (d) Simulations to Understand the Potential Effect of Proposed Changes

To understand the potential impact of using an expanded window for assignment to identify assignable beneficiaries, we simulated the impact of using the proposed definition of an assignable beneficiary using data for performance year (PY) 2021.<sup>224</sup> To simplify the analysis, this simulation used CY 2021 as the assignment window. Thus, the expanded window for assignment spanned from January 1, 2020, through December 31, 2021. We used a calendar year basis because we do not expect the impact of the proposed changes to meaningfully differ between retrospective and prospective assignment windows, the latter of which uses an offset window. In this analysis, the national assignable population included a total of 26.2 million beneficiaries based on the current methodology. The simulation applying the proposed policies then added 762,156 newly assignable beneficiaries, growing the national assignable population

---

<sup>224</sup> In the CY 2024 PFS proposed rule (88 FR 52448), we incorrectly stated that the simulation used the proposed definition for an assignable beneficiary and proposed step 3, using the set of ACOs and data for performance year 2021. This language inadvertently indicated that we simulated the potential impact of using an expanded window for assignment on both the assignable and ACO-assigned populations. The original simulation only simulated the impact of using an expanded window for assignment on the assignable population.

by about 2.9 percent. Additional analysis on estimated impacts of the proposed changes was included in the Regulatory Impact Analysis in section VI.E. of the proposed rule (see 88 FR 52706 through 52710, and 88 FR 52731). We solicited comments on the proposed approach and the potential effects of the proposed approach, including its effects modeled in the aforementioned simulation and its effects in other scenarios that commenters might have considered. We anticipated continuing additional simulations on the effect of the proposed changes to the assignment methodology to further inform our understanding of the potential impacts of the proposal and indicated that we planned to publish results from such additional simulations in the final rule.

As described in the CY 2024 PFS proposed rule, the original simulation results suggest that an expanded window for assignment may increase access to accountable care for underserved beneficiaries. Relative to the national assignable population as determined under the current assignment methodology, the group of added beneficiaries from the expanded window for assignment simulation were more likely to be disabled Medicare enrollees, resided in areas with slightly higher average Area Deprivation Index (ADI) national percentile rank (a measure of neighborhood socioeconomic disadvantage), and had a larger share with at least one month of Medicare Part D LIS enrollment (refer to Table 32).

**TABLE 32: Selected Characteristics of Beneficiaries Added to the National Assignable Population for PY 2021 through the Expanded Window for Assignment Simulation**

	National Assignable Population Under Current Assignment Methods	Added to the National Assignable Population in the Simulation	National Assignable Population Under the Simulation
<b>Total Beneficiaries</b>	26,169,153	762,156	26,931,309
<b>Total Person Years<sup>1</sup></b>	24,900,013	694,132	25,594,145
<b>Share of Person Years by Medicare Enrollment Type</b>			
<b>End-Stage Renal Disease (ESRD)</b>	0.9%	1.0%	0.9%
<b>Disabled</b>	11.1%	15.2%	11.2%
<b>Aged/Dual</b>	8.5%	7.6%	8.5%
<b>Aged/Non-Dual</b>	79.5%	76.3%	79.4%
<b>Mean ADI National Percentile Rank<sup>2</sup></b>	43.2	46.5	43.3
<b>Share of beneficiaries with at least one month of Medicare Part D LIS Enrollment</b>	20.4%	24.0%	20.5%

<sup>1</sup> This approach is consistent with calculation of ACO-assigned beneficiary person years as described in the Medicare Shared Savings Program, Shared Savings and Losses, Assignment and Quality Performance Standard Methodology Specifications (version # 11, January 2023) available at <https://www.cms.gov/files/document/medicare-shared-savings-program-shared-savings-and-losses-and-assignment-methodology-specifications.pdf>. Note that calculations of person years exclude months associated with episodes of care for treatment of COVID-19. Refer to Medicare Shared Savings Program, Shared Savings and Losses and Assignment Methodology Specifications of Policies to Address the Public Health Emergency for COVID-19 (December 2020) available at <https://www.cms.gov/files/document/medicare-shared-savings-program-shared-savings-and-losses-and-assignment-methodology-specifications.pdf>.

<sup>2</sup> Mean ADI National Percentile Rank was calculated as a weighted mean, weighted by person years, among beneficiaries with non-missing ADI percentile.

Note: Percentages in the table may not sum to 100% due to rounding. Similarly, total person years assigned to an ACO under current assignment methods and the total person years added to the ACO-assigned population in the simulation may not sum to the total person years assigned to an ACO under the simulation due to rounding.

These simulation results also suggest that using a 24-month expanded window for assignment in proposed step 3 of the claims-based assignment methodology would increase access to accountable care among beneficiaries with Medicare coverage for part of a year (such as beneficiaries who die during the performance year). The group of added assignable beneficiaries in the simulation previously described had a lower average prospective HCC risk score, lower total per capita spending in CY 2021, higher hospice utilization, and a higher mortality rate when compared to assignable beneficiaries identified using the current definition of assignable beneficiary. These results suggest that beneficiaries who would be added to the assignable population under the proposed changes may benefit from greater care coordination through ACOs.

We summarize and respond to public comments we received on these considerations elsewhere in this section of this final rule.

(e) Implementation of Revisions

In the CY 2024 PFS proposed rule (88 FR 52449), we proposed that the expanded window for assignment and revised step-wise assignment methodology would be applicable to all ACOs for the performance year beginning on January 1, 2025, and in subsequent performance years. For example, for a calendar year assignment window that runs from January 1, 2025, through December 31, 2025, the expanded window for assignment would run from January 1, 2024, through December 31, 2025. For an offset assignment window that runs from October 1, 2023, through September 30, 2024, the expanded window for assignment would run from October 1, 2022, through September 30, 2024. Consistent with how we have implemented previous changes to the Shared Savings Program assignment methodology, we would use the new methodology each time assignment is determined for a given benchmark or performance year and, as applicable, to determine the eligibility of ACOs applying to enter into or renew participation in the Shared Savings Program. For example, applicant eligibility for PY 2024 will be determined during CY 2023. We explained that we would not be able to review public comments and decide whether to finalize the proposed changes in sufficient time to apply the expanded window for assignment and revised methodology for PY 2024 applications. Additionally, we anticipated that the proposed revised approach, if finalized, would require significant operational changes to the Shared Savings Program assignment methodology, which would take time to prepare in advance of initial use of the approach during the application process. For these reasons, we would not be able to apply the expanded window for assignment and revised step-wise beneficiary assignment methodology for the performance year starting on January 1, 2024, and we proposed to apply this change beginning with the performance year starting on January 1, 2025.

We proposed that we would apply the proposed revised approach to determining beneficiary assignment and the revised definition of assignable beneficiary in establishing, adjusting, updating, and resetting historical benchmarks for ACOs entering new agreement periods beginning on January 1, 2025, and subsequent years. Also consistent with how we have implemented previous changes to the assignment methodology, we proposed that we would adjust benchmarks for all ACOs in agreement periods for which performance year 2025 is a second or subsequent performance year at the start of performance year 2025, so that the ACO benchmarks reflect the use of the same assignment rules and definition of assignable beneficiary as would apply in the performance year (refer to §§ 425.601(a)(9) and 425.652(a)(9)). We noted our belief that the expanded window for assignment and proposed step 3 represent a valuable change that would fill an important gap in the current assignment methodology. We stated that we have outlined a renewed vision and strategy for driving health system transformation to achieve equitable outcomes through high-quality, affordable, person-centered care for all beneficiaries.<sup>225</sup> In a January 2022 article, we stated our goal that 100 percent of people with Original Medicare will be in a care relationship with accountability for quality and total cost of care by 2030.<sup>226</sup> Many Medicare FFS beneficiaries are currently excluded from the assignable and Shared Savings Program assigned populations despite receiving primary care from ACO professional NPs, PAs, and CNSs during the existing 12-month assignment window, and these excluded beneficiaries tend to come from populations characterized by greater social risk factors. We explained more specifically that beneficiaries likely to be added to the assignable population are more likely to be disabled, be enrolled in the Medicare Part D LIS, and reside in areas with higher ADI scores. We explained our belief that the proposed change to the assignment methodology represents an opportunity to not only grow the share of Medicare beneficiaries

involved in accountable care relationships but to also support efforts to improve health equity in the Medicare program.

We solicited comments on the proposed changes to establish a new defined term in § 425.20, expanded window for assignment, for use in a proposed additional step 3 in the beneficiary assignment methodology and in identifying the assignable beneficiary population, revisions to the definition of assignable beneficiary, as well as proposed technical and conforming changes to provisions of the Shared Savings Program regulations, including the definition of assignment window under § 425.20, and provisions within subpart E and subpart G. We explained that the proposed changes, if finalized, would be applicable for the performance year beginning on January 1, 2025, and subsequent performance years. We welcomed comments on all aspects of the proposed changes, including the length of the expanded window for assignment. We also solicited comments on additional policies that CMS should consider for potential future rulemaking on our assignment methodology, with the goal of increasing the number of Original Medicare FFS beneficiaries assigned to an ACO, particularly in underserved communities.

We received public comments on the proposals and considerations described in section III.G.3.a of the CY 2024 PFS proposed rule. The following is a summary of the comments we received and our responses.

*Comment:* A large majority of commenters addressing our proposed modifications to the assignment methodology and to the definition of an assignable beneficiary were broadly supportive of an approach that would better account for beneficiaries' primary care relationships with non-physician practitioners. Some commenters expressed support for the overall goal of expanding access to accountable care, particularly for beneficiaries in rural and other areas experiencing primary care physician shortages.

Among these commenters, approximately half supported finalizing modifications as proposed. These commenters agreed that proposed changes would better account for

beneficiaries' primary care relationships with non-physician practitioners and help bring a greater number of underserved beneficiaries into the Shared Savings Program.

Although generally supporting the proposals, many commenters shared various concerns about the proposed approach to include additional beneficiaries in the assigned and assignable populations based on primary care services provided by non-physician practitioners, and suggested changes to the proposed approach to address these concerns, including changes that may require modifications to other Medicare policies.

*Response:* We summarize and respond to commenters' specific concerns and suggestions throughout the rest of this section of this final rule. Following consideration of all public comments received, we are finalizing these proposals without modification. We believe these proposals represent important strides toward including additional beneficiaries in the ACO-assigned and the national assignable populations, improving beneficiary access to accountable care (particularly among underserved beneficiaries), and moving toward greater health equity, in alignment with priorities emphasized in our CMS Framework for Health Equity (2022-2032).<sup>227</sup> These changes are also aligned with HHS' Initiative to Strengthen Primary Care<sup>228</sup> because, by better recognizing and considering the variety of clinician types who participate in delivering high-quality primary care, these changes advance coordinated, integrated primary care and promote health equity.

*Comment:* Many commenters requested additional analysis and information on the potential impact on ACOs of the proposed modifications to the assignment methodology and definition of an assignable beneficiary, asking for more information on either one or a combination of the proposals. One commenter requested that CMS make such additional information available with sufficient time for ACOs to review it prior to entering agreement

<sup>227</sup> Centers for Medicare & Medicaid Services, *The CMS Framework for Health Equity 2022-2032* (April 2022), 16-22, available at <https://www.cms.gov/files/document/cms-framework-health-equity.pdf>.

<sup>228</sup> U.S. Department of Health and Human Services, Request for Information (RFI): *HHS Initiative to Strengthen Primary Health Care*, 87 FR 38168 through 38170 (June 27, 2022).

periods beginning on January 1, 2025. Other commenters, including both those that expressed general support for and others that opposed the proposed changes, asked for further analysis by CMS before finalizing the proposed changes.

Many commenters specifically requested analysis on more years of data than the one year of data used for the simulation analysis described in the CY 2024 PFS proposed rule. Some commenters pointed to the simulation of changes to the national assignable population provided in Table 30 of the CY 2024 PFS proposed rule (see 88 FR 52448), which relied on PY 2021 data, which they noted was impacted by anomalies related to the COVID-19 pandemic. These commenters suggested that CMS expand this simulation to include data from additional years, such as 2019, 2020, 2021, and 2022.

Several commenters expressed concern that revising the definition of an assignable beneficiary will have varying effects on ACOs' financial performance due to the definition's effect on the national and regional assignable populations, which are used to calculate an ACO's benchmark. In particular, these commenters explained that while CMS estimated that the overall growth in the national assignable population will be small, CMS did not examine changes to regional assignable populations, which are used in certain calculations to adjust and update ACOs' financial benchmarks. As a result, some commenters were concerned that rural ACOs might be disproportionately affected, in part due to their smaller size.

Given these concerns, commenters urged CMS to provide additional analysis of the impact of the revisions to the definition of assignable beneficiary and proposed step 3 to assess financial and performance-related factors, including the following:

- Impacts to ACO benchmarks.
- Potential changes to regional factors based on regional FFS expenditures calculated with the new definition of an assignable beneficiary to ensure that any implementation of these proposals does not result in unintended consequences for rural ACOs and ACOs in underserved communities.

- Changes to ACO per beneficiary per year expenditures and average risk scores under the new definition of assignable beneficiary.

- Differential impact “based on geography, ACO size and composition,” ACOs participating under preliminary prospective assignment with retrospective reconciliation versus ACOs under prospective assignment, and ACOs with large beneficiary populations receiving care from safety net providers.

- The impact of the proposed changes on various Shared Savings Program calculations, including minimum savings rates, performance payment limits, risk adjustment, and the determination of an ACO’s status as high revenue or low revenue.

Several commenters urged CMS to provide additional analysis to assess the impact of the proposed changes at the individual ACO level, and with specificity for sub-populations of beneficiaries by demographic factors. In particular, these commenters urged CMS to provide this analysis to ensure the proposals would not have disparate impacts on ACO financial performance, and as several commenters put it, result in “artificial winners and losers.” However, the commenters did not provide specific suggestions on how to conduct this analysis.

*Response:* In the CY 2024 PFS proposed rule (88 FR 52448 through 52449), we described results from our analysis simulating the impact of our proposed modifications to the definition of an assignable beneficiary on the assignable population, and these results are restated in section III.G.3.a.(2)(d) of this final rule. Following publication of that proposed rule, we further simulated our proposed changes on both the assignable and ACO-assigned populations using multiple years of data. While the original analysis focused on simulating the impact of our proposed changes on the assignable population for PY 2021, in these later analyses, we simulated changes for both the assignable and ACO-assigned populations for PYs 2019 and 2021 using the set of 364 ACOs that participated in the Shared Savings Program in both of those PYs. The additional simulation also allowed us to further examine how these proposals would impact ACOs, including the expected impact of these proposals on ACO financial performance

measured in terms of gross savings. Furthermore, the additional analysis using two years of data allowed us to confirm that findings from PY 2021 – a year affected by the PHE for COVID-19 – were not anomalous. As with the initial analysis, we simplified this additional analysis by using CYs 2019 and 2021 as the respective assignment windows for each of these PYs, which would align with the assignment window for preliminary prospective assignment with retrospective reconciliation. Thus, the expanded window for assignment spanned from January 1, 2020, through December 31, 2021 for CY 2021, and from January 1, 2018, through December 31, 2019 for CY 2019.

We agree with commenters that providing findings of additional analysis of the impact of the revisions to the definition of assignable beneficiary and proposed step 3 to assess financial and performance-related factors is important to illustrate the policy changes, and we remain committed to ensuring program transparency. The additional analysis we summarize in this section addresses commenters’ requests for more information on the impact of the proposed changes on assignment of beneficiaries, ACO benchmarks, ACO gross savings, and ACO per capita savings and average risk scores in both a year affected by the PHE for COVID-19 and a year not affected by the PHE for COVID-19. The simulation of the impact of the proposed changes on ACO benchmarks and gross savings accounts for changes to regional adjustments and regional risk ratios as a result of the proposed step 3 and the proposed changes to the definition of an assignable beneficiary, thereby addressing the requests from commenters for additional analysis on the impact of the proposed changes on “regional factors.”

We note that commenters did not include detailed recommended specifications for analyzing differential impacts on a number of metrics or factors relevant to the Shared Savings Program. We believe our analysis based on the following factors (described in greater detail in this response) corresponds to the general categories of analysis requested by commenters: distinguishing ACOs based on their number of assigned beneficiaries as an indicator of ACO

size; distinguishing ACOs based on their market share in their regional service areas;<sup>229</sup> distinguishing ACOs located in urban versus ACOs in rural areas based a classification system for identifying the urbanicity of the counties in which the ACO's assigned beneficiaries reside;<sup>230</sup> and distinguishing ACOs according to what commenters referred to as "ACO composition" (to mean the demographic factors of the ACOs' assigned beneficiaries) or share of underserved populations, according to the ACO's proportion of assigned beneficiary person years by Medicare enrollment type, share of beneficiaries with an ADI national percentile rank of 85 or greater, and share of beneficiaries with at least one month of Medicare Part D LIS enrollment. Our additional analysis examined the differential financial impact on, and possible unintended consequences for, different groups of ACOs based on their proportion of assigned beneficiaries dually eligible for Medicare and Medicaid.

A comparison of the simulated impact on the assignable population for PY 2019 and PY 2021 revealed similar patterns between the two years, suggesting that the PHE for COVID-19 likely did not meaningfully affect the PY 2021 simulation results shared in the CY 2024 PFS proposed rule. As with PY 2021, in PY 2019 the group of added beneficiaries from the expanded window for assignment simulation were more likely to be disabled Medicare enrollees and have an ADI national percentile rank of 85 or greater, and a larger share of these beneficiaries had at least one month of Medicare Part D LIS enrollment (refer to Table 33). Additionally, for both PY 2019 and PY 2021, the group of added assignable beneficiaries in the simulation had a lower average prospective HCC risk score, lower total per capita spending in CY 2021, and higher

---

<sup>229</sup> An ACO's aggregate market share is calculated as the weighted average of the share of assignable beneficiaries in the ACO's regional service area that are assigned to the ACO for the performance year for each Medicare enrollment type. In calculating this weighted average, the weight applied to the share for each Medicare enrollment type is equal to the ACO's performance year assigned beneficiary person years for that enrollment type.

<sup>230</sup> For this analysis, we classified ACOs into urbanicity categories (for example, "Large Central Metropolitan," or "Noncore") as defined by the US Census Bureau Delineation files, available at <https://www.census.gov/geographies/reference-files/time-series/demo/metro-micro/delineation-files.html>, and using the National Center for Health Statistics (NCHS) Urban-Rural Classification Scheme for Counties, available at [https://www.cdc.gov/nchs/data\\_access/urban\\_rural.htm](https://www.cdc.gov/nchs/data_access/urban_rural.htm), based on the urbanicity of the counties in which their assigned beneficiaries reside. We classified ACOs into the urbanicity category representing the plurality of their assigned beneficiaries.

hospice utilization when compared to the population identified using the current definition of assignable beneficiary.

<sup>1</sup> This approach is consistent with calculation of ACO-assigned beneficiary person years as described in the Medicare Shared Savings Program, Shared Savings and Losses, Assignment and Quality Performance Standard Methodology Specifications (version # 11, January 2023) available at <https://www.cms.gov/files/document/medicare-shared-savings-program-shared-savings-and-losses-and-assignment-methodology-specifications.pdf>-2. Note that calculations of person years exclude months associated with episodes of care for treatment of COVID-19. Refer to Medicare Shared Savings Program, Shared Savings and Losses and Assignment Methodology Specifications of Policies to Address the Public Health Emergency for COVID-19 (December 2020) available at <https://www.cms.gov/files/document/medicare-shared-savings-program-shared-savings-and-losses-and-assignment-methodology-specifications.pdf>.  
Note: Percentages in the table may not sum to 100% due to rounding. Similarly, total person years assigned to an ACO under current assignment methods and the total person years added to the ACO-assigned population in the simulation may not sum to the total person years assigned to an ACO under the simulation due to rounding.

We present similar results in Table 34 for the simulations of the proposed addition of step

3 to the beneficiary assignment methodology. The simulations increased the total number of beneficiaries assigned to ACOs by 2.1 percent in PY 2019 and by 2.3 percent in PY 2021. Across both PY 2019 and PY 2021, the vast majority of ACOs (95.4 percent in PY 2019 and 93.9 percent in PY 2021) observed an increase between 0 and 5 percent in their number of assigned beneficiaries. Under these simulations, no ACOs observed a decrease in size of their assigned beneficiary population. Characteristics of beneficiaries newly added to the ACO-assigned populations for PY 2019 and PY 2021 resembled those of beneficiaries newly added to the national assignable population in the analysis described in the CY 2024 PFS proposed rule (88 FR 52448 through 52449). Compared to the ACO-assigned population under the current assignment methodology, beneficiaries newly added pursuant to proposed step 3 were more likely to be disabled Medicare enrollees and have an ADI national percentile rank of 85 or greater and a larger share of these beneficiaries had at least one month of Medicare Part D LIS enrollment. This group of beneficiaries newly added to the ACO-assigned population also had a lower average prospective HCC risk score, lower total per capita spending, and higher hospice utilization rate in PY 2019 and PY 2021 when compared to the ACO-assigned population under the current assignment methodology.

**TABLE 34: Selected Characteristics of Beneficiaries Added to the ACO-Assigned Population for PY 2019 and PY 2021 through the Step 3 Assignment Simulation**

	<b>ACO-Assigned Population Under Current Assignment Methods</b>	<b>Added to the ACO-Assigned Population in the Simulation</b>	<b>ACO-Assigned Population Under the Simulation</b>
<b>PY 2019</b>			
<b>Total Beneficiaries</b>	10,284,764	213,544	10,498,308
<b>Total Person Years<sup>1</sup></b>	10,020,314	205,610	10,225,924
<b>Share of Person Years by Medicare Enrollment Type</b>			
<b>End-Stage Renal Disease (ESRD)</b>	0.7%	0.8%	0.7%
<b>Disabled</b>	11.2%	14.9%	11.3%

<b>Share of beneficiaries with at least one month of Medicare Part D LIS Enrollment</b>	15.0%	17.5%	15.0%

<sup>1</sup> This approach is consistent with calculation of ACO-assigned beneficiary person years as described in the Medicare Shared Savings Program, Shared Savings and Losses, Assignment and Quality Performance Standard Methodology Specifications (version # 11, January 2023) available at <https://www.cms.gov/files/document/medicare-shared-savings-program-shared-savings-and-losses-and-assignment-methodology-specifications.pdf-2>. Note that calculations of person years exclude months associated with episodes of care for treatment of COVID-19. Refer to Medicare Shared Savings Program, Shared Savings and Losses and Assignment Methodology Specifications of Policies to Address the Public Health Emergency for COVID-19 (December 2020) available at <https://www.cms.gov/files/document/medicare-shared-savings-program-shared-savings-and-losses-and-assignment-methodology-specifications.pdf>.

Note: Percentages in the table may not sum to 100% due to rounding. Similarly, total person years assigned to an ACO under current assignment methods and the total person years added to the ACO-assigned population in the simulation may not sum to the total person years assigned to an ACO under the simulation due to rounding.

We also simulated the impact of the proposed modifications to the assignment methodology and the definition of an assignable beneficiary on ACOs' financial performance, measured in terms of gross savings (that is, benchmarks minus expenditures). To conduct this financial impact simulation, we made additional simplifying assumptions. We assumed that CY 2019 represented Benchmark Year 3 (BY3) and that CY 2021 represented PY2. We then calculated key benchmarking components to simulate ACOs' updated benchmarks and compared these updated benchmarks to ACOs' simulated PY 2021 expenditures to estimate gross savings. We then made gross savings estimates using the current assignment methodology and definition of assignable beneficiary and compared those estimates to gross savings estimates made using the proposed modifications to the beneficiary assignment methodology and definition of an assignable beneficiary.

As summarized in Table 35, on average, the simulated financial impact of the proposed modifications to the beneficiary assignment methodology and to the definition of an assignable beneficiary was relatively small. We observed slight average decreases in ACOs' per capita benchmarks that we attribute primarily to a slight decrease (1.7 percent) in the average regional adjustment. When analyzing combined impacts on ACO's benchmarks and performance year spending, we observed that average ACO per capita gross savings decreased by \$4.30, or 1.3 percent, but total gross savings increased by an average \$66,618, or 0.9 percent. In other words, in these illustrative analyses based on 2019 and 2021 data although the average ACO generated lower gross savings on a per capita basis, the average ACO generated greater total dollar savings due to an increase in the total number of assigned beneficiaries. Actual financial impacts from the proposed modifications to the beneficiary assignment methodology and to the definition of an assignable beneficiary, may vary based on how ACOs increase care coordination and multiple

other factors. Impacts on actual gross savings calculations starting in PY2024 might be even more limited than the relatively modest impacts estimated from the simulation because the simulation compared a 2019 base year to a 2021 performance year (and corresponding lookback period) that included unusual effects of COVID-19 on utilization of primary care services.

**TABLE 35: Average Estimated Impact of the Step 3 Assignment Simulation on ACOs’ Gross Savings for PY 2021 assuming CY 2019 as BY3 (Benchmarks Minus Expenditures)**

	Average Under Current Methodology	Average Under Step 3 Simulation	Average Change from Current Methodology (relative % change)
Per capita gross savings	\$334.53	\$330.22	-\$4.30 (-1.3%)
Total gross savings	\$7,496,707	\$7,563,325	\$66,618 (0.9%)

Note: The difference between the average under current methodology and the average under the step 3 simulation may not exactly equal the average change from current methodology due to rounding.

The impacts on individual ACOs were also relatively small for a majority of ACOs. Approximately half of ACOs (49.5 percent) observed greater total gross savings under the simulation using an assignment methodology that included the proposed step 3 and revised definition of an assignable beneficiary, and the magnitude of these changes was relatively small. Approximately two-thirds of ACOs (66.8 percent) saw changes in their total gross savings that were within plus or minus 10 percent of what they observed under the current methodology; nearly half (47.3 percent) were within plus or minus 5 percent. We also found that for very few ACOs, the direction of their performance changed, from generating gross savings to observing gross losses, and vice versa. Only 3 ACOs switched from generating total gross savings to observing total gross losses, while 6 ACOs switched from generating total gross losses to observing total gross savings. The changes in performance that we observed for these ACOs was somewhat expected given that ACOs with total gross savings or losses closer to zero are especially likely to switch from generating savings to observing losses, or vice versa, because the threshold for them to do so is very low.

We also examined whether the simulated financial impact of the proposed addition of step 3 and the revised definition of assignable beneficiary differed by ACOs with different characteristics, but we did not observe any meaningful differences. For example, ACOs located in the most urban areas (classified as “Large Central Metropolitan”) observed a median impact

on their total gross savings that was similar to the impact on ACOs located in the most rural areas (classified as “Noncore”). We similarly found no meaningful differences in financial impact between ACOs with different market shares in their regional service area, between ACOs with different levels of penetration across all Shared Savings Program ACOs in their regional service area,<sup>231</sup> between ACOs of different sizes (that is, ACOs with relatively large assigned beneficiary populations versus ACOs with relatively small populations), between ACOs with higher versus lower shares of beneficiaries dually eligible for Medicare and Medicaid, or between ACOs under prospective assignment versus preliminary prospective assignment with retrospective reconciliation.

Comparing the simulation results for low revenue ACOs and high revenue ACOs (as defined according to § 425.20), we found that high revenue ACOs observed a more positive average impact from the simulated addition of step 3 to the assignment methodology on their per capita and total gross savings (-\$8.61 versus -\$0.14 for per capita savings impact, and -\$15,255 versus \$145,835 for total savings impact for low revenue and high revenue ACOs, respectively). However, the mean difference in these impacts was small relative to the large variation in impact within both subgroups.

In summary, we found that proposed modifications to add step 3 to the beneficiary assignment methodology added a meaningful number of beneficiaries to the ACO-assigned population, and when combined with proposed revisions to the definition of an assignable beneficiary, had a relatively small impact on gross savings performance for a majority of ACOs. Furthermore, the simulated impact of these proposals did not appear to differ meaningfully between ACOs with different characteristics, as explained previously in this section, including for ACOs located in rural areas and for ACOs with higher versus lower shares of beneficiaries dually eligible for Medicare and Medicaid.

---

<sup>231</sup> The penetration level across all Shared Savings Program ACOs is calculated as the weighted average of the share of assignable beneficiaries in the ACO's regional service area that are assigned to any Shared Savings Program ACO for the performance year for each Medicare enrollment type.

With respect to the request from one commenter that CMS further assess the impact of the proposed changes on various Shared Savings Program calculations, including minimum savings rates, performance payment limits, risk adjustment, and the determination of an ACO's status as high revenue or low revenue, our analysis did not directly examine all of these calculations. However, we note that our findings on the impact of the proposed changes on ACOs' assigned beneficiary populations imply mostly small decreases in minimum savings rates (due to small increases in the size of ACOs' assigned populations) and slightly higher performance payment limits (due to increases in ACOs' total benchmarks related to their larger assigned beneficiary populations). While ACO participant revenue would not be affected by the proposed changes, we anticipate small increases in total assigned beneficiary expenditures (due to larger assigned beneficiary populations), which could lead to fewer ACOs being identified as high revenue ACOs. We also note that our analysis did incorporate risk adjustment when estimating the updated benchmarks used to calculate simulated gross savings under both the current and proposed assignment methodologies and definitions of assignable beneficiary. The relatively small estimated impacts on gross savings imply that the proposed changes to the assignment methodology and definition of assignable beneficiaries will have a limited impact on risk adjustment calculations.

We considered the findings from this additional analysis in our decision of whether to finalize these proposals. Because the additional analysis did not show meaningful differential impacts on ACOs among the different groups of ACOs we described previously, we did not see reason to modify or delay the proposed changes. The findings suggest it is unlikely that the proposed changes will have significant negative consequences on ACOs, and we continue to anticipate that the benefits of the proposed changes such as recognizing the clinicians that are providing high-quality primary care, expanding access to accountable care, particularly for beneficiaries in rural and other areas experiencing primary care physician shortages, and reducing the barriers for underserved beneficiaries to be assigned to ACOs, will outweigh any

risk of potential negative effects.

*Comment:* Many commenters, including those supportive of and those opposed to the proposals to revise the definition of assignable beneficiary and add step 3 to the step-wise assignment methodology, raised concerns about CMS's ability to distinguish between non-physician practitioners who practice primary care and those who practice specialty care, resulting in the assignment of beneficiaries that is driven by specialty care provided by ACO professionals (such as after an acute event requiring specialty care), rather than being reflective of the beneficiaries' primary care relationships with the ACO. A few commenters indicated that the concerns about the lack of specialty code designations for non-physician practitioners has been an ongoing issue, and commenters worried that the proposed new step 3 would exacerbate this problem in the context of beneficiary assignment. Commenters tended to explain that these circumstances result from an increase in non-physician practitioners working in specialty practices, and the lack of specialty designations in the Medicare health care provider taxonomy code classification for these practitioners by which to identify and remove such providers from use in assignment.

Commenters further described their concerns about this dynamic. Some commenters stated that beneficiaries receiving care from non-physician practitioners working in specialty practices tend to be those beneficiaries receiving a high-cost procedure or care for an acute condition in that performance year and are not assigned to the same ACO again in future performance years, affecting the ACO's ability to coordinate the beneficiaries' care and in turn the ACO's ability to reduce expenditures below its benchmark and improve the quality of care furnished to those beneficiaries. According to one commenter, such circumstances, where an ACO is held accountable for the care furnished to a beneficiary whose care is not being coordinated by the ACO, makes it harder for participating ACOs to succeed and thus creates disincentives for new ACOs to participate in the Shared Savings Program. A few commenters suggested that the impact of this concern would be dependent on an ACO's composition and that

ACOs containing large multispecialty practices or academic medical centers would experience higher rates of specialist-driven assignment related to care delivered by non-physician practitioners in these settings. One commenter, shared concerns that the proposed approach would lead to beneficiaries being assigned to their ACO due to a visit with a non-physician practitioner who is “not participating in nor understand[s] the population health objectives” crucial to the ACO’s success. One commenter expressed concern about assignment of beneficiaries residing in long-term nursing facility settings. This commenter noted that non-physician practitioners provide a significant amount of wound care and behavioral health care, which affects the determination of where a beneficiary receives the plurality of their primary care services and results in beneficiaries failing to be assigned to an ACO with which they have a “primary care relationship.”

*Response:* After further considering existing evidence and our analysis of the population that would be newly assigned under the proposed step 3 of the assignment methodology, we do not share the commenters’ concerns regarding the potential impact on assignment resulting from a lack of secondary specialty code designations for non-physician practitioners. We agree and recognize that non-physician practitioners may practice as specialty providers. However, in the June 2015 final rule (80 FR 32749 through 32750) when we finalized changes to step 1 of the assignment methodology to include claims for primary care services furnished by NPs, PAs, and CNSs under step 1 of the step-wise assignment methodology, commenters noted, and we agreed, that most non-physician practitioners have been trained in primary care or in providing services in primary care settings, or both. Recent research and analysis also support this point. A 2022 survey by the American Association of Nurse Practitioners found that 88.0 percent of NPs are certified in an area of primary care and that 70.3 percent deliver primary care.<sup>232</sup> In addition, we performed an analysis of 2022 Medicare claims data and found that only 7 percent of primary

---

<sup>232</sup> Refer to American Association of Nurse Practitioners, NP Fact Sheet (Updated November 2022), available at <https://www.aanp.org/about/all-about-nps/np-fact-sheet>.

care services identified under § 425.400(c) billed by NPs, PAs, and CNSs participating in ACOs were billed through medical groups comprised mostly (greater than 50 percent) of physicians with specialties that are not used in assigning beneficiaries to ACOs. In contrast, 93 percent were billed through either medical groups comprised mostly of primary care physicians or multi-specialty practices comprised mostly of clinicians with primary care or other specialty designations used in beneficiary assignment under § 425.402(c). Furthermore, claims-based beneficiary assignment currently is and will continue to be based on allowed charges for primary care services identified under § 425.400(c); therefore, to the extent NPs, PAs, and CNSs furnish specialty care services not included in the definition of primary care services used in assignment, such services would not be considered in assigning beneficiaries.

Additionally, under the current assignment methodology, only a very small share of claims-based assigned beneficiaries (approximately 2.2 percent of beneficiaries assigned under preliminary prospective assignment with retrospective reconciliation and approximately 3.3 percent of beneficiaries assigned under prospective assignment in PY 2022) are assigned in step 2 based on the plurality of primary care services provided by specialty physicians. Because only 7 percent of primary care services billed by NPs, PAs, and CNSs were billed through medical groups comprised mostly of physicians with specialties that are not used in assigning beneficiaries to ACOs, and because specialty services that might be billed by such specialist non-physician practitioners are not included in the primary care services identified for purposes of assigning beneficiaries (under § 425.400(c), we believe it is unlikely that a significantly high proportion of beneficiaries assigned to ACOs based on the revised step-wise methodology would be assigned to ACOs based on their receipt of primary care services provided by specialist non-physician practitioners.

Many beneficiaries have an established relationship with a physician and maintain their primary care relationship with the physician's practice through subsequent visits with NPs, PAs, and CNSs. The new step 3 is designed and expected to capture beneficiaries who receive their

primary care from ACOs that rely on advanced practice provider care models – that is, ACOs in which NPs, PAs, and CNSs collaborate with primary care physicians and other physicians with specialties used in assignment to manage their patients’ primary care. We believe that assignment of these beneficiaries to ACOs under step 3 reflects assignment of these beneficiaries to the ACOs that primarily managed their primary care during the expanded window for assignment.

Elsewhere in our response to comments in this section of this final rule we describe our additional analysis of the proposed changes to both the assignment methodology and to the definition of an assignable beneficiary. Our analysis shows that approximately 83 percent of beneficiaries newly added to the ACO-assigned population under step 3 for PY 2019 received at least one primary care service (as defined at § 425.400(c)) from a primary care physician (as defined at § 425.20), as opposed to a physician who has one of the specialty designations included in § 425.402(c), at the same ACO in 2018 that they were assigned to for PY 2019.<sup>233</sup> On average, we found that those primary care physician visits accounted for a majority of allowed charges for all primary care services received by those beneficiaries in 2018. This finding further supported the notion that the NPs, PAs, and CNSs seen by new step 3-assigned beneficiaries in the assignment window at the ACO were an extension of a primary care relationship between the beneficiaries and primary care physicians in the ACO in the prior year, suggesting further that these NPs, PAs, and CNSs are serving a primary care rather than specialty function. In other words, the ACO that was assigned a beneficiary in step 3 for PY 2019 was the ACO which included the primary care physicians who most often provided the beneficiary’s primary care in the 12-months preceding the assignment window, and, during the assignment window, the beneficiary continued to receive primary care services from non-physician

---

<sup>233</sup> We conducted this additional sub-analysis on one of the PYs in the simulation by examining the specific types of practitioners seen by beneficiaries newly added to the ACO assigned population with the step 3 simulation. For this sub-analysis, we selected PY 2019 to avoid any possible confounding effects of the PHE for COVID-19. The remaining 17 percent received at least one primary care service, as defined at § 425.400(c), from a physician who has one of the specialty designations included in § 425.402(c) and no primary care services from a primary care physician.

practitioners participating in the ACO.

We also note that beneficiaries assigned in step 3 must have received a primary care service from a Medicare-enrolled physician who is a primary care physician or who has one of the specialty designations included in § 425.402(c) during the expanded window for assignment. As we noted in the June 2015 final rule (80 FR 32750), we expect that specialist physicians often take the role of primary care physicians in the overall treatment of beneficiaries with certain chronic conditions, and such patterns are captured in step 2 in the current assignment methodology. As explained previously in this section, our analysis suggests that non-physician practitioners functioning as specialists represent a minority of non-physician practitioners. However, consistent with that analysis and similar to primary care services furnished by specialist physicians that are captured by step 2, to the extent that primary care services are furnished by specialist non-physician practitioners, we believe that those non-physician specialists would likely be acting as primary care providers and considering the primary care they provide as part of our assignment methodology would be appropriate for identifying the ACO professionals most responsible for a beneficiary's primary care. As a result, we believe that the proposed step 3 reflects an improved approach for capturing existing primary care relationships that include non-physician practitioners.

We acknowledge commenters' concern that some ACOs with large multispecialty practices may have higher likelihood of having a beneficiary assigned based on services furnished by specialty-focused non-physician practitioners. However, we do not believe this concern outweighs the benefits of our proposal. As our analysis of 2022 Medicare claims data suggests and we explain elsewhere in this section of this final rule, we do not believe that a significant percentage of beneficiaries will be assigned to ACOs pursuant to step 3 based on their receipt of primary care services provided by specialist non-physician practitioners. Step 3 will apply to a very limited, specific population of beneficiaries, namely beneficiaries who, during the assignment window, did not have a visit with a primary care physician or a physician with one of

the specialty designations included in § 425.402(c) who is an ACO professional in the ACO. Furthermore, as explained previously in this section, our analysis of the expected impact of the new step 3 indicates that, during the expanded window for assignment, the vast majority of beneficiaries newly added to the ACO-assigned population under step 3 will likely have received one or more primary care services from a primary care physician (as defined at § 425.20), as opposed to a physician who has one of the specialty designations included in § 425.402(c), who is participating in the ACO to which the beneficiary is assigned. In addition, our analysis suggests a high likelihood that those primary care physician visits will account for most of the beneficiaries' primary care services furnished in the 12 months preceding the assignment window and that those beneficiaries will receive primary care services from non-physician practitioners participating in the ACO during the assignment window.

We are limited in the extent to which we can address the commenter's concern about assignment of beneficiaries residing in long-term nursing facilities as a result of services for wound care or behavioral health care because the commenter did not provide sufficient information that we can use to identify the services about which they are concerned (such as the related HCPCS and CPT codes included in the definition of primary care services). Generally, we believe Medicare FFS beneficiaries residing in long-term care facilities, among other beneficiaries added to ACOs' assigned populations in step 3, would benefit from better care coordination through ACOs. In addition, as explained previously in this section, we do not believe that a significant percentage of beneficiaries will be assigned to ACOs pursuant to step 3 based on their receipt of primary care services provided by specialist non-physician practitioners, and we continue to anticipate that the benefits of the proposed changes will outweigh any risk of potential negative effects.

*Comment:* Among comments raising concerns about distinguishing between non-physician practitioners working as specialists from those working in primary care, most asked for a more refined approach and offered various suggestions for distinguishing between these

different types of providers. As explained by some commenters, these suggestions were oriented towards ensuring that non-physician practitioners who deliver primary care, as opposed to specialty care, play a prominent role in ACO assignment. One commenter specifically noted that changes accounting for the specialty of non-physician practitioners used in assignment should apply to both step 1 and the proposed new step 3 of the assignment process.

One suggestion common across multiple comments was for CMS to consider developing a new taxonomy to identify primary care or specialty care focused non-physician practitioners and to update the Provider Enrollment, Chain, and Ownership System (PECOS) to incorporate this new taxonomy. A few commenters suggested that to start this process, CMS could collect this information as an optional field in the Medicare provider enrollment application. One commenter stated an alternative option could be to expand the current specialty codes utilized in determining assignment, such as through rulemaking or guidance, because the current codes are too generic to differentiate between NPs, PAs, and CNSs that primarily practice primary care versus specialty care. Another commenter urged CMS to consider using patient relationship codes established under MACRA.<sup>234</sup>

Several commenters suggested revising Shared Savings Program policies to permit participation by ACOs comprised of ACO participants identified by a combination of NPIs and Medicare-enrolled billing TINs through which one or more ACO providers/suppliers bill Medicare. One commenter stated that such a change would enable the integration of specialists into the Shared Savings Program because it would allow ACOs to “segment primary care providers and specialist providers,” but did not provide additional details on what they meant by segmenting providers and how it would enable that integration. Similarly, some commenters requested that, without means to distinguish non-physician practitioners who practice primary care from those who practice specialty care, ACOs be permitted to identify specialty-focused

---

<sup>234</sup> For more information on MACRA patient relationship codes, refer to <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/Patient-Relationship-Categories-and-Codes-webinar-FAQ.PDF>.

practitioners so that CMS could ensure that services furnished by those practitioners to beneficiaries would not be considered as part of beneficiary assignment.

One commenter asked CMS to provide clarification on guardrails CMS intends to implement to ensure that a beneficiary with a complex condition being managed by a specialist outside the ACO and for whom that specialty care comprises the bulk of the beneficiary's care is not assigned to an ACO based on the services by NPs or PAs who are ACO professionals in that ACO.

More generally, some commenters noted that ACOs struggle to maintain assignment year-to-year for beneficiaries assigned "through specialists," and some suggested that CMS should explore strategies to support ACOs in "leveraging specialty-driven assignment" to develop longitudinal primary care relationships with these beneficiaries, but these commenters did not clarify whether the specialists they are concerned about include non-physician practitioners and did not provide specific suggestions on what these strategies could be.

Other commenters stated that CMS needs to conduct in-depth analysis to ensure more patients are not assigned to ACOs as a result of care provided by "specialists" under the proposed changes. Some commenters recommended this analysis include differences in risk scores and costs for beneficiaries assigned to ACOs as a result of care provided by specialists to inform future policy development, but commenters did not specify whether specialists in this analysis would include non-physician practitioners.

*Response:* At this time, we will not establish additional procedures to distinguish between non-physician practitioners working as specialists from those working in primary care for purposes of step 3, or as some commenters requested, for step 1 of the assignment process. In the June 2015 final rule (80 FR 32749 through 32750) when we finalized changes to step 1 of the assignment methodology to include claims for primary care services furnished by NPs, PAs, and CNSs under step 1 of the assignment process, some commenters suggested that CMS take additional steps to assure that the NPs, PAs and CNSs considered under step 1 are truly primary

care providers in order to better assure accurate assignment of beneficiaries to ACOs based on beneficiaries' receipt of primary care services. In our response to these commenters in the June 2015 final rule, we stated that at that time we would not establish special procedures to determine whether NPs, PAs, and CNSs are performing primary care and not specialty care. We continue to believe that most non-physician practitioners have been trained in primary care or provide services in primary care settings or both. In addition, as explained previously in this section, our analysis suggests that non-physician practitioners functioning as specialists represent a minority of non-physician practitioners and we do not believe that a significant percentage of beneficiaries will be assigned to ACOs pursuant to step 3 based on their receipt of primary care services provided by specialist non-physician practitioners. Furthermore, similar special procedures to distinguish between practitioners working as specialists from those working in primary care have posed significant challenges in the past when applied in the context of RHC and FQHC services. As we explained in the CY 2018 PFS final rule that removed the attestation requirement for RHC and FQHC participants (82 FR 53210), the procedure that relied on ACOs to report and identify all individual physicians that directly provide primary care services within ACO participant RHCs and FQHCs for purposes of beneficiary assignment is prone to error and can create significant operational burdens.

We decline to adopt the suggestions by commenters to further differentiate use of claims billed as a primary care service by non-physician practitioners in assignment through changes to the Medicare provider specialty code taxonomy. Currently, Medicare claims do not contain the necessary information to distinguish services by non-physician practitioners provided in a primary care versus specialty capacity. Creating new codes or modifying the Medicare provider specialty code taxonomy would require review and approval through rulemaking, and include consideration of several factors such as: whether the specialty has the authority to bill Medicare and if the specialty treats a significant volume of the Medicare population; evidence that the practice pattern of the specialty is markedly different from that of other specialties; evidence of

any specialized training and/or certification required by the providers; credentialing or other recognition by another organization, such as the American Board of Medical Specialties; and the availability of a corresponding Healthcare Provider Taxonomy Code.

We also decline to change the Shared Savings Program policies to permit participation by ACOs comprised of ACO participants identified by a combination of NPIs and Medicare-enrolled billing TINs through which one or more ACO providers/suppliers bill Medicare, instead of requiring that all ACO participants that comprise an ACO be identified by a Medicare-enrolled TIN through which one or more ACO providers/suppliers bill Medicare. Commenters requesting we make such a change go beyond the scope of our proposals described in the CY 2024 PFS proposed rule. However, we noted that as we stated in previous rulemaking (80 FR 67874), we believe that defining ACO participants to include all NPIs that have reassigned their billing rights to the ACO participant TIN is a means to allow the ACO's redesigned care processes to more broadly reach all Medicare FFS beneficiaries that may receive care from ACO participants and provides incentives for lower-performing providers within an ACO participant TIN to improve. We also continue to have concerns about ACOs selecting only the highest-performing providers within a practice to be part of the ACO while less efficient and less effective providers are not part of the ACO, because this structure could have negative implications for patients seen by the ACO participant and for the Medicare Trust Funds. Therefore, we continue to believe that maintaining the definition of ACO participant at the TIN level continues to be an effective approach in achieving the program's goals of improved care and reduced expenditures, for Medicare FFS beneficiaries more broadly.

We also decline to incorporate patient relationship categories and codes established under MACRA into our assignment methodology at this time. These HCPCS Level II modifier codes are currently being tested for their potential use in the attribution methodology for the cost measures being used under MACRA. Reporting is currently voluntary to help collect data for testing and educate clinicians and stakeholders about the proper use of these code modifiers. In

addition, given that the codes are based on categories of patient relationships, it is not clear how they could be incorporated into the claims-based assignment process. Use of patient relationship codes might require structural changes to the assignment process that were not contemplated in the CY 2024 PFS proposed rule. Absent data on how they may impact beneficiary assignment in the Shared Savings Program, it is not clear how we might use the patient relationship codes in beneficiary assignment or what the effect of that use may be. Possible use of these patient relationship codes in beneficiary ACO assignment would require additional investigation and request for comments.

Finally, we decline to adopt a policy to ensure that beneficiaries are not assigned to an ACO due to services provided by NPs, PAs, and CNSs if the majority of the beneficiary's care is provided by a specialist physician outside the ACO. We note that under step 3, a beneficiary who received primary care from an NP, PA, or CNS participating in an ACO but received the plurality of their primary care during the expanded window for assignment from a specialist physician outside of a given ACO would not be assigned to that ACO.

*Comment:* Several commenters expressed support for the proposed definition of the expanded window for assignment, that is, the 24-month period used to assign beneficiaries to an ACO, or to identify assignable beneficiaries, or both that includes the applicable 12-month assignment window and the preceding 12 months. Some commenters explained their belief that the proposed approach would appropriately align the expanded window for assignment with the different 12-month assignment windows for ACOs under prospective assignment versus preliminary prospective assignment with retrospective reconciliation. Another commenter explained that the proposed definition of the expanded window for assignment would better account for beneficiaries who receive primary care from NPs, PAs, and CNSs.

One commenter encouraged CMS to consider revising the expanded window for assignment to 36 months, to align the window with the CMS definition of an established patient

relationship.<sup>235</sup> The commenter explained that this is an already-defined timeframe and that using such an approach could assist with increasing beneficiary participation in an ACO.

*Response:* We appreciate the commenters' support for the proposed definition of the expanded window for assignment, which we are finalizing as proposed. We agree with the commenter's sentiment that a 24-month expanded window for assignment will better account for beneficiaries who receive primary care from NPs, PAs and CNSs.

We are unsure how to interpret the statements from some commenters that the proposed approach would appropriately align the expanded window for assignment with the different 12-month assignment windows for ACOs under prospective assignment versus preliminary prospective assignment with retrospective reconciliation. As we explained in the proposed rule (88 FR 52443), the expanded window for assignment for prospective assignment will differ from the expanded window for assignment for preliminary prospective assignment with retrospective reconciliation. The expanded window for assignment to be defined at § 425.20 will mean the 24-month period used to assign beneficiaries to an ACO, or to identify assignable beneficiaries, or both, that includes the applicable 12-month assignment window (as defined under § 425.20) and the preceding 12 months. For example, for a calendar year assignment window that runs from January 1, 2025, through December 31, 2025, the expanded window for assignment would run from January 1, 2024, through December 31, 2025. For an offset assignment window that runs from October 1, 2023, through September 30, 2024, the expanded window for assignment would run from October 1, 2022, through September 30, 2024.

At this time, we decline to adopt the commenter's suggestion to use a 36-month expanded window for assignment, but will continue to monitor beneficiary assignment to ACOs in the future and consider proposing additional changes, as appropriate. As we described in

---

<sup>235</sup> CMS defines an established patient as a person who receives professional services from the physician, non-physician practitioner, or another physician of the same specialty who belongs to the same group practice within the previous 3 years. Refer to CMS, Evaluation and Management Services Guide, MLN Booklet (MLN006764 August 2023), pg. 17, available at <https://www.cms.gov/outreach-and-education/medicare-learning-network-mln/mlnproducts/downloads/eval-mgmt-serv-guide-icn006764.pdf>.

section III.G.3.a.(2)(a) of this final rule, we believe that a 24-month expanded window for assignment, as opposed to a longer period, would prioritize primary care services that were provided more recently. We believe that primary care services furnished by nurse practitioners, physician assistants, and clinical nurse specialists during the 12-month assignment window could reflect their work in clinical teams in collaboration with and under the supervision of physicians, and thereby represent a continuation of the beneficiary's primary care relationship with a physician from the previous year. Furthermore, use of a 24-month expanded window for assignment builds on experience we have gained and lessons learned from testing Medicare ACO initiatives by the Innovation Center, specifically from the use of a two-year beneficiary alignment period in the ACO REACH Model and the NGACO Model.

*Comment:* Some commenters expressed concerns that the expanded window for assignment might inappropriately assign beneficiaries based on their receipt of services from practitioners who no longer serve as their primary care provider. One commenter urged CMS not to finalize the expanded window over concerns about beneficiaries who might reside in multiple states for different parts of the year.

*Response:* As with the existing step-wise methodology, the revised approach would determine assignment based on the plurality of allowed charges for primary care services furnished to the beneficiary during the assignment window or expanded window for assignment, regardless of whether the beneficiary may live in different geographic areas at different points in time in the assignment window or expanded window for assignment. In the June 2015 final rule (80 FR 32745), we reported results of an analysis we conducted that indicated that beneficiary relocation out of an ACO's service area impacted only a very small number of beneficiaries within an ACO's assigned population, and these beneficiaries did not represent a significant portion of the ACO's assigned population. We do not expect that expanding the window for assignment to 24 months would meaningfully change this outcome. In addition, we believe that beneficiaries who generally live in multiple geographic areas over the course of a year may be

likely to follow a similar pattern each calendar year of changing locations and obtaining primary care services. We do not expect a 12-month change in the length of the assignment window to significantly change how those beneficiaries are assigned because we believe they generally would maintain that same pattern across a 24-month window. We reiterate our belief, explained in the June 2015 final rule, that continuing to include those beneficiaries who have not permanently moved, but who otherwise live in two or more geographic locations during the year, provides an excellent opportunity for ACOs to make sure the care for such beneficiaries is coordinated.

*Comment:* A few commenters, addressing our statement in the proposed rule that, as with the current step-wise methodology, under the proposed step 3 a beneficiary prospectively assigned to an ACO for a benchmark or performance year would not be assigned to another ACO under prospective assignment or preliminary prospective assignment with retrospective reconciliation, even if the other ACO provides the plurality of the beneficiary's primary care services during the relevant benchmark or performance year, asked that CMS monitor for any effects that the precedence of prospective assignment may have on smaller ACOs subject to preliminary prospective assignment with retrospective reconciliation, to which beneficiaries prospectively assigned to another ACO through step-wise assignment, including the proposed step 3, could not be assigned.

One commenter described concerns that the expanded window for assignment would increase the number of beneficiaries assigned to ACOs based on a timeframe that "is not most reflective of the primary care physician relationship," with a disproportionately negative impact on ACOs operating under prospective assignment. The commenter explained that under prospective assignment, beneficiaries who have not seen a physician who is an ACO professional in the applicable 12-month assignment window but are assigned to an ACO based on the expanded window for assignment will be "locked in" to that ACO for the performance year; however, under preliminary prospective assignment with retrospective reconciliation many of

these beneficiaries would “drop” from the assignment list over the course of the performance year as new claims and services are considered in assignment. The commenter further cited concerns that preliminary prospective assignment with retrospective reconciliation serves as a means for ACOs to “game” assignment by encouraging higher-cost beneficiaries to receive care from providers that do not bill under an ACO participant TIN in the ACO, and focusing on ensuring lower-cost beneficiaries remain assigned to the ACO. The commenter suggested that CMS make assignment using the expanded window for assignment an annual option for ACOs to elect along with the choice of preliminary prospective assignment with retrospective reconciliation or prospective assignment. In the alternative, if the expanded window for assignment is used in our methodology for assigning beneficiaries to all ACOs, the commenter suggested that CMS remove the option for ACOs to select preliminary prospective assignment with retrospective reconciliation and require all ACOs to participate under prospective assignment.

*Response:* In the CY 2024 PFS proposed rule (88 FR 52445), we acknowledged that there may be a small share of beneficiaries who would be prospectively assigned to an ACO under the proposed step 3 for prospective assignment that differs from the ACO the beneficiary is currently assigned to under steps 1 or 2 under preliminary prospective assignment with retrospective reconciliation. We noted that this precedence of prospective assignment follows the current assignment methodology, which currently assigns beneficiaries via steps 1 and 2 of prospective assignment to an ACO that may be different than the ACO to which the beneficiary would have been assigned via steps 1 or 2 if assigned to an ACO under preliminary prospective assignment with retrospective reconciliation. For the average ACO under preliminary prospective assignment with retrospective reconciliation, the share of assigned beneficiaries affected by this precedence of prospective assignment has historically been very small, approximately 1.3 percent from 2018 through 2021. We anticipate monitoring the impact of the use of step 3 on the size of ACOs’ assigned populations, including for differences in impact

based on an ACO's selection of assignment methodology, and on smaller ACOs, including with respect to ACOs' ability to meet the requirement to have at least 5,000 assigned beneficiaries under § 425.110(a).

We also believe that the benefits of the proposed changes to the step-wise methodology outweigh the risk of prospectively assigning a beneficiary in step 3 to an ACO based on a physician visit and the beneficiary's use of primary care services during the expanded window for assignment instead of to another ACO to which the beneficiary would have been assigned under preliminary prospective assignment with retrospective reconciliation based on the plurality of allowed charges for primary care services furnished to the beneficiary during the benchmark or performance year. Overall, we expect that a very small proportion of beneficiaries assigned in step 3 will fall into this category, while the vast majority of beneficiaries assigned in step 3 will be beneficiaries who would not have otherwise been brought into an accountable care relationship.

Additionally, we do not share the concerns of the commenter who stated that the expanded window for assignment would increase the number of beneficiaries assigned to ACOs based on a timeframe that "is not most reflective of the primary care physician relationship," with a disproportionately negative impact on ACOs operating under prospective assignment. We refer the commenter to the additional analysis that we describe elsewhere in this section of this final rule, indicating that, during the expanded window for assignment, a large majority of beneficiaries assigned to ACOs pursuant to step 3 will have received one or more primary care services from a primary care physicians (as defined at § 425.20), as opposed to a physician who has one of the specialty designations included in § 425.402(c), who is participating in the ACO to which the beneficiary is assigned. Further, we note that ACOs have the option to elect prospective assignment or preliminary prospective assignment with retrospective reconciliation on an annual basis. ACOs that share the concern of the commenter could elect the methodology they find most appropriate for their ACO. With respect to the concern over gaming beneficiary

assignment by encouraging higher-cost beneficiaries to receive care from providers and suppliers that do not bill under an ACO participant TIN in the ACO, we do not expect step 3 to incentivize or enable an ACO to engage in this type of behavior to a greater degree than the current step-wise methodology does, and we remind the commenter that we monitor ACO avoidance of at-risk beneficiaries pursuant to the regulations at § 425.316(b).

We decline to adopt the commenter's suggestion to allow ACOs the option to elect whether to use the expanded window for assignment for purposes of assignment each year. The proposed expanded window for assignment would apply to both the step 3 in the assignment methodology and to the definition of an assignable beneficiary. We believe it is necessary to maintain symmetry between the step-wise assignment methodology and the definition of an assignable beneficiary. Applying the expanded window for assignment in the step-wise beneficiary assignment methodology but not to the definition of an assignable beneficiary, or vice-versa, could create programmatic inconsistencies and may result in differential changes in average per capita expenditures and risk scores, resulting in inaccurate benchmarks due to distortions to benchmark trend and update factors that are based on changes in expenditures for the national assignable population and in the risk-adjusted expenditures for the population of assignable beneficiaries in an ACO's regional service area. Elsewhere in this section of this final rule, we explain that numerous aspects of the Shared Savings Program rely on the ACO-assigned population and the assignable population (see sections III.G.3.a.(2)(b) and (c) of this final rule). That is, various aspects of the program's benchmarking and financial methodology applicable to all ACOs, such as in the calculation of the regional adjustment and in the calculation of regional service area expenditures, will be determined in part by the national and regional populations of assignable beneficiaries identified through use of an expanded window for assignment. We also decline to adopt an alternative that would allow ACOs the option to elect whether to use the expanded window for assignment for both assignment and establishing the assignable population. It would be operationally complex and unduly burdensome for CMS to create

multiple assignable beneficiary populations for different ACOs using different definitions of an assignable beneficiary. It would also be operationally complex and unduly burdensome to perform beneficiary assignment using step 3 for some ACOs but not for others. Among other operational concerns, with each distinct beneficiary assignment methodology, we would need to apply precedence rules for handling cases when a given beneficiary is assigned to different ACOs under different methodologies. Doing so would create excessive complexity in administering the program and excessive complexity for ACOs participating in the program to review and track.

We decline to adopt the suggestion by the commenter to require ACOs to participate under prospective assignment. Section 1899(c)(2)(A) of the Act, as amended by the Bipartisan Budget Act of 2018, provides that the Secretary shall permit ACOs to choose to have Medicare FFS beneficiaries assigned prospectively, rather than retrospectively. Consistent with section 1899(c)(2)(A) of the Act, we offer all Shared Savings Program ACOs in agreement periods beginning on July 1, 2019, and in subsequent years the opportunity to select their beneficiary assignment methodology annually.

*Comment:* One commenter, who supported the proposed approach, requested CMS clarify in the final rule that an eligible beneficiary who received at least one primary care service with an NP, PA, or CNS participating in the ACO during the applicable 12-month assignment window would be considered an assignable beneficiary in certain cases. Specifically, the commenter described the following cases:

- The primary care physician, who used to be an ACO professional in the ACO and provided the primary care service to the beneficiary in the 12 months preceding the assignment window, is no longer billing under the TIN of an ACO participant during the applicable 12-month assignment window;
- The ACO participant, which was the entity whose TIN the primary care physician was billing under when they provided the primary care service to the beneficiary in the 12-month

period preceding the assignment window, is no longer participating in the Shared Savings Program ACO during the applicable 12-month assignment window; and

- The physician, an ACO professional in the ACO who had one of the primary specialty designations identified in § 425.402(c) and provided the primary care service to the beneficiary in the 12 months preceding the assignment window, changed specialty designation in the PECOS and no longer had one of the primary specialty designations identified in § 425.402(c) during the applicable 12-month assignment window.

*Response:* We interpret this commenter’s question as requesting clarification of whether a beneficiary would be considered assignable to the ACO. We note that to actually be assigned, the beneficiary would have to have received the plurality of their primary care services from ACO professionals participating in the ACO during the applicable 12-month assignment window for steps 1 and 2 or during the expanded window for assignment for step 3. In the first case, the beneficiary would be considered assignable because the Shared Savings Program recognizes primary care services at the ACO-TIN level, and not at the ACO-TIN-NPI (that is, practitioner) level. In the second case, if the TIN was removed from the ACO’s ACO participant list for the performance year that beneficiary assignment is being conducted for, then the beneficiary would not be assignable to the ACO on the basis of primary care services billed under that TIN. In the third case, the beneficiary would be assignable if the physician’s specialty on the claim indicates a primary care physician or one of the specialty designations included in § 425.402(c). Note that CMS does not use PECOS to determine physician specialty, but rather uses the physician’s specialty listed on the claim record.

*Comment:* One commenter, which supported the inclusion of step 3, explained that it had conducted an analysis and found that expanding the window for assignment and adding step 3 had the desired effect of expanding the number of beneficiaries assigned to ACOs. Additionally, the commenter stated that they found that the proposed step 3 “led to assignment in approximately 90 percent of the cases where the beneficiary went from ineligible to eligible

under the policy.” The commenter considered the effect of the policy to be a substantial improvement.

*Response:* We do not have sufficient information about the commenter’s analysis to fully address the commenter’s statement. However, we do agree with the commenter that the inclusion of a step 3 would increase the number of beneficiaries assigned to ACOs on average. In the analysis we presented in the CY 2024 PFS proposed rule (88 FR 52448 through 52449), we found that the proposed policies added 762,156 newly assignable beneficiaries for PY 2021, growing the national assignable population by about 2.9 percent. Elsewhere in this section of this final rule, we describe the additional simulations we conducted on the proposed step 3 in the beneficiary assignment methodology, which showed that step 3 would have increased the total number of beneficiaries assigned to ACOs by 2.1 percent in PY 2019 and by 2.3 percent in PY 2021.

*Comment:* One commenter suggested that CMS also revise the existing definition of “assignable beneficiary” under § 425.20 using a similar approach as the proposed step 3.

*Response:* We believe the commenter may have misunderstood the proposal. We proposed to modify the definition of “assignable beneficiary” (described in section III.G.3.a.(2)(c). of this final rule) to include use of an expanded window for assignment to identify additional beneficiaries to include in the assignable population and to be consistent with the use of an expanded window for assignment under a new step 3 in the claims-based assignment process (described in section III.G.3.a.(2)(b). of this final rule). We proposed to add a new definition of “Expanded window for assignment” in § 425.20 to mean the 24-month period used to assign beneficiaries to an ACO, or to identify assignable beneficiaries, or both that includes the applicable 12-month assignment window (as defined under § 425.20) and the preceding 12 months. See also, section III.G.3.a.(2)(a) of this final rule in which we provide an overview of the proposed revisions to incorporate use of an expanded window for assignment. We proposed that these changes would be effective for the performance year beginning on

January 1, 2025, and subsequent performance years.

*Comment:* Some commenters expressed concerns that the Shared Savings Program's risk adjustment and benchmarking methodologies would not adequately account for complex and high-needs beneficiaries newly assigned to ACOs under the proposed modifications to the step-wise assignment methodology and the definition of an assignable beneficiary. Some of these commenters suggested the potential need for modifications to the risk adjustment and benchmarking methodologies to mitigate any adverse effects on ACOs that may result from the inclusion of these beneficiaries in their assigned beneficiary populations.

One commenter pointed to concerns about the adequacy of the cap on ACO risk score growth in the context of CMS' proposed step 3 that will assign more underserved individuals who may have complex conditions that are not properly diagnosed to Shared Savings Program ACOs. The commenter explained that these individuals typically have not had an established, stable primary care relationship, and as a result, their risk scores are likely to be unreliable. Once assigned to a Shared Savings Program ACO, these beneficiaries' conditions will be diagnosed and they will begin receiving treatment, which will raise the ACO's per capita costs. However, due to CMS' policy of capping HCC score growth at 3 percent plus changes in demographics, risk scores will not increase to reflect these changes. As a result, according to the commenter, ACOs that are assigned more complex, historically underserved beneficiaries through step 3 in the assignment methodology will experience losses and may be forced to stop participating in the Shared Savings Program.

Some commenters urged CMS to conduct further analysis on the impact of the proposed step 3 and proposed changes to the definition of an assignable beneficiary to determine if modifications to the risk adjustment and benchmarking methodologies are needed to address the effects of adding potentially higher cost and more complex patients to the ACO-assigned and national assignable populations. A few commenters suggested that CMS analyze the distribution of assignable beneficiaries to help determine the need for updates to the risk adjustment and

benchmarking methodologies. Another commenter asked for additional data on the impact of the proposed step 3 on ACOs in rural and other different geographic regions in connection with regional trend factors used to establish and update the benchmark. This commenter also stated that CMS should ensure that the addition of step 3 to the assignment methodology would not harm any ACO, indicating that ACOs that are adversely affected would likely exit the program. Another commenter recommended adjusting beneficiaries' risk scores to account for the addition to the assigned beneficiary population of a significant number of patients for whom acuity has not been adequately captured, for example, by assigning a floor on the average risk score, such as 1.0, to avoid unintended consequences. Another commenter similarly requested that CMS make additional risk adjustment or benchmarking changes to mitigate potential negative impacts to ACOs from the inclusion of more complex and high-needs beneficiaries in the expanded ACO-assigned population. This commenter also suggested a more gradual transition of the proposed changes during the initial performance years in order to smooth potential effects and asked that CMS monitor for unintended consequences and have a plan for addressing any unintended consequences in a timely and responsive manner. Several commenters specified that CMS should investigate the impacts of specialty-driven assignment, including differences in risk scores and costs for beneficiaries assigned as a result of care provided by specialists, but the commenters did not specify whether specialists in this analysis should include non-physician practitioners. If the data show that these beneficiaries have higher risk scores and higher costs, the commenters suggested that CMS consider addressing these factors through changes to the risk adjustment and benchmarking policies.

*Response:* In responding to comments elsewhere in this section of this final rule, we describe the results of additional simulations we have conducted on the impact of the proposed changes to the assignment methodology and to the definition of an assignable beneficiary. As part of those simulations, we examined the expected impact of the proposed changes on ACO financial performance.

We believe that the additional simulations described in this final rule demonstrate that any downward effects on the average ACO's historical and updated benchmarks as a result of changes in the risk profile of its beneficiary population or the assignable population in the ACO's regional service area are offset by an average increase in the number of beneficiaries assigned to the ACO, allowing the ACO the opportunity to earn a larger shared savings payment. Our findings suggest that the risk ratios used to adjust an ACO's historical benchmark will not be adversely affected by the proposed changes because we would apply the proposed changes when determining assignment for the benchmark years, as well as the performance year. Furthermore, the findings from our simulations suggest that the proposed changes to the assignment methodology and the definition of assignable beneficiary are unlikely to result in adverse impacts on risk adjustment between the ACO's assigned beneficiary population and the ACO's regional service area. Under these simulations, we found that the characteristics of beneficiaries newly added to the ACO-assigned population for PY 2021 resembled those of beneficiaries newly added to the national assignable population in the analysis described in the CY 2024 PFS proposed rule (88 FR 52443).

Under the methodology for capping ACO risk score growth that was finalized for agreement periods starting on January 1, 2024, and in subsequent years in the CY 2023 PFS final rule (87 FR 69932 through 69946), we will use prospective HCC risk scores to adjust the historical benchmark for changes in severity and case mix for all assigned beneficiaries between BY3 and the performance year, with positive adjustments subject to a cap equal to the ACO's aggregate growth in demographic risk scores between BY3 and the performance year plus 3 percentage points (herein referred to as the "aggregate demographics plus 3 percent cap"). When we finalized the aggregate demographics plus 3 percent cap in the CY 2023 final rule (87 FR 69940), we acknowledged that the policy balanced competing concerns between the need to allow for some upward growth in prospective HCC risk scores between the benchmark period and the performance year and the concern that those risk scores, in general, are susceptible to

coding initiatives. Specifically, we stated our belief that the policy we were finalizing would be protective of the Trust Funds by limiting incentives for coding intensity as it would retain the 3 percent cap on growth in prospective HCC risk scores after accounting for all changes in demographic risk scores for the ACO's overall assigned beneficiary population, while also allowing for more significant changes in prospective HCC risk scores for certain enrollment types with smaller numbers of assigned beneficiaries and for potentially higher benchmarks than the current risk adjustment methodology for ACOs that care for larger proportions of high risk beneficiaries in the aged/dual eligible, disabled, and ESRD enrollment types. Additionally, as described in section III.G.4.b of this final rule, we are finalizing the proposal to cap regional service area risk score growth for symmetry with the cap on ACO risk score growth, which our modeling suggests will be advantageous to ACOs that see greater risk score growth in their regional service area.

We have not examined differences in the beneficiaries assigned as result of care provided by specialists versus primary care practitioners in connection with the costs and risk scores. However, as we noted elsewhere in this section of this final rule, our analysis suggests that assignment of these beneficiaries to ACOs in step 3 reflects assignment of these beneficiaries based on the ACOs that primarily managed their primary care during the expanded window for assignment. Additionally, our analysis shows that the proposed revision to the definition of assignable beneficiary and the addition of a new step 3 in the assignment methodology would lead the average ACO's total gross savings to increase.

*Comment:* Some commenters addressed the effective date of the proposed changes to the assignment methodology and the identification of the assignable beneficiary population. A few commenters requested that the proposed changes be finalized to apply beginning with PY 2024. Another commenter urged CMS to allow currently participating ACOs to elect to have beneficiaries assigned to them only under the current assignment methodology until the start of a new agreement period, given their concern that the proposed approach would exacerbate

“ongoing challenges of specialty attribution.” One commenter requested that CMS share ACO-specific modeling and analysis of the impact of the expanded window for assignment and the proposed revisions to the assignment methodology with sufficient time for review prior to signing a participation agreement for entering an agreement period in the Shared Savings Program beginning on January 1, 2025.

*Response:* We decline to adopt the commenters’ recommendations to implement the proposed changes to the assignment methodology and the definition of assignable beneficiary starting in PY 2024. In the CY 2024 PFS proposed rule (refer to section III.G.3.a.(2)(e) of this final rule), we set forth reasons why we would not be able to apply the expanded window for assignment and revised step-wise beneficiary assignment methodology for the performance year starting on January 1, 2024. We explained that consistent with how we have implemented previous changes to the Shared Savings Program assignment methodology, we would use the new methodology each time assignment is determined for a given benchmark or performance year and, as applicable, to determine the eligibility of ACOs applying to enter into or renew participation in the Shared Savings Program. For example, applicant eligibility for PY 2024 will be determined during CY 2023. Additionally, we anticipated that the proposed revised approach, if finalized, would require significant operational changes to the Shared Savings Program assignment methodology, which would take time to prepare in advance of initial use of the approach during the application process. In light of these factors, we continue to believe there is insufficient time to apply the expanded window for assignment and revised step-wise beneficiary assignment methodology for the performance year starting on January 1, 2024.

We agree with the feedback of commenters in response to our proposals, as described elsewhere in this section of this final rule, that ACOs and other interested parties need time to evaluate the impact of the proposed revised assignment methodology, including the new step 3, and the revised definition of assignable beneficiary, in advance of the start of PY 2025. In response to the commenter who requested that CMS share ACO-specific modeling and analysis

of the impact of the expanded window for assignment and the proposed revisions to the assignment methodology with sufficient time for review prior to signing a participation agreement for entering an agreement period in the Shared Savings Program beginning on January 1, 2025, we note that elsewhere in our response to comments in this section of this final rule, and in the Regulatory Impact Analysis (see section VI.E.10. of this final rule), we describe additional analysis we have undertaken to estimate the impact of these proposals on ACOs, including on their financial performance and assigned beneficiary populations. We also provide ACOs with an estimate of their total number of assigned beneficiaries during the application cycle which the ACO can review prior to signing a participation agreement for entering a new agreement period.

We also decline to adopt an alternative approach whereby currently participating ACOs could elect to have beneficiaries assigned to them only under the current assignment methodology until those ACOs enter a new agreement period on or after January 1, 2025. The Shared Savings Program's longstanding approach is to implement changes to the assignment methodology on a performance year basis, and as we describe elsewhere in section III.G.3.a.(2)(e) of this final rule, we believe it is necessary to maintain symmetry between the assignment methodology and the definition of an assignable beneficiary to avoid programmatic inconsistencies that may result in inaccurate benchmarks. Furthermore, we have particular concern about allowing ACOs to "opt in" to certain policies that may affect updates and adjustments to their benchmark within an agreement period, as this would create an opportunity for selective behavior without the counterbalance of benchmark rebasing and would introduce significant operational complexity.

*Comment:* One commenter generally expressed its belief that the "gold standard" for assignment is always voluntary, prospective patient attribution, which both empowers patients by placing them at the center of their healthcare decision making and helps providers proactively manage care for the patients they know they are responsible for.

*Response:* We re-emphasize, as described in the background for our proposals in the CY 2024 PFS proposed rule (see section III.G.3.a.(1) of this final rule), that assignment for purposes of the Shared Savings Program in no way implies any limits, restrictions, or diminishment of the rights of Medicare FFS beneficiaries to exercise freedom of choice in the physicians and other health care practitioners from whom they receive covered services. To the extent that the commenter may have been referencing the non-claims-based process for voluntary alignment that applies to all Shared Savings Program ACOs and is used to supplement claims-based assignment (as specified in § 425.402(e)), we reiterate that the proposed changes would not change the fact that beneficiary voluntary alignment supersedes claims-based assignment.

*Comment:* A few commenters suggested changes to increase the extent to which assignment may be based upon services by non-physician practitioners. Specifically, a few commenters suggested that CMS exercise the waiver authority under section 1899(f) of the Act to waive the statutory requirement under section 1899(c)(1)(A) of the Act that beneficiaries be assigned to an ACO based on their use of primary care services furnished by physicians participating in the ACO, which is the basis for the assignment methodology's pre-step requirement. These commenters suggested that CMS allow beneficiaries to be assigned based on their receipt of primary care services provided by an NP, PA, or CNS who is an ACO professional. One commenter urged CMS to work with Congress to remove the physician-centric assignment language in section 1899 of the Act, a change which the commenter noted they believe would allow for simplification of the beneficiary assignment process.

*Response:* Section 1899(f) of the Act provides that the Secretary may waive such requirements of sections 1128A and 1128B and title XVIII of the Act as may be necessary to carry out the provisions of section 1899 of the Act. Section 1899(c)(1) of the Act, as amended by the CURES Act and the Bipartisan Budget Act of 2018, provides that the Secretary shall determine an appropriate method to assign Medicare FFS beneficiaries to an ACO based on their utilization of primary care services provided by physicians in the ACO and, in the case of

performance years beginning on or after January 1, 2019, services provided by a FQHC or RHC. We continue to believe that assigning beneficiaries to an ACO based on their receipt of primary care services furnished by physicians participating in the ACO is consistent with section 1899 of the Act, and that, to be consistent with that section, a claims-based assignment methodology must include a requirement that a beneficiary assigned to an ACO have received a primary care service from a physician participating in the ACO. We thank the commenters for their suggestion regarding possible future statutory changes to the beneficiary assignment requirements.

*Comment:* Several commenters responded to our request for comments on additional policies we should consider for potential future rulemaking on our assignment methodology, with the goal of increasing the number of Original Medicare FFS beneficiaries assigned to an ACO, particularly in underserved communities.

One commenter suggested lowering the minimum number of assigned beneficiaries required to support participation among smaller ACOs. A few commenters suggested changes to the voluntary alignment methodology, including the use of a paper process for beneficiaries to identify their primary care provider. One commenter also requested that voluntary alignment be a quarterly process and that CMS “confirm the selection through data.”

A few commenters made several recommendations to address concerns about assignment of beneficiaries receiving facility-based care (such as long-term care from a nursing facility, or short-term rehabilitative and skilled care in nursing facilities), and specifically about beneficiaries who have recently transitioned from receiving care from community-based primary care practitioners to facility-based primary care practitioners. One commenter, an ACO that exclusively serves Medicare beneficiaries who are long-term residents of nursing facilities, explained that the ACO experiences large year-over-year increases in the number of beneficiaries excluded from retrospective assignment as the result of the beneficiary already being prospectively assigned to another Shared Savings Program ACO or already being assigned to another Medicare shared savings initiative. The commenter explained that as a result of these

policies, newly institutionalized beneficiaries are assigned to an ACO based on care from their former community-based primary care practitioners rather than care from facility-based primary care practitioners, creating what the commenter refers to as “misalignment from an accountability of care and value-based care participation perspective.” Similarly, another commenter stated that under current Shared Savings Program assignment policies, beneficiaries newly admitted to a nursing facility for long-term care are often “misaligned” to their previous community-based primary care practitioner because services received from the new nursing facility-based practitioner are not captured in the assignment window. These commenters recommended CMS exclude the Long-Term Institutionalized (LTI) population from initial assignment algorithms to prevent “their misalignment to outdated community-based primary care relationships that no longer provide care to these LTI beneficiaries,” and run a “separate LTI population assignment process” that identifies primary care physician visits and calculates the plurality of primary care services provided in facilities identified by place of service codes 31, 32, or 33, excluding primary care services provided during a Part A Skilled Nursing Facility (SNF) stay. Additionally, the commenters requested that CMS provide monthly, detailed beneficiary information to ACOs participating under preliminary prospective assignment with retrospective reconciliation regarding beneficiaries who received at least one primary care service from an ACO provider during the performance year and who have been prospectively assigned to ACOs participating in other shared savings initiatives or to other Shared Savings Program ACOs.

*Response:* We appreciate these thoughtful comments in response to our comment solicitation. We may consider this information and these suggestions to inform future rulemaking.

After consideration of the public comments, we are finalizing our proposal to use an expanded window for assignment in a new step 3 to the claims-based assignment process to identify additional beneficiaries for ACO assignment (described in section III.G.3.a.(2)(b) of this

final rule), for performance year 2025 and subsequent performance years. Specifically, we are modifying subpart E of the Shared Savings Program regulations to specify the revised beneficiary assignment methodology. We are specifying the new step 3 in a new provision at § 425.402(b)(5). We are also finalizing as proposed technical and conforming changes to incorporate the revised methodology. We are amending § 425.402(b)(1), describing the existing pre-step of the assignment methodology that would remain applicable for step 1 and step 2, to refer to the identification of all beneficiaries who had “at least one primary care service *during the applicable assignment window* with a physician who is an ACO professional in the ACO and who is a primary care physician as defined under § 425.20 or who has one of the primary specialty designations included in [§ 425.402(c)]” (emphasis added to reflect revised text). In § 425.402(c), which indicates the primary specialty designations used in assignment, we are finalizing our proposal to specify that the listed specialties will be considered for ACO professionals in step 2 (as described in § 425.402(b)(4)) and step 3 (in the new provision at § 425.402(b)(5)) of the assignment methodology. In § 425.400(a)(2)(ii), which generally describes quarterly updates to preliminary prospective assignment with retrospective reconciliation, we are finalizing our proposal to specify that assignment will be updated quarterly based on the most recent 12 or 24 months of data, as applicable, under the methodology described in §§ 425.402 and 425.404. Lastly, in § 425.400(a)(3)(i), which generally describes prospective assignment of beneficiaries to ACOs at the beginning of each benchmark or performance year, we are finalizing our proposal to amend the reference that specifies that we base prospective assignment on the beneficiary's use of primary care services in the most recent 12 months for which data are available, to specify instead the beneficiary's use of primary care services in the most recent 12 months or 24 months, as applicable, for which data are available, using the assignment methodology described in §§ 425.402 and 425.404.

We are also finalizing our proposed amendments to § 425.20. We are finalizing our proposed modifications of the definition of “assignable beneficiary” to be consistent with the use

of an expanded window for assignment in the new step 3 of the assignment methodology, to identify additional beneficiaries to include in the assignable population after application of the existing methodology. Specifically, we will continue to utilize the criterion in the existing definition, under which assignable beneficiary means a Medicare FFS beneficiary who receives at least one primary care service with a date of service during a specified 12-month assignment window from a Medicare-enrolled physician who is a primary care physician or who has one of the specialty designations included in § 425.402(c). Further, for performance year 2025 and subsequent performance years, a Medicare FFS beneficiary who does not meet this requirement but who meets both of the following criteria will also be considered an assignable beneficiary:

(1) Receives at least one primary care service with a date of service during a specified 24-month expanded window for assignment from a Medicare-enrolled physician who is a primary care physician or who has one of the specialty designations included in § 425.402(c).

(2) Receives at least one primary care service with a date of service during a specified 12-month assignment window from a Medicare-enrolled practitioner who is an NP (as defined at § 410.75(b)), PA (as defined at § 410.74(a)(2)), or CNS (as defined at § 410.76(b)).

We are finalizing our proposed revisions to the definition of “assignment window,” for clarity and consistency, to mean the 12-month period used to assign beneficiaries to an ACO, or to identify assignable beneficiaries, or both. We are also finalizing our proposal to add a new definition of “expanded window for assignment” to mean the 24-month period used to assign beneficiaries to an ACO, or to identify assignable beneficiaries, or both that includes the applicable 12-month assignment window (as defined under § 425.20) and the preceding 12 months.

We are finalizing our proposal to amend provisions in subpart G of the Shared Savings Program regulations, within §§ 425.652, 425.654, and 425.656, that refer to the assignment window used to identify the assignable beneficiary population in order to incorporate references to the approach to using an expanded window for assignment in identifying the assignable

population for performance year 2025 and subsequent performance years. We refer readers to the description of these changes, as proposed, in section III.G.3.a.(2)(c) of this final rule. Similarly, we are also finalizing our proposal to specify in the new provision we are finalizing at § 425.655(b)(1) that the assignable population that will be used to calculate average county prospective HCC and demographic risk scores for purposes of calculating the regional risk score growth cap adjustment factor (refer to section III.G.4.b. of this final rule) will be identified for the relevant benchmark year or the performance year (as applicable) using the assignment window or expanded window for assignment that is consistent with the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.400(a)(4)(ii).

#### b. Revisions to the Definition of Primary Care Services used in Shared Savings Program Beneficiary Assignment

##### (1) Background

Section 1899(c)(1) of the Act, as amended by the CURES Act and the Bipartisan Budget Act of 2018, provides that for performance years beginning on or after January 1, 2019, the Secretary shall assign beneficiaries to an ACO based on their utilization of primary care services provided by a physician who is an ACO professional and all services furnished by RHCs and FQHCs. However, the statute does not specify a list of services considered to be primary care services for purposes of beneficiary assignment.

In the November 2011 final rule (76 FR 67853), we established the initial list of services, identified by Current Procedural Terminology (CPT) and Healthcare Common Procedure Coding System (HCPCS) codes, that we considered to be primary care services. In that final rule, we indicated that we intended to monitor CPT and HCPCS codes and would consider making changes to the definition of primary care services to add or delete codes used to identify primary care services if there were sufficient evidence that revisions were warranted. We have updated the list of primary care service codes in subsequent rulemaking (refer to 80 FR 32746 through 32748; 80 FR 71270 through 71273; 82 FR 53212 through 53213; 83 FR 59964 through 59968;

85 FR 27582 through 27586; 85 FR 84747 through 84756; 85 FR 84785 through 84793; 86 FR 65273 through 65279; 87 FR 69821 through 69825) to reflect additions or modifications to the codes that have been recognized for payment under the PFS and to incorporate other changes to the definition of primary care services for purposes of the Shared Savings Program.

For the performance year beginning on January 1, 2023, and subsequent performance years, we defined primary care services in § 425.400(c)(1)(vii) for purposes of assigning beneficiaries to ACOs under § 425.402 as the set of services identified by the following HCPCS/CPT codes:

- *CPT codes:*

- ++ 96160 and 96161 (codes for administration of health risk assessment).

- ++ 99201 through 99215 (codes for office or other outpatient visit for the evaluation and management of a patient).

- ++ 99304 through 99318 (codes for professional services furnished in a nursing facility; professional services or services reported on an FQHC or RHC claim identified by these codes are excluded when furnished in a SNF).

- ++ 99319 through 99340 (codes for patient domiciliary, rest home, or custodial care visit).

- ++ 99341 through 99350 (codes for evaluation and management services furnished in a patient's home).

- ++ 99354 and 99355 (add-on codes, for prolonged evaluation and management or psychotherapy services beyond the typical service time of the primary procedure; when the base code is also a primary care service code under this paragraph (c)(1)(vi)).

- ++ 99421, 99422, and 99423 (codes for online digital evaluation and management).

- ++ 99424, 99425, 99426, and 99427 (codes for principal care management services).

- ++ 99437, 99487, 99489, 99490 and 99491 (codes for chronic care management).

- ++ 99439 (code for non-complex chronic care management).

++ 99483 (code for assessment of and care planning for patients with cognitive impairment).

++ 99484, 99492, 99493 and 99494 (codes for behavioral health integration services).

++ 99495 and 99496 (codes for transitional care management services).

++ 99497 and 99498 (codes for advance care planning; services identified by these codes furnished in an inpatient setting are excluded).

- *HCPCS codes:*

++ G0402 (code for the Welcome to Medicare visit).

++ G0438 and G0439 (codes for the annual wellness visits).

++ G0442 (code for alcohol misuse screening service).

++ G0443 (code for alcohol misuse counseling service).

++ G0444 (code for annual depression screening service).

++ G0463 (code for services furnished in ETA hospitals).

++ G0506 (code for chronic care management).

++ G2010 (code for the remote evaluation of patient video/images).

++ G2012 and G2252 (codes for virtual check-in).

++ G2058 (code for non-complex chronic care management).

++ G2064 and G2065 (codes for principal care management services).

++ G0317, G0318, and G2212 (code for prolonged office or other outpatient visit for the evaluation and management of a patient).

++ G2214 (code for psychiatric collaborative care model).

++ G3002 and G3003 (codes for chronic pain management).

- Primary care service codes include any CPT code identified by CMS that directly replaces a CPT code specified in paragraph (c)(1)(vii)(A) of § 425.400 or a HCPCS code specified in paragraph (c)(1)(vii)(B) of § 425.400, when the assignment window (as defined in §

425.20) for a benchmark or performance year includes any day on or after the effective date of the replacement code for payment purposes under FFS Medicare.

## (2) Revisions

Based on feedback from ACOs and our further review of the HCPCS and CPT codes that are currently recognized for payment under the PFS or that we proposed to recognize for payment starting in CY 2024, we believe it would be appropriate to amend the definition of primary care services used in the Shared Savings Program assignment methodology to include certain additional codes and to make other technical changes to the definition of primary care services for use in determining beneficiary assignment for the performance year starting on January 1, 2024, and subsequent performance years, in order to remain consistent with billing and coding under the PFS.

We proposed to revise the definition of primary care services used for assignment in the Shared Savings Program regulations to include the following additions: (1) Smoking and Tobacco-use Cessation Counseling Services CPT codes 99406 and 99407; (2) Remote Physiologic Monitoring CPT codes 99457 and 99458; (3) Cervical or Vaginal Cancer Screening HCPCS code G0101; (4) Office-Based Opioid Use Disorder Services HCPCS codes G2086, G2087, and G2088; (5) Complex Evaluation and Management services Add-on HCPCS code G2211, if finalized under the Medicare FFS payment policy; (6) Community Health Integration (CHI) services HCPCS codes GXXX1 and GXXX2, if finalized under the Medicare FFS payment policy; (7) Principal Illness Navigation (PIN) services HCPCS codes GXXX3 and GXXX4, if finalized under the Medicare FFS payment policy; (8) SDOH Risk Assessment HCPCS code GXXX5, if finalized under the Medicare FFS payment policy; (9) Caregiver Behavior Management Training CPT codes 96202 and 96203, if finalized under the Medicare FFS payment policy; and (10) Caregiver Training services CPT codes 9X015, 9X016, and 9X017, if finalized under the Medicare FFS payment policy. The following provides additional

information about the HCPCS codes that we proposed to add to the definition of primary care services used for purposes of beneficiary assignment:

- *Smoking and tobacco-use cessation counseling services CPT codes 99406 and 99407:* Effective January 1, 2008, CPT codes 99406 (*Smoking and tobacco-use cessation counseling visit; intermediate, greater than 3 minutes up to 10 minutes*) and 99407 (*Smoking and tobacco-use cessation counseling visit; intensive, greater than 10 minutes*) were implemented for billing for smoking and tobacco-use cessation counseling services. As described in Medicare National Coverage Determinations (NCD) Manual, Publication 100-3, chapter 1, section 210.4.1, tobacco use remains the leading cause of preventable morbidity and mortality in the U.S. and is a major contributor to the nation's increasing medical costs. Despite the growing list of adverse health effects associated with smoking, more than 45 million U.S. adults continue to smoke and approximately 1,200 die prematurely each day from tobacco-related diseases. Since these are recognized as preventive services,<sup>236</sup> similar to other preventive services such as alcohol misuse screening and counseling (HCPCS codes G0442 and G0443) which are currently included in the definition of primary care services for purposes of beneficiary assignment, we believe it appropriate to include CPT codes that identify counseling to prevent tobacco use in the definition of primary care services for purposes of beneficiary assignment.

- *Remote Physiologic Monitoring CPT codes 99457 and 99458:* Chronic care remote physiologic monitoring (RPM) services involve the collection, analysis, and interpretation of digitally collected physiologic data, followed by the development of a treatment plan, and the managing of a patient under the treatment plan. In the CY 2020 PFS final rule (84 FR 62697) we finalized a revised CPT code 99457 (*Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; initial*

---

<sup>236</sup> Medicare Learning Network (MLN006559, May 2023) Medicare Preventive Services Quick Reference Chart, available at <https://www.cms.gov/Medicare/Prevention/PrevntionGenInfo/medicare-preventive-services/MPS-QuickReferenceChart-1.html#TOBACCO>.

20 minutes) and added CPT code 99458 (*Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; additional 20 minutes*) to adopt the CPT Editorial Panel revised structure for CPT code 99457.

The new code structure retained CPT code 99457 as a base code that describes the first 20 minutes of the treatment management services and uses a new add-on code to describe subsequent 20-minute intervals of the service. We further designated CPT codes 99457 and 99458 as care management services because care management services include establishing, implementing, revising, or monitoring treatment plans, as well as providing support services, and because RPM services include establishing, implementing, revising, and monitoring a specific treatment plan for a patient related to one or more chronic conditions that are monitored remotely. Because these remote therapeutic monitoring services are designated as care management services<sup>237</sup> and because we broadly include care management services (for example, CPT codes 99437, 99487, 99489, 99490 and 99491) in the Shared Savings Program definition of primary care services for purposes of beneficiary assignment, we stated in the CY 2024 PFS proposed rule (88 FR 52451) that we believed CPT codes 99457 and 99458 should also be included in the definition of primary care services for purposes of beneficiary assignment.

- *Cervical or Vaginal Cancer Screening Code HCPCS code G0101*: Section 4102 of the Balanced Budget Act of 1997 provides for coverage of screening pelvic examinations (including a clinical breast examination) for all female beneficiaries, subject to certain frequency and other limitations.<sup>238</sup> Cervical and vaginal cancer screening and clinical breast examination are important preventive health care services intended to detect early cancer, precancers and sexually

No. 100-3, Manual Section 210.2), available at <https://www.cms.gov/medicare-coverage-database/view/ncd.aspx?NCID=185#:~:text=Section%204102%20of%20the%20Balanced%20Budget%20Act%20of,beneficiaries%2C%20subject%20to%20certain%20frequency%20and%20other%20limitations>.

transmitted infections. HCPCS code G0101 (*Cervical or vaginal cancer screening; pelvic and clinical breast examination*) can be reimbursed by Medicare Part B every 2 years. For patients who are considered high risk, reimbursement is allowed on an annual basis.

Obstetrics/gynecology and gynecology/oncology are identified as physician specialty designations for purposes of identifying primary care services furnished to beneficiaries used in assignment operations according to § 425.402(c), so we believe it appropriate to use wellness and preventive care visits provided by these specialists in our definition of primary care services used in assignment. We consider these to be a preventive health service that can be provided in a primary care setting<sup>239</sup> similar to the annual wellness visit (AWV) HCPCS codes G0438 and G0439, which are already included in the Shared Savings Program definition of primary care services used in assignment, so we believe that they should be included in the definition of primary care services for purposes of beneficiary assignment.

- *Office-Based Opioid Use Disorder Services HCPCS Codes G2086, G2087, and G2088*: In the CY 2020 PFS final rule (84 FR 62568), we finalized our proposal to establish bundled payments for the overall treatment of Opioid Use Disorder (OUD), including management, care coordination, psychotherapy, and counseling activities HCPCS codes G2086 (*Office-based treatment for opioid use disorder, including development of the treatment plan, care coordination, individual therapy and group therapy and counseling; at least 70 minutes in the first calendar month*), G2087 (*Office-based treatment for opioid use disorder, including care coordination, individual therapy and group therapy and counseling; at least 60 minutes in a subsequent calendar month*), and G2088 (*Office-based treatment for opioid use disorder, including care coordination, individual therapy and group therapy and counseling; each additional 30 minutes beyond the first 120 minutes (List separately in addition to code for*

---

<sup>239</sup> Medicare Learning Network (MLN006559, May 2023) Medicare Preventive Services Quick Reference Chart, available at <https://www.cms.gov/Medicare/Prevention/PrevntionGenInfo/medicare-preventive-services/MPS-QuickReferenceChart-1.html#PELVIC>.

*primary procedure*)). Refer to the CY 2020 PFS final rule (84 FR 62673) for detailed, technical discussion regarding the description, payment, and utilization of these HCPCS codes.

The bundled payment under the PFS for office-based treatment for OUD was intended to create an avenue for physicians and other health professionals to bill for a bundle of services that is similar to the bundled OUD treatment services benefit, but not furnished by an Opioid Treatment Program (OTP). By creating a separate bundled payment for these services under the PFS, we hoped to incentivize increased provision of counseling and care coordination for patients with OUD in the office setting, thereby expanding access to OUD care. In the proposed rule we noted that use of these codes is limited to only beneficiaries diagnosed with OUD and these codes should not be billed for beneficiaries who are receiving treatment at an OTP, as we believe that would be duplicative since the bundled payments made to OTPs cover similar services for the treatment of OUD.

Because the separately reportable initiating visit requirement for the OUD bundle HCPCS codes G2086, G2087 and G2088 is similar to the separately reportable initiating visit requirements for chronic care management (CCM) services, and behavioral health integration services (BHI), as they include overall management and care coordination activities, we stated we believed these services should be considered primary care services for purposes of beneficiary assignment.<sup>240</sup> Additionally, as we stated in the proposed rule, we anticipated that the billing clinician, likely an addiction medicine specialist, would manage the patient's overall OUD care, as well as supervise any other individuals participating in the treatment, such as those billing incident to services of the billing physician or other practitioner, which is similar to the requirements related to the furnishing of psychiatric collaborative care model (CoCM) services. CCM, BHI, CoCM, and alcohol misuse screening and counseling services are included in our definition of primary care services, so we believe that HCPCS codes G2086, G2087 and G2088

---

<sup>240</sup> Medicare Physician Fee Schedule Office-Based Opioid Use Disorder (OUD) Treatment Billing Information, available at <https://www.cms.gov/medicare/physician-fee-schedule/office-based-opioid-use-disorder-oud-treatment-billing>.

are appropriate to be included in the definition of primary care services for purposes of beneficiary assignment. For additional clarity, incident to services are services rendered to a patient by a provider other than the physician treating the patient more broadly, that are an integral, although incidental, part of the patient's normal course of diagnosis or treatment of an injury or illness. These services are billed as Medicare Part B services, as if the original physician personally provided the care using that physician's NPI number. As we stated in the proposed rule, we anticipated that these services would often be billed by addiction specialty practitioners but note that these codes are not limited to use by any particular physician or non-physician practitioner specialty. Further, since addiction medicine is identified as one of the physician specialty designations for purposes of identifying primary care services used in assignment operations according to § 425.402(c)(13), we believed it would be appropriate to include care coordination services provided by these specialists in our definition of primary care services used for purposes of beneficiary assignment.

We further recognized that OUD bundle HCPCS codes G2086, G2087 and G2088 are identified as codes for alcohol and substance abuse-related diagnoses that are excluded from Shared Savings Program Claim and Claim Line Feeds. Given this, we want to make transparent that ACOs will not be able to see the claims that may have been used in assignment for beneficiaries receiving OUD services, and possibly not be able to identify why certain beneficiaries were assigned to their ACO related to these codes.

- *Complex Evaluation and Management Services Add-on HCPCS Code G2211, if finalized under Medicare FFS payment policy: As discussed in section II.F. of the CY 2024 PFS proposed rule (88 FR 52350 through 88 FR 52356), HCPCS add-on code G2211 (Visit complexity inherent to evaluation and management associated with medical care services that serve as the continuing focal point for all needed health care services and/or with medical care services that are part of ongoing care related to a patient's single, serious condition or a complex condition. (Add-on code, list separately in addition to office/outpatient evaluation and*

*management visit, new or established*) can be reported in conjunction with office/outpatient (O/O) evaluation and management (E/M) visits to better account for additional resources associated with primary care, or similarly ongoing medical care related to a patient's single, serious condition, or complex condition (84 FR 62854 through 62856, 85 FR 84571). Section 113 of Division CC of the Consolidated Appropriations Act, 2021 (Pub. L. 116-260, December 27, 2020) imposed a moratorium on Medicare payment for this service by prohibiting CMS from making payment under the PFS for inherently complex E/M visits described by HCPCS code G2211 (or any successor or substantially similar code) before January 1, 2024. The moratorium on Medicare payment under the PFS for HCPCS code G2211 will end on December 31, 2023, therefore we proposed to make HCPCS code G2211 separately payable effective January 1, 2024. Refer to section II.E of this final rule for finalized detailed, technical discussion regarding the description, payment, and utilization of this HCPCS code.

Since HCPCS code G2211 is an add-on code used in conjunction with O/O E/M services and such services are included in our definition of primary care services, we stated in the CY 2024 PFS proposed rule that we believed that the proposed inclusion of HCPCS code G2211 is consistent with our intent to encompass primary care and wellness services in the definition of primary care services used for purposes of beneficiary assignment.

- *Community Health Integration Services HCPCS Codes GXXX1 and GXXX2, if finalized under Medicare FFS payment policies:* In section II.E of the proposed rule (88 FR 52307 through 88 FR 52350), we proposed separate coding, payment, service elements and documentation requirements for the following CHI services:  
**GXXX1** *Community health integration (CHI) services performed by certified or trained auxiliary personnel including a community health worker, under the direction of a physician or other practitioner; 60 minutes per calendar month, in the following activities to address social determinants of health (SDOH) need(s) that are significantly limiting ability to diagnose or treat problem(s) addressed in an initiating E/M visit:*

- *Person-centered assessment, performed to better understand the individualized context of the intersection between the SDOH need(s) and problem(s) addressed in the initiating E/M visit.*

- ++ *Conducting a person-centered assessment to understand patient's life story, strengths, needs, goals, preferences and desired outcomes, including understanding cultural and linguistic factors.*

- ++ *Facilitating patient-driven goal-setting and establishing an action plan.*

- ++ *Providing tailored support to the patient as needed to accomplish the practitioner's treatment plan.*

- *Practitioner, Home, and Community-Based Care Coordination*

- ++ *Coordination with practitioner; home, and community-based service providers; and caregiver (if applicable).*

- ++ *Communication with practitioners, home- and community-based service providers, hospitals, and skilled nursing facilities (or other health care facilities) regarding the patient's psychosocial strengths and needs, functional deficits, goals, preferences, and desired outcomes, including cultural and linguistic factors.*

- ++ *Coordination of care transitions between and among health care practitioners and settings, including transitions involving referrals to other clinicians; follow-up after an emergency department visit; or follow-up after discharges from hospitals, skilled nursing facilities or other health care facilities.*

- ++ *Facilitating access to community-based social services (e.g., housing, utilities, transportation, food assistance) to address SDOH need(s).*

- *Health education- Helping the patient contextualize health education provided by the patient's treatment team with the patient's individual needs, goals, and preferences, in the context of the SDOH need(s), and educating the patient on how to best participate in medical decision-making.*

- *Building patient self-advocacy skills, so that the patient can interact with members of the health care team and related community-based services addressing the SDOH need(s), in ways that are more likely to promote personalized and effective diagnosis and treatment.*

- *Health care access / health system navigation:*

- ++ *Helping the patient access care, including identifying appropriate practitioners or providers for clinical care and helping secure appointments with them.*

- *Facilitating behavioral change as necessary for meeting diagnosis and treatment goals, including promoting patient motivation to participate in care and reach person-centered diagnosis or treatment goals.*

- *Facilitating and providing social and emotional support to help the patient cope with the problem(s) addressed in the initiating visit, the SDOH need(s), and adjust daily routines to better meet diagnosis and treatment goals.*

**GXXX2** – *Community health integration services, each additional 30 minutes per calendar month (List separately in addition to GXXX1).*

As described in section II.E of the proposed rule, all auxiliary personnel who provide CHI services must be certified or trained to perform all included service elements and authorized to perform them under applicable State laws and regulations. Under § 410.26(a)(1) of our regulations, auxiliary personnel must meet any applicable requirements to provide incident to services, including licensure, imposed by the State in which the services are being furnished.<sup>241</sup>

A billing practitioner may arrange to have CHI services provided by auxiliary personnel external to, and under contract with, the practitioner or their practice, such as through a community-based organization (CBO) that employs CHWs, if all of the “incident to” and other requirements and conditions for payment of CHI services are met. The payment policy described in section II.E of this final rule explains that we would expect the auxiliary personnel performing the CHI services to communicate regularly with the billing practitioner to ensure that CHI services are

---

<sup>241</sup> CHW Roles As Outlined In The C3 Project available at <https://chwtraining.org/c3-project-chw-skills/>.

appropriately documented in the medical record, and to continue to involve the billing practitioner in evaluating the continuing need for CHI services to address the SDOH need(s) that limit the practitioner's ability to diagnose and treat the problem(s) addressed in the initiating visit. Refer to section II.E of this final rule for the finalized detailed, technical discussion regarding the proposed description, payment and utilization of these HCPCS codes.

Since the proposal described in section II.E. of the proposed rule proposed to designate CHI services as care management services that may be furnished under general supervision under § 410.26(b)(5) and because we broadly include care management services in the definition of primary care services used for purposes of beneficiary assignment, we stated that we believed it would be similarly appropriate to include CHI services in the list of primary care services used for purposes of beneficiary assignment. Additionally, since CHI services require an initiating E/M visit and these services can be billed as incident to by the billing practitioner who bills for the CHI initiating E/M visit, and E/M services are currently included in the list of primary care services used for purposes of beneficiary assignment, we also stated that we believed it would be similarly appropriate to include CHI services in the list of primary care services used for purposes of beneficiary assignment.

- *Principal Illness Navigation (PIN) Services HCPCS codes GXXX3 and GXXX4, if finalized under Medicare FFS payment policies:* In section II.E of the proposed rule, we proposed new coding for Principal Illness Navigation (PIN) services. In considering the appropriate patient population to receive these services, we considered the patient population eligible for principal care management service codes (CPT codes 99424 through 99427), as well as clinical definitions of “serious illness.” For example, one peer-review study defined “serious illness” as a health condition that carries a high-risk of mortality and either negatively impacts a person’s daily function or quality of life, or excessively strains their caregivers.<sup>242</sup> Another study

---

<sup>242</sup> Kelley AS, Bollens-Lund E., Identifying the Population with Serious Illness: The "Denominator" Challenge. J Palliat Med. 2018 Mar;21(S2): S7-S16. doi: 10.1089/jpm.2017.0548. Epub 2017 Nov 10. PMID: 29125784; PMCID: PMC5756466. available at <https://pubmed.ncbi.nlm.nih.gov/29125784/>.

describes a serious illness as a health condition that carries a high-risk of mortality and commonly affects a patient for several years, while some measure serious illness by the amount of urgent health care use (911 calls, emergency department visits, repeated hospitalizations) and polypharmacy.<sup>243</sup> The navigation services such patients need are similar to CHI services, SDOH need(s) may be fewer or not present. Accordingly, a parallel set of services focused on patients with a serious, high-risk illness who may not necessarily have SDOH-related needs was proposed. PIN services could be furnished following an initiating E/M visit addressing a single high-risk disease.

The following codes would be reported for PIN services:

***GXXX3** Principal Illness Navigation services by certified or trained auxiliary personnel under the direction of a physician or other practitioner, including a patient navigator or certified peer specialist; 60 minutes per calendar month, in the following activities:*

- *Person-centered assessment, performed to better understand the individualized context of the serious, high-risk condition.*

- ++ *Conducting a person-centered assessment to understand the patient's life story, needs, goals, preferences, and desired outcomes, including understanding cultural and linguistic factors.*

- ++ *Facilitating patient-driven goal setting and creating an action plan.*

- ++ *Providing tailored support as needed to accomplish the practitioner's treatment plan.*

- *Identifying or referring patient (and caregiver or family, if applicable) to appropriate supportive services.*

- **Practitioner, Home, and Community-Based Care Coordination**

---

<sup>243</sup> Silver, Alison. Serious Illness: A High Priority for Accountable Care. The American Journal of Accountable Care. 2020;8(2):32-33. available at <https://www.ajmc.com/view/serious-illness-a-high-priority-for-accountable-care>.

++ *Coordinating receipt of needed services from healthcare practitioners, providers and facilities; home-, and community-based service providers; and caregiver (if applicable).*

++ *Communication with practitioners, home-, and community-based service providers, hospitals, and skilled nursing facilities (or other health care facilities) regarding the patient's psychosocial strengths and needs, functional deficits, goals, and preferences, including cultural and linguistic factors.*

++ *Coordination of care transitions between and among health care practitioners and settings, including transitions involving referrals to other clinicians; follow-up after an emergency department visit; or follow-up after discharges from hospitals, skilled nursing facilities or other health care facilities.*

++ *Facilitating access to community-based social services (e.g., housing, utilities, transportation, food assistance) as needed to address SDOH need(s).*

- *Health education- Helping the patients contextualize health education provided by the patient's treatment team with the patient's individual needs, goals, preferences, and SDOH need(s), and educating the patient (and caregiver, if applicable) on how to best participate in medical decision-making.*

- *Building patient self-advocacy skills, so that the patient can interact with members of the health care team and related community-based services (as needed), in ways that are more likely to promote personalized and effective treatment of their condition.*

- *Health care access / health system navigation.*

++ *Helping the patient access healthcare, identifying appropriate practitioners or providers for clinical care and helping secure appointments with them.*

- *Facilitating behavioral change necessary for meeting diagnosis and treatment goals, including promoting patient motivation to participate in care and reach person-centered diagnosis or treatment goals.*

- *Facilitating and providing social and emotional support for the patient to help the patient cope with the condition, SDOH need(s), and adjust daily routines to better meet diagnosis or treatment goals.*

- *Leverage knowledge of the serious, high-risk condition and/or lived experience when applicable to provide support, mentorship, or inspiration to meet treatment goals.*

**GXXX4** – *Principal Illness Navigation services, additional 30 minutes per calendar month (List separately in addition to GXXX3).*

As discussed in section II.E of the proposed rule, a billing practitioner may arrange to have PIN services provided by auxiliary personnel who are external to, and under contract with, the practitioner or their practice, such as through a community-based organization (CBO) that employs CHWs, if all of the “incident to” and other requirements and conditions for payment of PIN services are met. We will expect the auxiliary personnel performing the PIN services to communicate regularly with the billing practitioner to ensure that PIN services are appropriately documented in the medical record, and to continue to involve the billing practitioner in evaluating the continuing need for PIN services to address the serious, high-risk condition. Refer to section II.E of this final rule for finalized detailed, technical discussion regarding the description, payment and utilization of these HCPCS codes.

Since the proposal described in section II.E. of the proposed rule proposed to designate PIN services as care management services that may be furnished under general supervision under § 410.26(b)(5) and because we broadly include care management services in the list of primary care services used for purposes of beneficiary assignment, we believed it would be similarly appropriate to include PIN services in the list of primary care services used for purposes of beneficiary assignment. Additionally, since these services are meant to provide assistance to the beneficiary through communication and coordination with practitioners, providers, including referrals to other clinicians and follow-up after emergency or inpatient care, we stated in the CY 2024 PFS proposed rule that we believed that these services can further the ACO’s goal of care

coordination and the provision of value-based care, and therefore, should be included in the definition of primary care services for purposes of beneficiary assignment. Further, since PIN services require an initiating E/M visit and these services can be billed as incident to by the billing practitioner who bills for the PIN initiating E/M visit, and E/M services are currently included in the list of primary care services used for purposes of beneficiary assignment, we stated that we believed it would be similarly appropriate to include PIN services in the list of primary care services used for purposes of beneficiary assignment.

- *SDOH Risk Assessment HCPCS code GXXX5, if finalized under Medicare FFS payment policies:* In section II.E of the proposed rule, we proposed a new stand-alone G code, *GXXX5 (administration of a standardized, evidence-based Social Determinants of Health Risk Assessment tool, 5-15 minutes, at most every 6 months.)* to identify and value the work involved in the utilization of SDOH risk assessment as part of a comprehensive social history when medically reasonable and necessary in relation to an E/M visit. SDOH risk assessment through a standardized, evidence-based tool can more effectively and consistently identify unmet SDOH needs and enables comparisons across populations. The SDOH risk assessment must be furnished by the practitioner on the same date they furnish an E/M visit, as the SDOH assessment would be reasonable and necessary when used to inform the patient's treatment plan that is established during the visit. Finalized required elements are described in detail in the payment policy described in section II.E of this final rule.

Under the proposal described in section II.E. of the proposed rule (88 FR 52307 through 88 FR 52350), the practitioner billing or furnishing the SDOH risk assessment would be required to have the ability to furnish CHI or other care management services. Given the multifaceted nature of SDOH needs, ensuring adequate referral to appropriate services and supports is critical for addressing both the SDOH need and the impact of that need on the patient's health. Refer to section II.E and III.R of this final rule for finalized detailed, technical discussion regarding the description, payment, and utilization of this HCPCS code.

Additionally, the proposal detailed in section III.S. of the proposed rule (88 FR 52548 through 88 FR 52553) proposed to add elements to the AWP by adding a new SDOH Risk Assessment as an optional, additional element with an additional payment. Under that proposal, the SDOH Risk Assessment would be separately payable with no beneficiary cost sharing when furnished as part of the same visit with the same date of service as the AWP and would inform the care the patient is receiving during the visit, including taking a medical and social history, applying health assessments, and conducting prevention services education and planning.

Since the proposals described in sections II.E. and III.S. of the proposed rule proposed that these services would be provided in conjunction with professional services, such as E/M visits, which can be provided in a primary care setting, we stated in the proposed rule that we believed it would be appropriate to include these services in the definition of primary care services for purposes of beneficiary assignment. Additionally, since these are separately payable services when provided with an AWP and the AWP is included in the Shared Savings Program definition of primary care services for purposes of beneficiary assignment, we stated we believed it would be appropriate to include SDOH risk assessment in the definition of primary care services for purposes of beneficiary assignment. Further, since these services precede the utilization of CHI, PIN, and Care Management services, which are either currently included or proposed to be included in the definition of primary care services for purposes of assignment, we stated that we believed the inclusion of the new SDOH risk assessment HCPCS code would be appropriate as well.

- *Caregiver Behavior Management Training CPT Codes 96202 and 96203, if finalized under Medicare FFS payment policy: CPT code 96202 (Multiple-family group behavior management/modification training for guardians/caregivers of patients with a mental or physical health diagnosis, administered by physician or other qualified health care professional (without the patient present), face-to-face with multiple sets of guardians/caregivers; initial 60 minutes) and its add-on code, CPT code 96203 (Multiple-family group behavior management/modification*

*training for guardians/caregivers of patients with a mental or physical health diagnosis, administered by physician or other qualified health care professional (without the patient present), face-to-face with multiple sets of guardians/caregivers; each additional 15 minutes (List separately in addition to code for primary service))* are two new codes created by the CPT Editorial Panel during its February 2021 meeting used to report the total duration of face-to-face time spent by the physician or other qualified health professional providing group training to guardians or caregivers of patients. Although the patient does not attend the group trainings, the goals and outcomes of the sessions focus on interventions aimed at improving the patient's daily life.

In section II.E. of the proposed rule, an active payment status for CPT codes 96202 and 96203 (caregiver behavior management/modification training services) was proposed for CY 2024. These codes allow treating practitioners to report training furnished to a caregiver, in tandem with the diagnostic and treatment services furnished directly to the patient, in strategies and specific activities to assist the patient to carry out the treatment plan. Caregiver behavior management/modification training services may be reasonable and necessary when they are integral to a patient's overall treatment and furnished after the treatment plan (or therapy plan of care) is established. The caregiver behavior management/modification training services themselves need to be congruent with the treatment plan to effectuate the desired patient outcomes.

For purposes of caregiver behavior management/modification training services, our proposal required that a caregiver receiving behavior management/modification training services be a family member, friend, or neighbor who provides unpaid assistance to the patient, assisting or acting as a proxy for a patient with an illness or condition of short or long-term duration (not necessarily chronic or disabling). In this context, caregivers would be trained by the treating practitioner in strategies and specific activities that improve symptoms, functioning, adherence to treatment, and/or general welfare related to the patient's primary clinical diagnoses. Under the

proposal, caregiver behavior management/modification training services could be furnished directly by the treating practitioner or provided by auxiliary personnel incident to the treating practitioner's professional services as specified in § 410.26, as applicable for the types of practitioners whose covered services include "incident to" services. Refer to section II.E of this final rule for finalized detailed, technical discussion regarding the description, payment, and utilization of these CPT codes.

Since the proposal described in section II.E. of the proposed rule proposed that these services could be billed as incident to by the billing practitioner who could be a primary care physician who also bills for an E/M visit, and these services cannot duplicate services provided in conjunction with transitional care management, CCM, BHI services, and virtual check-in services which are currently included in the list of primary care services used for purposes of beneficiary assignment, we stated in the proposed rule that we believed that these services should be included in the definition of primary care services for purposes of beneficiary assignment in support of the Shared Savings Program's goal to provide coordinated, high quality care to an ACO's Medicare beneficiaries.

- *Caregiver Training Services CPT codes 9X015, 9X016, and 9X017, if finalized under Medicare FFS payment policy: CPT codes 9X015 (Caregiver training in strategies and techniques to facilitate the patient's functional performance in the home or community (e.g., activities of daily living [ADLs], instrumental ADLs [IADLs], transfers, mobility, communication, swallowing, feeding, problem solving, safety practices) (without the patient present), face-to-face; initial 30 minutes), add-on code, CPT code 9X016 (each additional 15 minutes (List separately in addition to code for primary service) (Use 9X016 in conjunction with 9X015)), and 9X017 (Group caregiver training in strategies and techniques to facilitate the patient's functional performance in the home or community (e.g., activities of daily living [ADLs], instrumental ADLs [IADLs], transfers, mobility, communication, swallowing, feeding, problem solving, safety practices) (without the patient present), face-to-face with multiple sets of*

*caregivers*) are new codes created by the CPT Editorial Panel during its October 2022 meeting. The three codes are to be used to report the total duration of face-to-face time spent by the physician or other qualified health professional providing individual or group training to caregivers of patients. Although the patient does not attend the trainings, the goals and outcomes of the sessions focus on interventions aimed at improving the patient's ability to successfully perform activities of daily living (ADLs). Activities of daily living generally include ambulating, feeding, dressing, personal hygiene, continence, and toileting.

These codes allow treating practitioners to report the training furnished to a caregiver, in tandem with the diagnostic and treatment services furnished directly to the patient, in strategies and specific activities to assist the patient to carry out the treatment plan. As discussed above, we believe training furnished to a caregiver may be reasonable and necessary when it is integral to a patient's overall treatment and furnished after the treatment plan (or therapy plan of care) is established. The Caregiver Training Services (CTS) themselves need to be congruent with the treatment plan to effectuate the desired patient outcomes, especially in medical treatment scenarios where the caregiver receiving CTS is necessary to ensure a successful treatment outcome for the patient.

In section II.E. of the proposed rule, we proposed an active payment status for CPT codes 9X015, 9X016, and 9X017 for CY 2024. CTS may be furnished directly by the treating practitioner or provided by auxiliary personnel incident to the treating practitioner's professional services as specified in 42 CFR 410.26, as applicable for the types of practitioners whose covered services include "incident to" services. Under the proposal, 9X015, 9X016, and 9X017 would be designated as "sometimes therapy." This means that the services represented by these codes are always furnished under a therapy plan of care when provided by PTs, OTs, and SLPs; but, in cases where they are appropriately furnished by physicians and NPPs outside a therapy plan of care (that is, where the services are not integral to a therapy plan of care), they can be furnished under a treatment plan by physicians and NPPs. Refer to section II.E of this final rule

for finalized, detailed, technical discussion regarding the description, payment, and utilization of these HCPCS codes.

The proposal described in section II.E. of the proposed rule proposed that these services could be billed as incident to by the billing practitioner who could be a primary care physician who also bills for an E/M visit. Additionally, these services cannot duplicate services provided in conjunction with transitional care management, CCM, BHI services, and virtual check-in services which are currently included in the list of primary care services used for purposes of beneficiary assignment and these services are reported to Medicare only when furnished in conjunction with treatment for particular conditions and reflected in a plan of care. In the proposed rule, we stated that we believed they should be included in the definition of primary care services for purposes of beneficiary assignment in support of the Shared Savings Program's goal to give coordinated, high quality care to an ACO's Medicare beneficiaries.

We proposed to specify a revised definition of primary care services in a new provision of the Shared Savings Program regulations at § 425.400(c)(1)(viii) to include the list of HCPCS and CPT codes specified in § 425.400(c)(1)(vii) along with the proposed additional CPT codes 99406 and 99407, and 99457 and 99458, 96202 and 96203, if finalized under the Medicare FFS payment policy; and 9X015, 9X016, and 9X017, if finalized under the Medicare FFS payment policy and HCPCS codes G0101; G2086, G2087, and G2088; G2211, if finalized under the Medicare FFS payment policy; GXXX1 and GXXX2, if finalized under Medicare FFS payment policy; GXXX3 and GXXX4, if finalized under the Medicare FFS payment policy; and GXXX5, if finalized under the Medicare FFS payment policy; as discussed in the preceding paragraphs. We proposed that the new provision at § 425.400(c)(1)(viii) would be applicable for use in determining beneficiary assignment for the performance year starting on January 1, 2024, and subsequent performance years.

We solicited comments on these proposed changes to the definition of primary care services used for assigning beneficiaries to Shared Savings Program ACOs for the performance

year starting on January 1, 2024, and subsequent performance years. We also solicited comments on any other existing HCPCS or CPT codes and new HCPCS or CPT codes proposed elsewhere in this final rule that we should consider adding to the definition of primary care services for purposes of assignment in future rulemaking.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Most commenters were supportive of our proposal to add the following codes to the definition of primary care services used in assignment: (1) Smoking and Tobacco-use Cessation Counseling Services CPT codes 99406 and 99407; (2) Cervical or Vaginal Cancer Screening HCPCS code G0101; (3) Visit complexity inherent to evaluation and management services add-on (referred to as Complex Evaluation and Management Services Add-on in the proposed rule) HCPCS code G2211; (4) CHI services HCPCS codes GXXX1 and GXXX2; (5) PIN services HCPCS codes GXXX3 and GXXX4; (6) Caregiver Behavior Management Training CPT codes 96202 and 96203; (7) Caregiver Training Services CPT codes 9X015, 9X016, and 9X017; and (8) SDOH Risk Assessment HCPCS code GXXX5. These commenters stated that these codes accurately reflect comprehensive, coordinated, whole-person primary care.

Many commenters expressed support for our proposal to include caregiver training and SDOH risk assessment services in the definition of primary care services used for purpose of beneficiary assignment, noting that they work well together with other CMS initiatives and further support ACOs in providing comprehensive, coordinated, whole-person primary care, recognizing the importance of capturing information on and screening for SDOH. One commenter recognized that considering SDOH risk assessment services in beneficiary assignment could potentially improve the health of a wide swath of Medicare beneficiaries by increasing access to social determinants of health risk assessments and “making them more affordable”.

One commenter stated their support for inclusion of several behavioral health services, sexual and reproductive health-related services, and several team-based care services as these additions would help primary care practices in ACOs continue to move closer to providing whole-patient, comprehensive primary care.

*Response:* We agree with commenters who recognize that our proposal to revise the definition of primary care services used for assignment will align well with other CMS initiatives, specifically those that promote health equity, and will help primary care practices to continue to move closer to providing whole-patient, comprehensive primary care. Without additional context, it is not clear how the inclusion of a service in the definition of primary care services used for Shared Savings Program beneficiary assignment would be likely to make a particular included service more affordable for beneficiaries. We interpret the comment from the commenter who supports inclusion of several behavioral health services, sexual and reproductive health-related services, and several team-based care services to be referring to our proposals related to smoking and tobacco-use cessation counseling services, cervical or vaginal cancer screening, OUD services, PIN services, CHI services, SDOH risk assessment services, and caregiver behavior management training services, and caregiver training services, and we appreciate this commenter's support.

*Comment:* Many commenters, while stating their support for the inclusion of the codes proposed, also urged CMS to continue to monitor the impact of expanding the definition of primary care services to include the "additional PFS codes", and to respond to any identified unintended consequences and consider changes to mitigate any unintended consequences in a timely manner. Several commenters urged CMS not to move forward with the proposal to expand the list of primary care services/codes in beneficiary assignment, stating many of the proposed codes would be new codes to the CY 2024 PFS and it is unclear what redistributive impact the proposed codes would have on assignment and encouraged CMS to perform additional analysis on potential impact of this policy and allow for an appropriate phase-in

period. Another commenter recommended “thorough, multi-year testing to ensure that patients are not aligned to ACOs strictly because of billing practices by clinicians unsuited for patient care coordination”. One commenter recommended a “phase-in period to better understand how the expanded beneficiary population will impact care delivery and financial assumptions”. The commenter stated that for some ACOs, this newly attributed population may represent a higher risk/acuity with “no growth option for the ACO’s risk score to accurately reflect the change resulting from a CMS rule”. Another commenter did not support the inclusion of the code for SDOH risk assessment as it does not have utilization history and so they noted it is premature to use it in assignment under in the Shared Savings Program.

*Response:* As described in our proposed rule, we consider these codes to be primary care and wellness services that fit within the definition of primary care services. It is important for the definition of primary care services used for purposes of beneficiary assignment to remain in sync with billing and coding updates and changes and include appropriate new CPT and HCPCS codes as they are implemented. Waiting for a phase-in of new assignment codes or conducting multi-year testing of codes could result in beneficiaries not being assigned to an ACO based on primary care services that are provided by their primary care provider as utilization of these services is implemented. Implementing billing and coding updates and changes as they are finalized under the PFS is important for purposes of assignment to ensure that beneficiaries are assigned appropriately as services billed shifts from already existing CPT/HCPCS codes to new CPT/HCPCS codes. If the Shared Savings Program is out of sync with changes and updates, assignment of beneficiaries could be inaccurate. Commenters were not specific in discussing unintended consequences that could occur should these services be added to the definition of primary care services used in beneficiary assignment. Therefore, we do not know what consequences they are concerned about and so we are not persuaded by these comments.

With regard to the commenter concerned that adding these codes will result in the assignment of higher risk beneficiaries to the ACO and that the higher risk profile of these

beneficiaries will not be full recognized as a result of the cap on an ACO's risk score growth during an agreement period, we note that the Shared Savings Program uses the CMS-HCC prospective risk adjustment model which adjusts for changes in severity and case mix and accounts for differences in health status of an ACO's assigned beneficiary population between the benchmark and performance years. Additionally, adding these codes in conjunction with other risk adjustment policies finalized in this rule (section III.G.4) would help mitigate impacts on the cap on prospective HCC risk score growth, and we are providing these updates to increase accountable care for beneficiaries. For more information on risk adjustment in the Shared Savings Program, please review the Shared Savings and Losses, Assignment and Quality Performance Standard Methodology Specifications, Version 11.<sup>244</sup> Commenters did not go into detail regarding what redistributive impacts could be or what specifically could be impacted and so we are not persuaded by these comments.

The SDOH Risk Assessment service is an optional, additional element of the AWV with an additional payment and no applicable beneficiary cost sharing, and the AWV is included in the definition of primary care services used for purposes of assignment. Additionally, we note that these services precede the inclusion of current services included in the definition of PCS for purposes of assignment, which are already included in the definition of primary care services for purposes of assignment. Accordingly, we are not persuaded by the comment suggesting we should not include this service in the definition of primary care in light of its limited utilization history.

In section II.E of this final rule, we also recognize the AWV as an initiating visit for PIN services when the AWV is furnished by a practitioner who has identified in the AWV a high-risk condition(s) that would qualify for PIN services under this rule. The AWV is included in the definition of primary care services used for purposes of assignment and so provides further rationale for the inclusion of PIN services in said definition.

---

Additionally, we are not persuaded by the commenters concerns suggesting that the proposed additional codes could assign patients to ACOs through clinicians unsuited for patient care coordination. For example, as described in section II.E of this final rule, we clarified that all auxiliary personnel who provide CHI services must be certified or trained to perform all included service elements and, as relevant, authorized to perform them under applicable State laws and regulations. For States that do not have applicable requirements for certification and training, it is the billing practitioner's responsibility to ensure the auxiliary personnel have been certified and trained in accordance with our final requirements.

*Comment:* One commenter cautioned that inclusion of the proposed codes will lead to assignment based on services furnished by specialists who are not positioned to provide comprehensive primary care. Another commenter who supported the inclusion of many of the codes recommended CMS remember the unique considerations related to differentiating assignment between primary care and specialty care services as part of beneficiary assignment and asked that CMS monitor to ensure the services included in the assignment methodology continue to support the delivery of comprehensive, coordinated, whole-person primary care and do not have the unintended consequence of disrupting ongoing patient-physician relationships.

Some commenters expressed support for inclusion of all the proposed revisions with the exception of the code for cervical or vaginal cancer screening since this service is provided by obstetricians or gynecologists and including this code in the assignment methodology risks shifting assignment away from primary care relationships in favor of specialty care. Another commenter urged CMS to consider removing tobacco-use cessation counseling services from the list because they are concerned that it will assign beneficiaries to the ACO that may not accurately reflect patients who are may not be receiving primary care services from ACO physicians, as physicians across different specialties will provide tobacco-use cessation counseling services. Other commenters recommend that we monitor the billing of these codes to

ensure that their addition is not shifting beneficiary attribution away from primary care relationships in favor of specialty care.

*Response:* We acknowledge the commenters who opposed or expressed concerns about inclusion of some of the codes on the basis that they may shifting assignment away from primary care relationships in favor of specialty care. Consistent with our current methodology, if services billed under these codes are provided by specialists not considered for purposes of beneficiary assignment, then the services will not be considered in beneficiary assignment.

The cervical or vaginal cancer screening preventive health service can be provided in a primary care setting similar to the AWV HCPCS codes G0438 and G0439, which are already included in the Shared Savings Program definition of primary care services used in assignment. Additionally, as noted in this section of this final rule, obstetrics/gynecology and gynecology/oncology are identified as physician specialty designations considered for purposes of identifying primary care services furnished to beneficiaries used in assignment operations according to § 425.402(c), so we are not persuaded by these comments.

Smoking and tobacco-use cessation counseling services are recognized as preventive services, like other preventive services such as alcohol misuse screening and counseling, the AWV, and depression screening, which are currently included in the definition of primary care services for purposes of beneficiary assignment. Further, smoking and tobacco-use cessation counseling services encourage comprehensive, coordinated whole person-centered care and can be provided in a primary care setting. Additionally, these services are generally billed in conjunction with an E/M visit which is currently included in the definition of primary care services. Finally, smoking-related diseases are a leading cause of death among individuals with substance use disorders, and individuals who treat their addiction to tobacco and other substances at the same time are 25 percent more likely to sustain their recovery, compared to the individuals

who do not address tobacco while in recovery from alcohol and other drugs<sup>245</sup>. In support of the CMS' goal to expand mental health services and SUD treatment, we believe it to be important for us to recognize these services for purposes of beneficiary assignment. For these reasons, and the reasons stated in this section of this final rule, we continue to believe they should be included in our assignment methodology.

*Comment:* Some commenters expressed opposition to the inclusion of the office-based OUD services until CMS includes these codes in the Claim and Claim Line Feeds (CCLFs) provided to ACOs and further advocated for CMS to provide them with timely, actionable patient data, including data for Substance Use Disorder (SUD), to ACOs. One commenter described ACOs as still lacking access to vital SUD-related data on their patients due to the fact that under current regulations, care coordination is not considered by CMS to fall under treatment, payment, and health care operations. This commenter stated the CARES Act allows sharing of this important data after initial patient consent, which will allow CMS to deliver this critical information to providers operating in ACOs.

*Response:* As described at § 425.708(c), in accordance with 42 U.S.C. 290dd-2 and the implementing regulations at 42 CFR part 2, CMS does not share beneficiary identifiable claims data relating to the diagnosis and treatment of alcohol and substance abuse without the explicit written consent of the beneficiary. As we explained in the June 2015 final rule (80 FR 32741), beneficiary identifiable information that is made available under § 425.704 would include Parts A, B and D data, but would exclude any information related to the diagnosis and treatment of alcohol or substance abuse. As we discussed in the April 2011 proposed rule (76 FR 19557), 42 U.S.C. 290dd-2 and the implementing regulations at 42 CFR part 2 restrict the disclosure of patient records by federally conducted or assisted substance abuse programs. Such data may be disclosed only with the prior written consent of the patient, or as otherwise provided in the

<sup>245</sup> Lung Cancer Screening Billing Guide Addendum for Behavioral Health available at <https://www.lung.org/getmedia/5adda30d-6738-4e3e-8666-621cc5120d4d/ala-billing-guide-addendum.pdf>.

statute and regulations. To assist ACOs in identifying the best sources for beneficiary medical record data, we provide the ACO with the TIN and NPI of the ACO participant and ACO professionals that provided the most recent primary care service to the beneficiary on each quarterly report. We also provide ACOs deidentified aggregate information related to substance use that may be helpful for understanding their patient population as described in § 425.702. We encourage ACOs and ACO participants to establish their own processes to access patients' health information directly, in accordance with applicable laws for purposes of care coordination.

As stated in the proposed rule, the OUD bundle HCPCS codes G2086, G2087, and G2088 have similar uses and requirements as other services that are included in our definition of primary care services, such as CCM, BHI, CoCM and alcohol misuse screening and counseling services and as such are appropriate to be included in the definition of primary care services for purposes of beneficiary assignment. Specifically, these services include the overall management and care coordination of beneficiaries being treated for SUD in an office setting.

*Comment:* Some commenters supported the proposal to include remote physiologic monitoring (RPM) CPT codes 99457 and 99458 and stated their belief that inclusion of these codes builds on support already provided for digital health (for example, adding G2012 and G2252 codes for virtual check-ins). One commenter stated that RPM enables providers to gain a comprehensive understanding of the patients' conditions while at home, facilitating more coordinated and engaged care efforts, which is particularly useful for patients who may have transportation or other barriers to frequent primary care access. One commenter added in their support for inclusion of RPM codes that include remote physiologic and therapeutic monitoring, artificial intelligence, and other tools. Another commenter stated that the proposed inclusion of RPM codes as primary care services for purposes of assignment, similar to how other CCM codes are so included, further aligns remote care and communication and aids in advancing RPM into value-based care models. This commenter welcomes this technical policy fix and appreciates that we have not "precluded furnishing and billing for the full range of RPM codes

while gaining provider/patient entry into shared savings.” This commenter does ask that we clarify whether the intent is solely to track these services for assignment and eligibility for shared savings, which they state could fall short in expanding the use of RPM in the Shared Savings Program. One commenter stated support for the inclusion of RPM since the devices involved in these codes and the clinicians who read the results are important elements in patient care and care management services but urged CMS to reexamine and clarify the assignment methodology to ensure that third-party device companies and specialists who use the devices involved in these codes do not inadvertently impact Shared Savings Program attribution, cautioning that when these devices are billed by clinicians who do not provide a beneficiary’s primary care services, it is important that those billing codes are not used to assign a beneficiary or remove a them from their primary care provider’s assignment list. Many commenters supported the inclusion of the RPM services but expressed concern that these codes can also be billed by specialists and that CMS should monitor the billing of RPM to ensure their addition is not shifting beneficiary attribution away from primary care relationships in favor of specialty care.

Many commenters recommended that CMS not include RPM services in the definition of primary care services used for purposes of assignment. One commenter stated that while these codes may be billed by primary care providers to support the overall management of a patient’s care, the codes can also be billed by specialists and can only be billed by one treating provider for a given patient. Therefore, if a specialist is billing these codes to support management of a specific condition, that patient’s primary care provider would not be able to also provide RPM treatment management services to the patient. One commenter also stated that since these services are billed monthly, the allowed charges for RPM services furnished by a specialist could surpass the allowed charges for primary care services furnished by the primary care provider. A few commenters suggested the proposal to add RPM be terminated, or not finalized, since not all groups/clinicians who utilize these codes contribute to an ACO’s population health practice, or initiatives to care for its patients. One commenter, while universally supportive of an expanded

set of primary care services, cited their analysis that showed that RPM has an uptake by certain physician specialties (that is, cardiology) and recommended that CMS monitor utilization to ensure that the specialty of clinicians continues to be considered in determining whether a service is considered to be a primary care service for purposes of beneficiary assignment. This commenter further stated that many cardiologists are enrolled in Medicare under an internal medicine specialty but function as a cardiologist. Since internal medicine is one of the specialties identified as a primary care physician in step 1 of the Shared Savings Program assignment methodology while cardiologists are not included until step 2, this could result in inappropriate assignment under the Shared Savings Program. With the continued proliferation of care management services, this commenter also urged CMS to monitor utilization to ensure clinician specialty is considered in determining whether a service is considered to be a qualifying primary care service for purposes of beneficiary assignment. Another commenter cautioned against using RPM for ACO assignment given the significant rise in its use among certain medical specialties. They stated that, while well intended, addition of this service code could result in increased beneficiary churn and assignment of beneficiaries who do not have a true primary care relationship with ACO professionals in the ACO. Some commenters recommended that CMS collect experience from ACOs before adding RPM to the list of services used in assignment. They noted that they believe that it has the potential to “pull attribution away from ACO providers” and could attribute more patients based on services received from specialists due to the quantity of billing done for specific chronic conditions and the amounts of those bills.

A few commenters expressed concern about the intended purpose of including RPM codes in the definition of primary care services used for assignment. One commenter noted that they believe that if reimbursement for these codes counts “towards the ACO’s benchmark for purposes of determining whether the ACO is eligible for shared savings,” it could be a disincentive for some practitioners to order these services. This commenter suggested that services billed under RPM and Remote Therapeutic Monitoring codes be reimbursable to

providers that participate in an ACO without the cost of services billed under the codes being factored into the determination of an ACO's eligibility for shared savings.

*Response:* We are persuaded by comments concerned about or opposed to adding RPM services to the definition of primary care services for purposes of assignment, and thus are not finalizing the proposed inclusion of CPT codes 99457 and 99458 for RPM services in the definition of primary care services. As commenters stated, while these services can be billed for both primary and specialty care, the services can only be billed by one provider in a 30-day period and are more often billed by specialty providers. As a result, including these codes in the definition of primary care services for purposes of assignment could inappropriately impact the determination of where a beneficiary received a plurality of their primary care services.

After further consideration, we believe that it would be inappropriate to include these services in the definition of primary care services used for purposes of beneficiary assignment in the Shared Savings Program. Although we are not finalizing our proposal to add RPM services to the definition of primary care services used for purposes of beneficiary assignment, we do want to clarify that these services will be reflected in the calculation of expenditures for ACO-assigned beneficiaries for each benchmark year and each performance year.<sup>246</sup>

*Comment:* One commenter responded to our solicitation of comments on any other existing HCPCS or CPT codes and new HCPCS or CPT codes proposed elsewhere in the proposed rule that we should consider adding to the definition of primary care services for purposes of assignment in future rulemaking. This commenter urged us to include Care Management Services for Behavioral Health Conditions HCPCS code G0323 in the definition of primary care services used for purposes of beneficiary assignment, as it is not only similar to services already included in the definition, such as BHI services (codes 99484, 99492, 99493 and

---

<sup>246</sup> See Medicare Shared Savings Program, Shared Savings and Losses, Assignment and Quality Performance Standard Methodology Specifications (version #11, January 2023), available at <https://www.cms.gov/files/document/medicare-shared-savings-program-shared-savings-and-losses-and-assignment-methodology-specifications.pdf-2> (see section 3.1, "Calculating ACO-Assigned Beneficiary Expenditures").

99494) and HCPCS code G2214 for psychiatric collaborative care model, it would also help recognize the participation of clinical psychologists in the Shared Savings Program.

*Response:* We agree that HCPCS code G0323 is a BHI service; however, this code describes general BHI that a clinical psychologist or clinical social worker performs to account for monthly care integration.<sup>247</sup> Under section 1899(c)(1)(A) of the Act, beneficiaries must be assigned to an ACO based on their receipt of primary care services furnished by an ACO professional who is a physician (as defined in section 1861(r)(1)) of the Act), or a practitioner that is a PA, NP, CNS (as defined in section 1842(b)(18)(C)(i) of the Act). We continue to believe that assigning beneficiaries to ACOs based on their receipt of primary care services furnished by an ACO professional who is a physician, and in addition, based on their receipt of primary care services furnished by a PA, NP, or CNS, consistent with the definition in § 425.20 of an ACO professional, is consistent with requirements of the Act. Section 1899 of the Act does not specifically allow for assignment of beneficiaries to an ACO based on their receipt of primary care services from clinical social workers or clinical psychologists (as defined in sections 1842(b)(18)(C)(iv) and 1842(b)(18)(C)(v) of the Act).

After consideration of public comments, we are finalizing a revised definition of primary care services in a new provision of the Shared Savings Program regulations at § 425.400(c)(1)(viii) to include the list of HCPCS and CPT codes specified in § 425.400(c)(1)(vii) along with the following additions: CPT codes 99406 and 99407; 96202 and 96203; and 9X015, 9X016, and 9X017 (which are being finalized as 97550, 97551, and 97552, respectively) and HCPCS codes G0101; G2086, G2087, and G2088; G2211; GXXX1 and GXXX2 (which are being finalized as G0019 and G0022, respectively) and; GXXX3 and GXXX4 (which are being finalized as G0023 and G0024, respectively); and GXXX5 (which is being finalized as G0136), as discussed in the preceding paragraphs. We are not finalizing our

<sup>247</sup> Medicare Learning Network (MLN909432, May 2023) Behavioral Health Integration Services, available at <https://www.cms.gov/files/document/mln909432-behavioral-health-integration-services.pdf>.

proposal to include CPT codes 99457 and 99458. We are finalizing as proposed that the new provision at § 425.400(c)(1)(viii) would be applicable for use in determining beneficiary assignment for the performance year starting on January 1, 2024, and subsequent performance years.

In section II.E of this final rule, certain code descriptions are being finalized with revisions:

*1) **G0019** Community health integration (CHI) services performed by certified or trained auxiliary personnel including a community health worker, under the direction of a physician or other practitioner; 60 minutes per calendar month, in the following activities to address social determinants of health (SDOH) need(s) that are significantly limiting ability to diagnose or treat problem(s) addressed in an initiating E/M visit:*

- *Person-centered assessment, performed to better understand the individualized context of the intersection between the SDOH need(s) and problem(s) addressed in the initiating E/M visit.*

- ++ *Conducting a person-centered assessment to understand patient's life story, strengths, needs, goals, preferences and desired outcomes, including understanding cultural and linguistic factors.*

- ++ *Facilitating patient-driven goal-setting and establishing an action plan.*

- ++ *Providing tailored support to the patient as needed to accomplish the practitioner's treatment plan.*

- *Practitioner, Home, and Community-Based Care Coordination*

- ++ *Coordinating receipt of needed services from healthcare practitioners, providers, and facilities; and from home- and community-based service providers, social service providers, and caregiver (if applicable).*

- ++ *Communication with practitioners, home- and community-based service providers, hospitals, and skilled nursing facilities (or other health care facilities) regarding the patient's*

*psychosocial strengths and needs, functional deficits, goals, preferences, and desired outcomes, including cultural and linguistic factors.*

*++ Coordination of care transitions between and among health care practitioners and settings, including transitions involving referrals to other clinicians; follow-up after an emergency department visit; or follow-up after discharges from hospitals, skilled nursing facilities or other health care facilities.*

*++ Facilitating access to community-based social services (e.g., housing, utilities, transportation, food assistance) to address SDOH need(s).*

- *Health education- Helping the patient contextualize health education provided by the patient's treatment team with the patient's individual needs, goals, and preferences, in the context of the SDOH need(s), and educating the patient on how to best participate in medical decision-making.*

- *Building patient self-advocacy skills, so that the patient can interact with members of the health care team and related community-based services addressing the SDOH need(s), in ways that are more likely to promote personalized and effective diagnosis and treatment.*

- *Health care access / health system navigation:*

- ++ Helping the patient access care, including identifying appropriate practitioners or providers for clinical care and helping secure appointments with them.*

- *Facilitating behavioral change as necessary for meeting diagnosis and treatment goals, including promoting patient motivation to participate in care and reach person-centered diagnosis or treatment goals.*

- *Facilitating and providing social and emotional support to help the patient cope with the problem(s) addressed in the initiating visit, the SDOH need(s), and adjust daily routines to better meet diagnosis and treatment goals.*

- *Leveraging lived experience when applicable to provide support, mentorship, or inspiration to meet treatment goals.*

2) **G0023** *Principal Illness Navigation services by certified or trained auxiliary personnel under the direction of a physician or other practitioner, including a patient navigator or certified peer specialist; 60 minutes per calendar month, in the following activities:*

- *Person-centered assessment, performed to better understand the individualized context of the serious, high-risk condition.*

- ++ *Conducting a person-centered assessment to understand the patient's life story, needs, goals, preferences, and desired outcomes, including understanding cultural and linguistic factors and including unmet SDOH needs (that are not separately billed).*

- ++ *Facilitating patient-driven goal setting and creating an action plan.*

- ++ *Providing tailored support as needed to accomplish the practitioner's treatment plan.*

- *Identifying or referring patient (and caregiver or family, if applicable) to appropriate supportive services.*

- **Practitioner, Home, and Community-Based Care Coordination**

- ++ *Coordinating receipt of needed services from healthcare practitioners, providers and facilities; home-, and community-based service providers; and caregiver (if applicable).*

- ++ *Communication with practitioners, home-, and community-based service providers, hospitals, and skilled nursing facilities (or other health care facilities) regarding the patient's psychosocial strengths and needs, functional deficits, goals, and preferences, including cultural and linguistic factors.*

- ++ *Coordination of care transitions between and among health care practitioners and settings, including transitions involving referrals to other clinicians; follow-up after an emergency department visit; or follow-up after discharges from hospitals, skilled nursing facilities or other health care facilities.*

- ++ *Facilitating access to community-based social services (e.g., housing, utilities, transportation, food assistance) as needed to address SDOH need(s).*

- *Health education- Helping the patients contextualize health education provided by the patient's treatment team with the patient's individual needs, goals, preferences, and SDOH need(s), and educating the patient (and caregiver, if applicable) on how to best participate in medical decision-making.*

- *Building patient self-advocacy skills, so that the patient can interact with members of the health care team and related community-based services (as needed), in ways that are more likely to promote personalized and effective treatment of their condition.*

- *Health care access / health system navigation.*

- ++ *Helping the patient access healthcare, identifying appropriate practitioners or providers for clinical care and helping secure appointments with them.*

- ++ *Providing the patient with information/resources to consider participation in clinical trials or clinical research as applicable.*

- *Facilitating behavioral change necessary for meeting diagnosis and treatment goals, including promoting patient motivation to participate in care and reach person-centered diagnosis or treatment goals.*

- *Facilitating and providing social and emotional support for the patient to help the patient cope with the condition, SDOH need(s), and adjust daily routines to better meet diagnosis or treatment goals.*

- *Leverage knowledge of the serious, high-risk condition and/or lived experience when applicable to provide support, mentorship, or inspiration to meet treatment goals.*

#### 4. Benchmarking Methodology

##### a. Overview

In section III.G.4 of the CY 2024 PFS proposed rule (88 FR 52456 through 52483), we proposed modifications to the benchmarking methodology under the Shared Savings Program. We proposed a combination of modifications to the Shared Savings Program's benchmarking methodology to encourage sustained participation by ACOs in the program. Specifically, we

proposed to revise the benchmarking methodology by modifying the existing calculation of the regional update factor used to update the historical benchmark between benchmark year (BY) 3 and the performance year (section III.G.4.b of the proposed rule). We also proposed to further mitigate the impact of the negative regional adjustment to the historical benchmark (section III.G.4.c of the proposed rule). Additionally, we proposed refinements to the prior savings adjustment calculation methodology (section III.G.4.d of the proposed rule), that would apply in the establishment of benchmarks for renewing ACOs and re-entering ACOs entering an agreement period beginning on January 1, 2024, and in subsequent years, to account for the following: a change in savings earned by the ACO in a benchmark year due to compliance action taken to address avoidance of at-risk beneficiaries or a change in the amount of savings or losses for a benchmark year as a result of issuance of a revised initial determination under § 425.315. Finally, we proposed to specify in the regulations an approach to calculating prospective HCC risk scores used in Shared Savings Program benchmark calculations, applicable for agreement periods beginning on January 1, 2024, and in subsequent years, in which we would use the CMS-HCC risk adjustment model(s) applicable to the calendar year corresponding to the performance year to calculate a Medicare FFS beneficiary's prospective HCC risk score for the performance year, and for each benchmark year of the ACO's agreement period (section III.G.4.e of the proposed rule). Our specific proposals are discussed in detail in the following sections.

#### b. Cap Regional Service Area Risk Score Growth for Symmetry with ACO Risk Score Cap

##### (1) Background

In the June 2016 final rule (81 FR 37977 through 37981), we established a policy of utilizing a regional growth rate to update the benchmark annually. In that rule, we finalized a policy that, for ACOs in their second or subsequent agreement period whose rebased historical benchmark incorporates an adjustment to reflect regional expenditures, the annual update to the benchmark would be calculated as a growth rate that reflects growth in risk adjusted regional per beneficiary FFS spending for the ACO's regional service area, for each of the following

populations of beneficiaries: ESRD, disabled, aged/dual eligible, aged/non-dual eligible (refer to § 425.603(d)).

In proposing and finalizing the regional growth rate policy, we explained that incorporating regional expenditures in the benchmark would make the ACO's cost target more independent of its historical expenditures and more reflective of FFS spending in its region. We also explained that the use of regional trend factors to trend forward BY1 and BY2 to BY3 in resetting ACO benchmarks and regional growth rates used to update the historical benchmark to the performance year annually would likely result in relatively higher benchmarks for ACOs that are low growth relative to their region compared to benchmarks for ACOs that are high growth relative to their region (refer to 81 FR 37955).

In the December 2018 final rule (83 FR 68013 through 68031), we finalized a proposal to use a blend of national and regional trend factors to trend forward BY1 and BY2 to BY3 when determining the historical benchmark and a blend of national and regional update factors to update the historical benchmark to the performance year for all agreement periods beginning on or after July 1, 2019 (refer to § 425.601(a) and (b)). Under this policy, the national component of the blended trend and update factors receives a weight equal to the share of assignable beneficiaries in the regional service area that are assigned to the ACO, computed by taking a weighted average of county-level shares. The regional component of the blended trend and update factors receives a weight equal to 1 minus the national weight. Calculations are made separately for each Medicare enrollment type. In the December 2018 final rule (83 FR 68024), we acknowledged that, for an ACO that serves a high proportion of beneficiaries in select counties making up its regional service area (referred to herein as having "high market share"), a purely regional trend would be more influenced by the ACO's own expenditure patterns, making it more difficult for the ACO to outperform its benchmark and conflicting with our goal to move ACOs away from benchmarks based solely on their own historical costs. Incorporating national trends that are more independent of an ACO's own performance was therefore intended to

reduce the influence of the ACO's assigned beneficiaries on the ultimate blended trend and update factors applied.

In the CY 2023 PFS final rule (87 FR 69881 through 69899), we finalized a policy for agreement periods starting on or after January 1, 2024, under which we will update the historical benchmark between BY3 and the performance year for each year of the agreement period using a three-way blend calculated as a weighted average of a two-way blend of national and regional growth rates determined after the end of each performance year and a fixed projected growth rate determined at the beginning of the ACO's agreement period called the Accountable Care Prospective Trend (ACPT) (refer to § 425.652(b)). Under this policy, we will make separate calculations for expenditure categories for each Medicare enrollment type. We explained that incorporating this prospective trend in the update to the benchmark would insulate a portion of the annual update from any savings occurring as a result of the actions of ACOs participating in the Shared Savings Program and address the impact of increasing market penetration by ACOs in a regional service area on the existing blended national-regional growth factor.

For ACOs in agreement periods beginning on July 1, 2019, and in subsequent years, we account for changes in severity and case mix of the ACO's assigned beneficiary population when establishing the benchmark for an agreement period and also in adjusting the benchmark for each performance year during the agreement period. In accordance with § 425.601(a)(3) and § 425.652(a)(3), in establishing the benchmark, we adjust expenditures for changes in severity and case mix using CMS Hierarchical Condition Category (CMS-HCC) prospective risk scores (herein referred to as prospective HCC risk scores). Pursuant to § 425.601(a)(10) and § 425.652(a)(10), we further adjust the ACO's historical benchmark at the time of reconciliation for a performance year to account for changes in severity and case mix for the ACO's assigned beneficiary population between BY3 and the performance year (refer to § 425.605(a)(1), (a)(2); § 425.610(a)(2), (a)(3)). In performing this risk adjustment, we make separate adjustments for

the population of assigned beneficiaries in each Medicare enrollment type used in the Shared Savings Program (ESRD, disabled, aged/dual eligible, aged/non-dual eligible).

As finalized in the CY 2023 PFS final rule (87 FR 69932 through 69946), for agreement periods beginning on or after January 1, 2024, we will use prospective HCC risk scores to adjust the historical benchmark for changes in severity and case mix for all assigned beneficiaries between BY3 and the performance year, with positive adjustments subject to a cap equal to the ACO's aggregate growth in demographic risk scores between BY3 and the performance year plus 3 percentage points (herein referred to as the "aggregate demographics plus 3 percent cap") (refer to § 425.605(a)(1)(ii); § 425.610(a)(2)(ii)). This cap applies only if the ACO's aggregate growth in prospective HCC risk scores between BY3 and the performance year across all of the Medicare enrollment types (ESRD, disabled, aged/dual eligible, aged/non-dual eligible) exceeds this cap. If the cap is determined to apply, the value of the cap is the maximum increase in prospective HCC risk scores (expressed as a ratio of the ACO's performance year risk score to the ACO's BY3 risk score) for the applicable performance year, such that any positive adjustment between BY3 and the performance year cannot be larger than the value of the aggregate demographics plus 3 percent cap for any of the Medicare enrollment types. This cap is applied separately for the population of beneficiaries in each Medicare enrollment type.

In the CY 2023 PFS final rule, we further explained that we were finalizing the aggregate demographics plus 3 percent cap to address concerns with the prior approach to risk adjustment, which used prospective HCC risk scores to adjust the historical benchmark for changes in severity and case mix for all assigned beneficiaries between BY3 and the performance year, subject to a cap of positive 3 percent for the agreement period that was applied separately by Medicare enrollment type (referred to herein as the "3 percent cap") (refer to § 425.605(a)(1)(i); § 425.610(a)(2)(i)). The 3 percent cap was finalized through the December 2018 final rule (83 FR 68013) and is applicable to ACOs in agreement periods beginning on or after July 1, 2019, and prior to January 1, 2024.

We believe that the aggregate demographics plus 3 percent cap addresses several concerns raised by interested parties<sup>248</sup> about the 3 percent cap by: accounting for higher volatility in prospective HCC risk scores for certain Medicare enrollment types due to smaller sample sizes; allowing for higher benchmarks than the prior risk adjustment methodology for ACOs that care for larger proportions of beneficiaries in aged/dual eligible, disabled and ESRD enrollment types (which are frequently subject to the 3 percent cap); and continuing to safeguard the Trust Funds by limiting returns from coding initiatives. However, the demographics plus 3 percent cap does not address concerns from certain interested parties that the current policy places a cap on an ACO's risk score growth between BY3 and the performance year but does not place a cap on the regional prospective HCC risk score growth between BY3 and the performance year, which is reflected in the regional growth rate used to calculate the update factor (pursuant to § 425.652(b)(2)(ii)).<sup>249</sup>

Under the methodology finalized in CY 2023 PFS final rule, as described in § 425.652(b), we express the regional update factor, used to update the historical benchmark to the performance year, as the ratio of an ACO's performance year regional service area risk adjusted expenditures to its BY3 regional service area risk adjusted expenditures for each Medicare enrollment type. Table 36 provides a numeric example of the current methodology for calculating the regional update factor for the ESRD Medicare enrollment type for a hypothetical ACO with a regional service area that includes counties A, B, C, and D.

Under § 425.654, an ACO's regional expenditures are calculated using risk adjusted county FFS expenditures. The counties included in the ACO's regional service area are based on the ACO's assigned beneficiary population for the applicable benchmark or performance year. We determine average county FFS expenditures based on expenditures for the assignable

---

<sup>248</sup> For summaries of these concerns of interested parties, refer to the CY 2022 PFS final rule (86 FR 65302 through 65306), CY 2023 PFS final rule (87 FR 69932 through 69934).

<sup>249</sup> For summaries of these concerns of interested parties, refer to the CY 2021 PFS final rule (85 FR 84783 through 84785), the CY 2022 PFS final rule (86 FR 65302 through 65306), and the CY 2023 PFS final rule (87 FR 66942 and 69943).

population<sup>250</sup> of beneficiaries in each county in the ACO's regional service area. We make separate calculations for each Medicare enrollment type. We adjust these county-level FFS expenditures (refer to Table 36, rows [A] and [F]) for severity and case mix of assignable beneficiaries in the county using county-level prospective HCC risk scores (refer to Table 36, rows [B] and [G]). The adjustment is made by dividing the county-level FFS expenditures for the Medicare enrollment type by county-level prospective HCC risk scores for the Medicare enrollment type, resulting in risk adjusted county-level FFS expenditures shown in Table 36 rows [C] and [H].

We then calculate an ACO's regional expenditures for each Medicare enrollment type by weighting these risk adjusted county-level FFS expenditures according to the ACO's proportion of assigned beneficiaries<sup>251</sup> in the county for that Medicare enrollment type (refer to Table 36, rows [D] and [I]), determined by the number of the ACO's assigned beneficiaries in the applicable population (according to Medicare enrollment type) residing in the county in relation to the ACO's total number of assigned beneficiaries in the applicable population (according to Medicare enrollment type) for the relevant benchmark or performance year. We then aggregate those values for each population of beneficiaries (according to Medicare enrollment type) across all counties within the ACO's regional service area<sup>252</sup> (refer to Table 36, rows [E] and [J]).

---

<sup>250</sup> Assignable beneficiary expenditures are calculated using the payment amounts included in Parts A and B FFS claims with dates of service in the 12-month calendar year that corresponds to the relevant benchmark or performance year, using a 3-month claims run out with a completion factor. These expenditure calculations exclude IME and DSH payments, and the supplemental payment for IHS/Tribal hospitals and Puerto Rico hospitals; and consider individually beneficiary identifiable final payments made under a demonstration, pilot or time limited program. Refer to § 425.654(a)(2). The assignable population of beneficiaries is identified for the assignment window corresponding to the relevant benchmark or performance year that is consistent with the assignment window that applies under the beneficiary assignment methodology selected by the ACO for the performance year according to § 425.400(a)(4)(ii). Refer to § 425.654(a)(1)(i). We refer readers to the discussion of the proposed changes to the methodology for identifying the assignable beneficiary population in section III.G.3.a of the proposed rule.

<sup>251</sup> Proportions are calculated using beneficiary person years.

<sup>252</sup> Refer to the Medicare Shared Savings Program, Shared Savings and Losses, Assignment and Quality Performance Standard Methodology Specifications (version #11, January 2023), sections 4.1.1 "Determining Regional FFS Expenditures" and 4.1.4 "Risk Adjusting and Updating the Historical Benchmark", available at <https://www.cms.gov/files/document/medicare-shared-savings-program-shared-savings-and-losses-and-assignment-methodology-specifications.pdf-2>.

We then calculate the regional update factor as the ratio of an ACO’s performance year expenditures to BY3 regional expenditures. This calculation is performed separately for each Medicare enrollment type. Refer to Table 36, row [K] for an example of how the regional update factor would be calculated for the ESRD Medicare enrollment type. This calculation would then be repeated for each of the other Medicare enrollment types.

**TABLE 36: Example Calculation of the Regional Update Factor for the ESRD Medicare Enrollment Type for a Hypothetical ACO**

	County A	County B	County C	County D	Regional
<b>BY3 ESRD Calculations</b>					
[A] County FFS Expenditures	72,000	108,000	86,400	79,200	
[B] County Prospective HCC Risk Scores	0.980	1.100	1.050	1.100	
[C] Risk Adjusted County FFS Expenditures, [A]/[B]	73,469	98,182	82,286	72,000

[G] County Prospective HCC Risk Scores	1.000	1.210	1.124	1.166	
[H] Risk Adjusted County FFS Expenditures, [F]/[G]	74,880	92,826	79,943	70,642	
[I] Proportion of Assigned Beneficiaries	0.58	0.26	0.15	0.01	
[J] Regional Risk Adjusted Expenditures, weighted average of [H] using weights [I]					<b>80,263</b>
<b>ESRD Regional Update Factor Calculation</b>					
[K] ESRD Regional Update Factor, [J]/[E]					<b>0.976</b>

While the regional expenditures for BY3 and the performance year are risk adjusted, as described previously in this section, there is currently no cap on prospective HCC risk score growth in an ACO’s regional service area between BY3 and the performance year. As discussed previously in this section, ACOs and other interested parties have expressed concerns that the program’s current cap on ACO risk score growth between BY3 and the performance year does not account for risk score growth in the ACO’s regional service area and that there is not an equivalent cap on regional risk score growth. High prospective HCC risk score growth in an ACO’s regional service area between BY3 and the performance year has the effect of decreasing the regional update factor, resulting in a lower updated benchmark for the ACO than if the regional risk score growth was capped (assuming that the risk score growth was high enough to

be capped). In past rulemaking, some commenters have encouraged CMS to adopt a policy of applying a cap on ACO risk score growth after accounting for regional increase in risk scores.<sup>253</sup> Others have suggested more generally that CMS align the use of a risk adjustment cap for the ACO and its region by applying a consistent capping policy to both.<sup>254</sup>

In the CY 2022 PFS proposed rule (86 FR 39294 through 39295), we sought comment on an alternate approach to capping ACO prospective HCC risk score growth between BY3 and the performance year in relation to the prospective HCC risk score growth in the ACO's regional service area. The option we presented was to allow an ACO's risk score growth cap to increase above 3 percent by a percentage of the difference between the 3 percent cap and risk score growth in the ACO's regional service area for a given Medicare enrollment type. In this alternate approach (herein referred to as the "3 percent cap plus regional difference"), the percentage applied would be equal to 1 minus the ACO's regional market share for the Medicare enrollment type. For example, if regional risk score growth for a particular Medicare enrollment type was 5 percent and the ACO's regional market share was 20 percent, we would increase the cap on the ACO's risk score growth for that Medicare enrollment type by an amount equal to the difference between the regional risk score growth and the 3 percent cap (2 percent) multiplied by one minus the ACO's regional market share (80 percent). Thus, the ACO would face a cap for this Medicare enrollment type equal to 4.6 percent instead of 3 percent (3 percent + (2 percent × 80 percent)). This approach would raise the 3 percent cap while limiting the ability for ACOs with high market share to increase their cap by engaging in coding intensity initiatives that raise the regional prospective HCC risk score. As discussed in the CY 2022 PFS final rule, a few commenters noted their support for this 3 percent cap plus regional difference methodology.<sup>255</sup> However, MedPAC expressed concern that increasing the cap beyond 3 percent could effectively

---

<sup>253</sup> Refer to CY 2021 PFS final rule (85 FR 84784).

<sup>254</sup> Refer to CY 2021 PFS final rule (85 FR 84784) and CY 2023 PFS final rule (87 FR 69943).

<sup>255</sup> Refer to 86 FR 65304.

reward ACOs for greater coding intensity in their region, particularly for those with higher market share.<sup>256,257</sup>

In the CY 2023 PFS final rule (87 FR 69932 through 69946), we indicated that we had considered the 3 percent cap plus regional difference methodology described in the CY 2022 PFS proposed rule when developing policies for the CY 2023 PFS proposed rule. However, we opted not to propose this policy and instead proposed, and ultimately finalized, the aggregate demographics plus 3 percent cap. One reason we did not propose the 3 percent cap plus regional difference was that a relatively small share of ACOs affected by the 3 percent cap operated in regional service areas where regional risk score growth was greater than 3 percent, indicating that this was not a widespread issue impacting ACO performance. Additionally, we explained that we still had concerns that allowing the cap on an ACO's risk score growth to increase with regional risk score growth could incentivize ACOs, particularly those with high market share, to engage in coding behavior that would increase their cap, even if this incentive would be mitigated to some degree by limiting the allowable increase in the cap based on the ACO's market share. Under the 3 percent cap, ACOs with high market share have a disincentive to engage in coding initiatives, as it could increase risk score growth in their regional service area and potentially decrease the value of the regional component of their update factor. We noted that raising the 3 percent cap based on risk score growth in an ACO's regional service area could change these incentives and encourage ACOs to engage in coding initiatives. In addition to finalizing the aggregate demographics plus 3 percent cap, in the CY 2023 PFS final rule, we noted that we declined to consider an approach that would impose a direct cap on risk score growth in an ACO's regional service area (87 FR 69932 through 69947). As with the 3 percent

<sup>256</sup> Refer to 86 FR 65303 through 65305.

<sup>257</sup> Refer to Letter from MedPAC to Chiquita Brooks-LaSure, Administrator, CMS (September 9, 2021), regarding File code CMS-1751-P (pages 16-18 "Risk adjustment methodology"), available at [https://www.medpac.gov/wp-content/uploads/2021/10/09092021\\_PartB\\_CMS1751\\_MedPAC\\_Comment\\_V2\\_SEC.pdf](https://www.medpac.gov/wp-content/uploads/2021/10/09092021_PartB_CMS1751_MedPAC_Comment_V2_SEC.pdf).

cap plus regional difference, we were concerned that such an approach would create adverse incentives for coding behavior, especially for ACOs with high market share.

In response to the discussion of the cap on prospective HCC risk score growth in the CY 2023 PFS proposed rule, commenters took the opportunity to reiterate their concerns that the program's current cap on ACO risk score growth between BY3 and the performance year does not account for risk score growth in the ACO's regional service area and suggested ways to incorporate a cap on regional risk score growth. A couple of commenters requested that the risk score cap be allowed to further increase for ACOs in regions where risk score growth exceeds the cap, with one stating that a flat percentage cap will always disadvantage ACOs in regions where risk score growth exceeds the cap and another stating that this additional flexibility would ensure ACOs are not disadvantaged by operating in underserved communities. Additionally, many commenters supported capping regional risk score growth in addition to capping ACO risk score growth. Several of those commenters stated that it was critical that, whatever policy CMS adopted for capping ACOs' risk score growth, the same policy must also apply to regional risk score growth. Several commenters noted that CMS should not apply adjustments to only one side of the equation, that is, capping ACO risk ratios without capping regional risk ratios, with many commenters saying this would lead to unintended consequences and another commenter stated it would have inequitable results. Several commenters stated that not capping increases in regional risk scores would stifle growth in exactly the areas CMS wants growth the most. A few commenters explained that lack of regional risk score growth caps incentivizes ACOs not to grow in places with certain types of populations, such as those with increasing health burdens, higher needs, or higher numbers of aged/dual and disabled enrollees.<sup>258</sup> In response to these comments, we indicated that we would continue to monitor the impacts of regional risk score

---

<sup>258</sup> Refer to 87 FR 69942 through 69943.

growth and might propose further refinements to our risk adjustment policies in future rulemaking.<sup>259</sup>

## (2) Revisions

Since the publication of the CY 2023 PFS final rule, we have performed further analysis on prospective HCC risk score growth in ACOs' regional service area between BY3 and the performance year and considered ways in which we could reduce impacts to ACOs in regions with high risk score growth, particularly when such growth is not due to the ACO's own complete and accurate coding, while also limiting the impact from coding initiatives, particularly among ACOs with high market share. Based on this additional analysis, which is detailed later in this section, in the CY 2024 PFS proposed rule (88 FR 52459 through 52465), we proposed to modify the calculation of the regional update factor used to update the historical benchmark between BY3 and the performance year. The proposed approach would cap prospective HCC risk score growth in an ACO's regional service area between BY3 and the performance year by applying an adjustment factor to the regional update factor. This cap on regional risk score growth would be applied independently of the cap on an ACO's own prospective HCC risk score growth between BY3 and the performance year, meaning that this proposed cap on prospective HCC risk score growth in an ACO's regional service area would be applied whether or not the ACO's prospective risk score growth was capped when updating the benchmark between BY3 and the performance year. We explained that applying these caps independently would be more equitable to ACOs serving high-risk patients in regions with high risk score growth and avoid creating incentives for ACOs to avoid high-risk and more medically complex patients. Adjusting the regional service area risk score growth cap based on the percentage of original Medicare FFS beneficiaries the ACO serves in the region would help to mitigate the impact an ACO's own coding initiatives have on risk score growth in the ACO's regional service area, particularly when the ACO has a greater influence on its regional service area risk score growth rate.

---

<sup>259</sup> Refer to 87 FR 69943.

To determine the cap on prospective HCC risk score growth in an ACO's regional service area, we proposed to follow a similar methodology as the one adopted in the CY 2023 PFS final rule<sup>260</sup> for capping ACO risk score growth, codified at §§ 425.605(a)(1)(ii) and 425.610(a)(2)(ii), while additionally accounting for an ACO's aggregate market share. The effect of the regional risk score growth cap would be to increase the regional component of the update factor for ACOs in regions with aggregate regional prospective HCC risk score growth above the cap, with ACOs with higher aggregate market shares seeing smaller increases, all else being equal. ACOs in regions with aggregate regional prospective HCC risk score growth below the cap would not be affected by the proposed policy.

As we explained in the CY 2024 PFS proposed rule, by symmetrically limiting risk score growth within both an ACO's assigned beneficiary population and its region, this proposed approach is expected to improve the accuracy of the regional update factors for ACOs operating in regional service areas with high risk score growth, particularly in later years of the 5-year agreement period where the difference between an ACO's BY3 and performance year regional risk scores is expected to be the greatest. We explained our belief that capping regional risk score growth would strengthen incentives for ACOs to form or continue to operate in regions with high-risk score growth and thereby incentivize ACOs to care for higher risk beneficiaries. This approach would also offer an incentive for potential applicant ACOs that may be examining recent risk score growth in their region and making the decision whether to participate in the Shared Savings Program. Additionally, by adjusting the regional risk score growth cap based on ACO market share, we noted that the proposal would also maintain a disincentive against coding intensity for ACOs with high market share.

To implement the new cap on regional risk score growth, we proposed to multiply the original regional update factor used to update the historical benchmark between BY3 and the performance year (determined in accordance with § 425.652(b)(2)(ii)) by a regional risk score

---

<sup>260</sup> 87 FR 69932 through 69946.

growth cap adjustment factor. The regional risk score growth cap adjustment factor would be calculated as follows:

- *Step 1:* Calculate county-level risk scores. We would calculate county-level prospective HCC and demographic risk scores by Medicare enrollment type for both BY3 and the performance year. To do this for a given benchmark or performance year, we would first determine the renormalized, prospective HCC and demographic risk score for each assignable beneficiary<sup>261</sup> in each county in the ACO’s regional service area. For both HCC and demographic risk scores, we would then compute the weighted average risk score for each county for each Medicare enrollment type by multiplying each assignable beneficiary’s risk score for that Medicare enrollment type by the beneficiary’s person years enrolled in that Medicare enrollment type, summing these weighted risk scores across all assignable beneficiaries for that Medicare enrollment type in the county, and then dividing by total person years for that Medicare enrollment type among assignable beneficiaries in the county. We noted that this approach would be similar to the approach that is currently used to determine county-level prospective HCC risk scores as an intermediate step in calculating risk adjusted regional expenditures under the current methodology.<sup>262</sup>

- *Step 2:* Calculate regional risk scores. We would calculate regional-level BY3 and performance year prospective HCC and demographic risk scores as a weighted average of county-level HCC and demographic risk scores for the Medicare enrollment type (calculated in step 1), with weights reflecting the proportion of the ACO’s assigned beneficiaries<sup>263</sup> in the county. This proportion is determined by the number of the ACO’s assigned beneficiaries (by

---

<sup>261</sup> Consistent with our proposal to revise the definition of an assignable beneficiary (refer to section III.G.3.a of the proposed rule), we proposed that the assignable population of beneficiaries for a benchmark or performance year would be identified using the assignment window or expanded window for assignment that is consistent with the beneficiary assignment methodology selected by the ACO for the applicable performance year according to § 425.400(a)(4)(ii).

<sup>262</sup> Refer to the Medicare Shared Savings Program, Shared Savings and Losses, Assignment and Quality Performance Standard Methodology Specifications (version #11, January 2023), section 4.1.1 “Determining Regional FFS Expenditures”, available at <https://www.cms.gov/files/document/medicare-shared-savings-program-shared-savings-and-losses-and-assignment-methodology-specifications.pdf-2>.

<sup>263</sup> Proportions are calculated using beneficiary person years.

Medicare enrollment type) residing in each county in relation to the ACO's total number of assigned beneficiaries for that Medicare enrollment type for the relevant benchmark or performance year. These would be the same weights as used to calculate regional expenditures under § 425.654(b).

- *Step 3: Determine aggregate growth in regional risk scores.* To calculate aggregate growth in regional risk scores, we would first calculate growth in prospective HCC and demographic risk scores between BY3 and the performance year for each Medicare enrollment type, expressed as the ratio of the performance year regional risk score for a Medicare enrollment type (calculated in step 2) to the BY3 regional risk score for that enrollment type (calculated in step 2). We would next take a weighted average of the regional prospective HCC or demographic risk ratios, as applicable, across the four Medicare enrollment types, where the weight applied to the growth in risk scores for each Medicare enrollment type would be the ACO's performance year assigned beneficiary person years for the Medicare enrollment type multiplied by the ACO's regionally adjusted historical benchmark expenditures for the Medicare enrollment type.<sup>264</sup>

- *Step 4: Determine the cap on regional risk score growth.* We would first calculate the non-market share adjusted cap on the ACO's regional risk score growth as the sum of the aggregate growth in regional demographic risk scores (calculated in step 3) and 3 percentage points.<sup>265</sup>

We would next adjust the cap to reflect the ACO's aggregate market share. We would calculate an ACO's aggregate market share as a weighted average of the ACO's market share across the four Medicare enrollment types. An ACO's market share for each Medicare enrollment type would be equal to the weight that is applied to the national component of the

---

<sup>264</sup> These are the same weights that are to be used when calculating weighted average ACO prospective HCC and demographic risk ratios under the risk adjustment methodology adopted in the CY 2023 PFS final rule (87 FR 69932 through 69946) and codified in §§ 425.605(a)(1)(ii)(C) and 425.610(a)(2)(ii)(C).

<sup>265</sup> This is similar to the calculation of the cap on ACO prospective HCC risk score growth finalized in the CY 2023 PFS (87 FR 69932 through 69946) and codified in §§ 425.605(a)(1)(ii)(A) and 425.610(a)(2)(ii)(A).

blended update factor in the two-way blend that is calculated as the share of assignable beneficiaries in the ACO's regional service area that are assigned to the ACO for the applicable performance year (refer to § 425.652(b)(2)(iv)). The weights for each Medicare enrollment type used to compute the weighted average would be the ACO's performance year assigned person years for the Medicare enrollment type.

We would adjust the cap on regional risk score growth to reflect the ACO's aggregate market share by adding to the non-market share adjusted cap the product of:

- ++ The ACO's aggregate market share, and
- ++ The difference (subject to a floor of zero) between:
  - The aggregate regional prospective HCC risk score growth (calculated in step 3), and
  - The non-market share adjusted cap (calculated first in this step).

This adjustment of the cap on regional risk score growth using the ACO's aggregate market share creates a sliding scale. Assuming that an ACO has aggregate regional prospective HCC risk score growth above the non-market share adjusted cap, an ACO with close to 0 percent aggregate market share would receive a market share adjusted cap on regional risk score growth close to the aggregate growth in regional demographic risk scores plus 3 percentage points and an ACO with 100 percent aggregate market share would receive a market share adjusted cap on regional risk score growth equal to the aggregate regional prospective HCC risk score growth calculated in step 3 (which is effectively no cap at all). Under this approach, as an ACO's aggregate market share increases, so does the cap on the ACO's regional risk score growth, ultimately limiting the potential increase to the regional update factor for ACOs with high market share.

- *Step 5:* Determine the regional risk score growth cap adjustment factor. First, we would determine if the ACO's regional risk score growth is subject to a cap by comparing the ACO's aggregate regional prospective HCC risk score growth (calculated in step 3) to the market share adjusted cap on regional risk score growth (calculated in step 4).

++ If the aggregate regional prospective HCC risk score growth does not exceed the cap on regional risk score growth, the ACO's regional risk score growth would not be subject to the cap. For these ACOs we would set the risk score growth cap adjustment factor equal to 1 for each Medicare enrollment type (which is effectively no adjustment).

++ If the aggregate regional prospective HCC risk score growth exceeds the market share adjusted cap, the ACO's regional risk score growth is subject to the cap. For these ACOs we would next determine whether the cap on regional risk score growth applies for each Medicare enrollment type. To do this, we would compare regional prospective HCC risk score growth for each Medicare enrollment type (calculated in step 3) with the market share adjusted cap (calculated in step 4). If the regional risk score growth for a Medicare enrollment type does not exceed the cap, the enrollment type is not subject to the cap and the regional risk score growth cap adjustment factor for that Medicare enrollment type is set equal to 1 (effectively no adjustment). Otherwise, the Medicare enrollment type is subject to the cap and we would set the adjustment factor for the Medicare enrollment type equal to the regional prospective HCC risk score growth for the Medicare enrollment type (calculated in step 3) divided by the market share adjusted cap calculated in step 4. In this case, the adjustment factor for the Medicare enrollment type would represent a measure of how far above the cap the regional prospective HCC risk score growth is.

Table 37 provides a numeric example of the calculation of the regional risk score growth cap adjustment factor for a hypothetical ACO that is determined to be subject to the market share adjusted cap. Table 37 begins at the end of step 2 of the calculation, and therefore only reflects regional-level calculations and does not include the county-level calculations:

**TABLE 37: Example of Calculation of the Regional Risk Score Growth Cap Adjustment Factor for a Hypothetical ACO**

Regional Level Measure	ESRD	Disabled	Aged/dual	Aged/non-dual	Weighted Average
<b>Results of Step 2 (Regional Risk Scores (Calculation not shown))</b>					
[A] BY3 Prospective HCC Risk Scores	1.027	1.016	1.037	1.006	
[B] PY Prospective HCC Risk Scores	1.075	1.049	1.043	1.053	
[C] BY3 Demographic Risk Scores	1.016	0.996	1.047	1.007	
[D] PY Demographic Risk Scores	0.962	1.012	1.054	0.983	
<b>Step 3 (Determine growth in aggregate risk scores)</b>					
[E] Prospective HCC Risk Ratio, [B] / [A]	1.047	1.032	1.006	1.047	
[F] Demographic Risk Ratio, [D] / [C]	0.947	1.016	1.006	0.977	
[G] Risk Score Weights (ACO performance year assigned person years multiplied by regionally adjusted historical benchmark expenditures, as a proportion)	0.010	0.090	0.150	0.750	
[H] Weighted Average HCC Risk Ratio, weighted average of [E] using weights [G]					1.039
[I] Weighted Average Demographic Risk Ratio, weighted average of [F] using weights [G]					0.984
<b>Step 4 (Determine the cap on regional risk score growth)</b>					
[J] Non-market Share Adjusted Cap, [I] + 0.030					1.014
[K] Market Share Weights (ACO performance year assigned person years, as a proportion)	0.007	0.085	0.120	0.788	
[L] ACO Market Share	0.150	0.200	0.180	0.300	
[M] Weighted Average Market Share, weighted average of [L] using weights [K]					0.276
[N] Market Share Adjusted Cap, [J]+([M]*([H]-[J])), Note that [H]-[J] is subject to a floor of 0					1.021
<b>Step 5 (Determine the regional risk score growth cap adjustment factor)</b>					
[O] Is the ACO Subject to Cap? [H] > [N]?					Yes
[P] Is the Enrollment Type Subject to Cap, If [O] = Yes, is [E]>[N]? If [O] = No, then No	Yes	Yes	No	Yes	
[Q] Regional Risk Score Growth Cap Adjustment Factor, If [P] =Yes, then [E]/[N], else 1	1.025	1.011	1.000	1.025	

Table Note: This numeric example shows only three decimal places and so attempting to replicate the calculations may result in slight differences due to rounding. In actual calculations all decimal places would be used.

In this example, the hypothetical ACO was in a regional service area with aggregate prospective HCC risk score growth (a weighted average risk ratio of 1.039, refer to row [H]) above the market share adjusted cap of 1.021 (refer to row [N]). The ACO's regional prospective HCC risk score growth (shown in row [E]) was above this cap for three of the four Medicare

enrollment types (all but the aged/dual eligible Medicare enrollment type). Therefore, the regional risk score growth cap adjustment factor (refer to row [Q]) calculated for those three capped Medicare enrollment types was above one, and the regional risk score growth cap adjustment factor calculated for the one uncapped Medicare enrollment type was equal to one. Once the regional risk score growth cap adjustment factors are multiplied by the original regional update factors used to update the historical benchmark between BY3 and the performance year, the regional update factor would increase for the three capped Medicare enrollment types. For example, if the original regional update factor for the ESRD Medicare enrollment type was 0.976, then the final regional ESRD update factor after the application of the regional risk score growth cap adjustment factor would be 1.000 (the product of 0.976 and the regional risk score growth cap adjustment factor of 1.025). There would be no change to the original regional update factor for the uncapped aged/dual eligible Medicare enrollment type as it would be multiplied by one. Because of the increase in original regional update factor for the three capped Medicare enrollment types, this hypothetical ACO would have a higher updated benchmark under this proposed policy than under current policy.

However, if an ACO was in a regional service area with aggregate prospective HCC risk score growth that was not above the regional risk score growth cap, the regional risk score growth cap adjustment factor for all Medicare enrollment types would be equal to one, thus resulting in no change to the original regional update factor for any Medicare enrollment type, and therefore, no change to the ACO's updated benchmark compared to current policy.

As we described in the CY 2024 PFS proposed rule, this proposed policy would help increase the accuracy of the regional update factor for ACOs operating in regional service areas with high risk score growth, including those serving more medically complex beneficiaries, therefore increasing incentives for ACOs to form or continue participation in such areas. We further explained that incorporating the market share adjustment helps to mitigate concerns related to coding intensity for ACOs with high market share and thus a relatively high level of

influence over risk scores in their regional service area as discussed in section III.G.4.b.(1) of the proposed rule, and therefore, would protect the Trust Funds by continuing to limit incentives for this behavior.

We simulated the impact of the proposed policy using PY 2021 financial reconciliation data for ACOs in agreement periods beginning on or after July 1, 2019. This simulation found that 38 of the 332 ACOs (11 percent) would have been subject to the cap on regional risk score growth determined in step 4 of the proposed methodology, and therefore, would have had a higher regional update factor than under current policy for at least one Medicare enrollment type. Thirty-six of those 38 ACOs were subject to the 3 percent cap on their own risk score growth for at least one enrollment type in actual PY 2021 results. Table 38 shows the percentage of ACOs determined to be subject to the cap on regional risk score growth for each Medicare enrollment type and the average increase in the regional update factor for that enrollment type among those ACOs.

**TABLE 38: Share of ACOs Subject to Regional Risk Score Growth Cap and Average Increase in Regional Update Factor among those ACOs by Medicare Enrollment Type**

	<b>ESRD</b>	<b>Disabled</b>	<b>Aged/Dual</b>	<b>Aged/Non-Dual</b>
Share of ACOs Capped in Simulation	2%	5%	10%	11%
Average Change in Regional Update Factor	0.011	0.015	0.035	0.016

In the proposed rule, we explained that while this modeling shows that only a small proportion of ACOs would have benefitted from this policy in PY 2021, our analyses have also shown that this proportion is predicted to increase as more ACOs advance farther into their 5-year agreement period. This prediction was supported by the finding that ACOs in the simulation were significantly more likely to be impacted if their agreement period started in 2019 with a BY3 of 2018 (16 percent) than if their agreement period started in 2020 with a BY3 of 2019 (6 percent).<sup>266</sup> Because the analysis of PY 2021 data demonstrates that circumstances like the PHE

---

<sup>266</sup> While analysis of average FFS risk score changes at the hospital referral region (HRR) level further supports the assumption that more ACOs would be impacted toward the end of their 5-year agreement period, such analysis also indicates that variation from the PHE for COVID-19 likely accentuated this phenomenon in the simulation on

for COVID-19 and progression along a 5-year agreement period can interact to increase the share of ACOs in regional service areas with aggregate regional risk score growth above the cap, we determined that our initial concerns about creating adverse incentives for coding behavior by capping regional risk score growth, as discussed in section III.G.4.b.(1) of the proposed rule, were outweighed by the potential harm to ACOs in regions with high risk score growth, particularly when such growth is not due to the ACO’s own coding activities. Additionally, we stated that the market share adjustment to the cap on regional risk score growth would limit overly advantaging ACOs with high market share if they participate in coding initiatives.

Table 39 displays information on the impact of the market share adjustment on the cap on regional risk score growth within our simulation of the application of the proposed policy in PY 2021 for the ACOs with the minimum, median, and maximum aggregate market share that were found to be subject to the cap on regional risk score growth.

**TABLE 39: Aggregate Market Share and Impact of Market Share Adjustment on Cap on Regional Risk Score Growth among ACOs Subject to Regional Risk Score Growth Cap (N=38)**

	Aggregate Market Share (proportion)	Non-Market Share Adjusted Cap	Market Share Adjusted Cap	Difference between Market Share Adjusted and Non-Market Share Adjusted Cap
Minimum	0.009	1.036	1.036	<0.001
Median	0.127	1.034	1.034	0.001
Maximum	0.536	1.008	1.028	0.020

Note: The minimum, median, and maximum refer to the minimum, median and maximum aggregate market share. The non-market share adjusted cap, market share adjusted cap, and difference between market share adjusted and non-market share adjusted cap represent data from the ACOs with the minimum, median, and maximum market shares. Because there are an even number of impacted ACOs, there are two ACOs comprising the median of 0.127. These two ACOs have the same non-market share adjusted and market share adjusted caps and have been combined into a single row for simplicity.

Based on this data in Table 39, the majority of ACOs found to be impacted in this simulation had a relatively small aggregate market share, with a median of about 13 percent. Because of this, the median increase to the cap on regional risk score growth from the market

---

PY2021 data. For this reason, the finding in the PY2021 simulation that 16 percent of 2019 starters were impacted is likely indicative of an upper bound for the share of ACOs potentially impacted by PY5 in agreement periods that start in 2024 or later (that is, where the impact of the PHE for COVID-19 on risk score growth between BY3 and the PY is minimal relative to risk score growth from 2018 to 2021 and from 2019 to 2021 in this simulation). This footnote has been revised, from footnote 187 in the CY 2024 PFS proposed rule (88 FR 52463), to clarify how findings from the PY 2021 simulation may be relevant in projecting risk score growth for agreement periods starting in 2024 or later.

share adjustment was small (0.001). (This is both the median increase among all 38 impacted ACOs and the increase for the impacted ACOs with the median market share). Further analysis showed that results were similar among both rural and urban ACOs. Of the 38 impacted ACOs, 34 were classified as urban and had a median aggregate market share of about 12 percent. The remaining four impacted ACOs were rural ACOs with a median aggregate market share of about 24 percent. While the market share was higher on average among rural ACOs, average market share for both types of ACOs was under 25 percent and both groups had only a small median increase to the cap on regional risk score growth from the market share adjustment of 0.001.<sup>267</sup>

ACOs with a larger aggregate market share received a larger increase in the cap on regional risk score growth due to the market share adjustment. For example, in Table 39, the ACO with the highest market share of 53.6 percent (an ACO that has a regional service area in an urban area), had a 20 percent increase in its cap from the market share adjustment, going from a non-market share adjusted cap of 1.008 to an adjusted cap of 1.028. As we explained in the CY 2024 PFS proposed rule, while the impact of the market share adjustment on the cap on regional risk score growth would be small for the majority of ACOs, this market share adjustment was important to address both our own concerns related to incentives for coding intensity and the similar concerns raised by MedPAC in the CY 2023 PFS final rule, as discussed in section III.G.4.b.(1) of the proposed rule. The market share adjustment to the cap limits the adverse coding incentives that can arise when allowing larger benchmark increases when an ACO increases its coding, especially for ACOs with high market share. Specifically, ACOs with high market share would still have a disincentive to engage in coding initiatives, as these initiatives could increase risk score growth in their regional service area and potentially decrease the value of the regional component of their update factor.

---

<sup>267</sup> For this analysis, ACOs were classified as rural if the plurality of their assigned beneficiaries resided in either micropolitan or noncore counties and urban if the plurality of their assigned beneficiaries resided in either large central metro, large fringe metro, medium metro, or small metro counties as defined by The United States Census Bureau and the Office of Management and Budget (OMB).

We explained that apart from the market share adjustment, the calculation of the proposed cap on regional risk score growth between BY3 and the performance year would be calculated in the same way as the aggregate demographics plus 3 percent cap on ACO risk score growth under §§ 425.605(a)(1)(ii)(A) and 425.610(a)(2)(ii)(A). Specifically, the cap would be calculated as the aggregate growth in regional demographic risk scores between BY3 and the performance year plus 3 percentage points, prior to application of the market share adjustment. Additionally, we noted that as a result of incorporating the risk adjustment into the regional update factor at the county level, the current methodology does not directly calculate a regional risk ratio that can be directly modified. The proposed approach of modifying the regional update factor by multiplying by an adjustment factor would achieve the goal of reducing the impact of regional risk score growth while leaving the existing methodology for calculating risk-adjusted regional expenditures intact.

In the CY 2024 PFS proposed rule, we explained that in earlier rulemaking (see 87 FR 69887 and 69888) we have used our authority under section 1899(i)(3) of the Act to adopt a three-way blended benchmark update factor (weighted one-third ACPT, and two-thirds national-regional blend) for agreement periods beginning on January 1, 2024, and in subsequent years, in place of an update factor based on the projected absolute amount of growth in national per capita expenditures for Parts A and B services under the original FFS program as called for in section 1899(d)(1)(B)(ii) of the Act. We also acknowledged that the changes we were proposing to the regional component of the three-way blended update factor would similarly require continued use of our statutory authority under section 1899(i)(3) of the Act. Section 1899(i)(3) of the Act grants the Secretary the authority to use other payment models, including payment models that use alternative benchmarking methodologies, if the Secretary determines that doing so would improve the quality and efficiency of items and services furnished under the Medicare program and program expenditures under the alternative methodology would be equal to or lower than those that would result under the statutory payment model. We explained our belief that the

changes to the methodology for updating the benchmark that we were proposing pursuant to section 1899(i)(3) of the Act would improve the quality and efficiency of items and services furnished under the Medicare Program. More specifically, we explained our belief that the proposed changes to the regional component of the update factor would – in the context of the downward effects on the benchmark resulting from elevated variation in regional average prospective HCC risk score growth as shown in the PY 2021 analysis – reinforce the incentive for ACOs to enter and remain in the Shared Savings Program, particularly in regions with changing populations. Moreover, we stated our belief that the proposed approach, by encouraging ACOs to enter and continue participation in the Shared Savings Program, would lead to improvement in the quality of care furnished to Medicare FFS beneficiaries because participating ACOs have an incentive to perform well on quality measures in order to maximize the shared savings they may receive. In addition, as discussed in the Regulatory Impact Analysis (section VII. of the proposed rule), it was our belief that the proposed changes to the regional component of the three-way blended update factor, in combination with the other proposals for which we were required to use our authority under section 1899(i)(3) of the Act, would result in a marginal impact that we estimated would result in \$330 million in lower net spending over the 10-year projection window, which supported our finding that the relatively minor changes to program spending resulting from these proposed changes would not violate the requirements of section 1899(i)(3)(B) of the Act. We stated that we would continue to reexamine this projection in the future to ensure that the requirement under section 1899(i)(3)(B) of the Act that an alternative payment model not result in additional program expenditures continues to be satisfied. In the event that we later determine that the payment model established under section 1899(i)(3) of the Act no longer meets this requirement, we would undertake additional notice and comment rulemaking to make adjustments to the payment model to assure continued compliance with the statutory requirements.

We proposed to revise the Shared Savings Program regulations governing the calculation of the regional growth rate when updating the historical benchmark between BY3 and the performance year at § 425.652(b)(2)(ii)(C) to incorporate a regional risk score growth cap adjustment factor. (In the preamble of the CY 2024 proposed rule (88 FR 52465), we inadvertently referred to § 425.652(c) instead of § 425.652(b)(2)(ii)(C); however, the proposed changes to the regulations text correctly reflected the intended revisions to § 425.652(b)(2)(ii)(C).) We also proposed to add a new section to the regulations at § 425.655 to describe the calculation of the adjustment factor.

We solicited comments on the proposed changes to calculation of the regional component of the update factor for agreement periods beginning on or after January 1, 2024.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

*Comment:* Many commenters supported the overall proposal to cap regional service area risk score growth for symmetry with the ACO risk score cap. A couple of commenters appreciated CMS' receptiveness to the concerns of interested parties while another thanked CMS for ensuring physicians in certain geographies are not disincentivized from participating in the Shared Savings Program.

Commenters cited a variety of reasons for their support of the proposal. Several commenters discussed the effect that the policy would have on ACOs that care for underserved beneficiaries or medically complex, high-risk beneficiaries, with many saying that it would strengthen incentives to continue providing care to such beneficiaries and another saying that it would bolster the financial stability of ACOs caring for that population. Multiple commenters stated the proposal supports CMS' strategic objective to increase the number of beneficiaries in care relationships with more accountability for quality care.

Several commenters discussed the effect that the policy would have on health care providers or ACOs that operate in regions with high risk score growth. Several commenters

stated that the proposal would strengthen incentives for new ACOs to form or for current ACOs to continue participating in the Shared Savings Program, and one commenter stated that the proposal would be equitable for such ACOs. Another commenter stated that the policy would create a more equitable marketplace for all and incentivize ACO growth in rural and underserved markets. One commenter stated the policy would prevent ACOs with higher risk score growth from “getting hit twice” with regional risk score growth. One commenter noted they believed the policy would guard against a small number of health systems dramatically altering the financial landscape of a region. One commenter tentatively supported the proposal but requested that CMS monitor closely to ensure the policy does not unduly penalize certain ACOs in regions with changing demographics beyond the ACOs’ control, such as an elderly population approaching the peak years for Medicare spending.

Several commenters described the policy as addressing what they considered flaws with existing policy for updating the benchmark. A couple of commenters suggested that the policy would address unfairness or inequity that exists under current policy. Another commenter stated that the policy would improve accuracy in accounting for regional service area risk score growth. Another commenter appreciated that CMS intends to make methodology changes that substantively address the commenter’s underlying concerns with the balance of national and regional trends in Shared Savings Program ACO benchmarks.

MedPAC supported the proposal to cap regional risk score growth with an adjustment for an ACO’s market share, stating that the proposal reasonably protects ACOs from coding that may be out of their control, depending on an ACO’s share of the market. MedPAC suggested the proposal was a reasonable approach in the absence of an alternative policy for updating the historical benchmark by using administrative update factors or a policy to address the underlying differences between ACOs’ risk scores and the average risk score for the assignable beneficiary population. However, MedPAC stated that the proposed approach should be viewed as an interim step because it does not address the underlying issues with coding incentives and

regional benchmarking. We further summarize MedPAC's comments on the proposed modifications to the benchmarking methodology elsewhere in section III.G.4 of this final rule.

*Response:* We agree with commenters that the proposed policy would encourage participation by ACOs in regions with changing beneficiary demographics and health status beyond the ACOs' control and improve the accuracy of the regional update factors for ACOs operating in regional service areas with high risk score growth. We also agree with commenters that the proposed policy would incentivize ACOs to care for higher risk beneficiaries.

*Comment:* Some commenters specifically stated support for adjusting the cap based on market share, with one commenter stating that the adjustment would maintain a disincentive against coding intensity for ACOs with high market share and another recognizing the need to limit the impact of coding initiatives, particularly among ACOs with high market share, to avoid potentially adverse incentives.

*Response:* We agree with commenters that adjusting the regional service area risk score growth cap based on the percentage of assignable beneficiaries the ACO serves in the region would help to mitigate the impact of the ACO's own coding initiatives on risk score growth in the ACO's regional service area, particularly when the ACO has a greater influence on its regional service area risk score growth rate. As an ACO's aggregate market share increases, so does the cap on the ACO's regional risk score growth, ultimately limiting the potential increase to the regional update factor for ACOs with high market share. This adjustment to the cap would have the effect of ACOs with higher aggregate market shares seeing smaller increases in the regional component of the update factor, all else being equal.

*Comment:* Many commenters supporting the proposal requested that the policy be made effective for all ACOs, not just ACOs in agreement periods starting on or after January 1, 2024, and a few commenters recommended that ACOs in existing agreement periods should be given the option of whether to receive the new policy. Some of these commenters described limiting the policy to ACOs entering new agreement periods as "unfair." A few commenters noted that

because the CY 2024 PFS proposed rule was issued after the application deadline for agreement periods starting on January 1, 2024, ACOs in the middle of a current agreement period missed the opportunity to submit applications for early renewal that would allow them to take advantage of this and other proposed changes to the program's benchmarking policies in PY 2024, if finalized. A few other commenters opined that requiring ACOs to go through the early renewal process to benefit from the policy was burdensome for ACOs. One commenter noted that the early renewal process also created burden for CMS and additionally suggested that it could risk disruption to the program and lead to large swings in cohort sizes.

*Response:* We decline commenters' suggestions to modify the timing of applicability for this policy and the other changes to the financial benchmarking methodology discussed in sections III.G.4.c-e of this final rule. The revisions we are making in this final rule to the benchmarking methodology, including the cap on regional service area risk score growth, will apply to all ACOs entering a new agreement period beginning on or after January 1, 2024. In section III.G.4.e of this final rule, we explain our concerns with applying benchmarking changes to ACOs within an agreement period in responding to similar suggestions in connection with the proposed revisions to the risk adjustment methodology.

*Comment:* Multiple supportive commenters urged CMS to adopt a higher cap for an ACO's risk score growth. Several commenters urged CMS to increase the current aggregate demographics plus 3 percent cap on ACO risk score growth between BY3 and the performance year to 5 percent and to apply a symmetrical cap on decreases in risk scores. These commenters stated that "the current methodology of normalizing risk adjustment in a region can penalize ACOs that have been coding accurately and that maintain the same level of risk over their agreement period." Another commenter requested that CMS increase the "regional cap" to 5 percent and cap negative risk score growth at 5 percent, saying that the "current practice of normalizing regional risk adjustment penalizes ACOs that code accurately and maintain the same level of risk."

One commenter expressed support for the proposal to cap regional risk score growth but also urged CMS to “remove” the cap on ACO risk score growth, but their comment also included a request that the cap be increased to 5 percent after accounting for demographics.

One commenter requested that CMS review whether the “3 percent cap in risk score growth” is a fair policy throughout a 5-year agreement period. The commenter reasoned that HCC scores are based on a previous year’s data and “may not reflect active changes in acuity among the population.” The commenter stated their belief that this disadvantages ACOs that treat the most serious or complex Medicare beneficiaries and recommended that CMS consider additional guardrails for years of high volatility—as seen post COVID-19—to protect ACOs that experience growth in the risk of the population they serve. The commenter also suggested CMS adjust prior year financial settlements, particularly PY 2021 and PY 2022, for ACOs that experienced high risk score growth.

*Response:* In some cases, it was not clear if the commenters were referring to the cap on an ACO’s own risk score growth or the proposed cap on an ACO’s regional service area risk score growth. However, because a higher cap on increases in risk scores in an ACO’s regional service area would not provide the same level of protection to ACOs against risk score increases in their regional service area, we interpret these comments to be requesting a higher cap on HCC risk score increases and a cap on prospective HCC risk score decreases within an ACO’s own assigned beneficiary population. We appreciate these commenters’ suggestions but note that their suggestions go beyond the scope of the proposed modifications to the Shared Savings Program’s benchmarking methodology. The policy of capping risk score growth for an ACO’s assigned beneficiaries during an agreement period using the demographics plus 3 percent cap was finalized in the CY 2023 PFS final rule (87 FR 69932 through 69946). We refer these commenters to the discussion in the CY 2023 PFS final rule (87 FR 69942) for an explanation of why we have concluded that it would be inappropriate to increase the demographics plus 3 percent cap or to limit the impact of prospective HCC risk score decreases.

*Comment:* One commenter expressed concern over CMS's existing and proposed risk adjustment policies, stating that the policies are founded on a perspective that ACO participants are routinely and consistently over coding. The commenter suggested that there are ACOs that serve populations whose health risks do increase substantially over time or whose historical health risks were not fully documented by reported diagnoses, and that they note no evidence to indicate that most physicians in the Shared Savings Program are deliberately manufacturing codes to improve reimbursement.

*Response:* As we described in section III.G.4.b.(1) of this final rule, it is important to consider the incentives a risk adjustment methodology may introduce for coding intensity. In the CY 2023 PFS final rule (87 FR 69932 through 69946), we highlighted recent research that provided evidence that a majority of CMS-HCC risk score growth for beneficiaries assigned to ACOs may come from coding initiatives and not from changes in beneficiary demographics or deteriorating health status. As a result, we acknowledge the need to limit the upward growth in prospective HCC risk scores in the ACO's regional service area between the benchmark period and the performance year, given that those risk scores are also susceptible to coding initiatives. The proposed policy for capping risk score growth in an ACO's regional service area would limit potential harm to ACOs in regions with high risk score growth when such growth is not due to the ACO's own coding activities while also protecting the Trust Funds by ensuring that benchmarks do not become overly inflated such that an ACO would have to do very little to continue to earn a shared savings payment.

*Comment:* One commenter requested that CMS exclude beneficiaries that are aligned to ACO REACH ACOs from the regional risk score calculation. The commenter stated their belief that the ACO REACH model's concurrent risk scoring methodology incentivizes ACOs participating in that model to do more coding, driving up risk scores in the region and thus negatively effecting Shared Savings Program ACOs operating in the same region.

*Response:* We decline to consider an approach that would exclude certain assignable

beneficiaries from the calculation of regional risk score growth. We have concerns that removing certain FFS beneficiaries, such as beneficiaries assigned to Medicare Shared Savings Program ACOs or aligned to ACOs participating in the ACO REACH Model, from the population of assignable beneficiaries included in an ACO's regional service area could lead regional growth rates for areas with high ACO penetration to be based on very small sample sizes such that the resulting regional update factor determined for these ACOs could lack validity. We also have concerns that removing certain FFS beneficiaries from an ACO's regional service area could incentivize ACOs – including Shared Savings Program ACOs and ACOs in the ACO REACH Model – to work in combination to favorably influence their regional spending. We noted similar concerns in the CY 2023 PFS final rule (87 FR 69926 and 69927) when discussing an alternative benchmarking policy that would remove an ACO's own assigned beneficiaries, or all Shared Savings Program assigned beneficiaries, from financial calculations based on the ACO's regional service area. However, in the CY 2023 PFS final rule (87 FR 69899) we finalized a three-way blended update factor that incorporates the Accountable Care Prospective Trend (ACPT). The ACPT is a prospectively projected administrative growth factor that is not influenced by actual performance by a single ACO, multiple ACOs in a region, or all ACOs nationally, and therefore, will help address the wider issue of multiple neighboring ACOs influencing the regional trend.

*Comment:* One commenter recommended that CMS control for the new prospective HCC risk score model phase-in, if finalized, in determining the regional risk score growth cap.

*Response:* We believe this comment could be interpreted in multiple ways and would require additional clarity before we could further consider the commenter's suggestion. However, we note that for agreement periods beginning January 1, 2024, and in subsequent years, the proposed policy to cap regional risk score growth would provide symmetry with how we will cap ACO risk score growth and is expected to improve the accuracy of the regional update factor for ACOs operating in regional service areas with greater risk score growth. In addition, the use of a consistent risk score model for the performance year and all benchmark

years, as described in section III.G.4.e of this final rule, is intended to more accurately assess changes in the level of risk for an ACO's assigned beneficiary population over time.

After consideration of the public comments, we are finalizing our proposal to cap regional service area risk score growth for symmetry with the ACO risk score growth cap and to adjust the cap on regional risk score growth to reflect the ACO's aggregate market share without modification. This change will apply to agreement periods beginning January 1, 2024, and subsequent years. We are revising the Shared Savings Program regulations governing the calculation of the regional growth rate when updating the historical benchmark between BY3 and the performance year at § 425.652(b)(2)(ii)(C) to incorporate a regional risk score growth cap adjustment factor. We are also finalizing our proposal to add a new section to the regulations at § 425.655 to describe the calculation of this adjustment factor. We have made one minor editorial change to the text of § 425.655(f)(2)(i) as it appeared in the proposed rule to remove a misplaced word.

#### c. Mitigating the Impact of the Negative Regional Adjustment on the Benchmark to Encourage Participation by ACOs Caring for Medically Complex, High-Cost Beneficiaries

##### (1) Background

In earlier rulemaking we have discussed our use of the Secretary's discretion under section 1899(d)(1)(B)(ii) of the Act to adjust the historical benchmark by "such other factors as the Secretary determines appropriate" in order to adjust ACO historical benchmarks to reflect FFS expenditures in the ACO's regional service area (81 FR 37962). We initially established a regional adjustment in a benchmark rebasing methodology that applied to ACOs entering a second agreement period beginning on January 1, 2017, January 1, 2018, or January 1, 2019 (§ 425.603(c) through (g)), before modifying our policy to apply this adjustment program wide beginning with agreement periods starting on July 1, 2019, and in subsequent years (§ 425.601(a)(8)). In the CY 2023 PFS final rule (87 FR 69915 through 69923) we modified the way we would calculate the regional adjustment for ACOs in agreement periods starting on

January 1, 2024, and in subsequent years (§ 425.656). We also finalized a policy that would modify the way we would apply the regional adjustment to the benchmark that would also take into account a new adjustment for prior savings that would be available to eligible ACOs (§ 425.652(a)(8)).

In accordance with § 425.601(a)(8), for ACOs in agreement periods beginning on or after July 1, 2019 and before January 1, 2024, we adjust historical benchmark expenditures by Medicare enrollment type (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, aged/non-dual eligible Medicare and Medicaid beneficiaries) by a percentage of the difference between the average per capita expenditure amount for the ACO's regional service area and the average per capita amount of the ACO's historical benchmark (referred to herein as the "regional adjustment"). The percentage applied in calculating the regional adjustment depends on whether the ACO has lower or higher spending compared to the ACO's regional service area and the agreement period for which the ACO is subject to the regional adjustment, according to the phase-in schedule of applicable weights. We cap the per capita dollar amount of the regional adjustment for each Medicare enrollment type at a dollar amount equal to positive or negative 5 percent of national per capita FFS expenditures for Parts A and B services under the original Medicare FFS program in benchmark year (BY) 3 for assignable beneficiaries (as defined in § 425.20) in that Medicare enrollment type identified for the 12-month calendar year corresponding to BY3 (§ 425.601(a)(8)(ii)(C)) (referred to herein as positive or negative 5 percent of national per capita FFS expenditures for assignable beneficiaries, and as the "symmetrical cap," terms which we consider to be synonymous). We then apply the capped regional adjustment for each Medicare enrollment type by adding it to the historical benchmark expenditure for that enrollment type. A positive regional adjustment for a given Medicare enrollment type increases the benchmark for that enrollment type, whereas a negative regional adjustment decreases the benchmark for that enrollment type.

With the policies finalized in the CY 2023 PFS final rule (87 FR 69915 through 69923), we sought to reduce the impact of negative regional adjustments in several ways for agreement periods beginning on January 1, 2024, and subsequent years. First, we finalized a policy that replaced the negative 5 percent cap on the negative regional adjustment with a negative 1.5 percent cap. Under this policy, we would continue to cap positive adjustments for each Medicare enrollment type at a dollar amount equal to 5 percent of national per capita FFS expenditures for assignable beneficiaries for that enrollment type but would cap negative adjustments for each enrollment type at a dollar amount equal to negative 1.5 percent of national per capita FFS expenditures for assignable beneficiaries for that enrollment type. Additionally, after applying the negative 1.5 percent cap, we would apply an offset factor that would gradually decrease the negative regional adjustment amount for a given Medicare enrollment type as an ACO's proportion of dually eligible Medicare and Medicaid beneficiaries increases or its weighted average prospective HCC risk score increases. Finally, for an ACO eligible for the prior savings adjustment for which the regional adjustment expressed as a single value (based on taking a person year weighted average across the four Medicare enrollment types) is negative, we would further offset the regional adjustment by the prior savings adjustment. In the CY 2023 PFS final rule (87 FR 69919) we expressed our belief that by reducing the impact of negative regional adjustments, these policies would incentivize ACOs that serve high-cost beneficiaries to join or continue to participate in the Shared Savings Program.

These policies to reduce the impact of negative regional adjustments are reflected in several new sections of the regulations. Section 425.652 is the main provision that describes the methodology for establishing, adjusting, and updating the benchmark for agreement periods beginning on January 1, 2024, and in subsequent years, including the interaction of the regional adjustment and the prior savings adjustment. Sections 425.656 and 425.658 provide additional detail on the calculations of the regional adjustment and the prior savings adjustment, respectively.

Table 40 illustrates how the caps on the regional adjustment would be calculated and applied to positive and negative regional adjustments at the Medicare enrollment type level under the policy finalized in the CY 2023 PFS final rule. Note that the uncapped regional adjustment values would be calculated using the applicable percentage phase-in weight based on whether the ACO has lower or higher spending as compared to its regional service area and the ACO’s agreement period subject to a regional adjustment as described in § 425.656(d). For example, if an ACO is considered to have lower spending compared to the ACO’s regional service area, and it is the ACO’s first agreement period subject to the regional adjustment, we would use a weight of 35 percent when applying the regional adjustment. If an ACO is considered to have higher spending compared to the ACO’s regional service area, and it is the ACO’s first agreement period subject to the regional adjustment, we would use a weight of 15 percent when applying the regional adjustment.

**TABLE 40: Hypothetical Example of Cap on Regional Adjustment**

Medicare Enrollment Type	Medicare Enrollment Type Proportion	Uncapped Regional Adjustment (\$)	Positive Regional Adjustment Cap: - 5% of National Assignable Per Capita Expenditures (\$)	Negative Regional Adjustment Cap: -1.5% of National Assignable Per Capita Expenditures (\$)	Capped Regional Adjustment (\$)
<b>ESRD</b>	0.015	932	4,437	-1,331	932
<b>Disabled</b>	0.190	-185	639	-192	-185
<b>Aged/dual</b>	0.100	258	974	-292	258
<b>Aged/non-dual</b>	0.695	-307	553	-166	-166
<b>Weighted Average</b>		-209			-111

The hypothetical ACO in this example has a mix of positive and negative regional adjustments across the four enrollment types. The ACO’s uncapped aged/non-dual eligible adjustment is outside the negative 1.5 percent cap and thus changes from -\$307 to -\$166 when the cap is applied. The ACO’s adjustments for the other three enrollment types are all within the applicable positive or negative caps, and thus, are unaffected. The ACO’s overall weighted average regional adjustment (calculated by multiplying the adjustment for each enrollment type

by the corresponding enrollment type proportion and then summing across the four enrollment types) changes from -\$209 to -\$111 when the negative regional adjustment cap is applied, reducing the per capita impact of the negative regional adjustment by \$98.

Under the methodology adopted in the CY 2023 PFS final rule (87 FR 69917 and 69920), after we apply the caps, we next apply an offset factor to any negative regional adjustments at the enrollment type level. The offset factor is based on the following: [A] the ACO's overall proportion of BY3 assigned beneficiaries that are dually eligible for Medicare and Medicaid (including dually eligible ESRD, disabled, and aged beneficiaries)<sup>268</sup> and [B] the ACO's weighted average prospective HCC risk score for BY3 taken across the four Medicare enrollment types.<sup>269</sup> Before taking this weighted average, the risk score for each enrollment type is first renormalized by dividing by the national mean risk score for the assignable FFS population for that enrollment type identified for the calendar year corresponding to BY3. Specifically, the offset factor is calculated as:

$$\text{Offset factor} = [A] + ([B] - 1)$$

We apply the offset factor, which is subject to a minimum of zero and a maximum of one, by subtracting its value from 1 and multiplying this difference by the negative regional adjustment for each Medicare enrollment type, calculated as:

$$\text{Final regional adjustment} = \text{Negative regional adjustment} \times (1 - \text{Offset factor})$$

The higher an ACO's proportion of dually eligible beneficiaries or the higher its risk score, the larger the offset factor would be and the larger the reduction to the overall negative regional adjustment. If the offset factor is equal to the maximum value of one, the ACO would not receive a negative regional adjustment for any enrollment type, because each negative adjustment would be multiplied by a value of 1 minus the offset factor, or 0. For these ACOs, the

---

<sup>268</sup> In computing this proportion, we use for each beneficiary the fraction of the year (referred to as person years) in which they were eligible for the aged/dual eligible enrollment type or for which they were eligible for the ESRD or disabled enrollment type and dually eligible for Medicare and Medicaid.

<sup>269</sup> In computing this weighted average, we apply a weight to the risk score for BY3 for an enrollment type that is equal to the product of the ACO's BY3 per capita expenditures for that enrollment type and the ACO's BY3 person years for that enrollment type.

overall weighted average regional adjustment would either be 0 (if the ACO had negative adjustments for all four enrollment types prior to the application of the offset factor) or positive (if the ACO had a mix of positive and negative adjustments at the enrollment type level prior to the application of the offset factor). If the offset factor is equal to the minimum value of zero, the ACO would receive no benefit from the offset factor.

To illustrate how the offset factor would be calculated and applied, assume that the hypothetical ACO from Table 40 had a proportion of dually eligible beneficiaries of 0.130 and a weighted average prospective HCC risk score for BY3 of 1.240. The offset factor for this ACO would be calculated as:

$$\text{Offset factor} = 0.130 + (1.240 - 1) = 0.370$$

This factor would be applied as illustrated in Table 41 by multiplying the negative regional adjustment for each applicable Medicare enrollment type by 1 minus the offset factor or 0.630.

**TABLE 41: Hypothetical Example of Offset Factor Applied to Negative Regional Adjustments**

Medicare Enrollment Type	Enrollment Proportion	Capped Regional Adjustment (Before Offset) (\$)	Offset Factor	1 – Offset Factor	Final Regional Adjustment (\$)
ESRD	0.015	932	N/A	N/A	932
Disabled	0.190	-185	0.370	0.630	-117
Aged/dual	0.100	258	N/A	N/A	258
Aged/non-dual	0.695	-166	0.370	0.630	-105
Weighted Average		-111			-55

Here, the offset factor is applied to the regional adjustments for the disabled and aged/non-dual eligible populations, as both are negative, but not to the regional adjustments for the ESRD and aged/dual eligible populations, which are both positive. Taking the weighted average across the enrollment types following application of the offset factor shows that the ACO’s overall weighted regional adjustment changes from -\$111 before the offset to -\$55 after the offset, further reducing the per capita impact of the negative regional adjustment by \$56. The overall per capita impact of both the cap and offset factor for this ACO would be \$154.

In the CY 2023 PFS final rule (87 FR 69918 and 69921), we presented simulations of the combined impact of the cap and offset factor relative to the symmetrical positive and negative 5 percent cap then in place for ACOs in agreement periods beginning on July 1, 2019, and in subsequent years. The results of these simulations, which used data from PY 2020 historical benchmarks for ACOs in agreement periods starting on or after July 1, 2019, and from PY 2022 historical benchmarks for ACOs starting an agreement period on January 1, 2022, found the negative regional adjustment for almost every ACO that had an overall negative regional adjustment in the PY 2020 and PY 2022 data under the symmetrical cap would have been reduced (or eliminated), with an average per capita impact of approximately \$114 for PY 2020 and \$48 for PY 2022. ACOs with higher weighted average BY3 prospective HCC risk scores and higher proportions of dually eligible Medicare and Medicaid beneficiaries had overall greater reductions in their negative regional adjustments. Four ACOs in the PY 2020 simulation and one in the PY 2022 simulation had an offset factor of 1, meaning they would have received a full offset to their negative regional adjustments.

Under a separate policy also finalized in the CY 2023 PFS final rule, an ACO beginning an agreement period on January 1, 2024, and in subsequent years that is a renewing or re-entering ACO may be eligible to receive an adjustment to its benchmark to account for savings generated in performance years that correspond to the benchmark years of its new agreement period. A full discussion of this policy can be found in that earlier rulemaking (87 FR 69899 through 69915). The policy was designed such that an eligible ACO would receive the higher of its overall positive regional adjustment or its prior savings adjustment, or a combination of the two if its overall regional adjustment is negative and it had prior savings. ACOs ineligible for the prior savings adjustment would receive the regional adjustment (computed as described earlier in this section applying a 5 percent cap on positive regional adjustments and a -1.5 percent cap and offset factor on negative regional adjustments). Specifically, if the regional adjustment, expressed as a single value, is positive, the ACO would receive a final adjustment equal to the

higher of the regional adjustment or an adjustment based on the ACO's prior savings (see § 425.652(a)(8)(iii)(B)). If the regional adjustment, expressed as a single value, is negative, we would calculate the final adjustment as described in § 425.652(a)(8)(iii)(A), with the ACO receiving either a smaller negative regional adjustment or a positive adjustment for prior savings depending on the relative size of the negative regional adjustment and the ACO's pro-rated prior savings.

Based on further consideration, in the CY 2024 PFS proposed rule (88 FR 52467) we expressed our belief that it was important and timely to revisit the policy that allows for negative adjustments to be applied in establishing the benchmark for ACOs. While we did not consider eliminating negative regional adjustments program-wide in CY 2023 PFS rulemaking, one commenter noted that there is an argument for doing so. We explained our belief that further mitigating the impact of the negative regional adjustment for ACOs with high-cost populations, thereby resulting in higher benchmarks for ACOs compared to the recently finalized methodology, could further bolster the business case for Shared Savings Program participation by such ACOs.

As we discussed in the CY 2023 PFS proposed rule (87 FR 46161), there is evidence that certain aspects of the program's benchmarking methodology, notably the regional adjustment to the benchmark, may deter participation among ACOs with spending above their regional service area including those serving medically complex, high-cost populations. High-cost ACOs are underrepresented in the Shared Savings Program, with around 86 percent of all participating ACOs receiving an overall positive regional adjustment in PY 2022 indicating that a majority of ACOs are lower spending than their regional service area. We also observed that ACOs that received an overall negative regional adjustment for PY 2022 were less likely to continue participation in the program in PY 2023 than were ACOs that received an overall positive regional adjustment, with 22 percent of ACOs with a negative overall adjustment leaving the program compared to 12 percent of ACOs with a positive overall adjustment. Since PY 2017 the

overall annual average share of ACOs that leave the program has been 12 percent. A recent academic study also found evidence suggesting selective participation among ACOs in response to the original adoption of a regional adjustment in 2017, with the composition of ACOs between 2017 to 2019 increasingly shifting to providers with lower preexisting levels of spending.<sup>270</sup> The authors attributed these changes to a combination of the entry of new ACOs with lower baseline spending, the exit of higher-spending ACOs, and the reconfiguration of ACO participant lists to favor lower-spending practices among ACOs continuing participation in the program.

Relatedly, we have observed that negative regional adjustments may make it more difficult for ACOs to succeed in the program financially. Between PY 2017, when regional adjustments were first introduced in the Shared Savings Program, and PY 2021, ACOs that received negative regional adjustments have been consistently less likely to share in savings than ACOs that received positive regional adjustments. For example, in PY 2021 we observed that 37 percent of ACOs that received a negative regional adjustment shared in savings compared to 63 percent among those with a positive adjustment.

In the CY 2024 PFS proposed rule (88 FR 52468), we stated that eliminating the possibility that an ACO will receive an overall negative regional adjustment to its benchmark in combination with the other elements of the benchmarking methodology finalized in the CY 2023 PFS final rule, would work together to further our efforts to ensure sustainability of the benchmarking methodology. More specifically, we believed this policy change would further encourage continued participation among high-cost ACOs that serve medically complex beneficiaries by eliminating the potential of a lower benchmark due to an overall negative regional adjustment. It may also encourage ACOs serving such populations that may have otherwise been discouraged from participating in the Shared Savings Program by the idea of a lower benchmark to join. We noted that the implementation of this policy would allow ACOs to

---

<sup>270</sup> Lyu P, Chernew M, McWilliams J. Benchmarking Changes And Selective Participation In The Medicare Shared Savings Program. *Health Affairs*. May 1, 2023. Available at <https://www.healthaffairs.org/doi/10.1377/hlthaff.2022.01061>.

serve the most vulnerable populations while lessening the concern of how their patient population may affect their performance in the program. We also stated our belief that program participation by ACOs serving these populations has the potential, over time, to produce cost savings for the Medicare Trust Funds by improving care coordination and quality of care for such beneficiaries.

Additionally, we stated that eliminating overall negative regional adjustments could further incentivize greater participation among ACOs whose ACO participants have historically been less efficient than other providers and suppliers in their regions. Such ACOs may have the greatest potential to generate cost savings for the Medicare Trust Funds by adopting more efficient practices, and therefore, their participation in the program should not be discouraged.

## (2) Revisions

In light of these considerations, in the CY 2024 PFS proposed rule (88 FR 52468 through 52472) we proposed to modify the policies we adopted in the CY 2023 PFS final rule so as to prevent any ACO from receiving an adjustment that would cause its benchmark to be lower than it would have been in the absence of a regional adjustment. Specifically, we proposed the following approach to calculate and apply the regional adjustment, or the regional adjustment in combination with the prior savings adjustment, if applicable, for ACOs in agreement periods starting on January 1, 2024, and in subsequent years:

- We would continue to calculate the original uncapped regional adjustment by Medicare enrollment type using the applicable percentage phase-in weight based on whether the ACO has lower or higher spending compared to its regional service area and the ACO's agreement period subject to a regional adjustment as described in § 425.656(d).

- We would continue to apply the 5 percent cap on positive regional adjustments and the -1.5 percent cap and offset factor on negative regional adjustments at the enrollment type level, as finalized in the CY 2023 PFS final rule and described in § 425.656(c). For the performance year beginning on January 1, 2025, and subsequent performance years, the national assignable

FFS population used to calculate the caps would reflect the revised definition of assignable beneficiary that incorporates the expanded window for assignment. (See section III.G.3.a of this final rule for a description of the proposed revisions to the definition of assignable beneficiary.)

- After applying the cap and offset factor (if applicable), we would express the regional adjustment as a single per capita value by calculating a person year weighted average of the Medicare enrollment type-specific regional adjustment values.

- If the ACO's regional adjustment amount (expressed as a single per capita value) is positive, the ACO would receive a regional adjustment, according to the approach we finalized in the CY 2023 PFS final rule. That is, we would apply the enrollment type-specific regional adjustment amounts separately to the historical benchmark expenditures for each Medicare enrollment type. If the ACO is also eligible for a prior savings adjustment, the ACO would receive the higher of the two adjustments. If the regional adjustment amount (expressed as a single per capita value) is higher, we would apply the enrollment type-specific regional adjustment amounts separately to the historical benchmark expenditures for each Medicare enrollment type. If the prior savings adjustment is higher, we would apply the adjustment in the manner finalized in the CY 2023 PFS final rule as a flat dollar amount applied separately to the historical benchmark expenditures for each Medicare enrollment type.

- If the ACO's regional adjustment amount (expressed as a single per capita value) is negative, the ACO would receive no regional adjustment to its benchmark for any enrollment type. If the ACO is eligible for a prior savings adjustment, it would receive the prior savings adjustment as its final adjustment, without any offsetting reduction for the negative regional adjustment.

Under the proposed approach, ACOs that would face a negative overall adjustment to their benchmark based on the methodology adopted in the CY 2023 PFS final rule would benefit, as they would now receive no downward adjustment. Additionally, ACOs that have a negative regional adjustment amount (expressed as a single value) and are eligible for a prior savings

adjustment under the policy adopted in the CY 2023 PFS final rule (§ 425.658) would also be expected to benefit from the proposed policy. Specifically, these ACOs could receive a larger positive adjustment to their benchmark or a positive adjustment instead of a negative adjustment, as we would no longer offset the prior savings amount by the negative regional adjustment amount when determining the final adjustment that would apply to the ACO's benchmark as described in the current regulations in § 425.652(a)(8)(iii)(A).<sup>271</sup> In the proposed rule, we stated our belief that by increasing the potential benefit of the prior savings adjustment in this manner, our proposed policy would be responsive to the comments discussed in the CY 2023 PFS final rule recommending that CMS make the prior savings adjustment more favorable, particularly for ACOs serving high-risk populations (see 87 FR 69910 through 69914).

Importantly, no ACO would be made worse off under the proposed policy. ACOs that have an overall positive regional adjustment amount would continue to receive the same adjustment to their benchmark as they would under the methodology finalized in the CY 2023 PFS final rule calculated and applied as described in the current regulations at §§ 425.656 and 425.652(a)(8), respectively. For these ACOs, the regional adjustment would continue to reflect the percentage phase-in weight based on whether the ACO has lower or higher spending compared to its regional service area and the ACO's agreement period subject to a regional adjustment as described in § 425.656(d) and we would continue to allow negative adjustments to be applied at the enrollment type level for those ACOs that receive a positive overall regional adjustment. We explained our belief that this would be appropriate because these ACOs would continue to receive a positive overall adjustment to their benchmark and thus should already have greater incentive to join or continue participation in the program than ACOs that might otherwise face an adjustment that reduces their benchmark.

---

<sup>271</sup> For examples of the calculation of the final adjustment when an ACO is eligible for a prior savings adjustment and the overall regional adjustment is negative under the policy adopted in the CY 2023 PFS final rule, please refer to Tables 65 and 66 of the CY 2023 PFS final rule (87 FR 69904 and 69905). In Table 65 the hypothetical ACO receives a positive final adjustment and in Table 66 a negative final adjustment.

Tables 41 and 42 present hypothetical examples to demonstrate how we would determine the final adjustment to an ACO’s benchmark under the proposed policy. Both tables include two hypothetical ACOs. The first ACO, ACO A, is the same hypothetical ACO as illustrated in Tables 39 and 40 within this section and has an overall negative regional adjustment. The second ACO, ACO B, has an overall positive regional adjustment. Table 42 assumes that both ACOs are ineligible for a prior savings adjustment, whereas Table 43 shows how the calculation would change if both ACOs were eligible for such an adjustment.

**TABLE 42: Hypothetical Examples of the Determination of the Final Adjustment to the Benchmark Assuming ACOs are Not Eligible for a Prior Savings Adjustment**

<b>Calculation Step</b>	<b>ACO A: Negative Regional Adjustment</b>	<b>ACO B: Positive Regional Adjustment</b>
Historical benchmark expenditures by enrollment type, before adjustment (\$ [A]:		
ESRD	90,000	101,000
Disabled	16,000	12,000
Aged/dual	18,000	19,000
Aged/non-dual	10,000	9,000
Enrollment proportion [B]		
ESRD	0.015	0.005
Disabled	0.190	0.100
Aged/dual	0.100	0.050
Aged/non-dual	0.695	0.845
Regional adjustment by enrollment type, reflecting the applicable phase-in weight and after cap and offset (if applicable) (\$) [C]:		
ESRD	932	-1,331
Disabled	-117	158
Aged/dual	258	-210
Aged/non-dual	-105	179
Regional adjustment (expressed as single value) (\$) [D] = Sum of [B] x [C]	-55	150
Final adjustment (\$) [E]= N/A if [D] is negative, otherwise [D]	N/A	150
Historical benchmark expenditures by enrollment type, after adjustment (\$) [F] = [A] if [E] is N/A, otherwise [A] + [C]		
ESRD	90,000	99,669
Disabled	16,000	12,158
Aged/dual	18,000	18,790
Aged/non-dual	10,000	9,179

In Table 42, because ACO A had an overall negative regional adjustment and was not eligible for a prior savings adjustment, the ACO ultimately receives no adjustment, upward or downward, to its benchmark. For ACO B, whose overall regional adjustment is positive, the final

adjustment is the regional adjustment, which is applied by adding the regional adjustment specific to each enrollment type (reflecting the percentage weight determined for the ACO and after the application of the cap and offset factor, if applicable) to the ACO’s pre-adjustment historical benchmark expenditures for that enrollment type.

**TABLE 43: Hypothetical Examples of the Determination of the Final Adjustment to the Benchmark Assuming ACOs are Eligible for a Prior Savings Adjustment**

	<b>ACO A: Negative Regional Adjustment</b>	<b>ACO B: Positive Regional Adjustment</b>
Historical benchmark expenditures by enrollment type, before adjustment (\$) [A]:		
ESRD	90,000	101,000
Disabled	16,000	12,000
Aged/dual	18,000	19,000
Aged/non-dual	10,000	9,000
Enrollment type proportions [B]		
ESRD	0.015	0.005
Disabled	0.190	0.100
Aged/dual	0.100	0.050
Aged/non-dual	0.695	0.845
Regional adjustment by enrollment type, reflecting the applicable phase-in weight and after cap and offset (if applicable) (\$) [C]:		
ESRD	932	-1,331
Disabled	-117	158
Aged/dual	258	-210
Aged/non-dual	-105	179
Regional adjustment (expressed as single value) [D] = Sum of [B] x [C]	-55	150
Prior savings adjustment* (\$) [E]	58	239
Final adjustment (\$) [F]= [E] if [D] is negative, otherwise higher of [D] or [E]	58	239
Historical benchmark expenditures by enrollment type, after adjustment [G] = [A] + [C] if [E] = [D], otherwise [A] + [E] for each enrollment type		
ESRD	90,058	101,239
Disabled	16,058	12,239
Aged/dual	18,058	19,239
Aged/non-dual	10,058	9,239

\*As provided in the proposed new provision at § 425.658(c)(1) of the regulations, the prior savings adjustment would be calculated as the lesser of 50 percent of the pro-rated positive average per capita savings amount, calculated as described in § 425.658(b)(3)(ii), and a cap equal to 5 percent of the national per capita expenditures for assignable beneficiaries in BY3 expressed as a single value by taking a person-year weighted average of the Medicare enrollment-type specific values.

In Table 43, both ACO A and ACO B are eligible for a prior savings adjustment. Because ACO A has a negative overall regional adjustment, its final adjustment is automatically set equal to the prior savings adjustment of \$58. The adjustment is applied as a flat dollar amount by adding the \$58 to the ACO’s historical benchmark expenditures (row [A]) for each enrollment type. For ACO B, by contrast, the final adjustment is determined by comparing the regional

adjustment amount (expressed as a single value) to the prior savings adjustment amount and using the higher of the two. In this case the ACO would receive a final adjustment equal to the prior savings adjustment of \$239. Like with ACO A, this would be applied to the ACO's historical benchmark expenditures for each enrollment type as a flat dollar amount.

In revisiting simulations done with the PY 2020 data described earlier in this section, there were 36 ACOs (of the 43 ACOs with a negative regional adjustment under the policy with the symmetrical cap) simulated to have a negative overall regional adjustment after the application of the cap and offset factor. Among these, 31 would not have been eligible for a prior savings adjustment and would have had this negative regional adjustment applied to their benchmark under the policy adopted in the CY 2023 PFS final rule. Under the new proposed policy, these ACOs would receive no adjustment to their benchmark. The average per capita benefit of eliminating the downward adjustment would be \$30.

The remaining five ACOs would have been eligible for the prior savings adjustment. These ACOs would have received a positive final adjustment to their benchmark under the methodology adopted in the CY 2023 PFS final rule but would receive a larger positive adjustment under the new proposed policy, with an average per capita increase of \$26. This is because we would no longer be offsetting the prior savings amount by the negative regional adjustment as part of determining the final adjustment to the ACO's benchmark as would happen under the methodology finalized in the CY 2023 PFS final rule and codified at § 425.652(a)(8)(iii)(A).

In the PY 2022 simulation described earlier in this section, there were 26 ACOs (of the 27 ACOs with a negative regional adjustment under the policy with the symmetrical cap) that would have had a negative regional adjustment, expressed as a single per capita value, after the application of the policy adopted in the CY 2023 PFS final rule. Among these, 14 ACOs would not have been eligible for a prior savings adjustment and would have their full negative regional adjustment eliminated under the new proposed policy, with an average impact of \$66. The

remaining 12 ACOs that would have been eligible for a prior savings adjustment would see a larger positive adjustment under the proposed policy, with an average increase of \$14.

In the CY 2024 PFS proposed rule (88 FR 52472), we explained our belief that the proposed changes to the calculation and application of the regional adjustment, including its interaction with the prior savings adjustment, would strengthen incentives for participation among ACOs that may otherwise be subject to a downward adjustment to their benchmark due to the negative regional adjustment. We noted that the proposed policy, if finalized, would not adversely impact any ACO's benchmark relative to the policy that was finalized in CY 2023 PFS final rule, all else being equal, but would tend to increase benchmarks for ACOs that have historically had higher spending than their regional service area. Based on our simulations using data from PY 2020 and PY 2022, the estimated average increase to the overall benchmark would be between 0.2 and 0.4 percent but could be larger in future years when more ACOs would be subject to higher phase-in weights for calculating the negative regional adjustment that would apply (alone or in combination with the prior savings adjustment) under the policy adopted in the CY 2023 PFS final rule. We also noted that ACOs that would benefit from the proposed policy are likely to include those that serve high-cost, medically complex patients or those whose ACO participants have historically been less efficient than their regional counterparts but may have the potential to generate the greatest savings to Medicare through their participation in the Shared Savings Program.

We proposed to implement the changes described in this section through revisions to §§ 425.652, 425.656, and 425.658. Specifically, within § 425.652, which is the section that sets forth the methodology for establishing, adjusting, and updating the benchmark for agreement periods beginning on January 1, 2024, and in subsequent years, we proposed revisions to § 425.652(a)(8). As revised, this provision would describe how we would determine and apply the adjustment to an ACO's benchmark depending on whether the ACO is eligible for a prior savings adjustment and whether the ACO's regional adjustment, expressed as a single value, is

positive or negative. This provision would also establish that if an ACO is not eligible to receive a prior savings adjustment and has a regional adjustment, expressed as a single value that is negative or zero, the ACO will not receive an adjustment to its benchmark.

We proposed to revise § 425.656 (which describes the calculation of the regional adjustment) and § 425.658 (which describes the calculation of the prior savings adjustment) to include certain elements of each calculation that were previously described in § 425.652(a)(8). Specifically, we proposed to revise § 425.656 to redesignate paragraphs (d) and (e) as paragraphs (e) and (f) (respectively) and to specify in a new paragraph (d) that we would express the regional adjustment as a single value, and use this value in determining whether a regional adjustment or a prior savings adjustment would be applied to the ACO's benchmark in accordance with § 425.652(a)(8) (as revised under the proposed rule). We also proposed modifications to update certain cross-references within § 425.656 for accuracy and consistency with the proposed revisions to the section.

We proposed to revise § 425.658 to redesignate paragraph (c) as paragraph (d). We proposed to add a new paragraph (c) under § 425.658 specifying that we would calculate the per capita savings adjustment as the lesser of 50 percent of the pro-rated average per capita savings amount (computed as described in § 425.658(b)(3)(ii)) and the cap equal to 5 percent of national per capita FFS expenditures for assignable beneficiaries for BY3 expressed as a single value by taking a person-year weighted average of the Medicare enrollment-type specific values. We proposed to revise newly redesignated paragraph (d) of § 425.658 to specify CMS would compare the per capita prior savings adjustment with the regional adjustment, expressed as a single value as described in § 425.656(d), to determine the adjustment, if any, that would be applied to the ACO's benchmark in accordance with § 425.652(a)(8).

Additionally, we proposed to make the following conforming changes:

- In § 425.600(f)(4)(ii), we proposed to remove the reference “425.656(d)” and add in its place the reference “425.656(e)”.

- In § 425.611(c)(2)(iii), we proposed to remove the reference “§ 425.652(a)(8)(iv)” and add in its place the reference “§ 425.658(c)(1)(ii)”.
- In § 425.652(a)(9)(v), we proposed to remove the wording that references CMS redetermining the adjustment to the benchmark based on “a combination of” the redetermined regional adjustment and the prior savings adjustment.
- In § 425.658(b)(3)(i), which specifies that the ACO is not eligible to receive an adjustment for prior savings if the average per capita amount computed in § 425.658(b)(2) is less than or equal to zero, we proposed to remove the sentence: “The ACO will receive the regional adjustment to its benchmark as described in § 425.656.”

We solicited comments on these proposed changes.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Many commenters supported the proposal to further mitigate the impact of negative regional adjustment to the benchmark. A number of these commenters suggested that the policy would increase program participation among ACOs with higher costs than their region by removing disincentives or barriers to entry, and would encourage more ACOs to care for underserved, medically complex and high-cost patients. Another commenter suggested that eliminating the regional adjustment, along with the proposed cap on HCC risk score growth in an ACO’s regional service area, would ensure that physicians in certain geographies are not disincentivized from participating.

MedPAC indicated that they concurred with the proposal to remove negative regional adjustments, though they expressed more general concerns about the regional adjustment overall, as discussed later in this section. In explaining their support for the policy, they noted their agreement with CMS that better incentives are needed to induce participation among health care providers serving beneficiaries with relatively higher spending. Another commenter stated their belief that the policy presented a near term solution for addressing selective participation by

encouraging high cost ACOs to participate and, by doing so, would enable larger aggregate savings for Medicare.

Several commenters opined on the types of ACOs that would likely benefit from the proposed policy, if finalized. Among those mentioned were ACOs caring for medically complex, high cost, or high-risk patients, ACOs serving high proportions of dually eligible patients, and ACOs with rural ACO participants. Some of these commenters indicated the policy, together with the other benchmarking proposals, would “level the playing field” for health care providers serving at-risk populations.

Other commenters noted that under the proposal, ACOs eligible for a prior savings adjustment would not have those savings offset by a negative regional adjustment, with one commenter explaining that this would make the prior savings adjustment more favorable, particularly for ACOs serving high-risk populations and a few commenters citing the favorable impact on the prior savings adjustment as the reason for their support of the proposal.

Expressing tentative support for this and the other proposed benchmarking policies, one commenter recommended that CMS move to finalize these proposals but warned that none had yet been tested via real world application. Another commenter suggested that the proposed modifications to the negative regional adjustment, similar to the proposal to cap regional risk score growth, would improve coding accuracy, although they did not explain why they held this belief.

*Response:* We agree with commenters that the proposed approach to further reducing the impact of the negative regional adjustment will facilitate participation of ACOs in the Shared Savings Program, particularly ACOs with spending above spending in their regional service area and those serving medically complex, high-cost populations, which are the beneficiaries that can benefit the greatest from better care coordination offered by ACOs. We expect this policy will help to promote agency goals of promoting health equity and having 100 percent of people with Original Medicare in an accountable care relationship by 2030, while also benefitting the Trust

Funds by encouraging participation from ACOs serving populations and beneficiaries with highest potential for reducing spending and improving quality and patient experience through better care coordination.

*Comment:* Many commenters supported the proposal and requested that the policy be made effective for all ACOs, not just ACOs in agreement periods starting on or after January 1, 2024. A few commenters recommended that ACOs in existing agreement periods should be given the option of whether to receive the new policy. Some commenters described limiting the policy to ACOs entering new agreement periods as “unfair.” One commenter argued that the proposed methodology to further mitigate the impact of negative regional adjustments would be beneficial for new ACOs serving high cost, high-risk populations, but would not provide any new protection for existing ACOs in the midst of current agreement periods or for renewing ACOs that already expected a full offset of the negative regional adjustment per the policy finalized in the CY 2023 PFS final rule. A few commenters noted that because the CY 2024 PFS proposed rule was issued after the application deadline for agreement periods starting on January 1, 2024, ACOs in the middle of a current agreement period missed the opportunity to submit applications for early renewal that would allow them to take advantage of this and other proposed changes to the program’s benchmarking policies in PY 2024, if finalized.

A few other commenters opined that requiring ACOs to go through the early renewal process to benefit from the policy was burdensome for ACOs. One commenter noted that the early renewal process also created burden for CMS and additionally suggested that it could risk disruption to the program and lead to large swings in cohort sizes. Several commenters indicated that failure to apply the policy to all ACOs in the program would penalize current ACOs serving costlier patients, work against the program’s health equity goals, or add unnecessary confusion and complexity. A few commenters cited the benefits of applying the policy to all ACOs, with one commenter noting that this would promote consistency across the program and avoid

disparate impacts across ACOs and another suggesting this would encourage ACO growth and recognize challenges current ACOs are facing.

*Response:* We decline commenters' suggestions to modify the timing of applicability for this policy and the other changes to the financial benchmarking methodology policies discussed in sections III.G.4.b-e of this final rule. The revisions we are making in this final rule to the benchmarking methodology, including the changes to mitigate the impact of the negative regional adjustment, will apply to ACOs entering a new agreement period beginning on or after January 1, 2024. In section III.G.4.e of this final rule, we explain our concerns with applying benchmarking changes to ACOs within an agreement period in responding to similar suggestions in connection with the proposed revisions to the risk adjustment methodology.

*Comment:* Several commenters expressed concern that none of the benchmark proposals in the proposed rule, including the proposal to further mitigate the impact of negative regional adjustments, would solve the ratchet effect where ACOs' benchmarks will continue to be lower over time as they reduce spending in their populations and future benchmarks are rebased using lower historic spending. A few commenters cautioned that if the policy to further mitigate negative regional adjustments is successful in bringing more inefficient ACOs into the program, this could increase the rate at which a given region becomes more efficient. They claimed that this, in turn, could exacerbate the ratchet effect for ACOs that are already efficient and now would be competing against a region getting more efficient at a faster pace. One such commenter strongly recommended that the policy to eliminate the negative regional adjustments be coupled with changes to address benchmark ratcheting that they claim occurs for regionally efficient ACOs at rebasing, particularly as ACOs enter later agreement periods. Another commenter encouraged CMS to monitor for possible unintended consequences of any of the proposed benchmarking policies if finalized in this final rule, including any disproportionate impacts on certain types of ACOs or patient populations, and to be receptive to feedback from industry partners and to look for additional ways to continuously improve benchmarking and risk

adjustment methodologies. In particular, these commenters urged CMS to look for ways to address the ratcheting effect and to retain high performing ACOs in the program.

One commenter stated that they do not believe that the additional modifications to the benchmarking methodology proposed in the CY 2024 PFS proposed rule go far enough to protect existing ACOs serving high cost, underserved populations, like themselves, from experiencing dramatic ratchets to their benchmarks upon their next agreement renewal. In light of this belief, the commenter offered multiple recommendations related to the prior savings adjustment and administratively set benchmarks, determinations of Qualifying Alternative Payment Model Participants (QPs), quality reporting and measures, risk adjustment, and beneficiary assignment (all summarized elsewhere in this final rule) that would allow their ACO to sustainably continue its participation in the program. Another commenter also urged CMS to develop a long-term vision for benchmarks that relies on an administrative benchmarking approach.

*Response:* Among the benchmarking policies finalized in the CY 2023 PFS final rule were two policies that were aimed at limiting the extent to which an ACO's own past success or the past success of other ACOs, at reducing expenditures would affect the ACO's benchmark in future agreement periods. First, the prior savings adjustment (see 87 FR 69898 through 69915) provides for a positive adjustment to be applied to the historical benchmark for ACOs that generated savings in the 3 years immediately preceding their current agreement period. This adjustment is directly connected to an ACO's own success at reducing expenditures, as ACOs achieving greater savings can potentially receive larger positive adjustments. We expect that eliminating the impact of negative regional adjustments on the prior savings adjustment, as proposed, will increase the effectiveness of the prior savings adjustment in addressing concerns about ratcheting. Second, the inclusion of a prospectively-determined component, the Accountable Care Prospective Trend (ACPT), in the factor used to update the benchmark to the performance year for agreement periods starting on or after January 1, 2024 (see 87 FR 69881 to

69898) will help to address the ratchet effect by insulating a portion of the update factor from the impact that ACO savings can have on retrospective national and regional spending trends. In May 2023, we published specifications detailing the methodology for computing the ACPT and explaining how it will be incorporated into the update factor.<sup>272</sup> We expect that the ACPT will help to address ratcheting concerns raised regarding the negative regional adjustment policy, that were interpreted to suggest if less efficient ACOs join the program and are successful in reducing expenditures for their assigned beneficiaries, regional trends facing already-efficient ACOs will be lower than they otherwise would.

As the prior savings adjustment and the three-way blended update factor that includes the ACPT apply only for agreement periods starting on or after January 1, 2024, we have not yet had a chance to gauge their success in meeting their intended aims in practice or to assess whether they have unintended consequences. We have continued to actively solicit feedback on what additional measures should be taken in the Shared Savings Program to further assuage concerns held by ACOs and other interested parties regarding the ratchet effect and the need for appropriate incentives to encourage ACOs to join the program and remain in the program over multiple agreement periods. For example, in the CY 2024 PFS proposed rule (see 88 FR 52494 through 52496), we sought comment on potential future modifications to both the prior savings adjustment and the benchmark update factor. As discussed in section III.G.8 of this final rule, we will take these suggestions and recommendations into consideration as we assess changes to propose in future notice and comment rulemaking.

*Comment:* One commenter requested that CMS make the data used to make the calculations of adjustments transparent to ACOs, which they believed would aid ACOs and their ACO participants in planning how to care for these patients. The same commenter also opined

---

<sup>272</sup> See Medicare Shared Savings Program, Shared Savings and Losses, Assignment and Quality Performance Standard Methodology Specifications of the Accountable Care Prospective Trend (ACPT) and Three-Way Blended Benchmark Update Factor (version #1, May 2023), available at <https://www.cms.gov/files/document/medicare-ssp-acpt-specifications.pdf>.

that ACOs should have a reliable way to appeal CMS's determination with enough time to have any appeals resolved prior to payment and participation in subsequent performance years but did not specify whether they were referring to determinations of shared savings payments or some other aspect of the payment methodology.

*Response:* ACOs receive historical benchmark reports which transparently detail the historical benchmark calculation, including the computation of positive and negative regional adjustments and, when it was applicable in the past, the prior savings adjustment. Modifications to the methodology for calculating the historical benchmark finalized in this rule will be reflected in such reports to provide additional transparency of benchmark calculations for ACOs beginning agreement periods on January 1, 2024, and in subsequent years. Additionally, we make various data available to ACOs to further promote transparency of our benchmarking calculations. For example, ACOs receive information on county of residence for all assigned beneficiaries in the Assignment List Report that is provided for each benchmark and performance year. ACOs can use this information in conjunction with public use files containing per capita expenditures and average risk scores for assignable beneficiaries (available on [data.cms.gov](https://data.cms.gov)) to estimate regional expenditures used in benchmark calculations.

The reconsideration review process for the Shared Savings Program is codified in 42 CFR part 425, subpart I of the program regulations. Consistent with section 1899(g) of the Act, § 425.802(a) states that an ACO may appeal an initial determination that is not prohibited from administrative or judicial review under § 425.800 by requesting a reconsideration review by a CMS reconsideration official. The initial determination or revised initial determination of the benchmark for an ACO in accordance with section 1899(d) of the Act is listed among the Shared Savings Program determinations that are prohibited from reconsideration, appeal, or other administrative or judicial review as specified in § 425.800. Additional information regarding the reconsideration review process is provided in the Medicare Shared Savings Program, Requesting Technical Assistance And Reconsideration Review Guidance (version #9, August 2022),

available at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/Downloads/Reconsideration-Review-Process-Guidance.pdf>.

*Comment:* Several commenters, as part of their comments on our proposal to mitigate the impact of the negative regional adjustment, also recommended that CMS take additional action to support ACOs serving medically complex beneficiaries, including dual eligible beneficiaries or those in underserved areas, and to further strengthen incentives for high-cost providers and suppliers to participate in the Shared Savings Program. One commenter encouraged CMS to continue to update its benchmarking methodologies to account for unfair financial outcomes realized by ACOs treating medically complex patients, many of whom they noted, are dual-eligible, but did not offer specific suggestions for achieving this goal. Several other commenters offered suggestions that went beyond the scope of the proposed modifications, or beyond the scope of the program's benchmarking methodology, including the following:

- “Lowering the cap” based on the share of the ACO's population that is attributed through Step 2 assignment to support ACOs that include a significant portion of high needs beneficiaries or beneficiaries aligned through specialists, although it was unclear which cap the commenter was referencing in this suggestion.
- Supporting facilities serving medically complex beneficiaries such as by facilitating partnerships with community organizations.
- Providing positive incentives to ACOs serving dually eligible and other medically complex beneficiaries.
- Incorporating a positive adjustment to the benchmark to accommodate increased spending that will occur when an ACO increases access to care for underserved areas.

*Response:* The commenters' suggestions go beyond the scope of the modifications proposed to mitigate impacts of the negative regional adjustment, including the proposed modifications of the interaction between the regional adjustment and the prior savings adjustment. However, we note that in the CY 2023 PFS final rule we finalized other changes to

the program's financial methodologies (in addition to the modifications to the negative regional adjustment) that we expect will benefit ACOs serving complex or underserved beneficiaries. For example, we finalized changes to the risk adjustment methodology to better account for medically complex, high-cost beneficiaries (see 87 FR 69932 through 69946) and a new policy to provide increased opportunities for low revenue ACOs, which may include smaller rural ACOs, to share in savings (see 87 FR 69946 through 69952). We also note that in the CY 2024 PFS proposed rule we sought comment on how to promote collaboration between ACOs and community-based organizations and refer readers to section III.G.8. of this final rule where we summarize the feedback we received.

*Comment:* Several commenters called on CMS to consider providing support for ACOs receiving a positive regional adjustment that have already lowered costs in the communities they serve. Some suggested that the caps on the positive regional adjustment and the new prior savings adjustment effectively serve as a further cap on savings, which they believe should be addressed to ensure that successful ACOs remain in the Shared Savings Program. Another commenter recommended several modifications to positive regional adjustments, including applying a factor that would take into account the proportion of an ACO's assigned beneficiary population that is underserved, setting the cap on positive regional adjustments equal to 5 percent of BY3 risk-adjusted regional expenditures by Medicare enrollment type, and using a 50 percent weight to calculate positive regional adjustments starting with the first agreement period.

*Response:* We decline to make any modifications to the methodology for calculating positive regional adjustments, including the calculation of the cap on positive regional adjustments or the phase-in of weights used to calculate the adjustment, or to the calculation of the cap on the prior savings adjustment at this time. Such suggestions go beyond the scope of the proposed policy which was focused on encouraging participation by ACOs caring for medically complex, high-cost beneficiaries. Furthermore, the caps on positive regional adjustments and prior savings adjustments are an important mechanism to protect the Trust Funds by ensuring

that benchmarks are not overly inflated such that an ACO would have to do very little to continue to earn a shared savings payment.

*Comment:* While supporting our specific proposal to mitigate the impact of negative regional adjustments, MedPAC, consistent with their comments on the CY 2023 PFS proposed rule (see 87 FR 69913), urged CMS to use the prior savings adjustment as a means to phase out the regional adjustment to the benchmark entirely. They suggested that the factor used in computing the prior savings adjustment (currently 50 percent) could be scaled up based on an ACO's regional efficiency. In addition to incorporating regional efficiency into the scaling factor used for the prior savings adjustment, MedPAC suggested that CMS could provide other incentives for current ACOs to remain in the program, such as scaling the shared savings rate based on efficiency and assuring protection from shared losses up to an amount equivalent to the current regional adjustment calculation.

*Response:* These comments go beyond the scope of policies proposed in the CY 2024 PFS proposed rule. However, we will take these suggestions for alternative approaches to incorporating regional efficiency into the program's financial methodology into consideration along with other feedback we have received in response to our comment solicitation (refer to section III.G.8 of this final rule) as we contemplate potential future changes to the program's financial methodology. Should we decide that additional modifications to the program's financial methodology are needed, we would propose such changes through future notice and comment rulemaking.

After consideration of the public comments, we are finalizing our proposal to further mitigate impacts of negative regional adjustments. We are also finalizing our proposed revisions to provisions of the Shared Savings Program regulations specifying the calculation of the regional adjustment (§ 425.656), the calculation of the prior savings adjustment (§ 425.658), and the interaction between these adjustments (§ 425.652(a)(8)), with minor non-substantive modifications to the provisions at § 425.652(a)(8)(ii), (iii), and (iv)(B), and § 425.658(c)

introductory text, for improved clarity and to ensure consistency of terminology across provisions.

Specifically, we are revising § 425.652 to specify how we will determine and apply the adjustment to an ACO's benchmark depending on whether the ACO is eligible for a prior savings adjustment and whether the ACO's regional adjustment, expressed as a single value, is positive or negative. If the ACO is not eligible to receive a prior savings adjustment and the regional adjustment is positive, the ACO will receive an adjustment equal to the positive regional adjustment. If the ACO is eligible to receive a prior savings adjustment and the regional adjustment is positive, the ACO will receive an adjustment equal to the higher of the two adjustments. If the ACO is not eligible to receive a prior savings adjustment and the regional adjustment is zero or negative, the ACO will not receive an adjustment to its benchmark. If an ACO is eligible to receive a prior savings adjustment and the regional adjustment is zero or negative, the ACO will receive an adjustment equal to the prior savings adjustment.

We are revising § 425.656 to specify how we will express the regional adjustment as a single value and use this value in determining whether a regional adjustment or prior savings adjustment will be applied to the ACO's benchmark. We are revising § 425.658 to specify that we will calculate the per capita prior savings adjustment as the lesser of 50 percent of the pro-rated average per capita savings amount (computed as described in § 425.658(b)(3)(ii)) and the cap equal to 5 percent of national per capita FFS expenditures for assignable beneficiaries for BY3 expressed as a single value. We are also finalizing as proposed the conforming revisions to provisions of subpart G, described in greater detail previously in this section of this final rule.

These changes will apply to agreement periods beginning on January 1, 2024, and in subsequent years.

#### d. Modifications to the Prior Savings Adjustment

##### (1) Background

Under section 1899(d)(1)(B)(ii) of the Act, an ACO's benchmark must be reset at the start of each agreement period using the most recent available 3 years of expenditures for Parts A and B services for beneficiaries assigned to the ACO. Section 1899(d)(1)(B)(ii) of the Act provides the Secretary with discretion to adjust the historical benchmark by such other factors as the Secretary determines appropriate. Under this authority, as described in the CY 2023 PFS final rule (87 FR 69898 through 69915), we established a prior savings adjustment that will apply when establishing the benchmark for ACOs entering a second agreement period beginning on January 1, 2024, or in subsequent years, to account for the average per capita amount of savings generated during the ACO's prior agreement period.

The prior savings adjustment adopted in the CY 2023 PFS final rule is designed to adjust an ACO's benchmark to account for the average per capita amount of savings generated by the ACO across the 3 performance years prior to the start of its current agreement period for new and renewing ACOs. In the CY 2023 PFS final rule (87 FR 69899), we explained that reinstating a prior savings adjustment would be broadly in line with our interest in addressing dynamics to ensure sustainability of the benchmarking methodology. Specifically, such an adjustment would help to mitigate the rebasing ratchet effect on an ACO's benchmark by returning to an ACO's benchmark an amount that reflects its success in lowering growth in expenditures while meeting the program's quality performance standard in the performance year's corresponding to the benchmark years for the ACO's new agreement period. We also explained our belief that a prior savings adjustment could help address an ACO's effects on expenditures in its regional service area that result in reducing the regional adjustment added to the historical benchmark.

In the CY 2023 PFS final rule (87 FR 69899), we explained that, in order to mitigate the potential for rebased benchmarks for ACOs that are lower-spending compared with their regional service area and that achieved savings in the benchmark period to become overinflated, we believed that adjusting an ACO's benchmark based on the higher of either the prior savings

adjustment or the ACO's positive regional adjustment would be appropriate. Additionally, we believed it would be appropriate to use a prior savings adjustment to offset negative regional adjustments for ACOs that are higher spending compared to their regional service area. We noted that this would permit ACOs that are subject to a negative regional adjustment, but that have generated savings in prior years, to receive a relatively higher benchmark.

In the CY 2024 PFS proposed rule (88 FR 52473 and 52474), we explained that under the methodology finalized in the CY 2023 PFS final rule and codified at § 425.658 of the regulations, the prior savings adjustment that will apply in the establishment of benchmarks for renewing ACOs and re-entering ACOs entering an agreement period beginning on January 1, 2024, and in subsequent years, would be calculated as follows<sup>273</sup>:

- Step 1: Calculate total per capita savings or losses in each performance year that constitutes a benchmark year for the current agreement period. For each performance year we will determine an average per capita amount reflecting the quotient of the ACO's total updated benchmark expenditures minus total performance year expenditures divided by performance year assigned beneficiary person years. CMS will apply the following requirements in determining the amount of per capita savings or losses for each performance year:

- ++ The per capita savings or losses will be set to zero for a performance year if the ACO was not reconciled for the performance year.

- ++ If an ACO generated savings for a performance year but was not eligible to receive a shared savings payment for that year due to noncompliance with Shared Savings Program requirements, the per capita savings for that year will be set to zero.

---

<sup>273</sup> Because the discussion that follows describes the methodology for determining the prior savings adjustment as adopted in the CY 2023 PFS final rule, it does not reflect the changes to further mitigate the negative regional adjustment that we proposed in the CY 2024 PFS proposed rule. Please see section III.G.4.c of this final rule for a discussion of those proposals and our final policies to mitigate the negative regional adjustment for agreement periods beginning on January 1, 2024, and in subsequent years.

++ For a new ACO that is identified as a re-entering ACO, per capita savings or losses will be determined based on the per capita savings or losses of the ACO in which the majority of the ACO participants in the re-entering ACO were participating.

- Step 2: Calculate average per capita savings. Calculate an average per capita amount of savings by taking a simple average of the values for each of the 3 performance years as determined in Step 1, including values of zero, if applicable. We will use the average per capita amount of savings to determine the ACO's eligibility for the prior savings adjustment as follows:

++ If the average per capita value is less than or equal to zero, the ACO will not be eligible for a prior savings adjustment. The ACO will receive the regional adjustment to its benchmark.

++ If the average per capita value is positive, the ACO will be eligible for a prior savings adjustment.

- Step 3: Apply a proration factor to the per capita savings calculated in Step 2 equal to the ratio of the average person years for the 3 performance years that immediately precede the start of the ACO's current agreement period (regardless of whether these 3 performance years fall in one or more prior agreement periods), and the average person years in benchmark years for the ACO's current agreement period, capped at 1. If the ACO was not reconciled for one or more of the 3 years preceding the start of the ACO's current agreement period, the person years from that year (or years) will be excluded from the averages in the numerator and the denominator of this ratio. For a new ACO that is identified as a re-entering ACO, the person years of the ACO in which the majority of the ACO participants of the re-entering ACO were participating will be used in the numerator of the calculation. This ratio will be redetermined for each performance year during the agreement period in the event of any changes to the number of average person years in the benchmark years as a result of changes to the ACO's certified ACO participant list, a change to the ACO's beneficiary assignment methodology selection, or changes to the beneficiary assignment methodology.

- Step 4: Determine final adjustment to benchmark. Compare the pro-rated positive average per capita savings from Step 3 with the ACO's regional adjustment, determined as specified in the regulation at § 425.656, expressed as a single per capita value by taking a person-year weighted average of the Medicare enrollment type-specific regional adjustment values.

++ If the regional adjustment, expressed as a single value, is negative or zero, calculate the sum of the regional adjustment value and the pro-rated positive average per capita savings value and determine the final adjustment as follows:

-- If the sum is positive, the ACO will receive a prior savings adjustment in place of the negative regional adjustment equal to the lesser of 50 percent of the sum of the pro-rated average per capita savings and the regional adjustment and 5 percent of national per capita FFS expenditures for Parts A and B services under the original Medicare FFS program in BY3 for assignable beneficiaries identified for the 12-month calendar year corresponding to BY3. The adjustment will be applied as a flat dollar amount to the historical benchmark expenditures for each of the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

-- If this sum is negative, this will constitute the amount of the negative regional adjustment applied to the ACO's historical benchmark. The adjustment will be applied as a flat dollar amount to the historical benchmark expenditures for the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

++ If the regional adjustment, expressed as a single value, is positive, the ACO will receive an adjustment to the benchmark equal to the higher of the following:

-- The positive regional adjustment amount. The adjustment will be applied separately to the historical benchmark expenditures for each of the following populations of beneficiaries in

accordance with § 425.656(c): ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

-- A prior savings adjustment equal to the lesser of 50 percent of the pro-rated positive average per capita savings value and 5 percent of national per capita FFS expenditures for Parts A and B services in BY3 for assignable beneficiaries identified for the 12-month calendar year corresponding to BY3. The adjustment will be applied as a flat dollar amount to the historical benchmark expenditures for each of the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries.

As we explained in the CY 2023 PFS final rule (87 FR 69900) in calculating an ACO's average per capita prior savings over the 3 performance years immediately preceding the start of its agreement period, we believe that a safeguard is needed to ensure that ACOs that achieved savings for a performance year that serves as a benchmark year for the current agreement period, but were ineligible to receive a shared savings payment due to noncompliance with Shared Savings Program requirements, are not subsequently eligible to have a portion of those savings included in their historical benchmark. Without such a safeguard, we would be rewarding an ACO, despite its noncompliance, through a higher benchmark in its subsequent agreement period. This would conflict with the sanction imposed on the ACO for its noncompliance during the performance year(s) of its prior agreement period. Accordingly, under the prior savings adjustment policy we finalized in the CY 2023 PFS final rule, if an ACO was ineligible to share in savings for any performance year in the 3 performance years immediately preceding the start of its agreement period due to noncompliance with Shared Savings Program requirements, we will set at zero the per capita amount of savings for the affected performance year(s) when calculating the prior savings adjustment.

There are a variety of reasons that could result in an ACO's ineligibility to receive a shared savings payment due to noncompliance. In accordance with §§ 425.605(c)(2), and

425.610(c)(2), an ACO does not qualify to receive shared savings for a performance year if it failed to meet the quality performance standard as specified under § 425.512 or otherwise did not maintain its eligibility to participate in the Shared Savings Program. Furthermore, an ACO will not receive any shared savings payments during the time it is under a corrective action plan (CAP) for avoidance of at-risk beneficiaries and is not eligible to receive shared savings for the performance year attributable to the time that necessitated the CAP (the time period during which the ACO avoided at-risk beneficiaries) (refer to § 425.316(b)(2)(ii)(B) and (C)).

In the CY 2023 PFS rulemaking to establish the current prior savings adjustment, we did not describe how we would account for certain circumstances where there could be changes to the values used in calculating the prior savings adjustment. Such changes could occur for changes in savings earned by ACOs in accordance with § 425.316(b)(2)(ii)(B) or (C) as a result of a compliance action to address avoidance of at-risk beneficiaries or issuance of a revised initial determination of financial performance under § 425.315. If CMS determines that an ACO, its ACO participants, any ACO providers/suppliers, or other individuals or entities performing functions or services related to the ACO's activities avoids at-risk beneficiaries and requires the ACO to submit a CAP, the ACO will not receive any shared savings payments during the time it is under the CAP (§ 425.316(b)(2)(ii)(B)), and it will not at any time be eligible to receive shared savings for the performance year attributable to the time that necessitated the CAP (§ 425.316(b)(2)(ii)(C)). Upon completion of an ACO's CAP for avoidance of at-risk beneficiaries, CMS may release shared savings payments withheld from an ACO during the time it was under a CAP under § 425.316(b)(2)(ii)(B), so long as the shared savings are not attributable to the time that necessitated the CAP (that is, the time period during which the ACO avoided at-risk beneficiaries). Thus, depending on the timing of compliance actions undertaken by CMS, the amount of savings eligible for inclusion in the prior savings adjustment under § 425.658(b)(1), may change as a result of the compliance action. For instance, the total savings eligible for inclusion in the prior savings adjustment may increase after the completion of a CAP and release

of a shared savings payment withheld under § 425.316(b)(2)(ii)(B). Further, if an initial determination of financial performance was already made and shared savings payments distributed and then the ACO was found to have avoided at-risk beneficiaries, and therefore, ineligible to receive a shared savings payment for the performance year, CMS would recoup the shared savings for the time period during which the ACO avoided at-risk beneficiaries. This latter scenario would result in a decrease in the total amount of savings eligible for inclusion in the prior savings adjustment calculation.

Further, if we determine that the amount of shared savings due to the ACO or the amount of shared losses owed by the ACO has been calculated in error, under § 425.315 CMS may reopen its prior determination and issue a revised initial determination: (1) at any time in the case of fraud or similar fault as defined in § 405.902; or (2) not later than 4 years after the date of the notification to the ACO of the initial determination of savings or losses for the relevant performance year, for good cause. If these situations—changes in the amount of shared savings for a prior performance year under § 425.316(b)(2)(ii)(B) or (C) as a result of a compliance action due to the avoidance of at-risk beneficiaries, or the issuance of a revised initial determination based on a reopening of ACO shared savings or shared losses under § 425.315—impact one of the 3 years prior to the start of the ACO’s current agreement period, it is possible that the prior savings adjustment would no longer reflect the savings or losses achieved by the ACO during the applicable years. In the CY 2023 PFS rulemaking, we did not adopt a mechanism to account for these changes in the prior savings adjustment, but rather focused on changes to the prior savings adjustment related to changes in an ACO’s participant list, changes to the ACO’s assignment methodology selection, or changes to beneficiary assignment methodology under the Shared Savings Program as a whole.

## (2) Revisions

In the CY 2024 PFS proposed rule (88 FR 52474 through 52476), we proposed refinements to the prior savings adjustment calculation methodology, specified in 42 CFR part

425, subpart G, that would apply in the establishment of benchmarks for renewing ACOs and re-entering ACOs entering an agreement period beginning on January 1, 2024, and in subsequent years, to account for circumstances where the amount of savings or losses for a performance year used in the prior savings adjustment calculation changes retroactively. Specifically, we proposed to modify the list of circumstances for adjusting the historical benchmark in § 425.652(a)(9) to include two additional scenarios: a change in savings earned by an ACO in a benchmark year in accordance with § 425.316(b)(2)(ii)(B) or (C) due to compliance action to address avoidance of at-risk beneficiaries, or a change in the amount of savings or losses for a benchmark year as a result of a reopening of a prior determination of ACO shared savings or shared losses and the issuance of a revised initial determination under § 425.315. In these situations, the amount of savings or losses that an ACO may have generated in the 3 performance years prior to the start of the current agreement period and that would have been eligible for inclusion in the calculation of the prior savings adjustment may change. The refinements we proposed would allow for the prior savings adjustment to be recalculated and the historical benchmark to be adjusted to reflect the any change in the amount of savings earned or losses incurred by the ACO in the 3 performance years prior to its current agreement period that are eligible for inclusion in the calculation of the prior savings adjustment.

We proposed to modify the process described in § 425.652(a)(9) for adjusting the historical benchmark. Under the current regulation, an ACO may receive an adjusted historical benchmark because of changes in the ACO's assigned beneficiary population in the benchmark years of the ACO's current agreement period due to the addition and removal of ACO participants or ACO providers/suppliers in accordance with § 425.118(b), a change to the ACO's beneficiary assignment methodology selection under § 425.226(a)(1)<sup>274</sup>, or changes to the beneficiary assignment methodology specified in 42 CFR part 425, subpart E. We proposed to

---

<sup>274</sup> Refer to section III.G.7.a of the proposed rule for a description of the proposal to revise the current reference to § 425.400(a)(4)(ii) in § 425.652(a)(9)(iv) to a reference to § 425.226(a)(1).

modify § 425.652(a)(9) to indicate that an ACO would receive an adjusted historical benchmark for changes in values used in benchmark calculations in accordance with § 425.316(b)(2)(ii)(B) or (C) due to compliance action to address avoidance of at-risk beneficiaries or as a result of issuance of a revised initial determination under § 425.315. More specifically, an ACO would receive an adjusted benchmark for the following reasons: (1) a change in the amount of savings calculated for any of an ACO's 3 benchmark years eligible for inclusion in the prior savings adjustment in accordance with § 425.316(b)(2)(ii)(B) or (C) due to compliance action taken to address avoidance of at-risk beneficiaries, or (2) CMS issues a revised initial determination under § 425.315 that impacts the amount of savings or losses calculated for 1 of the ACO's benchmark years. In the proposed rule, we noted that a compliance action taken to address avoidance of at-risk beneficiaries may lead to a change in the amount of savings earned by an ACO for a previous performance year when CMS releases savings previously withheld under § 425.316(b)(2)(ii)(B) for a time period other than the time period during which the ACO avoided at-risk beneficiaries following completion of a CAP or CMS recoups shared savings previously disbursed to an ACO under § 425.316(b)(2)(ii)(C) for a time period during which the ACO is later determined to have avoided at-risk beneficiaries.

Only ACOs whose current benchmark includes a prior savings adjustment or whose benchmark would include an adjustment for prior savings following a change in the amount of savings earned for a previous performance year that is a benchmark year for the ACO's current agreement period would receive an adjusted benchmark under these proposed changes. Furthermore, we proposed to modify the process described in § 425.652(a)(9) to indicate that if either of these two conditions occur after the ACO has already received its historical benchmark for the first performance year of its agreement period, an ACO could receive an adjusted historical benchmark for the first year of its agreement period.

We also proposed to add a new paragraph (e) to § 425.658 to indicate that, when either of the two aforementioned scenarios occurs, the prior savings adjustment itself would be

recalculated. We explained that without this addition there would be no mechanism for recalculating the prior savings adjustment to address changes in ACO's savings or losses for a performance year within an agreement period. Further, we proposed that, absent any other triggers for receiving an adjusted benchmark, an ACO would only receive an adjusted historical benchmark due to a change in the ACO's savings or losses for a performance year under §§ 425.315 or 425.316(b)(2)(ii)(B) or (C) if the change would result in a change to the prior savings adjustment as determined under § 425.652(a)(8). In other words, the ACO would not receive an adjusted historical benchmark following recalculation of the prior savings adjustment if the recalculation of the prior savings adjustment would not result in a change to the historical benchmark.

In the CY 2024 PFS proposed rule (88 FR 52475), we explained our belief that, to issue adjusted benchmarks and complete financial reconciliation in a timely fashion, it would be necessary to establish a timing cutoff for when the determination to issue an adjusted historical benchmark for these two additional reasons would be made. Each of the two scenarios for which we proposed to recalculate the prior savings adjustment may occur at any point during any performance year of the ACO's agreement period, as well as after the end of that agreement period. We proposed that for an adjusted benchmark due to the two conditions being considered to be used in financial reconciliation for a performance year, any determination under §§ 425.315 or 425.316(b)(2)(ii)(B) or (C) that changes the amount of the ACO's savings or losses in any of the benchmark years must be issued no later than the date of the initial determination of shared savings or shared losses through financial reconciliation for the relevant performance year under § 425.605(e) or § 425.610(h). We noted, however, that if we become aware of a potential change under § 425.316(b)(2)(ii)(B) or (C) in the savings earned in a benchmark year by an ACO eligible for the prior savings adjustment or an upcoming revised initial determination under § 425.315 that could impact the determination of the ACO's savings or losses for a benchmark year, we might delay the initial determination of shared savings or shared losses for the ACO for

the relevant performance year beyond when initial determinations would otherwise be issued in order to assess whether the ACO should receive an adjusted historical benchmark. Under this framework, changes to savings or losses for a benchmark year that are finalized after notification to the ACO of the initial determination of shared savings or shared losses for a given performance year would be reflected in the adjusted benchmark applied to any subsequent performance year during the relevant agreement period but would not be retroactively applied to completed performance years in the agreement period.

We considered several alternatives to the timing of when we could incorporate new information about a change in savings earned by an ACO in accordance with § 425.316(b)(2)(ii)(B) or (C) or a revised initial determination under § 425.315 into the prior savings adjustment. The two primary alternatives we considered were: (1) requiring information about a change to the amount of savings calculated for a previous year in accordance with § 425.316(b)(2)(ii)(B) or (C) or a revised initial determination under § 425.315 to become available by December 31<sup>st</sup> of the year prior to the performance year; and (2) considering this information at any time it becomes available. An advantage of the former option of requiring information by December 31<sup>st</sup> is that it would allow us to issue the adjusted benchmark in March of the performance year, consistent with when adjusted benchmarks are otherwise issued to ACOs. A disadvantage of this approach is that it would provide less flexibility for when new information impacting savings or losses in the benchmark years could be applied to the benchmark used in financial reconciliation for a given performance year. An advantage of the latter approach of considering such information at any time that it becomes available is that an ACO could receive an adjusted benchmark and a revised initial determination of shared savings or shared losses even after receiving its initial determination for a performance year. However, a disadvantage of this approach is that it would generate significant operational complexities. If, for instance, information becomes available during performance year four of an ACO's agreement period that would potentially impact financial reconciliation results in the first 3

performance years of the agreement period, we would need to simultaneously issue adjusted benchmarks and revised initial determinations for several performance years. In the proposed rule, we stated that on balance, we believed it would be appropriate to consider new information that could impact the prior savings adjustment up to the point at which an ACO receives its initial determination for a particular performance year. We noted that we were continuing to consider the complexities surrounding reopening initial determinations for multiple prior performance years throughout the program's benchmarking and financial reconciliation methodologies and may address this issue in future rulemaking.

We recognized that under § 425.658(b)(1)(iii), for a new ACO identified as re-entering ACO, the prior savings adjustment is based on the prior savings or losses of the ACO in which the majority of the ACO's ACO participants were participating. Accordingly, in the case of a re-entering ACO, we proposed to consider whether this prior ACO is impacted by the following when determining whether to issue an adjusted benchmark: (1) a change in the amount of savings calculated for any of the ACO's benchmark years eligible for inclusion in the prior savings adjustment in accordance with § 425.316(b)(2)(ii)(B) or (C) due to compliance action to address avoidance of at-risk beneficiaries; or (2) a revised initial determination issued under § 425.315 that impacts the determination of the ACO's savings or losses for one of the benchmark years. In this case, other aspects of the proposal would apply similarly, including the timing cutoff for issuing an adjusted benchmark and issuing an adjusted benchmark only if the change in savings or losses determined for the applicable benchmark year would result in a change to the prior savings adjustment as determined under § 425.652(a)(8).

We included two examples to illustrate how an ACO could receive an adjusted historical benchmark that incorporates additional savings as a result of the changes we were proposing.

- *Example 1:* An ACO renews to begin a new agreement period on January 1, 2025 but is under a corrective action plan under § 425.316(b) for avoidance of at-risk beneficiaries during performance year 2023. In accordance with § 425.316(b)(2)(ii)(B) the ACO did not receive a

shared savings payment for performance year 2024, which represents the third benchmark year of its new agreement period. Therefore, the ACO's prior savings adjustment for its new agreement period would be calculated by setting the gross savings and losses for the third benchmark year equal to 0 as described in § 425.658(b)(1)(ii). However, in November of 2026 the corrective action plan for avoidance of at-risk beneficiaries is closed and CMS determines that the ACO is eligible to receive payment for shared savings for performance year 2024. In this example, the ACO would have previously received notification of the initial determination of shared savings or shared losses for performance year 2025. Because the change in the status of the corrective action plan occurred after the ACO received its initial determination of shared savings and shared losses for performance year 2025, savings from the ACO's third benchmark year would be included in the calculation of the prior savings adjustment beginning with the benchmark used to determine financial performance for performance year 2026. That is, the ACO would receive an adjusted historical benchmark for performance year 2026 reflecting the recalculated prior savings adjustment, and financial reconciliation for performance year 2026 and subsequent performance years of the ACO's current agreement period would reflect that adjusted historical benchmark. However, financial reconciliation for performance year 2025 would not be reopened to reflect savings from the third benchmark year in the calculation of the prior savings adjustment because the corrective action plan was not lifted until after the ACO received its initial determination of shared savings or shared losses for that performance year.

- *Example 2:* An ACO begins a new agreement period on January 1, 2026, and receives its historical benchmark, which includes a prior savings adjustment. In February of 2027, information is identified that leads to a revised initial determination of shared savings and shared losses for benchmark year 2 of the ACO's new agreement period. Because the issue was identified in February of the second performance year of the new agreement period, which is prior to the ACO receiving an initial determination of its shared savings and shared losses for performance year 2026, the ACO would receive an adjusted historical benchmark for

performance year 2026. Shared savings and shared losses calculations for performance year 2026 would reflect the recalculated prior savings adjustment included in this adjusted benchmark. All subsequent performance years in the agreement period would also reflect the recalculated prior savings adjustment.

In summary, we proposed revisions to § 425.652(a)(9) to indicate that we would adjust the benchmark for changes in values used in benchmark calculations in accordance with § 425.316(b)(2)(ii)(B) or (C) due to compliance action to address avoidance of at-risk beneficiaries or as a result of the issuance of a revised initial determination under § 425.315. We also proposed to add new paragraph (e) to § 425.658 to specify that the ACO's prior savings adjustment is recalculated for changes to the ACO's savings or losses for a performance year used in the prior savings adjustment calculation in accordance with § 425.316(b)(2)(ii)(B) or (C) due to compliance action to address avoidance of at-risk beneficiaries or as a result of issuance of a revised initial determination under § 425.315. Further, the new provision § 425.658(e) would also establish that for new re-entering ACOs, the prior savings adjustment will be recalculated for changes in savings or losses for a performance year used in the prior savings adjustment for the ACO in which a majority of the new ACO's ACO participants were previously participating.

We solicited comments on the proposal to adjust the historical benchmark to reflect changes in savings or losses for a performance year that constitutes a benchmark year for an ACO's current agreement period. These changes would be applicable for agreement periods beginning on or after January 1, 2024.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

*Comment:* We received several comments pertaining to the proposal to adjust the historical benchmark to reflect changes in savings or losses for a performance year that constitutes a benchmark year for an ACO's current agreement period. All comments supported the proposed changes, with several noting that the proposed policy increases program integrity

without imposing undue burden on ACOs. We did not receive any comments opposing these changes.

*Response:* We agree with the commenters that the proposed provisions will improve the accuracy of the prior savings adjustment without placing additional burden on ACOs.

After consideration of the public comments, we are finalizing without modification the proposed refinements to the prior savings adjustment calculation methodology, specified in § 425.658, to account for circumstances where the amount of savings or losses for a performance year used in the prior savings adjustment calculation changes retroactively. This change will apply in the establishment of benchmarks for renewing ACOs and re-entering ACOs entering an agreement period beginning on January 1, 2024, and in subsequent years.

We are finalizing the proposed revisions to § 425.652(a)(9) to include two additional circumstances under which we will adjust the historical benchmark: a change in savings earned by an ACO in a benchmark year in accordance with § 425.316(b)(2)(ii)(B) or (C) due to compliance action to address avoidance of at-risk beneficiaries, or a change in the amount of savings or losses for a benchmark year as a result of a reopening of a prior determination of ACO shared savings or shared losses and the issuance of a revised initial determination under § 425.315.

We also refer readers to section III.G.8.c. of this final rule for a summary of comments received in response to the RFI in the CY 2024 PFS proposed rule regarding potential increases to the prior savings adjustment.

#### e. Update How Benchmarks Are Risk Adjusted

##### (1) Overview of Risk Adjustment within Shared Savings Program Benchmark Calculations

When establishing, adjusting, and updating an ACO's historical benchmark, CMS makes certain adjustments to account for the severity and case mix of, and certain demographic factors for, the ACO's assigned beneficiary population and the assignable beneficiary population. We

use prospective HCC risk scores and (as applicable) demographic risk scores to perform this risk adjustment.

To follow is a summary of the calculations in which we will account for the severity and case mix of the ACO's assigned beneficiary population or the assignable beneficiary population when establishing, adjusting, and updating the historical benchmark, for agreement periods beginning on January 1, 2024, and in subsequent years, including as proposed elsewhere in the CY 2024 PFS proposed rule.

- We risk adjust benchmark year expenditures used to establish the historical benchmark for changes in severity and case mix using prospective HCC risk scores, in accordance with § 425.652(a)(3). In making this adjustment, we account for changes in severity and case mix in the ACO's assigned beneficiary population between the first and third benchmark years and between the second and third benchmark years.<sup>275</sup>

- We calculate the ACO's regional FFS expenditures using risk adjusted county-level FFS expenditures, which are determined in accordance with § 425.654(a)(4) by adjusting FFS expenditures for severity and case mix of assignable beneficiaries in the county using prospective HCC risk scores and by making separate expenditure calculations for populations of beneficiaries by Medicare enrollment type (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries). The ACO's risk adjusted regional FFS expenditures are utilized in determining the regional adjustment to the historical benchmark (in accordance with § 425.656), the regional component of the national-regional blended trend factor (in accordance with § 425.652(a)(5)), and the regional component of the three-way blended benchmark update factor (in accordance with § 425.652(b)(2)).

---

<sup>275</sup> See, for example, Medicare Shared Savings Program, Shared Savings and Losses, Assignment and Quality Performance Standard Methodology Specifications (version #11, January 2023), available at <https://www.cms.gov/files/document/medicare-shared-savings-program-shared-savings-and-losses-and-assignment-methodology-specifications.pdf-2> (see section 3.6, "Risk Adjustment Policies").

- We calculate the regional adjustment to the historical benchmark in accordance with § 425.656, including the following calculations to account for severity and case mix:

- ++ We adjust for differences in severity and case mix between the ACO's assigned beneficiary population for BY3 and the assignable population of beneficiaries for the ACO's regional service area for BY3 in accordance with § 425.656(b)(3).

- ++ In calculating the negative regional adjustment, we apply an offset factor based on the ACO's overall proportion of BY3 assigned beneficiaries who are dually eligible for Medicare and Medicaid (including dually eligible ESRD, disabled, and aged beneficiaries) and the ACO's weighted average prospective HCC risk score for BY3 taken across the four Medicare enrollment types, in accordance with § 425.656(c)(4).

- We adjust the ACO's historical benchmark to account for changes in severity and case mix in the ACO's assigned beneficiary population between BY3 and the performance year in accordance with §§ 425.652(a)(10), 425.605(a)(1) and (2) (BASIC track), and 425.610(a)(2) and (3) (ENHANCED track), at the time of financial reconciliation for a performance year. We use prospective HCC risk scores to adjust the historical benchmark for changes in severity and case mix for all assigned beneficiaries between BY3 and the performance year, with positive adjustments subject to a cap equal to the ACO's aggregate growth in demographic risk scores between BY3 and the performance year plus 3 percentage points (refer to §§ 425.605(a)(1)(ii) and 425.610(a)(2)(ii), and section III.G.4.b.(1) of the proposed rule).

- In calculating the regional component of the three-way blended update factor, we proposed to cap prospective HCC risk score growth in an ACO's regional service area between BY3 and the performance year by applying an adjustment factor, as discussed in section III.G.4.b.(2) of the proposed rule and the proposed new provision at § 425.655.

- We adjust the flat dollar amounts of the ACPT component of the three-way blended update factor for each performance year, for differences in severity and case mix between the ACO's BY3 assigned beneficiary population and the national assignable FFS population for each

Medicare enrollment type identified for the 12-month calendar year corresponding to BY3, in accordance with § 425.660(b)(4).

## (2) Background on Calculation of Prospective HCC Risk Scores Used to Risk Adjust Shared Savings Program Benchmark Calculations

### (a) Historical Practices

We detailed how CMS performs Shared Savings Program risk adjustment calculations in programmatic material, including publicly available specifications documents. See, for example, Medicare Shared Savings Program, Shared Savings and Losses, Assignment and Quality Performance Standard Methodology Specifications (version #11, January 2023), available at <https://www.cms.gov/files/document/medicare-shared-savings-program-shared-savings-and-losses-and-assignment-methodology-specifications.pdf-2> (see section 3.6, “Risk Adjustment Policies”). While we have specified the details of these practices in guidance, we have not previously codified these practices in regulation.

In the CY 2024 PFS proposed rule (88 FR 52477), we described that CMS maintains the CMS-HCC risk adjustment models for the Medicare Advantage (MA) program. CMS maintains CMS-HCC risk adjustment models for populations of beneficiaries based on age, disability status, gender, institutional status, eligibility for Medicaid, and health status (see section 1853(a)(1)(C)(i) of the Act), including a separate MA risk adjustment model for the ESRD population, and a Part D risk adjustment model (known as the RxHCC model). Over time, CMS has implemented revised versions of the CMS-HCC risk adjustment models (also referred to generally as the “CMS-HCC model”). Historically, transitions to a revised version of the CMS-HCC model have been gradually phased-in over time by blending the old risk adjustment model and the revised risk adjustment model. We specify the CMS-HCC risk adjustment models applicable for a calendar year in the annual MA Rate Announcement (see sections 1853(a)(1)(C) and (b)(1) of the Act). Prior to doing so, we solicited comments on the CMS-HCC risk adjustment methodology (see section 1853(b)(2) of the Act). Using the specified model, or blend

of models (if applicable), we calculated prospective HCC risk scores for all Medicare beneficiaries, including FFS beneficiaries. These prospective HCC risk scores are then used to set MA capitation rates and Part C and D payment policies for the applicable calendar year.

To perform risk adjustment calculations for the Shared Savings Program, we calculate prospective HCC risk scores for Medicare FFS beneficiaries for the relevant benchmark year or performance year. In doing so, we use the CMS-HCC risk adjustment model(s) that are applicable for the particular calendar year corresponding to the benchmark or performance year to identify a Medicare FFS beneficiary's prospective HCC risk score for that benchmark or performance year. Prospective HCC risk scores used in financial calculations for the Shared Savings Program have the MA coding pattern adjustment of 5.90 percent removed, if applicable.<sup>276</sup> Additionally, all prospective HCC risk scores are renormalized by Medicare enrollment type based on a national assignable FFS population to ensure that the mean risk score among assignable beneficiaries is equal to one. Renormalization helps to ensure consistency in risk scores from year to year, given changes made to the underlying risk score models. All risk adjustment calculations for the Shared Savings Program, including risk score renormalization, are performed separately for each Medicare enrollment type for the following populations of beneficiaries: ESRD, disabled, aged/dual eligible for Medicare and Medicaid, aged/non-dual eligible for Medicare and Medicaid.<sup>277</sup>

Under the Shared Savings Program, we calculate demographic only risk scores using a separate model than those used to calculate prospective HCC risk scores. For agreement periods beginning on January 1, 2024, and subsequent years, CMS will use demographic risk scores to

---

<sup>276</sup> The MA risk adjustment models used for beneficiaries classified as ESRD for the Shared Savings Program (that is, beneficiaries in long-term dialysis or transplant status, no more than three months post-graft) do not currently employ a coding intensity adjustment, therefore no adjustment is currently removed from risk scores for beneficiaries in the ESRD enrollment type.

<sup>277</sup> A beneficiary's final risk score for each month is the risk score determined for that beneficiary based on the beneficiary's risk adjustment model status for that month. There are risk adjustment models for MA subpopulations (for example, community model versus institutional model versus new enrollee model for aged/non-dual eligible beneficiaries), and the risk scores used by the Shared Savings Program for beneficiaries in a Medicare enrollment type may be derived from more than one risk adjustment model.

determine the cap on risk score growth between BY3 and the performance year. Demographic risk scores consider only certain specified patient demographic factors, such as age, sex, Medicaid status, and the basis for Medicare entitlement (that is, age, disability, or ESRD), without incorporating diagnostic information. As such, demographic risk scores are not subject to changes in coding intensity or coding accuracy in the same way that prospective HCC risk scores are. We note that while the Shared Savings Program uses the same demographic factors as those used in MA, Shared Savings Program demographic factor coefficients are calibrated based on the entire Medicare FFS population instead of new Medicare enrollees as is used by MA.

Currently, when establishing, adjusting, and updating the benchmark, we account for changes in severity and case mix between benchmark years or between BY3 and the performance year by multiplying the expenditures for the applicable year by a quotient of two ACO-level renormalized risk scores, known as the risk ratio. For example, to risk adjust the expenditures for an ACO's assigned beneficiary population to account for changes in case mix and severity from the first benchmark year to the third, we multiply BY1 expenditures by a risk ratio equal to the mean renormalized risk score among the ACO's assigned beneficiaries in BY3 divided by the mean renormalized risk score among the ACO's assigned beneficiaries in BY1 for each Medicare enrollment type. For instance, a one percent rate of growth in renormalized risk scores between these benchmark years would be expressed by a risk ratio of 1.010. This ratio reflects growth in risk for the ACO's assigned beneficiary population relative to that of the national assignable population. Because the risk ratios used in benchmarking calculations may be determined using risk scores calculated from different underlying CMS-HCC risk adjustment models, depending on the CMS-HCC risk adjustment model(s) applicable to the corresponding benchmark or performance year, this approach allows for the possibility that differences in risk models between the benchmark years and the performance year could impact an ACO's financial performance.

Since the inception of the Shared Savings Program in 2012, there have been several CMS-HCC model changes. Several factors reduce the impact of using different risk adjustment models to calculate prospective HCC risk scores for benchmark and performance years when performing Shared Savings Program risk adjustment calculations. One factor is that the Shared Savings Program renormalizes prospective HCC risk scores by Medicare enrollment type, which ensures that the mean risk score for the national assignable FFS population for each enrollment type is equal to one. If a new CMS-HCC model leads to a shift in the mean of the distribution of prospective HCC risk scores for the national assignable FFS population for a particular Medicare enrollment type, then renormalizing the risk scores would counterbalance this effect. Because renormalization factors are calculated across the assignable beneficiary population for each enrollment type, any adverse or beneficial impact for an ACO from a change in CMS-HCC model would derive from the mean risk score for the ACO's assigned beneficiaries within a given enrollment type being impacted in a systematically different way than the mean for the national assignable population for that enrollment type.

A second factor is that risk scores are used in multiple ways that balance their effects when establishing, adjusting, or updating a benchmark. Risk scores are used to adjust ACO expenditures and also to adjust regional expenditures used in calculating the regional adjustment to the benchmark and regional growth rates in benchmark calculations. Any impact of a new CMS-HCC model that could increase or decrease an ACO's risk scores used to establish, adjust, or update a benchmark may differ directionally from the impact that risk scores for the assignable FFS population in an ACO's regional service area might have on risk-adjusted regional expenditure calculations. For example, if a new CMS-HCC model lowers the risk ratio between BY3 and the PY, and therefore, lowers the benchmark for an ACO, all else equal, then the new risk adjustment model may also lower the risk scores for the ACO's regional service area assignable beneficiary population, which would increase risk-adjusted regional

expenditures.<sup>278</sup> This would put upward pressure on the benchmark by increasing the regional update factor. Any changes to the ACO's risk ratio may be thus reduced by changes to the ACO's regional update factor. This would reduce the impact of CMS-HCC model changes on ACO financial performance.

A third factor is that CMS-HCC model transitions have been gradually phased-in over time by blending the old risk adjustment model and the new risk adjustment model, thereby constraining the magnitude of any change in risk ratios resulting from differences in the risk adjustment models used to calculate prospective HCC risk scores. That is, as a result of this blending, the risk ratios used to adjust expenditures between BY3 and the PY may have some degree of overlap in underlying risk adjustment models used to calculate both the numerator and denominator of the risk ratios.

#### (b) Introduction of the 2024 CMS-HCC Risk Adjustment Model, Version 28

On March 31, 2023, CMS released the Announcement of CY 2024 MA Capitation Rates and Part C and Part D Payment Policies,<sup>279</sup> which finalized the transition to a revised CMS-HCC risk adjustment model. The revised 2024 CMS-HCC risk adjustment model, Version 28 (V28), has the same structure as the 2020 CMS-HCC risk adjustment model currently used for payment in that it has eight model segments as first implemented for payment for CY 2017 and condition count variables as first implemented for payment for CY 2020. It incorporates the following technical updates: (1) updated data years used for model calibration, (2) updated denominator year used in determining the average per capita predicted expenditures to create relative factors in the model, and (3) a clinical reclassification of the hierarchical condition categories (HCCs) using the International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) codes. In addition, as part of the clinical reclassification, CMS conducted an assessment

---

<sup>278</sup> For each county and Medicare enrollment type (ESRD, disabled, aged/dual eligible, and aged/non-dual eligible) in the ACO's regional service area, CMS divides average per capita county-level FFS expenditures by the county average renormalized CMS-HCC risk score to obtain risk-adjusted county expenditures.

<sup>279</sup> For more details, refer to Announcement of Calendar Year (CY) 2024 Medicare Advantage (MA) Capitation Rates and Part C and Part D Payment Policies (March 31, 2023) (herein CY 2024 Rate Announcement), available at <https://www.cms.gov/files/document/2024-announcement-pdf.pdf>.

on conditions that are coded more frequently in MA relative to FFS. This assessment is consistent with Principle 10 of CMS's longstanding model principles, described in more detail initially in the December 2000 report titled, "Diagnostic Cost Group Hierarchical Condition Category Models for Medicare Risk Adjustment (Final Report)" (available at [https://www.cms.gov/Research-Statistics-Data-and-Systems/Statistics-Trends-and-Reports/Reports/downloads/pope\\_2000\\_2.pdf](https://www.cms.gov/Research-Statistics-Data-and-Systems/Statistics-Trends-and-Reports/Reports/downloads/pope_2000_2.pdf)). As a result of this assessment, in addition to the technical updates, the revised model includes additional constraints and the removal of several HCCs to reduce the impact on risk score variation in coding between MA and FFS.<sup>280</sup>

For CY 2024, MA risk scores will be calculated as a blend of 67 percent of the risk scores calculated under the 2020 CMS-HCC risk adjustment model, Version 24 (V24), and 33 percent of the risk scores calculated with the 2024 CMS-HCC risk adjustment model (V28). CMS expects that for CY 2025, MA risk scores will be calculated using a blend of 33 percent of the risk scores calculated with V24 and 67 percent of the risk scores calculated with V28, and for CY 2026, 100 percent of risk scores will be calculated with V28.<sup>281</sup>

With the transition to the use of the V28 CMS-HCC model beginning in CY 2024 in MA, it is timely to revisit how we apply the CMS-HCC risk adjustment model(s) to calculate risk scores used in Shared Savings Program calculations. As summarized in the CY 2024 Rate Announcement, some commenters questioned if the updated MA risk adjustment model will affect lines of business outside of Medicare Advantage such as the ACO REACH Model and Medicare Shared Savings Program. In response to these comments, we explained that we were considering the implications of these changes to the CMS-HCC risk adjustment model for these initiatives.<sup>282</sup>

In the CY 2024 PFS proposed rule we described our initial analysis of the impact of the V28 CMS-HCC model on Shared Savings Program calculations, including modeling of an alternative approach to calculating benchmark year risk scores (88 FR 52479 through 52481). We proposed an approach to making such calculations for agreement periods beginning on January 1, 2024, and in subsequent years.

### (3) Initial Analysis of the Impact of Risk Adjustment Model Changes on Shared Savings Program Calculations and Modeling of an Alternative Approach to Calculating Benchmark Year Risk Scores

In the CY 2024 PFS proposed rule (88 FR 52479), we noted that to further evaluate the potential impact of the V28 CMS-HCC model transition on Shared Savings Program ACOs, we analyzed the following:

- Our current approach in which we apply the CMS-HCC risk adjustment model(s) applicable for a particular calendar year to calculate a Medicare FFS beneficiary's prospective HCC risk score for the corresponding benchmark or performance year. This approach could lead to different CMS-HCC risk adjustment models being used to calculate prospective HCC risk scores for the benchmark years as compared to a particular performance year of the ACO's agreement period when there is a transition to a new CMS-HCC risk adjustment model between one or more benchmark years and the performance year.

- An alternative approach in which we would use the CMS-HCC risk adjustment model(s) applicable to the calendar year corresponding to the performance year to calculate a Medicare FFS beneficiary's prospective HCC risk score for the performance year, and for each benchmark year of the ACO's agreement period.<sup>283</sup> This approach ensures consistency between

---

<sup>283</sup> A similar approach was suggested by commenters in earlier rulemaking for the Shared Savings Program. See, for example, the December 2018 final rule (83 FR 68013), in which we summarize commenters' recommendation that CMS modify the current methodology to use the same CMS-HCC risk score model to calculate risk scores for both the benchmark years and the performance year.

the CMS-HCC risk adjustment methodology used to calculate the prospective HCC risk scores for the benchmark years relative to a particular performance year.

To conduct this analysis, we calculated prospective HCC risk scores and risk ratios for CY 2018 (treated as BY3) and CY 2021 (treated as the PY) for all 275 ACOs that participated in both PY 2018 and PY 2021. Risk ratios between BY3 and the PY were calculated under the current approach, in which we used the V24 CMS-HCC model to calculate BY3 prospective HCC risk scores and the V28 CMS-HCC model to calculate PY prospective HCC risk scores, and under the alternative approach of calculating both BY and PY prospective HCC risk scores using V28.<sup>284</sup>

We performed this analysis to roughly estimate how V28 would have impacted payment to ACOs in PY 2021 using weighted average risk scores calculated across the three non-ESRD Medicare enrollment types (disabled, aged/dual eligible, aged/non-dual eligible). The analysis provides insight into the impact of a fully phased-in V28, which is expected to occur in PY 2026 (particularly for ACOs that would at that point have a BY3 prior to 2024). For the 275 ACOs in the sample, combined PY 2021 shared savings payments would have been about 11 percent lower than actual payments if V28 had been fully phased-in for the performance year, when using V24 to calculate BY3 prospective HCC risk scores (reflecting the current approach to applying CMS-HCC risk adjustment models). Alternatively, combined shared savings payments would have been about 2 percent higher than actual if V28 were used for BY3 calculations, as well as for PY 2021 calculations (reflecting the alternative approach to applying CMS-HCC risk adjustment models).

Table 44 compares the estimated impact on PY 2021 shared savings of the current approach, and the alternative approach to calculating BY3 and PY prospective HCC risk scores.

---

<sup>284</sup> The V24 CMS-HCC model was not applicable to CY 2018 but was used in this analysis to calculate BY3 prospective HCC risk scores under the current approach to measure the impact of the transition from V24 to V28 on Shared Savings Program ACOs.

**TABLE 44: Estimated Impacts on PY 2021 Shared Savings of the V28 CMS-HCC Model under Current and Alternative Approaches to BY3 and PY Risk Score Calculation (Expressed as Percent of Benchmark)**

	Current Approach BY3 V24, PY V28	Alternative Approach BY3 V28, PY V28	Current minus Alternative
Minimum	-6.6%	-1.6%	-6.7%
10th percentile	-1.4%	-0.4%	-1.1%
25th percentile	-0.4%	0.0%	-0.5%
Median	0.0%	0.0%	0.0%
Mean	-0.2%	0.1%	-0.2%
75th percentile	0.1%	0.2%	0.0%
90th percentile	0.9%	0.6%	0.5%
Maximum	2.3%	2.2%	2.2%

Estimated decreases in PY 2021 shared savings payments are more extreme at the tail of the distribution when using the current approach. Over 10 percent of ACOs showed more than 1.4 percent in reduced shared savings payments relative to benchmark under the modeling of the current approach, in which we used V24 to calculate BY3 prospective HCC risk scores and V28 to calculate PY prospective HCC risk scores. In contrast, about 3 percent of ACOs showed declines of such magnitude in shared savings payments relative to the benchmark using the alternative approach to calculating prospective HCC risk scores for BY3 and PY 2021 with the V28 CMS-HCC model. Compared to the alternative approach, the current approach is estimated to result in a reduction in shared savings of about 0.2 percent per ACO on average, relative to benchmark. These impacts would be smaller, potentially one-third of the magnitude, if the use of V24 in BY3 was compared to the blend of 33 percent V28 and 67 percent V24 for the PY (reflecting the blend applicable for CY 2024).

Table 45 compares the estimated impact on PY 2021 shared savings of the current approach, and the alternative approach to calculating BY3 and PY risk scores (expressed as percentage of benchmark), based on the following ACO characteristics: ACO average renormalized prospective HCC risk scores for aged/disabled beneficiaries, ACO participation in performance-based risk, and year of entry into the Shared Savings Program. We observed that the current approach would have the greatest adverse effect on ACOs with the highest average risk scores (calculated with the V24 CMS-HCC model), ACOs participating in two-sided

models, and ACOs that have been in the Shared Savings Program longer. ACOs that would not have been harmed by the current approach had an average renormalized risk score for their non-ESRD populations roughly equal to 1.00. The 5 percent of ACOs in the modeling with the most adverse impact from the current approach had an average renormalized risk score for their non-ESRD populations of 1.22. For ACOs with the highest average risk scores, the modeling showed the current approach would have resulted in reduced shared savings of about 2 percent (relative to benchmark) per ACO, as compared to the alternative approach. The most adversely impacted ACOs in the modeling also were roughly 40 percent more likely to participate in a two-sided model and to have participated in the Shared Savings Program nearly 2 years longer than ACOs not harmed. The modeling demonstrates that the alternative approach would reduce the negative impact that the current approach shows for ACOs with high-risk scores, with earlier entry dates into the Shared Savings Program, and with participation in a two-sided model.

**TABLE 45: Estimated Impacts on PY 2021 Shared Savings of the V28 CMS-HCC Model under Current and Alternative Approaches to BY3 and PY Risk Score Calculation, Based on ACO Characteristics (Expressed as Percent of Benchmark)**

	<b>Current Approach BY3 V24, PY V28</b>	<b>Alternative Approach BY3 V28, PY V28</b>	<b>Current minus Alternative</b>
<b>Average HCC (Aged/Disabled)</b>			
>1.20	-2.0%	0.0%	-2.1%
1.10 to 1.20	-0.5%	-0.1%	-0.4%
1.025 to 1.10	-0.4%	0.0%	-0.4%
0.975 to 1.025	-0.1%	0.1%	-0.2%
0.90 to 0.975	0.2%	0.2%	0.1%
<0.90	0.5%	0.2%	0.3%
<b>PY21 Track/Level</b>			
Two-sided Model	-0.5%	0.0%	-0.5%
One-sided Model	0.1%	0.1%	0.0%
<b>Program Entry</b>			
On/before 2013	-0.6%	0.1%	-0.7%
On/after 2014	-0.1%	0.1%	-0.1%

In the context of the transition to the V28 CMS-HCC model, the results of this analysis show that the current approach to calculating prospective HCC risk scores is expected to adversely impact ACO financial performance, particularly for ACOs that serve a high-risk beneficiary population, when compared to the stated alternative approach. We explained that

factors discussed in the proposed rule (as described in section III.G.4.e.(2) of the proposed rule) — renormalizing risk scores to the national assignable FFS population, risk-adjusted regional expenditures providing a counterbalance to how risk ratios impact the benchmark, and the phased transition from V24 to V28 by means of a blended risk model — will reduce the impact of a risk adjustment model transition. However, these factors will be insufficient to prevent adverse effects on ACO financial performance due to the larger impact from the transition to V28 relative to prior CMS-HCC model transitions. The alternative policy under which CMS would apply the same CMS-HCC risk adjustment model used in the performance year to calculate prospective HCC risk scores for all benchmark years would strengthen risk adjustment in the Shared Savings Program and consistently apply the CMS-HCC model in the Shared Savings Program context as it is applied in MA.

#### (4) Revisions

The adoption of the alternative approach to calculating prospective HCC risk scores for the performance year and each benchmark year of an ACO's agreement period would allow us to more accurately measure the change in severity and case mix for an ACO's assigned beneficiary population or the assignable beneficiary population. Under such an approach, there would be no potential for distortion from using different CMS-HCC risk adjustment models in calculating prospective HCC risk scores for benchmark years and the performance year that could occur under the current policy. For this reason, we proposed to modify our current use of the CMS-HCC risk adjustment model and adopt the alternative approach to calculating prospective HCC risk scores for a performance year and the relevant benchmark years for agreement periods beginning on January 1, 2024, and in subsequent years.

We proposed to add a new section to our regulations at § 425.659, which would codify our existing framework for calculating risk scores used in Shared Savings Program benchmark calculations and adopt the alternative approach to calculating prospective HCC risk scores for a performance year and the relevant benchmark years (88 FR 52481 through 52483). We proposed

in paragraph (a) of § 425.659 to codify our current practice of accounting for differences in severity and case mix of the ACO's assigned beneficiaries and assignable beneficiaries (as defined under § 425.20) in calculations used in establishing, adjusting, and updating the ACO's historical benchmark.

We proposed to set forth in paragraph (b) of § 425.659 our approach to determining Medicare FFS beneficiary prospective HCC risk scores for Shared Savings Program benchmark and performance year calculations (88 FR 52481). In paragraph (b)(1) of § 425.659, we proposed to codify our current policy under which CMS specifies the CMS-HCC risk adjustment methodology used to calculate prospective HCC risk scores for Medicare FFS beneficiaries (as defined under § 425.20) for use in Shared Savings Program calculations. Additionally, we proposed:

- To codify our current practice of calculating risk scores for Medicare FFS beneficiaries for a performance year, which provides that CMS uses the CMS-HCC risk adjustment methodology applicable for the corresponding calendar year.

- To codify our current practice for agreement periods beginning before January 1, 2024, of applying the CMS-HCC risk adjustment methodology for the calendar year corresponding to benchmark year in calculating risk scores for Medicare FFS beneficiaries for each benchmark year of the agreement period.

- For agreement periods beginning on January 1, 2024, and in subsequent years, CMS would apply the CMS-HCC risk adjustment methodology for the calendar year corresponding to the performance year in calculating risk scores for Medicare FFS beneficiaries for each benchmark year of the agreement period.

We proposed at § 425.659(b)(2) to codify our current practices for calculating prospective HCC risk scores for a benchmark or performance year (88 FR 52482). Specifically, in calculating prospective HCC risk scores, we would remove the MA coding intensity adjustment, if applicable. Further, we would renormalize prospective HCC risk scores by

Medicare enrollment type (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries) based on a national assignable FFS population for the relevant benchmark or performance year. We would calculate the average prospective HCC risk score by Medicare enrollment type (ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries) in order to risk adjust benchmark calculations also performed by Medicare enrollment type.

We did not propose to modify the current approach to calculating demographic risk scores under the Shared Savings Program (88 FR 52482).

We also proposed to adjust the benchmark to account for CMS-HCC risk adjustment model changes during the term of the agreement period to maintain uniformity between the calculation of prospective HCC risk scores for the performance year and each benchmark year (88 FR 52482). We proposed to revise the list of circumstances for adjusting the historical benchmark for the second and each subsequent performance year during the term of the agreement period at § 425.652(a)(9) to include a change in the CMS-HCC risk adjustment methodology used to calculate prospective HCC risk scores under proposed, new § 425.659. We further proposed to add a new paragraph (a)(9)(vi) to § 425.652 to specify that we would redetermine factors based on prospective HCC risk scores calculated for benchmark years by calculating the prospective HCC risk scores using the CMS-HCC risk adjustment methodology that applies for the calendar year corresponding to the applicable performance year in accordance with proposed § 425.659(b)(1).

We also proposed a technical and conforming change to § 425.650(a), which generally describes the organization of the sections on the benchmarking methodology within subpart G of the Shared Savings Program regulations (88 FR 52482). In the description of the benchmarking methodology applicable for agreement periods beginning before January 1, 2024, we proposed to update the list of referenced sections to include the proposed new § 425.659.

We stated in the CY 2024 PFS proposed rule (88 FR 52482), that this proposed policy would address the concerns of ACOs and other interested parties regarding the transition to the V28 CMS-HCC model or other similar future changes to CMS-HCC risk adjustment methodology that could occur during the term of an ACO's agreement period. Under the proposal, both the numerator and denominator in the PY/BY3 risk ratio would be calculated using a consistent risk model, and any distributional impacts should, on average, be balanced. This would prevent distortion to historical benchmarks resulting from model changes. This conclusion was informed by the data analysis described in the proposed rule (88 FR 52479 through 52481), which shows that on average ACOs would have earned roughly 0.2 percent in additional PY 2021 shared savings payments relative to benchmark when both benchmark year and performance year prospective HCC risk scores are calculated under V28 compared to calculations under both V24 and V28.

Our analysis showed that ACOs with higher than average risk scores would benefit from using the proposed approach to calculate BY and PY prospective HCC risk scores relative to the current policy. The proposal would therefore help the Shared Savings Program retain ACOs serving the highest risk beneficiaries. This is a priority for CMS as high-risk beneficiaries may benefit the most from better care coordination and quality improvement activities, particularly by ACOs with above average duration of participation in the program. Similarly, the proposed approach would support potential participation from new ACOs that would consider whether risk adjustment calculations in the Shared Savings Program benchmarking methodology would be adequate for beneficiaries with the highest risk.

The proposal would not affect how prospective HCC risk scores are calculated for ACOs in agreement periods that began prior to January 1, 2024, consistent with our historical practice of incorporating changes to the benchmarking methodology only at the start of an ACO's agreement period. We explained that ACOs in an existing agreement period that includes performance year 2024, 2025 or 2026 may benefit from the factors discussed in the proposed

rule (88 FR 52478 through 52479) — renormalizing risk scores to the national assignable FFS population, risk-adjusted regional expenditures providing a counterbalance to how risk ratios impact the benchmark, and the phased transition from V24 to V28 by means of a blended risk model. These factors would diminish adverse effects of using the new CMS-HCC risk adjustment methodology in Shared Savings Program calculations.

In the CY 2024 PFS proposed rule (88 FR 52482), we stated that if we finalized the proposed approach for agreement periods beginning on January 1, 2024, and in subsequent years, an ACO in an existing agreement period could choose to terminate its participation agreement early, to early renew under a new participation agreement to be under the revised approach. For instance, an ACO under an existing agreement period with the current methodology (with a 2022 or 2023 start date) could apply to early renew with the application cycle for the January 1, 2025 agreement period start date, which would occur during CY 2024. For an existing ACO that applied to early renew and enters a new agreement period beginning on January 1, 2024, the proposed policy, if finalized, would apply to the ACO's new agreement period. Any ACO that early renews would have its benchmark rebased at the start of the new agreement period.

The following examples, based on the first 3 years of a 5-year agreement period beginning on January 1, 2024, illustrate the applicability of the current approach to calculating BY and PY prospective HCC risk scores using different CMS-HCC risk adjustment model(s), as compared to the proposed approach to calculating both BY and PY prospective HCC risk scores using the same CMS-HCC risk adjustment model(s). Under the current policy an ACO beginning a new agreement period on January 1, 2024, would have its prospective HCC risk scores for BY1 (2021) calculated using a blend of 25 percent under the 2014 CMS-HCC model, Version 22

(V22), and 75 percent V24,<sup>285</sup> and for BY2 (2022) and BY3 (2023) calculated using V24.<sup>286,287</sup> For PY1 (2024), prospective HCC risk scores would be calculated using a blend of 67 percent V24 and 33 percent V28. For PY2 (2025), prospective HCC risk scores are expected to be calculated using a blend of 33 percent V24 and 67 percent V28. For PY3 (2026), prospective HCC risk scores are expected to be calculated using V28. Under the current methodology, the risk ratios used to risk adjust expenditures would have the numerator and denominator calculated using different underlying CMS-HCC risk adjustment models. Specifically, to risk adjust BY1 expenditures to BY3 when establishing or adjusting the ACO's historical benchmark, the risk ratio would include risk scores calculated under V24 (BY3) and a blend of 25 percent V22 and 75 percent V24 (BY1). To risk adjust BY3 expenditures to the performance year when updating the historical benchmark during financial reconciliation, risk ratios would include risk scores calculated under V24 (as applicable to BY3) and either a blend of V24 and V28 (for PY1 and as expected for PY2) or fully calculated with V28 (as expected for PY3).

Under the proposed approach, BY and PY prospective HCC risk scores would be calculated under the CMS-HCC risk adjustment model(s) applicable to the calendar year corresponding to the relevant performance year. For an ACO beginning a new agreement period on January 1, 2024, in PY1 (2024) all benchmark year and PY1 prospective HCC risk scores would be calculated using a blend of 67 percent V24 and 33 percent V28. In PY2 (2025), all benchmark year and PY2 prospective HCC risk scores are expected to be calculated using a blend of 33 percent V24 and 67 percent V28. In PY3 (2026), all benchmark year and performance year prospective HCC risk scores are expected to be calculated using V28. In the

<sup>286</sup> For more details, refer to Announcement of Calendar Year (CY) 2022 Medicare Advantage (MA) Capitation Rates and Part C and Part D Payment Policies (January 15, 2021), available at <https://www.cms.gov/files/document/2022-announcement.pdf>.

<sup>287</sup> For more details, refer to Announcement of Calendar Year (CY) 2023 Medicare Advantage (MA) Capitation Rates and Part C and Part D Payment Policies (April 4, 2022), available at <https://www.cms.gov/files/document/2023-announcement.pdf>.

case of an ACO in an existing agreement period that early renews for a new agreement period beginning on January 1, 2025, the calculations described in this paragraph regarding the blend of V24 and V28 for 2025 and the fully phased-in V28 CMS-HCC model for 2026 would be expected to apply for the ACO's first and second performance years (respectively).

We solicited comments on these proposals regarding the prospective HCC risk scores to be used in risk adjustment for purposes of benchmark calculations under the Shared Savings Program.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Several commenters expressed general support for and appreciation of the proposed changes to how risk adjustment is performed for purposes of benchmark calculations under the Shared Savings Program. These commenters noted that they believe that using a consistent risk score model for both benchmark years and the performance year will improve predictability in risk scores, as well as prevent distortion to an ACO's historical benchmark resulting from changes in the risk score model.

*Response:* We agree with commenters that using a consistent risk score model for both benchmark years and the performance year will more accurately assess changes in an ACO's assigned beneficiary population across years.

*Comment:* Many commenters supported the proposed changes but urged CMS to apply the proposed changes to all ACOs and not just to ACOs in agreement periods beginning on or after January 1, 2024. Other commenters urged CMS to allow ACOs in existing agreement periods that began prior to January 1, 2024, be given an option to choose whether the proposed changes to the risk adjustment methodology will apply to them. Many commenters stated that the proposed rule was made public after the deadline to early renew to begin a new agreement period on January 1, 2024. They stated that knowledge of the proposed changes to risk adjustment methodology would have informed any decision to early renew. Several commenters referred to

CMS' data analysis in section III.G.4.e.(3) of the proposed rule which showed that total PY 2021 shared savings payments would have been 11 percent lower when performance year risk scores were calculated using V28. These commenters discussed that maintaining the current risk adjustment methodology for ACOs in agreement periods that began prior to January 1, 2024, would unfairly harm such ACOs, especially those serving high-risk beneficiary populations. A few commenters also noted that while there is an option to early renew to begin a new agreement period on January 1, 2025, there are administrative costs associated with the early renewal application process which may be prohibitive for some ACOs. Several commenters also noted that if an ACO decides to early renew, their benchmark will be rebased for the new agreement period and some ACOs may be harmed by the 'ratchet effect' in which any savings generated in the current agreement period could lead to a lower benchmark in the new agreement period.

*Response:* The data analysis presented in the proposed rule (88 FR 52479 through 52481) examines the impact of adopting the full V28 CMS-HCC risk adjustment model which is not expected to occur until 2026. While the results of the data analysis suggest combined PY 2021 shared savings payments would have been about 11 percent lower than actual payments if V28 had been fully phased-in for the performance year, this 11 percent is larger in magnitude than the actual impact for PY 2024 for ACOs continuing in an existing agreement period under the current risk adjustment methodology. The impact will be significantly reduced since the risk adjustment model implemented for PY 2024 will be a blend of 67 percent V24 and 33 percent V28. The magnitude of the impact on ACOs for PY 2024 might only be one-third of what was estimated in the analyses included in the proposed rule, because those analyses looked at the fully implemented V28 risk model (88 FR 52480). Table 46 shows the estimated impacts of the PY 2024 blended CMS-HCC model on PY 2021 Shared Savings under both the current and proposed risk adjustment methodologies (where the current approach will be applied for PY 2024 calculations only for ACOs with agreement periods that started before January 1, 2024).

**TABLE 46: Estimated Impacts on PY 2021 Shared Savings of the PY 2024 CMS-HCC Model blend of 67% V24 and 33% V28 under Current and Proposed Approaches to BY3 and PY 2024 Risk Score Calculation**

	<b>Current Approach BY3 V24, PY Blend</b>	<b>Proposed Approach BY3 Blend, PY Blend</b>	<b>Current minus Alternative</b>
Minimum	-1.7%	-1.5%	-1.6%
10th percentile	-0.2%	0.0%	-0.3%
25th percentile	0.0%	0.0%	-0.1%
Median	0.0%	0.0%	0.0%
Mean	0.0%	0.1%	-0.1%
75th percentile	0.1%	0.1%	0.0%
90th percentile	0.3%	0.2%	0.1%
Maximum	1.5%	1.5%	1.5%

Further, the analyses in the proposed rule only examined the impact of ACO risk scores on the risk ratios used to update the benchmark at the time of financial reconciliation. These risk ratios are calculated as the performance year prospective CMS-HCC risk scores divided by BY3 prospective CMS-HCC risk scores. Under the current policy, which will only apply to ACOs in agreement periods that started before January 1, 2024, the BY3 prospective CMS-HCC risk scores will not be recalculated using the new V28 model. The V28 model is expected to, on average, lower ACO prospective CMS-HCC risk scores which caused a fall in the risk ratios. Under the current approach, this then led to lower updated benchmarks which resulted in worsened average ACO financial performance in our analysis. However, as mentioned previously, there are other ways in which an ACO’s prospective CMS-HCC risk scores impact financial calculations. One important way is in the calculation of an ACO’s regional adjustment to their historical benchmark. When determining the amount of an ACO’s regional adjustment, the ACO’s BY3 prospective CMS-HCC risk scores are used to multiply risk-adjusted regional expenditures. Under the proposed policy, all benchmark year risk scores will be calculated using the MA risk adjustment model applicable to the performance year. If the proposed policy were applied to ACOs in existing agreement periods, all BY3 risk scores for such ACOs would be recalculated using the PY 2024 blended model of 67 percent V24 and 33 percent V28. As the blended model, through the V28 component, is expected to lower average ACO prospective CMS-HCC risk scores, this would tend to decrease the amount of the regional adjustment. This

would in turn offset some (or potentially all) of the reduction in benchmark that some ACOs would receive by not extending the proposed policy to ACOs in agreement periods that started before January 1, 2024. When we reviewed the ACOs that are most likely to see a decrease in their performance year risk scores, we also found these same ACOs would generally have the most favorable regional adjustments to their historical benchmarks, so the existing methodology would help them avoid negative impacts that would otherwise materialize from recalculation of those adjustments under the new risk model. Lastly, we note that risk scores continue to be renormalized across the assignable population in each eligibility group, which eliminates the risk that risk scores would be systematically biased against ACOs under either the current or proposed approaches described above. Due to these factors, we believe that the impact of the phased transition of V28 on financial performance for PY 2024 for ACOs in existing agreement periods will be lower than expressed by many commenters.

We also note that while the analysis in the proposed rule showed that on average ACOs would benefit from the proposed risk adjustment policy, this was not universal. In comparing the current and alternative approaches to calculating prospective CMS-HCC risk scores, the median value for the difference between the two approaches was 0.0 percent. While the mean impact on ACOs was negative, this was due to the larger impact on adversely affected ACOs rather than the number of ACOs that were adversely affected. In our analysis we found the proposed methodology would reduce benchmarks for at least 25 percent of ACOs in existing agreement periods. Due to this, applying the proposed policy to all ACOs in PY 2024 even those continuing in an existing agreement period, would slightly benefit some ACOs while marginally harming others. The Shared Savings Program's longstanding approach is to maintain a consistent benchmarking methodology for the duration of an ACO's agreement period because methodological changes can have varying impacts on ACO's benchmarks and performance.

Further, we do not believe it is desirable to implement an approach that would allow each ACO to select from a menu of options for customizing the benchmark methodology that would

apply in any given performance year during an agreement period. Historically, we have not applied changes to the benchmark methodology during an agreement period, and as we have discussed in prior rulemaking (see, for example, 87 FR 69876), we have particular concern about allowing ACOs to “opt in” to certain benchmarking policies within an agreement period, as this creates an opportunity for selective behavior without the counterbalance of rebasing and introduces significant operational complexity. An approach that allows an ACO to choose the more favorable of several methodologies for establishing its cost target would exacerbate our concerns about the potential for benchmarks to become overly inflated to the point where ACOs need to do little to maintain or change their care practices to generate savings. We are concerned that this flexibility could lead to opportunities for arbitrage and may dull incentives for ACOs to improve their performance under the Shared Savings Program. Further, doing so would introduce considerable operational complexity into the program's benchmarking methodology.

During CY 2024, ACOs have the option to “early renew” for PY 2025, meaning to terminate their current participation agreement under § 425.220 and immediately enter a new agreement period to continue participation in the Shared Savings Program. (See paragraph (2) of the definition of “renewing ACO” in § 425.20, and 83 FR 67885 through 67890, and the application procedures set forth in § 425.224.) Early renewal would allow a currently participating ACO to be subject to the modified financial benchmarking methodology policies described in sections III.G.4.b-d and to the modified risk adjustment methodology sooner than if the ACO were to wait to renew to continue its participation in the Shared Savings Program after completing its current agreement period of at least 5 years. We believe that ACOs that elect to renew or early renew for PY 2025 would have sufficient time to decide whether to renew for a new agreement period under the Shared Savings Program, for providers/suppliers to consider the business case for forming or joining a Shared Savings Program ACO, and for CMS to prepare to implement these changes.

*Comment:* One commenter appeared to misunderstand what was being proposed, stating

that they interpreted the proposed policy as introducing the MA risk adjustment models to the Shared Savings Program. They also interpreted the data analysis in section III.G.4.e.(3) of the proposed rule showing the impact of using V24 to calculate benchmark year prospective HCC risk scores and V28 to calculate performance year prospective HCC risk scores as measuring the impact of our proposed policy. They expressed concern that the use of different risk score models would lead to deviations in the uniformity of risk assessment which might diminish trust in the Shared Savings Program.

*Response:* We clarify that the current Shared Savings Program risk adjustment methodology calculates benchmark and performance year risk scores using the MA risk adjustment models that were applicable to the relevant calendar year. Under this approach, this may lead to situations in which benchmark and performance year risk scores are calculated under separate CMS-HCC risk score models. We proposed to revise the risk adjustment methodology to use the MA risk adjustment model that is applicable to the performance year to calculate both performance year and benchmark year prospective CMS-HCC risk scores. The proposed approach aims to ensure uniformity in risk assessment across multiple years by calculating prospective CMS-HCC risk scores using a consistent risk adjustment model.

After consideration of the public comments, we are finalizing our proposal to apply the CMS-HCC risk adjustment methodology for the calendar year corresponding to the performance year in calculating risk scores for Medicare FFS beneficiaries for each benchmark year of the agreement period, for ACOs in agreement periods beginning on or after January 1, 2024. We are finalizing our proposal to add a new section to our regulations at § 425.659 on calculating risk scores used in Shared Savings Program benchmark calculations, with minor modifications for grammar and clarity. We are also finalizing our proposal to revise the list of circumstances for adjusting the historical benchmark for the second and each subsequent performance year during the term of the agreement period at § 425.652(a)(9) to include a change in the CMS-HCC risk adjustment methodology used to calculate prospective CMS-HCC risk scores under new

§ 425.659. Further, we are finalizing our proposal to add a new paragraph (a)(9)(vi) to § 425.652 to specify that we will redetermine factors based on prospective HCC risk scores calculated for benchmark years by calculating the prospective HCC risk scores using the CMS-HCC risk adjustment methodology that applies for the calendar year corresponding to the applicable performance year in accordance with § 425.659(b)(1). We are finalizing as proposed a technical and conforming change to § 425.650(a), to revise the description of the benchmarking methodology applicable for agreement periods beginning before January 1, 2024, to include the new § 425.659 within the list of referenced sections.

## 5. Modifications to Advance Investment Payment Policies

### a. Overview

In the CY 2023 PFS final rule (87 FR 69782 through 69805), we finalized a new payment option for eligible Shared Savings Program ACOs entering agreement periods beginning on or after January 1, 2024, to receive advance shared savings payments. This payment option is referred to as advance investment payment (AIP) and the payments themselves are referred to as advance investment payments.

In that final rule, we explained that section 1899(i) of the Act authorizes the Secretary to use other payment models instead of the one-sided model described in section 1899(d) of the Act so long as the Secretary determines that the other payment model would improve the quality and efficiency of items and services furnished to Medicare beneficiaries without additional program expenditures (87 FR 69783 and 69784). In accordance with section 1899(i) of the Act, we determined that making advance investment payments to certain ACOs participating in the Shared Savings Program would improve the quality and efficiency of items and services furnished to Medicare beneficiaries by enhancing the accessibility of the Shared Savings Program (*Id.*).

We established standards for an ACO's receipt and use of advance investment payments within the Shared Savings Program regulations at § 425.630 and specified requirements in

connection with AIP in other sections within 42 CFR part 425. Such standards include: eligibility criteria to limit AIP to new, low revenue ACOs that are inexperienced with performance-based risk; application procedures and contents, including submission of a spend plan; policies governing use and management of payments; amount and frequency of payments, which are comprised of a one-time \$250,000 upfront payment and up to 8 quarterly payments; the methodology for calculation of the quarterly payment amount based on the ACO's assigned population; termination of advance investment payments, as well as recoupment and recovery of advance investment payments; policies to monitor ACO eligibility for AIP; and ACO public reporting requirements regarding the use of advance investment payments.

In the CY 2024 PFS proposed rule (88 FR 52483), we proposed modifications to refine AIP policies to better prepare for initial implementation of AIP beginning with ACOs entering agreement periods on January 1, 2024. In summary, we proposed to better support ACOs that are prepared to progress to performance-based risk by allowing ACOs to advance to two-sided model Levels within the BASIC track's glide path beginning in PY3 of the agreement period in which they receive advance investment payments (88 FR 52483). We also proposed to revise our policies for recoupment of advance investment payments from ACOs that wish to early renew and continue their participation in the Shared Savings Program (88 FR 52485). We proposed to specify that CMS would terminate quarterly advance investment payments in future quarters to ACOs that elect to terminate their participation in the Shared Savings Program (88 FR 52486). We proposed to require ACOs to report spend plan updates and actual spend information to CMS in addition to publicly reporting such information (88 FR 52484). Lastly, we proposed to codify that ACOs receiving advance investment payments may seek reconsideration review of all payment calculations (88 FR 52487). If finalized, we proposed that these policies would be effective beginning January 1, 2024 (88 FR 52488).

b. Modifications to AIP Eligibility Requirements to Allow ACOs to Advance to Performance-Based Risk During the 5-Year Agreement Period

## (1) Background

The policies we finalized with the CY 2023 PFS final rule (87 FR 69404) require an ACO to remain under a one-sided risk model for the duration of its agreement period in which it receives advance investment payments to remain compliant with AIP requirements. The ACO would otherwise face potential compliance action and may be required to repay all advance investment payments within 90 days of receiving written notification from CMS. This limits an ACO's ability to select participation options that include progression along the BASIC track's glide path to a performance-based two-sided risk model. This policy arises from the interaction of numerous standards.

First, an ACO is eligible to receive advance investment payments if CMS determines that all of the following criteria are met: (1) the ACO is not a renewing or a re-entering ACO; (2) the ACO has applied to participate in the Shared Savings Program under any level of the BASIC track's glide path and is eligible to participate in the Shared Savings Program; (3) the ACO is inexperienced with performance-based risk Medicare ACO initiatives; and (4) the ACO is a low revenue ACO (§ 425.630(b)). An eligible ACO will receive a one-time upfront payment of \$250,000 and quarterly payments each quarter for the first 2 performance years of the ACO's 5-year agreement period, totaling no more than 8 quarterly payments (§ 425.630(f)).

Second, under § 425.630(h), CMS will terminate an ACO's advance investment payments in accordance with § 425.316(e) if the ACO is no longer inexperienced with performance-based risk Medicare ACO initiatives or is no longer a low revenue ACO. Section 425.316(e) specifies that if CMS determines during any performance year of the agreement period that an ACO receiving advance investment payments is experienced with performance-based risk Medicare ACO initiatives or is a high revenue ACO, and the ACO remains experienced with performance-based risk Medicare ACO initiatives or a high revenue ACO after a deadline specified by CMS pursuant to compliance action, the ACO must repay all advance investment payments it received.

An eligible ACO that joins the Shared Savings Program in Level A of the BASIC track and opts to receive advance investment payments will be eligible for all 8 quarterly payments to be paid over PY1 and PY2, so long as the ACO remains in Level A (or progresses to Level B) in PY2 and remains inexperienced with performance-based risk Medicare ACO initiatives and a low revenue ACO. An ACO that joins the Shared Savings Program at Levels B through E of the BASIC track, however, will not be eligible to receive all 8 quarters of advance investment payments because current program regulations require that an ACO remain inexperienced with performance-based risk Medicare ACO initiatives while receiving advance investment payments (§ 425.630(h)(2)). More specifically, if an ACO receiving advance investment payments elects to participate at Level B of the BASIC track in PY1 progresses along the glide path to Level C for PY2, CMS would determine that the ACO is experienced with performance-based risk in PY2 and the ACO would no longer be eligible to receive advance investment payments during PY2.

In the CY 2023 final rule (87 FR 69787), we stated that advance investment payments were intended to assist smaller, community-based providers in forming high-performing ACO networks by providing much-needed startup capital that can be used to attract and maintain staffing, purchase healthcare delivery infrastructure and IT systems, and develop and implement a strategy to address the health needs of underserved communities. It is for this reason we restricted AIP eligibility to those ACOs that are inexperienced with performance-based risk. ACOs that are experienced with performance-based risk generally would not need advance investment payments to successfully participate in the Shared Savings Program as they have previously participated in the Shared Savings Program or certain Innovation Center models or CMS programs in which the ACO accepted risk for shared losses. In the CY 2024 PFS proposed rule, we proposed to modify program regulations to permit an ACO to progress to two-sided risk along the BASIC track's glide path within the agreement period while the ACO continues to benefit from advance investment payments.

(2) Revisions

We proposed to modify AIP eligibility requirements to allow an ACO receiving advance investment payments to transition to two-sided risk within its 5-year agreement period under the BASIC track's glide path. Specifically, we proposed to modify § 425.630(b)(2) and (3) to allow an eligible ACO receiving advance investment payments to advance to performance-based risk (by advancing from Level A or B to Level C, D, or E of the BASIC track's glide path) beginning in PY3 of the ACO's agreement period. We also proposed to modify § 425.316(e)(2) to specify that CMS will cease payment of advance investment payments if CMS determines that an ACO approved for AIP became experienced with performance-based risk Medicare ACO initiatives during the first or second performance year of its agreement period or became a high revenue ACO during any performance year of the agreement period in which it received advance investment payments. In accordance with § 425.316(e)(2)(ii), we may take compliance action against such ACOs. We also proposed to modify § 425.316(e)(2)(i) to specify that CMS will cease payment of advance investment payments no later than the quarter after the ACO became experienced with performance-based risk Medicare ACO initiatives or became a high revenue ACO.

Under the proposed approach, ACOs may choose to move into a two-sided risk participation option within the Shared Savings Program's BASIC track beginning in PY3 (and in subsequent performance years). These ACOs would still be required to repay advance investment payments through earned shared savings over the remaining performance years of their agreement period as prescribed in § 425.630(g). We proposed that this policy would be effective January 1, 2024. Under this proposal, an ACO could not use advance investment payments to fund repayment mechanisms or repay shared losses. This limitation also reduces the risk that ACOs stretch themselves beyond their financial capacity while receiving advance investment payments by taking on large amounts of risk. Unlike other ACOs, ACOs receiving advance investment payments will have the additional financial obligation of repaying the advance investment payments if they misjudge their appetite for risk and leave the program mid

performance period after incurring shared losses. These policies are intended to align with our goal to support the creation of new ACOs that need time and resource assistance to develop the infrastructure to operate an ACO that effectively manages patient care and lowers costs.

After 2 years of participation, new ACOs may have sufficient experience to be capable of taking on downside risk available in levels C-E of the BASIC track. As proposed, these modifications balance the risk of a new ACO taking on too much risk too quickly while allowing them to take on moderate risk as they develop more experience with the program.

Specifically, we proposed to amend the eligibility criteria specified in § 425.630(b) as follows. We proposed to revise the eligibility criterion at § 425.630(b)(2) to remove language stating that the ACO has applied to participate in the Shared Savings Program “under any level of the BASIC track’s glide path;” the revised provision would simply state that “CMS has determined that the ACO is eligible to participate in the Shared Savings Program.” Further, we proposed to amend the criterion in § 425.630(b)(3) to specify that the ACO must be inexperienced with performance-based risk Medicare ACO initiatives during its first 2 performance years but may participate in Levels of the BASIC track that would make it experienced with performance-based risk Medicare ACO initiatives starting with the third year of its first agreement period. Specifically, we proposed to specify in revisions to § 425.630(b)(3) that the ACO may participate in the Levels of the BASIC track's glide path as follows during the agreement period in which the ACO receives advance investment payments:

- For performance year 1, the ACO must participate in Level A of the BASIC track’s glide path.
- For performance year 2, the ACO may participate in Level A of the BASIC track’s glide path (in accordance with § 425.600(a)(4)(i)(C)(3)) or Level B.
- For performance years 3 through 5, the ACO may participate in Level A of the BASIC track’s glide path (in accordance with § 425.600(a)(4)(i)(C)(3)), or Levels B through E.

To illustrate the proposed policy, consider an ACO entering an agreement period beginning on January 1, 2024, that applies for and is determined to be eligible to receive advance investment payments. The ACO must participate in Level A for PY1. In PY2, the ACO may remain under Level A for all subsequent years of the agreement period in accordance with § 425.600(a)(4)(i)(C)(3) or may move to Level B. The ACO would receive advance investment payments for PY1 and PY2, receiving the one-time payment of \$250,000 and the 8 quarterly payments. If the ACO remained at Level A for PY2, it could then transition to a higher level of risk and potential reward within the glide path for PY3 (that is, Levels B, C, D, or E) in accordance with § 425.600(a)(4)(i)(C)(3)(iii). If the ACO participated in Level B for PY2, it could automatically progress for PY3 to Level C (in accordance with § 425.600(a)(4)(i)(C)(2)) or elect to transition to Level D (in accordance with § 425.600(a)(4)(i)(C)(2)(i) and § 425.226(a)(2)(i)) or Level E (in accordance with § 425.600(a)(4)(i)(C)(2)(i) and § 425.226(a)(2)(i)) beginning with PY3.

Under this proposed modification, CMS will continue to recoup from future shared savings. In contrast to what is required under existing § 425.316(e)(3), the ACO will not be immediately obligated to repay all advance investment payments it received by virtue of its transition to a two-sided model in its third performance year or any subsequent performance year. We noted that under our proposal if an ACO opts to progress to a two-sided risk model (BASIC track's glide path Levels C through Level E) in PY2, CMS will terminate the ACO's advance investment payments, the ACO may be subject to compliance actions specified in §§ 425.216 and 425.218, and CMS may seek repayment of advance investment payments as set forth at § 425.316(e).

We solicited comments on our proposal to amend AIP policies and require that all ACOs receiving advance investment payments be inexperienced with performance-based risk Medicare ACO initiatives while the ACO receives advance investment payments – that is, during PY1 and

PY2 of the agreement period – and to allow ACOs to progress to performance-based risk under the BASIC track’s glide path beginning with PY3 of the same agreement period.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

*Comment:* Commenters largely supported CMS’ proposal to allow ACOs receiving advance investment payments to progress along the glide path and move into a two-sided risk model beginning in PY 3 of the ACO’s agreement period. Many commenters noted that this policy refinement will strengthen and enhance the Shared Savings Program and assist in meeting CMS’ goal of having 100 percent of traditional Medicare beneficiaries in an accountable care relationship by 2030. Other commenters encouraged CMS to finalize this policy refinement, contending that advance investment payments will likely increase access to equitable care and reduce disparities in health outcomes in rural and underserved communities.

*Response:* We agree with commenters that this proposal will benefit the Shared Savings Program. Allowing ACOs receiving advance investment payments to move into a two-sided risk model beginning in PY 3 of their agreement period balances the risk of a new ACO taking on too much risk too quickly while allowing them to take on moderate risk as they develop more experience with the program, enabling ACOs receiving advance investment payments to progress along the BASIC track’s glide path in a manner that works best for them. CMS expects this proposal will increase participation in the Shared Savings Program, especially among providers who practice in underserved communities, advance equitable access to quality care, and better health outcomes for ACOs’ beneficiaries.

*Comment:* One commenter noted that allowing ACOs receiving advance investment payments to move into two-sided risk during the first agreement period provides greater flexibility for physician-led ACOs to participate in the Shared Savings Program. The commenter stated that this policy refinement will allow smaller practices to move into two-sided risk without the fear of having their advance investment payments immediately recouped.

*Response:* We agree with the commenter that this proposal will afford ACOs receiving advance investment payments the flexibility to move into a two-sided risk model later in their agreement period while continuing to use advance investment payments in the remaining performance years of their initial agreement period without fear of immediate recoupment by CMS, which will support all ACOs, including physician-led ACOs and smaller practices that are part of ACOs.

*Comment:* One commenter shared that because ACOs receiving advance investment payments are required to repay all advance investment payments received in the first 2 years of their agreement period in their entirety, CMS should make the AIP payment option as expansive as possible. Other commenters encouraged CMS to consider expanding AIP eligibility to all ACOs regardless of their experience with performance-based risk Medicare ACO initiatives, whether they are a currently participating ACO or a renewing or re-entering ACO, or their status as a high revenue or low revenue ACO.

*Response:* We agree with the commenter that eligibility for advance investment payments should be expanded. This proposal supports that expansion and provides ACOs with increased flexibilities that should better support newly participating ACOs in their efforts to build and maintain a high-performing ACO. However, we disagree with commenters who suggest that all ACOs should be eligible for advance investment payments. As we stated in the CY 2023 PFS final rule (87 FR 69783 through 69785), expanding AIP eligibility to all ACOs or even all ACOs that can demonstrate need among their patient populations is not consistent with the purpose of AIP and would not be an appropriate use of the Trust Funds. AIP policy is based in part on the success of the ACO Investment Model, which primarily limited participation to ACOs who were (1) new to the Shared Savings Program; (2) did not include a hospital unless it was a critical access hospital or a small Inpatient Prospective Payment System (IPPS) hospital; and (3) were not owned or operated by a health plan. While these eligibility criteria do not exactly match the AIP eligibility criteria, the intent behind both sets of criteria is similar. In addition, advance

investment payments are not intended to provide indefinite support to ACOs or to ACOs of all sizes, but to help provide start-up funding needed prior to earning shared savings for those ACOs that are most likely to face difficulty finding such funding.

As we previously explained, ACOs that are experienced with performance-based risk generally would not need advance investment payments to successfully participate in the Shared Savings Program as they have previously participated in the Shared Savings Program or certain Innovation Center models or CMS programs in which the ACO accepted risk for shared losses. Our experience administering the Shared Savings Program suggests that re-entering and renewing ACOs have alternative payment model experience and would not need, or benefit as significantly from, the start-up funds that advance investment payments provide because they have already invested in creating an ACO (see 87 FR 69784). They may also be able to leverage their experience to raise the necessary funds more easily than entities that are new and may primarily consist of ACO participants that are inexperienced with performance-based risk. Similarly, existing ACOs participating and earning shared savings have access to more resources to serve their aligned beneficiaries, and many existing ACOs already have health IT infrastructure in place to support and coordinate high quality care (87 FR 69786).

Advance investment payments are intended to advance shared savings to provide start-up funding for ACOs that are less well capitalized than a high revenue ACO, which should not need advance funding from CMS to increase staffing, improve healthcare infrastructure, and provide accountable care for underserved beneficiaries (87 FR 69786). By contrast, low revenue ACOs tend to be small, physician-led ACOs that are less well-capitalized organizations, and these ACOs may be encouraged to participate and remain in the program based on the availability of additional incentives, such as the opportunity to receive advance investment payments. For these reasons and the reasons stated elsewhere in this section, and to safeguard the Medicare Trust Funds, CMS will maintain more limited eligibility criteria at this time.

*Comment:* Other commenters requested that CMS further modify AIP eligibility

requirements to include ACOs who have been designated as experienced with performance-based risk by participating in the ENHANCED track. The commenters noted that these ACOs may still lack the significant resources and infrastructure required to meaningfully address patients' health and social needs.

*Response:* We disagree with commenters that it would be appropriate to provide advance investment payments to an ACO that has been designated as experienced with performance-based risk Medicare ACO initiatives for the reasons stated previously in this section. We also disagree with commenters that it would be appropriate to provide advance investment payments to an ACO that is participating in the ENHANCED track. As we stated in the CY 2023 PFS final rule (87 FR 69786), ACOs in the BASIC track are typically less experienced with risk and are more likely to benefit from upfront funding or ongoing financial assistance, while ACOs in the ENHANCED track, given the level of risk involved in that track, are generally well established and confident in their ability to coordinate care for their beneficiary population. However, as described in section III.G.5.c of this final rule, in the event that an ACO voluntarily terminates its participation agreement at the end of PY2 or later during the agreement period in which it received advance investment payments, and the ACO immediately enters into a new participation agreement with CMS under any level of the BASIC track's glide path or the ENHANCED track, CMS will not seek to collect all advance investment payments received from an ACO in accordance with § 425.630(g)(4). CMS will carry forward any remaining balance of advance investment payments owed by the early renewing ACO into the ACO's new agreement period.

These ACOs also benefit from effective management and planning, and such ACOs would not need advance investment payments from CMS to increase staffing, improve healthcare infrastructure, and provide accountable care for underserved beneficiaries. We also note that we solicited comments as part of the RFI in the CY 2024 PFS proposed rule regarding how ACOs could better work with CBOs to address the unmet health and social needs of

beneficiaries, and we will take the comments we received in response to that solicitation into consideration for future rulemaking. See section III.G.8.e of this final rule.

*Comment:* One commenter stated that all ACOs would benefit from AIP and would use the funds to invest in technology enhancements and account for resource expenditures resulting from the difficulty of keeping up with Shared Savings Program rules and guidance.

*Response:* We disagree with commenters who suggest that all ACOs should be eligible for advance investment payments for the reasons stated elsewhere in this section of this final rule. We also note that CMS furnishes annual program guidance based upon annual CMS rulemaking and updates those guidance materials with important and necessary program information for each upcoming performance year. These materials are available to all ACOs. CMS guidance materials include proposed and final rule fact sheets, detailed explanations of program requirements and financial calculations, and a number of other materials found in the Application toolkit and the ACO Management System (ACO-MS) knowledge library. ACOs may also submit inquiries to the Shared Savings Program helpdesk. We also note that investments in new technologies, including those required to meet program standards, are generally necessary among all healthcare providers, including those not participating in the Shared Savings Program, to keep pace with the current standards of medicine and deliver high-quality, coordinated care to patients.

*Comment:* Other commenters suggested that CMS consider expanding AIP eligibility to existing ACOs that meet specific parameters. Specifically, commenters requested that CMS consider exceptions that would allow FQHCs, RHCs, and critical access hospitals (CAHs) to be eligible for AIP, even if they do not meet the current eligibility requirements regarding revenue and risk experience. Other commenters noted that the current eligibility criteria are overly limiting and exclude many safety net providers as a result. The commenters noted that these provider types still lack the significant resources and infrastructure required to meaningfully address patients' health-related and social needs, even if they are deemed high-revenue by CMS.

*Response:* We agree with commenters that FQHCs, RHCs, CAHs, and other safety net providers play an important role in addressing the healthcare and social needs of underserved communities. However, we disagree that revising the AIP eligibility criteria is necessary for FQHCs, RHCs, and CAHs to receive advance investment payments. AIP eligibility requirements are set forth at § 425.630(b). Section 425.630(b)(2) currently provides that an ACO must have applied to participate in the Shared Savings Program under any level of the BASIC track's glide path and be eligible to participate in the Shared Savings Program to be eligible to receive advance investment payments. Section 425.102(a) states that CAHs that bill under Method II (as described in § 413.70(b)(3)), FQHCs, and RHCs are eligible to apply to participate in the Shared Savings Program. We remind commenters the Shared Savings Program currently includes these provider types among the 456 ACOs participating in CY 2023 (2023 Shared Savings Program Fast Facts: <https://www.cms.gov/files/document/2023-shared-savings-program-fast-facts.pdf>).

Moreover, as we explained in the CY 2023 PFS final rule (87 FR 69786), we disagree that the AIP eligibility criteria should include an exception for high revenue ACOs that include safety-net providers, such as CAHs, FQHCs, and RHCs, as ACO participants. This would result in many ACOs receiving advance investment payments that do not need access to start-up capital. The vast majority of FQHCs and RHCs participating in Shared Savings Program ACOs without a hospital are in low revenue ACOs, so the AIP eligibility criteria should not preclude them from receiving advance investment payments. We plan to monitor the impact of advance investment payments on ACO formation and program participation, including the impact on CAHs.

For the reasons explained in the previous discussion in this section of this final, we disagree with the commenters who suggested that CMS should revise the eligibility criteria to permit renewing or re-entering ACOs, currently participating ACOs, and ACOs that are experienced with performance-based risk Medicare ACO initiatives to receive advance investment payments.

*Comment:* Multiple commenters recommended that CMS allow new, high revenue ACOs to be eligible for AIP regardless of their geographic location or status as a safety net provider, contending that this approach is aligned with CMS' goal to increase participation in the program through AIP. A few commenters stated that the distinction between high and low revenue is "artificial." Another commenter cited analysis that found there was no significant difference in high revenue and low revenue ACO performance. One commenter shared that current AIP eligibility requirements exclude Medicare beneficiaries who may experience negative health outcomes due to socioeconomic factors simply because they are attributed to a high revenue ACO. These commenters urged CMS to remove the requirement that an ACO be considered low revenue to be eligible for advance investment payments.

*Response:* We disagree with commenters about whether revenue status is an appropriate criterion to consider in determining AIP eligibility. As we explained previously in this section of this final rule, the intent of AIP is to advance shared savings to provide start-up funding for ACOs that are less well capitalized than a high revenue ACO. Low revenue ACOs tend to be small, physician-led ACOs that are less well capitalized than a high revenue ACO, and low revenue ACOs may be encouraged to participate and remain in the program based on the availability of additional incentives, such as the opportunity to receive advance investment payments.

In contrast to low revenue ACOs, high revenue ACOs should not need advance funding from CMS to increase staffing, improve healthcare infrastructure, and provide accountable care for underserved beneficiaries, including Medicare beneficiaries who may experience negative health outcomes due to socioeconomic factors, because they are more likely to be sophisticated organizations with access to additional funding through parent organizations or capital markets and are more likely to already have the resources needed to provide accountable care for underserved beneficiaries. In addition to having access to more capital, ACOs identified as high revenue have a higher degree of control over the healthcare of their assigned beneficiaries.

Relative to low revenue ACOs, high revenue ACOs provide a larger proportion of the healthcare their beneficiaries receive. This is because the services high revenue ACOs provide to their beneficiaries account for a larger amount of their assigned beneficiaries' total Medicare Parts A and B FFS expenditures (See § 425.20, “High revenue ACO” and “Low revenue ACO”). They should therefore be in a better position to coordinate care for their beneficiaries. For further discussion of revenue status and other AIP eligibility criteria, we refer readers to our previous discussion in this section of this final rule and the CY 2023 PFS final rule (87 FR 69784 through 69786).

We also note that ACOs that meet the criteria set forth in § 425.630(b) are eligible to receive advance investment payments, regardless of their geographic location or status as a safety net provider. Separately, as we stated in the CY 2023 PFS final rule (87 FR 69803), we will continue to monitor and collect program data on advance investment payments and the AIP eligibility requirements. After data on how advance investment payments impact ACOs and their beneficiaries, including underserved beneficiaries, become available, CMS may revisit the AIP eligibility criteria in future rulemaking.

*Comment:* Some commenters noted that one barrier to increasing ACO participation in underserved communities is not including consideration of the level of need represented by their patient population in the AIP eligibility determination. Several commenters recommended CMS consider other eligibility criteria which are more reflective of an ACO’s level of capital and inclusive of the patient populations they serve. These commenters suggested that CMS consider the proportion of an ACO’s assigned beneficiaries who meet the highest risk factors-based score when determining AIP eligibility (that is, those beneficiaries who are enrolled in the Medicare Part D LIS or are dually eligible for Medicare and Medicaid, or whose mailing addresses are matched to ADIs at or above the 85th percentile).

*Response:* We disagree with the comment that beneficiary need is not considered when we determine an ACO’s eligibility for advance investment payments. As we explained in the CY

2023 PFS final rule (69785), re-entering and renewing ACOs are ineligible to receive advance investment payments partly because our experience administering the Shared Savings Program has shown us that these ACOs have already benefited from alternative payment model experience, and therefore, would be less likely to need financial support to develop programs targeting SDOH or to become operational. Similarly, as we explained previously in this section of this final rule, high revenue ACOs are ineligible to receive advance investment payments partly because, unlike low revenue ACOs, they are substantially better positioned to provide accountable care for underserved beneficiaries.

*Comment:* One commenter urged CMS to consider extending AIP eligibility to renewing or re-entering ACOs who have never achieved shared savings due to not having access to this type of up-front investment. Another commenter urged CMS to consider offering AIP opportunities for renewing, low revenue ACOs that require additional investment to sustain participation in the Shared Savings Program. The commenter noted this would be especially helpful for ACOs that have yet to earn shared savings and are caring for underserved populations.

*Response:* We remind commenters that advance investment payments are not intended to provide indefinite support to ACOs or to ACOs of all sizes, but to help provide start-up funding needed prior to earning shared savings for those ACOs that face difficulty finding such funding. Expanding AIP eligibility to all ACOs, including those that can demonstrate need among their beneficiary population, is not an appropriate use of the Medicare Trust Funds. For those reasons and the reasons explained previously in this section of this final rule, we disagree with the commenters who suggest we consider expanding AIP eligibility to certain renewing or re-entering ACOs.

For the reasons discussed above, we are finalizing the revisions we proposed at § 425.630(b) clarifying the AIP eligibility requirements and allowing the progression to performance-based risk for ACOs that receive advance investment payments beginning with PY

3 of the agreement period in which they received an advance investment payment. Under this finalized modification, CMS will continue to recoup from future shared savings. In contrast to what is required under existing § 425.316(e)(3), the ACO would not be immediately obligated to repay all advance investment payments it received by virtue of its transition to a two-sided model in its third performance year or any subsequent performance year. We note that under our proposal if an ACO opts to progress to a two-sided risk model (BASIC track's glide path Levels C through Level E) in PY2, CMS would terminate the ACO's advance investment payments, the ACO may be subject to compliance actions specified in §§ 425.216 and 425.218, and CMS may seek repayment of advance investment payments as set forth at § 425.316(e).

c. Modifications to AIP Recoupment and Recovery Policies for Early Renewing ACOs

(1) Background

In the CY 2023 PFS final rule (87 FR 69803 through 69805), CMS finalized program policies regarding recoupment and recovery of advance investment payments. In accordance with § 425.630(g)(4), if an ACO terminates its participation agreement during the agreement period in which it received an advance investment payment, the ACO must repay all advance investment payments it received. CMS would provide written notification to the ACO of the amount due and the ACO must pay such amount no later than 90 days after the receipt of such notification.

Paragraph (2) of the definition of “renewing ACO” at § 425.20 includes an ACO that continues its participation in the Shared Savings Program for a consecutive agreement period, without a break in participation, because it is an ACO that terminated its current participation agreement under § 425.220 and immediately enters a new agreement period to continue its participation in the program. In prior rulemaking (see, for example, 83 FR 67885 through 67890), we have referred to this provision as allowing for an “early renewal” option. In developing the AIP policies in the PFS rulemaking for CY 2023, we did not address the potential interactions between the policy on recovery of advance investment payments specified in

§ 425.630(g) and a voluntary termination of the participation agreement by an ACO that is seeking to early renew.

## (2) Revisions

In the CY 2024 PFS proposed rule (88 FR 52485), we proposed to amend § 425.630(g)(4) to create a limited exception to CMS's policy of recovering advance investment payments from an ACO that voluntarily terminates its participation agreement for the agreement period during which it received advance investment payments. Under this proposal, we would not seek to collect all advance investment payments received from an ACO in accordance with § 425.630(g)(4) if the ACO voluntarily terminates its participation agreement at the end of PY2 or later during the agreement period in which it received advance investment payments, provided that the ACO immediately enters into a new participation agreement with CMS under any level of the BASIC track's glide path or the ENHANCED track. Rather, we would carry forward any remaining balance of advance investment payments owed by the early renewing ACO into the ACO's new agreement period. ACOs who participate in the Shared Savings Program participate in either the Basic or Enhanced track for their entire agreement period. While all ACOs receiving advance investment payments must participate in the Basic track for their first agreement period, they have flexibility to begin a new agreement period and participate in either track while CMS recoups the payments from earned shared savings.

We proposed to allow an ACO approved for AIP to early renew its participation agreement before the expiration of its current agreement, as long as the ACO terminates its current participation agreement effective on or after December 31 of the ACO's second performance year. By requiring the ACO to maintain its current agreement period for the first 2 years, the ACO will receive all of its advance investment payments prior to renewing its participation agreement. We further proposed that in such circumstances, the early renewing ACO must continue to repay the advance investment payments through shared savings earned in the subsequent agreement period. If an ACO early renews prior to PY3, it will no longer comply

with the eligibility requirements for receiving payments in § 425.630(b)(1) and may be subject to compliance actions under §§ 425.216 and 425.218.

Section 425.630(e)(3) specifies that an ACO may spend advance investment payments over its entire agreement period and must repay to CMS any unspent funds remaining at the end of the ACO's agreement period. We proposed to amend § 425.630(e)(3) to permit an early renewing ACO to spend advance investment payments in its second agreement period so long as the advance investment payments are spent within 5 performance years of when it began to receive advance investment payments (that is, PY1 of its first agreement period). If the ACO does not spend all of the advance investment payments received by the end of the fifth performance year, the ACO must repay any unspent funds to CMS. The duration of spending advance investment payments was discussed in the CY 2023 PFS final rule (87 FR 69801).

As we stated in the CY 2024 PFS proposed rule (88 FR 52485), we anticipate these policy proposals would be most relevant to an ACO that is receiving advance investment payments and seeks to early renew to enter a new participation agreement to participate under modified Shared Savings Program policies that are not applicable to the ACO's current agreement period. For such an ACO, any remaining balance of advance investment payments owed would continue to be recouped from any shared savings the ACO earns in its new agreement period. Further, such an ACO would continue its participation in the Shared Savings Program without a lapse in participation and would be required to continue to adhere to all AIP requirements. Continued program participation aligns with our goals to improve the quality and efficiency of care. These policies provide ACOs the flexibility to participate in the Shared Savings Program in a manner that may work best for their structure and patient population without having to choose between immediately paying back the advance investment payments they received and being able to enter a new agreement with the Shared Savings Program. Some policy changes are applicable only to new agreement periods, and ACOs approved for AIP

should have the opportunity to enter a new agreement to experience those changes. We are finalizing this proposal without modification, and it will be effective January 1, 2024.

We solicited comments on the proposed changes to § 425.630(e)(3) and (g)(4).

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

*Comment:* Several commenters were supportive of CMS' proposal to provide these additional flexibilities to ACOs that receive advance investment payments and wish to early renew their participation in the Shared Savings Program. One commenter shared that they appreciate CMS' proposal to allow ACOs receiving advance investment payments to early renew and not require immediate repayment of all advance investment payments received. The commenter contended that allowing ACOs to repay advance investment payments in the ACO's new agreement period allows the ACO to participate in the Shared Savings Program in the manner that works best for their structure and patient population. The commenter also supported CMS' proposal to allow an early renewing ACO that received advance investment payments to continue to spend advance investment payments in its second agreement period, provided that the funds are spent within 5 performance years of when it began to receive advance investment payments. One commenter noted that this policy refinement could ensure continued Shared Savings Program participation by ACOs in their initial agreement periods.

*Response:* We agree with commenters that allowing flexibility for early renewing ACOs that received advance investment payments in the agreement period they are terminating will provide incentives for continued participation in the Shared Savings Program. Allowing ACOs to carry advance investment payments over into a new agreement period will provide flexibility to these ACOs that they can use to maximize their shared savings potential and participate in the Shared Savings Program in a manner that may work best for their structure and patient population without having to choose between immediately paying back the advance investment payments they received and being able to enter a new agreement period.

*Comment:* Several commenters were supportive of CMS's proposals to allow ACOs that receive advance investment payments to early renew but made recommendations to CMS on refining our AIP recoupment policies. These commenters urged CMS to consider modifications to AIP recoupment and recovery policies, which currently dictate that CMS will recoup advance investment payments from all earned shared savings by an ACO until all advance investment payments are repaid. Several commenters urged CMS to consider a longer time period for recoupment of advance investment payments. One commenter noted that if an ACO that received advance investment payments was unable to achieve shared savings payments for a significant period, this existing policy may jeopardize the ACO's ability to maintain its infrastructure and investments to support care coordination and performance improvement efforts. This commenter recommended a more gradual repayment that allows the ACO to retain a portion of earned shared savings during the performance year, noting that ACOs often reinvest earned shared savings to improve care quality and efficiency of care delivery.

*Response:* As we explained in the CY 2023 PFS final rule (87 FR 69804 through 69805), AIP recoupment begins the first performance year of the agreement period in which the ACO achieves shared savings, and any advance investment payments that are not recouped in the first agreement period would continue into the ACO's next agreement period and subsequent agreement periods if an AIP balance persists. We disagree with commenters that a longer recoupment period would be appropriate. As we explained in the CY 2023 PFS final rule, we view our AIP recoupment policy as a critical measure necessary to ensure the adequate protection of the Medicare Trust Funds regardless of the characteristics of the ACO's provider composition, aligned beneficiary population, and financial or quality performance. Immediately recouping these funds from earned shared savings should not disadvantage any ACOs as they will be receiving quarterly payments for the first 2 years. Regarding the commenters who advocated that ACOs should be able to retain a portion of their advance investment payments, we note that the advance investment payments are not intended to supplement FFS payments, but

rather provide start-up capital out of expected future shared savings to be used by new ACOs to provide sufficient resources for staffing, providing accountable care for underserved beneficiaries, and investing in healthcare delivery infrastructure.

After consideration of public comments, we are finalizing our proposed changes to AIP recoupment and recovery policies for early renewing ACOs. We are finalizing our proposed revisions to § 425.630(e)(3), with modifications for improved clarity. We are finalizing without modification our proposed revisions to § 425.630(g)(4).

In summary, we anticipate these finalized policy changes would be most relevant to an ACO that is receiving advance investment payments and seeks to early renew to enter a new participation agreement to participate under modified Shared Savings Program policies that are not applicable to the ACO's current agreement period. For such an ACO, any remaining balance of advance investment payments owed would continue to be recouped from any shared savings the ACO earns in its new agreement period. Further, such an ACO would continue its participation in the Shared Savings Program without a lapse in participation and would be required to continue to adhere to all AIP requirements. These finalized policies will be effective January 1, 2024.

#### d. Amendments to Termination Policies to Allow CMS to Cease Distribution of Advance Investment Payments Following an ACO's Notification of Voluntary Termination

##### (1) Background

In the CY 2023 PFS final rule (87 FR 69803), we finalized policies for termination of advance investment payments at § 425.630(h). Section 425.630(h)(1) specifies that CMS may terminate an ACO's advance investment payments if the ACO fails to comply with the requirements of § 425.630 or meets any of the grounds for ACO termination set forth in § 425.218(b). However, we did not address the termination of advance investment payments if an ACO voluntarily terminates its participation agreement in accordance with § 425.220(a). This created ambiguity regarding whether CMS would continue to make quarterly advance

investment payments to an ACO that voluntarily terminates its participation agreement in accordance with § 425.220(a) and does not immediately enter a new agreement period. We are concerned that the continued payment of advance investment payments in such a case would not serve the purpose for which CMS is making such payments and would create unnecessary program integrity risks for the Shared Savings Program. In such a case, CMS would be knowingly paying funds to the ACO that will need to be repaid upon termination.

## (2) Revisions

In the CY 2024 PFS proposed rule (88 FR 52485), we proposed to permit CMS to terminate advance investment payments for future quarters to an ACO that has provided CMS with notice of termination in accordance with § 425.220(a) if the ACO will not immediately enter a new agreement period. This avoids distributing advance investment payments to an ACO from which CMS would subsequently need to recover such payments. Specifically, we proposed to add § 425.630(h)(1)(iii), which allows CMS to terminate an ACO's advance investment payments when the ACO voluntarily terminates its participation agreement in accordance with § 425.220(a). We also proposed conforming changes to the punctuation of the list of factors in paragraphs (h)(1)(i) and (ii) of § 425.630. These proposed changes would be effective January 1, 2024.

We solicited comments on this proposal. We received public comments on this proposal. The following is a summary of the comments we received and our responses.

*Comment:* Several commenters expressed appreciation of CMS' proposed policy revisions to terminate advance investment payments made to an ACO in the case of voluntary termination. Commenters noted that this revision aligns with the policy for ceasing advance investment payments for other causes of termination and protects the Medicare Trust Funds. One commenter suggested that CMS consider the reasons for termination and investments made by the ACO when requiring terminated ACOs to pay back all advance investment payments received.

*Response:* We agree with commenters that ceasing advance investment payments to ACOs that inform CMS of their intent to terminate their participation agreement is necessary to safeguard the Medicare Trust Funds. We disagree with the commenter who suggested that CMS consider the reasons for the ACO's termination before requiring the repayment of all advance investment payments received. As we stated previously in this section of this final rule, recoupment of advance investment payments is a critical measure necessary to ensure the adequate protection of the Medicare Trust Funds regardless of the characteristics of the ACO's provider composition, aligned beneficiary population, and financial or quality performance. By requiring immediate repayment of advance investment payments upon early termination, we also reduce the risk that ACOs will voluntarily terminate their participation agreements to avoid repayment of advance investment payments.

After consideration of public comments, we are finalizing this proposal without modification. Beginning January 1, 2024, CMS will cease paying advance investment quarterly payments to any ACO that voluntarily terminates its participation agreement in accordance with § 425.220(a) if the ACO will not immediately enter a new agreement period. This policy revision is consistent with § 425.630(g)(4), which requires such an ACO to repay all advance investment payments within the 90 days after receiving notice of the amount due to CMS.

#### e. Requirements for ACOs to Report to CMS Spend Plan Updates and Use of Advance Investment Payments

In the CY 2023 PFS final rule (87 FR 69786 through 69788), CMS finalized program policies to require ACOs that receive advance investment payments to submit a spend plan to CMS as a part of their Shared Savings Program application (§ 425.630(d)(1)). In accordance with § 425.630(d)(3), CMS may review an ACO's spend plan at any time and require the ACO to modify its spend plan to comply with the spend plan requirements specified at § 425.630(d)(2) and the requirements for use and management of advance investment payments at § 425.630(e).

In the CY 2023 PFS final rule (87 FR 69801 and 69802), we also finalized requirements at § 425.308(b)(8) that an ACO receiving advance investment payments must publicly report information, updated annually, about the ACO's use of advance investment payments for each performance year, including the following:

- The ACO's spend plan.
- The total amount of any advance investment payments received from CMS.
- An itemization of how advance investment payments were spent during the year, including expenditure categories, the dollar amounts spent on the various categories, any changes to the spend plan submitted under § 425.630(d), and such other information as may be specified by CMS.

These provisions do not require an ACO to submit this same information to CMS. To support CMS's ability to monitor AIP efficiently, in the CY 2024 PFS proposed rule (88 FR 52486), we proposed that an ACO must report to CMS the same information about its use of advance investment payments that it is required to publicly report under § 425.308(b)(8).

To ensure that § 425.630 sets forth the complete requirements applicable to an ACO's obligation to report information on its receipt and use of advance investment payments, we proposed to add a new provision at § 425.630(i) specifying that an ACO must (1) publicly report information about the ACO's use of advance investment payments for each performance year in accordance with § 425.308(b)(8); and (2) in a form and manner and by a deadline specified by CMS, report to CMS the same information it is required to publicly report in accordance with § 425.308(b)(8).

We expect that these proposed changes would help ensure that CMS efficiently obtains information in a consistent manner from all ACOs receiving advance investment payments and thereby support CMS's monitoring and analysis of the use of advance investment payments. We anticipate that these proposed changes will impose little to no administrative burden on participating ACOs, which are already required to publicly report this information by

§ 425.308(b)(8). Further, we expect to use the submitted data as the template that ACOs can use to populate their public reporting webpage early in each performance year to minimize administrative burden for ACOs. These proposed changes would be effective January 1, 2024.

We solicited comments on this proposal. We received public comments on this proposal. The following is a summary of the comments we received and our responses.

*Comment:* Several commenters supported CMS' proposal to require ACOs receiving advance investment payments to report the same information to CMS as is reported publicly on the ACOs public reporting website page. Another commenter noted that AIP reporting will require additional steps for the ACOs who have elected to receive advance investment payments. The commenter cautioned CMS to consider ways to reduce any extra reporting steps and instead allow for increased flexibility for reporting on advance investment payments and AIP spend plans.

*Response:* We agree with commenters that the information ACOs publicly report about their use of advance investment payments must be consistent with the information the ACOs provide to CMS. This proposal ensures that CMS receives the same information ACOs publicly account for advance investment payments received and their actual advance investment payment spending by category (that is, increased staffing, healthcare infrastructure and provisions of accountable care by underserved beneficiaries) and thereby supports CMS's monitoring of ACOs' use of advance investment payments. While CMS is mindful of reporting burden, this proposal supports our program integrity and monitoring efforts, and the administrative burden on participating ACOs should be minimal because they are already required to publicly report this information by § 425.308(b)(8). We remind the commenters that we expect to use the submitted data as the template that ACOs can use to populate their public reporting webpage early in each performance year to minimize administrative burden on ACOs. In the future, CMS will consider ways to further ease the reporting burden on ACOs receiving advance investment payments.

*Comment:* One commenter shared that AIP could be leveraged by ACOs to enhance

sociodemographic data collection, create targeted initiatives to reduce health disparities, and develop relationships with community-based organizations (CBOs) to address social needs. In short, the commenter suggested that advance investment payments could accelerate the investments and infrastructure for existing ACOs to build health equity programs, including data collection on the social determinants of health of beneficiaries.

*Response:* We agree with the commenter that AIP could provide an opportunity to collect sociodemographic data on beneficiaries in the Shared Savings Program if necessary to implement initiatives focused on increased staffing, health care infrastructure, and the provision of accountable care for underserved beneficiaries, which may include addressing social determinants of health as required in § 425.630(e)(1). We note that advance investment payments must be used consistent with all applicable laws and regulations, including applicable anti-discrimination laws. We also agree with the commenter that advance investment payments could assist in providing coordinated care to underserved populations, and we agree that advance investment payments could be valuable in enabling clinical practices to partner with CBOs when identifying and providing care to underserved beneficiaries, which we note may include those who are impacted by SDOH factors that contribute to poor health outcomes. In the future, after advance investment payments are implemented in PY 2024, we will monitor how advance investment payments impact ACOs and their beneficiaries, including how ACOs use the funds. We intend to expand access to accountable care in underserved communities and will continue to refine and improve the Shared Savings Program to encourage ACO participation.

After consideration of public comments, we are finalizing as proposed the addition of a new provision at § 425.630(i). This finalized change will help ensure that CMS efficiently obtains information in a consistent manner from all ACOs receiving advance investment payments and thereby support CMS's monitoring and analysis of the use of advance investment payments.

f. Permitting Reconsideration Review of Quarterly Payment Calculations

## (1) Background

In the CY 2023 PFS final rule (87 FR 69795 and 69796), we specified that an ACO can request a reconsideration review if CMS does not make an advance investment payment to the ACO under subpart I of part 425 (§ 425.630(f)). However, we did not specify that an ACO could request reconsideration of the amount of the advance investment payments.

## (2) Revisions

In the CY 2024 PFS proposed rule (88 FR 52487), we proposed to permit an ACO to request a reconsideration review for all AIP quarterly payment calculations, not just instances where no payments are distributed. We proposed to revise § 425.630(f) to provide that CMS would notify in writing each ACO of its determination of the amount of the advance investment payments it will receive and that such notice would inform the ACO of its right to request reconsideration review in accordance with the procedures specified under 42 CFR part 425, subpart I. We solicited comments on this proposal.

We received several public comments on this proposal. The following is a summary of the comments we received and our response.

*Comment:* All commenters supported CMS' proposed policy refinement. Commenters also suggested that CMS provide payment details far enough in advance to allow sufficient time to resolve reconsideration reviews and avoid delayed payments to ACOs.

*Response:* We appreciate the commenter's support of our proposed policy. CMS intends to provide payment details as quickly as operationally possible to avoid delays in payment of advance investment payments.

After consideration of public comments, we are finalizing as proposed the revision of § 425.630(f) without modification.

## 6. Shared Savings Program Eligibility Requirements

### a. Overview

We proposed two modifications to the Shared Savings Program eligibility requirements that will be implemented on January 1, 2024. Specifically, we proposed the following, which are discussed in more detail in sections (b) and (c) below:

- Remove the option for ACOs to request an exception to the shared governance requirement that 75 percent control of an ACO's governing body must be held by ACO participants.
- Codify the existing Shared Savings Program operational approach to specify that CMS determines that an ACO participant TIN participated in a performance-based risk Medicare ACO initiative if it was or will be included on a participant list used in financial reconciliation for a performance year under performance-based risk during the 5 most recent performance years.

### b. Shared Governance Requirement

#### (1) Background

In the November 2011 final rule (76 FR 67819), we finalized policies that require an ACO to establish and maintain a governing body with adequate authority to execute the statutory functions of an ACO, and we codified the governing body policies at § 425.106. Specifically, § 425.106(c)(3) mandates that at least 75 percent control of an ACO's governing body must be held by ACO participants. An ACO's governing body is responsible for providing ACO leadership, strategic direction, and oversight for operational management towards meeting the goals of the ACO, including better care, healthy communities, and reduced spending. This responsibility incorporates not only the delivery of improved healthcare, but also the promotion of evidence-based healthcare practices, improved engagement of patients and caregivers, reporting on quality and cost, provision of high-quality care to beneficiaries, and the distribution of shared savings, among other functions. In the November 2011 final rule (76 FR 67819), we indicated our belief that this requirement allowed for Medicare-enrolled entities that directly

provide health care services to beneficiaries to drive decision-making, while recognizing that partnerships with non-Medicare enrolled entities outside this 75 percent composition allow these participants access to capital and infrastructure needed for an ACO. This physician-driven leadership is balanced by the remaining percentage of the governing body that is made up of patient advocates, accounting, legal and other professionals that support administrative duties and other functions of the ACO.

We affirmed in the November 2011 final rule (76 FR 67820) our belief that the 75 percent participant control requirement is necessary to ensure that ACOs are provider-driven, innovative in care delivery and strike an appropriate balance to incentivize and empower ACO participants to be accountable for the success of the ACO's operations and improve the health outcomes of their beneficiaries. Previously, commenters expressed concern that the 75 percent participant control threshold is overly prescriptive and may hinder operations, conflict with IRS and State tax laws, and restrict access to capital for the ACO. ACOs requested flexibility to develop their own governing body composition to meet the unique leadership needs of the ACO. In response to these comments, CMS granted an exception process for an ACO that wishes to structure its governing body in a manner that does not meet the 75 percent participant control threshold as required under § 425.106(c)(3). Under the exception process defined at paragraph (c)(5), an ACO must describe why it seeks to differ from the 75 percent participant control threshold and how the ACO will involve ACO participants in innovative ways in ACO governance. If the exception is granted by CMS, an ACO can form a governing body with less than 75 percent participant control.

In the December 2014 Medicare Shared Savings Program proposed rule (79 FR 72776) we proposed to revise § 425.106(c)(5) to remove the flexibility for ACOs to deviate from the requirement that at least 75 percent control of an ACO's governing body must be held by ACO participants. We stated that, through program implementation, we learned that ACO applicants do not have difficulty meeting the requirements under § 425.106(c)(3) that ACO participants

maintain 75 percent control of the governing body. We also noted that since CY 2012, we had not denied participation to any ACO applicants solely based on failure to comply with this requirement and no exceptions have been granted by CMS under § 425.106(c)(5). Furthermore, we affirmed the 75 percent participant control requirement to be “necessary and protective of the ACO participant’s interests” and thus, that there was no reason to continue to offer an exception to the rule.

During the public comment period for the December 2014 Medicare Shared Savings Program proposed rule, several commenters advocated for retaining the flexibility offered at § 425.106(c)(5), stating that an ACO may elect to utilize the exception in the future. In our response, we noted that our program experience thus far had not suggested that commenters’ concerns that laws concerning the composition of tax-exempt or State-licensed entities would interfere with their ability to meet the 75 percent participant control threshold would impact their compliance with this requirement. However, since implementation of the requirement remained in the early stages and we had limited applicability with ACOs in two-sided risk tracks, we declined to finalize the proposal in the June 2015 final rule (80 FR 32719) and elected to retain the flexibility at § 425.106(c)(5). In the final rule, we noted that we anticipated granting such exceptions only in limited circumstances (that is, an ACO being unable to meet the 75 percent participant control requirement because it conflicts with other laws) and might revisit this issue in future rulemaking.

## (2) Revisions

We continue to believe that ACO participants should drive ACO leadership to move toward improved quality of care and patient outcomes, and that this is a key component of ACO success and ability to earn shared savings. The 75 percent participant control threshold is critical to ensuring that governing bodies are participant-led and best positioned to meet program goals, while allowing for partnership with non-Medicare enrolled entities to provide needed capital and infrastructure for ACO formation and administration.

Over the years, a few ACOs have requested an exception to form a governing body with less than 75 percent participant control. CMS discussed the exemption requests with the interested ACOs and ultimately most ACOs adjusted to comply with the 75 percent participant control requirement. As noted in the proposed rule, we believed that no ACO had been granted an ACO an exception to this requirement, despite the flexibility provided in current regulation. Accordingly, we believed that there was no reason to continue to offer an exception to the requirement. Thus, we proposed to remove the option under § 425.106(c)(5) for ACOs to request an exception to the requirement specified in § 425.106(c)(3) that 75 percent control of the ACO's governing body must be held by ACO participants. Additionally, we proposed a corresponding revision to § 425.204(c)(3) to remove the option for ACOs to request an exception to the 75 percent control requirement under § 425.106(c)(3) as part of their Shared Savings Program applications.

We solicited comments on the appropriateness of our proposed policy refinement and elimination of the exception process. As stated in the CY 2024 PFS proposed rule, the proposed modification to § 425.106(c) would make no changes to paragraphs(c)(2), (3) and (4). We also proposed to amend § 425.106(c)(5) to remove reference to paragraph (c)(3) and the procedure for submitting a request for an exception to the 75 percent requirement. Specifically, in our proposal the revised regulation text would state that in cases in which the composition of the ACO's governing body does not meet the requirements of paragraph (c)(2) of this section, the ACO must describe why it seeks to differ from these requirements and how the ACO will provide meaningful representation in ACO governance by Medicare beneficiaries. Additionally, we proposed to amend § 425.204(c)(3) to remove references to § 425.106(c)(3) and the procedure for submitting a request for an exception to the 75 percent requirement. We proposed that these amendments would become effective on January 1, 2024.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Commenters largely supported our proposal to remove the option for ACOs to request an exception to the requirement specified in § 425.106(c)(3) that 75 percent control of the ACO's governing body must be held by ACO participants. Commenters noted they believe the threshold was appropriate, attainable, and important to ACO care delivery. Other commenters also noted that they believe that it is important to ACO participant involvement and supported centering practitioners in ACO governance.

*Response:* We agree with the majority of commenters who stated that it was appropriate to remove the exception to meeting the requirement that 75 percent control of the ACO's governing body must be held by ACO participants. We agree with commenters about the importance of ACO participant governance and that it is attainable. We believe that this requirement is necessary and protective of the ACO participants' interests and does not believe that it is necessary to grant exceptions to this requirement.

*Comment:* One commenter did not support removing the exception and wanted ACOs to retain the ability to make this request. Another commenter contested the statement that CMS has never issued an exception to the 75 percent control threshold, as they had worked with ACOs who believe they have received such an exception.

*Response:* We disagree with the commenter who wants to retain the exception for the meeting the 75 percent participant control threshold as we do not believe it is necessary for ACO participation as noted above. However, in response to the comment regarding previously issued exceptions, we reviewed all previous application data and discovered 3 ACOs operating with an exception to the 75 percent threshold and 2 that had an exception at the start of their agreement period but are currently meeting the threshold. While CMS failed to identify these ACOs in the proposed rule and the assertion that approvals had never occurred was cited by several supporting comments, these previously issued exceptions do not change our belief that exceptions to this requirement should no longer be permitted. To reduce disruption for the few ACOs who do not currently meet the requirement, we are finalizing this policy with the

modification that the exception will be permitted only for agreement periods beginning before January 1, 2024.

After consideration of the public comments, we are finalizing our proposal with modification, to specify that the option under § 425.106(c)(5) for ACOs to request an exception to the requirement specified in § 425.106(c)(3) that 75 percent control of the ACO's governing body must be held by ACO participants is applicable only to agreement periods beginning before January 1, 2024.

Additionally, we are finalizing with modification the proposed changes to § 425.204(c)(3). We are finalizing revisions to § 425.204(c)(3)(iii) to limit the option for ACOs to request an exception to the 75 percent control requirement under § 425.106(c)(3), as part of their Shared Savings Program applications, to agreement periods beginning before January 1, 2024. Further, we are finalizing a technical change to § 425.204(c)(3)(ii), to provide a more complete cross-reference to § 425.106(c)(2), for clarity and consistency.

#### c. Identifying ACOs Experienced with Risk Based on TINs' Prior Participation

##### (1) Background

In the December 2018 final rule, we added a new paragraph (d) under § 425.600 to set forth the participation options for ACOs that are experienced or inexperienced with “performance-based risk Medicare ACO initiatives” (which is defined at § 425.20 to include certain Innovation Center ACO models, as well as two-sided risk tracks of the Shared Savings Program). We also finalized the definitions of “experienced with performance-based risk Medicare ACO initiatives” and “inexperienced with performance-based risk Medicare ACO initiatives” (83 FR 68062). These definitions classify ACOs by experience level based on the percentage of ACO participant TINs that participated in performance-based risk Medicare ACO initiatives during a 5-year lookback period. However, current regulation text does not specify how CMS determines whether an ACO participant TIN has “participated” in a performance-based risk Medicare ACO initiative. To improve clarity of the regulations, we proposed to codify

our existing program policy under which an ACO participant TIN is considered to have participated in a performance-based risk Medicare ACO initiative if it was or will be included in financial reconciliation for a performance year under such initiative during any of the 5 most recent performance years.

Under the December 2018 final rule, an ACO is “inexperienced with performance-based risk Medicare ACO initiatives” (and therefore, eligible to enter an agreement period under the BASIC track’s glide path), if less than 40 percent of its ACO participants has participated in a performance-based risk Medicare ACO initiative in “each” of the 5 most recent performance years prior to its Shared Savings Program agreement start date, and the ACO legal entity has not participated in any performance-based risk Medicare ACO initiative (83 FR 67895). Similarly, an ACO is “experienced with performance-based risk Medicare ACO initiatives” if 40 percent or more of its ACO participants has participated in a performance-based risk Medicare ACO initiative in “any” of the 5 most recent performance years prior to its Shared Savings Program agreement start date (83 FR 67895). Thus, if 40 percent or more of the entities on an ACO participant list participated in a performance-based risk Medicare ACO initiative in a single performance year within the 5 most recent performance years, we would determine that the ACO meets the definition of “experienced with performance-based risk Medicare ACO initiatives.” Conversely, we would determine that an ACO satisfies the definition of “inexperienced with performance-based risk Medicare ACO initiatives” only if it is below the 40 percent threshold in all of the 5 most recent performance years prior to the ACO’s agreement start date. In other words, an ACO is inexperienced with performance-based risk Medicare ACO initiatives as long as it does not meet the definition of “experienced with performance-based risk Medicare ACO initiatives” in any of the five most recent performance years prior to the ACO’s agreement start date. We chose to use a 5-year lookback period for determining whether an ACO is experienced or inexperienced with performance-based risk Medicare ACO initiatives for a number of reasons, including that it could reduce the incentive for organizations to wait out the period in an effort to

establish a new legal entity with the same or very similar composition of ACO participants for purposes of gaming program policies.

We recognized that some ACOs or TINs in performance-based risk Medicare ACO initiatives participate for only part of a performance year, but our current regulation text does not specify the duration of participation required for CMS to determine that an ACO participant TIN has participated in a performance-based risk Medicare ACO initiative.

## (2) Revisions

We proposed to codify the current operational approach for determining whether an ACO participant has participated in a performance-based risk Medicare ACO initiative. Under our current operational approach, an ACO participant is considered to have participated in a performance-based risk Medicare ACO initiative if its TIN was or will be used to calculate financial reconciliation for the entity participating in such ACO initiative (“Initiative ACO”). In general, if an ACO participant was included on an Initiative ACO’s participant list for a performance year during the 5 most recent performance years before the ACO’s agreement start date, and the Initiative ACO is, or will be, financially reconciled for that performance year, the ACO participant will be considered to have participated in the Initiative ACO. This will generally be true regardless of whether the entity leaves the Initiative ACO mid-performance year because its claims experience would still be used in the Initiative ACO’s alignment and financial reconciliation for that performance year. If the ACO participant was included on an Initiative ACO’s participant list for a performance year during the lookback period, but the ACO voluntarily terminates before the deadline for reconciliation or is otherwise not eligible for reconciliation, the ACO participant will not be considered to have experience with risk because its claims experience would not be used for financial reconciliation.

Except for determinations made regarding AIP ACOs for purposes of § 425.316(e)(2), we determine whether an ACO is experienced with performance-based risk Medicare ACO initiatives prior to the start of an ACO’s agreement start date. At the time we make these

determinations, the ACO may be in the middle of a PY for which reconciliation has not yet occurred. Nevertheless, we believe that at the time we make these determinations, we have the information necessary to determine whether an ACO or ACO participant TIN will be included in financial reconciliation for a PY in the relevant Medicare ACO initiative because this issue is addressed in the terms of each Medicare ACO initiative. For example, as outlined in § 425.221(b)(2)(ii)(A), if an ACO in a two-sided model terminates from the Shared Savings Program after June 30<sup>th</sup> of a PY, they will be held responsible for a pro-rated share of any shared losses determined for the performance year during which the termination becomes effective. Any ACO participant TIN that was included on the participant list for that performance year will have been included in beneficiary alignment and their claims experience used to calculate the benchmark and performance year expenditures. For other Medicare ACO initiatives, the terms of the participation agreement specify when the ACO is subject to reconciliation and which TINs will be included in reconciliation.

We proposed to modify the existing definitions for “experienced with performance-based risk Medicare ACO initiatives” and “inexperienced with performance-based risk Medicare ACO initiatives” at § 425.20 to include the following new sentence at the end of each definition: An ACO participant is considered to have participated in a performance-based risk Medicare ACO initiative if the ACO participant TIN was or will be included in financial reconciliation for one or more performance years under such initiative during any of the 5 most recent performance years. We also proposed a technical correction to remove the language “as defined under this section” from both definitions. We proposed that these amendments would become effective on January 1, 2024.

We solicited comments on the proposed regulation text.

The following is a summary of the comments received on the proposal to codify the existing Shared Savings Program operational approach to specify that CMS determines that an ACO participant TIN participated in a performance-based risk Medicare ACO initiative if it was

or will be included on a participant list used in financial reconciliation for a performance year under performance-based risk during the 5 most recent performance years and our responses:

*Comment:* Commenters supported the proposal to codify the existing Shared Savings Program operational approach to specify that CMS determines that an ACO participant TIN participated in a performance-based risk Medicare ACO initiative if it was or will be included on a participant list used in financial reconciliation for a performance year under performance-based risk during the 5 most recent performance years. Multiple commenters appreciated CMS' transparency regarding program operations.

*Response:* We thank the commenters for their support and agree that aligning the definitions of “experienced with performance-based risk Medicare ACO initiatives” and “inexperienced with performance-based risk Medicare ACO initiatives” with current operational methodologies will bring increased clarity and transparency around the determination of experience level.

*Comment:* While multiple commenters appreciated the additional detail this proposal provides regarding TIN risk experience determination, they requested further clarification on the methodology described. One commenter asked how a determination of experience would be made if a portion of a TIN has participated in performance-based risk Medicare ACO initiatives during the 5 most recent performance years. In particular, they asked if a TIN would be classified as experienced if one participant in the TIN previously participated in ACO REACH, where participation is determined at the TIN/NPI level. Other commenters advocated for a process where ACOs could submit a reconsideration review if an ACO participant TIN has been determined to have participated in an Innovation Center ACO Model based on a small percentage of NPIs billing under the TIN for a split-TIN model. Both sets of commenters providing these additional suggestions advocated for CMS to align the experience thresholds at the ACO and TIN levels, meaning a TIN would only be considered experienced if 40 percent or more of the NPIs billing under the TIN participated in any performance-based risk Medicare

ACO initiatives.

*Response:* We thank the commenters for their support to codify the existing operational approach around TIN experience determination. As the commenters stated, the Shared Savings Program identifies participants using full TINs, which requires all individuals and entities that have reassigned their right to receive Medicare payment to the TIN of an ACO participant to participate in the ACO and comply with program requirements (82 FR 53689). As stated in the December 2018 final rule, we believe that defining ACO participants to include all NPIs that have reassigned their billing rights to the TIN is a means to allowing the ACO's redesigned care processes to more broadly reach all Medicare FFS beneficiaries that may receive care from ACO participants, including those that may not meet the program's assignment criteria, and provides incentives for lower performing providers within an ACO participant TIN to improve (83 FR 67874). Additionally, NPIs who have participated in a risk-based arrangement can help facilitate care redesign within their TIN, better preparing the TIN to join a ACO taking on risk. The impact of ACO participant experience can be seen in the shared savings results. Of the ACOs that newly joined the Shared Savings Program in 2022, 88 percent of the ACOs considered experienced with performance-based risk earned shared savings in the first performance year in comparison to 46 percent of the ACOs that were considered inexperienced with performance-based risk.

After consideration of public comments, we are finalizing without modification the proposed changes to the definitions for “experienced with performance-based risk Medicare ACO initiatives” and “inexperienced with performance-based risk Medicare ACO initiatives” at § 425.20. We believe these changes will improve ACO understanding of our current operational policies.

## 7. Technical Changes to References in Shared Savings Program Regulations

### a. References to an ACO’s Assignment Methodology Selection

Section 1899(c)(2)(A) of the Act, as amended by the Bipartisan Budget Act of 2018, provides all ACOs with a choice of prospective assignment for agreement periods beginning on or after January 1, 2020. In the December 2018 final rule (83 FR 67859 through 67863), we finalized modifications to the Shared Savings Program's regulations, to separate the choice of beneficiary assignment methodology from the choice of participation track (financial model). We also added a new section of the Shared Savings Program regulations at § 425.226 to govern annual participation elections (see 83 FR 67857 through 67859). In accordance with § 425.226, before the start of a performance year an ACO may make elections related to its participation in the Shared Savings Program, including selection of its beneficiary assignment methodology, which will be effective at the start of the applicable performance year and for the remaining years of the agreement period, unless superseded by a later election. Section 425.226(a)(1) specifies that an ACO may select the assignment methodology that CMS employs for assignment of beneficiaries under subpart E of the Shared Savings Program regulations. An ACO may select either of the following: (i) preliminary prospective assignment with retrospective reconciliation, as described in § 425.400(a)(2); or (ii) prospective assignment, as described in § 425.400(a)(3).

For consistency, in the December 2018 final rule (83 FR 67859 through 67863), we also finalized conforming changes to regulations that previously identified assignment methodologies according to participation track. Among other changes to the Shared Savings Program regulations, we added § 425.400(a)(4)(ii) to establish that for agreement periods beginning on July 1, 2019, and in subsequent years, the ACO may select the assignment methodology CMS employs for the assignment of beneficiaries. As specified in § 425.400(a)(4)(ii)(B), this selection of assignment methodology is made prior to the start of each agreement period and may be modified prior to the start of each performance year as specified in § 425.226 (83 FR 67863).

Although §§ 425.226(a)(1) and 425.400(a)(4)(ii) both reference assignment methodology selection, there are key differences in the purpose each section serves in directing action from the ACO versus action that CMS initiates. Section 425.226 states that the initial selection of, and any

annual selection for a change in, beneficiary assignment methodology by an ACO must be made in the form and manner and according to the timeframe, that we establish. Therefore, § 425.226(a)(1) is the relevant regulation for referencing the ACO's option to select and to change its selection of assignment methodology. That is, § 425.226 describes actions for which the ACO is responsible because the ACO is selecting the assignment methodology that will be effective at the beginning of the ACO's agreement period or making a change to the ACO's prior assignment methodology selection that will become effective at the beginning of the next performance year.

In comparison, § 425.400 outlines how we employ the assignment methodology described in §§ 425.402 and 425.404 for purposes of benchmarking, preliminary prospective assignment (including quarterly updates), retrospective reconciliation, and prospective assignment. Therefore, § 425.400(a)(4)(ii) is the relevant regulation for referencing how we determine the assignment methodology to be used in the referenced program operations or program calculations. That is, § 425.400(a)(4)(ii) governs actions undertaken by us because we are applying the ACO's selected assignment methodology when determining benchmarking, preliminary prospective assignment, retrospective reconciliation, and prospective assignment.

Throughout the current Shared Savings Program regulations text, there are various references to § 425.226(a)(1) or § 425.400(a)(4)(ii). We conducted a review of the Shared Savings Program regulations text to determine whether the existing 12 references to either § 425.226(a)(1) or § 425.400(a)(4)(ii) align with provisions' intended purposes. We also considered the intended purposes of the provisions in identifying the appropriate cross-reference to include in the proposed new regulation at § 425.655, which is described in section III.G.4.b. of this final rule.

We believe the following five references to § 425.400(a)(4)(ii) are consistent with the intended purpose of § 425.400(a)(4)(ii) because they refer to how we determine the ACO's chosen assignment methodology for purposes of determining beneficiary assignment or

performing certain program calculations: § 425.609(c)(1); § 425.652(a)(5)(v)(A) and (b)(2)(iv)(A); § 425.654(a)(1)(i); and § 425.656(b)(3).

We believe the following two references to § 425.226(a)(1) are consistent with the intended purpose of § 425.226(a)(1) because the references are used when referring to the ACO's option to change its selection of assignment methodology: § 425.601(a)(9) introductory text; and § 425.652(a)(9) introductory text.

We identified five inconsistencies in references to §§ 425.226(a)(1) and 425.400(a)(4)(ii) that we proposed to revise in the CY 2024 PFS proposed rule (see 88 FR 52490). To follow is a description of the five references that we proposed to revise in 42 CFR part 425, subpart G to ensure that the appropriate assignment selection reference is being cited, for clarity and consistency.

For performance years starting on January 1, 2019, and subsequent performance years, we add beneficiaries to an ACO's list of assigned beneficiaries based on a beneficiary's designation of an ACO professional as the provider or supplier they consider responsible for coordinating their overall care, if certain conditions are satisfied, including the conditions specified in § 425.402(e)(2)(ii)(A). In accordance with § 425.402(e)(2)(ii)(A), the beneficiary must meet the eligibility criteria established at § 425.401(a) and must not be excluded by the criteria at § 425.401(b). Further, § 425.402(e)(2)(ii)(A) specifies that the exclusion criteria at § 425.401(b) apply for purposes of determining beneficiary eligibility for alignment to an ACO based on the beneficiary's designation of an ACO professional as responsible for coordinating their overall care under § 425.402(e), regardless of the ACO's assignment methodology selection under § 425.400(a)(4)(ii). The citation to § 425.400(a)(4)(ii) in § 425.402(e)(2)(ii)(A) is not consistent with the intended purpose of the reference, which is to refer to the ACO's option to change its assignment methodology selection. Therefore, in the CY 2024 PFS proposed rule (88 FR 52490), we proposed to amend § 425.402(e)(2)(ii)(A) by removing the reference to §

425.400(a)(4)(ii) and adding in its place a reference to § 425.226(a)(1), for clarity and consistency.

The introductory text of § 425.601(a) (applicable to agreement periods beginning on or after July 1, 2019, and before January 1, 2024) and of § 425.652(a) (applicable to agreement periods beginning on January 1, 2024, and in subsequent years) specify that in computing an ACO's historical benchmark for its first agreement period under the Shared Savings Program, we determine the per capita Parts A and B FFS expenditures for beneficiaries that would have been assigned to the ACO in any of the 3 most recent years prior to the start of the agreement period using the ACO participant TINs identified before the start of the agreement period as required under § 425.118(a) and the beneficiary assignment methodology selected by the ACO for the first performance year of the agreement period as required under § 425.226(a)(1). Accordingly, the introductory text in § 425.601(a) and in § 425.652(a) is describing how we will compute expenditures for beneficiaries that would have been assigned to the ACO based on the assignment methodology selected by the ACO. These provisions are referring to how we determine the assignment methodology to be used to identify the beneficiary population that would have been assigned in the three benchmark years, not to the ACO's act of selecting the assignment methodology. Therefore, in the CY 2024 PFS proposed rule (see 88 FR 52490), we proposed to amend the introductory text of § 425.601(a) and of § 425.652(a) by removing the references to § 425.226(a)(1) and adding in their place references to § 425.400(a)(4)(ii), for clarity and consistency.

Section 425.652(a)(9)(ii) specifies that for agreement periods beginning on January 1, 2024, and in subsequent years, when adjusting the benchmark for certain changes during the agreement period, we redetermine the regional adjustment amount under § 425.656 according to the ACO's assigned beneficiaries for BY3, and based on the assignable population of beneficiaries identified for the assignment window corresponding to BY3 that is consistent with the assignment window that applies under the beneficiary assignment methodology selected by

the ACO for the performance year according to § 425.226(a)(1). In § 425.652(a)(9)(ii), the reference to § 425.226(a)(1) is not consistent with the intended purpose of the reference, which is to specify how we determine the assignment methodology that will be used to identify the assigned beneficiary and assignable beneficiary populations for purposes of redetermining the regional adjustment amount in the event the ACO changes its selected assignment methodology for a performance year. Therefore, in the CY 2024 PFS proposed rule (88 FR 52490), we proposed to amend § 425.652(a)(9)(ii) by removing the reference to § 425.226(a)(1) and adding in its place the reference to § 425.400(a)(4)(ii), for clarity and consistency.

Section 425.652(a)(9)(iv) describes that for agreement periods beginning on January 1, 2024, and in subsequent years, when adjusting the benchmark for certain changes during the agreement period, we redetermine the proration factor used in calculating the prior savings adjustment under § 425.658(b)(3)(ii) to account for changes in the ACO's assigned beneficiary population in the benchmark years of the ACO's current agreement period due to the addition and removal of ACO participants or ACO providers/suppliers in accordance with § 425.118(b), a change to the ACO's beneficiary assignment methodology selection under § 425.400(a)(4)(ii), or changes to the beneficiary assignment methodology under 42 CFR part 425, subpart E. In § 425.652(a)(9)(iv), the reference to § 425.400(a)(4)(ii), is not consistent with the intended purpose of the reference, which is to specify that we will redetermine the proration factor used in calculating the prior savings adjustment if the ACO changes its beneficiary assignment methodology selection. Therefore, we proposed to amend § 425.652(a)(9)(iv) by removing the reference to § 425.400(a)(4)(ii) and adding in its place a reference to § 425.226(a)(1), for clarity and consistency.

We solicited comments on these proposed technical changes.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* All commenters supported these proposals and provided no further

elaboration or suggestions, stating that these technical changes will eliminate errors and inconsistencies and improve clarity in the regulatory text:

*Response:* We agree with commenters that these technical changes will eliminate errors and inconsistencies and improve clarity in the regulatory text.

We are finalizing the proposal to amend five inconsistencies in references to §§ 425.226(a)(1) and 425.400(a)(4)(ii). Specifically, we are finalizing the following:

- Amend § 425.402(e)(2)(ii)(A) by removing the reference to § 425.400(a)(4)(ii) and adding in its place a reference to § 425.226(a)(1).
- Amend the introductory text of § 425.601(a) and of § 425.652(a) by removing the reference to § 425.226(a)(1) and adding in its place a reference to § 425.400(a)(4)(ii).
- Revise § 425.652(a)(9)(ii) to remove the reference to § 425.226(a)(1) and include a reference to § 425.400(a)(4)(ii), among other revisions to this paragraph that we are finalizing with this final rule (see section III.G.3.a. of this final rule).
- Amend § 425.652(a)(9)(iv) by removing the reference to § 425.400(a)(4)(ii) and adding in its place a reference to § 425.226(a)(1).

#### b. Definition of Rural Health Clinic

In the November 2011 final rule, we established a definition for the term “Rural health center (RHC)” for the Shared Savings Program at § 425.20.<sup>288</sup> The definition of “Rural health center (RHC)” at § 425.20 states that this term has the same meaning given to this term under § 405.2401(b). The term “Rural health clinic (RHC)” is defined at § 405.2401(b) to mean a facility that has—

- Been determined by the Secretary to meet the requirements of section 1861(aa)(2) of the Act and 42 CFR part 491 concerning RHC services and conditions for approval; and

---

<sup>288</sup> See, for example, 76 FR 67930 through 67932 (discussion of our proposal to define FQHCs and RHCs as these terms are defined in § 405.2401(b)), and 76 FR 67974 and 67975 (finalized regulations text for § 425.20).

- Filed an agreement with CMS that meets the requirements in § 405.2402 to provide RHC services under Medicare.

In the CY 2024 PFS proposed rule (88 FR 52490 and 52491), we explained that the inconsistency between § 425.20, which inaccurately uses the word “center,” and § 405.2401(b), which accurately uses the word “clinic,” had recently come to our attention. We noted that the term “rural health clinic” was in use and defined at § 405.2401(b) when we established the term and definition for “Rural health center (RHC)” under part 425 with the November 2011 final rule. Furthermore, we noted that in the November 2011 final rule (76 FR 67803), we separately established an acronym “RHCs” for “Rural Health Clinics” in the acronyms list reflecting the accurate term.

To ensure clarity and accuracy, we proposed to correct the error in the definition for “Rural health center (RHC)” at § 425.20 by replacing the word “center” with the word “clinic”. We also clarified that all uses of the acronym “RHC” or “RHCs” throughout part 425 – including in the definition of “primary care physician” in § 425.20, as well as in §§ 425.102 and 425.304 and throughout 42 CFR part 425, subpart E – have been interpreted to refer to “rural health clinic” or “rural health clinics” as defined at § 405.2401(b). Further, we proposed to revise the definition of rural health center in § 425.20 to specify that the referenced provision at § 405.2401(b) is within 42 CFR Chapter IV. We solicited comments on these proposed technical changes.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* All commenters supported these proposals and provided no further elaboration or suggestions, stating that these technical changes will eliminate errors and inconsistencies and improve clarity in the regulatory text.

*Response:* We agree with commenters that these technical changes will eliminate errors and inconsistencies and improve clarity in the regulatory text.

After consideration of public comments, we are finalizing as proposed.

c. Definition of At-Risk Beneficiary

In the November 2011 final rule (see 76 FR 67974), we established the definition of “At-risk beneficiary” at § 425.20, the meaning of which includes, but is not limited to, a beneficiary who –

- Has a high-risk score on the CMS-HCC risk adjustment model;
- Is considered high cost due to having two or more hospitalizations or emergency room visits each year;

- Is dually eligible for Medicare and Medicaid;
- Has a high utilization pattern;
- Has one or more chronic conditions;
- Has had a recent diagnosis that is expected to result in increased cost;
- Is entitled to Medicaid because of disability; or
- Is diagnosed with a mental health or substance abuse disorder.

In the November 2011 final rule, we explained that we agreed with commenters that our proposed definition of at-risk beneficiary should be expanded to include patients who are entitled to *Medicare* (emphasis added) because of disability (see 76 FR 67950). However, in codifying the relevant regulation text at § 425.20, we inadvertently referred to patients who are entitled to *Medicaid* because of disability (emphasis added). In the CY 2024 PFS proposed rule (88 FR 52491), we noted that an individual who is entitled to Medicare because of disability and who is also entitled to Medicaid, would be included under the category “Is dually eligible for Medicare and Medicaid.”

We proposed to correct the typographical error in the definition for “At-risk beneficiary” at § 425.20 by replacing the word “Medicaid” in paragraph (7) with the word “Medicare”. We also proposed to adjust inaccurate punctuation in the list of paragraphs within this definition by

replacing the period at the end of paragraphs (5) and (6) with a semi-colon. We solicited comments on these proposed changes.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* All commenters supported these proposals and provided no further elaboration or suggestions, stating that these technical changes will eliminate errors and inconsistencies and improve clarity in the regulatory text.

*Response:* We agree with commenters that these technical changes will eliminate errors and inconsistencies and improve clarity in the regulatory text.

After consideration of public comments, we are finalizing as proposed.

#### d. Updating Terminology in Regulations on Data Sharing with ACOs

In the CY 2024 PFS proposed rule (88 FR 52491), we explained that it had come to our attention that certain terminology that is used in the data sharing regulations for the Shared Savings Program in 42 CFR part 425, subpart H is outdated or inconsistent with the terminology used elsewhere in the Medicare program and in the HIPAA regulations in 45 CFR part 164. We proposed technical and conforming changes to § 425.702(c)(1)(ii)(A)(3) and § 425.702(c)(1)(ii) for clarity and consistency.

In accordance with the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA), CMS discontinued the use of Social Security Number-based Health Insurance Claim Numbers (HICNs) as the beneficiary identifier on Medicare cards and replaced that identifier type with Medicare Beneficiary Identifiers (MBIs) by April 2019. MBIs are now used for Medicare transactions like billing, eligibility status, and claim status. All claims with a date of service on or after January 1, 2020, must use the beneficiary's MBI, rather than the HICN.<sup>289,290</sup>

---

<sup>289</sup> CMS, MLN Matters, "New Medicare Beneficiary Identifier (MBI) Get It, Use It". Article number SE18006, revised March 19, 2020. Available at <https://www.cms.gov/outreach-and-education/medicare-learning-network-mln/mlnmattersarticles/downloads/se18006.pdf>.

<sup>290</sup> CMS.gov website, Medicare Beneficiary Identifiers (MBIs), at <https://www.cms.gov/Medicare/New-Medicare-Card>.

To accommodate this change from HICN to MBI, starting in PY 2018 we revised Shared Savings Program reports that provide beneficiary-identifiable information under § 425.702, and claim and claim line feed files with beneficiary identifiable claims data provided under § 425.704, to include a field for the beneficiary's MBI. By the end of PY 2019, we discontinued populating data in the HICN fields. However, when we made this operational update, we did not make conforming changes to the regulations text at § 425.702(c)(1)(ii)(A) to revise the list of the four data elements we provide to ACOs on their FFS beneficiary population: (1) beneficiary name; (2) date of birth; (3) HICN; and (4) sex. Therefore, because we have discontinued use of the HICN, we proposed to revise § 425.702(c)(1)(ii)(A)(3) to refer to "Beneficiary identifier" instead of "Health Insurance Claim Number (HICN)." We explained that this change to the regulations text would not change the information that is provided to ACOs pursuant to § 425.702(c)(1)(ii).

Further, we proposed to revise the list of purposes in § 425.702(c)(1)(ii) for which an ACO may request certain beneficiary-identifiable data for purposes of population-based activities to better align with the terminology used in the first paragraph of the definition of health care operations at 45 CFR 164.501. Specifically, we proposed to remove the reference to "process development" and to add in its place a reference to "protocol development." In prior rulemaking, we indicated that ACOs could request beneficiary-identifiable data under § 425.702(c)(1)(ii) for purposes of carrying out population-based activities, including process development, and we referred to care coordination processes and required process development under § 425.112 (see 80 FR 32734 and 32735). In the proposed rule, we stated that we did not believe the proposed revision would impact ACOs' ability to request data for these types of process development. Rather, activities related to care coordination processes and the development of required processes under § 425.112 would continue to fall within the population-based activities listed in § 425.702(c)(1)(ii) for which an ACO may request data, including protocol development (as added by this proposed revision) and care coordination. We also noted

that this proposed revision would ensure that the terminology used in § 425.702(c)(1)(ii) is consistent with the language of the proposed new provision at § 425.702(c)(1)(iii) (see section III.G.2.b.(2) of this final rule for a discussion of this proposal).

We solicited comments on these proposed changes.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* All commenters supported these proposals and provided no further elaboration or suggestions, stating that these technical changes will eliminate errors and inconsistencies and improve clarity in the regulatory text.

*Response:* We agree with commenters that these technical changes will eliminate errors and inconsistencies and improve clarity in the regulatory text.

After consideration of public comments, we are finalizing as proposed.

## 8. Comment Solicitation on Potential Future Developments to Shared Savings Program Policies

### a. Background

As we described in the CY 2024 PFS proposed rule (88 FR 52492), in an article published on the New England Journal of Medicine's website on April 27, 2022,<sup>291</sup> CMS articulated a vision for how ACOs participating in the Shared Savings Program and in Innovation Center models can help CMS achieve its goal of having all beneficiaries in Original Medicare cared for by health care providers who are accountable for the cost and quality of care by 2030. This article describes a vision for the Shared Savings Program and new Innovation Center models to expand participation in ACOs, strengthen incentives for savings for participants and for Medicare, and make access to ACOs more equitable, including: (1) aligning features of new Innovation Center models and features in the Shared Savings Program; (2) adopting lessons from the ACO Investment Model to help provide upfront investments for small ACOs that lack

---

<sup>291</sup> Jacobs D, Rawal P, Fowler L, Seshamani M. Expanding Accountable Care's Reach among Medicare Beneficiaries. *NEJM.org*, April 27, 2022, available at <https://www.nejm.org/doi/full/10.1056/NEJMp2202991>.

experience with performance-based risk; (3) examining benchmarking approaches that could support increased participation, including among organizations serving patients with high costs of care, and addressing the effects of rebasing and regional benchmark adjustments; and (4) examining the use of incentives to recruit health care providers that care for underserved populations to join ACOs, with the goal of closing gaps in outcomes, and asking health care providers to consider beneficiaries' social needs in care plans.

In the CY 2023 PFS final rule (87 FR 69777 through 69968), we adopted several policies to advance these goals, including providing advance shared savings payments in the form of AIPs to certain new, low revenue ACOs that they can use to build the infrastructure needed to succeed in the Shared Savings Program and promote equity by holistically addressing beneficiary needs, including social needs; reinstating a sliding scale reflecting an ACO's quality performance for use in determining shared savings for ACOs and shared losses for ENHANCED track ACOs; modifying the benchmarking methodology to strengthen financial incentives for long-term participation by reducing the impact of ACOs' performance and market penetration on their benchmarks; supporting the business case for ACOs serving high-risk and a high proportion of dually eligible populations to participate; mitigating bias in regional expenditure calculations for ACOs electing prospective assignment; and expanding opportunities for certain low revenue ACOs participating in the BASIC track to share in savings.

In the CY 2024 PFS proposed rule (88 FR 52492), we explained that we have also continued to receive significant input from interested parties regarding opportunities to increase participation in ACO initiatives. One such option would be to identify ways that the Shared Savings Program can support ACOs' efforts to strengthen primary care, such as by providing prospective payments for primary care that would reduce reliance on FFS payments and support innovations in care delivery that better meet beneficiary needs and increase access to primary care in underserved communities. Empirical data support the notion that primary care serves as the foundation of high-performing ACOs. ACO performance results have indicated that ACOs

comprised of 75 percent or more of primary care clinicians share in savings at almost twice the rate of those ACOs comprised of less than 75 percent primary care clinicians.<sup>292</sup> Another option would be to offer a higher risk track in the Shared Savings Program.

We solicited public comments on potential future developments to Shared Savings Program policies (88 FR 52492 through 52497).

b. Incorporating a Higher Risk Track than the ENHANCED Track

As described in the CY 2024 PFS proposed rule (88 FR 52492), CMS, over time, has considered a higher risk Shared Savings Program track under which the shared savings/loss rate would be somewhere between 80 percent and 100 percent (that is, a rate higher than that currently offered under the ENHANCED track) that builds on the experience of the Next Generation ACO (NGACO) and ACO Realizing Equity, Access, and Community Health (ACO REACH) Models. “Higher risk” sharing provides a higher level of potential reward which may encourage ACOs that would not otherwise have participated in the Shared Savings Program because of current limitations on potential upside to consider participating. Also, a higher risk sharing model may incentivize participating ACOs to take on more risk (and potential reward) and incentivize ACOs to improve performance in the program, which may result in reduced healthcare costs for Medicare, and more effective, efficient care for beneficiaries. In addition, higher risk sharing may incentivize ACOs to develop new care delivery strategies, such as a focus on specialty care integration and reduced care fragmentation. Offering a higher risk sharing track may also help CMS reach our goal of having all beneficiaries in Original Medicare in a care relationship with a health care provider who is accountable for the costs and quality of their care by 2030 by encouraging efficient ACOs to continue participation in the Shared Savings Program.

---

<sup>292</sup> Refer to CMS, Press Release, “Medicare Shared Savings Program Saves Medicare More Than \$1.6 Billion in 2021 and Continues to Deliver High-quality Care” (August 30, 2022), available at – As of August 30, 2022, available at <https://www.cms.gov/newsroom/press-releases/medicare-shared-savings-program-saves-medicare-more-16-billion-2021-and-continues-deliver-high>.

Currently, under the Shared Savings Program, ACOs may enter participation agreements under one of two tracks—the BASIC track or the ENHANCED track. The BASIC track allows eligible ACOs to begin under a one-sided model and incrementally transition to higher levels of risk and potential reward through the BASIC track’s glide path. The ENHANCED track is a two-sided model that represents the highest level of risk and potential reward currently offered under the Shared Savings Program. The rules governing the participation options available to ACOs and the progression from lower to higher risk for ACOs entering the program are described in § 425.600 of the regulations.

Under the BASIC track, eligible ACOs operate under either a one-sided model or a two-sided model, either sharing savings only or sharing both savings and losses with the Medicare program. Under the BASIC track’s glide path, the level of risk and potential reward phases in over the course of an agreement period with the ACO beginning participation under a one-sided model and progressing to incrementally higher levels of risk and potential reward, unless the ACO chooses to begin under a two-sided model and/or progresses more quickly than the glide path would require.<sup>293</sup> The glide path includes five levels (Levels A through E). Levels A and B are one-sided models (shared savings only);<sup>294</sup> and Levels C, D, and E are two-sided models (shared savings and shared losses) that provide for incrementally higher performance-based risk.<sup>295</sup> An ACO in the ENHANCED track operates under a two-sided model, sharing both savings and losses with the Medicare program, for all five performance years of the agreement period.

To qualify for a shared savings payment, an ACO must meet a minimum savings rate (MSR) requirement, meet the quality performance standard or alternative quality performance standard established under § 425.512, and otherwise maintain its eligibility to participate in the

---

<sup>293</sup> Refer to § 425.600(a)(4)(i).

<sup>294</sup> Refer to §§ 425.600(a)(4)(i)(A)(1), 425.605(d)(1)(i) (Level A); §§ 425.600(a)(4)(i)(A)(2), 425.605(d)(1)(ii) (Level B).

<sup>295</sup> Refer to §§ 425.600(a)(4)(i)(A)(3), 425.605(d)(1)(iii) (Level C); §§ 425.600(a)(4)(i)(A)(4), 425.605(d)(1)(iv) (Level D); §§ 425.600(a)(4)(i)(A)(5), 425.605(d)(1)(v) (Level E).

Shared Savings Program under 42 CFR part 425.<sup>296</sup> For ACOs meeting the applicable quality performance standard established under § 425.512(a)(2), (4)(i) (for PY 2022 and PY 2023), or (5)(i) (for PY 2024 and subsequent performance years), the final shared savings rate is equal to the maximum sharing rate specific to the ACO's track/level of participation as follows: 40 percent for ACOs participating in Level A or Level B of the BASIC track;<sup>297</sup> 50 percent for ACOs participating in Levels C, D, or E of the BASIC track;<sup>298</sup> and 75 percent for ACOs participating in the ENHANCED track.<sup>299</sup> Beginning in PY 2023, ACOs meeting the MSR requirement that do not meet the applicable quality performance standard established under § 425.512(a)(2), (4)(i) or (5)(i), as applicable, but meet the alternative quality performance standard described in § 425.512(a)(4)(ii) (for PY 2023) or (5)(ii) (for PY 2024 and subsequent performance years) will have the opportunity to share in savings at a lower rate that is scaled by the ACO's quality performance. Additionally, beginning in PY 2024, certain ACOs participating in the BASIC track that do not meet the MSR have the opportunity to share in savings at a rate that is equal to half of the rate to which they would have otherwise been entitled had they met the MSR.<sup>300</sup> CMS computes an ACO's shared savings payment by applying the final sharing rate to the ACO's savings on a first dollar basis (meaning the final sharing rate is applied to the ACO's full total savings amount), with the payment subject to a cap that is equal to 10 percent of the updated benchmark for an ACO in the BASIC track or 20 percent of the updated benchmark for an ACO in the ENHANCED track.<sup>301</sup>

ACO's that operate under a two-sided model and have losses that meet or exceed a minimum loss rate (MLR) must share losses with the Medicare program.<sup>302</sup> Once this MLR is met or exceeded, the ACO will share in losses at a rate determined according to the ACO's

---

<sup>296</sup> Refer to §§ 425.100(b), 425.604(c), 425.605(c), 425.606(c), 425.610(c).

<sup>297</sup> Refer to § 425.605(d)(1)(i)(A), (d)(1)(ii)(A).

<sup>298</sup> Refer to § 425.605(d)(1)(iii)(A), (d)(1)(iv)(A), (d)(1)(v)(A).

<sup>299</sup> Refer to § 425.610(d).

<sup>300</sup> Refer to § 425.605(h).

<sup>301</sup> Refer to § 425.605(d); § 425.610(e).

<sup>302</sup> Refer to § 425.100(c).

track/level of participation, up to a loss recoupment limit (also referred to as the loss sharing limit).<sup>303</sup> In determining shared losses, ACOs participating in Level C, D, or E of the BASIC track are subject to a fixed shared loss rate (also referred to as the loss sharing rate) of 30 percent.<sup>304</sup> ENHANCED track ACOs are subject to a loss rate that is scaled by the ACO's quality performance, subject to a minimum of 40 percent and a maximum of 75 percent.<sup>305</sup>

For agreement periods beginning before January 1, 2024, certain ACOs were only allowed to enter the program in the ENHANCED track, and ACOs entering the program in the BASIC track were limited in how many agreement periods they could participate in the BASIC track before being required to transition to the ENHANCED track. Based on changes finalized in the CY 2023 PFS final rule (87 FR 69818 through 69821), for agreement periods starting on January 1, 2024, and in subsequent years, participation in the ENHANCED track will be optional.

In the NGACO Model, NGACOs were offered the choice between two risk arrangements, partial risk or full risk. Under both arrangements, the NGACO was responsible for 100 percent of performance year expenditures, for services rendered to the NGACO's aligned beneficiaries.<sup>306</sup> Under the partial risk arrangement, the NGACO could receive or owe up to 80 percent of savings/losses, whereas under the full risk arrangement, the NGACO could receive or owe up to 100 percent of savings/losses. To mitigate the ACO's risk of large shared losses, as well as to protect the Medicare Trust Funds against paying out excessive shared savings, NGACOs were required to choose a cap on gross savings/losses. The cap, expressed as a percentage of the benchmark, ranged from 5 percent to 15 percent. The risk arrangement chosen

---

<sup>303</sup> Refer to § 425.605(d); § 425.610(f), (g).

<sup>304</sup> Refer to § 425.605(d)(1)(iii)(C), (d)(1)(iv)(C), (d)(1)(v)(C).

<sup>305</sup> Refer to § 425.610(f).

<sup>306</sup> In 2020, due to the impacts of the COVID-19 pandemic, NGACOs were offered an optional amendment to the Participation Agreement (PA) for 2020 (PY5). For NGACOs that signed the amendment, CMS removed all beneficiary experience associated with COVID-19 related admissions and retrospectively updated the prospective trend with a regional observed trend. For 2021, CMS modified the NGACO financial methodology to provide financial protection to all NGACOs continuing in the model for PY6. PY6 financial protections included: adoption of an extreme and uncontrollable circumstances policy, under which any shared losses were prorated based on the number of months during the PHE and the number of beneficiaries residing in an impacted area, and all expenses associated with COVID-19 related admissions were removed from both PY expenditures and retrospective trend.

by the NGACO (80 or 100 percent) was applied to gross savings or losses after the application of the cap. In PYs 1-3, a discount was applied to the NGACO's benchmark that was set at a standard 3 percent, with various adjustments, that allowed the final discount to vary from 0.5 percent to 4.5 percent. In PYs 4-6, a discount of 0.5 percent was applied to the benchmark under the partial risk arrangement, and a discount of 1.25 was applied to the benchmark under the full risk arrangement. The purpose of the discount was to ensure that CMS received a financial benefit from any savings achieved by the NGACOs participating in the model.

Under the ACO REACH Model, REACH ACOs are offered the choice of participating under the Global or the Professional Risk Sharing Options. As in the NGACO Model, under both risk sharing options, the REACH ACO is responsible for 100 percent of performance year expenditures for services rendered to aligned beneficiaries. Because ACOs electing the Global Risk Sharing Option retain up to 100 percent of the savings/losses, a discount is applied to the benchmark to ensure savings are also generated for CMS. Consequently, for ACOs in the Global Risk Sharing Option, the benchmark is reduced by a fixed percentage based on the performance year.<sup>307</sup> The benchmark for ACOs participating in the Professional Risk Sharing Option does not include this discount, and these ACOs are only eligible to retain 50 percent of savings or owe 50 percent of any losses.

As we explained in the CY 2024 PFS proposed rule (see 88 FR 52493 through 52494), when considering including a higher risk track in the Shared Savings Program, we must balance several factors to protect beneficiaries, ACOs, and the Medicare Trust Funds. One factor to consider is that there may be selective participation with regard to which ACOs would choose to participate in a higher risk track, if offered. For example, Shared Savings Program ACOs that have a history of high levels of shared savings or have received a favorable high regional adjustment to their benchmark may be more likely than other ACOs to switch to the higher risk

---

<sup>307</sup> For more details, refer to CMS, ACO Realizing Equity, Access, and Community Health (REACH) Model, PY2023 Financial Settlement Overview, available at <https://innovation.cms.gov/media/document/aco-reach-py2023-fncl-settlement> (see Table 4: Schedule of Discounts by Risk Arrangement).

track upon renewing or early renewing their participation in the program so they can receive additional benefit from the higher levels of potential reward offered in a higher risk track.

Section 1899(i)(3) of the Act grants the Secretary the authority to use other payment models, if the Secretary determines that doing so would improve the quality and efficiency of items and services furnished under Medicare, and the alternative methodology would result in program expenditures equal to or lower than those that would result under the statutory payment model under section 1899(d) of the Act. In the proposed rule, we expressed concerns that introducing a higher risk track would lead to only select ACOs participating, creating benefits limited almost entirely to those ACOs and limited to no benefits for beneficiaries or CMS.

Another consideration we explained in the proposed rule is that ACOs in a higher risk track could have an increased incentive (relative to existing Shared Savings Program risk models) to avoid high-cost beneficiaries in the performance year in order to maximize their potential shared savings payment or avoid or reduce potential shared losses. The Shared Savings Program truncates individual beneficiary expenditures at the 99<sup>th</sup> percentile of national Medicare FFS expenditures by enrollment type, which can help to protect ACOs from the impact of expenditure outliers (that is, to prevent a small number of extremely costly beneficiaries from significantly affecting the ACO's per capita expenditures) and reduce the incentive for ACOs to avoid high-cost beneficiaries. As described earlier in this section of this final rule, the Shared Savings Program also caps the amount of shared savings an ACO may receive or the amount of shared losses it may owe, which can further discourage beneficiary selection. If introducing a higher risk track to the program, we would need to consider whether the program's existing approach to expenditure truncation and capping shared savings and shared losses would be sufficient in curbing incentives for ACOs to engage in beneficiary selection in light of the higher potential risk and reward, while ensuring that the new risk model will still be attractive to ACOs and improve the quality and efficiency of the care their assigned beneficiaries receive.

When considering a higher risk track, we would need to balance the incentives for ACOs to transition to higher levels of risk and potential reward only when they are very confident it is in their financial interest to do so, with the benefits of increasing ACO participation in the Shared Savings Program and in two-sided accountable care tracks, all while ensuring sufficient financial safeguards against inappropriately large shared losses for ACOs coordinating and improving quality of care for high-cost beneficiaries.

In the proposed rule (88 FR 52492 through 52494), we sought comment on the following: (1) policies/model design elements that could be implemented so that a higher risk track could be offered without increasing program expenditures; (2) ways to protect ACOs serving high-risk beneficiaries from expenditure outliers and reduce incentives for ACOs to avoid high-risk beneficiaries; and (3) the impact that higher sharing rates could have on care delivery redesign, specialty integration, and ACO investment in health care providers and practices.

The following is a summary of the public comments we received in response to the comment solicitation on incorporating a higher risk track than the ENHANCED track and our response:

*Comment:* Many commenters supported a higher risk track option in the Shared Savings Program. Commenters offered a variety of reasons for their support of a higher risk track, including that it would encourage more participation in the Shared Savings Program, bring more beneficiaries into an accountable care arrangement, improve care delivery, and could serve as a track for ACO REACH Model participants to transition into the Shared Savings Program, if the track is designed somewhat similarly to ACO REACH Model (for example, by offering options regarding the shared savings rate, options for waivers, and an option for paper-based voluntary alignment), after the ACO REACH Model expires at the end of 2026. Some commenters suggested that if CMS adopted certain design features, such as waivers to permit a home visit program and a tool that allows providers to receive advance payment for non-primary care services, those design features could lead ACOs to generate more savings and spur innovation.

Multiple commenters requested that the higher risk track be optional. Several commenters requested that CMS use lessons learned from the NGACO Model and the ACO REACH Model when designing a higher risk track, specifically lessons relating to benefit enhancements and beneficiary engagement incentives, such as the post-discharge home visit waiver, care management home visit waiver, tailored Part B cost sharing support, SNF 3-day waiver, and telehealth waiver. One commenter recommended the higher risk track be offered within the Shared Savings Program, as opposed to being within a new ACO model offered by the Innovation Center.

Many commenters provided input on financial model design elements for a higher risk track. One key design element discussed was the shared savings/shared losses rate. Several commenters supported a full risk model; that is, a model with a 100 percent shared savings/shared losses rate. Many of these commenters paired their support for a full risk model with other financial model design elements such as risk corridors, stop-loss insurance, caps on shared savings and shared losses, or discounts to the benchmark. Several commenters suggested that CMS should offer a choice between a full-risk model with a discount, or a shared savings rate of 85 or 90 percent, with some of these commenters specifically citing the ACO REACH Model and NGACO Model as precedent for these arrangements.

A couple of commenters requested design elements that would result in asymmetrical upside versus downside financial risk. One commenter suggested a shared savings rate of at least 85 percent, with a cap on gross shared savings not to exceed 20 percent of the ACO's updated benchmark, along with a shared loss rate that is between 55 percent and 75 percent, with a cap on gross shared losses not to exceed 15 percent of the ACO's updated benchmark. Another commenter suggested that CMS offer an asymmetric shared savings rate and shared loss rate, where the rates would start off as symmetrical but would be "offset...in opposite directions based on an ACO's proportion of underserved beneficiaries," and explained their belief that this option could offer a higher shared savings rate while safeguarding ACOs from inappropriately large shared losses. As another option,

the commenter suggested CMS explore an “asymmetric MSR/MLR option, where the offset factor is based on the ACO’s proportion of underserved beneficiaries,” and explained their belief that such an option would protect ACOs with high proportion of underserved beneficiaries from being accountable for unforeseen losses, while increasing the likelihood of becoming eligible to share in savings.

Multiple comments included input on the level of any discount to benchmark. A couple of commenters recommended the discount be capped at 50 percent of the average shared savings rate among all ACOs participating in the Shared Savings Program. Several commenters expressed concerns that the level of the discount may end up being set too high for them to want to participate. One commenter stated that a discount of 3 percent would be a dealbreaker for many ACOs. Another commenter recommended that the discount be no more than 2 percent. A couple of commenters expressed concern that in the ACO REACH Model, ACOs had average net savings of less than 1 percent after the discount was incorporated. Several commenters stated that, for a full risk model with a 3 percent discount, they would need to generate savings of at least 12 percent to earn more than they would earn in the ENHANCED track.

A few commenters recommended changing the benchmarking methodology for a higher-risk track. Suggestions included using regional-based benchmarks, using a fully administratively-set benchmark, removing the cap on regional adjustments, and applying an offset factor creating asymmetry between the MSR and MLR for an ACO based on its proportion of underserved beneficiaries. Some of these commenters stated that a track with higher risk should have more innovative benchmarking policies, and others stated that benchmark setting should reward risk-taking by ACOs whose assigned beneficiaries include high-needs populations.

Many commenters recommended that providers participating in the higher risk track be paid using a payment methodology other than Medicare FFS payment, including “prospective payments for primary care,” “prospective payments,” primary care or total cost of care “capitation payments,” “population-based payments,” payments for “team-based care,” “advanced payment option,” “bundled payments,” and a “hybrid payment option that includes primary care

capitation.” Some commenters suggested that payments under these alternative payment methods should be available as of January 1, 2025, so that primary care practices do not feel compelled to leave ACOs for the sole purpose of accessing prospective primary care payments in the Making Care Primary model. One commenter stated that a total cost of care capitation option would support ACOs interested in better engaging specialists through mechanisms such as shadow bundles.<sup>308</sup> One commenter requested that flexibility be offered in selecting the level of capitation, including the selection of the specific services subject to capitation. The commenter stated that this flexibility would allow more small, independent, and new entrant practices to participate in a new higher risk track. A few commenters suggested that an alternative payment method be treated like any other Medicare Part B expenditure for purposes of benchmark and shared savings calculations.

Commenters had differing views as to whether the new payments under a higher risk track should be made to ACOs or directly to providers and suppliers. A couple of commenters suggested that the ACO should have a choice of whether CMS makes prospective payments to the ACO or directly to the primary care practices, stating that “ACOs composed of independent practices who have joined together to participate in the Shared Savings Program typically need to share services through the ACO” and, in these cases, “paying the prospective payment directly to the ACO makes the most sense.” A few commenters suggested there be “safeguards to ensure investments,” which we understand to mean prospective payments, reach primary care practices. One commenter stated that prospective payments to physicians are important so that physicians have the resources they need to proactively manage patients’ care. Several commenters suggested that we establish clear guidelines for what portion of a capitated payment an ACO itself may retain, rather than share with its ACO participants. Commenters also requested that we “require ACOs receiving capitated payments to help participating practices build the capacity to

---

<sup>308</sup> Shadow bundles are data that provide information on specialists’ care patterns and clinical episodes of care. They are developed using existing assignment and claims data, and they assign services and associated payments to clinical episodes and provide additional information on procedural or condition-specific care.

independently receive and effectively use prospective payments to support the provision of comprehensive primary care.” One commenter mentioned that ACOs have varying organizational structures which will require CMS to take a very thoughtful approach to ensure payments intended to support primary care, including capitated or per patient per month payments, reach the primary care practices where physicians and care teams are delivering the care. Another commenter preferred an approach under which CMS would make capitated payments directly to primary care practices, but also stated that another option would be to make capitated payments to ACOs with stipulations that establish the maximum level of retention of those payments by ACOs and to establish a strong audit mechanism and financial penalties for non-compliance.

Several commenters provided input on the amount of payments for primary care services under a higher risk track. Some of these commenters requested that the ACO receive prospective primary care payments in an amount greater than Medicare’s historical payments to the ACO’s primary care providers to provide funds for innovative care delivery strategies. Another commenter suggested that monthly primary care capitation payments be set equal to 100 percent of an ACO’s historical primary care spending, stating that this would provide important cash flow opportunities for ACOs looking to make proactive investments in primary care capacity to better manage patient care. One of the commenters requested CMS provide ACOs with the ability to gradually increase to higher levels of capitation payments, like Comprehensive Primary Care Plus Track 2.

Many commenters suggested ways to protect ACOs serving high-risk beneficiaries from expenditure outliers and reduce incentives for ACOs to avoid high-risk beneficiaries. Several commenters suggested that CMS incorporate risk corridors or risk adjustment to account for treatment of complex and high-cost beneficiaries. A few commenters encouraged CMS to evaluate the applicability of some of the safeguards and policies in place under the ACO REACH Model that aim to reduce the potential for cherry-picking of beneficiaries, mitigate the

potential of “bad actors,” and ensure appropriate resources for higher cost beneficiaries. A few commenters stated that there are already sufficient protections in place because there are several policies in place to identify and mitigate practices related to avoiding higher risk beneficiaries.

*Response:* We appreciate the feedback we received in response to this comment solicitation. We will consider this information to inform future rulemaking.

#### c. Increasing the Amount of the Prior Savings Adjustment

Under section 1899(d)(1)(B)(ii) of the Act, an ACO’s benchmark must be reset at the start of each agreement period using the most recent available 3 years of expenditures for Parts A and B services for beneficiaries assigned to the ACO. Section 1899(d)(1)(B)(ii) of the Act provides the Secretary with discretion to adjust the historical benchmark by “such other factors as the Secretary determines appropriate.” Under this authority, as described in the CY 2023 PFS final rule (87 FR 69898 through 69915), we established a prior savings adjustment that will apply when establishing the benchmark for eligible ACOs entering an agreement period beginning on January 1, 2024, or in subsequent years, to account for the average per capita amount of savings generated during the ACO’s prior agreement period.

The prior savings adjustment adopted in the CY 2023 PFS final rule is designed to adjust an ACO’s benchmark to account for the average per capita amount of savings generated by the ACO across the 3 performance years prior to the start of its current agreement period for re-entering and renewing ACOs. In the final rule, we explained that reinstating a prior savings adjustment would be broadly in line with our interest in addressing dynamics to ensure sustainability of the benchmarking methodology. Specifically, such an adjustment would help to mitigate the rebasing ratchet effect on an ACO’s benchmark by returning to an ACO’s benchmark an amount that reflects its success in lowering growth in expenditures while meeting the program’s quality performance standard in the performance years corresponding to the benchmark years for the ACO’s new agreement period. We also explained our belief that a prior

savings adjustment could help address an ACO's effects on expenditures in its regional service area that result in reducing the regional adjustment added to the historical benchmark.

In the CY 2023 PFS final rule (87 FR 69899), we explained that, in order to mitigate the potential for rebased benchmarks for ACOs that are lower-spending compared with their regional service area and that achieved savings in the benchmark period to become overinflated, we believed that adjusting an ACO's benchmark based on the higher of either the prior savings adjustment or the ACO's positive regional adjustment would be appropriate. In the CY 2024 PFS proposed rule, we also noted that we proposed to further mitigate the impacts of the negative regional adjustment when the overall adjustment to an ACO's historical benchmark is negative; however, the negative regional adjustments by enrollment type would continue to be factored in when the overall regional adjustment is positive. (Refer to 88 FR 52494, and 88 FR 52465 through 52472.)

In the CY 2023 PFS final rule (87 FR 69914 through 69915), we finalized a policy to apply a 50 percent scaling factor to the pro-rated positive average per capita prior savings, because we believed it would be important to consider a measure of the sharing rate used in determining the shared savings payment the ACO earned in the applicable performance years under its prior agreement period(s). In response to discussion of this policy in the CY 2023 PFS proposed rule (87 FR 69910), ACOs and other interested parties commented that we should consider using a higher scaling factor that may more closely match the maximum shared savings rate from an ACO's prior agreement period. However, in the CY 2023 PFS final rule, we reiterated our belief that a 50 percent scaling factor would be appropriate because it represents a middle ground between the maximum sharing rate of 75 percent under the ENHANCED track and the lower sharing rates available under the BASIC track (for example, 40 percent). Additionally, we noted that if we were to finalize a scaling factor that would more closely match the average shared savings rate from an ACO's prior agreement period, many ACOs would have

a scaling factor below 50 percent, which would be less advantageous than the policy that we finalized (see 87 FR 69910 through 69911).

In the CY 2023 PFS final rule (see 87 FR 69902), we also finalized a policy to calculate the final adjustment to the benchmark by adding the pro-rated average per capita prior savings to the ACO's negative regional adjustment for ACOs that are higher spending relative to their regional service area. Under this policy, we apply the 50 percent scaling factor after offsetting the negative regional adjustment to maximize the portion of the pro-rated average per capita savings that would be added to the negative regional adjustment in determining the final adjustment to the benchmark and strengthen incentives for ACOs to remain in the program.

MedPAC commented on the CY 2023 PFS proposed rule that while the prior savings adjustment is a reasonable policy for mitigating ratcheting effects, implementing both the prior savings adjustment and the regional adjustment policies together would be duplicative. MedPAC also expressed concern that the prior savings adjustment and the regional adjustment could interact in a way that would perpetuate a programmatic bias towards ACOs receiving a positive regional adjustment. In MedPAC's view, many ACOs would receive an inflated prior savings adjustment because the prior savings adjustment would be based on savings achieved using benchmarks already inflated by the regional adjustment. However, we explained in the CY 2023 PFS final rule (87 FR 69913) that because for most ACOs, the positive regional adjustment would exceed the prior savings adjustment, our policy of applying the larger of the regional adjustment and the prior savings adjustment potentially mitigates this concern.

In the CY 2024 PFS proposed rule (88 FR 52494 through 52495), we solicited comments on potential changes to the 50 percent scaling factor used in determining the prior savings adjustment. such as using an average of the ACO's shared savings rates from the 3 years prior to the start of its agreement period, increasing to 75 percent of shared savings achieved if the ACO participated in the ENHANCED track in the 3 years prior to the start of the agreement period, or another value corresponding to the maximum shared savings rate the ACO was eligible to earn in

the 3 years prior to the start of the agreement period. We also solicited comments on potential changes to the positive regional adjustment to reduce the possibility of inflating the benchmark, while still mitigating potential ratchet effects on ACO benchmarks.

The following is a summary of the public comments we received in response to the comment solicitation on increasing the amount of the prior savings adjustment and our response:

*Comment:* In response to the RFI regarding implementing changes to the prior savings adjustment and related changes to the positive regional adjustment to mitigate potential ratchet effects on ACOs' benchmarks, the majority of comments were supportive of increasing the prior savings adjustment in at least one of the ways described in the proposed rule, with several commenters specifically recommending using the maximum shared savings rate the ACO was eligible to receive during the benchmark years. We also received several comments regarding potential changes to the positive regional adjustment to reduce the possibility of inflating ACOs' benchmarks, while still mitigating potential ratchet effects on those benchmarks. Of those, most commenters favored increasing the cap on the positive regional adjustment to provide an additional incentive to ACOs that are already efficient relative to their region. One commenter noted that beneficiaries assigned based on primary care services furnished by specialists tend to have higher costs and suggested adjusting the cap on the positive regional adjustment based on the share of the ACO's assigned beneficiary population that is assigned based on step 2 of the step-wise beneficiary assignment methodology. One commenter recommended capping the positive regional adjustment using risk adjusted regional per-capita FFS expenditures in BY3 instead of national per-capita FFS expenditures, and also suggested incorporating an offset factor for the regional adjustment for ACOs that serve an unusually high proportion of underserved beneficiaries relative to other ACOs in their region.

Two commenters, including MedPAC, were opposed to increasing the amount of the prior savings adjustment to align with the higher shared savings rate available under the ENHANCED track. MedPAC noted that using the sharing rate available under the ENHANCED

track to increase the scaling factor of the prior savings adjustment would exacerbate the inflation of benchmarks due to the regional adjustment. As an alternative, MedPAC suggested that the prior savings adjustment should serve as a mechanism for phasing out the regional adjustment entirely. MedPAC also suggested that the prior savings adjustment could be scaled based on an ACO's own efficiency within its region, which would mitigate both the ratchet effect and benchmark inflation because the regional adjustment would be removed both from performance year benchmarks and the prior savings adjustment. Another commenter opined that the current 50 percent scaling factor is appropriate because it aligns with the weight used to determine positive regional adjustments for ACOs receiving a regional adjustment for their second or subsequent agreement periods.

Several commenters recommended increasing the cap on the prior savings adjustment beyond 5 percent of national per-capita FFS expenditures. Several also recommended risk adjusting the capped amount to reflect differences in the health status of ACOs' beneficiary populations. A number of commenters also recommended allowing ACOs to receive the greater of the 50 percent factor and 5 percent of national per-capita FFS expenditures, and one commenter suggested allowing ACOs to retain 75 percent of the average savings achieved by the ACO over the three benchmark years. One commenter was opposed to increasing the 5 percent cap, suggesting instead that the cap be based on a weighted average of national and risk-adjusted regional per-capita FFS expenditures as described in § 425.652(a)(5)(iv).

A few commenters recommended implementing a quartile-based benchmark system similar to Medicare Advantage, adjusting benchmarks relative to regional spending. Additionally, a few commenters suggested that ACOs transitioning from total cost of care models such as the ACO REACH Model be eligible for a prior savings adjustment based on savings achieved under those models. One commenter also suggested calculating the prior savings adjustment at the TIN level instead of the ACO level.

*Response:* We appreciate the feedback we received in response to this comment solicitation. We will consider this information to inform future rulemaking.

d. Expanding the ACPT Over Time and Addressing Overall Market-wide Ratchet Effects

As described in the December 2018 final rule (83 FR 68024 through 68030), we used our statutory authority under section 1899(i)(3) of the Act to adopt the policy under which we update the historical benchmark using a blend of national and regional growth rates. In accordance with § 425.601(b), for agreement periods beginning on July 1, 2019, and before January 1, 2024, we update the historical benchmark for an ACO for each performance year using a blend of national and regional growth rates between BY3 and the performance year.

In the CY 2023 PFS final rule (87 FR 69881 through 69898), we finalized a policy for agreement periods beginning on January 1, 2024, and in subsequent years, to incorporate a prospectively projected administrative growth factor, a variant of the United States Per Capita Cost (USPCC) that we refer to as the Accountable Care Prospective Trend (ACPT), into a “three-way” blend with national and regional growth rates to update an ACO's historical benchmark for each performance year in the ACO's agreement period. The three-way blend is calculated as the weighted average of the ACPT (one-third weight) and the existing national-regional “two-way” blend (two-thirds weight). The ACPT will be projected for an ACO's entire agreement period near the start of that agreement period, providing a degree of certainty to ACOs.

We explained in the CY 2023 PFS final rule that the ACPT will insulate a portion of the annual benchmark update from any savings occurring as a result of the actions of ACOs participating in the Shared Savings Program and address the impact of increasing market penetration by ACOs in a regional service area on the existing blended national-regional growth factor. Because the ACPT is prospectively set at the outset of an agreement period, any savings generated by ACOs during the agreement period would not be reflected in the ACPT component of the three-way blend. Accordingly, the incorporation of the ACPT may allow benchmarks to

increase beyond actual spending growth rates as ACOs slow spending growth. By limiting ACOs' ability to slow spending growth for purposes of their own benchmarks, we noted that we believed the use of this three-way blend to update ACOs' benchmarks would incentivize greater savings by ACOs and greater program participation. Additionally, because incorporating the ACPT into the update would reduce the degree to which an ACO's savings negatively impact its benchmark through the regional trend component of the update, we also stated our belief that this change to the update methodology would help to address concerns raised by ACOs and other interested parties regarding the disproportionate impact of an ACO's savings on the benchmark update for ACOs with high market share.

In the CY 2023 PFS final rule, we noted that it was possible that incorporating the ACPT into a three-way blended update factor would have the potential for mixed effects. For example, it might also lower an ACO's benchmark relative to the two-way blend if external factors lead to higher program spending growth than originally projected at the start of an ACO's agreement period. Consequently, we finalized that if an ACO generates losses for a performance year that meet or exceed its MLR (for two-sided model ACOs) or negative MSR (for one-sided model ACOs) under the three-way blend, we would recalculate the ACO's updated benchmark using the two-way blend and the ACO would receive whichever benchmark update minimizes shared losses. However, the ACO would not be eligible to share in savings resulting from use of the two-way blend in updating the benchmark. We also finalized that if unforeseen circumstances such as an economic recession, pandemic, or other factors cause actual expenditure trends to significantly deviate from projections, we would retain discretion to decrease the weight applied to the ACPT in the three-way blend.

In their comments on the proposal to adopt the three-way blend in the CY 2023 PFS proposed rule (see 87 FR 69890), ACOs and other interested parties expressed concern that the three-way blend effectively increases the proportion of the benchmark update that is based upon national trends, as opposed to regional trends, noting that the blend may not adequately account

for geographic variation in spending growth that is outside of an ACO's control. Over a 5-year agreement period, we recognize some ACOs may be disadvantaged or advantaged in the short term by benchmark updates that give greater weight to a national update factor. However, as we stated in the CY 2023 PFS final rule (87 FR 69891), we expect that the net impact of these deviations will be modest in the context of offsetting considerations. For example, the three-way blend only incorporates the ACPT at a one-third weight and maintains the current two-way blend for the majority weight of the benchmark trend calculation, allowing for a significant proportion of the benchmark update to reflect expenditure growth in an ACO's regional service area. The ACPT itself is also expected to project spending above realized spending as ACOs generate savings, thereby providing a stable, predictable component of the update factor that will be beneficial for ACOs.

Interested parties who commented on the proposal in the CY 2023 PFS proposed rule to incorporate the ACPT as part of a three-way blend suggested modifications to the three-way blend to further mitigate potential ratchet effects and to better reflect regional variation in spending. These included modifications such as: (1) keeping a two-way national-regional blend and substituting the national component of the two-way blend with the ACPT (see 87 FR 69890); and (2) adjusting the weight of the ACPT in the three-way blend to reflect each ACO's market penetration, as is done with the national component of the two-way blend (see 87 FR 69893). We declined to implement these suggestions in the CY 2023 PFS final rule.

In the CY 2024 PFS proposed rule (88 FR 52495 through 52496), we sought comment on the following potential refinements to the ACPT and the three-way blended benchmark update factor as CMS works toward broad implementation of administrative benchmarks: (1) replacing the national component of the two-way blend with the ACPT; and (2) scaling the weight given to the ACPT in a two-way blend for each ACO based on the collective market share of multiple ACOs within the ACO's regional service area.

The following is a summary of the public comments we received in response to the comment solicitation on expanding the ACPT over time and addressing overall market-wide ratchet effects, and our response:

*Comment:* Many commenters supported replacing the national component of the two-way blend with the ACPT over use of the three-way blend finalized in the PY 2023 PFS final rule. MedPAC also supported the concept of scaling the weight given to the ACPT in a two-way blend for each ACO based on the collective market share of multiple ACOs within the ACO's regional service area. However, MedPAC also expressed a preference for phasing out the regional component of the update factor in favor of an administrative growth factor. Another commenter also supported scaling the weight of the ACPT in a blended update factor based on each ACO's market share, but only above a minimum threshold for market share.

Several commenters were opposed to moving to a two-way blended update factor with the ACPT replacing the national component of the current two-way blend and favored keeping the three-way blend as finalized in the CY 2023 PFS final rule. Recommendations from these commenters included: (a) focusing on the longer-term goal of moving to an administrative benchmark; (b) providing additional details on how the three-way blend will be operationalized before making any changes; and (c) evaluating the impact of the three-way blend before making changes. A few commenters were also opposed to scaling the weight given to the ACPT in a two-way blend for each ACO based on the collective market share of multiple ACOs within the ACO's regional service area.

Several commenters recommended that CMS remove an ACO's assigned beneficiaries from the assignable population for the region when calculating the update factor (the commenter did not specify if they were referencing the two-way or three-way blended update factor). Most of these commenters were also supportive of substituting the ACPT for the national component of the two-way blend, but commenters varied on whether removing assigned beneficiaries from the assignable population should be done in conjunction with, or as an alternative to, that

approach.

Several commenters favored calculating a two-way blended and three-way blended update factor for each ACO and using the more advantageous factor when updating the benchmark in each performance year. Some of these commenters favored using the national and regional two-way blend, while others preferred an updated two-way blend including the ACPT in place of the national component.

A number of commenters were concerned that the 5-year projection used in the ACPT, as finalized in the CY 2023 PFS final rule, would potentially be less accurate in later years of an ACO's agreement period and recommended only projecting the ACPT out for 3 years instead of 5. A few commenters also expressed general support for a longer-term move toward administrative benchmarks to address the ratchet effect experienced by renewing ACOs.

*Response:* We appreciate the feedback we received in response to this comment solicitation. We will consider this information to inform future rulemaking.

#### e. Promoting ACO and CBO Collaboration

Section 1899(b)(2)(G) of the Act requires an ACO participating in the Shared Savings Program to define processes to promote evidence-based medicine and patient engagement, report on quality and cost measures, and coordinate care, such as through the use of telehealth, remote patient monitoring, and other enabling technologies. In the November 2011 final rule (76 FR 67827), we finalized policies to require that a participating Shared Savings Program ACO provide documentation in its application describing its plans to: (1) promote evidence-based medicine; (2) promote beneficiary engagement; (3) report internally on quality and cost metrics; and (4) coordinate care. We emphasized our belief that ACOs should retain the flexibility to establish processes that are best suited to their practice and patient population. As part of these required processes, we explained that ACOs should adopt a focus on patient-centeredness, which could include such activities as: a process for evaluating the needs of the ACO's population, including consideration of diversity in its patient populations, and a plan to address the needs of

this population, including how the ACO intends to partner with other interested parties in the community to improve the health of its population; a plan to engage in shared decision-making with beneficiaries; and a plan to implement individualized care plans, including taking into account the community resources available to the individual beneficiary.

When establishing these required processes and patient centeredness criteria in the November 2011 final rule (76 FR 67826), we stated that as we learn more about successful strategies in these areas, and as we gain more experience assessing specific critical elements for success, the Shared Savings Program eligibility requirements under section 1899(b)(2)(G) of the Act may be revised. For example, in subsequent rules we underscored the importance of health information technology development and infrastructure within care coordination. In the June 2015 final rule (80 FR 32725), we finalized two modifications to the care coordination processes required of ACOs under § 425.112(b)(4): (1) adding a new eligibility requirement under § 425.112(b)(4)(ii)(C), which required an ACO to describe in its application how it will encourage and promote the use of enabling technologies for improving care coordination for beneficiaries, and (2) adding a new provision at § 425.112(b)(4)(ii)(D), which required the applicant to describe how the ACO intends to partner with long-term and post-acute care providers to improve care coordination for the ACO's assigned beneficiaries. In the CY 2018 PFS final rule (82 FR 53222), we shifted from requiring an ACO to submit documents detailing how it would meet the requirements of § 425.112 as a narrative in its Shared Savings Program application to instead requiring it to certify at the time of application that it has defined the required processes and patient centeredness criteria consistent with the requirements specified in § 425.112 and to furnish such documentation upon request – thereby reducing ACO burden while maintaining CMS's flexibility to obtain additional documentation when necessary (see § 425.204(c)(ii)).

Additionally, in our June 2015 final rule (80 FR 32722), we specified that the care coordination processes under § 425.112 could include coordination with CBOs that provide

services that address social determinants of health. This coordination could include a plan to partner with interested parties in the community, a plan to engage in shared decision making with beneficiaries, and a plan to implement individualized care plans. In that rulemaking (80 FR 32722 and 32723), we also confirmed our understanding that ACOs differ in their ability to adopt the appropriate health information exchange technologies, but we continued to underscore the importance of robust health information exchange tools in effective care coordination.

In the CY 2024 PFS proposed rule (88 FR 52496 through 52497), we solicited comments on ways to improve and incentivize collaboration between ACOs and interested parties in the community or CBOs. As explained in the CY 2023 PFS final rule (87 FR 69790), where we refer to CBOs, we mean public or private not-for-profit entities that provide specific services to the community or targeted populations in the community to address the health and social needs of those populations. They may include community-action agencies, housing agencies, area agencies on aging, or other non-profits that apply for grants to perform social services. They may receive grants from other agencies in the U.S. Department of Health and Human Services, including Federal grants administered by the Administration for Children and Families (ACF), Administration for Community Living (ACL), or the Centers for Disease Control, or from State-funded grants to provide social services. Generally, we believe such organizations are trusted entities that know the populations they serve and their communities, want to be engaged, and may have the infrastructure or systems in place to help coordinate supportive services that address social determinants of health or serve as a trusted source to share information.<sup>309</sup> We recognize that ACOs wishing to address social needs may want to make investments in goods or social services that would enable their ACO participants and ACO providers/suppliers to work with CBOs that have expertise in identifying and providing the types of social services that the ACO's beneficiary population requires.

---

<sup>309</sup> U.S. Department of Health & Human Services, Office of the Assistant Secretary for Preparedness and Response, Community-Based Organizations during COVID-19, available at <https://www.phe.gov/emergency/events/COVID19/atrisk/returning-to-work/Pages/default.aspx>.

It is important to note that the Shared Savings Program does not prohibit ACOs from partnering with CBOs. Currently, if a CBO is enrolled in Medicare, it may already be an ACO participant or an ACO provider/supplier. We believe CBOs could play an important role in identifying and addressing gaps in health equity. As we stated in the CY 2023 PFS final rule, we hope to encourage more ACOs to partner with CBOs whether they provide items and services reimbursed by Medicare or not. We recognized, however, that Federal and other sources of grant funding for social services may be insufficient to fully address the demand for services within a community or broader geography. As we noted in that final rule, contractual arrangements between the health care sector and CBOs providing social services have increased in recent years to meet this demand.

In the CY 2024 PFS proposed rule (88 FR 52496 through 52497), we solicited comments on approaches, generally, for encouraging or incentivizing increased collaboration between ACOs and CBOs, including any policies specifically designed to encourage ACOs to partner with CBOs and address unmet health-related social needs. We also solicited comments on potential changes CMS could make to the patient-centered care requirements in § 425.112 to strengthen partnerships between ACOs and interested parties in the community, including CBOs, to address unmet health-related social needs.

The following is a summary of the public comments we received in response to the comment solicitation on promoting ACO and CBO collaboration, and our response:

*Comment:* Commenters generally supported increasing collaboration between ACOs and CBOs. Commenters noted that they appreciate the opportunity to highlight ways ACOs could increase collaboration with CBOs and strengthen partnerships between ACOs and interested parties in the community to address health equity and SDOH. Commenters stated that some ACOs are actively working with community partners to address SDOH and are working to close the loop between referrals to social services and follow-up interventions.

Several commenters encouraged CMS to consider increased financial support to sustain ACO-CBO collaboration. The commenters stated that many CBOs are underfunded and lack connections to the health care system or the ability to share data effectively. Some commenters stated that they use shared savings to support partnerships with CBOs, but that more stable and predictable funding mechanisms that would support the long-term collaboration needed to improve care for beneficiaries may be needed. Some commenters suggested that CMS consider new and innovative payment methods for encouraging relationships between ACOs and CBOs, including advance payments to ACOs that agree to invest in CBO capacity to align with ACO providers to deliver targeted interventions to priority populations or a capitated payment methodology that would better support the capacity of CBOs, including systems and other infrastructure they can use to improve coordination of care.

Commenters shared further suggestions with CMS (listed below) and stressed the need for non-financial support in increasing ACO-CBO collaborations.

- Commenters encouraged CMS to provide additional “technical assistance,” as well as additional program guidance and resources to ACOs that they can use when establishing or expanding partnerships with CBOs in the community.

- Commenters encouraged CMS to conduct outreach and provide support to CBOs that may be interested in collaborating with ACOs.

- Commenters suggested that CMS expand payment mechanisms using a similar approach embedded in the Maryland Total Cost of Care (TCOC) Model for supporting collaboration with CBOs.

- Commenters suggested that CMS add an ACO quality measure to assess the percentage of the ACO population screened for health-related social needs, and the percentage of the population that had an intervention delivered by a CBO.

- Commenters suggested that CMS improve SDOH data collection and expand and refine the use of payment methodologies that appropriately address the health, social, and equity goals of the community.

Several commenters recommended changes to the Shared Savings Program’s financial methodology to support ACO collaboration with CBOs. Specifically, they noted that increasing the financial benchmark to reflect assigned beneficiaries with social risk factors would provide resources for ACOs to develop robust community partnerships and allow flexibility for ACOs to provide supplemental benefits to those beneficiaries. Other commenters recommended that CMS leverage technology by providing ACOs with quality data reported via MIPS for purposes of identifying beneficiaries who have been screened for SDOH. One commenter encouraged CMS to consider a “tiered level of ACO participation” in the Shared Savings Program based on the degree to which the ACO collaborates with CBOs and integrates them into its governance structure and/or its ACO participant/ACO provider/supplier structure.

In addition to the suggestions for increasing and incentivizing ACO-CBO collaboration as summarized above, commenters also shared a few potential program risks from advancing ACO-CBO collaboration. Commenters expressed concern regarding the capacity of CBOs to furnish care and shared that increasing collaboration between ACOs and CBOs would also increase referrals to the CBO, possibly straining the CBO’s resources and increasing the demand on those resources. However, a few commenters noted that CMS could better evaluate the needs of communities to assist ACOs in meeting those needs. Lastly, commenters cautioned against any new regulations intended to increase ACO-CBO collaboration, noting that ACOs would benefit from the continued flexibility to form relationships that best meet the ACO’s goals and the needs of the beneficiaries that they serve.

*Response:* We thank commenters for their suggestions and appreciate the feedback we received for this solicitation. We will consider this information in future rulemaking.

## f. Out of Scope Comments

The following is a summary of the public comments that we received that went beyond the scope of the four RFIs in the CY 2024 PFS proposed rule (88 FR 52492 through 52497) and our response.

*Comment:* A few commenters requested certain waivers of Medicare requirements for Shared Savings Program ACOs. One commenter requested that CMS allow wider use of telehealth by allowing all Shared Savings Program ACOs access to telehealth waivers, and expand what telehealth waivers cover (for example, to include patient cost-sharing, modalities, and covered services). Another commenter asked CMS to “waive the initiating face-to-face relationship requirement for the proposed and existing care management codes for partner organizations that have been designated by an ACO that accepts downside risk.” This commenter also requested that ACOs be able to waive beneficiary co-pays and cost sharing requirements. One commenter requested that CMS change the “eligibility requirements for beneficiaries for the Skilled Nursing Facility (SNF) 3-Day Rule Waiver which currently precludes the beneficiary from residing in a SNF or other long term care setting.” Another commenter encouraged CMS to allow SNFs to be added to the ACO’s SNF Affiliate List on a quarterly basis as well as “reconsider the timing and star rating criteria so SNFs have an opportunity to correct” their processes following an “incident” that reduced their star rating to ensure that the SNF would have an opportunity to attain their minimum star rating status in time for the following Shared Savings Program performance year. Other commenters suggested modifications to the Shared Savings Program’s financial methodology unrelated to the RFIs or proposals in the CY 2024 PFS proposed rule, such as:

- Eliminating the distinction between low revenue ACOs and high revenue ACOs (refer to the definitions of “High revenue ACO” and “Low revenue ACO” at § 425.20);
- Setting regional-only benchmarks;
- Making equity adjustments in financial benchmarking;

- Removing the ACO’s own assigned beneficiaries from regional expenditure calculations when adjusting and updating the ACO’s benchmark;
- Retroactively applying the policy described at § 425.605(h) (Calculation of shared savings for certain BASIC track ACOs not meeting MSR requirement) to expand opportunities for certain ACOs to share in savings so that it will apply to PY 2023 and all prior years.
- Developing a pediatric risk algorithm; and
- Developing “value-based arrangements” (such as a nested bundled payment for skilled nursing facility, home health, or palliative care/serious illness management services) that “are embedded within the ACO for non-physician participating providers or organizations.”

Another commenter suggested CMS provide “projected or year-to-date shared savings levels that include a single dollar amount without requiring template population.” The commenter also requested that CMS allow an ACO to exclude a beneficiary from the ACO’s assigned beneficiary population if the beneficiary declines data sharing. One commenter requested that CMS require ACOs to include geriatric expertise on their governing bodies or incentivize health systems to become “Age-Friendly Health Systems.”

*Response:* We appreciate the commenters’ input but note that these suggestions go beyond the scope of the RFIs in the CY 2024 PFS proposed rule.

H. Medicare Part B Payment for Preventive Vaccine Administration Services (§§ 410.10, 410.57, 410.152)

1. Statutory Background

Under section 1861(s)(10) of the Act, Medicare Part B covers both the vaccine and vaccine administration for the specified preventive vaccines – the pneumococcal, influenza, hepatitis B and COVID-19 vaccines. Section 1861(s)(10)(B) of the Act specifies that the hepatitis B vaccine and its administration is only covered for those who are at high or intermediate risk of contracting hepatitis B, as defined at § 410.63. Under sections 1833(a)(1)(B) and (b)(1) of the Act, respectively, there is no applicable beneficiary coinsurance, and the annual Part B deductible does not apply for these vaccines or the services to administer them. Per section 1842(o)(1)(A)(iv) of the Act, payment for these vaccines is based on 95 percent of the Average Wholesale Price (AWP) for the vaccine product, except when furnished in the settings for which payment is based on reasonable cost, such as a hospital outpatient department (HOPD), rural health clinic (RHC), or Federally qualified health center (FQHC). Some other preventive vaccines, such as the zoster vaccine for the prevention of shingles, are not specified for Medicare Part B coverage under section 1861(s)(10) of the Act and are instead covered and paid for under Medicare Part D.

2. Medicare Part B Payment for the Administration of Preventive Vaccines

a. Pneumococcal, Influenza and Hepatitis B Vaccine Administration

In the CY 2022 PFS final rule (86 FR 65186), we finalized a uniform payment rate of \$30 for the administration of a pneumococcal, influenza or hepatitis B vaccine covered under the Medicare Part B preventive vaccine benefit. We explained that since payment policies for the administration of the preventive vaccines described under section 1861(s)(10) of the Act are independent of the PFS, these payment rates will be updated as necessary, independent of the valuation of any specific codes under the PFS. (Please see COVID-19 vaccine administration payment information in the next section.) The CY 2022 PFS final rule (86 FR 65180 through

65182) provides a detailed discussion on the history of the valuation of the three Level II Healthcare Common Procedure Coding System (HCPCS) codes, G0008, G0009, and G0010, which describe the services to administer an influenza, pneumococcal, and hepatitis B vaccine, respectively.

In the CY 2023 PFS final rule (87 FR 69984), we finalized a policy to annually update the payment amount for the administration of Part B preventive vaccines based upon the percentage increase in the Medicare Economic Index (MEI). Additionally, we finalized the use of the PFS Geographical Adjustment Factor (GAF) to adjust the payment amount to reflect cost differences for the geographic locality based upon the fee schedule area where the preventive vaccine is administered. These adjustments and updates apply to HCPCS codes G0008, G0009, G0010, and to the Level I Current Procedural Terminology (CPT) codes that describe the service to administer COVID-19 vaccines, which we discuss in the next section.<sup>310</sup>

The current payment rates for G0008, G0009, and G0010, as finalized in the CY 2023 PFS final rule, can be found on the CMS Vaccine Pricing website under “Seasonal Flu Vaccines”.<sup>311</sup> The payment rates for these services, with the annual update applied for CY 2024, are available in Tables 46A and 46B in section III.H.3.d. of this final rule.

#### b. COVID-19 Vaccine Administration

In the CY 2022 PFS final rule (86 FR 65181 and 65182), we provided a detailed history regarding the determinations of initial payment rates for the administration of COVID-19 vaccines, and an explanation of how the payment policy evolved to a rate of \$40 per dose. We noted that in the CY 2022 PFS proposed rule (86 FR 39220 through 39224), we included a comment solicitation requesting information that identifies the resource costs and inputs that should be considered when determining payment rates for preventive vaccine administration. As

---

<sup>310</sup> COVID-19 vaccine coding is available at <https://www.cms.gov/medicare/payment/fee-for-service-providers/part-b-drugs/average-drug-sales-price/vaccine-pricing>, under “COVID-19 Vaccines & Monoclonal Antibodies”

<sup>311</sup> <https://www.cms.gov/medicare/payment/fee-for-service-providers/part-b-drugs/average-drug-sales-price/vaccine-pricing>, under “Seasonal Flu Vaccines”.

part of the comment solicitation, we requested feedback specifically related to the circumstances and costs associated with furnishing COVID-19 vaccines, to ensure that we took these into consideration when determining our payment policy. In the CY 2022 PFS final rule (86 FR 65185), we stated that, after consideration of all the comments received, it was appropriate to establish a single, consistent payment rate for the administration of all four Part B preventive vaccines in the long term, but to pay a higher, \$40 payment rate for administration of COVID-19 vaccines in the short term, while pandemic conditions persisted (86 FR 65185).

In the CY 2023 PFS final rule (87 FR 69988 through 69993), we stated that due to timing distinctions between a PHE declared under section 319 of the Public Health Service (PHS) Act and an Emergency Use Authorization (EUA) declaration under section 564 of the Federal Food, Drug, and Cosmetic Act (FD&C Act), we reconsidered the policies finalized in the CY 2022 PFS final rule in light of our goal to promote broad and timely access to COVID-19 vaccines. We explained that our goal would be better served if our policies with respect to payment for administration of these products, as addressed in the November 2020 IFC and CY 2022 PFS final rule, continue until the EUA declaration for drugs and biological products with respect to COVID-19 (see 85 FR 18250) is terminated. Therefore, we finalized that we would maintain the current payment rate of \$40 per dose for the administration of COVID-19 vaccines through the end of the calendar year in which the March 27, 2020 EUA declaration under section 564 of the FD&C Act (EUA declaration) for drugs and biological products ends. Effective January 1 of the year following the year in which the EUA declaration ends, the COVID-19 vaccine administration payment would be set at a rate to align with the payment rate for the administration of other Part B preventive vaccines, that is, approximately \$30 per dose. As mentioned above, we also finalized that, beginning January 1, 2023, we would annually update the payment amount for the administration of all Part B preventive vaccines based upon the percentage increase in the MEI, and that we would use the PFS GAF to adjust the payment

amount to reflect cost differences for the geographic locality based upon the fee schedule area where the vaccine is administered.

The current payment rates for the CPT codes that describe the service to administer COVID-19 vaccines, as finalized in the CY 2023 PFS final rule, are available on the CMS COVID-19 Vaccine Pricing website, under “COVID-19 Vaccines & Monoclonal Antibodies”.<sup>312</sup> The payment rates for these services, with the annual update applied for CY 2024, are available in Tables 46A and 46B in section III.H.3.d. of this final rule.

*Comment:* Some commenters requested CMS to clarify the Part B preventive vaccine administration payment amounts for CY 2024. Commenters specifically asked that, due to the uncertainty surrounding the “commercialization” of COVID-19 vaccines, and due to the additional expenses and operational complexity that COVID-19 vaccines still present in relation to other vaccines, CMS maintain the existing higher COVID-19 vaccine administration payment through CY 2024. These commenters expressed that they would appreciate additional clarification about the transition date for the COVID-19 vaccine administration payment amount from \$40 to the \$30. One commenter asked CMS to clarify payment amounts for both COVID-19 vaccine products and their administration, and the commenter also specifically requested a chart similar to Tables 85 and 86 published in the CY 2023 PFS final rule (87 FR 69993).

*Response:* We acknowledge the commenters’ requests for clarification regarding the transition date for the vaccine administration payment amount for COVID-19 vaccines. In the CY 2023 PFS final rule (87 FR 69988 through 69993), we set this transition to occur on January 1 of the year following the year in which the Secretary ends the March 27, 2020, EUA declaration under section 564 of the FD&C Act (EUA declaration) for drugs and biological products. In the CY 2023 PFS final rule (87 FR 70224), we also codified this policy in regulations at § 410.152(h)(2) and (3).

---

<sup>312</sup> <https://www.cms.gov/medicare/payment/fee-for-service-providers/part-b-drugs/average-drug-sales-price/vaccine-pricing>, under “COVID-19 Vaccines & Monoclonal Antibodies”.

As discussed in the CY 2023 PFS final rule (87 FR 69987), an emergency declaration pursuant to section 564 of the FD&C Act (an “EUA declaration”) continues until specifically terminated.<sup>313</sup> When an EUA declaration is to be terminated, notice of termination will be published in the **Federal Register** to provide advance notice to the public that the EUA declaration is being terminated and provide for a transition period. This will permit manufacturers, health care facilities, providers, patients, and other interested parties time to transition from EUA products and the policies that support them. An EUA declaration under section 564 of the FD&C Act is distinct from, and not dependent on, an HHS PHE declaration under section 319 of the PHS Act. While the HHS PHE declaration under section 319 of the PHS Act for COVID-19 expired on May 11, 2023, the EUAs issued under the section 564 EUA declarations for drugs and biological products with respect to COVID-19 continue to remain in effect.<sup>314</sup>

Per commenters’ suggestions, we have included Tables 46A and 46B, at the end of section III.H.3 of this final rule, that reflect the potential alternative payment amounts for Part B preventive vaccine administration for CY 2024. Table 47 displays the CY 2024 Part B payment rates for preventive vaccine administration if the EUA declaration continues into CY 2024, and Table 48 displays the CY 2024 Part B payment rates for preventive vaccine administration if the EUA declaration ends on or before December 31, 2023.

For more information on Part B payment for COVID-19 vaccines and their administration, please see the CMS COVID-19 Vaccine Pricing website at <https://www.cms.gov/medicare/payment/all-fee-service-providers/medicare-part-b-drug-average-sales-price/vaccine-pricing>, under “COVID-19 Vaccines & Monoclonal Antibodies.” The website includes Medicare Part B payment amounts for COVID-19 vaccine products. For

<sup>314</sup> Ibid.; <https://www.hhs.gov/about/news/2023/05/09/fact-sheet-end-of-the-covid-19-public-health-emergency.html>, viewed September 19, 2023

more information on the end of the Centers for Disease Control and Prevention's (CDC) COVID-19 Vaccination Program and the transition to private purchasing of COVID-19 vaccines in the commercial marketplace, please see <https://www.cdc.gov/vaccines/covid-19/vaccination-provider-support.html>.

*Comment:* Several commenters requested that CMS evaluate how the current Part B preventive vaccine administration payment amounts impact vaccination rates, and that CMS work with vaccine providers to ensure the in-home add-on payment is adequate, given the additional costs associated with at-home administration. Other commenters suggested CMS to continue the \$40 payment amount for COVID-19 vaccine administration beyond the end of CY 2023, and extend that payment amount to the administration of all Medicare preventive vaccines. Some commenters noted that, while COVID-19 vaccines are somewhat easier for physician practices to manage than in previous years, the vaccines will still require unique practice considerations and additional expenses for those administering the vaccines.

*Response:* The CY 2022 PFS final rule (87 FR 65184 through 65186) contains an extensive discussion on our rationale for initially setting the \$40 COVID-19 vaccine administration rate, and for eventually aligning the COVID-19 vaccine administration rate with the rate for administration of the other Part B preventive vaccines, that is, \$30 per vaccine administered. In the CY 2023 final rule (87 FR 69988 through 69993), we set this transition to occur on January 1 of the year following the year in which the Secretary ends the March 27, 2020, EUA declaration under section 564 of the FD&C Act (EUA declaration) for drugs and biological products.

We acknowledged the unique circumstances that still surround the COVID-19 vaccine landscape, even now that the COVID-19 public health emergency (PHE) has expired.<sup>315</sup> We believe that our proposal to continue the higher COVID-19 vaccine administration rate through

---

<sup>315</sup> <https://www.hhs.gov/about/news/2023/05/09/fact-sheet-end-of-the-covid-19-public-health-emergency.html>, viewed on September 19, 2023.

the end of the year in which the EUA declaration ends, rather than immediately aligning the COVID-19 vaccine administration payment amount with that of the other Part B preventive vaccines upon the expiration of the PHE, provides an appropriate transition period to recognize continued higher resource needs. We will continue to review payment policies for Part B preventive vaccines and their administration, as circumstances continue to evolve regarding COVID-19 specifically, and regarding public health in general. When the transition to a calendar year post-EUA declaration does arrive, we plan to provide both vaccine providers and Medicare enrollees with sufficient notice and thorough guidance regarding the transition.

### 3. In-Home Additional Payment for Administration of COVID-19 Vaccines

#### a. Background

In the CY 2022 PFS final rule (86 FR 65187 and 65190), we provide a detailed discussion on the payment policy for COVID-19 vaccine administration in the home. In summary, providers and suppliers that administer a COVID-19 vaccine in the home, under certain circumstances, can bill Medicare for one of the existing COVID-19 vaccine administration CPT codes along with HCPCS code M0201 (*COVID-19 vaccine administration inside a patient's home; reported only once per individual home per date of service when only COVID-19 vaccine administration is performed at the patient's home*).<sup>316</sup> In CY 2022, the Medicare Part B payment amount paid to providers and suppliers administering a COVID-19 vaccine in the home was \$75.50 dollars per dose (\$40 for COVID-19 vaccine administration and \$35.50 for the additional payment for administration in the home). These payment amounts were then geographically adjusted using PFS GPCIs (as discussed in the CY 2023 PFS final rule at 87 FR 69980 through 69983). We note that when a preventive vaccine that is covered and paid under section 1861(s)(10) of the Act, is furnished in the settings for which payment is based on reasonable cost, such as a hospital outpatient department (HOPD), rural health clinic (RHC), or

---

<sup>316</sup> <https://www.cms.gov/medicare/payment/fee-for-service-providers/part-b-drugs/average-drug-sales-price/vaccine-pricing>, under "COVID-19 Vaccines & Monoclonal Antibodies".

Federally qualified health center (FQHC), the in-home additional payment mechanism is not applicable, since vaccine administration in those settings is based on reasonable cost, and is paid through the cost report process.

Since announcing the add-on payment for in-home COVID-19 vaccine administration in June 2021, we have noted that we established these policies on a preliminary basis to ensure access to COVID-19 vaccines during the public health emergency, and that we would continue to evaluate the needs of Medicare patients and these policies. In the CY 2022 PFS proposed rule (86 FR 39224 through 39226), we included a comment solicitation to collect feedback on these policies and potential future changes. As part of the comment solicitation, we requested feedback related to our definition of “home,” program integrity concerns, changes that we should consider, costs associated with administering COVID-19 vaccines in the home, and whether outside of a PHE there is a need to vaccinate people in the home rather than going to a health care provider or supplier. In the CY 2022 PFS final rule (86 FR 65188 through 65190), we discussed the feedback received, and we noted that commenters overwhelmingly recommended that we continue making the additional payment for COVID-19 vaccines administered in the home beyond the end of the PHE. Many commenters also supported extending the payment to other preventive vaccines, either permanently or until the end of the PHE. Commenters emphasized the importance of increasing vaccination rates and making vaccines available to underserved homebound beneficiaries who face barriers including chronic illness, financial and social precarity, and lack of access to digital resources. We agreed with commenters that the added costs and compelling needs required CMS to adopt the in-home add-on payment rate for COVID-19 vaccine administration. In addition, we stated that since we did not expect those needs or costs to diminish immediately with the end of the PHE, we believed it would be appropriate to leave the in-home add-on payment rate in place through the end of the calendar year in which the PHE ends. We explained that this extension of payment past the end of the PHE would also afford CMS the opportunity to monitor vaccine uptake data (86 FR 65189).

In the CY 2023 PFS final rule (87 FR 69984 through 69986), we discussed that we had received many comments and requests from interested parties that the in-home add-on payment be applied more broadly to all preventive vaccines. Commenters also expressed concerns that discontinuation of the in-home additional payment would negatively impact access to the COVID-19 vaccine for underserved homebound beneficiaries. We noted that while we agreed with these concerns, we also believed that we needed to learn more about the populations served through the current in-home add-on payment, and other potential populations that may not have been able to access a COVID-19 vaccine despite the availability of the in-home add-on payment, in order to understand the barriers experienced when receiving vaccinations in a home versus in the community. We also noted the need to consider potential program integrity concerns. Therefore, we finalized that we would continue the additional payment of \$35.50 when a COVID-19 vaccine is administered in a beneficiary's home, under the certain circumstances, only for the duration of CY 2023. We explained that we were continuing the additional payment for at-home COVID-19 vaccinations for another year to provide us time to track utilization and trends associated with its use, so to inform the Part B preventive vaccine policy on payments for in-home vaccine administration for CY 2024.

We also finalized the policy to adjust this payment amount for geographic cost differences as we do the payment for the preventive vaccine administration service, that is, based upon the fee schedule area where the COVID-19 vaccine is administered, by using the PFS GAF. In addition, we finalized an update to the \$35.50 payment amount by the CY 2023 MEI percentage increase, consistent with the policy finalized for the other preventive vaccine administration services. We noted that in the CY 2023 PFS final rule (87 FR 69688 through 69710), we rebased and revised the MEI to a 2017 base year. Therefore, we finalized (87 FR 69986) that for CY 2023, the in-home additional payment amount for COVID-19 vaccine administration described by HCPCS code M0201 was \$36.85 ( $\$35.50 \times 1.038 = \$36.85$ ), and we

established that payment for these services is adjusted for geographic cost differences using the relevant PFS GAF.

We note that in section III.H.3 of this final rule, we are finalizing revisions to § 410.152 that relate to these policies.

#### b. Conditions for Billing HCPCS code M0201 through CY 2023

In establishing the additional payment for COVID-19 vaccine administration in the home, we also established certain conditions for the add-on payment described by HCPCS code M0201. In the CY 2022 PFS final rule, we provided a detailed discussion on how we established the certain conditions under which the code can be used, and the situations we contemplated to arrive at our final payment policy (86 FR 65187 and 65188).

For purposes of this add-on payment for in-home COVID-19 vaccine administration, the following requirements have applied when billing for HCPCS code M0201:<sup>317,318</sup>

- The patient has difficulty leaving the home to get the vaccine, which could mean any of these:

- ++ They have a condition, due to an illness or injury, that restricts their ability to leave home without a supportive device or help from a paid or unpaid caregiver;

- ++ They have a condition that makes them more susceptible to contracting a pandemic disease like COVID-19; or

- ++ They are generally unable to leave the home, and if they do leave home, it requires a considerable and taxing effort.

- The patient is hard-to-reach because they have a disability or face clinical, socioeconomic, or geographical barriers to getting a COVID-19 vaccine in settings other than their home. These patients face challenges that significantly reduce their ability to get vaccinated outside the home, such as challenges with transportation, communication, or caregiving.

---

<sup>317</sup> <https://www.cms.gov/medicare/payment/covid-19/medicare-covid-19-vaccine-shot-payment>.

<sup>318</sup> <https://www.cms.gov/files/document/vaccine-home.pdf>.

- The sole purpose of the visit is to administer the COVID-19 vaccine. Medicare will not pay the additional amount if the provider or supplier furnished another Medicare covered service in the same home on the same date.

- A home can be:

- ++ A private residence, temporary lodging (for example, a hotel or motel, campground, hostel, or homeless shelter);

- ++ An apartment in an apartment complex or a unit in an assisted living facility or group home (including assisted living facilities participating in the CDC's Pharmacy Partnership for Long-Term Care Program when their residents are vaccinated through this program);

- ++ A patient's home that is made provider-based to a hospital during the PHE for COVID-19; or

- ++ Communal spaces of a multi-unit or communal living arrangement.

- A home cannot be:

- ++ An institution that meets the requirements of sections 1861(e)(1), 1819(a)(1), or 1919(a)(1) of the Act, which includes hospitals and skilled nursing facilities (SNFs), as well as most nursing facilities under Medicaid.<sup>319</sup>

To meet requirements for billing HCPCS code M0201, a COVID-19 vaccine must be administered inside an individual's home. For this purpose, an individual unit in a multi-dwelling building is considered a home. For example, an individual apartment in an apartment complex or an individual bedroom inside an assisted living facility or group home is considered a home. HCPCS code M0201, as noted in the code descriptor, can be billed only once per individual home per date of service. Medicare pays the additional payment amount for up to a maximum of 5 vaccine administration services per home unit or communal space within a single group living location; but only when fewer than 10 Medicare patients receive a COVID-19 vaccine dose on the same day at the same group living location.

---

<sup>319</sup> 42 CFR 409.42(a).

### c. Policies for CY 2024 and Subsequent Years

As discussed in the CY 2024 PFS proposed rule (88 FR 52499 through 52500), we have engaged in an in-depth analysis of the use of HCPCS billing code M0201, which specifically indicates that a COVID-19 vaccine was furnished in the home on a Medicare claim. The analysis found that data for in-home COVID-19 vaccinations among Medicare fee-for-service beneficiaries from June 2021 to June 2022 show the payment code was used at a disproportionately high rate by underserved populations, including persons who are dual eligible for both Medicare and Medicaid and those of advanced age. The data reflect that, between June 2021-June 2022, those 85 years of age and older were over 3 times more likely than younger beneficiaries to have received an in-home COVID-19 vaccination, and persons who are dual eligible for both Medicare and Medicaid were over 2 times more likely than those who are not dual eligible to have received a COVID-19 vaccine provided in their home. The data also showed higher usage of the in-home payment code among those with some common chronic conditions.<sup>320</sup>

Considering the results of our study, we concluded that the in-home additional payment improved healthcare access to vaccines for these often-underserved Medicare populations. From an analysis of the data, the in-home additional payment is billed significantly more frequently for beneficiaries that are harder to reach and that may be less likely to otherwise receive these preventive benefits. Therefore, we proposed to maintain the in-home additional payment for COVID-19 vaccine administration under the Part B preventive vaccine benefit. In addition, since our statutory authority at section 1861(s)(10) of the Act to regulate Part B preventive vaccine administration is identical for all four preventive vaccines, and since the payment has been shown to positively impact health equity and healthcare access, we proposed to extend the additional payment to the administration of the other three preventive vaccines included in the

---

<sup>320</sup> Common chronic conditions as identified by the CMS Chronic Conditions Data Warehouse, <https://www2.ccwdata.org/web/guest/home/>.

Part B preventive vaccine benefit – the pneumococcal, influenza, and hepatitis B vaccines. We proposed to provide the additional payment for pneumococcal, influenza, hepatitis B and COVID-19 vaccine administrations in the home when the conditions described in section III.H.3.b of the CY2024 PFS proposed rule are met. We noted that several of the conditions we established for the in-home additional payment refer specifically to COVID-19. We also stated in the CY 2024 PFS proposed rule, that if we finalize the proposal to expand the in-home additional payment to the other preventive vaccines, we would broaden the conditions for the payment to reflect preventive vaccines for the other diseases.

In the CY 2024 PFS proposed rule (88 FR 52500), we explained that, for CY 2024, the proposed growth rate of the 2017-based MEI was estimated to be 4.5 percent, based on the IHS Global, Inc. (IGI) first quarter 2023 forecast with historical data through fourth quarter 2022. We also proposed that if more recent data subsequently became available (for example, a more recent estimate of the MEI percentage increase), we would use such data, if appropriate, to determine the CY 2024 MEI percentage increase in the CY 2024 PFS final rule; we would apply that new MEI percentage increase to update last year's \$36.85 CY 2023 in-home additional payment amount for Part B preventive vaccine administration.

Since expanding this policy could mean that multiple vaccines are administered during the same visit to the home, we proposed to limit the additional payment to one payment per home visit, even if multiple vaccines are administered during the same home visit. We emphasized that every vaccine dose that is furnished would still receive its own unique vaccine administration payment. We stated our intent of continuing to monitor utilization of the M0201 billing code for the in-home additional payment, and that we plan to revisit the policy should we observe inappropriate use or abuse of the code. We proposed to modify the regulations at § 410.152(h) to reflect these policies.

We solicited comments on the policy condition regarding Medicare payment of the in-home additional payment amount for up to a maximum of five vaccine administration services

per home unit or communal space within a single group living location, but only when fewer than 10 Medicare patients receive a COVID-19 vaccine dose on the same day at the same group living location. We invited feedback on the applicability of this policy to the proposed policy to make the in-home additional payment available for the administration of all four Part B preventive vaccines.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Commenters were overwhelmingly supportive of our proposals to maintain the in-home additional payment for the administration of COVID-19 vaccine, and to extend the in-home additional payment to the administration of the other three Part B preventive vaccines. Many commenters remarked that this proposal, if finalized, would greatly improve access to vaccines for vulnerable, hard to reach and medically underserved populations. Commenters referenced increased access for the those with chronic illness, financial and social precarity, and for those who lack access to digital resources; those who face difficulty accessing transportation or who have limitations to mobility; minority and marginalized patients; older Americans; dually-eligible individuals; and generally, all those with barriers who rely on in-home care. Similarly, several commenters pointed to the positive impact the proposal would have on health equity. Other commenters voiced their belief that the policy will improve utilization of preventive vaccines, and therefore, help beneficiaries avoid serious illness. One commenter noted that the proposal would support primary care providers in their effort to combat vaccine hesitancy.

Several comments voiced their support for our continued payment amount updates based on inflationary factors via the MEI, and for our geographic adjustments of payment amounts based on the PFS GAF.

Many of the supportive commenters discussed the importance of vaccination in general. One commenter stated that the COVID-19 pandemic emphasized the need for an effective

vaccine delivery infrastructure. The commenter also emphasized the importance of vaccination in pediatric and primary care. Another commenter discussed the barriers that Medicare enrollees face in obtaining vaccinations, and noted, with reference to an article published by the Assistant Secretary for Planning and Evaluation, that homebound older adults are more likely to be members of racial and ethnic minorities.<sup>321</sup> Another commenter mentioned that, in addition to vaccines' contributions to the prevention of disease and lowering of healthcare costs, vaccines also contribute to treatment plans for certain conditions. Commenters encouraged CMS to continue incentivizing vaccination using every tool available, and to continue to believe creatively about ways to support vaccine access all parts of Medicare.

*Response:* We thank commenters for their support of our proposals and for partnering with CMS in our efforts to improve health access and equity. We agree that finalizing this proposal would improve access to preventive vaccines for all of the aforementioned groups of Medicare enrollees, including vulnerable, hard to reach and medically underserved populations, and those with chronic conditions and mobility challenges. We look forward to continuing our work with all of our partners in order to continue facilitating increased access to vaccinations for both Medicare enrollees and all Americans.

*Comment:* Some commenters requested that CMS consider a wide expansion of the proposals regarding in-home additional payments for Part B vaccine administration. While virtually all commenters supported our proposals, some commenters requested that the Part B vaccine benefit cover all Medicare-covered vaccines, including those currently covered under Part D, such as the new respiratory syncytial virus (RSV) vaccine. One commenter specified that this move would likely minimize cost-sharing for patients. Others stated that the proposed in-home additional payment should apply to all vaccines recommended by the CDC's Advisory

---

<sup>321</sup> Characteristics of Homebound Older Adults: Potential Barriers to Accessing the COVID-19 Vaccine Issue Brief. Office of the Assistant Secretary for Planning and Evaluation. U.S. Department of Health and Human Services. April 5, 2021. <https://aspe.hhs.gov/reports/characteristics-homebound-older-adults-potential-barriers-accessing-covid-19-vaccineissue-brief>.

Committee on Immunization Practices (ACIP). One commenter stated that they believe that all vaccines should be available in all settings of care.

A few commenters requested that CMS clarify that those furnishing vaccines in the home be permitted to bill for any additional unexpected services at the time of the visit.

Another commenter voiced support for legislation that would allow pharmacists to bill for vaccine administration under Medicare Part B, as they believe that would help relieve constraints on primary care providers and other healthcare professionals. Similarly, another commenter requested that CMS address the types of health care providers that are permitted to bill for furnishing preventive vaccines, and this commenter specifically noted that CMS should consider allowing Emergency Medical Services (EMS) Providers, Nursing Technicians, Pharmacy Technicians, and other provider types to be paid for administering vaccines, in order to increase access to preventive care.

One commenter requested that CMS use COVID-19 vaccine reporting requirements that were put in place during the pandemic to continue to prioritize vaccine reporting and suggested that this policy would support CMS' efforts to promote interoperability.

*Response:* We thank commenters for their interest in and support of our policies. We note that, in accordance with the statute, Part B payment can be made only for the preventive vaccines specified at section 1861(s)(10) of the Act. Please see sections III.H.1 and III.H.2 of this final rule for more information.

We will not address each of these comments specifically, as they are outside of the scope of our proposals in the CY 2024 PFS proposed rule. We did not make any proposals regarding expanding the Part B preventive vaccine benefit to additional vaccines. We did not make any proposals regarding payment for vaccines covered under Part D, and we did not address vaccine administration in other health care settings. We also note that our proposals were limited to payment for in-home vaccine administration. We did not make any proposals regarding the scope of practice for those who would administer the vaccines, and we did not address COVID-19

vaccination reporting.

However, as noted above, CMS is dedicated to the goal of increasing vaccine access for Medicare enrollees. We appreciate that these commenters share CMS' priorities in this area. We are actively taking these comments into consideration for the future, as appropriate under our statutory authority.

*Comment:* Some commenters requested specific expansions of our proposed policies. One commenter requested that we remove the requirement that a patient have difficulty leaving the home, or that patient must face barriers to getting a vaccine in settings other than their home, for the additional payment for in-home vaccine administration to apply. This commenter and others also suggested that we allow "home" to be defined to include skilled nursing facilities. Other commenters requested that CMS consider lifting the limit on the additional in-home payment to one payment per home visit, given the costs and operations associated with administering vaccines. A commenter explained that each vaccine administration involves unique work, time, and risk, and each vaccine administration has its own associated products.

One commenter requested CMS to consider further incentivizing access to home-based care by revising the additional in-home vaccine administration payment to address travel-related expenses, including various factors such transportation options, transportation costs, geographic distance and traffic conditions. Similarly, other commenters requested CMS to consider an additional payment for an extended visit with a patient or an extended commute to a patient.

*Response:* The proposals we included in the CY 2024 PFS proposed rule for the add-on payment for in-home administration of preventive vaccines are the first to establish payment for in-home vaccination under Part B outside the circumstances of the PHE for COVID-19. Our proposed regulations regarding the Part B preventive vaccine in-home additional payment are based on the payment conditions for the COVID-19 in-home additional payment, and they allow beneficiaries to receive Part B preventive vaccines in a variety of circumstances. As stated earlier in this section, we intend to continue to monitor utilization of the HCPCS M0201 billing code for

the in-home additional payment, and we plan to revisit the policy should we observe inappropriate use or abuse of the code. We are also carefully reviewing all the comments discussed above and will take them into consideration for potential future rulemaking regarding in-home vaccine administration payments.

After consideration of public comments, we are finalizing these policies as proposed. The in-home additional payment for the administration of pneumococcal, influenza, and hepatitis B vaccines will be effective January 1, 2024, together with the current additional payment for the in-home administration of COVID-19 vaccines that is being extended. That is, providers and suppliers would continue to bill Medicare Part B for the additional payment for the in-home administration of COVID-19 vaccines, and beginning January 1, 2024, they would also be able to bill Medicare Part B for the in-home administration of pneumococcal, influenza, and hepatitis B vaccines. In addition, like the current in-home additional payment for COVID-19 vaccine administration, the in-home additional payment for the administration of Part B preventive vaccines will be geographically adjusted based on the PFS GAF, and annually updated by the CY 2024 MEI percentage increase.

We proposed in the CY 2024 PFS proposed rule (88 FR 52500) that if more recent data become available (for example, a more recent estimate of the CY 2024 MEI percentage increase), we would use such data, if appropriate, to determine the CY 2024 MEI percentage increase in the CY 2024 PFS final rule, and would then apply that new MEI percentage increase to update last year's \$36.85 CY 2023 in-home additional payment amount for Part B preventive vaccine administration. More recent data are now available, and we believe it is appropriate to use the updated data to update the in-home additional payment amount for CY 2024. The MEI percentage increase for this CY 2024 final rule is 4.6 percent, based on the most recent historical data through second quarter 2023. The CY 2024 in-home additional payment for Part B preventive vaccine administration is therefore \$38.55 ( $\$36.85 \times 1.046 = \$38.55$ ).

Thus, in this final rule, we are amending the Part B payment for preventive vaccine administration regulations at § 410.152(h) to reflect the following:

- Effective January 1, 2022, the Medicare Part B additional payment amount paid to providers and suppliers administering a COVID-19 vaccine in the home, under certain circumstances, is \$35.50. For COVID-19 vaccines administered in the home January 1, 2022, through December 31, 2022, the additional payment amount under Medicare Part B is adjusted to reflect geographic cost variations using the PFS GPCIs.

- Effective January 1, 2023, the additional payment amount for the administration of a COVID-19 vaccine in the home is updated annually based upon the percentage change in the MEI. For COVID-19 vaccines administered in the home January 1, 2023, through December 31, 2023, the in-home vaccine administration payment amount is adjusted to reflect geographic cost variations using the PFS GAF.

- Effective January 1, 2024, the payment policy allowing for additional payment for the administration of a COVID-19 vaccine in the home is extended to include the other three preventive vaccines included in the Part B preventive vaccine benefit, and the in-home vaccine administration payment amount is the same for all four vaccines (though only one payment is made per home visit regardless of how many vaccines are administered). That is, beginning January 1, 2024, Medicare Part B will pay the same additional payment amount to providers and suppliers that administer a pneumococcal, influenza, hepatitis B, or COVID-19 vaccine in the home, under certain circumstances. This additional payment amount will be annually updated using the percentage increase in the MEI and adjusted to reflect geographic cost variations using the PFS GAF.

#### d. Summary of Payment Amounts for CY 2024 and Subsequent Years

Due to the uncertainty surrounding the future of the EUA declaration for drugs and biological products for COVID-19, we are including Tables 46A and 46B that summarize Medicare Part B the potential alternative preventive vaccine administration payment amounts at

the time of the publication of this final rule. If the EUA declaration continues in effect on January 1, 2024, the payment rates in Table 47 will apply. If the EUA declaration is terminated before January 1, 2024, the payment rates in Table 48 will apply.

**TABLE 47: CY 2024 Part B Payments for Preventive Vaccine Administration if the EUA Declaration for Drugs and Biologicals with Respect to COVID-19 Continues into CY 2024**

Category of Part B Product Administration	Part B Payment Amount (Unadjusted)	Annual Update <sup>6</sup>	Geographic Adjustment
Influenza, Pneumococcal, Hepatitis B Vaccines <sup>1,4</sup>	\$32.57	MEI	GAF
COVID-19 Vaccine <sup>2,4</sup>	\$43.43	MEI	GAF
In-Home Additional Payment for Part B Vaccine Administration (M0201)	\$38.55	MEI	GAF
COVID-19 Monoclonal Antibodies (for Treatment or Post-Exposure Prophylaxis) <sup>3,4,5</sup>			
Infusion: Health Care Setting	TBD	N/A	GAF
Infusion: Home	TBD	N/A	GAF
Intravenous Injection: Health Care Setting	TBD	N/A	GAF
Intravenous Injection: Home	TBD	N/A	GAF
Injection: Health Care Setting	TBD	N/A	GAF
Injection: Home	TBD	N/A	GAF
COVID-19 Monoclonal Antibodies (for Pre-Exposure Prophylaxis) <sup>3,4,5</sup>			
Injection: Health Care Setting	TBD	N/A	GAF
Injection: Home	TBD	N/A	GAF

<sup>1</sup> HCPCS Codes G0008, G0009, G0010.

<sup>3</sup> <https://www.cms.gov/monoclonal>. As of the issuance of the CY2024 PFS final rule, there are no COVID-19 monoclonal antibodies approved or authorized for use against the dominant strains of COVID-19 in the United States.

<sup>4</sup> Beneficiary coinsurance and deductible are not applicable.

<sup>5</sup> To be determined (TBD). As of the issuance of the CY 2024 PFS final rule, there are no COVID-19 monoclonal antibodies approved or authorized for use against the dominant strains of COVID-19 in the United States.

<sup>6</sup> The CY 2024 MEI percentage increase is 4.6 percent based on the most recent historical data through the 2<sup>nd</sup> quarter of 2023.

**TABLE 48: Part B Payments for Preventive Vaccine Administration Beginning January 1, 2024, if the EUA Declaration for Drugs and Biologicals with Respect to COVID 19 is Terminated on or Before December 31, 2023**

Category of Part B Product Administration	Part B Payment Amount (Unadjusted)	Annual Update <sup>7</sup>	Geographic Adjustment
Influenza, Pneumococcal, Hepatitis B <sup>1,4</sup>	\$32.57	MEI	GAF
COVID-19 <sup>2,4</sup>	\$32.57	MEI	GAF
In-Home Additional Payment for Part B Vaccine Administration (M0201)	\$38.55	MEI	GAF
COVID-19 Monoclonal Antibodies (for Treatment or Post-Exposure Prophylaxis) <sup>3,5</sup>	Medicare payment under the applicable payment system		
COVID-19 Monoclonal Antibodies (for Pre-Exposure Prophylaxis) <sup>4,5</sup>	TBD <sup>5,6</sup>	N/A	GAF

<sup>1</sup> HCPCS Codes G0008, G0009, G0010.

<sup>2</sup> <https://www.cms.gov/medicare/payment/fee-for-service-providers/part-b-drugs/average-drug-sales-price/vaccine-pricing>.

<sup>3</sup> Payment is in accordance with the applicable payment system of the setting in which the product is administered. Beneficiary coinsurance and deductible are applicable.

<sup>4</sup> Beneficiary coinsurance and deductible are not applicable.

<sup>5</sup> As of the issuance of the CY2024 PFS final rule, there are no COVID-19 monoclonal antibodies approved or authorized for use against the dominant strains of COVID-19 in the United States.

<sup>6</sup> Please see section III.H.4 of this final rule.

<sup>7</sup> The CY 2024 MEI percentage increase is 4.6 percent based on the most recent historical data through the 2<sup>nd</sup> quarter of 2023.

#### 4. Other Amendments to Regulation Text

In CY 2023 PFS final rule (87 FR 69987 through 69993), we finalized changes to our policies regarding Part B coverage and payment for COVID-19 monoclonal antibody products and their administration. In that final rule (87 FR 69987), we discussed that all COVID-19 monoclonal antibody products and their administration are covered and paid for under the Part B preventive vaccine benefit through the end of year in which the Secretary terminates the EUA declaration for drugs and biological products with respect to COVID-19. In addition, we explained that, under the authority provided by section 3713 of the CARES Act, we have established specific coding and payment rates for the COVID-19 vaccine, as well COVID-19 monoclonal antibodies and their administration, through technical direction to Medicare Administrative Contractors (MACs) and information posted publicly on the CMS website (87 FR 69987). In Tables 46A and 46B, we do not list the unique payments rates for the administration of COVID-19 monoclonal antibodies since at the time of the publication of this final rule, there

are no COVID-19 monoclonal antibodies approved or authorized for use against the dominant strains of COVID-19 in the United States.

In the CY 2023 PFS final rule, we also established a policy to continue coverage and payment for monoclonal antibodies that are used for pre-exposure prophylaxis (PrEP) of COVID-19 under the Part B preventive vaccine benefit, if they meet applicable coverage requirements (87 FR 69992). We explained that we will continue to pay for these products and their administration even after the EUA declaration for drugs and biological products is terminated, so long as after the EUA declaration is terminated, such products have market authorization. Additionally, we established that payments for the administration of monoclonal antibodies that are used for PrEP of COVID-19 would be adjusted for geographic cost variations using the PFS GAF. However, we did not codify these policies in our regulations. In the CY 2024 PFS proposed rule (88 FR 52500), proposed revisions to the relevant regulations to include monoclonal antibodies that are used for PrEP of COVID-19 under the Part B preventive vaccine benefit. Specifically, we proposed to revise the following regulations to reflect policies for monoclonal antibodies for PrEP of COVID-19 that we finalized in the CY 2023 PFS final rule:

- At § 410.10, in paragraph (l), we proposed to add a phrase regarding monoclonal antibodies used for pre-exposure prophylaxis of COVID-19, and their administration.
- At § 410.57, in paragraph (c), we proposed to add a phrase regarding monoclonal antibodies used for pre-exposure prophylaxis of COVID-19, and their administration.

We note again that at the time of the publication of this final rule, there are no COVID-19 monoclonal antibodies approved or authorized for use against the dominant strains of COVID-19 in the United States. Therefore, we did not finalize any payment regulations regarding monoclonal antibodies for PrEP of COVID-19 at this time. If and when a new monoclonal antibody for PrEP of COVID-19 becomes authorized for use, we will use the authority provided by section 3713 of the CARES Act, as discussed in the CY 2023 PFS final rule (87 FR 69987), to establish specific coding and payment rates for the administration of that product through

technical direction to MACs and information posted publicly on the CMS website. We will subsequently propose coding and payment rates for the administration of that product via rulemaking.

We also note that, for the purposes of the in-home additional payment discussed above in section III.H.3 of this final rule, that additional payment is not applicable to the administration of monoclonal antibodies for PrEP of COVID-19. For monoclonal antibodies for PrEP of COVID-19, as displayed in Tables 46A and 46B, we set the coding and payment rates for the administration of COVID-19 monoclonal antibodies in the home to be higher than those in other health care settings, and therefore such amounts already account for the higher costs of administering the product in the home. More information on our coding and payment policies for COVID-19 monoclonal antibodies is available at <https://www.cms.gov/monoclonal>.

Also, in the CY 2023 PFS final rule, we codified our payment rates for all four Part B preventive vaccines, and we finalized that the vaccine administration payment rates for all four Part B preventive vaccines would be annually updated by the MEI and geographically adjusted by the PFS GAF. We included these policies in regulation text at § 410.152(h). However, we neglected to include the effective date for the MEI policy in the regulation text. Therefore, in the CY 2024 PFS proposed rule (88 FR 52501), we proposed the following correction, and we reorganized other elements of the regulation text at § 410.152(h) as we proposed to codify the in-home additional payment:

- At § 410.152, at paragraph (h)(5), we proposed to add that the paragraph is effective beginning January 1, 2023.
- At § 410.152, we proposed to combine the existing paragraphs (h)(2) and (3) into a new paragraph (h)(2), with paragraphs (h)(2)(i) and (h)(2)(ii).
- At § 410.152, at a revised paragraph (h)(3), we proposed new regulations regarding the in-home additional payment for preventive vaccine administration, as described in section III.H.3.c of this final rule.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Commenters supported the proposed amendments to regulation text detailed above. Commenters reiterated their support for CMS' policy regarding monoclonal antibodies for PrEP of COVID-19, since these products provide certain patients, including immune-compromised patients, additional options for preventive care for COVID-19.

*Response:* We thank commenters for their support of our proposals.

*Comment:* One commenter requested CMS clarify guidance regarding payment for potential monoclonal antibodies that are indicated for both PrEP and treatment of COVID-19.

*Response:* As previously stated, at the time of the publication of this final rule, there are no COVID-19 monoclonal antibodies approved or authorized for use against the dominant strains of COVID-19 in the United States. If and when a new monoclonal antibody for either PrEP or treatment of COVID-19 becomes authorized for use, we would use the authority provided by section 3713 of the CARES Act, as discussed in the CY 2023 PFS final rule (87 FR 69987), to establish specific coding and payment rates for the administration of that product through technical direction to MACs and information posted publicly on the CMS website. In the case of a monoclonal antibody for PrEP of COVID-19, we would subsequently propose coding and payment rates for the administration of that product via rulemaking.

After consideration of public comments, we are finalizing these amendments to regulation text as proposed.

## I. Medicare Diabetes Prevention Program (MDPP)

The Centers for Medicare & Medicaid Services' (CMS) Medicare Diabetes Prevention Program Expanded Model (hereafter, "MDPP" or "expanded model") is an evidence-based behavioral intervention that aims to prevent or delay the onset of type 2 diabetes for eligible Medicare beneficiaries diagnosed with prediabetes. MDPP is an expansion in duration and scope of the Diabetes Prevention Program (DPP) model test, which was initially tested by CMS through a Round One Health Care Innovation Award (2012-2016). MDPP was established in 2017 as an "additional preventive service" covered by Medicare and not subject to beneficiary cost-sharing, in addition to being available once per lifetime to eligible beneficiaries. To facilitate delivery of MDPP in a non-clinical community setting (to align with the certified DPP model test), CMS created a new MDPP supplier type through rulemaking in the CY 2017 PFS final rule (81 FR 80471),<sup>322</sup> , in addition to requiring organizations that wish to participate in MDPP enroll in Medicare separately, even if they are already enrolled in Medicare for other purposes.

MDPP is a non-pharmacological behavioral intervention consisting of up to 22 intensive sessions using a Centers for Disease Control and Prevention (CDC) approved National Diabetes Prevention Program (National DPP) curriculum. Sessions are furnished over 12 months by a trained Coach who provides training on topics that include long-term dietary change, increased physical activity, and behavior change strategies for weight control and diabetes risk reduction. Suppliers may use the CDC-developed PreventT2 curriculum<sup>323</sup> or an alternate CDC-approved curriculum when delivering MDPP. The primary goal of the expanded model is to help Medicare

<sup>323</sup> <https://www.cdc.gov/diabetes/prevention/resources/curriculum.html>.

beneficiaries reduce their risk for developing type 2 diabetes by achieving at least 5 percent weight loss.

Eligible organizations seeking to furnish MDPP began enrolling in Medicare as MDPP suppliers on January 1, 2018, and began furnishing MDPP on April 1, 2018. Through the National Diabetes Prevention Recognition Program (DPRP), the CDC administers a national quality assurance program recognizing eligible organizations that furnish the National DPP through its evidence based DPRP Standards,<sup>324</sup> which are updated every 3 years. The CDC established the DPRP in 2012 and possesses significant experience assessing the quality of program delivery by organizations throughout the United States, applying a comprehensive set of national quality standards. For further information on the DPP model test<sup>325</sup>, the CDC's National DPP<sup>326</sup>, and DPRP Standards<sup>327</sup>, please refer to the CY 2017<sup>328</sup> (81 FR 80471) and CY 2018 PFS<sup>329</sup> (82 FR 52976) final rules and related websites.

We proposed to amend § 410.79(b),<sup>330</sup> Conditions of coverage, to remove the definition for the core maintenance session interval while adding definitions for the following terms: Combination delivery, Distance learning, Extended flexibilities, Extended flexibilities period, Full-Plus CDC DPRP recognition, Online delivery, and Virtual sessions. In addition, we

proposed to amend § 410.79(c)(2)(i)(A) and (B)<sup>331</sup> to update the maximum number of payable sessions during the MDPP core services period. We also proposed to amend § 410.79(e)(3) to extend certain flexibilities established through rulemaking as a result of the recent COVID-19 public health emergency (PHE) for a period of 4 years.<sup>332</sup> Furthermore, we proposed to amend § 414.84 Payment for MDPP Services<sup>333</sup> to streamline the MDPP payment structure by adding service-based attendance payments while still retaining the diabetes risk reduction performance payments for 5 percent and 9 percent weight loss. We also proposed to amend § 424.205(a) and (c) to remove “MDPP interim preliminary recognition” and replace it with “CDC preliminary recognition”.<sup>334</sup>

1. Changes to § 410.79 by amending paragraphs (b), (c)(2)(i) and (e)(3)

MDPP is a comprehensive behavior change intervention for people with pre-diabetes with the goal of preventing them from becoming diabetic. CMMI expanded this model in 2018 based on a Health Care Innovation Award (HCIA) to the National Young Men’s Christian Association (YMCA) of the USA (Y-USA), who tested the Centers for Disease Control and Prevention’s (CDC) National Diabetes Prevention Program (National DPP) in the Medicare population through their network of YMCAs in multiple US markets (DPP model test ).<sup>335</sup> The

DPP model test successfully met statutory criteria for model expansion,<sup>336</sup> demonstrating five percent weight loss by participants (a key metric of the program's success) along with statistically significant reductions in Medicare spending, ED visits and inpatient stays.<sup>337</sup>

The MDPP expanded model was implemented through the rulemaking process in two phases in the CY 2017 PFS final rule<sup>338</sup> and in the CY 2018 PFS final rule<sup>339</sup>. In the CY 2017 PFS, we established MDPP to expand the duration and scope of the DPP model test, created a new supplier class, finalized the MDPP framework for expansion, and finalized details about the benefit such as beneficiary eligibility criteria, MDPP supplier eligibility criteria, enrollment policies, and the MDPP benefit period. In the CY 2018 PFS, we finalized additional policies necessary for suppliers to begin furnishing MDPP services nationally in 2018, including established the MDPP payment structure and amounts, provided additional supplier enrollment requirements and supplier compliance standards. In addition, we updated CY 2017 policies regarding MDPP services and beneficiary eligibility, established an MDPP-specific supplier enrollment application and an effective date for MDPP billing privileges.

Although MDPP was established through the 2017 PFS, it went into effect in 2018, with supplier enrollment starting January 1, 2018, and beneficiary enrollment starting April 1, 2018. After nearly 6 years of implementation, we are finalizing updates to MDPP based on lessons learned since the expanded model's launch, including updates to definitions and the core services

period as well as extending the flexibilities allowed under the COVID-19 Public Health Emergency for a period of 4 years.

The core maintenance session interval, as defined in the CY 2018 PFS, means one of the two consecutive 3-month time periods during months 7 through 12 of the MDPP services period, during which an MDPP supplier offers an MDPP beneficiary at least one core maintenance session per month.<sup>340</sup> The core maintenance session interval represents a performance interval for attendance-based payments in the current payment structure. Because we proposed that beneficiary attendance be paid on a fee-for-service basis, we proposed removing the core maintenance session interval to make the payment structure less confusing.

In prior rulemaking, we did not formally define the MDPP delivery modalities that are considered virtual. In this final rule, we proposed adding definitions for distance learning and online delivery modalities in § 410.79(b) to better clarify which virtual modalities can be used in the proposed Extended flexibilities period.<sup>341</sup>

We also proposed to modify the definitions for Make-up session, MDPP services period, and MDPP session as defined in § 410.79(b) to remove most references to ongoing maintenance sessions.<sup>342</sup> In the finalized CY 2022 PFS, we removed eligibility for the ongoing maintenance sessions for those beneficiaries who started the Set of MDPP services on or after January 1, 2022.<sup>343</sup> Given that the 2-year MDPP services period for those beneficiaries who started MDPP

on or before December 31, 2021, will end on or before December 30, 2023, eligibility for ongoing maintenance services will end December 31, 2023 for all beneficiaries.

The core services period, as defined in § 410.79(c)(2)(i)(A) and (B), consists of at least 16 core sessions offered at least one week apart during the months 1 through 6 of the MDPP services period, and two 3-month core maintenance session intervals offered during months 7 through 12 of the MDPP services period. In order to conform to the proposed revisions to the payment structure in § 414.84, we proposed to amend the expanded model regulations to allow for fee-for-service payments for beneficiary attendance during the core services period.

MDPP's performance-based payment structure was established in the CY 2018 PFS final rule<sup>344</sup> to pay for the Set of MDPP services that makes up the periodic performance payments to MDPP suppliers during the MDPP services period. The aggregate of all MDPP performance payments constitutes the total performance-based payment amount for the Set of MDPP services. Although beneficiaries may currently attend at least 16 weekly sessions in months 1-6 and at least 6 monthly sessions in months 7-12, MDPP suppliers are only paid five times for beneficiary attendance: after a beneficiary attends the 1<sup>st</sup>, 4<sup>th</sup> and 9<sup>th</sup> sessions in months 1-6, and after attending the second core maintenance session in months 7-9 and in months 10-12.<sup>345</sup>

Since this payment structure went into effect in 2018, feedback was received from suppliers and interested parties that the MDPP performance-based payment structure is confusing to suppliers, including those new to Medicare and existing Medicare-enrolled suppliers. Confusion with claims submission has been due in part to the MDPP payment structure, which pays for attendance and diabetes risk-reduction performance-based milestones instead of paying for an individual service. Paying for an individual service delivery is typical in

Medicare.<sup>346</sup> Public comments in response to the CY 2018 PFS proposed rule have indicated that CMS should modify its payment structure such that it allows for an adequate and predictable payment stream to cover the cost of providing services as long as beneficiaries attend sessions.

After 5 years of testing the current performance-based payment structure, we have determined that the structure is inadequate to meet MDPP supplier needs and beneficiary retention. For example, there are currently five attendance-based performance payments over the 12-month MDPP service period, with a potential 4- to 5-month lag between the third payment and the fourth payment. We believe that our current payment structure does not incentivize beneficiary retention. As a result, we proposed fee-for-service payments for beneficiary attendance in this final rule, allowing for up to 22 attendance-based payments versus the five that are currently in place. Thus, we proposed allowing beneficiaries to attend a maximum of 22 sessions during the core services period, including up to 16 sessions in months 1-6 and up to 6 sessions in months 7-12.<sup>347</sup>

We proposed to amend the MDPP expanded model to revise certain MDPP policies finalized in the CY 2021 PFS final rule.<sup>348</sup> We proposed to extend the flexibilities allowed under the COVID-19 PHE for a period of 4 years until December 31, 2027. These Extended flexibilities are described in § 410.79(e)(3)(iii), and (iv) of this final rule. The MDPP regulations provide for the following flexibilities during the PHE or an applicable 1135 waiver event:

---

- *Alternatives to the requirement for in-person weight measurement (§410.79(e)(3)(iii)).*

Section 410.79(e)(3)(iii) permits an MDPP supplier to obtain weight measurements for MDPP beneficiaries for the baseline weight and any weight loss-based performance achievement goals in the following manner: (1) via digital technology, such as scales that transmit weights securely via wireless or cellular transmission; or (2) via self-reported weight measurements from the at-home digital scale of the MDPP beneficiary. We stated that self-reported weights must be obtained during live, synchronous online video technology, such as video chatting or video conferencing, wherein the MDPP Coach observes the beneficiary weighing themselves and views the weight indicated on the at-home digital scale. Alternatively, the MDPP beneficiary may self-report their weight by submitting to the MDPP supplier a date-stamped photo or video recording of the beneficiary's weight, with the beneficiary visible in their home. The photo or video must clearly document the weight of the MDPP beneficiary as it appears on the digital scale on the date associated with the billable MDPP session. This flexibility allows suppliers to bill for participants achieving weight loss performance goals.

- *Elimination of the maximum number of virtual services (§ 410.79(e)(3)(iv)):* The virtual session limits described in § 410.79(d)(2), and (d)(3)(i) and (ii) do not apply, and MDPP suppliers may provide all MDPP sessions virtually during the PHE as defined in § 400.200 of this chapter or applicable 1135 waiver event. MDPP suppliers were permitted to provide the Set of MDPP services virtually during the PHE for COVID-19, as long as the virtual services were furnished in a manner that is consistent with the CDC DPRP standards for virtual sessions, follow the CDC-approved National DPP curriculum requirements, and the supplier has an in-person DPRP organizational code.

We proposed that during the Extended flexibilities period, MDPP suppliers may provide virtual services as long as they are provided in a manner consistent with the CDC DPRP

standards for distance learning.<sup>349</sup> The extension of these flexibilities under § 410.79I(3)(v) will allow beneficiaries to obtain the Set of MDPP services either in-person, through distance learning, or through a combination of in-person and distance learning for a period of 4 years.

In the May 2, 2023, **Federal Register** (88 FR 27413), we published a notice extending PHE flexibilities for MDPP suppliers, providing them the opportunity to deliver the Set of MDPP services either virtually or in-person (or a combination of both) from May 12, 2023, through December 31, 2023. As a result, MDPP suppliers can continue delivering the Set of MDPP services on a virtual basis during this period to allow MDPP suppliers additional time to resume in-person services. For more information on the **Federal Register** Notice, please see <https://www.federalregister.gov/d/2023-09188>. For more information on the flexibilities that MDPP suppliers were permitted to implement during the PHE, please see <https://www.ms.gov/files/document/participants-medicare-diabetes-prevention-program-cms-flexibilities-fight-covid-19.pdf>. The CDC’s 2021 DPRP Standards allow two types of virtual delivery modalities: “Distance learning” and “online” delivery.<sup>350</sup> According to CDC, *Distance learning* involves “a yearlong National DPP lifestyle change program delivered 100 percent by trained Lifestyle Coaches via remote classroom or telehealth. The Lifestyle Coach provides live (synchronous) delivery of session content in one location and participants call-in or video-conference from another location.”<sup>29</sup> Although “telehealth” is included in CDC’s definition of distance learning, CMS stated in the CY 2017 PFS final rule (82 FR 52976) that MDPP services delivered via a telecommunications system or other remote technologies do not qualify as telehealth services.<sup>351</sup>

Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule and Other Revisions to Part B for CY 2017; Medicare Advantage Pricing Data Release; Medicare Advantage and Part D Medical Low Ratio Data Release; Medicare Advantage Provider Network

Additionally, CDC defines *online* delivery as a yearlong National DPP lifestyle change program delivered 100 percent online for all participants.<sup>29</sup> The program is experienced through the Internet via smart phone, tablet, or laptop in an asynchronous classroom where participants are experiencing the content on their own time without a live Lifestyle Coach teaching the content. However, live Lifestyle Coach interaction should be provided to each participant no less than once per week during the first 6 months and once per month during the second 6 months. E-mails and text messages can count toward the requirement for live coach interaction as long as there is bi-directional communication between coach and participant.<sup>352</sup>

In the CY 2021 PFS final rule (85 FR 84472),<sup>353</sup> we established that virtual sessions performed under flexibilities finalized in that rule could only be performed by suppliers who offered in-person services. For the proposed Extended flexibilities period<sup>354</sup>, we proposed to limit virtual delivery to the CDC DPRP definition of “distance learning.” This proposal was based on internal data from the PHE for COVID-19, including anecdotal, monitoring, evaluation, claims, and CDC DPRP data, suggesting that the majority of the MDPP virtual sessions delivered during the PHE for COVID-19 1135 waiver event were distance learning sessions.

Although the MDPP was certified and established as an in-person service, in response to the PHE for COVID-19, we established and implemented policies that allowed MDPP suppliers

to provide MDPP services virtually during the PHE for COVID-19, as long as the virtual services: were furnished in a manner that is consistent with the CDC DPRP standards for virtual sessions, the curriculum furnished during the virtual sessions addressed the same curriculum topics as the CDC-approved National DPP curriculum, the supplier had an in-person DPRP organizational code, and other requirements specified at § 410.79(e)(3)(iv) were satisfied.<sup>355</sup> We believe that distance learning allows for a similar live group experience for beneficiaries but only when delivered in a synchronous virtual manner through telephonic or video conference.

Through utilizing distance learning, participants may still interact with their Coach and other participants in their cohort in real-time, allowing for relationship building and peer support, unlike online delivery which is delivered asynchronously. Therefore, the proposed Extended flexibilities do not include online delivery (or asynchronous virtual), as defined in the CDC DPRP Standards through the “online” modality, including virtual make-up sessions.

We previously stated that the MDPP expanded model was certified for expansion by the Chief Actuary of CMS, based on a model test that used in-person delivery.<sup>356</sup> Given the 3-year duration of the PHE for COVID-19 and the feedback received from MDPP suppliers,

(85 FR 84833), December 28, 2020. <https://www.federalregister.gov/d/2020-26815.pdf>.

beneficiaries, MA plans, interested parties, and comments submitted during the CY 2022 rulemaking, there is interest in extending the flexibilities offered during the PHE for COVID-19 to reduce the burden of traveling to an in-person class on a weekly basis, as beneficiaries experienced transportation as well as child/elder care challenges with in-person delivery. Additionally, we have heard interest in a hybrid or combination delivery option where participants could attend some in-person classes as well as virtual classes. As a result of this feedback, we proposed to extend the flexibilities allowed under § 410.79(e)(3)(iii) (regarding use of alternative methods for obtaining weight measurements during virtual services) and § 410.79(e)(3)(iv) (regarding elimination of the maximum number of virtual services) for 4 years, to give us time to test and evaluate the distance learning delivery of MDPP.

Since MDPP was established in the CY 2017 PFS final rule, CMS and interested parties have considered whether fully virtual services could be included as part of the expanded model. For example, in the CY 2017 PFS proposed rule, we proposed that MDPP suppliers be allowed to provide MDPP services via remote technologies, even though the majority of CDC DPRP organizations provided in-person delivery at that time.<sup>357</sup> However, we also recognized that the virtual delivery of the Set of MDPP services may introduce additional risk of fraud and abuse. CMS stated that if that provision was to be finalized, we will propose specific policies in future rulemaking to mitigate these risks. In the CY 2017 PFS final rule (81 FR 80459), we deferred establishing policies related to organizations delivering the Set of MDPP services virtually.

In the subsequent CY 2018 PFS proposed rule, we explained our rationale for proposing not to allow fully virtual delivery of MDPP, but did propose to allow, consistent with CDC DPRP Standards, a limited number of virtual make-up sessions for participants who missed a regularly scheduled session.<sup>36</sup> “Virtual make-up session” was defined in § 410.79(d)(2) as a

---

<sup>357</sup> Centers for Medicare & Medicaid Services. Centers for Medicare & Medicaid Services. July 15, 2016. <https://www.govinfo.gov/content/pkg/FR-2016-07-15/pdf/2016-16097.pdf>.

make-up session that is not furnished in-person and that is furnished in a manner consistent with the requirements in paragraph § 410.79(d)(1). In the CY 2018 PFS final rule<sup>358</sup>, we finalized that the Set of MDPP services would be primarily delivered in-person, in a classroom-based setting, and within an established timeline.

We prioritized establishing a service that, when delivered within this framework, would create the least risk of fraud, waste, and abuse; increase the likelihood of success for beneficiaries; and maintain the integrity of data. Furthermore, we believed at that time that in-person administration of beneficiaries' weight measurements was the most reliable and appropriate approach to monitoring beneficiary-level progress toward the 5 percent weight loss programmatic goal.

However, circumstances have changed since the start of the expanded model. We have received comments from interested parties in response to the CY 2018 PFS proposed rule and thereafter regarding increasing the limited virtual delivery of MDPP. Commenters noted that increased virtual options could expand access to MDPP for beneficiaries in rural areas, those who lack access to healthcare providers, specifically minority beneficiaries living within underserved communities, beneficiaries who are homebound or who lack transportation options, as well as increase beneficiary choice of delivery modality and flexibility of location. Commenters also noted that virtual National DPP delivery has been successful in reaching beneficiaries in certain locations. Ultimately, we finalized our policy that suppliers could offer no more than four virtual makeup sessions during months 1-6 and two virtual makeup sessions during months 7-12.

On March 13, 2020, less than 2 years after MDPP went into effect, COVID-19 was declared a national emergency by Proclamation 9994.<sup>359</sup> By mid-March 2020, MDPP suppliers were largely unable to deliver in-person classes due to national and local restrictions resulting from the national emergency. On April 6, 2020, CMS established MDPP PHE-related flexibilities in the first interim final rule with comment (IFC-1),<sup>360</sup> to allow for temporary flexibilities that prioritized availability and continuity of services for MDPP suppliers and MDPP beneficiaries impacted by extreme and uncontrollable circumstances during the PHE for COVID-19. These flexibilities allowed an unlimited number of virtual sessions, waived the once-per-lifetime limit for those participating in MDPP when the PHE for COVID-19 started, and waived the 5 percent weight loss requirement to continue with ongoing maintenance sessions.

However, we did not waive the requirement for in-person weigh-ins at that time, leaving suppliers unable to obtain the 5 percent weight loss performance payment given the local and State restrictions that may have kept individuals at home during the initial months of the PHE for COVID-19. This prevented suppliers from collecting an in-person weight from beneficiaries at each MDPP session as described in § 424.205(g)(2)(v) to document the 5 percent weight loss.

In the CY 2021 PFS final rule<sup>361</sup>, we finalized the MDPP Emergency Policy and updated the PHE flexibilities established in the IFC-1 in the following ways: allowing for virtual weigh-

ins and new cohorts to begin virtually; reinstating the 5 percent weight loss requirement during an 1135 waiver event; and reinstating the once-per-lifetime limit during an 1135 waiver event starting with beneficiaries who started the Set of MDPP services in 2021 or thereafter. These changes sought to address interruptions in services caused by CMS not waiving the in-person weigh-in in IFC-1, which prevented MDPP suppliers from starting new cohorts and getting reimbursed for participants who achieved and maintained the 5 percent weight loss goals. Additionally, beneficiaries who began sessions on or before December 31, 2020, were able to re-start MDPP sessions at a later date. Similarly, we allowed suppliers to pause, then resume MDPP sessions at a later date.

During the PHE for COVID-19, we allowed full virtual delivery of MDPP. In making that policy change in the CY 2021 PFS final rule, we stated that “Because MDPP services are covered under Medicare only when they are furnished at least in-part in-person, a supplier that does not have an organizational code authorizing in-person services (“virtual-only suppliers”) may not provide MDPP services, either virtually or in-person.”<sup>362</sup> We indicated that it is not appropriate to permit virtual-only suppliers, such as suppliers with CDC DPRP recognition in the distance learning, online, or combination only modalities, to furnish MDPP services when the Emergency Policy is in effect. This is due to the requirement that MDPP suppliers remain prepared to resume in-person delivery of the Set of MDPP services to start new cohorts and to serve beneficiaries who wish to return to in-person services when the Emergency Policy is no longer in effect.

(85 FR 84830), December 28, 2020. <https://www.federalregister.gov/d/2020-26815.pdf>.

As stated earlier, we proposed in the CY 2024 PFS proposed rule to extend the flexibilities allowed during the PHE for COVID-19 under § 410.79(e)(3)(iii), and (iv) for 4 years, or through December 31, 2027.<sup>363</sup> Next, we proposed that the Extended flexibilities under § 410.79(e)(3)(iii) and (iv) continue to apply only to MDPP suppliers that have and maintain CDC DPRP in-person recognition.<sup>364</sup> We recognized that organizations and interested parties may be disappointed that we did not propose to allow organizations with CDC recognition in distance learning delivery modalities to participate in MDPP unless they also have and maintain their in-person CDC recognition. In the CY 2021 PFS final rule<sup>365</sup>, we stated that virtual only suppliers are not permitted to provide the Set of MDPP services because MDPP beneficiaries may elect to return to in-person services after the PHE for COVID–19 or other applicable 1135 waiver event ends, and MDPP suppliers need to be able to accommodate their request.

During the PHE for COVID-19, we allowed greater flexibility with the use of virtual sessions, but the virtual delivery was primarily furnished as a virtual classroom or through distance learning. In the CY 2024 PFS proposed rule<sup>366</sup>, we proposed that suppliers may offer a combination delivery of MDPP, including both in-person and distance learning. After almost 4

years of having the option to deliver the Set of MDPP services through distance learning, between the PHE for COVID-19 and the **Federal Register** Notice to extend the PHE flexibilities through December 31, 2023, allowing MDPP suppliers to have the option to continue delivering the Set of MDPP services in the same manner will be the least disruptive to both suppliers and beneficiaries. We also proposed that MDPP suppliers may no longer suspend the Set of MDPP services as described in paragraph (e)(3)(v) in this section on or after January 1, 2024<sup>45</sup>. We believe we have given MDPP suppliers ample time, through the **Federal Register** Notice to extend the PHE flexibilities through December 31, 2023, to adequately prepare to resume MDPP services from an operational perspective.

Furthermore, we also believe that our proposal to extend the PHE flexibilities for 4 years, or through December 31, 2027, will make MDPP more equitable and accessible for all eligible beneficiaries by providing both suppliers and beneficiaries more flexibility in how the Set of MDPP services are delivered, including in-person, distance learning, or a combination of in-person and distance learning. For example, allowing virtual sessions will make MDPP more accessible to beneficiaries who reside in rural or urban communities or urban underserved communities, and who may have transportation and other barriers to attending in-person classes. We anticipate that the combination of a simplified payment structure in addition to more flexibilities regarding how MDPP is delivered will encourage more organizations to engage in and deliver MDPP, making MDPP more accessible to more beneficiaries.

Additionally, extending the PHE flexibilities for 4 years would provide CMS an opportunity to evaluate the impact of the Extended flexibilities over a longer period of time. To better track the use of distance learning through claims, we proposed the creation of a new HCPCS G-code specific to “distance learning<sup>367</sup>,” that will more accurately track sites from

---

<sup>367</sup> Centers for Medicare & Medicaid Services. Medicare and Medicaid Programs; CY 2024 Payment Policies Under the Physician Fee Schedule and Other Changes to Part B Payment and Coverage Policies; Medicare Shared Savings Program Requirements; Medicare Advantage; Medicare and Medicaid Provider and Supplier Enrollment Policies; and Basic Health Program. 88 FR 52506. <https://www.govinfo.gov/content/pkg/FR-2023-08-07/pdf/2023-14624.pdf>.

which distance learning occurs, the number of MDPP sessions delivered by distance learning, monitor the expanded model for fraud, waste, or abuse, and evaluate the impact of distance learning and in-person delivery modalities of MDPP relative to cost-savings and diabetes risk reduction among participants.

In previous rulemaking, we received comments about how to best monitor the use of virtual make-up sessions, and whether CMS would use an additional HCPCS code or modifier to indicate virtual sessions since there was a limit to the number of virtual make-up sessions a beneficiary can attend.<sup>368</sup> In response, we finalized the use of the virtual make-up sessions in § 410.79(d)(2) and stated that MDPP suppliers must include the virtual modifier (VM) on claims to indicate the use of the virtual make-up session.<sup>369</sup> As part of the MDPP flexibilities established in response to the PHE for COVID-19, we eliminated the maximum number of virtual make-up sessions that could be delivered by MDPP suppliers, described in § 410.79(d)(2) and (d)(3)(i) and (ii), but still required MDPP suppliers to use the VM to indicate when a beneficiary received MDPP virtually.

Given the inconsistent use of the VM as it was described in the CY 2018 PFS final rule to document the virtual make-up sessions allowed during the PHE for COVID-19 as described in § 410.79(e)(2)(iii), we proposed to add a HCPCS code for distance learning to better track the synchronous virtual delivery of the Set of MDPP services to be used instead of the VM when submitting MDPP claims, including claims for make-up sessions since we are not permitting online (asynchronous virtual) delivery of the Set of MDPP services.<sup>370</sup> At this time, we did not

propose to remove use of the VM entirely in-case we need it in future rulemaking, for example, should we allow online make-up sessions in future rulemaking.

MDPP supplier locations have traditionally clustered proximate to large metropolitan areas, leaving significant gaps throughout rural communities.<sup>371</sup> Given that the MDPP curriculum consists of no fewer than 16 weekly sessions in months 1-6, and 6 monthly sessions in months 7-12 months, the participation commitment may pose significant challenges to beneficiaries with limited mobility or access to reliable transportation. Based on findings from the 2<sup>nd</sup> evaluation report of the MDPP expanded model<sup>372</sup>, we believe that in-person requirements have contributed to significant MDPP underutilization, not only for those who reside in rural communities, but also populations that experience excessive diabetes-related disparities, including populations of color, low-income beneficiaries, those living in Tribal and rural communities, and the disabled.

To date, beneficiary uptake of MDPP has been low, with 4,848 beneficiaries participating as of December 31, 2021, and approximately half of those participants were Medicare FFS beneficiaries, and the remaining MA beneficiaries. White women account for the majority of MDPP participants to date, with the both the National DPP and MDPP having enrolled a similar high proportion of non-Hispanic white women. The evaluator estimated that 97 percent of participants travel less than 25 miles to attend in-person services, with the average distance to the nearest MDPP supplier location being 5 to 7 miles<sup>373</sup>. At the time of the second annual evaluation report, which was released in November 2022 and includes data through December 31, 2021, 39 percent of all Medicare beneficiaries live more than 25 miles from the nearest MDPP location. Extending the PHE flexibilities to allow distance learning will make MDPP

<sup>373</sup> RTI International. Evaluation of the Medicare Diabetes Prevention Program (MDPP): Second Evaluation Report. November 2022. <https://www.cms.gov/priorities/innovation/data-and-reports/2022/mdpp-2ndannevalrpt>.

more accessible to beneficiaries who live more than 25 miles from the nearest MDPP location or lack transportation<sup>374</sup>. Additionally, the second annual evaluation report (p. 32)<sup>375</sup> noted that suppliers tried to make MDPP services accessible to Medicare beneficiaries by scheduling sessions at locations that were most convenient to Medicare beneficiaries. It was also noted that while beneficiary engagement and connection tend to be stronger with in-person cohorts, moving to distance learning delivery reduced participant barriers (p. 34). While some suppliers and beneficiaries experienced initial challenges migrating to fully virtual delivery, the report noted an overwhelming support from MDPP suppliers for the continued opportunity to administer MDPP through distance learning or a combination of in-person and synchronous virtual delivery. We proposed in the CY 2024 PFS proposed rule<sup>376</sup> the use of synchronous virtual delivery as an acceptable modality for MDPP delivery, because our goal is to use the Extended flexibilities period to increase beneficiary access to and uptake of MDPP while demonstrating that the beneficiaries receiving the Set of MDPP services through distance learning experience similar or better outcomes compared to in-person delivery concerning attendance, achievement of the 5 percent weight loss goal, and cost savings.

We anticipate the proposed programmatic updates will boost supplier enrollment, with the goal of increasing beneficiary participation and retention due to increased access to the Set of MDPP services. Moreover, we believe that extending the PHE flexibilities will increase equitable access to diabetes preventive services among rural and at-risk populations, as well as minority beneficiaries who reside in communities underserved by healthcare providers. For example, for beneficiaries with transportation challenges or child/elder care obligations, the ability to participate in MDPP through a live virtual classroom, or distance learning, may

encourage uptake and retention among those participants. Also, for beneficiaries living in rural areas or regions with a limited number of MDPP suppliers, the distance learning option will allow beneficiaries to enroll in programs further away from their homes, making MDPP accessible to more beneficiaries. Finally, we believe that increased participation in the Set of MDPP services through distance learning may provide data necessary to conduct an impactful evaluation of the synchronous virtual delivery of MDPP.

In the CY 2024 PFS proposed rule<sup>377</sup>, we proposed to amend § 410.79(b), (c), and (d) to remove most references to, and requirements of, the Ongoing Maintenance phase described in these sections. In the CY 2022 PFS final rule<sup>378</sup>, we removed eligibility for the ongoing maintenance sessions for those beneficiaries who started the Set of MDPP services on or after January 1, 2022. Eligibility for these services will end December 31, 2023.

We proposed to amend § 410.79(b), (c)(2)(i) and (e)(2), and solicited comments on these proposals.<sup>379</sup>

We received public comments on these proposals. Overall, commenters were very supportive of the proposed changes. The following is a summary of the comments we received and our responses.

*Comment:* Several commenters encouraged CMS to consider adopting the same definitions for MDPP as CDC uses for the National DPP, including distance learning, online delivery, and combination modalities to better align the two programs. Commenters indicated that the addition of these definitions that are consistent with the CDC's definitions will reduce

confusion about MDPP.

*Response:* We agree that MDPP and the National DPP should align terminology where applicable. Although CMS works closely with CDC to coordinate the National DPP and MDPP, there are times when the National DPP and MDPP will naturally diverge given that CMS is a payer of the MDPP Set of services, and CDC sets the quality standards for organizations that deliver the National DPP. CMS and CDC have worked closely to update the National DPP and MDPP for CY 2024, as MDPP updates were proposed in this provision, and CDC is updating its standards in 2024. To the extent possible, CMS may make conforming changes in future rulemaking, including applicable definitions.

*Comment:* Commenters were overwhelmingly supportive of the proposed changes to streamline the MDPP payment structure. Commenters indicated that improvements to the payment schedule may increase both supplier and beneficiary access to MDPP. MDPP coaches commented that the proposed changes are more streamlined and less burdensome to those responsible for billing.

Regarding the new HCPCS G-codes, commenters were very supportive of our creation of a new G-code for in-person delivery (G9886), distance learning (G9887), and maintenance of 5 percent weight loss from baseline in months 7 to 12 (G9888). Commenters agreed that these new G-codes will enable CMS to track trends related to the distance learning service delivery. One commenter recommended that instead of CMS allowing for six monthly claims for maintaining the 5 percent weight loss from baseline (G9888), CMS should consider a one-time payment of \$48 for maintenance of 5 percent weight loss in months 7 to 12 that is paid at the time of program completion. Finally, commenters appreciated CMS simplifying the number of HCPCS G-codes from 15 to 6, reducing the administrative burden while allowing suppliers to collect payments more frequently.

*Response:* We appreciate comments and support of the proposed rule provisions. Although out of scope for this rule, depending upon the outcomes we observe, we may consider

alternative performance payments for maintenance of 5 percent weight loss in future rulemaking.

*Comment:* Commenters were unanimously supportive of the proposed changes to extend the PHE flexibilities for 4 years. They commented that these flexibilities will allow the MDPP to continue to grow and offer beneficiaries flexibility when determining how they would like to receive services. These flexibilities will allow MDPP to continue to grow and offer beneficiaries increased flexibility when it comes to how they would like to receive services. Such flexibility is important in promoting equity, as well as reaching underserved communities, or individuals who face challenges making in-person appointments, including those lacking access to transportation or those with mobility issues.

Additionally, multiple commenters indicated that they were able to reach more participants through distance learning compared to in-person delivery during the PHE for COVID-19, and that the flexibilities increased access to MDPP for both coaches and participants by removing barriers related to transportation and time. Similarly, another commenter indicated that the Extended flexibilities would help reduce the financial and physical hardship for patients by being able to attend MDPP through distance learning. Another commenter reminded us that distance learning delivery of MDPP does require technological competency and access, so it may not be appropriate for all participants.

Concerning participation, one commenter indicated that the 4-year extension of the flexibilities utilized during the PHE for COVID-19 may incentivize rural beneficiaries to participate with an MDPP supplier that is not local. The commenter further reasoned that CMS could use this 4-year extension to monitor the uptake of the program and make an evidence-based decision on permanently extending virtual services.

Although there is overwhelming support of extending the flexibilities utilized during the PHE for COVID-19, multiple commenters were disappointed that CMS is not allowing virtual-only providers to enroll in Medicare as MDPP suppliers. Virtual-only providers include those that deliver the National DPP services solely by distance learning or online delivery.

Commenters indicated that the lack of full alignment between the MDPP expanded model and the CDC's National DPP continues to severely limit supplier participation, thus contributing to increased health inequities by limiting opportunities for the MDPP to reach the most vulnerable Medicare beneficiaries.

Finally, multiple commenters recommended CMS remove the requirement to maintain in-person recognition for distance learning only suppliers, while allowing CDC-defined online providers of CDC's DPRP recognized program to apply to become MDPP suppliers.

One commenter questioned CMS' rationale for excluding virtual-only suppliers, arguing that the proposed rule conflicts with the belief that peer support is less effective when people are not together in person.

*Response:* We appreciate the widespread support of the proposed changes and are encouraged by the comments received for our proposed changes, in-particular the extension of the PHE flexibilities utilized during COVID-19 to allow distance learning delivery. Although we understand the disappointment of commenters representing distance learning and online delivery organizations, we hope that they will continue to work with CMS to increase the recruitment and retention of beneficiaries to help expand MDPP access and uptake.

Although we updated our definitions in this rule to better align with the National DPP, we will continue to work with CDC to align its National DPP with MDPP to the greatest extent possible. As such, we encourage National DPP organizations, MDPP suppliers, and interested parties to review the updated 2024 DPRP Standards when they are published in 2024. CMS will consider conforming changes, as appropriate, in future rulemaking.

As we stated earlier, MDPP was established as a primarily in-person service since the original DPP test and data used in the certification were based on in-person delivery. At the time of certification, although we did have minimal online delivery data provided to us by CDC and industry, these data did not meet the thresholds required for certification. The PHE for COVID-19 was a unique circumstance that required CMS to quickly establish MDPP pandemic-related

flexibilities in the IFC-1, which was released in early April of 2020 to allow for temporary flexibilities that prioritized availability and continuity of services for MDPP suppliers and MDPP beneficiaries impacted by uncontrollable circumstances during the PHE for COVID-19.

In the CY 2021 PFS final rule, we updated and finalized the policies from the IFC-1. We did not expect the PHE for COVID-19 to last over 3 years, with MDPP suppliers able to deliver services virtually for longer than they delivered services in-person prior to the PHE for COVID-19. Therefore, the PHE for COVID-19 was a unique circumstance that afforded us the opportunity to deliver the MDPP Set of services virtually over the past 3.5 years.

When we established the MDPP flexibilities in the IFC-1, we could not predict when the PHE for COVID-19 would end. In the CY 2021 PFS<sup>380</sup>, we indicated that virtual-only suppliers may not have sufficient time to obtain the CDC's authorization to furnish in-person services. Therefore, permitting virtual-only suppliers to furnish MDPP services during the PHE for COVID-19 could disrupt the provision of MDPP Set of services when services were to resume on an in-person basis. Consequently, virtual only suppliers are not permitted to provide the set of MDPP services because MDPP suppliers need to accommodate beneficiary requests for in-person services.

Our internal data explain that suppliers halted in-person sessions at the beginning of the PHE for COVID-19, with their pauses varying in length. However, most suppliers resumed offering the Set of MDPP services via virtual delivery. Currently, we do not have sufficient data from the PHE for COVID-19 to certify the distance learning delivery of MDPP. We hope that

---

<sup>380</sup> Centers for Medicare & Medicaid Services. Medicare Program; CY 2021 Payment Policies Under the Physician Fee Schedule and Other Changes to Part B Payment Policies; Medicare Shared Savings Program Requirements; Medicaid Promoting Interoperability Program Requirements for Eligible Professionals; Quality Payment Program; Coverage of Opioid Use Disorder Services Furnished by Opioid Treatment Programs; Medicare Enrollment of Opioid Treatment Programs; Electronic Prescribing for Controlled Substances for a Covered Part D Drug; Payment for Office/Outpatient Evaluation and Management Services; Hospital IQR Program; Establish New Code Categories; Medicare Diabetes Prevention Program (MDPP) Expanded Model Emergency Policy; Coding and Payment for Virtual Check-in Services Interim Final Rule Policy; Coding and Payment for Personal Protective Equipment (PPE) Interim Final Rule Policy; Regulatory Revisions in Response to the Public Health Emergency (PHE) for COVID-19; and Finalization of Certain Provisions from the March 31st, May 8th and September 2nd Interim Final Rules in Response to the PHE for COVID-19. (85 FR 84830), December 28, 2020. <https://www.federalregister.gov/d/2020-26815.pdf>.

after the Extended flexibilities period we will have enough data to fully evaluate the impact of distance learning delivery of MDPP on diabetes risk reduction, as well as cost-savings to Medicare.

We also understand that distance learning delivery of MDPP may not be appropriate for every beneficiary. For example, beneficiaries may not have the required technological competency and access to participate in MDPP through distance learning. Given this, we want to remind suppliers that they are required to maintain capacity to deliver MDPP Set of services in-person.

Although commenters expressed concern about MDPP's lack of full alignment with the CDC's National DPP in terms of allowing fully virtual organizations -- or organizations that deliver diabetes prevention services solely through distance learning or online delivery -- to become MDPP suppliers, we want to remind commenters that MDPP continues to be an expanded model test of in-person delivery of diabetes prevention services. In the CY 2018 final rule,<sup>381</sup> we stated that CDC began recognizing Virtual DPP organizations in 2015. The MDPP certification<sup>382</sup> was publicly released in March 2016 and was based on in-person data from the DPP clinical trial, the DPP test, CDC DPRP data, and a large national DPP provider.

The PHE for COVID-19 was a special circumstance that allowed MDPP suppliers to deliver the MDPP Set of Services virtually, but there remains a lack of data on virtual delivery during the PHE for COVID-19 because many suppliers appear to have paused or stop delivery of MDPP Set of services during the PHE for COVID-19. Although we understand that the exclusion of fully virtual suppliers may limit supplier participation, we do not agree that this exclusion will contribute to increased health inequities among Medicare's most vulnerable

<sup>382</sup> Paul Spitalnic. Certification of Medicare Diabetes Prevention Program. Mar. 14, 2016. <https://www.cms.gov/Research-Statistics-Data-and-Systems/Research/ActuarialStudies/Downloads/Diabetes-Prevention-Certification-2016-03-14.pdf>.

beneficiaries. Although virtual delivery of MDPP may make MDPP more accessible for most beneficiaries, it is not appropriate for every Medicare beneficiary. We appreciate this commenter's feedback and will assess the health equity impact of excluding fully virtual suppliers once we have updated data from the PHE for COVID-19 time period.

Additionally, we understand the commenter's concern about the proposed rule conflicting with the belief that peer support is less effective when people are not together in person. We have confidence that distance learning possesses similar elements to in-person delivery such as live instruction from a coach and live interactive peer support, both which we believe will contribute to beneficiary understanding of pre-diabetes management tactics and strategies.

*Comment:* As part of MDPP's Emergency Policy finalized in the CY 2021 PFS final rule, we allowed for virtual weight collection. In this final rule, we summarized our policies for alternatives to the requirement for in-person weight collection (§ 410.79(e)(3)(iii)), which include virtual weight collection<sup>383</sup>. Overall, commenters were very supportive of CMS continuing to allow virtual weight collection. However, we received several comments regarding barriers suppliers experienced relating to virtual weight collection during the PHE for COVID-19.

For example, several commenters recommended that CMS no longer require date-stamped photos to document the self-reported beneficiary weights. The commenters reported that many of their beneficiaries are unable to take a picture while standing on their home scales due to risk of injury and physical health limitations. Thus, this risk has prevented organizations from submitting claims accurately, since they have several participants that live alone and attend sessions via distance education.

Additionally, some participants join virtual sessions from different locations and do not

---

<sup>383</sup> Centers for Medicare & Medicaid Services. Medicare and Medicaid Programs; CY 2024 Payment Policies Under the Physician Fee Schedule and Other Changes to Part B Payment and Coverage Policies; Medicare Shared Savings Program Requirements; Medicare Advantage; Medicare and Medicaid Provider and Supplier Enrollment Policies; and Basic Health Program. 88 FR 52502. <https://www.govinfo.gov/content/pkg/FR-2023-08-07/pdf/2023-14624.pdf>.

have access to a scale to record their measurement each session. The commenter urged CMS to consider allowing submission of weight photos without the date and time stamp, allowing participants to submit official weights less frequently for example, every 2-3 sessions).

Finally, we received a comment indicating that some participants may not be able to purchase Bluetooth-enabled scales, and the MDPP payment structure does not enable the program to purchase scales without additional funding.

*Response:* We acknowledge that some MDPP beneficiaries may lack the technology or capacity to provide a date-stamped photograph to document their body weight measurements. In situations in which beneficiaries may be unable to self-report their weight according to the MDPP conditions of coverage, suppliers may want to consider collecting weight measurements from the MDPP beneficiary in-person.

In terms of allowing MDPP participants to submit their weight less frequently, the current CDC DPRP Standards<sup>384</sup> state that the participant's body weight must be recorded at all sessions. In addition, in § 424.25(g)(2)(v)<sup>385</sup>, we state that documentation for each MDPP session must include each MDPP's beneficiary's weight and date weight taken in a form and manner specified by CMS. Given that we aim to align with the DPRP Standards as much as possible, we are requiring participant body weight to be collected at each MDPP session so that weight loss can be tracked during the MDPP service period.

Suppliers may also consider urging beneficiaries to identify a household member, friend, or family member who could assist the participant with relaying their body weight to the supplier. However, we want to remind MDPP suppliers that beneficiaries may report their weight using scales that securely transmit their weight to the MDPP supplier. Unfortunately, CMS

<sup>385</sup> Centers for Medicare & Medicaid Services. Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule and Other Revisions to Part B for CY 2017; Medicare Advantage Pricing Data Release; Medicare Advantage and Part D Medical Low Ratio Data Release; Medicare Advantage Provider Network Requirements; Expansion of Medicare Diabetes Prevention Program Model. 82 FR 53366, November 15, 2017. <https://www.govinfo.gov/content/pkg/FR-2017-11-15/pdf/2017-23953.pdf>.

cannot provide funds for a Bluetooth-enabled scale per one commenter request. However, we want to remind suppliers that in the CY 2018 PFS rulemaking, we finalized the use of beneficiary engagement incentives under § 424.210, and suppliers may review the requirements of that regulation.

*Comment:* One commenter indicated their appreciation of allowing unlimited make-up sessions and the ability to hold the make-up sessions on the same day as a different session (so that a participant who missed the previous week, can attend the make-up session immediately before the next session). This allows for flexibility for both the participant and the Coach.

*Response:* In the CY 2018 PFS final rule, we finalized that suppliers may furnish a maximum of one virtual make-up session on the same day as a regularly scheduled in-person session. However, we stated that the intent of this policy was to allow most make-up sessions to be scheduled on different days than regularly scheduled session, since beneficiaries may not be able to attend a make-up session on the same day as a regularly scheduled session.

In the CY 2021 PFS final rule, we finalized in paragraph §410.79(e)(3)(iv)(B) that the MDPP supplier may furnish to the MDPP beneficiary a maximum of one virtual make-up session on the same day as a regularly scheduled session and that under paragraph (e)(3)(iv)(C), the MDPP supplier may furnish a maximum of one virtual make-up session per week. In the proposed rule, we proposed to no longer require suppliers to indicate whether the session was delivered as a make-up session or a regularly scheduled session when submitting claims for services. Instead of using the virtual modifier on claims to indicate a virtual make-up session, we proposed to replace the virtual modifier with one of two MDPP G-codes (G9886 or G9887) to indicate whether the session was delivered in-person (G9886) or through distance learning (G9887)<sup>386</sup>.

<sup>386</sup> Centers for Medicare & Medicaid Services. Medicare and Medicaid Programs; CY 2024 Payment Policies Under the Physician Fee Schedule and Other Changes to Part B Payment and Coverage Policies; Medicare Shared Savings Program Requirements; Medicare Advantage; Medicare and Medicaid Provider and Supplier Enrollment Policies; and Basic Health Program. 88 FR 52507. <https://www.govinfo.gov/content/pkg/FR-2023-08-07/pdf/2023-14624.pdf>.

In the current payment schedule (CY 2018 to CY 2023), attendance is paid on a performance basis, after attending the 1<sup>st</sup>, 4<sup>th</sup>, and 9<sup>th</sup> sessions in months 1 to 6, and after the 2<sup>nd</sup> monthly session in months 7 to 12. Additionally, there is a non-payable session code (G9891) to track attendance. Under the current performance-based schedule<sup>387</sup>, same day make-up sessions were permitted because it did not necessarily impact payments. In contrast, under the CY 2024 PFS<sup>388</sup> proposed payment schedule, which pays for up to 22 sessions on a fee-for-service (FFS) basis over the 12-month MDPP service period, participants have 6 months to attend the first 16 weekly sessions and another 6 months to attend 6 monthly sessions. Theoretically, in months 1 to 6, participants can reach 16 sessions at some point in month 4 if they attend most of the weekly sessions and sooner if they attend same-day make-up sessions. .

Although §410.79(e)(3)(iv)(B) and (C) does permit a beneficiary one virtual makeup session on the same day as a regularly scheduled session, and a beneficiary may only have one virtual make-up session per week, we want to encourage suppliers to schedule make-up sessions on days other than the same day of a regularly scheduled session to avoid claims being rejected or denied under the new payment schedule and to allow beneficiaries to receive the benefit as intended by having access to the full 12 months MDPP service period to build the skills needed to reduce their risk for diabetes.

*Comment:* One commenter requested that CMS affirm that MA plans may use virtual MDPP to meet network adequacy requirements and satisfy the requirements to provide MDPP services by allowing virtual providers to register as Medicare suppliers for this purpose.

*Response:* We appreciate the commenter's request for clarification regarding allowing virtual providers to enroll in Medicare as MDPP suppliers for the purpose of meeting MA Plan

network adequacy requirements. Given that we proposed that MDPP suppliers must have and maintain CDC in-person DPRP recognition, it does not make sense to allow this requirement to be waived for organizations that serve beneficiaries in MA plans.

*Comment:* Several commenters requested that CMS waive the once per lifetime requirement to allow for multiple attempts at weight loss. Moreover, several commenters expressed concern over the high-risk designation requirements for organizations enrolling in Medicare as MDPP suppliers.

*Response:* We appreciate the commenters' support and interest in MDPP. These suggested changes are outside the scope of this final rule. The provisions we are finalizing in this rule are to extend the PHE flexibilities for 4 years, update the MDPP payment structure from a performance-based attendance and weight loss structure to a hybrid structure that pays for attendance on an FFS basis and diabetes risk reduction (weight loss), on a performance basis, and remove most references to and requirements of, the Ongoing Maintenance phase.

After consideration of public comments, we are finalizing § 410.79(b), (c)(2)(i), (e)(2), and (e)(3)(iv) as proposed.

## 2. Changes to §414.84

Although MDPP has over 300 suppliers representing over 1,000 locations across the US, based on fee-for-service claims analysis, only one-third of them have submitted claims since MDPP launched in April 2018. We have heard anecdotally from suppliers, CDC, and interested parties that our payment structure is complex, which has created barriers to organizations wanting to participate in the MDPP. As a result, the lack of suppliers has contributed to limited beneficiary access to the preventive services offered under this expanded model. Challenges inherent in the current payment structure include irregular flow of operating funds due to the performance-based payment structure, claims denials due to the complicated payment structure, and a lack of incentive to retain participants after the 9<sup>th</sup> core session due to the potential 4 to 5-month payment lag between the 9<sup>th</sup> session attended and the 2<sup>nd</sup> session attended in months 7-9.

Consistent with this last challenge, our monitoring data show a sharp drop in claims after the first quarter.

In the proposed rule<sup>389</sup>, we proposed to update the payment structure from a performance-based attendance and weight loss structure to a hybrid structure that pays for attendance on a FFS basis and diabetes risk reduction (weight loss), on a performance basis.

Given consistent supplier and interested party feedback regarding the complexity of this payment structure and necessary up-front costs incurred by suppliers, we proposed to simplify the payment structure and pay for attendance on a FFS basis. We proposed creating an Attendance Payment, which we proposed to define as a payment that is made to an MDPP supplier for furnishing services to an MDPP beneficiary when the MDPP beneficiary attends an MDPP core or core maintenance session. We also proposed that suppliers may receive an Attendance Payment after they submit a claim for each MDPP session, starting with the first core session, using a new HCPCS G-code, *Behavioral counseling for diabetes prevention, in-person, group, 60 minutes*, or *Behavioral counseling for diabetes prevention, distance learning, 60 minutes*, for MDPP dates of service on or after January 1, 2024<sup>390</sup>.

This proposed payment structure aligns closely to that of similar benefits such as the Intensive Behavioral Counseling for Obesity (IBTO) and Diabetes Self-Management Training (DSMT), and also allows suppliers to receive regular payments for service for up to a year during a 12-month MDPP service period. We proposed paying for up to 22 sessions of either in-person or distance learning, or a combination of the two, for MDPP dates of services within a 12-month MDPP services period. In months 1 to 6, payments are allowed for one in-person or

<sup>390</sup> Centers for Medicare & Medicaid Services. Medicare and Medicaid Programs; CY 2024 Payment Policies Under the Physician Fee Schedule and Other Changes to Part B Payment and Coverage Policies; Medicare Shared Savings Program Requirements; Medicare Advantage; Medicare and Medicaid Provider and Supplier Enrollment Policies; and Basic Health Program. 88 FR 52506. <https://www.govinfo.gov/content/pkg/FR-2023-08-07/pdf/2023-14624.pdf>.

distance learning session every week up to a maximum of 16 sessions. During months 7 to 12, payments are allowed for one in-person or distance learning session every month up to a maximum 6 sessions.

We proposed to update the performance goal to depict a weight loss goal that an MDPP beneficiary must achieve during the MDPP services period for an MDPP supplier to be paid a performance payment and removing the performance-based payments for attendance from the performance goal.<sup>391</sup> We retained the diabetes risk-reduction performance payments, which include payments for 5 percent and 9 percent weight loss because we want to continue to pay for outcomes, and the MDPP certification includes a diabetes risk-reduction component, the achievement of 5 percent weight loss from baseline. Although we proposed to remove the attendance-based performance goal and pay for attendance on a FFS basis, we want to continue rewarding suppliers for achieving successful outcomes for beneficiaries (weight loss), while motivating suppliers to retain participants and deliver a high-quality program.

As part of the performance payments, MDPP suppliers must still submit a claim when 5 percent weight loss from baseline weight is achieved and will receive a one-time payment for this claim (weight loss G-code). We proposed to create a new HCPCS G-code, “Maintenance of 5 percent weight loss from baseline, months 7-12” to be submitted along with the monthly session claim for beneficiaries who have met the 5 percent weight loss performance goal, for whom the one-time claim for 5 percent weight loss has been submitted. This maintenance of 5 percent weight loss code replaces the attendance plus 5 percent weight loss HCPCS G-codes, G9878 and G9879, in months 7-12.

The one-time claim for 5 percent weight loss must be submitted prior to submitting a claim for the enhanced payment in months 7 to 12 for maintaining the 5 percent weight loss.

---

<sup>391</sup> Centers for Medicare & Medicaid Services. Medicare and Medicaid Programs; CY 2024 Payment Policies Under the Physician Fee Schedule and Other Changes to Part B Payment and Coverage Policies; Medicare Shared Savings Program Requirements; Medicare Advantage; Medicare and Medicaid Provider and Supplier Enrollment Policies; and Basic Health Program. 88 FR 52506. <https://www.govinfo.gov/content/pkg/FR-2023-08-07/pdf/2023-14624.pdf>.

Additionally, suppliers must continue to submit a claim when 9 percent weight loss from baseline weight is achieved per § 414.84(b)(7), so they may receive a one-time payment for this claim.

This proposed payment structure increases the maximum attendance-based payments a supplier may receive in the first 6 months by \$56 per MDPP beneficiary, while allowing for similar maximum attendance payments in months 7-12 and maintaining the maximum total payment of \$768 per person during the MDPP services period<sup>392</sup>. Also, this proposed payment structure takes into consideration the Extended flexibilities, by adding a distance learning HCPCS G-code. The new structure simplifies the claims submission process because it no longer requires that suppliers submit 11 to 15 G-codes for different attendance-based sessions at irregular intervals.

This proposed payment structure allows suppliers to submit one of two G-codes (depending on whether the MDPP session was delivered in person or via distance learning) for each session. In months 7-12, suppliers may also add the proposed maintenance of the 5 percent weight loss from baseline G-code to their claim once the 5 percent weight loss has been achieved. The proposed payment structure allows suppliers to indicate which sessions were held via distance learning without needing to provide additional information in the claim submission process. The proposed new payment structure reduces complexity by reducing the number of G-codes from 15 to 6.

Table 49 displays the proposed MDPP payment structure and Table 50 indicates the current CY 2023 performance payments.

**TABLE 49: Changes to MDPP Payment Structure to include Attendance-Based Service Payments and Diabetes Risk Reduction Performance Payments**

HCPCS G-Code	Payment Description*	CY 2024
G9886*	Behavioral counseling for diabetes prevention, in-person, group, 60 minutes	\$25
G9887*	Behavioral counseling for diabetes prevention, distance learning, 60 minutes	\$25
G9880	5 percent WL Achieved from baseline weight	\$145
G9881	9 percent WL Achieved from baseline weight	\$25
G9888**	Maintenance 5 percent WL from baseline in months 7-12	\$8
G9890	Bridge Payment	\$25
<b>Subtotal Maximum Attendance-Based Payment</b>		<b>\$550</b>
<b>Total Maximum Payment</b>		<b>\$768</b>

\*Medicare pays up to 22 sessions billed with codes G9886 and G9887, combined, in a 12-month period:

Months 1-6: 1 in-person or distance learning session every week (max 16 sessions)

Months 7-12: 1 in-person or distance learning session every month (max 6 sessions)

\*\* Suppliers must submit claim for 5 percent weight loss (G9880) prior to submitting claims for the maintenance 5 percent WL from baseline in months 7-12 (G9888).

**TABLE 50: CY 2023 MDPP Payment Structure**

HCPCS G-Code	Payment Description	CY 2023
<b>Core Sessions (Months 1-6)</b>		
G9873	Attend 1 Core Session	\$38
G9874	Attend 4 Core Sessions	\$115
G9875	Attend 9 Core Sessions	\$191
<b>Core Maintenance (CM) Sessions (Months 7-12)</b>		
G9876	Attend 2 Core Maintenance Sessions (No 5% WL) in CM Interval 1 (Months 7-9)	\$76
G9877	Attend 2 Core Maintenance Sessions (No 5 percent WL) in CM Interval 2 (Months 10-12)	\$76
G9878	Attend 2 Core Maintenance Sessions (5 percent WL) in CM Interval 1 (Months 7-9)	\$101
G9879	Attend 2 Core Maintenance Sessions (5 percent WL) in CM Interval 2 (Months 10-12)	\$101
G9880	5 percent WL Achieved from baseline weight	\$184
G9881	9 percent WL Achieved from baseline weight	\$38
G9890	Bridge Payment	\$38
G9891	Non-payable session code (This code is for reporting purposes only).	\$0
<b>Ongoing Maintenance Sessions (Months 7-12)**</b>		
G9882	Attend 2 Ongoing Maintenance (OM) Sessions in OM Interval 1 (Months 13-15)	\$57
G9883	Attend 2 Ongoing Maintenance Sessions in OM Interval 2 (Months 16-18)	\$57
G9884	Attend 2 Ongoing Maintenance Sessions in OM Interval 3 (Months 19-21)	\$58
G9885	Attend 2 Ongoing Maintenance Sessions in OM Interval 4 (Months 22-24)	\$58
<b>Subtotal Maximum Attendance-Based Payment</b>		<b>\$496</b>
<b>Total Maximum Payment</b>		<b>\$768</b>

\*\*In the CY 2022 PFS, CMS removed the Ongoing Maintenance Sessions for those beneficiaries who started MDPP services on or after January 1, 2022. MDPP beneficiaries who were participating in the Set of MDPP services on or before December 31, 2021 may continue with the ongoing maintenance phase if they maintain 5 percent weight loss and attendance requirements.

During the CY 2018 PFS rulemaking process<sup>393</sup>, we received comments regarding how to best monitor the use of virtual make-up sessions, and whether we would use an additional HCPCS code or modifier to indicate virtual sessions since there is a limit to the number of virtual make-up sessions a beneficiary can attend. In response, we finalized the use of the virtual make-up sessions in § 410.79(d)(2) and stated in the preamble to the CY 2018 PFS final rule that MDPP suppliers must include the virtual modifier on claims to indicate the use of the virtual make-up session<sup>394</sup>. As part of the flexibilities established in response to the COVID-19 PHE, in the CY 2021 PFS final rule, we eliminated the maximum number of virtual make-up sessions that could be delivered by MDPP suppliers, described in § 410.79(d)(2), and (d)(3)(i) and (ii)<sup>395</sup>, but still required MDPP suppliers to use the virtual modifier to indicate when a beneficiary received MDPP virtually.

In the CY 2024 PFS proposed rule, we proposed to amend our policies on payment for MDPP services §414.84(a), (b), (c), and newly redesignated paragraphs (d)(1) and (e). We solicited comments on these proposals.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Commenters supported the proposal to move from a performance-based

attendance and outcomes (weight loss of 5 and 9 percent) payment structure to a hybrid structure that pays for attendance on an FFS basis, indicating it would reduce the administrative burden associated with billing. Overall, commenters supported allowing payment for up to 22 sessions during the 12-month core services period and indicated that finalizing these proposals should increase efficiency from a timeliness perspective of payments due to an increase of attendance payments for MDPP suppliers, many of whom have been operating MDPP at a loss.

Several commenters added that the National DPP is reimbursable in their States through Medicaid and the Medicaid billing per attendance has been much more efficient than the MDPP billing. Therefore, the FFS changes will be a welcome advancement for suppliers that provide billing management for their community-based partner organizations that furnish the MDPP Set of services.

Additionally, commenters indicated that finalizing these proposals may also help reduce health inequities by reducing disincentives in the current outcomes-based reimbursement approach as many MDPP suppliers serve populations that may be less likely to achieve the 5 percent weight loss threshold, and therefore, would be operating at a financial loss.

For example, several commenters indicated that the streamlined MDPP payment schedule may increase participation in MDPP of community-based settings with limited cash flow and capital. It is critical that MDPP delivered in these types of settings receive payment in a timely manner, so that they may pay staff, rent, and other direct operating expenses.

Concerning Medicare FFS attendance payments, commenters supported CMS moving from performance-based attendance to service-based attendance. Commenters noted that this would create greater consistency for payments. Commenters also appreciated the simplified billing process, as one commenter suggested that it may expand the potential pool of organizations who will be able to provide MDPP Set of services due to more frequent payments. Others commented that the updated payment structure is consistent with other Medicare services, simplifies billing, and assures payment for services that are rendered.

Comments regarding MDPP diabetes risk-reduction one-time performance payments for achievement of 5 percent and 9 percent weight loss were also positive. Commenters indicated that payments for positive health outcomes, including 5 percent and 9 percent weight loss are worthwhile and should be maintained. One commenter agreed with incentivizing weight loss outcomes given that weight loss drives diabetes risk reduction.

Interestingly, comments regarding performance payments consisted mostly of recommendations to CMS concerning including additional performance payments for consideration. Several commenters recommended weight loss performance payments be provided for lesser, yet clinically relevant weight loss such as 3 to 5 percent weight loss, while maintaining a small payment for achieving 9 percent weight loss. Several commenters recommended CMS establish an additional performance payment for 4 percent weight loss, as this would align with the CDC weight loss performance outcomes. One commenter further explained that for National DPPs that serve historically underserved communities, a 4 percent weight loss benchmark is based on evidence that achieving a 5 percent goal is more difficult in these communities and that lower levels of weight loss are associated with improved health.

Several commenters recommended that CMS consider adding a 0.2% reduction in Hemoglobin A1C (HbA1c) as an additional performance measure for diabetes risk reduction. One commenter in particular further clarified that the proposed CY 2024 payment structure, which only accounts for 5 or 9 percent weight loss to receive a performance payment, does not reward suppliers for individuals who have maintained weight or gained muscle mass while reducing HbA1c. Commenters discussed the limitations of body weight and BMI as they do not take into account changes in body composition type such as muscle mass versus fat mass. Commenters referred to an American Medical Association published statement on considering body composition measures in addition to BMI for better indicators of health. (<https://www.ama-assn.org/press-center/press-releases/ama-adopts-new-policy-clarifying-role-bmi-measure-medicine>).

One commenter recommended that given MDPP's role in preventing the onset of type 2 diabetes, the known underutilization of this service, and the enormous cost to care for patients who transition from prediabetes into full type 2 diabetes, CMS should consider either (1) incentivizing clinicians to facilitate MDPP through increased payment for the program or, (2) creating an incentive for clinician referral to MDPP or oversight of MDPP via a billable CPT code. This commenter clarified that incentivizing clinicians to refer to or oversee the MDPP program via a billable code or increasing payment to administer the MDPP as a clinician would increase program implementation.

Several commenters also recommended that CMS increase the payment rates, indicating that the proposed rates do not cover the costs to deliver MDPP set of services to participants with adverse social determinants. Commenters suggested that the proposed rates do not fully cover staff time, coordination, and follow-up. One commenter indicated that the payment amount is insufficient to incentivize rural providers to enroll and provide MDPP Set of services.

Several commenters recommended that CMS consider paying for up to 26 sessions versus the proposed 22 sessions. One commenter further explained that when they initiated the program, they offered the minimally required 22 sessions (16 sessions followed by monthly meetings once a month). After reviewing their data, they found that participants had significantly better attendance when the sessions were offered weekly compared to monthly. Based on that observation they moved to offering sessions twice a month after the first 16 weeks of the program, which improved program attendance and outcomes.

Regarding our proposed G-Code for the "Maintenance of 5 percent weight loss from baseline, months 7-12," one commenter commended the intent of the G-code, but recommended CMS consider a larger one-time payment for "Maintenance of 5 percent weight loss in months 7 to 12." The commenter recommended this one-time payment take place at the time of program completion, to encourage participant retention.

*Response:* We appreciate the interest and comments regarding the revised MDPP

payment structure, the FFS attendance payments, and the weight loss performance payments.

We note that the one-time performance payments for 5 percent and 9 percent weight loss from baseline as well as the monthly performance payments for maintenance of 5 percent weight loss from baseline weight in months 7 to 12 are out of scope of this rule. However, we will review and consider commenters' recommendations for future rulemaking, as appropriate, regarding a second performance measure that considers lower thresholds for weight loss performance payments such as 4 percent weight loss, as well as HbA1c reduction as a performance payment. Historically, CMS has not covered HbA1c as part of the diabetes screening benefit, thus we could not consider it as a performance measure. In a section of the proposed rule<sup>396</sup> that was not specific to MDPP, CMS is finalizing to expand diabetes screening and diabetes definitions, including the addition of HbA1c test as part of the diabetes screening benefit, and we thank commenters for separately supporting this proposal. We may consider an additional performance payment option in future rulemaking. We may also consider other recommendations including suggestions on how to create incentives for clinician referral.

Per the commenters that recommended we increase the MDPP payment rates, we appreciate this feedback. Unfortunately, we run the risk of jeopardizing our certification as an expanded model test if we increase the total payment amount to the rates recommended by these commenters. Moreover, we believe that the current payment schedule aligns with similar Medicare preventive services payment rates such as IBTO and DSMT in terms of per session payment and maximum payment amounts. Per §414.84(e) we annually adjust the MDPP performance payments, attendance payments, and bridge payments by the percent change in the Consumer Price Index and publish the updated MDPP payment schedule at the beginning of the

calendar year.<sup>397</sup>

We appreciate the comments regarding the number of sessions CMS should cover in the new payment schedule. We applaud the commenter who found that offering the program twice a month in the second 6 months instead of monthly increased attendance and improved outcomes. However, should we increase the total number of sessions to 26 versus 22, the maximum payment amount would still have to remain the same given our certification, but the session payment amounts would decrease. In addition, paying for up to 22 sessions allows more flexibility in how sessions are scheduled, encouraging suppliers to retain participants since more sessions will be covered, and allow more suppliers to meet the maximum attendance payments. We are concerned that if we increase the number of payable sessions to 26, fewer suppliers will be able to reach that goal with their participants, and they would not be able to reach the maximum attendance payments for MDPP. We believe that paying for up to 22 sessions provides the right balance between per session payments, supplier success in reaching the maximum attendance payments for beneficiaries, and flexibility with scheduling sessions.

After consideration of public comments, we are finalizing as proposed.

3. Changes to § 424.205 (a), (b)(1), (c), and newly designated paragraphs (c)(1), (d)(14), (f)(2)(i), (g)(1)(i)(C)

The Centers for Disease Control and Prevention (CDC), which administers the Diabetes Prevention Recognition Program (DPRP), is responsible for implementing the quality assurance function of the National DPP at the national level, including for MDPP<sup>398</sup>. The DPRP awards four categories of recognition: Pending, preliminary, full, and full-plus.<sup>399</sup> Organizations may

<sup>399</sup> Centers for Disease Control & Prevention Diabetes Prevention Recognition Program: Standards and Operating Procedures. May 1, 2021. <https://www.cdc.gov/diabetes/prevention/pdf/dprp-standards.pdf>.

participate in MDPP with preliminary, full, or full-plus CDC recognition. Organizations may advance in CDC DPRP recognition by demonstrating their ability to effectively deliver the behavioral change program (preliminary) and achieve the outcomes shown to prevent or delay type 2 diabetes (full and full-plus). To achieve full CDC recognition, organizations must demonstrate a reduction in risk of developing type 2 diabetes among completers in the evaluation cohort by showing that at least 60 percent of all completers achieved at least **one** of the following outcomes:

- At least 5 percent weight loss 12 months after the cohort began; or
- At least 4 percent weight loss and at least 150 minutes/week on average of physical activity 12 months after the cohort began; or
- At least a 0.2 percent reduction in HbA1C.

Organizations are granted an additional 2 years of full recognition (full-plus), for a total of 5 years if, at the time full recognition is achieved, organizations meet the following retention criteria:

- A minimum of 50 percent at the beginning of the fourth month since the cohorts held their first sessions;
- A minimum of 40 percent at the beginning of the seventh month since the cohorts held their first sessions; and
- A minimum of 30 percent at the beginning of the tenth month since the cohorts held their first sessions.<sup>400</sup>

In the CY 2017 PFS final rule<sup>401</sup>, we indicated that we would align the CDC's DPRP and MDPP to the greatest extent possible. When the CY 2018 PFS final rule went into effect on January 1, 2018, CDC's 2018 DPRP Standards had neither been publicly released nor gone into

<sup>401</sup> Centers for Medicare & Medicaid Services. Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule and Other Revisions to Part B for CY 2018; Medicare Shared Savings Program Requirements; and Medicare Diabetes Prevention Program. 82 FR 53298. <https://www.govinfo.gov/content/pkg/FR-2018-11-23/pdf/2018-24170.pdf>.

effect. For these reasons, we had to establish an interim MDPP preliminary recognition so that eligible organizations could begin enrolling in Medicare to become MDPP suppliers starting January 1, 2018, and approved suppliers could start serving Medicare beneficiaries on April 1, 2018.

When the CY 2018 PFS final rule was issued, the CDC 2015 DPRP Standards were still in effect, and the CDC only recognized organizations with pending or full DPRP recognition. Consequently, CMS and CDC developed an interim solution that would allow organizations that met the MDPP interim preliminary recognition standard, which went into effect on January 1, 2018, to become eligible to enroll in Medicare as an MDPP supplier.

Because CMS and the CDC understood that there would be a 2- to 4-month gap between when the CY 2018 PFS went into effect for MDPP (January 1, 2018) and when the CDC 2018 DPRP Standards would be cleared and go into effect, CMS worked with CDC to establish an interim solution so that eligible organizations with MDPP interim preliminary or CDC DPRP full recognition could apply to Medicare to become MDPP suppliers before the CDC's 2018 Standards went into effect on March 1, 2018. The CY 2018 PFS final rule<sup>402</sup> established at § 424.205(c)(2)(ii) that CDC-recognized organizations with pending CDC DPRP recognition could meet additional criteria for an "interim preliminary recognition" standard and enroll as MDPP suppliers. With the MDPP new supplier type going into effect on January 1, 2018, and beneficiary enrollment starting on April 1, 2018, CMS wanted suppliers to be able to enroll in Medicare to become MDPP suppliers in time for the April 1 MDPP launch.

With the CDC DPRP Standards for preliminary recognition in effect, in the CY 2024 PFS proposed rule<sup>403</sup>, we proposed to remove § 424.205(c) and retire the MDPP "interim preliminary

Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule and Other Revisions to Part B for CY 2018; Medicare Shared Savings Program Requirements; and Medicare Diabetes Prevention Program. 82 FR 53298. <https://www.govinfo.gov/content/pkg/FR-2018-11-23/pdf/2018-24170.pdf>.

<sup>403</sup> Centers for Medicare & Medicaid Services. Medicare and Medicaid Programs; CY 2024 Payment Policies Under the Physician Fee Schedule and Other Changes to Part B Payment and Coverage Policies; Medicare Shared Savings Program Requirements; Medicare Advantage; Medicare and Medicaid Provider and Supplier Enrollment Policies; and Basic Health Program. 88 FR 52501. <https://www.govinfo.gov/content/pkg/FR-2023-08-07/pdf/2023-14624.pdf>.

recognition” standard. We also proposed to amend § 424.59(a)(1) (redesignated § 424.205(b)(1)) to require that, at the time of enrollment, organizations have preliminary, full, or full-plus CDC DPRP recognition. As described in the CY 2018 PFS final rule<sup>404</sup>, MDPP suppliers who received MDPP interim preliminary recognition during the 4-month time period between when the CY 2018 PFS final rule was published and when the CDC 2018 Standards went into effect, have achieved CDC preliminary recognition.

To maintain compliance with the current CDC DPRP Standards, organizations that enrolled in Medicare as MDPP suppliers based on their MDPP interim preliminary recognition<sup>405</sup> between January 1, 2018, and February 28, 2018, would have had at least two CDC DPRP evaluations given the 5-year time lapse. Per CDC DPRP Standards, organizations are required to submit data to CDC every 6 months, and undergo evaluation every 12 to 18 months, depending upon the timing of new cohorts.

Since the CDC DPRP Standards were updated in 2018 and 2021 and are due to be updated in Spring 2024, suppliers are required to meet the most current CDC DPRP Standards for preliminary, full, or full-plus recognition to maintain their eligibility to enroll and participate in MDPP as MDPP suppliers. Organizations that are interested in enrolling in Medicare as MDPP suppliers should refer to the CDC DPRP’s most current standards<sup>406</sup> to understand how to obtain preliminary, full, or full-plus CDC recognition, and consult § 424.205 for all other enrollment conditions that need to be met, in advance of submitting their application to become a MDPP supplier.

<sup>406</sup>Centers for Disease Control & Prevention Diabetes Prevention Recognition Program: Standards and Operating Procedures. May 1, 2021. <https://www.cdc.gov/diabetes/prevention/pdf/dprp-standards.pdf>.

We proposed to amend § 424.205 newly designated paragraphs (c) and (f) to remove reference to and requirements of the Ongoing Maintenance phase described in these sections with the exception of the newly designated requirement at § 424.205(d)(14), which we are retaining for historical recordkeeping and crosswalk purposes<sup>407</sup>. In the CY 2022 PFS final rule<sup>408</sup>, CMS removed eligibility for the Ongoing Maintenance Sessions for those beneficiaries who started the Set of MDPP services on or after January 1, 2022. Eligibility for these services will end December 31, 2023.

We proposed to amend § 424.205(a), (b)(1)<sup>409</sup>, newly redesignated paragraphs (c)(1) and (g)(1)(i)(C). We solicited comments on these proposals.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Commenters were unanimous in their support of CMS' proposal to remove the requirement for MDPP interim preliminary recognition and replace it with CDC preliminary recognition.

*Response:* We appreciate the public comments in support of the proposed revisions. After consideration of public comments, we are finalizing as proposed.

#### 4. Changes to § 424.210(b) and (d)

## J. Appropriate Use Criteria for Advanced Diagnostic Imaging

Section 1834(q) of the Act, as added by section 218(b) of the Protecting Access to Medicare Act (Pub. L. 113-93, April 1, 2014) (PAMA), directs CMS to establish a program to promote the use of appropriate use criteria (AUC) for advanced diagnostic imaging services. Since the bill was passed, we have taken steps to implement this program and codified the AUC program in our regulations at 42 CFR 414.94. In CY 2020, we began conducting an educational and operations testing period for the claims-based reporting of AUC consultation information and the program currently operates in this phase.

In the CY 2024 PFS proposed rule (88 FR 52262, at 52509 through 52515), we proposed to pause efforts to implement the AUC program for reevaluation and to rescind the current AUC program regulations at § 414.94. We did not propose a timeframe within which implementation efforts may recommence. We stated that we will continue efforts to identify a workable implementation approach and will propose to adopt any such approach through subsequent rulemaking.

### 1. Background

AUC are evidence-based guidelines that assist clinicians in selecting the imaging studies most likely to improve health outcomes for patients based on their individual clinical presentation. AUC present information in a manner that links a specific clinical condition or presentation; one or more services; and an assessment of the appropriateness of the service(s). For purposes of this program, AUC are a set or library of individual AUC. Each individual criterion is an evidence-based guideline for a particular clinical scenario based on a patient's presenting symptoms or condition. Under this program, any clinician who orders an advanced diagnostic imaging service must consult AUC for the imaging service ordered. Examples of advanced diagnostic imaging services include computed tomography, positron emission tomography, nuclear medicine and magnetic resonance imaging.

To consult AUC, clinicians use clinical decision support mechanisms (CDSMs). CDSMs are the electronic portals through which clinicians access the AUC during the patient workup. They can be standalone applications that require direct entry of patient information; however, may be more effective when they are integrated into electronic health records (EHRs). Ideally, clinicians would interact directly with the CDSM through their primary user interface, thus minimizing interruption to the clinical workflow.

Under the AUC program, clinicians and facilities that furnish the imaging service are responsible for reporting information about the ordering clinician's AUC consultation on the imaging service claim. The furnishing clinician and facility are not paid if the ordering clinician fails to consult and/or if the consultation information is not correctly included on the imaging service claim.

## 2. Statutory Authority

Section 218(b) of the PAMA added a new section 1834(q) of the Act entitled, "Recognizing Appropriate Use Criteria for Certain Imaging Services," which directed the Secretary to establish a program to promote the use of AUC. Section 1834(q)(4) of the Act requires ordering professionals to consult with specified applicable AUC through a qualified CDSM for applicable imaging services furnished in an applicable setting and paid for under an applicable payment system; and payment for such service may only be made if the claim for the service includes information about the ordering professional's consultation of specified applicable AUC through a qualified CDSM.

## 3. Discussion of Statutory Requirements and Implementation

There are four major components of the AUC program under section 1834(q) of the Act, and each component has its own implementation date: (1) establishment of AUC by November 15, 2015 (section 1834(q)(2) of the Act); (2) identification of mechanisms for consultation with AUC by April 1, 2016 (section 1834(q)(3) of the Act); (3) AUC consultation by ordering professionals, and reporting on AUC consultation by January 1, 2017 (section

1834(q)(4) of the Act); and (4) annual identification of outlier ordering professionals (based on low adherence to AUC) for services furnished after January 1, 2017 (section 1834(q)(5) of the Act). These four components are precursors to the requirement that, beginning for CY 2017, we establish mandatory prior authorization procedures for outlier ordering professionals when ordering advanced diagnostic imaging services (section 1834(q)(6) of the Act).

a. Establishment of AUC

We addressed the first component of the Medicare AUC program under section 1834(q)(2) of the Act, establishment of AUC, in the CY 2016 PFS final rule with comment period (80 FR 70886). With this rule, we began to codify the statutory requirements in our regulations at 42 CFR 414.94. We also defined provider-led entity (PLE), as well as additional definitions under section 1834(q)(1) of the Act in our regulations at § 414.94(b). In § 414.94(c)(1) and (2), respectively, we set forth the requirements and process by which PLEs become qualified by CMS to develop, modify, or endorse AUC. We qualified the first group of PLEs under the AUC program and posted them to the CMS website in June 2016 at which time their AUC libraries became specified applicable AUC for purposes of section 1834(q)(2)(A) of the Act.

b. Identification of Mechanisms for Consultation with AUC

We addressed the second component under section 1834(q)(3) of the Act, identification of mechanisms for consultation with AUC, in the CY 2017 PFS final rule (81 FR 80170). In this rule we defined clinical decision support mechanism (CDSM) in § 414.94(b). In § 414.94(g)(1) and (2), respectively, we set forth the requirements CDSMs must meet and established a process by which CDSMs may become qualified by CMS in accordance with the statutory requirements under section 1834(q)(3)(B)(ii) of the Act. We qualified the first group of CDSMs under the AUC program and posted them to the CMS website in July 2017.

c. AUC Consultation and Reporting

We addressed the third component under section 1834(q)(4) of the Act, AUC

consultation by ordering professionals, and reporting on AUC consultation, primarily in the CY 2018 PFS final rule (82 FR 53190). Additionally, in the CY 2017 PFS final rule, we defined terms in § 414.94(b) (81 FR 80405 and 80406) and identified exceptions to the AUC consultation and reporting requirements under section 1834(q)(4) of the Act in § 414.94(i) (81 FR 80422 through 80424) which are pertinent to the third component. We also continued to revise the regulation at § 414.94 as needed and in response to comments from interested parties in subsequent rulemaking cycles. These updates, revisions, and clarifications, which continued through annual PFS rulemaking for CYs 2018, 2019, and 2020, are discussed throughout this section as they directly relate to the AUC consultation requirement under section 1834(q)(4)(A) of the Act and reporting requirement under section 1834(q)(4)(B) of the Act.

In the CY 2017 PFS final rule, we defined applicable payment systems consistent with section 1834(q)(4)(D) of the Act to include the PFS established under section 1848(b) of the Act, the prospective payment system for hospital outpatient department services under section 1833(t) of the Act, and the ambulatory surgical center payment system under section 1833(i) of the Act (81 FR 80406). In the CY 2016 PFS final rule with comment period, we defined applicable setting consistent with section 1834(q)(1)(D) of the Act to include a physician's office, a hospital outpatient department (including an emergency department), and an ambulatory surgical center (80 FR 71105). We later added independent diagnostic testing facility (IDTF) to the definition of applicable setting in the CY 2019 PFS final rule (83 FR 59690 and 59691).

Also in the CY 2017 PFS final rule, consistent with section 1834(q)(4)(C) of the Act, we identified exceptions to the AUC consultation and reporting requirements under section 1834(q)(4) of the Act in the case of: a service ordered for an individual with an emergency medical condition, a service ordered for an inpatient and for which payment is made under Medicare Part A, and a service ordered by an ordering professional for whom the Secretary determines that consultation with applicable AUC would result in a significant hardship (81 FR 80422 through 80424). The significant hardship exception criteria and process under

§ 414.94(i)(3) was later updated in the CY 2019 PFS final rule (83 FR 59697 through 59700).

In the CY 2018 PFS final rule, we established a voluntary period from July 2018 through the end of 2019 during which ordering professionals who were ready to participate in the AUC program could consult specified applicable AUC through qualified CDSMs and communicate the results to furnishing professionals (82 FR 53193 through 53195). Furnishing professionals who were ready to do so could report AUC consultation information on the claim. To incentivize early use of qualified CDSMs for consulting AUC, we established in the CY 2018 Updates to the Quality Payment Program; and Quality Payment Program: Extreme and Uncontrollable Circumstances Policy for the Transition Year final rule with comment period and interim final rule a high-weight improvement activity for ordering professionals who consult specified AUC using a qualified CDSM for the Merit-based Incentive Payment System (MIPS) performance period that began January 1, 2018 (82 FR 54193).

In addition, in the CY 2018 PFS final rule, we established the start date of January 1, 2020, for the Medicare AUC program for advanced diagnostic imaging services in § 414.94(j)(1) (82 FR 53189 through 53195). Specifically, for services ordered on and after January 1, 2020, we established that ordering professionals must consult specified applicable AUC using a qualified CDSM when ordering applicable imaging services in § 414.94(j) and furnishing professionals must report AUC consultation information on the Medicare claim in § 414.94(k). In the CY 2019 PFS final rule, we specified under § 414.94(j)(2) that when delegated by the ordering professional, clinical staff under the direction of the ordering professional may perform the AUC consultation with a qualified CDSM. In the CY 2018 PFS final rule, we further specified that the AUC program, including the claims denial payment penalty phase, would begin on January 1, 2020, with a year-long educational and operations testing period for CY 2019 during which AUC consultation information was expected to be reported on claims, but claims would not be denied for failure to include proper AUC consultation information (82 FR 53193 through 53195). As discussed in further detail below, the educational and operations

testing period was subsequently extended multiple times and the program currently operates in the educational and operations testing period.

In the CY 2018 PFS final rule and consistent with section 1834(q)(4)(B) of the Act, we established in § 414.94(k) that the following information must be reported on Medicare claims for advanced diagnostic imaging services: (1) the qualified CDSM consulted by the ordering professional; (2) whether the service ordered would or would not adhere to specified applicable AUC, or whether the specified applicable AUC consulted was not applicable to the service ordered; and (3) the NPI of the ordering professional (if different from the furnishing professional) (82 FR 53190 through 53193). Section 1834(q)(4)(B) of the Act specifies that payment for advanced diagnostic imaging service claims under the AUC program may only be made if the claim submitted by the furnishing professional (of which there can be more than one if the professional component is furnished by a different entity than the technical component) includes this information about the ordering professional's AUC consultation. This statutory requirement establishes a real-time claims-based reporting requirement whereby payment for the imaging service is contingent upon specific information being present on the claim. We worked to operationalize the real-time claims-based reporting requirement by announcing our intention to use G-codes and HCPCS modifiers to report AUC consultation information on the Medicare claims in the CY 2019 PFS final rule.

In the CY 2022 PFS final rule (86 FR 64996), we provided further clarification around the scope of the AUC program specifically pertaining to updates or modifications to orders for advanced diagnostic imaging services (86 FR 65227 through 65229), the extreme and uncontrollable circumstances significant hardship exception (86 FR 65229 and 65230) and specified claims processing solutions, including creation and use of a new HCPCS modifier intended to accurately identify claims that are and are not subject to the AUC program requirements. We also discussed special circumstances related to: services furnished by a critical access hospital (CAH) (86 FR 65231 and 65232), services paid under the Maryland Total Cost of

Care Model (86 FR 65232 and 65233), inpatients converted to outpatients (86 FR 65233 and 65234), Medicare as the secondary payer (86 FR 65234 and 65235), and imaging services ordered prior to the start of the claims denial payment penalty phase but furnished on or after the start of the payment penalty phase (86 FR 65235). We addressed where to identify the ordering professional on practitioner claims for imaging services (86 FR 65231) (we addressed where to identify ordering professionals on institutional claims in educational materials following the CY 2019 PFS final rule claims-based reporting discussion (83 FR 59696)) and confirmed that claims that do not properly append AUC consultation information will be returned for correction and resubmission, rather than denied, when the payment penalty phase begins (86 FR 65234). We did not specify how long claims would be returned before the payment penalty phase would shift to claim denials. Finally, we established that the payment penalty phase would begin on the later of January 1, 2023, or the January 1 that follows the declared end of the PHE for COVID-19.

Under this specification and with the declared end of the PHE for COVID-19 on May 11, 2023, the payment penalty phase would have been scheduled to begin on January 1, 2024. However, as announced via the AUC website in 2022 and discussed further below in this section of the proposed rule, the educational and operations testing period will continue until further notice.

We did not include provisions pertaining to the AUC program in the CY 2023 PFS final rule (87 FR 69404).

#### d. Identification of Outlier Ordering Professionals

We began to address the fourth component under section 1834(q)(5) of the Act, identification of outlier ordering professionals, in the CY 2017 PFS final rule by finalizing the first list of priority clinical areas (PCAs) in § 414.94(e)(5) (81 FR 80406 through 80412) which were intended to ultimately guide identification of outlier ordering professionals who would eventually be subject to prior authorization when ordering advanced diagnostic imaging services. Section 1834(q)(5) of the Act directs CMS to: (1) determine on an annual basis no more than 5 percent of total ordering professionals who are outlier ordering professionals; and (2) base the

determination of an outlier ordering professional on low adherence to AUC which may be based on comparisons to other ordering professionals and include data for ordering professionals for whom prior authorization applies; and (3) use 2 years of data to identify outlier ordering professionals; and (4) consult with physicians, practitioners and other interested parties in developing methods to identify outlier ordering professionals. To date, we have not proposed or codified the methods for identifying outlier ordering professionals as prescribed by section 1834(q)(5) of the Act, and thus, we have not subjected any ordering professionals to prior authorization when ordering advanced diagnostic imaging services as prescribed by section 1834(q)(6) of the Act.

#### 4. Timeline

As evident from the description of our regulatory activities to date, we have not met the statutory implementation time frame for the AUC program components. The educational and operations testing period began January 1, 2020, and the AUC program continues to operate in this phase currently. In this phase, there are no payment penalties for advanced diagnostic imaging service claims that do not append AUC consultation information. The provisions in section 1834(q) of the Act repeatedly stress the importance of engagement with interested parties in developing the Medicare AUC program. Throughout our implementation activities, we have intentionally taken a diligent, stepwise implementation approach to maximize the opportunity for public comment and engagement with interested parties, and allow for adequate advance notice to physicians and practitioners, beneficiaries and other AUC interested parties of any programmatic changes or updates. These efforts to maximize engagement included speaking and answering live questions at multiple CMS Open Door Forums, participating in external meetings sponsored by and at the request of interested parties like medical specialty societies and health care practitioners, and meeting in person and virtually with interested parties upon request to receive feedback and answer questions to the best of our ability and within the context of already publicly available information. All of these interactions were critical to inform our proposals

during each round of notice and comment rulemaking. This approach has allowed us to be comprehensive in our assessment of implementation options and regulatory proposals, responsive to concerns expressed by interested parties, and agile in reacting to unexpected events, like the PHE for COVID-19. Since the CY 2022 PFS final rule was released, we have used the AUC website<sup>412</sup> to publicly announce updates to the AUC program. In July 2022, we updated the AUC website to inform interested parties that the payment penalty phase of the AUC program would not begin on January 1, 2023, even if the PHE for COVID-19 ended in 2022. This update also stated that the educational and operations testing period would continue and that we are not able to forecast when the payment penalty phase will begin. In October 2022, we updated the AUC website again to announce that applications for CDSM and PLE initial qualification and re-qualification would not be accepted for the 2023 application cycle and that all CDSMs and PLEs qualified as of July 2022 would remain qualified through this cycle.

##### 5. Proposal to Pause Program for Reevaluation

Since 2015, we have taken a thoughtful, stepwise approach that maximized engagement and involvement of interested parties to implement the statutory provisions set forth in section 1834(q), as added by section 218(b) of the PAMA, using notice and comment rulemaking. As discussed previously in this section of the final rule, we established the first two components of the AUC statutory requirements - establishment of AUC and mechanisms for consultation. We began to build the parameters for the fourth component, outlier identification, leading to prior authorization, by establishing the PCAs. And we began implementing the third component, the AUC consultation and reporting requirement, using the ongoing educational and operations testing period. At this time, however, we have exhausted all reasonable options for fully operationalizing the AUC program consistent with the statutory provisions as prescribed in section 1834(q)(B) of the Act directing CMS to require real-time claims-based reporting to

---

<sup>412</sup> <https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/appropriate-use-criteria-program>.

collect information on AUC consultation and imaging patterns for advanced diagnostic imaging services to ultimately inform outlier identification and prior authorization. As a result, we proposed to pause implementation of the AUC program for reevaluation, and proposed to rescind the current AUC program regulations from § 414.94. We expected this to be a hard pause to facilitate thorough program reevaluation and, as such, we did not propose a time frame within which implementation efforts may recommence.

a. Real-Time Claims-Based Reporting

Section 1834(q)(4)(A) of the Act requires ordering professionals to consult AUC using a qualified CDSM. Section 1834(q)(4)(B) of the Act requires furnishing professionals to report information about the ordering professional's AUC consultation with a qualified CDSM on the Medicare claim for the advanced diagnostic imaging service the ordering professional ordered. This section dictates that payment to the furnishing professional is contingent on reporting the ordering professional's AUC consultation information, which must include the ordering professional's NPI, the qualified CDSM that was consulted, and whether the service ordered adheres or does not adhere to the AUC consulted, or if there were no AUC applicable to the order available for consultation via the qualified CDSM that was consulted as described above.

While each component of the statutory requirements has presented unique challenges to implement, the greatest challenge has been in fully implementing and operationalizing the real-time claims-based reporting requirement consistent with section 1834(q)(4)(B) of the Act to ensure accurate reporting, claims processing and, ultimately, outlier identification and prior authorization. We formally solicited public comment and feedback from interested parties in notice and comment rulemaking in the CY 2017 PFS rulemaking cycle, and have welcomed and encouraged feedback and information from interested parties less formally throughout the duration of our implementation efforts in each successive year. In the CY 2017 PFS final rule, we discussed the importance of developing and operationalizing a meaningful solution for collecting AUC consultation information on Medicare claims. We explained that “we must

diligently evaluate our options taking into account the vast number of claims impacted and the limitations of the legacy claims processing system.” We further noted that “[m]oving too quickly to satisfy the reporting requirement could inadvertently result in technical and operational problems that could cause delays in payments” (81 FR 80420). In addition to consulting with claims processing experts outside of and between rulemaking cycles, we continued to clearly and intentionally solicit feedback and suggestions from interested parties to assist us in developing workable claims processing edits and solutions to operationalize the AUC reporting requirement consistent with section 1834(q)(4)(B) of the Act in rulemaking cycles for the CY 2018, 2019 and 2022 PFS.

Having considered many rounds of input from interested parties, including internal and external experts, and diligent exploration of options, we have come to believe that the real-time claims-based reporting requirement prescribed by section 1834(q)(4)(B) of the Act presents an insurmountable barrier for CMS to fully operationalize the AUC program. To properly apply the statutory provisions of the AUC program, including specifications around settings in which services are furnished and payment systems under which Medicare payments are made, it is critical that claims are accurately identified in the Medicare claims processing system and accurately subjected to system’s edits to ensure AUC consultation information is properly reported on the claim. Equally important is ensuring that claims not subject to the AUC program are not inappropriately subjected to claims system’s edits. We consider a process where the Medicare claims processing system properly and accurately identifies only claims for services subject to the AUC program requirements, without manual action by practitioners/facilities that submit claims, to be a fully automated process. The existing Medicare claims processing system does not have the capacity to fully automate the process for distinguishing between advanced diagnostic imaging claims that are or are not subject to the AUC program requirement to report AUC consultation information as prescribed by section 1834(q)(4)(B) of the Act. This means that the Medicare claims processing system is not able to ensure that claims for services that are

not subject to the AUC consultation information reporting requirement will not be improperly denied for failure to append AUC consultation information. We note here that our intention, as announced in the CY 2022 PFS final rule, was to begin the payment penalty phase of the AUC program by returning, rather than denying, claims for advanced diagnostic imaging services that do not contain AUC consultation information for correction and resubmission; however, section 1834(q)(4)(B) of the Act specifies that payment for advanced diagnostic imaging services under the AUC program may only be made if the claim for the imaging service includes specific AUC consultation information. Consequently, the payment penalty phase would eventually need to shift from returning claims for correction and resubmission to denying claims. As such, and without the practicable capacity to fully automate the process for editing claims to ensure only appropriate claims are edited for AUC consultation information, there is a significant risk that full implementation of the penalty phase of the AUC program would result in inappropriate claims denials.

To avoid these inappropriate denials, we considered requiring claims to include certain modifiers that would identify them as not being subject to the AUC consultation and reporting requirements under section 1834(q)(4)(A) and (B) of the Act. However, this would add an extra layer of burden on furnishing professionals, including freestanding and hospital-based imaging facilities, requiring them to append information to the claims even for services that are not subject to the AUC consultation and reporting requirement in order to allow us to identify which imaging services are and are not subject to the AUC consultation and reporting requirements under section 1834(q)(4)(A) and (B) of the Act, and allow us to appropriately process claims. Additionally, the AUC program is designed to target a subset of advanced diagnostic imaging services furnished in specific settings and paid under specific payment systems, as opposed to, for example, all Medicare part B advanced diagnostic imaging service claims, and includes multifaceted criteria for identifying which services are subject to the program. As such, ordering professionals would need to know, at the time of the order, where each imaging service will be

furnished and under which payment system the claim will be paid to determine whether AUC consultation, and transmission of AUC consultation information with the order, is required. Furnishing professionals, including freestanding and hospital-based imaging facilities, would need to be able to delineate which orders received without AUC consultation information are not subject to the AUC program from those that are subject to the program and its requirements. If they are able to confirm that a service is not subject to the AUC program, then they would need to identify the appropriate modifier to append to the claim so it can be processed and be paid without AUC consultation information. Alternatively, if they find that the order is subject to the AUC program, they would need to take steps to obtain AUC consultation information from the ordering professional, decline to furnish the service, or risk denial of the claim for a furnished service.

An example that highlights the practical complexity and unwieldiness of the AUC program is the, not uncommon, scenario where an advanced diagnostic imaging service is furnished in two settings—only one of which is an applicable setting. For example, this occurs when the technical component (TC) of an imaging service is furnished in a setting, like a critical access hospital (CAH), that is not an applicable setting. As we discussed in the CY 2022 PFS final rule, because the service was not furnished in an applicable setting, the entirety of the service (both the technical and professional component (PC)), is not subject to the AUC consultation requirement. Therefore, neither of the separate claims for the TC and PC for the service are required to include AUC consultation information. However, there is no way in real-time claims processing for us to identify that the PC claim is for an imaging service that was not furnished in an applicable setting. For the claim to process and be paid when it does not include AUC consultation information, the furnishing professional for the PC would need to append a modifier to the claim to identify it as not being subject to the AUC consultation and reporting requirement.

#### b. Accuracy of Claims Data

Because, as previously noted, the CMS claims processing system is unable to fully automate editing advanced diagnostic imaging claims, risks around reporting accuracy are inherent to the AUC program prescribed by section 1834(q)(4)(B) of the Act. These risks directly impact furnishing professionals, including free-standing and hospital-based facilities, by affecting payment for advanced diagnostic imaging services they furnish, in some cases based on conduct of ordering professionals with whom they have little or no affiliation. Beyond the potential for inappropriate claims denials as previously discussed, by manually appending information to their claims as supplied by ordering professionals, furnishing professionals are attesting to the credibility and accuracy of that information and may find themselves subject to audits or post-pay review. Considering that the AUC program ultimately involved the identification of outlier ordering professionals and imposing a prior authorization procedure for them as prescribed in sections 1834(q)(5) and (6) of the Act, reliance on manual reporting by one party of information supplied by another party presents a serious risk to data accuracy and integrity. Since section 1834(q)(5) of the Act directs CMS to use these data from claims-based AUC consultation information collection to identify outlier ordering professionals, and section 1834(q)(6) of the Act directs CMS to require prior authorization for outlier ordering professionals, the quality and accuracy of the data used to make these determinations is critical to ensure the AUC program leads to appropriate application of prior authorization for advanced diagnostic imaging services.

#### c. Effect on Medicare Beneficiaries

We recognize that a program to promote the use of AUC for advanced diagnostic imaging could improve imaging utilization patterns for Medicare beneficiaries. Ideally, beneficiaries would undergo fewer and more appropriate imaging procedures to inform more efficient treatment plans and address medical conditions more quickly and without unnecessary tests. In the CY 2019 PFS final rule, we estimated how adding AUC consultation to an ordering professional's workload would directly impact a Medicare beneficiary based on the additional

office visit time needed for consultation and ordering. We estimated this impact by calculating the cost to beneficiaries associated with the additional consultation time to be \$68,001,000 annually (83 FR 60040), representing the opportunity cost of time spent in the office. In the CY 2022 PFS final rule, we updated this estimate based on Medicare claims data and changes in wage estimates to \$54,789,518 annually. We estimated that potential savings would offset this opportunity cost of time spent by beneficiaries in the office by \$27,394,759 annually based on process efficiencies that may be implemented over time by ordering professionals (86 FR 65626). In the CY 2019 PFS final rule, we estimated other impacts associated with the AUC program including potential savings to the Medicare program. We estimated potential savings of \$700,000,000 annually by extrapolating savings from a clinical decision support pilot project performed by the Institute for Clinical Systems Improvement in Bloomington, Minnesota<sup>413</sup> (83 FR 60043). Since this estimate was based on information from previous clinical decision support experiences and not Medicare claims data or wage estimates, we did not update this estimate in the CY 2022 PFS final rule. The prior savings estimate is no longer an accurate reflection of savings that could be achieved and CMS will not realize the estimated \$700,000,000 annual savings because, as described in the final rule, the AUC program cannot be implemented as written in statute; therefore, expected savings are negligible.

While the incorporation of any new process into workflows can be expected to impart burden that eventually lessens, we have additional concerns about risks for beneficiaries stemming from the real-time claims-based reporting requirement prescribed by section 1834(q)(4)(B) of the Act. Beyond the burden of adding to the workload of the ordering and furnishing professionals for advanced diagnostic imaging services, the AUC consultation program can produce risk to beneficiaries in receiving timely imaging services, and potentially being financially liable for advanced diagnostic imaging service claims denied by the Medicare program, whether properly or due to omissions or errors in conveying AUC consultation

---

<sup>413</sup> Miliard, M. Nuance, ICSI aim to prevent unnecessary imaging tests. Healthcare IT News. November 10, 2010.

information on claims. Beneficiaries may experience delays in scheduling and receiving imaging if AUC information is not properly provided with the order from the ordering professional to furnishing professionals/facilities. This may happen, even if the imaging service is not subject to the AUC program requirements, in any circumstance where the furnishing professional/facility is unclear whether the AUC consultation and reporting requirements apply (for example if Medicare is the secondary payer, or under other circumstances as discussed in the CY 2022 PFS final rule). Section 1834(q) of the Act does not separately establish protections to Medicare beneficiaries from financial liability for advanced diagnostic imaging service claims not paid by Medicare as required under the AUC program. As discussed above, because the Medicare claims processing system cannot fully automate a process to ensure only claims for advanced diagnostic imaging services subject to the AUC program reporting requirement under section 1834(q)(4)(B) of the Act are edited as such, there is a risk of inappropriate claims denials. Additionally, in the event that an ordering professional fails to consult AUC or neglects to communicate AUC consultation information (or relevant exception information) to the furnishing professional/facility and the furnishing professional/facility proceeds with furnishing the imaging service despite the absence of this information, the beneficiary may incur unwarranted financial liability for the imaging service.

#### d. Summary

Taken together and, in particular, due to the inability of the Medicare claims processing system to automate claims processing edits that ensure only claims subject to the AUC program requirements as prescribed in section 1834(q) of the Act will be processed as such, returned or denied accordingly, we believe the inherent risks in terms of data integrity and accuracy, beneficiary access, and potential beneficiary financial liability for advanced diagnostic imaging services render the AUC program impracticable, and have led us to our proposal to pause efforts to implement the AUC program for reevaluation and rescind current regulations. Working within the parameters prescribed under section 1834(q) of the Act, we have not identified any practical

way to move the AUC program forward beyond the educational and operations testing period. Further, without a way forward to fully implement the AUC program, we believe there is no utility in continuing the educational and operations testing period. We will continue efforts to identify a workable implementation approach and will propose to adopt any such approach through subsequent rulemaking. We note, and discuss further below in this section of the final rule, that clinical decision support tools can be beneficial in assisting with clinical decision making and we encourage continued use of clinical decision support in a manner that best serves and assists clinicians.

## 6. Summary of Other Quality Initiatives

As discussed above, section 218(b) of the PAMA of 2014 entitled “Promoting Evidence-Based Care” established the Medicare AUC program. The statute was designed to promote the use of AUC for advanced diagnostic imaging services with enforcement through immediate non-payment of claims for which there was no AUC consultation and, eventually, prior authorization for “outliers” that more frequently neglect to consult AUC. Promoting the use of AUC in clinical practice is an activity that encourages the use of evidence-based information/guidelines/recommendations to guide patient care thus resulting in improved value and quality. Subsequent to PAMA, the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114-10, April 16, 2015) established the Quality Payment Program, which is an incentive program to tie Medicare PFS payment to performance by rewarding high-value, high-quality care. After enactment of these laws, we worked to implement both programs by successfully establishing and fully operationalizing the Quality Payment Program (both the Merit-based Incentive Payment System (MIPS) and Advanced Alternative Payment Models (APMs)) and, as discussed above, taking steps to implement each component of the AUC program up to and through the ongoing educational and operations testing period. We have developed outreach and educational

materials and made all AUC program-related information available on the CMS AUC website.<sup>414</sup>

We believe that many goals of the AUC program have been met by the QPP and other more comprehensive accountable care initiatives such as the Medicare Shared Savings Program, advances in electronic clinical quality measures (eCQMs) and interoperability requirements of Certified Electronic Health Record Technology (CEHRT), and new Innovation Center models such as ACO REACH and Kidney Care Choices where physicians and other health care providers join together to take responsibility for both the quality of care and total cost of care their patients experience. These quality and value-based care programs are designed to achieve quality of care goals by addressing issues of utilization, cost and quality holistically instead of via claim-by-claim examination and improvement initiatives for specific types of services.

While these initiatives, including the Shared Savings Program, do not specifically target advanced diagnostic imaging, we expect that this more global approach to improving quality and accountable care would broadly affect all services, including advanced diagnostic imaging utilization. Both ACO participation and episode of care payment models promote accountability for beneficiary cost of care as well as improving or maintaining quality of care according to applicable quality measures. Similarly, the MIPS ties together quality and costs by measuring and scoring performance in four performance categories: quality, cost, improvement activities, and promoting interoperability. MIPS uses measures and activities in each of these categories, such as the Total Per Capita Cost (TPCC) specialty measure, which focuses on effective primary care management to support Medicare savings. While also not specific to advanced diagnostic imaging, improvements in primary care management including ordering of diagnostic tests may involve consideration of appropriate imaging orders.

More specific to advanced diagnostic imaging, MIPS includes 10 specific quality measures pertaining to imaging or under the “Diagnostic Radiology” Specialty Measure Set.

---

<sup>414</sup> <https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/appropriate-use-criteria-program>.

Additionally, the Meaningful Measures 2.0 Framework includes a priority area for safety with the goal of “Reduced Preventable Harm” (<https://edit.cms.gov/files/document/cascade-meaningful-measures-framework.xlsx>). An objective under this goal is “Diagnostic Accuracy/Error” which includes a cascade measure concept/family of “Appropriate use of radiology and lab testing.” An example of an existing measure within this concept is “Appropriate Follow-up Imaging for Incidental Abdominal Lesions” (<https://www.cms.gov/files/document/cascade-measures.xlsx>).

While a standalone program specifically requiring AUC consultation when ordering advanced diagnostic imaging services would directly target goals of improving advanced diagnostic imaging ordering patterns, our experience in recent years has demonstrated that the goals of appropriate, evidence based, coordinated care can be achieved more effectively, efficiently and comprehensively through other CMS quality initiatives.

## 7. Summary of the Proposal to Rescind (§ 414.94)

We provided clarity to interested parties as we proposed to amend our regulations to rescind the current regulations by removing the text of § 414.94 and reserve it for future use. This section contains the entirety of the regulations we adopted in the course of implementing elements of section 1834(q) of the Act. We believe the removal of these regulations is consistent with our proposal to pause efforts to implement the AUC program for reevaluation, and would avoid the potential confusion that could result if we were merely to retain or amend the regulation text at § 414.94.

We acknowledge and emphasize the value of clinical decision support to bolster efforts to improve the quality, safety, efficiency and effectiveness of health care. We welcome and encourage the continued voluntary use of AUC and/or clinical decision support tools in a style and manner that most effectively and efficiently fits the needs and workflow of the clinician user. Across many specialties and services, not just advanced diagnostic imaging, clinical decision support predates the enactment of the PAMA and, given its utility when accessed and used

appropriately, we expect it to continue being used to streamline and enhance decision making in clinical practice and improve quality of care. Resources on clinical decision support are available on HHS Agency websites including the following:

- Office of the National Coordinator - <https://www.healthit.gov/topic/safety/clinical-decision-support>.
- Agency for Healthcare Research and Quality - <https://www.ahrq.gov/cpi/about/otherwebsites/clinical-decision-support/index.html>.
- Centers for Disease Control and Prevention - <https://www.cdc.gov/opioids/healthcare-admins/ehr/clinical-decision-support.html>.

## 8. Summary

In conclusion, we proposed to pause efforts to implement the AUC program for reevaluation and to rescind the current AUC program regulations at § 414.94 and reserve this section in the CFR. We did not propose a timeframe within which implementation efforts may recommence. We will continue efforts to identify a workable implementation approach and will propose to adopt any such approach through subsequent rulemaking.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Many commenters supported our proposal to pause efforts to implement the AUC program for reevaluation. The majority of these commenters also supported our proposal to rescind and reserve the current AUC program regulations at § 414.94. Most commenters cited their agreement with our explanations of the insurmountable barriers presented in the discussion on the real-time claims-based reporting requirement and claims processing issues, as well as other operational challenges. Many stakeholders that represent health care providers who would be considered ordering professionals expressed support for the proposals because they believe the AUC program imposes undue burdens and administrative costs on providers. Many discussed aspects of the time, training effort, and costs of complying with the regulations. A few health

systems and providers discussed their specific technical challenges with integrating CDSMs into their clinical workflow, disrupting patient care. Others noted that after years of the educational and operations testing period, they continue to have significant problems with reviewing orders received from outside their system and challenges in contacting ordering professionals to get correct information. One also noted technical challenges getting their electronic systems to correctly include AUC information on claims. One commenter stated that the regulatory requirement to implement a clinical decision support tool “focused solely on imaging appropriateness creates a large burden on health systems and clinicians, without evidence that the program reduces high-cost imaging.” Many commenters agreed with CMS’s concerns about unintended costs to beneficiaries for improperly denied claims, as well as potential delays in accessing needed imaging services. Many commenters that represent professionals who furnish imaging services also thanked CMS for recognizing their concerns that the penalty portion included in the statute would penalize furnishing professionals who are unable to control the behaviors of ordering professionals. Several commenters agreed with CMS’s concerns that the claims processing systems challenges present substantial risks for data integrity and accuracy. Many commenters expressed hope that CMS would permanently forgo the AUC program and/or that Congress would repeal or substantially change the PAMA statute. Many commenters recommended that CMS should provide clarity as to the status of the AUC program and not take steps to continue future implementation except through additional public engagement and public notice and comment. Several commenters thanked CMS for engaging with stakeholders and being responsive to comments and concerns of all interested parties over the last 8 years.

*Response:* We thank commenters for their support.

*Comment:* Some commenters provided mixed comments and a few commenters noted that they were unclear about their support or opposition to the proposal. Of the commenters that had mixed views, several expressed support for pausing the program for reevaluation and working toward a redesigned program but were either silent about rescinding the regulations or

believed that rescinding the regulations at § 414.94 is premature. A few commenters noted they believed that the PAMA statute must be changed in order to successfully implement an AUC program that eases utilization and does not inappropriately deny claims.

*Response:* As discussed in the CY 2024 PFS proposed rule (88 FR 52514 through 52515), we acknowledge and emphasize the value of clinical decision support to bolster efforts to improve the quality, safety, efficiency, and effectiveness of health care. We welcome and encourage the continued voluntary use of AUC and/or clinical decision support tools in a style and manner that most effectively and efficiently fits the needs and workflow of the clinician user. Across many specialties and services, not just advanced diagnostic imaging, clinical decision support predates the enactment of the PAMA and, given its utility when accessed and used appropriately, we expect it to continue being used to streamline and enhance decision-making in clinical practice and improve quality of care.

While we are finalizing our proposal to pause the AUC program for reevaluation and to rescind the regulations at § 414.94 at this time, reserving it for future use, we will continue efforts to identify a workable implementation approach and will propose to adopt any such approach through subsequent rulemaking, including implementing any amendments Congress might make to the AUC program statutory provisions. We appreciate some commenters' concerns that rescinding all or part of § 414.94 is premature; however, given the need for clarity on the status of the program, we believe rescinding the regulations and reserving § 414.94 is the most appropriate and straightforward option.

Comment: Some commenters stated opposition to the proposal to both pause the AUC program and to rescind the regulations. Generally, most of these commenters cited the benefits of using AUC such as promoting cost containment and better test results. A few commenters expressed concern about the time, effort, money, and staff training resources they have spent to implement AUC consultation within their health system or practices. Several commenters that represent EHR vendors, developers of clinical decision support tools, and a developer of AUC

expressed strong concerns over delaying progress in development and use of AUC and CDSMs to advance use of high-quality imaging services as well as the potential chilling effect a pause could have on innovation within Medicare and across health care as a whole including Medicare Advantage and commercial plans. One commenter stated that CMS is concentrating too much on the payment mechanism in PAMA rather than focusing on the quality improvement aspect which in their view is the foundational aspect of the program. Three commenters stated that CMS has incorrectly interpreted various sections of the statute, including the requirement for AUC real-time claims-based reporting. Two commenters suggested that CMS is not interpreting enough flexibility into the PAMA or subsequent authorizing statutes; and if we follow commenters' interpretations instead, then we would have the authority already to incorporate the AUC program into other quality and value-based care programs. Several commenters also expressed concerns regarding the time and resources spent developing, qualifying, and marketing clinical decision support tools and AUC; and the revenue they fear losing if CMS does not mandate use of AUC within the Medicare program. One commenter requested that CMS at minimum keep the PLE and CDSM subsections of §414.94. One commenter urged CMS to set a timeline for reevaluation and promulgation of new regulations so that phases of the program can continue.

Response: As previously mentioned, use of clinical decision support in the healthcare industry predates the enactment of the PAMA across many specialties, not just advanced diagnostic imaging. Given its utility when accessed and used appropriately, we expect it to continue being used to streamline and enhance decision making in clinical practice and improve quality of care. We disagree with commenters' suggestions that we could and should simply ignore or reinterpret the PAMA statute to disregard the real-time claims-based processing requirement in section 1834(q)(4)(B) of the Act. We also disagree with interpretations of the statute that read a flexibility into the PAMA or subsequent authorizing statutes that would allow CMS to incorporate AUC into other quality and value-based care programs without additional amendments to the statute. As noted in the previous response, we are finalizing our proposal to

pause the AUC program for reevaluation and to rescind the regulations at § 414.94 at this time, reserving it for future use. We will continue efforts to identify a workable implementation approach and will propose to adopt any such approach through subsequent rulemaking, including implementing any amendments Congress might make to the AUC program statutory provisions. We appreciate comments recommending that we keep certain parts of § 414.94; however, we believe it would be confusing for all interested parties if CMS were to continue annually reviewing and qualifying PLE and CDSM applications while the rest of the program is paused. As noted in the proposed rule and previous comment response, the use of AUC and clinical decision support pre-dates the statutory AUC program for advanced diagnostic imaging. We note that many commenters indicated that they may continue to incorporate AUC and/or clinical decision support tools into their clinical decision making. Therefore, we expect, and encourage, that clinicians may continue to use clinical decision support, likely including mechanisms that had been qualified CDSMs under the AUC program, in a style and manner that best fits their needs and workflow. As such, while CMS will not be qualifying PLEs or CDSMs, we expect the industry and market for them will continue. We did not propose and cannot specify a timeframe within which implementation efforts may recommence, as that depends on the time needed for reevaluation and findings, as well as any potential Congressional action to revise the statute.

*Comment:* Some commenters recommended that CMS hire a third-party contractor (technology vendor) to make any necessary changes to the claims processing system in order to avoid pausing the program for reevaluation. One commenter stated their “surprise” at learning for the first time of the claims processing difficulties as a reason for pausing the program. Other commenters disagreed with our descriptions of the claims processing barriers and questioned the accuracy of our explanations of the risks for improperly denied claims and inaccurate claims data. One commenter stated their belief that we over-estimated the numbers of inaccurate claims and improperly denied claims. This commenter believed instead that the worst result of implementing the program as is would be “occasional incidents of a consultation occurring that

was not required.”

Response: We thank commenters for their suggestion that we contract for additional technical assistance, and will take it into further consideration. In the CY 2024 PFS proposed rule (88 FR 52510 through 52512), we explained that since 2015, we have taken a thoughtful, stepwise approach to implementing the statute that maximized engagement and involvement of interested parties. In the proposed rule (88 FR 52512 through 52513), we detailed the years of effort and public engagement to solve the claims processing aspects required by the statute. As described in the proposed rule on pages 52512 through 52514, we considered many factors and believe we have exhausted all reasonable options for fully operationalizing the AUC program and resolving the issues with the real-time claims-based reporting requirement. We disagree with assertions that implementing the payment penalty portion of the statute with the current capabilities would not result in the potential for millions of improperly denied claims and would not implicate beneficiary liability for those denied claims. We also disagree with assertions that the only negative impacts would be occasional incidences of ordering professionals consulting AUC when it is not required. In the CY 2022 PFS final rule we updated the regulatory impact analysis based, in part, on updated claims data for advanced diagnostic imaging. Using only services billed on the professional claim type, we estimated over 30 million advanced diagnostic imaging services to be subject to the AUC program (86 FR 65626). Since only professional claims were used for these estimates, the number of claims only increases once institutional claims for the same services are considered. Because we cannot fully automate the claims processing system to accurately identify the claims for services that are and are not subject to the real-time claims-based reporting requirement as discussed above, millions of claims are in fact at risk of improper processing, including unwarranted denials. As noted in a previous response, while we are finalizing our proposal to pause the AUC program for reevaluation and will rescind the regulations at § 414.94 (reserving this section) at this time. We will continue efforts to identify a workable implementation approach and will propose to adopt any such approach

through subsequent rulemaking, including implementing any amendments Congress might make to the AUC program statutory provisions.

*Comment:* One commenter recommended that CMS should require the CDSMs to provide CMS data on compliance and problem areas that may exist. Another commenter similarly recommended that CMS change the AUC program to transfer responsibility for reporting and auditing on CDSM/Guideline usage to the CDSMs. This commenter stated the CDSM reports could then be used “on an ex post facto basis” to enforce the program as originally envisioned, leading outlier physicians to have to follow pre-certification steps until their usage of AUC was within established limits.

*Response:* This suggestion would require a change in the statute to remove the current real-time claims-based reporting requirement in section 1834(q)(4)(B) of the Act. As noted in the proposed rule, we would use the public notice and comment rulemaking process to reinstate any regulations and make future changes to the AUC program, including to implement any amendments Congress might make to the AUC program statutory provisions.

*Comment:* A few commenters indicated that in recent years they have made efforts to work directly with Congress to revise or rescind the PAMA statute and will continue to do so given the discussion in the proposed rule. Several commenters requested that CMS partner directly with Congress; some suggested that this partnership work toward removing the requirements for the AUC program from the statute, others suggested CMS and Congress should modify the statute to remove the real-time claims-based reporting requirements and provide CMS with more flexibility in how to implement AUC within Medicare. Several suggested modifying the statute to align or incorporate the AUC program with other quality improvement and value-focused programs authorized under other sections of the statute. One commenter requested that CMS work to advance legislation with Congress that enables implementation of an advanced payment model for advanced diagnostic imaging based on the use of AUC embedded in CDSMs and to consider other opportunities in Federal policy making to use

CDSMs.

*Response:* As noted, the commenters are suggesting legislative changes to the AUC program, which would require Congressional action. We appreciate these suggestions and will respond appropriately to any amendments to the statute that impact the AUC program.

*Comment:* One commenter wished to “...remind CMS that, in July 2021, the House Appropriations Committee approved the Fiscal Year (FY) 2022 Labor, Health and Human Services, Education spending bill and included an accompanying report that called on CMS to report to Congress on the implementation of the AUC Program, including program challenges and successes. The report language further directed CMS to consider existing quality improvement programs and relevant CMS Innovation Center models and their influence on appropriate use of advanced diagnostic imaging.”

*Response:* We provided a response to this Appropriations Committee request in February 2023. Additionally, in the proposed rule (88 FR 52514 through 52515) in section 6. “Summary of Other Quality Initiatives”, we discussed that, subsequent to PAMA, in accordance with the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114 10, April 16, 2015) we established and fully operationalized the Quality Payment Program (both the Merit-based Incentive Payment System (MIPS) and Advanced Alternative Payment Models (APMs)). We discussed the Quality Payment Program and stated that we believe that many goals of the AUC program have been met by the Quality Payment Program and other more comprehensive accountable care initiatives such as the Medicare Shared Savings Program, advances in electronic clinical quality measures (eCQMs) and Interoperability requirements of Certified Electronic Health Record Technology (CEHRT), and new Innovation Center models such as ACO REACH and Kidney Care Choices where physicians and other health care providers join together to take responsibility for both the quality of care and total cost of care their patients experience. These quality and value-based care programs are designed to achieve quality of care goals by addressing issues of utilization, cost, and quality holistically instead of via claim-by-

claim examination and improvement initiatives for specific types of services. While a standalone program specifically requiring AUC consultation when ordering advanced diagnostic imaging services would directly target goals of improving advanced diagnostic imaging ordering patterns, our experience in recent years has demonstrated that the goals of appropriate, evidence based, coordinated care can be achieved more effectively, efficiently, and comprehensively through other CMS quality initiatives.

*Comment:* Many commenters noted that other quality and efficiency programs may have a greater impact on improving quality of care and promoting high-value care. Several commenters stated that the current AUC program does not consider patient outcomes, or other important factors related to quality, which they believe are more appropriately addressed in APMs. Additionally, one commenter stated that physicians participating in APMs are “already accountable for the quality and cost of their care, including strong incentives to reduce unnecessary utilization of costly imaging services, rendering the AUC program unnecessary.” Another commenter stated that their organization has always been concerned that implementation of the AUC program would detract from the developments of the Quality Payment Program made in the years since the AUC program was signed into law. One commenter recommended adjusting the MIPS to better serve as an incentive for use of AUC; they noted that practices and customers have difficulty gauging the benefit of AUC contribution to their MIPS credit scoring and have concerns that including AUC in their submissions could actually reduce their MIPS credits if used as an alternative.

*Response:* We thank commenters for these comments and suggestions and will keep them in consideration as we reevaluate the AUC program. As noted in the previous responses, we are finalizing our proposal to pause the AUC program for reevaluation and to rescind the regulations at § 414.94 at this time, reserving it for future use. We will continue efforts to identify a workable implementation approach and will propose to adopt any such approach through subsequent rulemaking, including implementing any amendments Congress might make

to the AUC program statutory provisions. As noted in the proposed rule, and in responses above, our experience in recent years has demonstrated that the goals of appropriate, evidence based, coordinated care can be achieved more effectively, efficiently, and comprehensively through other CMS quality initiatives. However, as discussed in the proposed rule (88 FR 52514 through 52515) in section 6. “Summary of Other Quality Initiatives”, those other programs have different authorizing statutes.

*Comment:* A few commenters commended CMS for reinforcing the beneficial role of clinical decision support tools and commended CMS for welcoming and supporting voluntary use of AUC and clinical decision support tools even as we pause efforts to implement the AUC program for reevaluation and rescind the current AUC program regulations. Several commenters wrote of their commitment to the AUC program's overarching goal of enhancing patient safety and reducing healthcare costs by curbing unnecessary imaging studies, even without the AUC program.

*Response:* We thank commenters for their support.

*Comment:* One commenter requested that CMS take steps to limit prior authorization burden for any impacted clinicians as CMS reevaluates the AUC program and designs any future quality or AUC related program. Another commenter stated that AUC is necessary for targeting prior authorization to practitioners who ordered diagnostic imaging services inconsistent with appropriate, evidence-based care to reduce the amount of “low-value” care in the traditional Medicare program.

*Response:* We thank the commenter for their suggestions and will note these concerns as we continue to reevaluate the program.

*Comment:* One commenter recommended that CMS audit the current eight priority clinical areas to assess the impact of clinical decision support on quality of care.

*Response:* We thank the commenter for their recommendation and will consider this suggestion as part of our reevaluation.

*Comment:* Several commenters expressed their willingness to provide help to CMS in its reevaluation, for example, “insights on how automated tools in the EHR can support CMS’s goals of implementing the program in a manner that does not increase provider burden.” Several commenters representing various sectors of the healthcare industry urged CMS to engage with representatives of their respective industries while reevaluating the program, including but not limited to various physician specialties, the radiology and revenue cycle communities, the EHR industry, and independent guideline authors.

*Response:* We thank commenters for their offers to assist with reevaluation and to continue to engage with CMS and provide feedback. We continue to welcome and encourage feedback and information from interested parties. While we did not propose and are not finalizing a timeframe within which implementation efforts may recommence, we will continue efforts to identify a workable implementation approach and will include stakeholder engagement as part of that process and will propose to adopt any such approach through subsequent rulemaking, including implementing any amendments Congress might make to the AUC program statutory provisions.

*Comment:* One commenter stated their primary concern with the AUC program continues to be the regulatory definition of Provider Led Entity, which they believe continues to be inconsistent with the statute and prevents independent evidence-based guideline authors from participating in the AUC program. The commenter took issue with our previous responses to this comment in past rulemaking cycles.

*Response:* As discussed in prior responses, we are finalizing our proposal to pause the program and rescind the current regulations at § 414.94, including the regulatory definition of a Provider Led Entity.

After consideration of public comments, we are finalizing our proposal to pause the AUC program for reevaluation and to rescind the regulations at § 414.94, keeping this section reserved for future use.

## K. Medicare and Medicaid Provider and Supplier Enrollment

### 1. Medicare Enrollment

#### a. Background

Section 1866(j)(1)(A) of the Act requires the Secretary to establish a process for the enrollment of providers and suppliers into the Medicare program. The overarching purpose of the enrollment process is to help confirm that providers and suppliers seeking to bill Medicare for services and items furnished to Medicare beneficiaries meet all applicable Federal and State requirements to do so. The process is, to an extent, a “gatekeeper” that prevents unqualified and potentially fraudulent individuals and entities from entering and inappropriately billing Medicare. Since 2006, we have undertaken rulemaking efforts to outline our enrollment procedures. These regulations are generally codified in 42 CFR part 424, subpart P (currently §§ 424.500 through 424.575 and hereafter occasionally referenced as subpart P). They address, among other things, requirements that providers and suppliers must meet to obtain and maintain Medicare billing privileges.

As outlined in § 424.510, one such requirement is that the provider or supplier must complete, sign, and submit to its assigned Medicare Administrative Contractor (MAC) the appropriate enrollment form, typically the Form CMS-855 (OMB Control No. 0938-0685). The Form CMS-855, which can be submitted via paper or electronically through the Internet-based Provider Enrollment, Chain, and Ownership System (PECOS) process (SORN: 09-70-0532, PECOS), collects important information about the provider or supplier. Such data includes, but is not limited to, general identifying information (for example, legal business name), licensure and/or certification data, and practice locations. The application is used for a variety of provider enrollment transactions, including the following:

- Initial enrollment – The provider or supplier is -- (1) enrolling in Medicare for the first time; (2) enrolling in another Medicare contractor's jurisdiction; or (3) seeking to enroll in Medicare after having previously been enrolled.

- Change of ownership – The provider or supplier is reporting a change in its ownership.
- Revalidation – The provider or supplier is revalidating its Medicare enrollment information in accordance with § 424.515. (Suppliers of durable medical equipment, prosthetics, orthotics, and supplies (DMEPOS) must revalidate their enrollment every 3 years; all other providers and suppliers must do so every 5 years.)
- Reactivation – The provider or supplier is seeking to reactivate its Medicare billing privileges after it was deactivated in accordance with § 424.540.
- Change of information – The provider or supplier is reporting a change in its existing enrollment information in accordance with § 424.516.

After receiving the provider’s or supplier’s initial enrollment application, CMS or the MAC reviews and confirms the information thereon and determines whether the provider or supplier meets all applicable Medicare requirements. We believe this screening process has greatly assisted CMS in executing its responsibility to prevent Medicare fraud, waste, and abuse.

As previously mentioned, over the years we have issued various final rules pertaining to provider enrollment. These rules were intended not only to clarify or strengthen certain components of the enrollment process but also to enable us to take further action against providers and suppliers: (1) engaging (or potentially engaging) in fraudulent or abusive behavior; (2) presenting a risk of harm to Medicare beneficiaries or the Medicare Trust Funds; or (3) that are otherwise unqualified to furnish Medicare services or items. Consistent with this, and as we discuss in this section III.K of this final rule, we proposed several changes to our existing Medicare provider enrollment regulations.

(We note that section III.K of this final rule also addresses a proposed change to one of our Medicaid provider enrollment provisions.)

#### b. Legal Authorities

There are two principal categories of legal authorities for our proposed Medicare provider enrollment provisions:

- Section 1866(j) of the Act furnishes specific authority regarding the enrollment process for providers and suppliers.
- Sections 1102 and 1871 of the Act provide general authority for the Secretary to prescribe regulations for the efficient administration of the Medicare program.

c. Medicare Provider Enrollment Provisions

i. Revocation and Denial Reasons and Revisions to Other Revocation Policies

(A) Revocations

Under § 424.535(a), we may revoke a Medicare provider's or supplier's enrollment for any of the reasons specified within that paragraph. (The revocation grounds are currently identified as § 424.535(a)(1) through (22), with paragraphs (a)(15) and (16) designated as reserved.) These reasons include, for instance, the provider's or supplier's: (i) failure to adhere to Medicare enrollment requirements; (ii) exclusion by the HHS Office of Inspector General (OIG); (iii) felony conviction within the previous 10 years; (iv) pattern of improper or abusive billing, prescribing of Part B or Part D drugs, or ordering/referring/certifying of Medicare services or items; and (v) termination by another Federal health care program. A revocation is designed to safeguard the Medicare program, the Trust Funds, and beneficiaries by removing (and preventing payment to) Medicare providers and suppliers that have engaged in problematic or otherwise non-compliant behavior. When a provider or supplier is revoked, they are generally barred from reenrolling in Medicare for a period of 1 to 10 years. The length of this "reenrollment bar" is predicated upon the severity of the basis of the revocation. The maximum reenrollment bar is typically restricted to egregious acts of misconduct.

We have previously finalized a number of regulations adding new revocation reasons to § 424.535(a) to address particular program integrity vulnerabilities and types of provider or supplier behavior. We have also used rulemaking to refine other policies regarding revocations,

such as the reenrollment bar and the effective dates of certain revocations. Given our continuing obligation to assess potential vulnerabilities and establish payment safeguard measures, we proposed several additions and revisions to our revocation policies in § 424.535(a).

(1) Non-Compliance Revocation Ground (§ 424.535(a)(1))

Existing § 424.535(a)(1), in part, permits revocation if the provider or supplier is determined to not be in compliance with the enrollment requirements described in subpart P or in the enrollment application applicable to its provider or supplier type. We proposed to change the language therein that reads “described in this subpart P or in the enrollment application” to “described in this title 42, or in the enrollment application ...” This is because there are enrollment requirements located outside of 42 CFR part 424, subpart P; for instance, certain enrollment requirements pertaining to opioid treatment programs are in § 424.67(b). All enrollment requirements, regardless of their placement in title 42, must be adhered to, which is why we believed the scope of § 424.535(a)(1) should be expanded.

We received the following comments on this proposal:

*Comment:* A commenter expressed support for our proposed expansion of § 424.535(a)(1).

*Response:* We appreciate the commenter’s support.

*Comment:* A commenter asked CMS to outline the enrollment provisions outside of subpart P to which this new revocation authority could apply; otherwise, the commenter stated, CMS should not finalize this proposal because commenters would not have had adequate opportunity to comment on this change.

*Response:* As noted above, the proposed rule cited as an example certain enrollment requirements pertaining to opioid treatment programs that are found in § 424.67(b). Other examples include conditions for Medicare diabetes prevention program enrollment in § 424.205 and certain enrollment requirements for home infusion therapy suppliers in § 424.68. However, as the provider community is largely familiar with the enrollment provisions outside of subpart

P, we do not believe it is necessary to list all of them aside from citing examples of the expanded applicability of § 424.535(a)(1). Each enrollment section of title 42 outside of subpart P, moreover, is denoted as applying to enrollment either in the title or the text of the section; for instance, § 424.68(c) is titled “Specific requirements for enrollment.” We hence believe that adequate notice was furnished to stakeholders regarding the scope of our proposal.

After consideration of these comments, we are finalizing this provision as proposed.

## (2) Misdemeanor Convictions

As already alluded to, a provider or supplier can be revoked under § 424.535(a)(3)(i) if the provider, supplier, or any owner, managing employee, officer, or director of the provider or supplier was, within the preceding 10 years, convicted of a Federal or State felony that CMS determines is detrimental to the best interests of the Medicare program and its beneficiaries. Section 424.535(a)(3)(ii) lists examples of such felonies, though they are not limited in scope and severity to these offenses.

Section 424.535(a)(3) does not include misdemeanor convictions, and there currently is no regulatory authority to revoke a provider or supplier based solely on a misdemeanor. We noted in the proposed rule that we have become aware of and increasingly concerned about providers and suppliers convicted of misdemeanors for conduct that could endanger the Trust Funds’ integrity and Medicare beneficiaries’ health and safety. To this end, we proposed in new § 424.535(a)(16)(i) that CMS may revoke a provider’s or supplier’s enrollment if they, or any owner, managing employee or organization, officer, or director thereof, has been convicted (as that term is defined in 42 CFR 1001.2) of a misdemeanor under Federal or State law within the previous 10 years that CMS deems detrimental to the best interests of the Medicare program and its beneficiaries. Proposed § 424.535(a)(16)(ii) stated that offenses under § 424.535(a)(16) include, but are not limited in scope or severity to, the following:

- Fraud or other criminal misconduct involving the provider’s or supplier’s participation in a Federal or State health care program or the delivery of services or items thereunder.

- Assault, battery, neglect, or abuse of a patient (including sexual offenses).
- Any other misdemeanor that places the Medicare program or its beneficiaries at immediate risk, such as a malpractice suit that results in a conviction of criminal neglect or misconduct.

We solicited comments on this proposal. We specifically sought feedback on: (1) whether there are any potential unintended consequences of our proposal that we are not considering; or (2) any guardrails we should consider so as not to create unintended impacts on persons with misdemeanor convictions.

*Comment:* We received numerous comments opposing our proposed misdemeanor revocation authority. Among the principal concerns expressed, commenters noted:

- The purview of our proposal was too broad in that it could encompass many types of misdemeanors involving comparatively modest conduct.
- Physicians with misdemeanor convictions for violating State laws restricting gender-affirming care or reproductive rights (particularly in States with near-total bans on abortion) could have their enrollments unfairly revoked.
- The provision could negatively impact equity given that some individuals with misdemeanors for minor offenses could be denied the opportunity to work in the health care field because provider organizations may be reluctant to hire them out of concern that they may be revoked.

*Response:* After reviewing the comments received, we are not finalizing proposed § 424.535(a)(16). We will nonetheless continue to monitor cases of misdemeanor convictions involving significant misconduct and may pursue future rulemaking to address them. We emphasize that many misdemeanors, especially those involving assault, battery, neglect, or abuse of a patient (including sexual offenses), can pertain to activity that remains of concern to us.

### (3) False Claims Act Civil Judgments

The False Claims Act (FCA) (31 U.S.C. §§ 3729 – 3733) is the Federal government’s principal civil remedy for addressing false or fraudulent claims for Federal funds. Section 3729(a)(1) of the FCA lists specific actions that can result in an FCA judgment against a defendant, such as knowingly presenting, or causing to be presented, a false or fraudulent claim for payment or approval.

Although the FCA’s scope is not restricted to the health care arena and applies to all types of Federal government programs, the FCA has proven effective in helping to stem Medicare fraud. However, an FCA civil judgment against a provider or supplier does not, in and of itself, impact the latter’s Medicare enrollment. Even if, for example, a provider is found to have knowingly submitted fraudulent claims and is liable for \$100,000 in damages, we have no ability to revoke the provider’s enrollment exclusively on this basis. This concerns us, for the actions identified in section 3729(a)(1) of the FCA involve serious misbehavior. We believe we must address this vulnerability to protect the Medicare program and its beneficiaries.

We accordingly proposed in § 424.535(a)(15) that we could revoke enrollment if the provider or supplier, or any owner, managing employee or organization, officer, or director thereof, has had a civil judgment under the FCA imposed against them within the previous 10 years. (Strictly for purposes of (a)(15), the term “civil judgment” would not include FCA settlement agreements. The provision would require a judgment against the provider or supplier.) Recognizing that the specific facts and circumstances of each case will differ, we proposed to consider the following factors in our decision:

- The number of provider or supplier actions that the judgment incorporates (for example, the number of false claims submitted).
- The types of provider or supplier actions involved.
- The monetary amount of the judgment.
- When the judgment occurred.

- Whether the provider or supplier has any history of final adverse actions (as that term is defined in § 424.502).
- Any other information that CMS deems relevant to its determination.

We noted that we would include FCA civil judgments against owners, managing employees and organizations, and officers and directors (as those terms are defined in § 424.502) of the provider or supplier within the scope of this revocation basis. This is consistent with our approach to several other revocation reasons in § 424.535(a) and reflects our recognition that certain owning and managing parties exercise great influence over the provider or supplier organization and its daily operations. Should such a party have an FCA civil judgment against them, this could present a program integrity risk. We therefore stated our belief that § 424.535(a)(15) should encompass such situations. However, we would consider the degree of the owning or managing party's control over the provider or supplier (for example, percentage of ownership, scope of day-to-day operational authority) as a factor in our determination.

We received the following comments on this proposal:

*Comment:* A commenter expressed support for our proposed revocation authority regarding FCA judgments.

*Response:* We appreciate the commenter's support.

*Comment:* Several commenters opposed our proposed FCA authority. They were concerned that it could: (1) harm good-faith providers and suppliers that inadvertently submitted false claims; and (2) compel providers and suppliers to settle their case -- even though the provider or supplier believes it committed no wrongdoing and wishes to contest the government's claims -- to maintain their Medicare enrollment. One commenter stated that this second scenario could impose serious financial costs on such providers and suppliers, hence diverting resources from patient care. This commenter added that if CMS nonetheless finalizes its proposal, the 10-year window should apply prospectively. This would prevent CMS from revoking enrollment for judgments that occurred many years ago when the provider or supplier

could not have accounted for Medicare enrollment in determining whether to settle or contest the case.

Response: We appreciate these comments. We first note that our authority under § 424.535(a)(15) will be purely discretionary and not mandatory. We would only take action after a careful assessment of the factors outlined in § 424.535(a)(15) and the circumstances of the case. However, we respectfully do not believe our new authority will compel providers and suppliers to settle FCA cases rather than challenge them. In our view, the provider's or supplier's decision on this matter will be based on many considerations, some of which may be more critical to the provider or supplier than Medicare enrollment. We are unaware, for example, of situations where providers and suppliers have pled guilty to a misdemeanor charge instead of contesting a felony charge out of concern that their Medicare enrollment would be revoked if convicted of a felony. We believe the same will hold true regarding § 424.535(a)(15).

Concerning the final comment, we only intend to apply § 424.535(a)(15) prospectively – that is, to FCA judgments occurring on or after the effective date of this final rule.

*Comment:* Several commenters stated that situations involving false claims already fall under: (1) CMS' existing revocation authority; or (2) OIG or DOJ authorities. Consequently, there is no need for proposed § 424.535(a)(15).

*Response:* At this time, we believe we lack explicit authority to revoke enrollment in every possible instance where a false claim is implicated. The closest authority is § 424.535(a)(8)(ii), but this requires a pattern or practice of submitting non-compliant claims and does not allow us to take action based solely on the FCA judgment itself. Had we believed we had the legal authority to revoke in all false claim situations, we would not have proposed § 424.535(a)(15). Moreover, while we partner with OIG and DOJ to protect the Medicare program and its beneficiaries, we also have an independent responsibility to do so. Consequently, we must have administrative means at our disposal to promptly act in Medicare's best interests.

*Comment:* A commenter asked CMS to explain what an FCA "settlement" is.

*Response:* We refer the commenter to the DoJ False Claims Act web link at <https://www.justice.gov/civil/false-claims-act> for information concerning FCA settlements.

After consideration of these comments, we are finalizing this proposal without modification.

#### (4) Violation of Provider and Supplier Standards

As alluded to previously, § 410.33(g) lists detailed enrollment standards that IDTFs must meet to enroll and maintain enrollment in Medicare. Likewise, § 424.57(c) identifies 30 enrollment standards that DMEPOS suppliers must meet as conditions of enrollment. These IDTF and DMEPOS standards address matters such as the maintenance of liability coverage, solicitation of patients, and customer service requirements. In addition, §§ 424.67(b) and (e), 424.68(c) and (e), and 424.205(b) and (d) contain enrollment standards and conditions for, respectively, opioid treatment programs (OTPs), home infusion therapy (HIT) suppliers, and Medicare diabetes prevention programs (MDPPs). The standards and conditions in §§ 410.33(g), 424.57(c), 424.67(b) and (e), 424.68(c) and (e), and 424.205(b) and (d) are in addition to, and not in lieu of, the more general enrollment requirements in subpart P with which IDTFs, DMEPOS suppliers, OTPs, HIT suppliers, MDPPs, and all other provider and supplier types must comply.

We proposed to add new paragraph (a)(23) to § 424.535 that would permit CMS to revoke an IDTF's, DMEPOS supplier's, OTP's, HIT supplier's, or MDPP's enrollment based on a violation of any standard or condition in, respectively, §§ 410.33(g), 424.57(c), 424.67(b) or (e), 424.68(c) or (e), or 424.205(b) or (d). No revocation reason in existing § 424.535(a) specifically references these regulatory paragraphs or violations thereof. Although we have sometimes applied a comparatively broad revocation basis in § 424.535(a)(1) to certain non-compliant IDTFs, DMEPOS suppliers, OTPs, HIT suppliers, and MDPPs (for example, an invalid practice location under § 424.535(a)(5)), we believed that a narrower approach that allows us to target violations of these standards and conditions is preferable. That is, our

proposal would more directly tie these regulatory paragraphs to § 424.535(a) by establishing a new revocation reason restricted to non-compliance with any of them.

We received the following comments on this proposal:

*Comment:* A commenter stated that proposed § 424.535(a)(23) is unnecessary because CMS can currently deactivate providers and suppliers for non-compliance.

*Response:* We respectfully disagree. As we will discuss further in this section III.K., there are varying degrees of non-compliance and some of them are substantial enough to warrant a revocation as opposed to a deactivation. In other words, the non-compliance is of a sufficiently serious nature that we believe revocation – and a consequent reenrollment bar to keep the provider or supplier out of the Medicare program for a period of time --- are needed to protect Medicare and its beneficiaries. We accordingly must retain the ability to take such action as circumstances dictate.

*Comment:* Several commenters stated that CMS should only apply § 424.535(a)(23) when the provider or supplier has a pattern of non-compliance and refuses to remedy the matter when requested to do so; one commenter explained that isolated instances of minor non-compliance can inadvertently occur.

*Response:* We respectfully do not believe a pattern or multiple acts of non-compliance should be required to invoke § 424.535(a)(23). While we acknowledge that an isolated instance of non-compliance can take place, this can nonetheless involve a serious violation of an enrollment condition or standard. We do not believe we should be compelled to wait for the provider or supplier in such cases to commit additional violations (and, in the process, potentially further threaten the Medicare program) before taking revocation action.

After reviewing the comments received, we are finalizing our proposal without modification.

(5) Scope of § 424.535(a)(17)

Under § 424.535(a)(17), we may revoke enrollment if the provider or supplier has an existing debt that CMS appropriately refers to the United States Department of Treasury. In determining whether a revocation is appropriate, we consider the six factors outlined in § 424.535(a)(17)(i) through (vi); these include, for instance, the reason for the provider's or supplier's failure to pay the debt. The purpose of § 424.535(a)(17) is to spur providers and suppliers to repay their financial obligations to Medicare. In our view, their failure to do so raises doubts as to whether the provider or supplier can be a reliable partner of the Medicare program.

We received inquiries from interested parties concerning the scope of this provision, such as whether paragraph (a)(17) applies to debts that are no longer being collected or are being appealed. We proposed to revise paragraph (a)(17) to address these issues.

First, and to help accommodate our revisions, existing § 424.535(a)(17)(i) through (vi) would be re-designated as paragraphs (a)(17)(i)(A) through (F).

Second, in new paragraph (a)(17)(ii), we proposed to exclude from paragraph (a)(17)(i)'s purview those cases where: (1) the provider's or supplier's Medicare debt has been discharged by a bankruptcy court; or (2) the administrative appeals process concerning the debt has not been exhausted or the timeline for filing such an appeal, at the appropriate appeal level, has not expired. We believed the debts in these two situations have not been finally and fully adjudicated for purposes of paragraph (a)(17)(i)'s applicability. For this reason, we believed basic fairness to the provider or supplier justifies revised paragraph (a)(17)(ii).

Third, in § 424.535(a)(17)(i) we proposed to change the term "existing debt" to "failure to repay a debt". This would allow us to potentially use our revocation authority even if collection action has ceased and the debt was ultimately terminated as a result, since the provider or supplier had still failed to repay it.

We received the following comments on our proposal:

*Comment:* Several commenters expressed concerns about our proposed terminology change in § 424.535(a)(17) to “failure to repay a debt.” The commenters stated that there are many circumstances where a debt may be “written off” that do not involve a provider’s or supplier’s intent to avoid its legal obligations under Medicare. One commenter requested that CMS clarify: (1) the circumstances under which a provider or supplier would be revoked under our proposal; and (2) the length of time that must elapse before a provider or supplier is deemed as having failed to repay the debt, including how many points of contact CMS will attempt before moving a provider or supplier into such a status.

*Response:* We appreciate these comments and address them in turn. First, we recognize that failures to repay certain debts may not involve any nefarious intent by the provider or supplier. Yet the core issue is not the provider’s or supplier’s state of mind but the repayment failure itself. As we explained at length in the proposed rule, any non-payment, whether deliberate or not, harms the Trust Funds and the taxpayers, and we must have means to address such situations, hence our change to § 424.535(a)(17). However, this change will not alter the criteria we consider in determining whether a revocation is appropriate or the care and conscientiousness with which we review the facts and circumstances of the case. Providers and suppliers should also not assume they will now be more likely to be revoked under § 424.535(a)(17). Nonetheless, we cannot outline fact patterns for which CMS will always invoke § 424.535(a)(17) due to the need to retain our flexibility to address each case on its own unique characteristics.

Regarding the latter commenter’s second request for clarification, CMS Publication 100-06, Medicare Financial Management, Chapter 4 (hereafter Chapter 4) outlines CMS procedures for recovering debts, referring unpaid debts to the Department of Treasury, and determining when debts are written-off or closed out. This includes information regarding the timeframes in which debts are placed in certain debt statuses and the steps that occur (such as demands for repayment) prior thereto. We: (1) will continue to follow these procedures upon implementation

of revised § 424.535(a)(17); and (2) encourage the commenter and other interested stakeholders to review Chapter 4 for more information regarding the operational aspects of debt collection, including the number of attempted contacts before a provider or supplier is moved into a certain status.

After reviewing the comments received, we are finalizing our proposal without modification.

#### (B) Reasons for Denial

As previously discussed, we proposed new revocation authorities in § 424.535(a)(15), (16), and (23), as well as expanded the scope of § 424.535(a)(1) to include non-compliance with any enrollment provision in title 42. Since we believed that the rationales for these revocation reasons (and our associated program integrity concerns) were equally applicable to newly enrolling providers and suppliers, we proposed corresponding denial reasons on these bases. Specifically, proposed denial reasons § 424.530(a)(16), (a)(17), and (18) involved, respectively, misdemeanor convictions, FCA judgments, and supplier standard/condition violations, with revised § 424.530(a)(1) addressing violations of enrollment provisions in title 42.

In general, the previously identified comments in section III.K.1.c.i.(A) did not distinguish between revocations and denials. The commenters' concerns were the same irrespective of whether, for example, a misdemeanor conviction resulted in a denial or revocation. For this reason, we will not repeat these comments in this section III.K.1.c.i.(B). Yet we fully considered these comments and will take the same approach for our denial reasons that we did for our revocation grounds; that is, the rationales behind our responses to those revocation-related comments are equally applicable to our proposed denial bases. We are accordingly finalizing proposed § 424.530(a)(17) and (18) (respectively, FCA judgments and supplier standard/condition violations), as well as our proposed change to § 424.530(a)(1) without modification. We are not finalizing proposed § 424.530(a)(16) concerning denials for misdemeanor convictions.

### (C) Effective Date of Revocation

Section 424.535(g) addresses revocation effective dates. It states that a revocation becomes effective 30 days after CMS or the contractor mails notice of its determination to the provider or supplier. Yet there are exceptions. If the revocation is based on a Federal exclusion or debarment, felony conviction, license suspension or revocation, or non-operational practice location, the revocation is effective with the date of exclusion or debarment, felony conviction, license suspension or revocation, or the date that CMS or its contractor determined that the provider or supplier was non-operational. The purpose of these exceptions is to prevent payment to a provider or supplier while it is out of compliance with Medicare enrollment requirements. With this overarching principle in mind, we proposed several organizational changes to and expansions of § 424.535(g).

First, we would split existing § 424.535(g) into several paragraphs. Paragraph (g)(1) would include the previously mentioned 30-day effective date policy, though with the following language at its beginning, “Except as described in paragraphs (g)(2) and (g)(3) of this section”. New paragraph (g)(2) would list the four retroactive revocation situations in existing § 424.535(g). Each situation (and its associated revocation effective date) would be incorporated into a separate paragraph to make paragraph (g)(2) clearer and more readable.

Second, paragraph (g)(2) would include the following additional situations where a retroactive effective date would be warranted:

- Revocations under proposed § 424.535(a)(16) (regarding misdemeanor convictions): the effective date would be the date of the misdemeanor conviction.
- Revocations based on a State license surrender in lieu of further disciplinary action: the effective date would be the date of the license surrender.
- Revocations based on termination from a Federal health care program other than Medicare (for example, Medicaid): the effective date would be the date of the termination.

- Revocations based on termination of a provider agreement under 42 CFR part 489: the effective date would be, as applicable to the type of provider involved, the later of the following: (1) the date of the provider agreement termination; or (2) as applicable, the date that CMS establishes under 42 CFR 489.55. (Section 489.55 permits payments beyond the provider agreement termination date in certain instances and for a certain period.)

- Revocations based on proposed § 424.535(a)(23) would be as follows:

- ++ If the standard or condition violation involved the suspension, revocation, or termination (or surrender in lieu of further disciplinary action) of the provider's or supplier's Federal or State license, certification, accreditation, or MDPP recognition, the revocation effective date would be the date of the license, certification, accreditation, or MDPP recognition suspension, revocation, termination, or surrender.

- ++ If the standard or condition violation involved a non-operational practice location (for example, an IDTF's failure to maintain a physical facility on an appropriate site per § 410.33(g)(3)), the revocation effective date would be the date the non-operational status began.

- ++ If the standard violation involved a felony conviction of an individual or entity described in § 424.67(b)(6)(i), the revocation effective date would be the date of the felony conviction.

For all other standard violations, the effective date in paragraph (g)(1) would apply if the effective date in new § 424.535(g)(3) does not. Under § 424.535(g)(3), we proposed that if the action that triggered the revocation occurred before the provider's or supplier's enrollment effective date, the revocation effective date would be the enrollment effective date that CMS assigned to the provider or supplier. The aim of § 424.535(g)(3) was to merely reiterate that we could not apply a revocation effective date that is earlier than the date the provider or supplier is enrolled.

We received the following comments on this proposal.

*Comment:* A commenter expressed support for our proposed retroactive revocation effective dates.

*Response:* We appreciate the commenter's support.

*Comment:* A commenter stated that retroactive revocations can result in the imposition of an overpayment for services that were medically reasonable and necessary and delivered in good faith. The commenter expressed concern that, given the discretionary nature of revocations, a supplier who becomes aware of a potential retroactive revocation must decide whether to: (1) stop billing Medicare (which in many cases, the commenter believed, would result in the supplier going out of business); or (2) take their chances that they will not receive a retroactive revocation notice many months in the future, which could leave the supplier with a six or seven-figure overpayment. The commenter thus requested that CMS place a cap on the overpayment period for retroactive revocations, such as a maximum 30-days after CMS became aware of the action resulting in the revocation; this policy, the commenter added, should also apply to retroactive deactivation grounds under § 424.540(b).

In support of their request, the commenter noted that under existing § 424.535(g) (and as referenced previously in section III.K of this final rule), a revocation based on a felony conviction, license suspension or revocation, or a non-operational practice location is applied retroactively. Because these three revocation grounds (like other revocation bases) are discretionary, CMS might not revoke a provider or supplier for these reasons, meaning the provider or supplier can continue to be paid. Consequently, the commenter stated, CMS cannot justify retroactive revocation and deactivation effective dates on the contention that it is unable to pay for services while a provider or supplier is non-compliant, since CMS is doing so when it elects not to impose a revocation or deactivation when it has the authority to do so.

*Response:* We respectfully do not believe an overpayment cap is warranted. Providers and suppliers must always remain compliant with Medicare enrollment requirements, and any failure to do so can result in CMS action. Merely because CMS might decline in a particular

instance to impose, for example, a revocation for non-compliance does not mean CMS should be barred from ever assessing overpayments in cases where it does apply a revocation. That is, it does not follow that CMS non-action in a potential revocation situation mandates similar non-action (and subsequent non-assessment of overpayments) in every other situation where the same revocation reason under § 424.535(a) is involved. As discussed further in section III.K.1.c.ii of this final rule, there are varying degrees of non-compliance. When we impose a revocation instead of, for instance, a deactivation or a stay of enrollment, it is generally because the conduct involved was of such significance that we believe the provider or supplier should be removed from the Medicare program. Given, accordingly, the seriousness of the provider's or supplier's action or inaction in revocation cases, we do not believe we should be prohibited from assessing overpayments to the extent we deem appropriate. It is ultimately the provider's or supplier's responsibility to: (1) maintain compliance; (2) take rapid measures to resume adherence if they fall out of compliance or suspect that they have; and (3) not engage in the applicable misconduct, such as felonious behavior. Doing so will avoid the situation the commenter describes in their first paragraph concerning physicians who believe they might be revoked.

After reviewing the comments received, we are finalizing them as proposed excluding the language in paragraph (g)(2) referencing misdemeanor convictions. We are not finalizing this paragraph because we are not finalizing § 424.535(a)(16).

#### (D) Timeframes for Reversing a Revocation Under § 424.535(e)

Section 424.535(e) states that if a revocation was due to adverse activity (sanction, exclusion, felony) by one of the parties listed in § 424.535(e) (for example, owner, managing employee, authorized or delegated official, supervising physician), the revocation can be reversed if the provider or supplier terminates and submits proof that it has terminated its business relationship with that party within 30 days of the revocation notification.

As we explained in the proposed rule, we have been concerned about this 30-day period. We do not believe a provider or supplier should be afforded so much time to terminate this

business relationship. Each day the revoked provider or supplier remains affiliated with the party in question, the more Medicare dollars that could be paid until the 30-day timeframe expires. It is the provider's or supplier's constant responsibility to ensure that its owning and managing personnel present no program integrity risks to the Medicare program. To give the provider or supplier 30 days to terminate a relationship that should have been promptly ended upon the commission of the adverse action (for example, when the owner became excluded) would be inconsistent with our obligation to protect the Trust Funds. It could also convey a false impression that maintaining affiliations with problematic parties is acceptable so long as the relationship ceases within a month of the revocation notice.

To this end, we proposed to revise § 424.535(e) to reduce the 30-day period therein to 15 days. We did not propose, for instance, a 5-day period because we recognized that it might be administratively and financially difficult to immediately terminate the business relationship in question, especially an owner's interest in the provider or supplier. Still, the reduction from 30 days to 15 days evidences our concern about making Medicare payments to providers and suppliers that have relationships with parties presenting program integrity risks.

We received the following comments on our proposal:

*Comment:* Several commenters opposed our proposed reduction from 30 days to 15 days. They stated that this is insufficient time to terminate the affiliation and submit proof thereof, especially since there could be administrative and legal processes to complete before the relationship can be severed. They noted that revocation letters can take 5 or more days to reach the provider (and even longer to reach the appropriate person within the provider organization), leaving the latter no more than 10 days to comply with § 424.535(g)'s requirements. They stated the current 30-day period should remain, adding that merely because the provider or supplier can appeal the revocation does not make the proposed reduction to 15 days more palatable. Some commenters recommended that if CMS finalizes this proposal: (1) a provider or supplier should have 15 days (business or calendar, though preferably the former) from the documented date of

receipt of the revocation letter to end the affiliation and furnish proof thereof; and (2) CMS should send all revocation notices via certified mail.

*Response:* We recognize that affected providers and suppliers will need to act expeditiously to comply with revised § 424.535(g). However, and as explained in the proposed rule and this final rule, it is imperative that providers and suppliers always take quick measures to resume compliance with enrollment requirements. The overriding concern, in our view, must be the protection of the Trust Funds from improper payments, even if this means the provider or supplier has less time to satisfy § 424.535(g)'s requirements. The longer the provider or supplier remains non-compliant, the more taxpayer monies that can be inappropriately paid; this is especially true with respect to excluded providers, suppliers, owners, etc., for we are prohibited by statute from paying for services furnished by such parties. While Days 16-30 (that is, the difference between current and proposed § 424.535(g)) may only represent two weeks of payments, many thousands of dollars could still be paid to non-compliant providers. In sum, while we understand the commenters' contentions, our foremost obligation is to safeguard the Trust Funds, and we respectfully believe this must take precedence over the inconvenience of a shorter period under proposed § 424.535(g).

In terms of the stakeholders' suggestions, we do not believe the 15-day timeframe should commence upon the provider's receipt of the revocation notice. Such a policy could amount to a reduction in existing § 424.535(g)'s timeframe from 30 days to 20 days, which would still not address to our satisfaction the need to reduce improper payments as much as possible; five extra days of payments (Days 16-20) could, again, involve thousands of dollars. We maintain our position that 15 days is the appropriate period. As for sending revocation notices via certified mail, we appreciate this suggestion and may consider it as a future enhancement to the enrollment process.

*Comment:* A commenter did not believe that retaining the 30-day period (and foregoing the proposed reduction to 15 days) substantially increases the risk to the Medicare program.

Another commenter stated that keeping the existing timeframe will support patient care by reducing the potential for unnecessary disruption.

*Response:* As previously explained, each additional day where the provider is non-compliant with enrollment requirements threatens the Medicare program due to the potentially significant volume of payments that could be made to the provider or supplier. Regarding the second comment, we do not believe our revision to § 424.535(g) will have a deleterious effect on patient care. It has been our experience that patients whose treating physicians, practitioners, and providers have been revoked were able to obtain care from other parties, and we do not foresee this changing because of a mere 15-day reduction in § 424.535(g)'s timeframe. We also note that rebuttals of deactivations under § 424.540 and payments suspensions under § 405.371 must be submitted within 15 days. Providers and suppliers have generally been able to meet this timeframe, and we believe this will be true regarding § 424.535(g) new timeframe, too.

*Comment:* A commenter asked whether the timeframe in § 424.535(g) begins on the day that the offending owner, manager, etc., was notified of the adverse action or the day when the organization with which he or she is affiliated was notified.

*Response:* The timeframe under § 424.535(g) commences on the date of the revocation notice to the organization with which the owner, manager, etc., is associated. This has long been our operational policy and is consistent with the current language in § 424.535(g) that requires provider compliance within “30 days of the revocation notification.”

*Comment:* Several commenters disagreed with our belief in the proposed rule that a 30-day period could convey the false impression that maintaining affiliates who have engaged in improper conduct is acceptable.

*Response:* We respectfully do not concur with the commenters' position. We believe that reducing the period to 15 days will expedite provider action and make clear that allowing, for example, 28 or 29 days to pass before compliance is reached (especially when it could have accomplished in 10-15 days) is inappropriate. It is critical for revoked providers under §

424.535(g) to understand that they cannot take their time in resuming compliance but must act quickly to remedy the situation.

After reviewing the comments received, we are finalizing our proposal without modification.

## ii. Stay of Enrollment

Pursuant to § 424.540, we may deactivate a provider's or supplier's Medicare billing privileges for any of the reasons specified in paragraph (a) of that section. A deactivation differs from a revocation in that the former: (1) merely involves the stoppage, rather than the termination, of the provider's or supplier's billing privileges; and (2) does not entail any reenrollment bar under § 424.535(c). The latter is a particularly important distinction, for a deactivated provider or supplier can reactivate its billing privileges by following the procedures in § 424.540(b). A deactivated provider or supplier need not wait (as a revoked provider or supplier must) for the expiration of the 1 to 10-year bar period referenced in § 424.535(c) before attempting to restore its ability to bill Medicare.

Nevertheless, we explained in the proposed rule that: (1) a deactivation can still impose burden on a provider or supplier; and (2) a middle ground between deactivation and non-action on our part is needed. In our view, we need as much flexibility as possible to take appropriate, fair, and reasonable measures that are commensurate with the degree of the provider's or supplier's non-compliance.

For these reasons, we proposed in new § 424.541 a new enrollment status labeled a "stay of enrollment." This would be a preliminary, interim status---prior to any subsequent deactivation or revocation---that would represent, in a sense, a "pause" in enrollment, during which the provider or supplier would remain enrolled in Medicare; in this vein, CMS would neither formally nor informally treat the stay as a sanction or adverse action for purposes of Medicare enrollment. We would also notify the affected provider or supplier in writing of the stay.

We proposed two prerequisites for a stay's implementation. First, the provider or supplier must be non-compliant with at least one enrollment requirement in Title 42. Second, CMS ascertains that the provider or supplier can remedy the non-compliance by submitting, as applicable to the situation, a Form CMS-855, Form CMS-20134, or Form CMS-588 change of information or revalidation application (hereafter collectively and occasionally referenced "Form CMS-855 change request," "change of information application," or similar term). This change request could involve, for instance, reporting a new street number (to illustrate, a provider's address changed from 10 Smith Street to 15 Smith Street) that the provider previously failed to disclose to CMS. We believed these two comparatively bright-line standards would clearly articulate when a stay can be implemented and the specific vehicle for remedial action.

We proposed that when a stay is imposed, the provider or supplier could not receive payment for services or items furnished during this period because the provider or supplier is non-compliant with enrollment requirements. Although we acknowledged that this denial of payment mirrors what occurs with a deactivation under § 424.540, we explained that there are critical differences between the two actions. First, § 424.541 made clear that a stay lasts no more than 60 days. A deactivation, on the other hand, has no finite timeframe, meaning that services and items may not be payable for a long period of time if the provider or supplier does not submit the required reactivation application. Second, MACs can generally process Form CMS-855 change requests more rapidly than reactivation applications. A provider or supplier subject to a stay could therefore begin receiving payments again sooner than would a deactivated provider or supplier. Third, while a reactivation application typically involves the provider's or supplier's completion of the entire Form CMS-855, a change of information application may only involve the submission of a limited amount of data (such as the information that is changing and basic identifying data). Completion of a change of information application is, in short, considerably less burdensome for providers and suppliers than completion of a reactivation application.

Indeed, the issue of burden was the core consideration behind our proposal. As previously indicated, we do not wish to have to proceed to a deactivation (much less a revocation) in all cases of non-compliance. This is especially true if CMS believes the non-adherence can be promptly corrected via the provider's or supplier's submission of updated enrollment data. We again acknowledged that payments for services and items furnished during the stay would not be covered, but we noted that this would also occur if CMS imposed a deactivation or revocation, with the important distinction that the period of non-payment would often be significantly shorter with a stay than with a deactivation and certainly a revocation. In all, we believed that our stay provision would ultimately reduce the burden on providers and suppliers that would otherwise be deactivated or revoked for non-compliance.

Notwithstanding this, we believed the affected provider or supplier should have an opportunity to raise a concern about a stay by submitting a rebuttal. The rebuttal process would generally mirror that for deactivations and payment suspensions (outlined in §§ 424.546 and 405.374, respectively), the two actions most akin to a stay. We recognized that given the comparatively short period of a stay, the stay may have expired by the time CMS makes its rebuttal determination. In addition, if the provider or supplier can quickly return to compliance, they may likely pursue this course rather than submit a rebuttal (although the provider or supplier may still do so). Yet merely because some providers and suppliers may forego submitting a rebuttal does not mean the process should be unavailable to them.

Consistent with all the foregoing, we proposed several provisions in § 424.541. In paragraph (a)(1), we proposed that CMS may stay an enrolled provider's or supplier's enrollment if the provider or supplier:

- Is non-compliant with at least one enrollment requirement in title 42; and
- Can remedy the non-compliance via the submission of, as applicable to the situation, a

Form CMS-855, Form CMS-20134, or Form CMS-588 change of information or revalidation application.

We emphasized that our authority to impose a stay would be discretionary. More specifically, our authority to apply a revocation, deactivation, or a stay lies within our discretion. Our decision as to which of these actions is most appropriate would depend upon the facts and circumstances of the case in question. We emphasize that we may impose a deactivation or revocation (if grounds exist for either) without first applying a stay; that is, a stay is not a mandatory prerequisite for a subsequent deactivation or revocation. Too, there may be situations where we impose a stay and, if the non-compliance is not addressed, we would then exercise our discretion to impose a deactivation or revocation. The effective date of the deactivation or revocation will be applied in accordance with the applicable regulations in 42 CFR part 424, subpart P, and could, depending on the specific regulatory provision involved, be retroactive to the date of the non-compliance.

In paragraphs (a)(2)(i) and (ii), respectively, we would state that during the stay period:

- The provider or supplier remains enrolled in Medicare; and
- Claims submitted by the provider or supplier with dates of service within the stay

period will be denied.

In paragraph (a)(3), we proposed that a stay would last no longer than 60 days from the postmark date of the notification letter.

In paragraph (a)(4), we proposed that CMS must notify the affected provider or supplier in writing of the stay's imposition.

In paragraph (b), we outlined our proposed rebuttal process, which, as stated, would largely align with that for deactivations and payment suspensions.

In paragraph (b)(1), we proposed that if a provider or supplier receives written notice from CMS or its contractor that the provider or supplier is subject to a stay under § 424.541, the provider or supplier has 15 calendar days from the date of the written notice to submit a rebuttal to the stay.

In paragraph (b)(2), we proposed that CMS may, at its discretion, extend the 15-day time-period referenced in paragraph (b)(1).

In paragraphs (b)(3)(i) through (iv), we proposed that the rebuttal must:

- Be in writing.
- Specify the facts or issues about which the provider or supplier disagrees with the stay's imposition and/or the effective date, and the reasons for disagreement.
- Submit all documentation the provider or supplier wants CMS to consider in its review of the stay.
- Be submitted in the form of a letter that is signed and dated by the individual supplier (if enrolled as an individual physician or non-physician practitioner), the authorized official or delegated official (as those terms are defined in § 424.502), or a legal representative (as defined in § 498.10). If the legal representative is an attorney, the attorney must include a statement that he or she has the authority to represent the provider or supplier; this statement is sufficient to constitute notice of such authority. If the legal representative is not an attorney, the provider or supplier must file with CMS written notice of the appointment of a representative; this notice of appointment must be signed and dated by, as applicable, the individual supplier, the authorized official or delegated official, or a legal representative.

In paragraph (b)(4), we proposed that the provider's or supplier's failure to submit a rebuttal that is both timely under paragraph (b)(1) of this section and fully compliant with all the requirements of paragraph (b)(3) of § 424.541 constitutes a waiver of all rebuttal rights under this section.

In paragraph (b)(5), we proposed that upon receipt of a timely and compliant stay rebuttal, CMS reviews the rebuttal to determine whether the imposition of the stay and/or the effective date thereof are correct.

In paragraph (b)(6), we proposed that a determination made under paragraph (b) is not an initial determination under § 498.3(b), and therefore not appealable.

In paragraph (b)(7), we proposed that nothing in paragraph (b) requires CMS to delay the imposition of a stay pending the completion of the review described in paragraph (b)(5).

We proposed in paragraph (b)(8) to clarify the interaction between a stay and a subsequent deactivation or revocation.

In paragraph (b)(8)(i), we proposed that nothing in paragraph (b) would require CMS to delay the imposition of a deactivation or revocation pending completion of the review described in paragraph (b)(5) of this section.

In paragraph (b)(8)(ii)(A), we proposed that if CMS deactivates the provider or supplier during the stay, any rebuttal to the stay the provider or supplier submits that meets the requirements of § 424.541 will be combined and considered with the provider's or supplier's rebuttal to the deactivation under § 424.546 if CMS has not yet made a determination on the stay rebuttal. (This is meant to facilitate efficiency and simplicity in the review process of both rebuttals.) In paragraph (b)(8)(ii)(B), however, we proposed that in all cases other than that described in paragraph (b)(8)(ii)(A), a stay rebuttal that was submitted in compliance with § 424.541 would be considered separately and independently of any review of any other rebuttal or provider enrollment appeal.

Finally, existing § 424.555(b) states that payment may not be made for Medicare services and items furnished to a Medicare beneficiary by a deactivated, denied, or revoked provider or supplier. The paragraph further states that the beneficiary has no financial liability for such services and items provided by these providers and suppliers. To clarify the issues of payment and beneficiary liability for purposes of § 424.541, we proposed to add providers and suppliers currently under a stay of enrollment to the categories of providers and suppliers falling within § 424.555(b).

We received the following comments on our proposal:

*Comment:* Several commenters supported the basic concept of a stay of enrollment in lieu of deactivating or revoking a provider or supplier for minor instances of non-compliance.

*Response:* We appreciate the commenters' support.

*Comment:* Notwithstanding the previous comments, numerous commenters opposed the prohibition against payment for services and items furnished during the stay. At a minimum, they requested that these services and items be payable retroactively; that is, once the provider or supplier has resumed compliance and the stay has been lifted, payment can be made for services and items provided during the stay. They noted that it would be unfair to deny payment – which could, more importantly, seriously harm providers' cash flow and hinder patient access to care – for inconsequential cases of non-compliance that CMS did not even deem significant enough to warrant a deactivation or revocation. Some commenters added that they saw little difference between the provider burden imposed by a stay and that by a deactivation.

*Response:* We agree with these commenters on two principal grounds. First, and above all, the central purpose of the stay proposal was to ameliorate provider burden. We believe, upon further reflection and after reviewing these comments, that this objective would be largely unmet if we applied to stays the same policy of “no retroactive payment” that we use for deactivations. Second, we stated in the proposed rule that a stay would prove less burdensome for providers than a deactivation because, for instance: (a) completion of a Form CMS-855 change of information application generally entails less provider burden (and takes less time for a MAC to process) than a reactivation application; and (b) a stay would last a maximum of 60 days whereas a deactivation lasts until the provider complies with the reactivation requirements. While (a) and (b) are true, we do not believe these burden differences are so substantial as to offset the provider burden associated with prohibiting retroactive payments. In other words, we concur with commenters who did not see an appreciable difference in burden between stays and deactivations notwithstanding (a) and (b). Another way, in our view, to materially distinguish between stays and deactivations in terms of provider impact is to permit retroactive payment in the former instance.

We acknowledge our statement in the proposed rule whereby we deemed retroactive payment prohibitions for stays to be necessary because “(t)o permit payment for these services and items [while the provider was non-compliant with enrollment requirements] would be contrary to our obligation to safeguard the Trust Funds.”<sup>415</sup> Yet, upon further consideration, we do not believe that allowing retroactive payments in stay situations would be inherently inconsistent with this statement. During the stay period, the non-compliant provider or supplier would indeed not be receiving payment for services furnished therein, as the above-quoted language indicates. Once the stay ends, these payments could be retroactively made if the requirements outlined in this final rule are met. We raise this matter because we do not want stakeholders to believe that, by permitting retroactive payments in stay cases, we are now allowing all non-complaint providers and suppliers – whether stayed, deactivated, revoked, etc. -- to receive continuous payments for services and items furnished while out of adherence. This is untrue, as evidenced by our stoppage of payments for services furnished during the stay. We emphasize that we remain fully committed to ensuring that providers remain in full and constant compliance with enrollment requirements and will take measures, such as imposing a stay, if they are not.

Considering the foregoing, proposed § 424.541 will be revised as follows:

- As proposed, paragraph (a)(2)(ii) states that during the stay period, claims submitted by the provider or supplier with dates of service within the stay period will be denied. We will change this paragraph in two principal ways.

First, the paragraph will be redesignated as paragraph (a)(2)(ii)(A), though with the insertion of the following caveat at its beginning: “Except as stated in paragraph (a)(2)(ii)(B) of this section”. We will also change “denied” to “rejected,” which we believe will make it easier for the provider or supplier to later resubmit the claims.

---

<sup>415</sup> 88 FR 52520.

Second, new paragraph (a)(2)(ii)(B) will state that these claims are eligible for payment (and may be resubmitted by the provider or supplier within applicable timeframes specified in title 42) if: (1) CMS or its contractor determines that the provider or supplier has resumed compliance with all Medicare enrollment requirements in Title 42; and (2) the stay ends on or before the 60<sup>th</sup> day of the stay period. This will clarify that retroactive payment is permissible (assuming all other requirements for payment of the claim are met) but only if the provider or supplier returned to compliance within the stay period. The purpose of this latter proviso is to spur the stayed provider or supplier to resume compliance quickly. Without this condition, the provider or supplier might indefinitely continue its non-compliance beyond the 60-day stay period because it knows it may eventually receive retroactive payments. This, in our view, is unacceptable, and we believe that providers must understand they cannot disregard their obligation to always adhere to enrollment requirements. If they wish to receive retroactive payments, they must fulfill this obligation in a timely manner.

- As indicated previously, and with respect to payment prohibitions, we proposed to add the language “if the provider or supplier is currently under a stay of enrollment” to § 424.550(b). We will add the following parenthetical to end of this language: “(except as stated in paragraph (a)(2)(ii)(B) of this chapter).” This means that payments can be made when the circumstance in paragraph (a)(2)(ii)(B) applies.

*Comment:* A commenter stated that if compliance is not reached within the 60-day stay timeframe, CMS should extend the period an additional 60 days rather than deactivate the provider or supplier.

*Response:* We respectfully disagree for two reasons. First, we believe 60 days is adequate time for a provider or supplier to remedy its non-compliance, particularly considering the relatively minor nature thereof. Second, if we were to permit a subsequent 60-day period, providers and suppliers might be less incentivized to come into compliance within the initial 60-day timeframe. In our view, it is imperative that providers and suppliers resume compliance

promptly, and we believe the commenter's recommendation, while appreciated, is contrary to this.

*Comment:* A commenter stated that the 15-day rebuttal period should be extended to 30 days because it may take 5 or more days for the stay notice to reach the provider or supplier, leaving little time to prepare and submit the rebuttal.

*Response:* We respectfully disagree. As previously noted, rebuttals of deactivations under § 424.540 and payments suspensions under § 405.371 are subject to a 15-day period, and it has been our experience that providers and suppliers have generally been able to meet this timeframe. We believe the same will occur for stay rebuttals.

*Comment:* A commenter stated that a stay should not be imposed for mere clerical or administrative errors that result in non-compliance. The commenter stated this would be overly punitive.

*Response:* While we are respectfully uncertain what the commenter considers to be simple clerical or administrative errors for enrollment purposes, we believe that any form of non-compliance is cause for concern. To permit even minor non-compliance to go unremedied could threaten the Trust Funds, and we respectfully do not believe the commenter's apparent suggestion for CMS to merely dismiss such non-adherence is a feasible solution. Yet we recognize that there are degrees of non-compliance, and it is with this in mind that we proposed the stay provision. We sought a measure that could address minor cases of non-compliance without involving a more significant action, such as a deactivation. We believe an enrollment stay, particularly given our above-mentioned change to § 424.541(a)(2)(ii), is a suitable remedy.

*Comment:* Several commenters sought clarification about the operational aspects of the stay process, including the commencement date of any stay, when the stay ends, and how providers will be notified of the stay. One commenter asked whether the stay would end on the date the contractor processes the changed information, which we interpret to mean the date on

which the contractor completes its application processing and approves the application submission.

*Response:* We appreciate these questions and address them in § 424.541 as follows:

- Commencement - Paragraph (a)(3) states that a stay lasts no longer than 60 days from the postmark date of the notification letter. The effective date is therefore the notification letter's postmark date. To clarify this point, we will add the following language at the end of paragraph (a)(3): "which is the effective date of the stay."

- End-Date of the Stay –We will clarify in paragraph (a)(5) that the stay's end-date will be the date on which CMS or the contractor determines that the provider or supplier has resumed compliance with all Medicare enrollment requirements in Title 42 or the day after the 60-day stay period expires, whichever occurs first. We believe this is consistent with our aforementioned change concerning paragraph (a)(2)(ii)(B).

- Notification of the Stay – Per paragraph (a)(4), CMS notifies the affected provider or supplier in writing of the stay's imposition.

Other operational matters of the stay process will be addressed via, as appropriate, subregulatory guidance or future rulemaking.

*Comment:* A commenter stated that CMS should outline the types of conduct that would result in (1) a deactivation, (2) a stay of enrollment, or (3) no CMS action at all. The commenter expressed concern that a stay could be a more punitive option in situations where CMS previously would not have taken any action against the provider or supplier.

*Response:* We are unable in this final rule or in subregulatory guidance to provide further detail about the forms of non-compliance that fall within these three categories for two principal reasons. First, there are many types of non-compliance involving many different regulatory requirements and data elements. To list them all is not feasible. Second, we cannot publicly commit ourselves to a specific course of action in these cases because there could be different facts and circumstances associated with each situation. We must always retain the flexibility to

address them on an individual basis. As for the stakeholder's remaining comment, the stay provision is not primarily intended to now penalize providers for matters that previously would not have involved CMS action. It is instead to reduce the severity of CMS action for minor cases of non-compliance that would ordinarily have triggered a deactivation. In other words, the goal is to reduce the level of burden rather than create new, harsher penalties for certain actions.

*Comment:* A commenter asked CMS to explain the resources it will dedicate to the MACs to ensure that: (1) they will expedite the processing of "stay of enrollment" changes of information; and (2) such applications will indeed be processed within 60 days. The commenter also appeared to ask whether CMS will explicitly direct MACs to process these applications within the stay period. The commenter stated that if the MAC does not timely process the change, the provider or supplier should not be penalized with deactivation. The commenter also expressed concern that the 60-day stay period may not be sufficient time for: (1) the MACs and providers to resolve complex issues; and (2) the rebuttal process to be completed.

*Response:* We will work very closely with the MACs regarding the implementation of this final rule's stay provisions and will issue detailed subregulatory guidance to them. We are confident the MACs will: (1) be able to process these Form CMS-855 applications within the stay period; and (2) have the resources to do so. We will also establish timeliness standards that MACs must meet when processing applications submitted pursuant to a stay.

We cannot commit in this final rule to never impose a subsequent deactivation if the application is not timely processed; this is because of the variety of factual scenarios that can arise. Yet we understand the commenter's concern regarding cases where the 60-day period expires without a contractor decision, and we will account for such circumstances in determining whether to proceed with a deactivation or revocation.

We also acknowledge the commenter's remaining concern that the 60-day period may be too brief to resolve all potential issues. However, we reiterate that the provider or supplier is out of compliance with enrollment requirements during this time, and it is imperative that providers

and suppliers act rapidly to resume adherence. We believe 60 days appropriately balances the need for the latter while giving providers and suppliers adequate time to do so.

After reviewing the comments received, we are finalizing our stay provisions in § 424.541 as proposed except for the previously noted.

- Modification to paragraph (a)(2)(ii);
- Addition of new paragraph (a)(5); and
- Addition of the parenthetical “(except as stated in § 424.541(a)(2)(ii)(B) of this chapter)” to the end of the first sentence of § 424.550(b).

### iii. Reporting Changes in Practice Location

Consistent with §§ 424.57(c)(2), 410.33(g)(2), and 424.516(d)(1)(iii), respectively, the following provider and supplier types must report a change in practice location within 30 days of the change: (1) DMEPOS suppliers; (2) IDTFs; and (3) physicians, nonphysician practitioners, and physician and nonphysician practitioner organizations. All other provider and supplier types are required per § 424.516(e)(2) to report practice location changes within 90 days of the change. We proposed two sets of regulatory revisions regarding practice location changes. First, we proposed to revise § 424.516(e)(1) to require such location changes involving providers and suppliers other than the categories previously described to be reported within 30 days of the change. Second, we proposed to clarify in §§ 410.33(g)(2), 424.516(d)(1)(iii), and 424.516(e)(1) that a change of practice location includes adding a new location or deleting an existing one.

There were two main reasons for our proposals. One is that Medicare payments are often based on the provider’s or supplier’s specific geographic location. If we are not timely informed of the change in location, we could be making incorrect payments to the provider or supplier for an extended period (for instance, 90 days); this would be inconsistent with CMS’s obligation to protect the Trust Funds. The other reason is that we would be unable to promptly determine whether the new site is compliant with Medicare provider enrollment requirements (for example,

via a site visit) because we would not yet know of the change. The provider or supplier may be furnishing services from an invalid location, hence resulting in improper payments.

We also noted that for purposes of reporting practice location changes, we have always included additions and deletions of locations within the scope of such changes. We sought to reemphasize this interpretation via our proposed revisions.

We received the following comments on our proposal:

*Comment:* A commenter stated that the list of providers and suppliers in § 424.516 that are subject to the 30- or 90-day reporting timelines is not exhaustive, which could create confusion among providers outside these categories (particularly pharmacies enrolled as DMEPOS suppliers). The commenter recommended that CMS elucidate which timeframes are applicable to providers and suppliers that are enrolled as multiple provider or supplier types (for example, pharmacy and DMEPOS).

*Response:* All provider and supplier types are addressed in § 424.516. Those types not explicitly referenced (such as home health agencies (HHAs), community mental health centers, etc.) fall within § 424.516(e). The applicable timeframe category is determined by the provider or supplier type involved. For instance, suppose an entity is enrolled as an HHA and an IDTF. The timeframes in §§ 424.516(b) and 410.33(g)(2) apply to the IDTF enrollment and those in § 424.516(e) to the HHA enrollment. Using the commenter's example, since the pharmacy is enrolled as a DMEPOS supplier, the applicable reporting timeframes are those for DMEPOS suppliers (addressed in §§ 424.516(c) and 424.57(c)(2)).

*Comment:* A commenter stated that our practice location reporting proposal should be coordinated with the DEA's telehealth requirements to avoid subjecting suppliers to conflicting standards.

*Response:* While we appreciate this comment, we are respectfully uncertain as to the specific DEA standard to which the commenter is referring. We further note that we must adopt policies that are best-suited to protect the Medicare program.

*Comment:* Several commenters opposed our practice location reporting proposal, stating that the existing burden and difficulty in meeting timeframes for reporting changes in enrollment data would be exacerbated if all practice location changes must be disclosed within 30 days.

*Response:* We note that over 2 million currently enrolled physicians and non-physicians are required under § 424.516(d)(1)(iii) (as are over 60,000 enrolled DMEPOS suppliers per § 424.57(c)(2)) to report practice location changes within 30 days. This requirement has been effective for over a decade, and we are unaware of any significant, wide-ranging challenges these supplier types have encountered in meeting the timeframe. We accordingly and respectfully do not believe that providers and suppliers that must now report practice location changes within 30 days will have great difficulty doing so.

*Comment:* A commenter asked: (1) how providers should report required changes of information when the contractor is currently processing a pending application from the provider; and (2) whether a provider can report a change of information 30 days prior to the change becoming effective.

*Response:* Providers and suppliers must report changes of information within required timeframes irrespective of whether the contractor is processing a pending application. They are welcome to submit such changes prior to the change's effective date.

After reviewing the comments received, we are finalizing our proposal without modification.

#### iv. Definitions

We also proposed several new and clarified definitions to help explain the meaning of certain provider enrollment concepts.

##### (A) "Pattern or Practice"

The following current Medicare enrollment revocation reasons are based upon the provider or supplier engaging in a pattern or practice of conduct:

- Section 424.535(a)(8)(ii): The provider or supplier has a pattern or practice of submitting claims that fail to meet Medicare requirements.
- Section 424.535(a)(14): The physician or eligible professional has a pattern or practice of prescribing Part B or D drugs that is abusive, represents a threat to the health and safety of Medicare beneficiaries, or fails to meet Medicare requirements.
- Section 424.535(a)(21): The physician or eligible professional has a pattern or practice of ordering, certifying, referring, or prescribing Medicare Part A or B services, items, or drugs that is abusive, represents a threat to the health and safety of Medicare beneficiaries, or otherwise fails to meet Medicare requirements.

We have received questions from interested parties over the years as to what constitutes a pattern or practice under these provisions. Accordingly, we proposed to define “pattern or practice” in § 424.502. It would mean:

- For purposes of § 424.535(a)(8)(ii), at least three submitted non-compliant claims.
- For purposes of § 424.535(a)(14), at least three prescriptions of Part B or Part D drugs that are abusive, represent a threat to the health and safety of Medicare beneficiaries, or otherwise fail to meet Medicare requirements.
- For purposes of § 424.535(a)(21), at least three orders, certifications, referrals, or prescriptions of Medicare Part A or B services, items, or drugs that are abusive, represent a threat to the health and safety of Medicare beneficiaries, or otherwise fail to meet Medicare requirements.

To accommodate our definition, we also proposed to make several minor technical changes to § 424.535(a)(8)(ii), (14), and (21).

We received several comments on our proposed “pattern or practice” definition.

*Comment:* Some commenters opposed the definition. They noted that the threshold of three non-compliant claims, orders, etc. (1) is too low, (2) cannot adequately establish a pattern or practice of intentional or harmful behavior, and (3) could be arbitrarily applied by CMS. One

commenter stated that the term “pattern or practice” is typically understood to require more than three instances and means activity done in a systematic way. The commenter stated that our proposed definition is inconsistent with this standard meaning.

*Response:* After reviewing the comments received, we are not finalizing our proposed definition of “pattern or practice” or the corresponding technical revisions to §424.535(a)(8)(ii), (14), and (21). We may reconsider this issue for future rulemaking.

#### (B) Indirect Ownership

We also proposed to define “indirect ownership interest” in § 424.502. Some interested parties have expressed uncertainty about what indirect ownership is. An understanding of indirect ownership is important for providers and suppliers because they are required to report on their enrollment application all their 5 percent or greater indirect owners. Section 420.201 defines an “indirect ownership interest” as “any ownership interest in an entity that has an ownership interest in the disclosing entity. The term includes an ownership interest in any entity that has an indirect ownership interest in the disclosing entity.” We believed this definition (albeit with certain modifications for purposes of clarity and to conform to the terminology of subpart P) would provide the desired elucidation. Consequently, our proposed definition of “indirect ownership interest” would state:

- Any ownership interest in an entity that has an ownership interest in the enrolling or enrolled provider or supplier.
- Any ownership interest in an indirect owner of the enrolling or enrolled provider or supplier.

We proposed to designate this portion of our definition as paragraphs (1)(i) and (ii). To further elucidate the concept of indirect ownership, we proposed in paragraph (2) to mirror an example contained in § 420.202(a). Paragraph (2) would state: “The amount of indirect ownership interest is determined by multiplying the percentages of ownership in each entity. For example, if A owns 10 percent of the stock in a corporation that owns 80 percent of the provider

or supplier, A's interest equates to an 8 percent indirect ownership interest in the provider or supplier and must be reported on the enrollment application. Conversely, if B owns 80 percent of the stock of a corporation that owns 5 percent of the stock of the provider or supplier, B's interest equates to a 4 percent indirect ownership entity in the provider or supplier and need not be reported.”

We received the following comment on our proposal to define “indirect ownership” in § 424.502.

*Comment:* A commenter supported our proposed definition.

*Response:* We appreciate the commenter’s support.

After reviewing the comment received, we are finalizing our proposed definition of “indirect ownership” without modification.

#### (C) PTs and OTs in Private Practice and Speech-Language Pathologists

Physical therapists in private practice (PTPPs), occupational therapists in private practice (OTPPs), and speech-language pathologists (SLPs) are permitted under the Act to receive payment for furnished Medicare services. However, they do not fall within the regulatory definition of “supplier” under § 400.202. The reason is that while the services they provide are payable under Medicare (thus allowing these individuals to enroll in the program), PTPPs, OTPPs, and SLPs are not formally recognized in either the Act or the CFR as types of “suppliers.” Nevertheless, we have applied the provisions of subpart P to PTPPs, OTPPs, and SLPs via current guidance. We have also afforded PTPPs, OTPPs, and SLPs the same appeal rights (for example, appeals of enrollment denials and revocations) as all other enrolling or enrolled individuals and entities. To codify these practices in the CFR, we proposed several regulatory provisions.

First, we proposed to define “supplier” in § 424.502 as follows: “Supplier means, for purposes of this subpart, all of the following: (1) the individuals and entities that qualify as suppliers under § 400.202; (2) physical therapists in private practice; (3) occupational therapists

in private practice; and (4) speech-language pathologists.” Second, we included within new § 405.800(d) the same definition of “supplier” we proposed in § 424.502. This is because subpart H of part 405 addresses various types of provider enrollment appeals under Medicare Part B. Third, 42 CFR part 498, too, contains various provisions concerning provider enrollment appeals. Section 498.2 defines “supplier” for purposes of part 498 by outlining several categories of suppliers. One such category, codified in paragraph (6) of this definition, reads, “Physical therapist in independent practice.” We proposed to revise paragraph (6) to state: “For purposes of this part, physical therapist in private practice, occupational therapist in private practice, or speech-language pathologist.”

We received the following comment on this proposal:

*Comment:* A commenter supported our proposed inclusion of PTPPs, OTPPs, and SLPs within § 498.2, as well as our proposed definition of supplier in § 424.502.

*Response:* We appreciate the commenter’s support.

After reviewing this comment, we are finalizing these proposals without modification.

#### (D) Authorized Officials

Under § 424.510(d)(3), an authorized official or delegated official must sign the Medicare enrollment application (for example, Form CMS-855A) on behalf of the provider or supplier if the latter is a corporation, partnership, group, limited liability company, or other organization. The terms authorized official and delegated official are defined in § 424.502. The former is “an appointed official (for example, chief executive officer, chief financial officer, general partner, chairman of the board, or direct owner) to whom the organization has granted the legal authority to enroll it in the Medicare program, to make changes or updates to the organization's status in the Medicare program, and to commit the organization to fully abide by the statutes, regulations, and program instructions of the Medicare program.” A delegated official is defined as an individual “who is delegated by the ‘Authorized Official’ the authority to report changes and updates to the enrollment record. The delegated official must be an individual

with ownership or control interest in, or be a W-2 managing employee of, the provider or supplier.”

With respect to the authorized official definition, interested parties have asked CMS whether the term “organization” as used therein means: (1) the entity listed in Section 2 of the Form CMS-855 as identified by its legal business name (LBN) and tax identification number (TIN); or (2) the provider or supplier type that is enrolling. To illustrate, suppose Entity A (with its unique LBN and TIN) submits three separate Form CMS-855A initial enrollment applications to enroll an HHA, a hospice, and a skilled nursing facility (SNF), all of which have Entity A’s LBN and TIN. In this type of situation, the question is whether “organization” refers to Entity A or instead to three separate ones – that is, the HHA, hospice, and the SNF.

We proposed to add a sentence to the conclusion of the “authorized official” definition clarifying that the term “organization” therein --- and exclusively for purposes of applying the “authorized official” definition -- means the enrolling entity as identified by its LBN and TIN and not the provider or supplier type(s) that the entity is enrolling as. Using our previous illustration, this is because the HHA, hospice, and the SNF are not legal entities (such as corporations) separate and distinct from Entity A but are, in effect, part of Entity A itself; Entity A, in other words, is enrolling as an HHA, hospice, and SNF. In practical terms, this means an authorized official serves in that role on behalf of the enrolling entity (Entity A). Per our example, the individual could sign CMS provider enrollment applications concerning the HHA, hospice, and the SNF.

We received no comments on our proposed change and are therefore finalizing it without modification.

## 2. Medicaid and CHIP Enrollment

### a. Background

The Medicaid program (title XIX of the Act) is a joint Federal and State health care program that, as of June 2023, covers more than 85 million low-income individuals. States have

considerable flexibility with respect to the design of their Medicaid programs within a broad Federal framework, and programs vary from State to State. The Children's Health Insurance Program (CHIP) (Title XXI of the Act) is a joint Federal and State health care program that (as of June 2023) provides health care coverage to nearly 7 million children in families with incomes too high to qualify for Medicaid, but too low to afford private coverage.

In operating Medicaid and CHIP, and as required by sections 1902(a)(78) and 2107(e)(1)(D) of the Act, respectively, each State requires providers to enroll if the providers wish to furnish, order, prescribe, refer, or certify eligibility for Medicaid or CHIP items or services in that State.<sup>416</sup> States may also establish their own provider enrollment requirements which must be met in addition to the applicable Federal provider enrollment requirements, outlined in 42 CFR part 455. Similar to Medicare provider enrollment, the purpose of the Medicaid and CHIP provider enrollment processes is to ensure that providers: (1) meet all Medicaid or CHIP requirements (and any other State-specific or Federal requirements); (2) are qualified to furnish, order, prescribe, refer, or certify Medicaid and CHIP services, items, and drugs; and (3) are eligible to receive payment, where applicable.

The provider enrollment provisions in part 455 to which States must adhere include requirements relating to denial or termination of enrollment. Under § 455.416, the State must deny or terminate a provider's Medicaid or CHIP enrollment for reasons specified therein.

These include, for example:

- Any person with a 5 percent or greater direct or indirect ownership interest in the provider fails to: (1) submit timely and accurate information; and (2) cooperate with any screening methods required under part 455, subpart E.

---

<sup>416</sup> Section 1902(kk)(7) also requires physicians and other eligible professionals who order or refer Medicaid services and items to be enrolled in Medicaid. This requirement is made applicable to CHIP via section 2107(e)(1)(G) of the Act.

- Any person with a 5 percent or greater direct or indirect ownership interest in the provider has been convicted of a criminal offense related to that person's involvement with Medicare, Medicaid, or CHIP in the last 10 years.

Of particular relevance to this rulemaking is that, under section 1902(a)(39) of the Act and § 455.416(c), the State must deny or terminate the provider's enrollment if the provider is terminated under the Medicare program, or the Medicaid program or CHIP of any other State.

b. The 21<sup>st</sup> Century Cures Act's Medicaid and CHIP Provider Enrollment Requirements

Section 5005 of the 21<sup>st</sup> Century Cures Act (Pub. L. 114-255; hereafter referred to as the Cures Act) addresses, in part, Medicaid and CHIP provider enrollment and provider terminations. For purposes of our proposals discussed in section of this final rule, section 5005's most pertinent provisions are:

- Section 5005(a)(1) of the Cures Act added a new paragraph (8) to section 1902(kk) of the Act requiring the State to report the termination of a provider under Medicaid or CHIP to the Secretary within 30 days after the effective date of the termination. Section 5005(a)(1) of the Cures Act also outlines data that must be included in the termination notification that the State sends to CMS. However, paragraph (8)(A) limits this reporting requirement to terminations for reasons specified in § 455.101 as in effect on November 1, 2015, which are limited to terminations "for cause" (including, but not limited to, terminations for reasons relating to fraud, integrity, or quality). Paragraph (8)(B) provides that, for purposes of the reporting requirement, the effective date of a Medicaid termination is the later of: (1) the effective date specified in the notice of termination; or (2) the date on which applicable appeal rights have been exhausted or the timeline for appeal has expired.

- Section 5005(a)(3) of the Cures Act added a new paragraph (ll) to section 1902 of the Act stating that within 30 days of receiving notification of a Medicaid or CHIP provider termination, the Secretary shall review such termination and, if the Secretary determines

appropriate, include such termination in any database or similar system developed under section 6401(b)(2) of the Affordable Care Act.

- Section 5005(a)(4)(A) of the Cures Act added a new paragraph (D) to section 1903(i)(2) of the Act providing that, except for emergency items or services (but not including items or services furnished in a hospital emergency department), no Federal financial participation (FFP) funds may be paid for items and services furnished by a provider terminated under Medicaid or CHIP (as described in section 1902(kk)(8)) beginning 60 days after the date the termination is included in the termination database.

We have issued extensive subregulatory guidance to assist States in implementing Medicaid and CHIP screening and enrollment provisions outlined in 42 CFR part 455. This guidance is compiled in a document titled “Medicaid Provider Enrollment Compendium” (MPEC) (<https://www.medicaid.gov/sites/default/files/2021-05/mpec-3222021.pdf>), originally issued in May 2016 and subsequently updated several times. After the enactment of the Cures Act, CMS again updated the MPEC to clarify the operational details concerning several of the statutory provisions amended by section 5005.

Under CMS’ existing process (under the statute and MPEC guidance), when a State reports a “for cause” termination, CMS determines whether: (1) the State submitted the required termination data in accordance with section 1902(kk)(8) of the Act; and (2) the termination is, indeed, “for cause.” If CMS concludes that the reported termination is “for cause” and is thus appropriate to be included in the database referenced in section 1902(ll) of the Act, the information is uploaded into a CMS-managed database. This database contains information on Medicaid and CHIP terminations and Medicare revocations, the latter of which is updated at least monthly. The database enables a State to review Medicaid and CHIP terminations in other States, as well as Medicare revocations, and, under § 455.41(c), to deny enrollment or take its own termination action against a provider if the latter is also enrolled in the State. Moreover, the database gives CMS access to information on Medicaid and CHIP provider terminations

nationwide, which permits us to take a Medicare revocation action against the provider under § 424.535(a)(12)(i), if appropriate, based on the Medicaid or CHIP termination.

c. Proposed Provisions

i. Termination Lengths - Background

There are two termination database-related matters that have generated uncertainty during our implementation of the § 455.416(c) termination requirement. They involve: (1) the length of time for which a termination remains active in the termination database; and (2) the interaction of different termination periods imposed by the States and/or the Medicare program.

Under § 424.535(c), if a Medicare provider or supplier is revoked from Medicare, they are barred from participating in the Medicare program from the effective date of the revocation until the end of the reenrollment bar, which, under existing § 424.535(c), is generally for a period of 1 to 10 years. This 1- to 10-year period typically constitutes: (1) the period for which the provider or supplier is revoked from Medicare; and (2) the amount of time that the Medicare revocation will remain in the termination database.

Many States have similar reenrollment bars for terminated Medicaid and CHIP providers. (Hereafter, and for purposes of consistency, the terms “termination period” and “reenrollment bar” as used in this section III.K.2 of this final rule, refer to a Medicaid or CHIP reenrollment bar, unless otherwise noted.) Yet these termination periods often differ among the States. For instance, State A may terminate a provider for 3 years for a particular transgression while State B might do so for 10 years for the same conduct. As noted in the proposed rule, we recognize the traditional deference given to States regarding the establishment of reenrollment bars. However, the interplay between varying termination period lengths (especially as they relate to the termination database and the termination requirement in § 455.416(c)) has caused confusion among the States, provider communities, and other interested parties. Accordingly, we proposed to specify in regulation the length of time for which “for cause” provider terminations will

remain in the database and, by extension, the period for which other States must deny or terminate the provider under § 455.416(c).

ii. Revision to § 455.416(c)

We proposed to add the following clause to the end of § 455.416(c): “and is currently included in the termination database under § 455.417.” This would clarify that the denial and termination requirement under § 455.416(c) is predicated on the provider’s inclusion in the termination database.

iii. Length of Inclusion in Database (§ 455.417)

For the reasons outlined above and in the proposed rule, we proposed several provisions in new § 455.417 as follows:

- In paragraph (a)(1), we proposed that a provider would remain in the termination database referenced in section 1902(l) of the Act for a period that is the lesser of:

- ++ The length of the termination period imposed by the initially terminating State Medicaid program or CHIP, or the reenrollment bar imposed by the Medicare /program; or
- ++ 10 years (for those Medicaid or CHIP terminations that are greater than 10 years).

- Under proposed paragraph (a)(2,) all other State Medicaid programs or CHIPs in which the provider is enrolled or seeking to enroll would be required to terminate or deny the provider’s enrollment from their respective programs (under § 455.416(c)) for at least the same length of time as the termination database period).

- In paragraphs (b)(1)(i) and (ii), respectively, we proposed that nothing in paragraph (a) would prohibit:

- ++ The initially terminating State from imposing a termination period of greater than 10 years consistent with that State’s laws, or

- ++ Another State from terminating the provider, based on the original State’s termination, for a period: (A) of greater than 10 years; or (B) that is otherwise longer than that imposed by the initially terminating State.

In paragraph (b)(2), however, we proposed to clarify that the period established under paragraph (b)(1)(ii) must be no shorter than the period in which the provider is to be included in the termination database under paragraph (a).

In paragraph (c)(1), we proposed that if the initially terminating State agency or the Medicare program reinstates the provider prior to the end of the termination period originally imposed by the initially terminating State program or Medicare, CMS would remove the provider from the termination database after the reinstatement has been reported to CMS.

In paragraph (c)(2), we proposed that if the provider is removed from the database due to reinstatement by the originally terminating State agency, nothing prohibits CMS from immediately re-including the provider in the database if a separate basis for doing so exists under 42 CFR part 455 or 424.

In paragraph (d), we proposed that, for purposes of § 455.417 only, terminations under § 455.416(c) (which, as previously discussed, are based on another State's termination of the provider) are not themselves considered "for cause" terminations, and therefore, need not be separately reported to CMS for inclusion in the termination database.

We received the following comments on our termination database proposal:

*Comment:* Several commenters supported our termination database provisions, believing that they would furnish needed elucidation.

*Response:* We appreciate the commenters' support.

After reviewing the comments received, we are finalizing our termination database proposals without modification.

### 3. Miscellaneous Comments

We also received the following miscellaneous comments concerning our proposals, as well as on provider enrollment in general.

*Comment:* Several commenters asked us to: (1) provide detailed public guidance for providers and suppliers regarding our new revocation reasons and how they will affect providers

and suppliers; and (2) monitor the impact of our revocation policies on providers' and suppliers' workforces.

*Response:* As we typically do upon issuing new provider enrollment regulatory provisions, we will: (1) release subregulatory guidance to stakeholders explaining our new requirements and the provider activity involved; and (2) keep abreast of any impacts these provisions may have on the provider community.

*Comment:* A commenter stated that in proposing our enrollment provisions, we failed to justify why our existing regulatory authority is insufficient to protect program integrity. The commenter urged CMS to engage with the provider community via town hall discussions, requests for comments, and other modes of dialogue before initiating what the commenter believed was a sweeping expansion of administrative authority. Another commenter recommended that CMS not finalize its enrollment proposals and instead obtain feedback from stakeholders (including via conferences with provider groups and State medical boards, as well as requests for information (RFI) published in the **Federal Register**) to better understand the proposals' potential consequences, including with respect to patient care.

*Response:* We respectfully disagree that we did not sufficiently justify our proposals or the need for them. We detailed in the proposed rule the reasons for our provisions and the gaps in our current authority that we were attempting to close. For instance, we explained why an across-the-board 30-day practice location reporting period was critical, how the current 90-day period for some provider types can leave CMS without accurate practice location information for months, and the program integrity risks this posed. Insofar as public consultation, CMS regularly communicates with stakeholders, such as provider organizations, on provider enrollment issues, including at conferences, chatrooms, etc., and solicits recommendations on means of improving the provider enrollment process and addressing important payment safeguard issues. Part of this also involves the notice-and-comment process in rulemaking, wherein we receive valuable observations and suggestions from interested parties, such as

occurred with our enrollment proposals in this rule. We believe the comments we received helped us make informed decisions regarding our provisions, which, except as otherwise noted, we are finalizing as proposed.

*Comment:* Several commenters stated that CMS should: (1) revoke providers and suppliers only for severe infractions involving clear potential harm to Medicare beneficiaries or financial malfeasance and not for minor errors unrelated to patient care; (2) outline the criteria it will use when determining whether to revoke and explain when providers and suppliers can anticipate a revocation, including the degree of improper conduct necessary for such an action; (3) always give providers and suppliers an opportunity to correct any errors and to present their side before revocation; (4) ensure that all providers and suppliers are treated equally when considering whether revocation is necessary; (5) clarify the expertise of the personnel making such determinations; and (6) recognize and ameliorate the impact that revocations (include those we are finalizing) can have on longstanding physician-patient relationships and beneficiary access to care. Regarding the fourth recommendation, a commenter requested that CMS explicitly confirm that it will adopt this approach.

*Response:* In reviewing some of these comments, it was unclear whether the stakeholders were referring only to our proposed revocation reasons or to all revocation grounds under § 424.535(a). To ensure that these comments are fully addressed, our responses will jointly pertain to our existing revocation bases and those we are finalizing in this rule.

We are very cognizant of the impact a revocation can have on providers and suppliers. We do not take this decision without a careful and thorough analysis of the facts and circumstances of the case. For many revocations, we also diligently consider specific factors outlined in regulation. Revocation is always the least desired step for CMS in addressing a particular provider enrollment situation. But it is sometimes the necessary one if circumstances warrant. As already explained in this final rule, our primary obligation is to safeguard the Medicare program and its beneficiaries, and revocation action may occasionally be required to

facilitate this goal. It is not possible for us in this rule, as the commenters appeared to request, to: (1) articulate every type of conduct that will automatically result in a revocation; or (2) establish a minimum threshold or bright-line test regarding the severity of behavior or impact on Medicare (or beneficiary care) that is required for revocation action. While we always ensure that providers are treated fairly and consistently in our reviews, which (in response to the commenter's fifth issue) are conducted by experienced enrollment personnel, every case is and must be considered on its own unique facts. Nevertheless, CMS typically does not revoke providers for modest errors but instead may deactivate the provider or, per this final rule, impose a stay of enrollment.

Concerning the request for an opportunity to correct or for a hearing before any revocation is imposed, we reiterate that we generally take revocation action only when the non-compliance or conduct is of a sufficiently significant nature that we must move quickly to protect the (1) Trust Funds and (2) Medicare beneficiaries. The longer we wait to act (such as via a pre-revocation hearing), the greater the threat to both. Moreover, if we were to furnish corrective opportunities and hearings before each revocation, providers and suppliers would have little incentive to consistently adhere to enrollment requirements because they would know they could avoid revocation by waiting until the pre-revocation period to remedy the problem. It would, in our view, negate the provider's or supplier's obligation to always remain compliant with our requirements.

*Comment:* A commenter stated that the "any other information that CMS deems relevant to its determination" criterion CMS uses in some of its denial and revocation determinations (including in its FCA proposal) should include mitigating factors (for example, efforts the provider took to address the concern, cooperation in the investigation, etc.)

*Response:* CMS always considers mitigating factors under this criterion in its denial and revocation determinations and will continue to do so.

*Comment:* Several commenters stated that our proposals, such as the revision to § 424.535(g), give CMS the opportunity to eliminate the use of standard mail when communicating with providers and instead adopt more reliable and cost-efficient means of communication, such as electronic delivery, PECOS, or certified mail. The commenters believed this would help providers and suppliers meet strict timeframes for responding to CMS requests for information.

*Response:* We appreciate this comment but believe it is outside the scope of this final rule.

*Comment:* A commenter expressed concern about the 10-year maximum length of the reenrollment bar, stating that: (1) this period is longer than most OIG exclusions and has the same effect as an exclusion; and (2) there is no published guidance as to how CMS determines the length of a reenrollment bar (that is, how it ascertains the severity of the conduct resulting in the revocation).

*Response:* We believe this comment is outside the scope of this final rule.

*Comment:* A commenter stated that CMS' original justification for not extending appeal rights to deactivations --- that a deactivation carried no payment consequences and thus no appeal rights were warranted -- is invalid because § 424.540(e) states that a provider or supplier may not receive payment while deactivated.

*Response:* We believe this comment is outside the scope of this final rule.

*Comment:* A commenter contended that there should be an expedited right of judicial review (we assume the commenter was referring to enrollment revocations and denials) as exists in the Medicare claims and the Provider Reimbursement Review Board processes. The commenter stated that a provider or supplier seeking to raise a constitutional or regulatory procedural or arbitrary and capricious challenge currently must go through several years of the enrollment appeals process before being able to present such challenge in court. The commenter

added that notice-and-comment procedures are not required to implement a procedural rule such as an expedited appeals process.

*Response:* We believe this comment is outside the scope of this final rule.

*Comment:* A commenter stated that CMS should eliminate gaps in payment stemming from provider enrollment actions, particularly with respect to deactivations. The commenter stated that the definition of “deactivate” in § 424.502 states that a provider’s or supplier’s billing privileges can be “restored” (which, the commenter contended, means to be put back in the original state) and that CMS, at one time, did not have payment gaps for deactivations. Eliminating such gaps would be consistent with both the definition of deactivate, as well as previous CMS policy.

*Response:* We believe this comment is outside the scope of this final rule.

## L. Expand Diabetes Screening and Diabetes Definitions

In the CY 2024 PFS proposed rule (88 FR 52262), we proposed to: (1) expand coverage of diabetes screening tests to include the Hemoglobin A1C test (HbA1c) test; (2) expand and simplify the frequency limitations for diabetes screening; and (3) simplify the regulatory definition of “diabetes” for diabetes screening (§ 410.18(a)), Medical Nutrition Therapy (MNT) (§ 410.130) and Diabetes Outpatient Self-Management Training Services (DSMT) (§ 410.140).

Medicare coverage for diabetes screening tests under Part B are described in statute (sections 1861(s)(2)(Y), 1861(ww)(2)(K), 1861(yy), and 1862(a)(1)(M) of the Act) and in regulation at 42 CFR 410.18. The statute and regulations allow for diabetes screening tests:

- The Fasting Plasma Glucose (FPG) test (section 1861(yy)(1)(A) of the Act and § 410.18(c)(1));
- The Post Glucose Challenge Test, also called the Glucose Tolerance Test (GTT) (§ 410.18(c)(2)); and
- Such other tests, and modifications to tests, as the Secretary determines appropriate, in consultation with appropriate organizations (section 1861(yy)(1)(B) of the Act) and that may be determined through a national coverage determination (§ 410.18(c)(3)).<sup>417</sup>

We proposed to exercise our authority in section 1861(yy)(1) of the Act to add the HbA1c test to the types of diabetes screening tests covered under § 410.18(c), after consultation with appropriate organizations.

Section 1861(yy)(3) of the Act limits the frequency of diabetes screening tests to not more often than twice within the 12-month period following the date of the most recent diabetes screening test of that individual. Our regulations currently allow two screening tests per calendar year if the patient was previously diagnosed with pre-diabetes and one screening test per year for patients who were previously tested who were not diagnosed with pre-diabetes, or who were

---

<sup>417</sup> The Secretary, as of the date of this final rule, has not approved additional diabetes screening tests by through a national coverage determination.

never tested before (§ 410.18(d)). We proposed to exercise our authority in section 1861(yy)(1)(3) of the Act to simplify our frequency limitations for diabetes screening by aligning to the statutory limitation of not more often than twice within the 12-month period following the date of the most recent diabetes screening test of that individual.

We also proposed to simplify the regulatory definitions of “diabetes” for the purpose of diabetes screening at § 410.18(a) to remove the codified clinical test requirements from the definition of “diabetes.” We also proposed to remove the definition of “pre-diabetes” at § 410.18(a). The diabetes and prediabetes definitions at § 410.18(a) supported existing regulatory frequency limitations in § 410.18(d), which describe separate frequency limitations between individuals previously diagnosed, and those terms would no longer be needed under our proposed updates. We recognized that it is unnecessary to codify clinically specific test criteria into the regulatory definition of diabetes, which reduces flexibility for the agency and health care system to adapt to evolving clinical standards without potentially producing programmatic benefit. The proposed revised definition of diabetes for screening purposes will be shortened to describe diabetes as diabetes mellitus, a condition of abnormal glucose metabolism.

Medicare coverage for MNT under Part B is described in statute (primarily sections 1861(s)(2)(V), 1861(vv), and 1861(ww)(2)(I) of the Act, in regulations at 42 CFR part 410, subpart G, and in National Coverage Determination (NCD) (Section 180.1 of the Medicare National Coverage Determinations Manual (NCD Manual)). Section 410.130 currently describes a number of definitions for purposes of the MNT benefit, including “diabetes.” The regulatory definition of diabetes for MNT purposes at § 410.130 is currently identical to the existing regulatory definition of diabetes for screening purposes at § 410.18(a). We proposed to simplify the regulatory definitions of “diabetes” for the purpose of MNT at § 410.130 to remove the codified clinical test requirements. The proposed revised definition of diabetes for MNT purposes will be shortened to simply describe diabetes as diabetes mellitus, a condition of

abnormal glucose metabolism. NCD 180.1 refers to the regulatory definition of diabetes at § 410.130, so no modifications would be required to the NCD.

Medicare coverage for DSMT under Part B is described in statute (sections 1861(s)(2)(S), 1861(qq), 1861(ww)(2)(F) of the Act) and in regulation at part 410 subpart H. Section 410.140 currently describes a number of definitions for the purposes of the DSMT benefit, including “diabetes”. The regulatory definition of diabetes for DSMT purposes at § 410.140 is identical to the existing regulatory definition of diabetes for MNT purposes at § 410.130 and the existing regulatory definition of diabetes for screening purposes at § 410.18(a). We proposed to exercise our authority to simplify the regulatory definitions of “diabetes” for the purpose of DSMT at § 410.140 to remove the codified clinical test requirements. The proposed revised definition of diabetes for DSMT purposes will be shortened to simply define diabetes as diabetes mellitus, a condition of abnormal glucose metabolism.

## 1. Background

Diabetes is a chronic disease that affects how the body turns food into energy and includes three main types: Type 1, Type 2 and gestational diabetes. The Centers for Disease Control and Prevention (CDC) reports that approximately 37.3 million Americans are living with diabetes and an additional 96 million Americans are living with prediabetes.<sup>418</sup> CDC reports that 326,000 persons age 65 years and older are newly diagnosed with diabetes each year. CDC also estimates that among persons age 65 years and older, 21 percent have been diagnosed with diabetes while 5 percent have undiagnosed diabetes.<sup>419</sup> Diabetes is the leading cause of kidney failure and new cases of blindness among adults, and the sixth leading cause of death among adults age 65 years and older in the US.<sup>420</sup> Screening is performed on persons who may not exhibit symptoms to identify persons with either prediabetes or diabetes, who can then be

---

<sup>418</sup> CDC Website on diabetes at <https://www.cdc.gov/diabetes/basics/index.html>.

<sup>419</sup> Centers for Disease Control and Prevention. National Diabetes Statistics Report, 2020. Accessed March 9, 2023. <https://www.cdc.gov/diabetes/pdfs/data/statistics/national-diabetes-statistics-report.pdf>.

<sup>420</sup> Heron M. Deaths: Leading causes for 2019. National Vital Statistics Reports; vol 70 no 9. Hyattsville, MD: National Center for Health Statistics. 2021. DOI: <https://dx.doi.org/10.15620/cdc:107021>.

referred for appropriate prevention or treatment, with the intention of improving health outcomes.

In October 2015, the United States Preventive Services Task Force (USPSTF) issued a revised final recommendation statement, with a grade of B, for screening for abnormal blood glucose as part of cardiovascular risk assessment in adults aged 40 to 70 years who are overweight or obese and again identified the FPG, GTT and HbA1c tests as appropriate for diabetes screening.<sup>421</sup> In August 2021, the USPSTF issued a revised final recommendation statement, with a grade of B, that expanded recommended screening for prediabetes and type 2 diabetes in adults aged 35 to 70 years who have overweight or obesity, and that clinicians should offer or refer patients with prediabetes to effective preventive interventions, which are discussed in their report. The USPSTF again recommended the FPG, GTT and HbA1c tests as appropriate for diabetes screening and noted, “Because HbA1c measurements do not require fasting, they are more convenient than using a fasting plasma glucose level (FPG) or an oral glucose tolerance test (GTT).”<sup>422</sup> The grade of B is indicated when the USPSTF has high certainty that the net benefit is moderate or moderate certainty that the net benefit is moderate to substantial.

Both the USPSTF and specialty societies have identified the HbA1c test as clinically appropriate for diabetes screening. In addition, the HbA1c test has certain unique advantages and disadvantages compared to the FPG and GTT tests that should be considered by the practitioner and patient when choosing a diabetes screening test. The American Diabetes Association (ADA) Standards of Care in Diabetes – 2023 reads, “Generally, FPG, 2-h PG during 75-g OGTT (aka GTT), and A1C (aka HbA1c) are equally appropriate for diagnostic screening... The same tests may be used to screen for and diagnose diabetes and to detect individuals with prediabetes...A1C (aka HbA1c) has several advantages compared with FPG and OGTT (aka

---

<sup>421</sup> USPSTF Website: <https://www.uspreventiveservicestaskforce.org/uspstf/recommendation/screening-for-abnormal-blood-glucose-and-type-2-diabetes-october-2015>.

<sup>422</sup> USPSTF Website: <https://www.uspreventiveservicestaskforce.org/uspstf/recommendation/screening-for-prediabetes-and-type-2-diabetes>.

GTT), including greater convenience (fasting not required), greater preanalytical stability, and fewer day-to-day perturbations during stress, changes in nutrition, or illness. However, these advantages may be offset by the lower sensitivity of A1C (aka HbA1c) at the designated cut point, greater cost, limited availability of A1C (aka HbA1c) testing in certain regions of the developing world, and the imperfect correlation between A1C (aka HbA1c) and average glucose in certain individuals... Despite these limitations with A1C (aka HbA1c), in 2009, the International Expert Committee added A1C (aka HbA1c) to the diagnostic criteria with the goal of increased screening.”<sup>423</sup> We also recognized that the American Association of Clinical Endocrinology (AACE) also recommends screening for diabetes and prediabetes with similar tests, including HbA1c.<sup>424</sup>

The regulatory texts for diabetes screening, MNT, and DSMT currently include a clinically specific test-based definition for “diabetes” that has since been overtaken by evolving clinical standards. Since 2020, the ADA has revised and expanded its criteria for the diagnosis of diabetes to also include the HbA1c test and a random plasma glucose test for a patient appearing to have hyperglycemia or hyperglycemic crisis.<sup>425</sup>

## 2. Statutory Authority

Section 613 of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108-173) added section 1861(yy) to the Act and mandated coverage of diabetes screening tests in the Medicare Part B program. Section 1861(yy)(1) of the Act describes diabetes screening tests as testing furnished to an individual at risk for diabetes for the purpose of early detection of diabetes, including the FPG test and such other tests, and modifications to tests, as the Secretary determines appropriate, in consultation with appropriate organizations. Section 1861(yy)(2) of the Act describes “individual at risk for diabetes” as an

American Association of Clinical Endocrinology Clinical Practice Guideline: Developing a Diabetes Mellitus Comprehensive Care Plan—2022 Update. *Endocrine Practice*, 2023; 28: 923-1049, <https://doi.org/10.1016/j.eprac.2022.08.002>.

<sup>425</sup> Diabetes Care 2020;43(Supplement 1):S14–S31, [https://diabetesjournals.org/care/article/43/Supplement\\_1/S14/30640/2-Classification-and-Diagnosis-of-Diabetes](https://diabetesjournals.org/care/article/43/Supplement_1/S14/30640/2-Classification-and-Diagnosis-of-Diabetes).

individual who has any of a number of listed risk factors, including obesity, defined as a body mass index greater than or equal to 30 kg/m<sup>2</sup> as an independent qualifying factor and overweight, defined as a body mass index greater than 25 kg/m<sup>2</sup>, but less than 30, kg/m<sup>2</sup> (when present with a second qualifying factor including a family history of diabetes, a history of gestational diabetes and an age of 65 years or older. Section 1861(yy)(3) of the Act mandates that the Secretary shall establish standards, in consultation with appropriate organizations, regarding the frequency of diabetes screening tests, except that such frequency may not be more often than twice within the 12-month period following the date of the most recent diabetes screening test of that individual. Section 1861(yy) of the Act does not include a definition of diabetes.

Section 105 of the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (Pub. L. 106-554) added section 1861(vv) to the Act and mandated coverage of MNT under Part B. Section 1861(s)(2)(V) of the Act limits coverage of MNT to patients with diabetes or a renal disease. Section 1861(vv)(1) of the Act describes MNT, in pertinent part, as nutritional diagnostic, therapy, and counseling services for the purpose of disease management. Sections 1861(s)(2)(V) and (vv) of the Act do not include a codified definition of diabetes.

Section 4105(a) of the Balanced Budget Act of 1997 (Pub. L. 105-33) added section 1861(qq) to the Act and mandated coverage of DSMT. Section 1861(qq) of the Act describes DSMT, in part, as educational and training services furnished to an individual with diabetes by a certified provider in an outpatient setting by an individual or entity, but only if the physician who is managing the individual's diabetic condition certifies that such services are needed under a comprehensive plan of care related to the individual's diabetic condition to ensure therapy compliance or to provide the individual with necessary skills and knowledge to participate in the management of the individual's condition. Section 1861(qq) of the Act does not establish a definition of diabetes.

### 3. Regulatory Authority and National Coverage Determinations

Our implementing regulations for diabetes screening tests are codified at § 410.18. The current regulatory definition of diabetes and prediabetes for the purposes of diabetes screening were created, in part, to distinguish separate frequency limitations for each. Section 410.18(d) allows two diabetes screening tests per calendar year for individuals diagnosed with pre-diabetes and one diabetes screening test per calendar year for individuals previously tested who were not diagnosed with pre-diabetes, or who were never tested before. Section 410.18(e) limit diabetes screening to “individual at risk for diabetes” with a list of qualifying eligibility factors, including obesity, defined as a body mass index greater than or equal to 30 kg/m<sup>2</sup> as an independent qualifying factor (§ 410.18(e)(3)) and overweight, defined as a body mass index greater than 25 kg/m<sup>2</sup>, but less than 30, kg/m<sup>2</sup> (when present with a second qualifying factor including a family history of diabetes, a history of gestational diabetes and an age of 65 years or older) (§410.18(e)(5)).

Our implementing regulations for MNT are codified at part 410 subpart G. Section 410.130 describes a number of definitions for purposes of the MNT benefit, including “diabetes.” MNT is also described as a covered service at section 180.1 of the NCD Manual. NCD 180.1 does not include a codified definition of diabetes but does refer to “diabetes, as defined at § 410.130.” Our implementing regulations for DSMT are codified at part 410 subpart H. Section 410.140 describes a number of definitions for the purposes of the DSMT benefit, including “diabetes.”

NCD 190.20, Blood Glucose Testing, describes the indications and limitations of blood glucose testing generally but refers to § 410.18 and the Claims Processing Manual for specific policies on diabetes screening. NCD 190.21, Glycated Hemoglobin/Glycated Protein, authorizes coverage of the HbA1c test for the management of diabetes but does not address screening for diabetes.

In the CY 2004 PFS final rule (68 FR 63195), we finalized proposals to adopt regulatory definitions of diabetes for the purposes of MNT and DSMT. We codified in regulatory text at

§§ 410.130 and 410.140 that diabetes is defined as “diabetes mellitus, a condition of abnormal glucose metabolism diagnosed using the following criteria: A fasting blood sugar greater than or equal to 126 mg/dL on two different occasions; a 2 hour post-glucose challenge greater than or equal to 200 mg/dL on 2 different occasions; or a random glucose test over 200 mg/dL for a person with symptoms of uncontrolled diabetes.” The definition of diabetes was based, in part on a clinical recommendation submitted by the American Association of Clinical Endocrinologists. In the CY 2005 PFS final rule (69 FR 66235), we finalized proposals to adopt implementing regulations for diabetes screening, which was recently added as a Medicare covered benefit in the Section 613 of the MMA. We adopted a new regulatory definition of prediabetes as condition of abnormal glucose metabolism diagnosed using the following criteria: a fasting glucose level of 100-125 mg/dL, or a 2-hour post-glucose challenge of 140-199 mg/dL, as well as including the conditions of impaired fasting glucose and impaired glucose tolerance. We also adopted the regulatory definition of diabetes finalized in the CY 2004 PFS for MNT and DSMT. Neither the statutes nor the regulatory text for diabetes screening, MNT and DSMT distinguish between different types of diabetes.

#### 4. Revisions to the Final Rule

We proposed to exercise our authority in section 1861(yy)(1)(B) of the Act to add the HbA1c test to the types of diabetes screening tests covered under § 410.18(c), consistent with a recently revised recommendation by the USPSTF. The USPSTF recommended the HbA1C test for diabetes screening in their October 2015 and August 2021 revised final recommendation statements. We also engaged in meetings with appropriate organizations while developing our proposal to expand diabetes screening coverage, including the ADA, the Association of Diabetes Care & Education Specialists (ADCES), the National Clinical Care Commission (NCCC) and the Diabetes Advocacy Alliance (DAA). In addition, we consulted the published clinical

recommendations from the USPSTF (described earlier), the ADA<sup>426</sup> and the AACE<sup>427</sup> in developing our proposal. We also solicited comments from other organizations through the notice and comment rulemaking process.

We received public comments on these proposals. Overall, commenters expressed broad support and approval of our proposal to exercise our authority in section 1861(yy)(1)(B) of the Act to add the HbA1c test to the types of diabetes screening tests covered under § 410.18(c). The following is a summary of the comments we received and our responses.

*Comment:* Commenters agreed that adding the HbA1c test to the types of diabetes screening tests covered under § 410.18(c) will make available a screening option that will reduce patient burdens. Many commenters agreed that a screening option with reduced patient burden will be especially impactful for patients with diabetes, a disease that disproportionately impacts minority and disadvantaged populations. Many commenters agreed that expanding coverage of diabetes screening to include the HbA1c test will allow measurement of different aspects of diabetes pathology compared to the already covered FPG and GTT tests. Commenters also expressed appreciation that our proposal to cover the HbA1c test for diabetes screening will support increased patient referral to the Medicare Diabetes Prevention Program. Commenters also supported aligning Medicare coverage policies with USPSTF and ADA clinical recommendations.

*Response:* We thank the commenters for their support of our proposal to add the HbA1c test to the types of diabetes screening tests covered under § 410.18(c) and we are adopting those changes in this final rule. We are also finalizing corresponding updates to regulatory text as proposed.

*Comment:* Many commenters recommended that CMS eliminate Part B cost-sharing (deductible and coinsurance) for the HbA1c test when furnished as a diabetes screening test.

---

<sup>426</sup> [https://diabetesjournals.org/care/article/45/Supplement\\_1/S17/138925/2-Classification-and-Diagnosis-of-Diabetes](https://diabetesjournals.org/care/article/45/Supplement_1/S17/138925/2-Classification-and-Diagnosis-of-Diabetes).

<sup>427</sup> [https://www.endocrinepractice.org/article/S1530-891X\(22\)00576-6/fulltext](https://www.endocrinepractice.org/article/S1530-891X(22)00576-6/fulltext).

*Response:* We are happy to clarify that Congress has made Part B coinsurance (section 1833(a)(1)(Y) of the Act, § 410.152(l)(9)) and deductibles (section 1833(b)(1) of the Act) not applicable for covered prevention services recommended with a grade of A or B by the USPSTF. As described earlier in our rule, in August 2021, the USPSTF issued a revised final recommendation statement, with a grade of B, that expanded recommended screening for prediabetes and type 2 diabetes in adults aged 35 to 70 years who have overweight or obesity, and that clinicians should offer or refer patients with prediabetes to effective preventive interventions, which are discussed in their report. The USPSTF recommended the FPG, GTT and HbA1c tests as appropriate for diabetes screening. Thus, the HbA1c test will require no Part B coinsurance and deductible when furnished as a covered diabetes screening test. We clarify that the HbA1c test will continue to require Part B coinsurance and deductible when furnished for diabetes management.

We also proposed to exercise our authority in section 1861(yy)(1)(3) of the Act to expand and simplify our frequency limitations for diabetes screening by aligning to the statutory limitation of not more often than twice within the 12-month period following the date of the most recent diabetes screening test of that individual. We also proposed to remove the current regulatory definition of pre-diabetes for the purposes of diabetes screening at § 410.18(a), which functionally served, in part, to distinguish the separate frequency limitations of diabetes screening at two diabetes screening tests per calendar year for individuals diagnosed with pre-diabetes and one diabetes screening test per calendar year for individuals previously tested who were not diagnosed with pre-diabetes, or who were never tested before (§ 410.18(d)). We noted in the PFS proposed rule that our proposal to remove the regulatory definition of pre-diabetes was intended to simplify and expand diabetes screening while reducing unnecessary regulatory complexity. We also noted that we recognize that pre-diabetes and diabetes exist on a continuum, and both are screened and identified through common diabetes screening tests. Our proposal to remove the regulatory definition of pre-diabetes did not reflect a change in our position on pre-

diabetes screening and treatment as a Medicare benefit. In making this proposal we recognized that the FPG, GTT and HbA1c tests include different levels of burden for the patient and also measure different aspects of diabetes pathology. The August 2021 USPSTF revised final recommendation statement states “HbA1c is a measure of long-term blood glucose concentration and is not affected by acute changes in glucose levels caused by stress or illness. Because HbA1c measurements do not require fasting, they are more convenient than using a fasting plasma glucose level or an oral glucose tolerance test. Both fasting plasma glucose and HbA1c levels are simpler to measure than performing an oral glucose tolerance test. The oral glucose tolerance test is done in the morning in a fasting state; blood glucose concentration is measured 2 hours after ingestion of a 75-g oral glucose load. The diagnosis of prediabetes or type 2 diabetes should be confirmed with repeat testing before starting interventions.”<sup>428</sup> We noted we had engaged in meetings with appropriate organizations while developing our proposal to expand diabetes screening coverage, including the ADA, the ADCES, the NCCC, and the DAA. We noted we also consulted with the written recommendations of a number of specialty societies and the USPSTF in developing our proposal. We acknowledged that the USPSTF, ADA and AACE recommend diabetes screening frequency screening of once every 3 years.<sup>429,430,431</sup> We proposed expanding the frequency limitations for diabetes screening to twice in a 12-month period under the theory that additional flexibility in screening frequency will remove barriers and empower clinicians to apply screening by multiple types of tests or with increased frequency where the circumstances of the patient demonstrate a medical necessity. We noted in the PFS proposed rule that we looked forward to further consultation with organizations through the public notice and comment rulemaking process and solicited comments on our proposal.

---

<sup>428</sup> USPSTF Website: [https://www.uspreventiveservicestaskforce.org/uspstf/recommendation/screening-for-prediabetes-and-type-2-diabetes\\_](https://www.uspreventiveservicestaskforce.org/uspstf/recommendation/screening-for-prediabetes-and-type-2-diabetes_)

<sup>429</sup> [https://diabetesjournals.org/care/article/43/Supplement\\_1/S14/30640/2-Classification-and-Diagnosis-of-Diabetes](https://diabetesjournals.org/care/article/43/Supplement_1/S14/30640/2-Classification-and-Diagnosis-of-Diabetes).

<sup>430</sup> [https://www.endocrinepractice.org/article/S1530-891X\(22\)00576-6/fulltext](https://www.endocrinepractice.org/article/S1530-891X(22)00576-6/fulltext).

<sup>431</sup> <https://www.uspreventiveservicestaskforce.org/uspstf/recommendation/screening-for-prediabetes-and-type-2-diabetes#bootstrap-panel--10>.

The following is a summary of the comments we received and our responses.

*Comment:* We received numerous public comments expressing approval of our proposal to exercise our authority in section 1861(yy)(1)(3) of the Act to expand and simplify our frequency limitations for diabetes screening by aligning to the statutory limitation of not more often than twice within the 12-month period following the date of the most recent diabetes screening test of that individual. Many commenters agreed that expanding frequency limitations for diabetes screening to not more often than twice within the 12-month period following the date of the most recent diabetes screening test of that individual will remove barriers, expand access and empower clinicians to apply multiple types of tests or with increased frequency when the circumstances of the patient demonstrate a medical necessity.

*Response:* We thank commenters for their support and in this final rule we are expanding and simplifying our frequency limitations for diabetes screening as proposed. We are also finalizing corresponding updates to regulatory text as proposed.

*Comment:* One commenter disagreed with our proposal to expand and simplify our frequency limitations for diabetes screening and suggested that diabetes screening frequency be determined by the furnishing clinician (with no statutory or regulatory frequency limitations imposed by CMS).

*Response:* We disagree with the commenter's recommendation that diabetes screening frequency be entirely determined by the furnishing clinician without any frequency limitations. First, we have no authority to disregard or remove the frequency limitation for diabetes screening included in section 1861(yy)(1)(3) of the Act. Second, frequency limitations are important to protect beneficiaries from clinically inappropriate services and protect beneficiaries and the Medicare program from fraud, waste, and abuse. We are not adopting the commenter's suggestion.

*Comment:* We received numerous comments expressing support for our proposal to remove the regulatory definition of pre-diabetes from § 410.18(a). Many commenters agreed that

pre-diabetes and diabetes exist on a continuum, are detected by the same screening tests, and that removing the definition of pre-diabetes from diabetes screening regulations will remove barriers and expand access to care for patients and providers. Many commenters agreed that our proposal will simplify claims processing and reduce the risk of denied claims due to frequency limitations.

*Response:* We thank commenters for their support and will remove the regulatory definition of pre-diabetes for the purposes of diabetes screening at § 410.18(a). We are also finalizing corresponding updates to regulatory text as proposed.

We also proposed to simplify the regulatory definitions of “diabetes” for the purpose of diabetes screening at § 410.18(a), MNT at § 410.130 and DSMT at § 410.140. In all three instances, we proposed to remove the codified clinical test requirements from the definition of “diabetes” and keep a shorted version of the existing definition that would define diabetes as diabetes mellitus, a condition of abnormal glucose metabolism. We noted in the proposed rule that we now recognize that regulatorily codifying clinically specific test criteria into the regulatory definition of diabetes for screening, MNT and DSMT benefit reduces flexibility for the agency and health care system to adapt to evolving clinical standards without potentially producing programmatic benefit. We noted that we believe that our proposal will empower practitioners to apply clinically accurate and appropriate criteria and that we can ensure certain safeguards through medical coding and claims processing instructions. By analogy, we considered that end stage renal disease (ESRD) is not described with specific clinical test criteria in section 226A and 1881 of the Act, nor in regulations at § 406.13. We noted in the proposed rule that we generally believe that scientific advancements in understanding and measuring disease pathology outpace the lengthy and formal notice and comment rulemaking process. In the instance of diabetes screening, MNT and DSMT, the regulatory codification of clinical test criteria into disease definitions may not be necessary nor ideal. We noted that even without clinical test criteria codified in the regulatory definitions of diabetes and pre-diabetes, a Medicare claim that includes a diagnosis of diabetes or pre-diabetes would still need to include appropriate

coding, substantiation in the medical record and compliance with claims processing instructions from CMS and Medicare Administrative Contractors (MACs).

In the alternative, we considered not removing the clinical test criteria for the regulatory definitions of diabetes or removing the regulatory definition of pre-diabetes. We considered adding the HbA1c test criteria result of 6.5 percent or greater into the regulatory definition of diabetes for screening, MNT and DSMT and the HbA1c test criteria result of 5.7 percent to 6.4 percent to the regulatory definition of pre-diabetes for screening. The alternative would be consistent with our proposal to expand coverage of diabetes screening by adding the HbA1c test, and would also be consistent with clinical recommendations by the USPSTF<sup>432</sup> and the ADA<sup>433</sup>. However, we did not propose this alternative because, while currently clinically appropriate, we believed it would further, unnecessarily complicate the regulatory definition of diabetes and pre-diabetes. As noted earlier, we noted in the proposed rule that we now recognize that regulatorily codifying clinically specific test criteria into the regulatory definition of “diabetes” and “pre-diabetes” for screening, and “diabetes” for the MNT and DSMT benefits reduces flexibility for the agency and health care system to adapt to evolving clinical standards without potentially producing programmatic benefit. We solicited comments on our proposal and alternative considered.

The following is a summary of the comments we received and our responses. No commenters opposed our proposed rule and no commenters favored the alternative.

*Comment:* Numerous public commenters expressed approval and support for our proposal to simplify the regulatory definitions of “diabetes” for the purpose of diabetes screening at § 410.18(a), MNT at § 410.130 and DSMT at § 410.140 by removing the codified clinical test requirements from the definition of “diabetes” and keeping a shorted version of the existing

---

<sup>432</sup> <https://www.uspreventiveservicestaskforce.org/uspstf/recommendation/screening-for-prediabetes-and-type-2-diabetes#bootstrap-panel--6>.

<sup>433</sup> [https://diabetesjournals.org/care/article/43/Supplement\\_1/S14/30640/2-Classification-and-Diagnosis-of-Diabetes](https://diabetesjournals.org/care/article/43/Supplement_1/S14/30640/2-Classification-and-Diagnosis-of-Diabetes).

definition that will define diabetes as diabetes mellitus, a condition of abnormal glucose metabolism. Many commenters expressed that our proposal will increase patient access to care to diabetes screening and related services by improving the referral process and reduce the risk of claims being denied. Many commenters also expressed support and appreciation that our simplified regulatory definition of “diabetes” for diabetes screening, MNT and DSMT would remove potential future misalignment between specific clinical test criteria in regulations and evolving standards of care.

*Response:* We thank the commenters for their support and will simplify the regulatory definitions of “diabetes” for the purpose of diabetes screening at § 410.18(a), MNT at § 410.130 and DSMT at § 410.140 by defining diabetes as diabetes mellitus, a condition of abnormal glucose metabolism. We are also finalizing corresponding updates to regulatory text as proposed.

*Comment:* We received several comments that were outside the scope of the proposals made in the CY 2024 PFS proposed rule. Comments included removing the clinical test criteria from the definition of “Chronic renal insufficiency” in the MNT regulations at 410.130, to expand the regulatory definition of Chronic Kidney Disease, to allow the HbA1c test for diabetes screening to be furnished at pharmacies and allowing for coverage of diabetes screening regardless of the licensure of the ordering physician.

*Response:* Although we are not summarizing and responding to these comments in the final rule, they have been informative and we will take them into consideration for possible future rulemaking.

After considering public comments, we are finalizing the proposals made in the CY 2024 PFS proposed rule to (1) expand coverage of diabetes screening tests to include the Hemoglobin A1C test (HbA1c) test; (2) expand and simplify the frequency limitations for diabetes screening; and (3) simplify the regulatory definition of “diabetes” for diabetes screening (§ 410.18(a)), Medical Nutrition Therapy (MNT) (§ 410.130) and Diabetes Outpatient Self-Management Training Services (DSMT) (§ 410.140 ).

We noted in the CY 2024 PFS proposed rule that we believe that our proposal to expand and simplify coverage for diabetes screening aligns with the administration’s strategic pillar to advance health equity by addressing the health disparities that underlie our health system. The August 2021 updated USPSTF final recommendation statement reads, “The prevalence of diabetes is higher among American Indian/Alaska Native (14.7 percent), Asian (9.2 percent), Hispanic/Latino (12.5 percent), and non-Hispanic Black (11.7 percent) persons than among non-Hispanic White (7.5 percent) persons. Disparities in diabetes prevalence are the result of a variety of factors. A large body of evidence demonstrates strong associations between prevalence of diabetes and social factors such as socioeconomic status, food environment, and physical environment.”<sup>434</sup> The HbA1c test does not require fasting or drinking an unappetizing glucose solution. We noted in the CY 2024 PFS proposed rule that expanding coverage for diabetes screening to include the HbA1c test will reduce screening burdens for a disease that disproportionately impacts minority and disadvantaged populations. In addition, earlier identification of diabetes and prediabetes among minorities and disadvantaged persons may lead to improved diabetes control and reduce its complications, which currently occur disproportionately in those groups.

We recognize that expanded access and appropriate utilization of diabetes screening is critical to mitigating and avoiding downstream health complications that significantly impact beneficiary wellbeing, as well as being costly and burdensome to the healthcare system. We also note that the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK) website states, “diabetes can cause serious health problems, such as heart disease, stroke, and eye and foot problems. Prediabetes also can cause health problems. The good news is that type 2 diabetes can be delayed or even prevented. The longer you have diabetes, the more likely you are to

---

<sup>434</sup> USPSTF Website: <https://www.uspreventiveservicestaskforce.org/uspstf/recommendation/screening-for-prediabetes-and-type-2-diabetes>.

develop health problems, so delaying diabetes by even a few years will benefit your health.”<sup>435</sup>

The U.S. Department of Health and Human Services Office of the Assistant Secretary for Planning and Evaluation recently published a Report to Congress on the Affordability of Insulin that included a number of generalized findings on costs and downstream impacts of serious diabetes related complications on health care use.<sup>436</sup> We believe our final rules will expand access to quality care and improve health outcomes for patients through prevention, early detection, and more effective treatment.

M. Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug under a Prescription Drug Plan or an MA-PD plan

1. Previous Regulatory Action

In the CY 2021, CY 2022, and CY 2023 PFS final rules, we finalized policies for the CMS EPCS Program requirements specified in section 2003 of the SUPPORT Act (Pub. L. 115-271, October 24, 2018). We refer readers to 85 FR 84802 through 84807, 86 FR 65361 through 65370, and 87 FR 70008 through 70014 for the details of the statutory requirements and those finalized policies. Specifically, in the CY 2022 PFS final rule, we extended the date of compliance actions to no earlier than January 1, 2023 and, for prescribers writing Part D controlled substances prescriptions for beneficiaries in long-term care (LTC) facilities, January 1, 2025 (86 FR 65364 and 65365). We also finalized a proposal requiring prescribers to electronically prescribe at least 70 percent of their Schedule II, III, IV, and V controlled substances that are Part D drugs, except in cases where an exception or waiver applies (86 FR 65366); finalized multiple proposals related to the classes of exceptions specified by section 2003 of the SUPPORT Act (86 FR 65366 through 65369); and finalized our proposal to limit compliance actions with respect to compliance through December 31, 2023 to a non-compliance notice (86 FR 65370).

In the CY 2023 PFS final rule (87 FR 70012 through 70013), we extended the existing non-compliance action of sending notices to non-compliant prescribers, which we had finalized for the CY 2023 CMS EPCS Program implementation year (January 1, 2023 through December 31, 2023), to the CY 2024 Program implementation year (January 1, 2024 through December 31, 2024). We also finalized a change to the data sources used to identify the geographic location of prescribers for purposes of the recognized emergency exception at § 423.160(a)(5)(iii) (87 FR 70011 through 70012) and finalized our proposal to use the Prescription Drug Event (PDE) data from the current evaluated year instead of the preceding year when CMS determines whether a

prescriber qualifies for an exception based on issuing 100 or fewer Part D controlled substance prescriptions per calendar year (87 FR 70009 through 70011).

## 2. CMS EPCS Program Terminology

In the CY 2021, CY 2022, and CY 2023 PFS final rules (85 FR 84802 through 84807, 86 FR 65361 through 65370, and 87 FR 70008 through 70013), we used various terminology to describe aspects of the requirements for EPCS. In order to provide consistency and clarity throughout the CMS EPCS Program and future rules, we will use the following terms going forward.

- *CMS EPCS Program.* We will refer to the program requirements for EPCS at § 423.160(a)(5) as the “CMS EPCS Program.” We believe this provides an appropriate distinction from the prescriber’s act of electronically submitting individual prescriptions for controlled substances, which is also referred to as EPCS.

- *Non-compliance action or action for non-compliance.* We will use “non-compliance action” or “action for non-compliance” to refer to a consequence for not meeting the CMS EPCS Program compliance threshold, as described at § 423.160(a)(5), after exceptions have been applied.

- *Measurement year.* When we refer to “measurement year,” we mean the time period (beginning on January 1 and ending on December 31 of each calendar year) during which data is collected to calculate outcomes for the CMS EPCS Program. In prior rules, we have used the term “current year” or “evaluated year,” but moving forward we will use the term “measurement year.”

- *Compliance threshold.* For the CMS EPCS Program, “compliance threshold” is the requirement at § 423.160(a)(5) that prescribers must conduct prescribing for at least 70 percent of their Schedule II, III, IV, and V controlled substances that are Part D drugs electronically, after exceptions, each measurement year.

- *Compliance analysis period.* The “compliance analysis period” is the time period after the measurement year where data is analyzed to determine whether prescribers have met the compliance threshold for the CMS EPCS Program.

- *Notification period.* The “notification period” is the time period during which we notify a prescriber of the prescriber’s initial compliance status and any associated review or waiver process that may be available prior to CMS determining the prescriber’s final compliance status.

- *Measurement cycle.* The “measurement cycle” is generally a period of 24 months, consisting of a measurement year, the compliance analysis period, and the notification period.

### 3. Standard for CMS EPCS Program

#### a. Updates to the NCPDP Standards

In the CY 2021 PFS final rule (85 FR 84804), we finalized a requirement for Part D prescribers to use the NCPDP SCRIPT standard version 2017071 standard for electronic prescribing of Schedule II, III, IV, and V controlled substances covered under Medicare Part D. In the CY 2021 PFS proposed rule, we had stated our belief that because prescribers were already required to use this standard when e-prescribing for covered Part D drugs for Part D eligible individuals, prescribers should use this same standard when e-prescribing controlled substances (85 FR 50261).

In the CY 2024 PFS proposed rule (88 FR 52532), we noted that on December 27, 2022, as part of the Medicare Program; Contract Year 2024 Policy and Technical Changes to the Medicare Advantage Program, Medicare Prescription Drug Benefit Program, Medicare Cost Plan Program, Medicare Parts A, B, C, and D Overpayment Provisions of the Affordable Care Act and Programs of All-Inclusive Care for the Elderly; Health Information Technology Standards and Implementation Specifications proposed rule (herein referred to as the “CY 2024 Medicare Advantage and Part D Policy and Technical Changes proposed rule”) (87 FR 79550), we proposed to update provisions related to e-prescribing standards at § 423.160(b), including, after

a transition period, requiring the NCPDP SCRIPT standard version 2022011 proposed for adoption at 45 CFR 170.205(b), and retiring the current NCPDP SCRIPT standard version 2017071, as the e-prescribing standard for covered Part D drugs for Part D eligible individuals. The CY 2024 Medicare Advantage and Part D Policy and Technical Changes final rule appeared in the April 12, 2023 **Federal Register** (88 FR 22120). We noted that we did not address comments received on the provisions of the proposed rule related to e-prescribing standards as these provisions were not finalized in the final rule. We also noted that we will address provisions of the proposed rule that we did not finalize at a later time, such as in possible future rulemaking, as appropriate.

As stated in the CY 2021 PFS proposed rule (85 FR 50261), our intent with the CMS EPCS Program is for prescribers to use the same version of the NCPDP SCRIPT standard for their electronic prescribing of Schedule II-V controlled substances that are Part D drugs as for other electronic prescribing for Part D eligible individuals. Although we finalized the NCPDP SCRIPT standard version 2017071 as the standard in the CY 2021 PFS final rule, we want to clarify that, based on the existing regulatory text at § 423.160(a)(5), the CMS EPCS Program will automatically adopt the electronic prescribing standards at § 423.160(b) as they are updated. This is based on the requirement at § 423.160(a)(5) that prescribers conduct prescribing for at least 70 percent of their Schedule II, III, IV, and V controlled substances that are Part D drugs electronically using the applicable standards in paragraph (b) of § 423.160. Therefore, any proposals from the CY 2024 Medicare Advantage and Part D Policy and Technical Changes proposed rule to standards at § 423.160(b) that are finalized will apply to electronic prescribing for the CMS EPCS program as well.

Although we did not make a formal proposal in this section, we did receive public comments requesting clarification on when the new NCPDP SCRIPT standard version would be adopted and the implications for measuring long-term care (LTC) compliance. Because we did not make a proposal in regard to the date on or after which compliance actions will commence

against prescribers who do not meet the compliance threshold based on prescriptions written for a beneficiary in a LTC facility, the responses that follow are for clarification purposes only.

*Comment:* A few commenters supported our clarification that the CMS EPCS Program will require use of the same NCPDP SCRIPT standard version that is required for Part D e-prescribing. One commenter noted their belief that the following preamble text from the CY 2024 PFS proposed rule was confusing: “In the final rule, we did not address comments received on the provisions of the proposed rule related to e-prescribing standards as these provisions were not finalized in the final rule. Rather, we will address provisions of the proposed rule that we did not finalize at a later time, such as in possible future rulemaking, as appropriate.” The commenter recommended removing that statement and substituting the following: “Therefore, any proposals from the CY 2024 Medicare Advantage and Part D Policy and Technical Changes proposed rule to standards at § 423.160(b) that are finalized will apply to electronic prescribing for the CMS EPCS program as well.”

*Response:* We appreciate this feedback. We are further clarifying that the CMS EPCS Program will require use of the same version (or versions) of standards that are finalized through rulemaking for Medicare Part D e-prescribing by virtue of the cross reference in § 423.160(a)(5) to “the applicable standards in paragraph (b) of this section,” which refers to the standards in § 423.160(b). In particular, the CMS EPCS Program will require use of the same version (or versions) of standards that are required for prescribers, dispensers, and Part D sponsors transmitting prescriptions and prescription-related information for covered Part D drugs for Part D eligible individuals using electronic media consistent with the general rules governing requirements for electronic prescribing at § 423.160(a)(1) and (2).

*Comment:* A few commenters sought clarification for when the Medicare Part D standards for electronic prescribing would be finalized and noted the implications for LTC. Commenters noted that the proposed NCPDP SCRIPT standard version 2022011 offered new and important functionality that addresses longstanding challenges with implementing e-

prescribing in the post-acute care sector. These commenters sought clarification as to CMS' timeline for adopting and implementing this new standard, given that prescriptions written for a beneficiary in an LTC facility were excluded from compliance until January 1, 2025 and compliance actions against prescribers who do not meet the compliance threshold based on prescriptions written for a beneficiary in an LTC facility will commence on or after January 1, 2025.

*Response:* As of publication of this final rule, we acknowledge that we have not finalized our proposal to update the standard that was proposed in the CY 2024 Medicare Advantage and Part D Policy and Technical Changes proposed rule (88 FR 22120).

In the 2022 PFS final rule (86 FR 65364), we noted that the intent of extending the date on or after which we will pursue compliance actions for prescriptions written for beneficiaries in LTC facilities to January 1, 2025 was to strike a balance between being responsive to stakeholder concerns surrounding the increased implementation barriers faced by LTC facilities, while at the same time helping to ensure that these facilities eventually implement EPCS, given the benefits of EPCS. Furthermore, we noted that we were not persuaded to further delay commencing compliance actions to await publication of the NCPDP SCRIPT 2022011 standard. We acknowledged that three-way communication is not as seamless in the 2017071 version of the standard as it may be in upcoming versions. We also stated that it is still possible with some modifications to EPCS, and therefore, we did not believe it would be appropriate to adopt a further delay on this basis alone. We know that some prescribers prescribing for beneficiaries in LTC facilities have adopted EPCS, but that others have waited for the standard to be updated. Our current policy is to start including prescriptions written for a beneficiary in a LTC facility in compliance calculations starting January 1, 2025. However, if the updated NCPDP SCRIPT standard is finalized for a date after January 1, 2025, we may explore whether a waiver is appropriate for prescribers who are not compliant solely as a result of prescriptions they have

written for beneficiaries in LTC facilities or we may revisit the compliance start date, if needed, through future rulemaking.

b. Standards for Same Legal Entity

In the CY 2022 PFS final rule (86 FR 65366), we finalized an exception at § 423.160(a)(5)(i) for prescriptions issued where the prescriber and dispensing pharmacy are the same entity (hereafter called the same entity exception). We stated our belief that a requirement to use the NCPDP SCRIPT standard version 2017071 within a closed system could increase costs and the rate of performance errors, such as data corruption and patient matching errors, which we understand often happens when a unified database is split into a transaction system that relays information to and from the same entity.

As we have implemented the same entity exception, our experience has been that the Prescription Drug Event (PDE) data, which we use for CMS EPCS Program compliance calculations, does not have a field that consistently and accurately identifies prescribers and dispensing pharmacies that are part of the same entity, making it impossible to exclude these prescriptions from the compliance calculations using PDE data. Additionally, we realized that we can include prescriptions where the prescriber and dispensing pharmacy are the same entity without triggering the concerns that led us to us to finalize the same entity exception, if we remove the requirement to use the NCPDP SCRIPT standard listed in § 423.160(b), as described below.

Medicare Part D has an existing electronic prescribing regulation that permits the use of either HL7 messages or the NCPDP SCRIPT standard to transmit prescriptions or prescription-related information internally when the sender and the beneficiary are part of the same legal entity while still maintaining the requirement for e-prescribing. The Medicare Program; E-Prescribing and Prescription Drug Program final rule (70 FR 67581), which appeared in the November 7, 2005 **Federal Register**, codified at § 423.160(a)(3)(ii), that either HL7 messages or the NCPDP SCRIPT standard could be used when all parties to a transaction are, for example,

employed by and part of the same legal entity. We subsequently finalized a proposal to move the provision to § 423.160(a)(3)(iii) in the CY 2008 PFS final rule (72 FR 66405).

In the CY 2024 PFS proposed rule (88 FR 52532), we proposed to integrate this regulation into the CMS EPCS Program, as it provides alignment across electronic prescribing policies for prescriptions prescribed and dispensed within the same legal entity without forcing these entities to adopt the NCPDP SCRIPT standard for such transmittals. We are finalizing this proposal. As a result, prescribers in the same legal entities as the dispensing pharmacy will have multiple methods to conduct internal electronic transmittals for Schedule II, III, IV, and V controlled substances that are Part D drugs, as permitted in § 423.160(a)(3)(iii). Therefore, we believe that these prescribers' prescriptions can be included in the CMS EPCS Program compliance calculation so long as prescribers' electronic prescriptions are transmitted consistent with the exemption in § 423.160(a)(3)(iii).

By finalizing this proposal, we will no longer need to separately identify and apply different methodologies based on whether the prescriber and dispensing pharmacy are the same entity. We will identify electronic prescriptions for Schedule II-V controlled substances that are Part D drugs using the Prescription Origin Code data element in the PDE record, where a value of three indicates electronic transmission. Additionally, this proposal will expand the available standards for prescribers that are within the same legal entities as the dispensing pharmacy under the CMS EPCS Program, as defined by the Medicare Program; E-Prescribing and Prescription Drug Program final rule (70 FR 67581), by cross-referencing the standards at § 423.160(a)(3)(iii), which broadens the requirements of the e-prescribing standard that can be used to meet CMS EPCS Program requirements. We believe that by aligning with the regulation at § 423.160(a)(3)(iii), we are advancing e-prescribing standardization and addressing potential concerns about burdening prescribers within the same legal entity, including workflow and data errors.

Therefore, to address our data limitations and to provide flexibility where prescriptions are transmitted within the same legal entity, we are finalizing our proposals to remove the same entity exception at § 423.160(a)(5)(i) from the CMS EPCS Program requirements and to redesignate paragraphs (a)(5)(ii) through (iv) as paragraphs (a)(5)(i) through (iii), respectively. We also are finalizing our proposal to add “subject to the exemption in paragraph (a)(3)(iii) of this section” to § 423.160(a)(5). As a result, prescriptions that are prescribed and dispensed within the same legal entity will be included in CMS EPCS Program compliance calculations as part of the 70 percent compliance threshold at § 423.160(a)(5), and prescribers will not be exempt from the requirement to prescribe electronically at least 70 percent of their Schedule II-V controlled substances that are Part D drugs – but such prescriptions will only have to meet the applicable standards in § 423.160(b) subject to the exemption in § 423.160(a)(3)(iii).

We solicited comments on the proposals to remove the same entity exception and expand the available standards for same legal entities within the CMS EPCS Program.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Several commenters supported the proposal to remove the same entity exception and use HL7 messages or the NCPDP SCRIPT standard, which is identified in the exemption at § 423.160(a)(3)(iii), because it reduces administrative burden and promotes interoperability and data sharing which can improve patient outcomes.

*Response:* We thank the commenters for their support of the proposal to remove the same entity exception and align e-prescribing practices with Medicare Part D.

*Comment:* One commenter did not support the proposal to remove the same entity exception and use HL7 messages or the NCPDP SCRIPT standard as they believed broader flexibility would not solve this issue because some prescribers, especially those in rural communities, may use proprietary codes rather than HL7 messages or the NCPDP SCRIPT standard, which is identified in the exemption at § 423.160(a)(3)(iii), and LTC participants have

unique requirements. The commenter suggested that CMS consider alternative options for excluding same entity prescriptions and allow some level of exception.

*Response:* Generally speaking, we intend to align CMS EPCS Program requirements with the Medicare Part D electronic prescribing standards, as we do not want to create different requirements regarding the use of electronic prescribing standards between the Medicare Part D program as a whole and the CMS EPCS Program. The concerns the commenter identified with respect to EPCS within the same entity would also be applicable to electronic prescriptions for non-controlled Part D drugs. However, as noted in the CY 2024 PFS proposed rule and as we reiterate above, due to the limitations in the data we have already described, we intend to identify electronic prescribing through the Prescription Origin Code with a value of three found in the PDE record, which is based on the NCPDP definitions for electronic transmission.<sup>437</sup>

After consideration of public comments, we intended to finalize these policies as proposed.

#### 4. Definition of Prescriptions for Compliance Calculation

In the CY 2022 PFS final rule, we finalized the compliance threshold requirement for the CMS EPCS Program such that prescribers are required to prescribe at least 70 percent of their Schedule II, III, IV, and V controlled substances that are Part D drugs electronically, except in cases where an exception or waiver applies (86 FR 65366). Additionally, we indicated that the compliance threshold for each prescriber would be calculated by examining PDE data at the end of the measurement year and dividing the number of Part D controlled substances that were e-prescribed by the total number of Part D controlled substance prescriptions (excluding from both the numerator and denominator any prescriptions issued while a prescriber falls within an exception or is subject to a waiver) (86 FR 65365). Previously, we did not define how prescriptions with multiple fills would affect the compliance threshold calculation. We proposed to specify how the compliance threshold is affected by multiple fills within the same year.

---

<sup>437</sup> <https://www.ncdp.org/NCPDP/media/pdf/VersionD-Questions.pdf>.

For purposes of CMS EPCS Program, we will count unique prescriptions in the measurement year using the prescription number assigned by the pharmacy and included in the Part D claims data. All prescriptions, regardless of how they are transmitted, may include a number of refills so that the pharmacy may provide additional fills of the prescribed medication without the need for a new prescription from, or visit to, a prescriber. Refills are not separately transmitted prescriptions; they are documented as part of the original prescription transmittal, which includes any refills issued against the original prescription (by the pharmacy). However, renewals of prescriptions (such as those for maintenance medications) require prescribers to generate a new prescription along with a new set of refills. Because of this distinction, we will count renewals as an additional prescription in the CMS EPCS Program compliance threshold calculation, and we will not count refills as an additional prescription in the CMS EPCS Program compliance threshold calculation unless the refill is the first occurrence of the unique prescription in the measurement year.

We believe, if we were to include every fill in the compliance threshold calculation, an increased burden could be placed on small prescribers, as they would potentially no longer qualify for the small prescriber exception at § 423.160(a)(5)(ii) (which we proposed to be redesignated to § 423.160(a)(5)(i), as described in the regulation text in this rule). If we were to count every single fill, preliminary analysis of 2021 Part D data shows that approximately 23,000 prescribers would no longer qualify for the small prescriber exception and that approximately 6,900 additional prescribers would be considered non-compliant. For this reason, we will count only the unique prescriptions in the measurement year for the purposes of CMS EPCS Program compliance threshold calculations.

We received public comments on the definition of prescriptions for the CMS EPCS program compliance calculation. The following is a summary of the comments we received and our responses.

*Comment:* A few commenters supported counting prescription renewals, but not refills,

toward the CMS EPCS program's compliance threshold calculation and to only include a refill in the calculation if it is the first occurrence of that unique prescription within a measurement year. One commenter noted that many prescribers who currently qualify for the small prescriber exception would be at risk of no longer qualifying if each refill of a prescription counted towards the compliance threshold calculation.

*Response:* We agree with commenters that if we were to include every fill in the compliance threshold calculation, an increased burden could be placed on small prescribers, as they would potentially no longer qualify for the small prescriber exception.

After consideration of public comments, we are finalizing the policy as proposed to count only the unique prescriptions in the measurement year for the purposes of CMS EPCS Program compliance threshold calculations.

## 5. Updates to CMS EPCS Program Exceptions for Cases of Recognized Emergencies and Extraordinary Circumstances

### a. Background

In the CY 2022 PFS final rule (86 FR 65367 through 65368), we finalized two exceptions related to exceptional circumstances that may prevent prescribers from being able to conduct EPCS. The first exception, codified at § 423.160(a)(5)(iii), is for prescribers who are prescribing during a recognized emergency, such as a natural disaster, a pandemic, or a similar situation where there is an environmental hazard. Prescribers in a geographic area of an emergency or disaster declared by a Federal, State, or local government entity are excluded from the CMS EPCS Program requirements. In the CY 2023 PFS final rule (87 FR 70012), we modified the exception to use the prescriber's PECOS address or, in situations where a prescriber does not have a PECOS address, the prescriber's address in the National Plan and Provider Enumeration System (NPPES) data, to determine whether the exception at § 423.160(a)(5)(iii) is applicable.

The second exception, codified at § 423.160(a)(5)(iv), is for prescribers who request and receive from CMS a waiver, which we grant to prescribers who are facing extraordinary

circumstances that prevent them from electronically prescribing a controlled substance to a Part D beneficiary, but who are not in an emergency or disaster area. We defined “extraordinary circumstance” for purposes of this exception to mean a situation, other than an emergency or disaster, outside of the control of a prescriber that prevents the prescriber from electronically prescribing a controlled substance to a Part D beneficiary (86 FR 65367).

In the CY 2024 PFS proposed rule (88 FR 52533), we proposed to further modify the recognized emergency exception and extraordinary circumstances waiver (which we codified at § 423.160(a)(5)(ii) and (iii), respectively, as described in section III.M.3.b of this rule). We proposed to modify the rules for when these exceptions apply by enabling prescribers to apply for waivers in times of an emergency and disaster and by limiting the emergencies or disasters that would trigger the recognized emergency exception. Additionally, we proposed to modify the duration of both exceptions and proposed timing requirements for submitting a waiver application.

b. Updating the Circumstances Applicable for the Recognized Emergency and Extraordinary Circumstances Waiver Exceptions

At the time we made proposals in the CY 2024 PFS proposed rule (88 FR 52533 through 52534), the exception for recognized emergencies applied to all prescribers with an address in PECOS, or alternatively in NPPEs, in the geographic area of an emergency or disaster declared by a Federal, State, or local government entity. As we explained in that proposed rule, we have realized there may be unintended consequences to our policy based on our experience implementing it. First, while we can identify emergencies recognized by the Federal Emergency Management Agency (FEMA) or pandemics recognized by the Department of Health and Human Services (HHS), we may not be able to identify every local or state emergency. Because we excluded emergencies and disasters from our extraordinary circumstances waiver policy, some prescribers may not be able to receive an exception for an emergency or disaster we did not identify. Second, we realized that not every emergency may impact the ability of prescribers to

conduct EPCS, and thus it may not be appropriate to automatically apply the exclusion to all prescribers in the affected geographic area of some emergencies. Third, we realized that some of our policies do not align with other emergency policies of CMS programs for quality reporting and performance. Therefore, in order to address these concerns, we looked to the Quality Payment Program Merit-based Incentive Payment System (MIPS) automatic policy for extreme and uncontrollable circumstances and to the extraordinary circumstances exceptions (ECE) for many of our quality reporting and value-based purchasing programs for hospitals and other types of facilities to see other examples of when we apply automatic exceptions versus when we ask clinicians or facilities to apply for a waiver.

In the FY 2018 IPPS/LTCH PPS final rule (82 FR 38410) and CY 2018 OPPI/ASC final rule (82 FR 52584), we worked to align common processes for our ECE policies across many of our quality programs including the Hospital IQR Program, Hospital OQR Program, IPFQR Program, ASCQR Program, and PCHQR Program, as well as the Hospital VBP Program, HAC Reduction Program, and the Hospital Readmissions Reduction Program. Using the Hospital IQR Program as an example, generally, CMS may grant an exception with respect to quality data reporting requirements in the event of extraordinary circumstances beyond the control of the hospital (42 CFR 412.140(c)(2)). A hospital may submit such a request in the form and manner described on QualityNet.org. CMS may also grant an exception to one or more hospitals that have not requested an exception if: CMS determines that a systemic problem with CMS data collection systems directly affected the ability of the hospital to submit data; or if CMS determines that an extraordinary circumstance, such as an act of nature (for example, hurricane), has affected an entire region or locale (*see* § 412.140(c)(2)(ii) and 76 FR 51651). We stated that if we make the determination to grant an ECE to hospitals in a region or locale, we would communicate this decision through routine communication channels (76 FR 51652).

Separately, in the context of clinicians participating in MIPS, we established another ECE policy. In the Medicare Program; CY 2018 Updates to the Quality Payment Program; and

Quality Payment Program: Extreme and Uncontrollable Circumstance Policy for the Transition Year (CY 2018 Quality Payment Program final rule), we adopted in an interim final rule with comment period an automatic extreme and uncontrollable circumstances policy for one performance period due to several hurricanes (82 FR 53895 through 53900). In discussing the triggering events for this policy (82 FR 53897), we stated that we have discretion not to require MIPS eligible clinicians to submit an application for reweighting the performance categories in cases where an extreme and uncontrollable circumstance, such as an act of nature (for example, hurricane), affects an entire region or locale. We noted that we anticipate the types of events that could trigger this policy would be events designated by the Federal Emergency Management Agency (FEMA) as major disasters or a public health emergency declared by the Secretary, although we will review each situation on a case-by-case basis. We also noted our intention to align the automatic extreme and uncontrollable circumstance policy with the ECE policies for other Medicare programs such that events that trigger ECE policies would also trigger the automatic extreme and uncontrollable circumstance policy (82 FR 53897). In the CY 2019 PFS final rule (83 FR 59875), we finalized a similar policy for all future years, which we codified at § 414.1380(c)(2)(i)(A)(8) and (C)(3).

As we stated in the CY 2024 PFS proposed rule (88 FR 52534), we believe that it will be beneficial to interested parties for the CMS EPCS Program to have a similar policy as it relates to applying for an exception versus having an automatic exception for all prescribers in an affected region. This will streamline communications across CMS programs, as well as ensure that CMS can, where appropriate, except all prescribers for an appropriate circumstance beyond their control, including disasters or emergencies. In order to facilitate this transition, for the waiver exception at § 423.160(a)(5)(iv) (which we proposed to codify at § 423.160(a)(5)(iii), as described in the regulation text in this rule), we are finalizing our proposal to modify the definition of “extraordinary circumstance” to mean a situation outside of the control of a prescriber that prevents the prescriber from electronically prescribing a Schedule II-V controlled

substance that is a Part D drug. This updated definition will drop the restriction “other than an emergency or disaster,” that we previously included when discussing this exception. This modification will allow prescribers the ability to request a waiver regardless of whether we trigger the recognized emergency exception.

Additionally, we proposed to modify the recognized emergency exception at § 423.160(a)(5)(iii) (which is codified at § 423.160(a)(5)(ii), as described in the regulation text in this rule) so that we will identify which events trigger the recognized emergency exception. We believe the ability to identify triggering events will allow us to ensure that the emergency affects widespread EPCS functionality. In applying this determination of which emergencies or disasters would trigger this exception, we will review each emergency situation on a case-by-case basis but will generally look to events designated as a FEMA major disaster or a public health emergency declared by the Secretary. We also intend to align the determination of the emergency exception with the MIPS automatic extreme and uncontrollable circumstances policy, such that events that would trigger this policy, in most instances, will also qualify under the CMS EPCS Program exception for recognized emergencies. We expect any deviation from MIPS automatic extreme and uncontrollable circumstances policies would be rare and only in circumstances which may cause disruption for MIPS performance but should not affect a prescriber’s ability to electronically prescribe Schedule II-V controlled substances that are Part D drugs, or vice versa.

We will inform prescribers of which emergencies or disasters qualify for the exception, as determined by CMS, using normal communication channels such as listservs and the CMS EPCS Program website.

We solicited comments on the proposals related to circumstances applicable for the recognized emergency and extraordinary circumstances waiver exceptions.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Several commenters supported the proposal to modify the definition of extraordinary circumstances by dropping the phrase “other than an emergency or disaster.” Commenters noted the policy allows prescribers to apply for a waiver for all circumstances beyond their control, even in cases where a recognized emergency is not declared. One commenter noted their belief that this policy promotes climate change resiliency by providing EPCS flexibilities during a natural disaster. Commenters also supported the alignment of policies with MIPS and other CMS programs and noted how that promotes continuity and reduces burden.

*Response:* We thank these commenters for their support. We agree that this policy provides the most flexibility to prescribers and reduces burden by aligning with other CMS programs.

*Comment:* A few commenters supported our proposal for CMS to review emergency situations and offer blanket exceptions by region on a case-by-case basis using FEMA-designated emergencies and HHS-declared public health emergencies as a baseline because it aligns with MIPS program policies.

*Response:* We agree that it is important that we have flexibility in establishing exceptions for recognized emergencies and that it is desirable to align the CMS EPCS Program with other CMS programs where practicable and appropriate.

*Comment:* One commenter did not support the proposal for CMS to identify the emergencies and disasters that would trigger the recognized emergency exception. The commenter noted that CMS did not provide any examples of when such emergencies may not be applicable, and the commenter was also concerned that disconnecting emergency and disaster declarations from the recognized emergency exception may lead to confusion.

*Response:* As discussed earlier in this section, we will review each emergency situation on a case-by-case basis and will generally look to events designated as a FEMA major disaster or a public health emergency declared by the Secretary. Further, by permitting prescribers to

request a waiver regardless of whether we trigger the recognized emergency exception, we are providing prescribers greater certainty that, regardless of whether we recognize an emergency under the exception at § 423.160(a)(5)(ii), a prescriber can still request a waiver identifying the extraordinary circumstance preventing the prescriber from complying with the CMS EPCS Program requirements.

Finally, we believe our proposal will reduce confusion rather than increase confusion by aligning with other CMS programs. One potential example for this policy is the multi-year public health emergency related to COVID-19 that ended May 11, 2023. Some prescribers may continue to be affected by the emergency in calendar year 2023, while others are not. Under the policy we are finalizing, we would have the ability to make an assessment if the recognized emergency applies for the measurement year for the entire nation and align this assessment, if appropriate, to other programs. After consideration of public comments, we are finalizing these policies as proposed.

#### c. Duration of Recognized Emergency Exceptions

In the CY 2022 PFS final rule (86 FR 65367), we clarified that the recognized emergency exception would be applicable only if the dispensing date of the medication occurs during the time period that the declared disaster is occurring. In an effort to continue aligning the CMS EPCS Program with the Quality Payment Program, we proposed that, as a default, prescribers impacted by the CMS EPCS Program recognized emergency exception at § 423.160(a)(5)(iii) (which we codified at § 423.160(a)(5)(ii), as described in the regulation text in this rule) would be excepted for the entire measurement year, and not just for the duration of the emergency. We believe this would protect prescribers who may not be able to monitor their compliance status over multiple periods of time.

We solicited comments on the proposed duration for exceptions due to recognized emergencies.

We received public comments on these proposals. The following is a summary of the

comments we received and our responses.

*Comment:* A few commenters supported the proposal that any prescriber impacted by a recognized emergency exception would be excepted for the whole measurement year instead of the length of the emergency. One commenter noted that they believed this would help reduce administrative burden for practices.

*Response:* We thank the commenters for their support. We agree this proposal will reduce administrative burden.

After consideration of public comments, we are finalizing this policy as proposed.

#### d. Duration and Timing of Extraordinary Circumstances Waiver Exception

In the CY 2022 PFS final rule (86 FR 65367 through 65368), we finalized an attestation process for prescribers to request a waiver.<sup>438</sup> In the CY 2024 PFS proposed rule (88 FR 52535), we did not propose any modifications on the information needed to request a waiver, but we proposed the timeframe that would be covered by a waiver that is authorized under the CMS EPCS Program and the timing of waiver requests.

Section 1860D-4(e)(7)(B)(iii) of the Act, as added by section 2003 of the SUPPORT Act, refers to a waiver or a renewal thereof for a period of time, not to exceed 1 year, as determined by the Secretary. We proposed that approved waivers for the CMS EPCS Program would apply to the entire measurement year. Prescribers who receive a waiver and continue to experience exceptional circumstances that extend beyond December 31 of a measurement year would be required to complete a new waiver application for the subsequent measurement year.

In the CY 2022 PFS proposed rule (86 FR 39332), we signaled that we would include more information about the waiver process in subsequent rulemaking. One issue that was not clearly defined is the timing of when a prescriber can request a waiver. In the CY 2022 PFS final rule (86 FR 65370), we finalized that we would notify prescribers that they are violating the

---

<sup>438</sup> The waiver application is currently going through the Paperwork Reduction Act approval process under the document identifier CMS-10834, and the proposed collection comment request appeared in the March 10, 2023 **Federal Register** (88 FR 15037).

EPCS requirement with information about how they can come into compliance, the benefits of EPCS, an information solicitation as to why they are not conducting EPCS, and a link to the CMS portal to request a waiver. In the CY 2024 PFS proposed rule (88 FR 52535), we proposed that a prescriber has a period of 60 days from the date of the notice of non-compliance to request a waiver. Approved waivers would apply to prescriptions written by a prescriber for the entire measurement year, and the waiver would expire on December 31 of the applicable measurement year.

We solicited comments on the proposed waiver duration and the proposal for the timing and process of applying for a waiver in cases of extraordinary circumstances.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* A few commenters supported our proposal to apply the extraordinary circumstance exception for the entire measurement year and for prescribers to reapply if the emergency goes beyond the measurement year. Commenters noted this reduces burden.

*Response:* We agree this policy reduces burden.

*Comment:* One commenter requested clarification regarding how CMS will determine the length of an extraordinary circumstance for which a prescriber requests a waiver, especially if it occurs close to the end of the year, given that a granted exception would apply for the full measurement year. The commenter noted it is critical for providers to understand this information when CMS grants a waiver in response to an application to avoid inadvertent noncompliance.

*Response:* We realize that prescribers will not be able to apply for waivers until after the measurement period has ended and this may result in the prescriber not being able to modify their behavior based on the denial of a waiver. As part of the waiver request process, we provide an opportunity for a prescriber to describe the reasons for non-compliance. If the waiver is not accepted, there is an opportunity for educational outreach.

We also hope to minimize inadvertent non-compliance by allowing prescribers to apply for a waiver after they know their compliance status for the year. In some cases, we believe prescribers who experience an extraordinary circumstance may still be compliant because, even with the extraordinary circumstance, they were able to achieve the 70 percent compliance threshold.

After consideration of public comments, we are finalizing these policies as proposed.

## 6. Actions for Non-Compliance

In the CY 2022 PFS final rule (86 FR 65370), we limited compliance actions with respect to compliance from January 1, 2023 through December 31, 2023, to a non-compliance notice sent to prescribers who are violating the CMS EPCS Program requirement. In the CY 2023 PFS final rule (87 FR 70013), we extended the existing compliance action of sending notices to non-compliant prescribers from the CY 2023 CMS EPCS Program implementation year (January 1, 2023 through December 31, 2023) to the CY 2024 EPCS Program implementation year (January 1, 2024 through December 31, 2024). The content of the notices will remain unchanged and continue to consist of a notice to prescribers that they are violating the CMS EPCS Program requirements, information about how they can come into compliance, the benefits of EPCS, and a link to the CMS EPCS Program dashboard where the prescriber may request a waiver and provide information as to why they are not conducting EPCS.

We proposed to continue the practice of issuing a prescriber a notice of non-compliance as a non-compliance action for subsequent measurement years. As stated in the CY 2023 PFS final rule (87 FR 70013), we believe prescriber use of EPCS encourages the use of interoperable technology, produces a verifiable and traceable history, prevents fraud and abuse, and reduces burden. We believe that continuing to send non-compliance notices would support increased EPCS adherence and encourage increased EPCS adoption rates, which could be more effective than imposing more restrictive non-compliance actions or penalties that may increase burden on prescribers.

In the CY 2023 PFS proposed rule (87 FR 46240 through 46241), we solicited ideas of possible non-compliance actions with the goal of identifying one that would be operationally feasible (for example, can be accomplished without requiring modifications to the data available through the PDE file) and support the nation's ongoing fight against drug abuse and diversion without adding administrative burden to prescribers or hindering beneficiary access to needed medications. We did not receive a large number of comments. However, we did receive one comment specifically noting that non-compliance alone is not a definitive indicator of fraud, waste, or abuse. We agree with the commenter that non-compliance alone is not a definitive indicator of fraud, waste, or abuse; however, we maintain that one risk to public safety is potential fraud, waste, and abuse and intend that a prescriber's non-compliance under the CMS EPCS program may be considered in our processes for assessing potential fraud, waste, and abuse. We may use this information in our processes for assessing potential fraud, waste, and abuse, which, in some instances, could result in a referral to law enforcement or revocation of billing privileges, in the event that evidence of fraud, waste, or abuse is present. At this time, we believe the risk of fraud, waste, or abuse can be mitigated without the need for further penalties for CMS EPCS program non-compliance. Literature suggests a correlation between use of EPCS and reduction in fraud, waste, and abuse related to opioid prescriptions.<sup>439,440</sup> Prescriber use of EPCS is directly related to improving prescription security, decreasing prescription forgery, and reducing the overall chance of fraud and alteration associated with paper prescribing.<sup>441</sup> Also notable are studies demonstrating reductions in opioid overdoses when EPCS use is increased

---

<sup>439</sup> Abuok, Rahi, and David Powell. "Can Electronic Prescribing Mandates Reduce Opioid-Related Overdoses?" Science Direct, JOURNAL of ECONOMICS & HUMAN BIOLOGY, Elsevier B.V., 14 Apr. 2021, <https://doi.org/10.1016/j.ehb.2021.101000>.

<sup>440</sup> Achar, Suraj, et al. "Adoption and Increased Use of Electronic Prescribing of Controlled Substances." *Journal of Medical Regulation*, Federation of State Medical Boards, 27 Aug. 2021, <https://doi.org/10.30770/2572-1852-107.2.8>.

<sup>441</sup> Achar, Suraj, et al. "Adoption and Increased Use of Electronic Prescribing of Controlled Substances." *Journal of Medical Regulation*, Federation of State Medical Boards, 27 Aug. 2021, <https://doi.org/10.30770/2572-1852-107.2.8>.

and general findings that e-prescribing can improve coordination of care, reduce fraud and abuse, and contribute to public health safety.

Although we did not propose further non-compliance actions beyond the extension of sending notices at this time, we will continue to evaluate compliance and prescriber performance under the CMS EPCS Program and will consider whether to propose changes in future years. We solicited comments on our proposal to continue the action of sending notice to prescribers who are identified as non-compliant.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Many commenters supported the proposal to send non-compliance notices to prescribers who do not meet the CMS EPCS Program requirements in subsequent years without imposing additional penalties. Several commenters noted that continuing to send the notices would promote increased EPCS adoption, especially for those who require additional time to update their technological abilities, and any added provider penalties for non-compliance beyond the notice and education could be counterproductive. A few commenters noted that CMS should not impose restrictions, penalties, or other limitations that may interfere with beneficiary access and instead should work with practices to support compliance efforts.

*Response:* We agree that continuing to send non-compliance notices in subsequent years will encourage adoption and compliance without adding prescriber burden or restricting patient access.

*Comment:* A few commenters agreed with CMS's belief that public safety concerns related to fraud, waste and abuse for prescribers who do not use EPCS can be mitigated without additional penalties in the CMS EPCS Program.

*Response:* We agree with commenters. We believe that considering a prescriber's non-compliance under the CMS EPCS program in our processes for assessing potential fraud, waste, and abuse could help identify prescribers who may be avoiding CMS EPCS Program compliance

for harmful reasons. We believe doing so promotes proper prescribing patterns.

*Comment:* A few commenters did not support the proposal to issue a notice of non-compliance as a non-compliance action for the CMS EPCS program requirement in subsequent measurement years; these commenters expressed concerns that additional penalty mechanisms would be needed in addition to the notice in order to increase prescriber adoption and compliance in the CMS EPCS program. One commenter noted that stronger compliance actions might be needed to increase prescriber compliance in the future, but did not provide specific suggestions. One commenter specifically supported further consideration of corrective action plans, public notice of noncompliance, and referral to applicable state regulators. One commenter suggested that the CMS EPCS requirement be connected to the Promoting Interoperability performance category under the MIPS program. Another commenter suggested that CMS consider offering incentives as a future mechanism for those who comply, as a method to encourage implementation. A few commenters acknowledged CMS' authority to refer non-compliant prescribers to other enforcement agencies for investigation. One commenter recommended that CMS provide a "series of escalating notices" that would allow prescribers appropriate time to correct non-compliance.

*Response:* We considered multiple actions for CMS EPCS Program non-compliance but believe continuing to provide non-compliant prescribers with notices, along with using CMS EPCS Program non-compliance information in our processes for identifying fraud, waste, and abuse, is sufficient incentive to encourage EPCS adoption. We will continue to evaluate previously considered actions for non-compliance and their applicability for the future as we evaluate and monitor CMS EPCS Program compliance in subsequent years. We considered the use of corrective action plans, public notice of non-compliant prescribers, referral to state regulators, and believed these options to be logistically complex for the value they would bring. We also considered alignment with existing MIPS reporting options and other financial incentives but do not believe those are feasible at the present time.

We will send notices of non-compliance for each measurement year a prescriber is non-compliant and will provide educational opportunities to support prescribers in becoming compliant. We plan to monitor CMS EPCS program compliance rates and may revisit the use of further non-compliance actions in future rulemaking.

After consideration of public comments, we are finalizing this policy as proposed.

N. Changes to the Regulations Associated with the Ambulance Fee Schedule and the Medicare Ground Ambulance Data Collection System (GADCS)

1. Background on Ambulance Services

Section 1861(s)(7) of the Act establishes an ambulance service as a Medicare Part B service where the use of other methods of transportation is contraindicated by the individual's condition, but only to the extent provided in regulations. Since April 1, 2002, payment for ambulance services has been made under the ambulance fee schedule (AFS), which the Secretary established, as required by section 1834(l) of the Act, in 42 CFR part 414 subpart H. Payment for an ambulance service is made at the lesser of the actual billed amount or the AFS amount, which consists of a base rate for the level of service, a separate payment for mileage to the nearest appropriate facility, a geographic adjustment factor (GAF), and other applicable adjustment factors as set forth at section 1834(l) of the Act and § 414.610 of the regulations. In accordance with section 1834(l)(3) of the Act and § 414.610(f), the AFS rates are adjusted annually based on an inflation factor. The AFS also incorporates two permanent add-on payments in § 414.610(c)(5)(i) and three temporary add-on payments to the base rate and/or mileage rate, which are discussed in the next section of this final rule.

Our regulations relating to coverage of and payment for ambulance services are set forth at 42 CFR part 410, subpart B, and 42 CFR part 414, subpart H.

2. Ambulance Extender Provisions

a. Amendment to Section 1834(l)(13) of the Act

Section 146(a) of the Medicare Improvements for Patients and Providers Act of 2008 (Pub. L. 110–275, enacted July 15, 2009) (MIPPA), amended section 1834(l)(13) of the Act to specify that, effective for ground ambulance services furnished on or after July 1, 2008, and before January 1, 2010, the ambulance fee schedule amounts for ground ambulance services shall be increased as follows:

- For covered ground ambulance transports that originate in a rural area or in a rural

census tract of a metropolitan statistical area, the fee schedule amounts shall be increased by 3 percent.

- For covered ground ambulance transports that do not originate in a rural area or in a rural census tract of a metropolitan statistical area, the fee schedule amounts shall be increased by 2 percent.

The payment add-ons under section 1834(l)(13) of the Act have been extended several times. Most recently, division FF, section 4103 of the Consolidated Appropriations Act, 2023 (Pub. L. 117-328, December 29, 2022) amended section 1834(l)(13) of the Act to extend the payment add-ons through December 31, 2024. Thus, these payment add-ons apply to covered ground ambulance transports furnished before January 1, 2025. In the CY 2024 PFS proposed rule (88 FR 52536), we proposed to revise § 414.610(c)(1)(ii) to conform the regulations to this statutory requirement. (For a discussion of past legislation extending section 1834(l)(13) of the Act, please see the CY 2014 PFS final rule with comment period (78 FR 74438 through 74439), the CY 2015 PFS final rule with comment period (79 FR 67743), the CY 2016 PFS final rule with comment period (80 FR 71071 through 71072) and the CY 2019 PFS final rule with comment period (83 FR 59681 through 59682)).

This statutory requirement is self-implementing. A plain reading of the statute requires only a ministerial application of the mandated rate increase and does not require any substantive exercise of discretion on the part of the Secretary.

We received one comment regarding this proposal. The following is the summary of the comment we received and our response.

*Comment:* One commenter supported the proposal and agreed with CMS that the statutory provision is self-implementing and that these provisions are critically important to ground ambulance services.

*Response:* We appreciate the commenter's support of these provisions.

After consideration of the public comment that we received, we are finalizing our

proposal to revise § 414.610(c)(1)(ii) to conform the regulations to this statutory requirement.

b. Amendment to Section 1834(l)(12) of the Act

Section 414(c) of the Medicare Prescription Drug, Improvement and Modernization Act of 2003 (MMA) (Pub. L. 108-173, December 8, 2003) added section 1834(l)(12) to the Act, which specified that, in the case of ground ambulance services furnished on or after July 1, 2004, and before January 1, 2010, for which transportation originates in a qualified rural area (as described in the statute), the Secretary shall provide for a percent increase in the base rate of the fee schedule for such transports. The statute requires this percent increase to be based on the Secretary's estimate of the average cost per trip for such services (not taking into account mileage) in the lowest quartile of all rural county populations as compared to the average cost per trip for such services (not taking into account mileage) in the highest quartile of rural county populations. Using the methodology specified in the July 1, 2004 interim final rule (69 FR 40288), we determined that this percent increase was equal to 22.6 percent. As required by the MMA, this payment increase was applied to ground ambulance transports that originated in a "qualified rural area," that is, to transports that originated in a rural area comprising the lowest 25th percentile of all rural populations arrayed by population density. For this purpose, rural areas included Goldsmith areas (a type of rural census tract). This rural bonus is sometimes referred to as the "Super Rural Bonus" and the qualified rural areas (also known as "super rural" areas) are identified during the claims process via the use of a data field included in the CMS-supplied ZIP code file.

The Super Rural Bonus under section 1834(l)(12) of the Act has been extended several times. Most recently, division FF, section 4103 of the CAA, 2023 amended section 1834(l)(12)(A) of the Act to extend this rural bonus through December 31, 2024. Therefore, we are continuing to apply the 22.6 percent rural bonus described in this section (in the same manner as in previous years) to ground ambulance services with dates of service before January 1, 2025 where transportation originates in a qualified rural area. Accordingly, in the CY 2024 PFS

proposed rule (88 FR 52536), we proposed to revise § 414.610(c)(5)(ii) to conform the regulations to this statutory requirement. (For a discussion of past legislation extending section 1834(l)(12) of the Act, please see the CY 2014 PFS final rule with comment period (78 FR 74439 through 74440), CY 2015 PFS final rule with comment period (79 FR 67743 through 67744), the CY 2016 PFS final rule with comment period (80 FR 71072) and the CY 2019 PFS final rule with comment period (83 FR 59682)).

This statutory provision is self-implementing. It requires an extension of this rural bonus (which was previously established by the Secretary) through December 31, 2024, and does not require any substantive exercise of discretion on the part of the Secretary.

We received one comment regarding this proposal. The following is the summary of the comment we received and our response.

*Comment:* One commenter supported the proposal and agreed with CMS that the statutory provision is self-implementing and that these provisions are critically important to ground ambulance services.

*Response:* We appreciate the commenter's support of these provisions.

After consideration of the public comment that we received, we are finalizing our proposal to revise § 414.610(c)(5)(ii) to conform the regulations to this statutory requirement.

### 3. Medicare Ground Ambulance Data Collection System

#### a. Background

Section 50203(b) of the BBA of 2018 added paragraph (17) to section 1834(l) of the Act, which requires ground ambulance providers of services and suppliers (ground ambulance organizations) to submit cost and other information. Specifically, section 1834(l)(17)(A) of the Act requires the Secretary to develop a data collection system (which may include use of a cost survey) to collect cost, revenue, utilization, and other information determined appropriate by the Secretary for providers and suppliers of ground ambulance services. Section 1834(l)(17)(B)(i) of the Act required the Secretary to specify the data collection system by December 31, 2019, and

to identify the ground ambulance providers and suppliers that would be required to submit information under the data collection system. Section 1834(l)(17)(D) of the Act required that beginning January 1, 2022, the Secretary apply a 10 percent payment reduction to payments made under section 1834(l) of the Act for the applicable period to a ground ambulance provider or supplier that is required to submit information under the data collection system and does not sufficiently submit such information. The term “applicable period” is defined under section 1834(l)(17)(D)(ii) of the Act to mean, for a ground ambulance provider or supplier, a year specified by the Secretary not more than 2 years after the end of the period for which the Secretary has made a determination that the ground ambulance provider or supplier has failed to sufficiently submit information under the data collection system. Division P, section 311 of the CAA, 2022 (Pub. L. 117-103) amended section 1834(l)(17)(F)(i) of the Act to delay the deadline for MedPAC to submit its report to Congress on the ground ambulance data collection system study until the second June 15th following the date the Secretary transmits data for the first representative sample of ground ambulance organizations. Section 1834(l)(17)(I) of the Act states that the Paperwork Reduction Act (PRA) (44 USC § 3501 et seq.) does not apply to the collection of information required under section 1834(l)(17) of the Act.

In the CY 2020 PFS final rule (84 FR 62864 through 62897), we implemented section 1834(l)(17) of the Act and codified regulations governing data reporting by ground ambulance organizations at §§ 414.601, 414.605, 414.610(c)(9), and 414.626. We also finalized a data collection system that collects detailed information on ground ambulance provider and supplier characteristics including service areas, service volume, costs, and revenue through a data collection instrument, commonly referred to as the Medicare Ground Ambulance Data Collection Instrument, via a web-based system. We refer the reader to our CY 2020 PFS final rule (84 FR 62864 through 62897) for more specifics on the establishment of the Medicare Ground Ambulance Data Collection System.

In the CY 2022 PFS final rule (86 FR 65306 through 65317), we finalized a number of updates to the Medicare Ground Ambulance Data Collection System, including: (1) a new data collection period beginning between January 1, 2023, and December 31, 2023, and a new data reporting period beginning between January 1, 2024, and December 31, 2024, for selected ground ambulance organizations in Year 3; (2) aligning the timelines for the application of penalties for not reporting data with our new timelines for data collection and reporting and a notice that the data collected will be publicly available beginning in 2024; and (3) revisions to the Medicare Ground Ambulance Data Collection Instrument that include better accounting for labor hours across different categories of personnel and better distinguishing between accrual and cost basis accounting methodologies. We refer the reader to our CY 2022 PFS final rule (86 FR 65306 through 65317) for more specifics on the revisions to the Medicare Ground Ambulance Data Collection System.

In the CY 2023 PFS final rule (87 FR 70014) we finalized a series of changes to the Medicare Ground Ambulance Data Collection System. First, we finalized our proposal to update our regulations at § 414.626(d)(1) and (e)(2) to provide the necessary flexibility to specify how ground ambulance organizations should submit hardship exemption requests and informal review requests, including to our web-based portal once that portal is operational. Second, we finalized our proposed changes and clarifications to the Medicare Ground Ambulance Data Collection Instrument to reduce burden on respondents, improve data quality, or both. We refer the reader to our CY 2023 PFS final rule (87 FR 70014) for more specifics on the revisions to the Medicare Ground Ambulance Data Collection System.

#### b. Revisions to the Medicare Ground Ambulance Data Collection Instrument

As described in the CY 2022 PFS final rule (86 FR 65307) and the CY 2023 PFS Final Rule (87 FR 70014), we made several changes to the instrument instructions and questions to improve clarity and reduce burden for respondents. A printable version of the current instrument instructions and questions is available in English and Spanish on the CMS website at

*<https://www.cms.gov/Medicare/Medicare-Fee-for-Service->*

*[Payment/AmbulanceFeeSchedule/Ground-Ambulance-Services-Data-Collection-System](https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AmbulanceFeeSchedule/Ground-Ambulance-Services-Data-Collection-System)*.

We continue to receive ad hoc questions and feedback related to the Medicare Ground Ambulance Data Collection System and the Medicare Ground Ambulance Data Collection Instrument via four primary channels. First, we receive email and other written communication from ground ambulance organizations via the CMS Ambulance Data Collection email inbox (*[AmbulanceDataCollection@cms.hhs.gov](mailto:AmbulanceDataCollection@cms.hhs.gov)*) and through other channels (for example, inquiries sent by organizations to Medicare Administrative Contractors (MACs) and then forwarded to CMS). These emails and other communications often include questions seeking clarification of instrument questions and their applicability to specific ground ambulance organization scenarios and context. We continue to update a Medicare Ground Ambulance Data Collection System Frequently Asked Questions (FAQ) document with answers and the GADCS User Guide to commonly asked questions. These documents are available on the CMS website at *<https://www.cms.gov/medicare/medicare-fee-for-service-payment/ambulancefeeschedule/ground-ambulance-services-data-collection-system>*. Through review of questions and feedback, we identified some instances where a clarification to the instrument language itself will likely be more useful and less burdensome to respondents than having to respond with reference to the FAQ document, the GADCS User Guide, or to other resources. Second, we answer questions live from interested parties during webinars, dedicated question and answer sessions, and other educational sessions. As with the emailed questions described above, live question and answer exchanges sometimes identify opportunities for clarifying instrument language. Third, we have begun analyzing initial data responses submitted via the GADCS portal by selected organizations in Year 1 and Year 2. Findings from this initial analysis, including inconsistent response patterns, unusual combinations of responses across questions, and investigation of outlier results were helpful to identify some additional opportunities for clarification. Fourth, we continue to identify opportunities to clarify

instructions and correct a small number of typos through the final development and launch of the web-based GADCS.

Based on information that we received via the four sources described above, we proposed in CY 2024 PFS proposed rule (88 FR 52537), the following further changes and clarifications to the Medicare Ground Ambulance Data Collection Instrument. The changes and clarifications aimed to reduce burden on respondents, improve data quality, or both.

#### 1. Addressing Partial-Year Responses

Ground ambulance organizations selected to participate in the GADCS that are in operation for only part of their continuous, 12-month data collection period are, following the GADCS instructions, still required to collect and report data. However, there is not a field for these organizations to report that they were in operation, and therefore collecting data, for less than a full 12-month period via the GADCS. In these cases, we would not know that the costs, revenue, and utilization reported by these partial-year organizations are comparatively smaller than those reported by similar organizations in operation for an entire 12-month period. As a result, some statistics from analyses of GADCS data, for example total annual expenditures per ground ambulance organization, would be biased downward.

To address this limitation, we proposed in the CY 2024 PFS proposed rule (88 FR 52538) to add a response option to Section 2 (Organizational Characteristics), Question 1 which asks whether the selected national provider identifier (NPI) linked to the organization was used to bill Medicare for ground ambulance services during its data collection period. The current response options are “Yes (1)” and “No (0)”. We proposed to split the existing “Yes (1)” response into two separate responses, one reading “Yes, throughout the organization’s continuous, 12-month data collection period (1)” and “Yes, but for only part of the organization’s continuous, 12-month data collection period (2).” The “No (0)” response would not change. Respondents from organizations that billed for ground ambulance services during part of, but not all of, its continuous, 12-month data collection period, would select “Yes, but for only part of the

organization's continuous, 12-month data collection period (2)". Those that did so would be prompted to enter the date they started and/or stopped operations during the continuous, 12-month data collection period in a pop-up box, followed by an instruction to proceed through the remainder of the GADCS reporting process.

Organizations selecting "Yes, throughout the organization's continuous, 12-month data collection period (1)" would proceed through the rest of the GADCS reporting process as would respondents answering "Yes (1)" to this question currently. Organizations selecting "No (0)" would, as is currently the case, be prompted with several follow-up questions which result in either: outreach to the GADCS helpdesk for assistance if the listed NPI does not match their organization, or if they answer that none of the scenarios in the follow-up questions apply or to the completion of the organization's data reporting requirement.

This approach allows CMS to understand when reported costs, revenue, and utilization are measured over a period of time less than a full 12 months and, if necessary, to adjust partial-year responses so that they are more comparable to most responses that will cover a continuous full 12-month data collection period. Furthermore, we believe this approach will reduce confusion and burden for organizations in operation for only part of their 12-month data collection periods.

We solicited comments on this proposal to address partial-year responses.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Two commenters stated their overall support for our proposals to the Medicare Ground Ambulance Data Collection Instrument in the CY 2024 PFS proposed rule. The commenters appreciated CMS' efforts to educate, as well as to listen to input from interested parties and revise the data collection instrument based on this feedback.

Response: We appreciate the commenters' support of our proposals.

After consideration of the public comments we received, we are finalizing our proposal to add the ability to address partial- year responses as proposed.

## 2. Programming Logic for Hospitals and Other Medicare Providers of Services

Section 2 of the GADCS printable instrument includes a programming note after Question 9 reading: “For the remainder of the data collection instrument, instructions and items related to fire, police, or other public safety department-based ground ambulance organizations are shown to organizations that answer Section 2, Question 7= “a” or “b” OR Question 8 = Yes (1) OR answer Question 9 = Yes (1) to one or both of a and b.” The intent of this programming note is to ensure questions in Section 7 (Labor Costs) present instructions and response fields appropriate to organizations with staff having both ground ambulance and fire, police, or other public safety responsibilities. In other words, a for-profit, ground ambulance-only organization should not be asked whether they have ground ambulance staff with fire, police, or other public safety responsibilities, while a fire department-based ground ambulance organization should.

Section 2, Question 8 asks whether organizations reporting to be fire department-based (response “a” in Section 2, Question 7), police or other public safety department-based (response “b” in Section 2, Question 7), or hospital or other Medicare provider of services-based (response “d” in Section 2, Question 7) share operational costs between ground ambulance and the respective other reported function. A programming note for Section 2, Question 8 states that the question should be asked of organizations responding a, b, or d to Section 2, Question 7. As a result, hospitals and other Medicare provider of services-based organizations responding “d” in Section 2, Question 7 are presented with Section 2, Question 8, and many may respond “Yes” to Section 2, Question 8. As discussed above, answering “Yes” to Section 2, Question 8 triggers the appearance of table columns in Section 7, Question 1 related to fire, police, and other public safety staff (“Section 2, Question 7= “a” or “b” OR Question 8 = Yes (1) OR answer Question 9 = Yes (1) to one or both of a and b).

As a result of these programming notes, many hospital-based organizations answering “d” to Section 2, Question 7 and “Yes” to Section 2, Question 8, and any options other than “a” or “b” in Section 2, Question 9 will see columns for fire, police, and other public safety staff in Section 7, Question 1, which was not intended. We believe that no ground ambulance organizations with this response pattern will have fire, police, or other public safety staff to report via the GADCS. Furthermore, we are concerned that this will result in confusion for hospital-based organizations.

In the CY 2024 PFS proposed rule (88 FR 52538), we proposed to change the programming note after Section 2, Question 9 to read as follows: “...instructions and items related to fire, police, or other public safety department-based ground ambulance organizations are shown to organizations that: (A) answer Section 2, Question 7= “a” or “b” AND answering Question 8 = Yes (1); OR, (B) answer Question 9 = Yes (1) to one or both of “a” or “b”.” This change to the programming logic will result in provider-based ground ambulance organizations seeing only two columns in Section 7, Question 1, one for paid and the other, if applicable, for volunteer staff, and not columns specific to staff with fire, police, or other public safety responsibilities.

We solicited comments on this proposal to change the programming note after Section 2, Question 9 in the GADCS printable instrument.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Two commenters stated their overall support for our proposals to the Medicare Ground Ambulance Data Collection Instrument in the CY 2024 PFS proposed rule. The commenters appreciated CMS’ efforts to educate, as well as to listen to input from interested parties and revise the data collection instrument based on this feedback.

Response: We appreciate the commenters’ support of our proposals.

After consideration of the public comments we received, we are finalizing our proposal to change the programming note after Section 2, Question 9 in the GADCS printable instrument as proposed.

### 3. Typos and Technical Corrections

In the CY 2024 PFS proposed rule (88 FR 52538), we proposed to make four corrections to the GADCS printable instrument.

- Section 2, Question 1a.ii is missing the word “period” after “data collection” in the text. Therefore, we proposed the question to read as: “The NPI was in operation during the data collection period but was not used during the data collection to bill Medicare for ground ambulance services.”

- Section 2, Question 3 in the printable instrument questions “What is the name of your organization? For the remainder of the instrument, the term “organization” refers to the NPI for which we are requesting data. (enter name)” while the web-based GADCS asks “Is [ORGANIZATION NAME] the name of your organization? For the remainder of the instrument, the term ‘organization’ refers to the NPI for which we are requesting data. Yes (1) /No (0).” The web-based GADCS asks the question in this way because organization name is pre-populated in the system and not entered directly. We proposed to change the language in the printable instrument to match the text in the web-based GADCS for consistency.

- Section 9.1 (Ground Ambulance Vehicle Costs), Question 5 current wording states “Do not report ground ambulance acquisition costs related to an annual depreciation expense for the same ambulance” which does not make sense. We proposed Question 5 to read as: “Do not report an acquisition cost and an annual depreciation expense for the same ground ambulance.”

- Section 9.2 (Other Vehicle Costs (Non Ambulance)), Question 5 current wording includes the same error as noted above for Section 9.1, Question 5, and also mistakenly refers to ground ambulances rather than non-ambulance vehicles: “Do not report non-ambulance vehicle acquisition costs related to an annual depreciation expense for the same ground ambulance.” We

proposed to change the question to read as: “Do not report an acquisition cost and an annual depreciation expense for the same ground non-ambulance vehicle.”

We solicited comments on these proposals related to GADCS typos and technical corrections.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Two commenters stated their overall support for our proposals to the Medicare Ground Ambulance Data Collection Instrument in the CY 2024 PFS proposed rule.

*Response:* We appreciate the commenters’ support of our proposals.

After consideration of the public comments we received, we are finalizing our typos and technical corrections as proposed.

## O. Hospice: Changes to the Hospice Conditions of Participation

### 1. Background and Statutory Authority

We have broad statutory authority for most provider and supplier types to establish health and safety regulations, which includes the authority to establish health and safety requirements that advance health equity for underserved communities. Certain statutes explicitly give CMS the authority to enact regulations that the Secretary finds necessary in the interest of the health and safety of individuals who are furnished services in an institution, while others give CMS the authority to prescribe regulations as may be necessary to carry out the administration of the program. Section 122 of the Tax Equity and Fiscal Responsibility Act of 1982 (Pub. L. 97-248) (TEFRA), added section 1861(dd) to the Act to provide coverage for hospice care to terminally ill Medicare beneficiaries who elect to receive care from a Medicare-participating hospice. Under the authority of section 1861(dd)(2)(G) of the Act, the Secretary established the Conditions of Participation (CoPs) that a hospice must meet to participate in Medicare and/ or Medicaid, and these conditions are set forth at 42 CFR part 418. The CoPs apply to the hospice as an entity, as well as to the services furnished to each individual under hospice care. Under section 1861(dd), the Secretary is responsible for ensuring that the CoPs and their enforcement, are adequate to protect the health and safety of the individuals under hospice care. To implement this requirement, State survey agencies conduct surveys of hospices to assess their compliance with the CoPs.

The Consolidated Appropriations Act of 2023 (Pub. L. 117-328) (CAA 2023), was signed into law on December 29, 2022. Division FF, section 4121 of the CAA 2023 establishes a new Medicare benefit category for marriage and family therapist (MFT) services and mental health counselor (MHC) services furnished by and directly billed by MFTs and MHCs, respectively. Section 4121(b)(2) of CAA 2023 specifically adds these services to covered hospice care services under section 1861(dd)(2)(B)(i)(III) of the Act. To implement division FF, section 4121 of the CAA 2023, we proposed to modify the requirements for the hospice CoPs at

§ 418.56 “*Interdisciplinary group, care planning and coordination of service,*” and §418.114 “*Personnel qualifications.*” This statutorily-required modification allows MFTs and MHCs to serve as members of the interdisciplinary group (IDG). Specifically, the CAA 2023 revised section 1861(dd) of the Act to state that the hospice interdisciplinary group is required to include a social worker, MFT, or MHC. In addition, we proposed to modify the hospice personnel qualification at § 418.114(c) to also include qualifications for an MFT and an MHC.

## 2. Summary of the Hospice Proposed Provisions, Public Comments, and Responses to Comments:

In this section, we discuss the public comments received on the inclusion of an MFT and MHC as part of the IDG for hospice care and personnel requirements. We received a total of 13 unique comments from patient advocacy groups, national associations, and individuals with a personal or professional interest in this proposed rule. Overall, commenters were generally supportive of the addition of the MFT and MHC to the hospice IDG. Several of the comments sought additional information and clarification on the implementation of these proposals. In addition, many comments expressed burden concerns related to staffing shortages and highlighted the challenges rural areas experience with limited access to behavioral health professionals. A few commenters believed CMS misinterpreted the Statute and that the proposed provisions do not align with congressional intent.

The following is a summary of the comments we received, our responses, and the policies we are finalizing for hospices.

### a. General Comments

*Comment:* A commenter asked if an MFT and MHC will be able to admit a hospice patient, stating that social workers are able to admit patients. They stated that because (based on the commenter’s understanding) social workers can admit a hospice patient, the MFT and MHC should also be able to do the same. Further, a commenter asked if the hospice MSW would supervise the MFT and MHC.

*Response:* We thank the commenter for the question regarding admitting a patient to hospice. We believe the commenter is referring to the hospice's initial visit with the patient. The initial and comprehensive assessment requirements for hospices have not changed and can be found at § 418.54. Specifically, at § 418.54(a), we require the hospice registered nurse to complete an initial assessment within 48 hours after the election of hospice care in accordance with § 418.24 (unless the physician, patient, or representative requests that the initial assessment be completed in less than 48 hours.) There are no requirements in the assessment CoPs that require the social worker (SW) to be included in the initial assessment visit. However, we understand that many hospices utilize both the nurse and the SW for the initial assessment. Therefore, it would be within the individual hospice's purview to allow for the MFT or MHC to accompany the nurse to complete the initial assessment.

There are no regulatory requirements for the supervision of the MFT and MHC other than what is referenced in the *Condition of participation: Interdisciplinary group, care planning, and coordination of services*, § 418.56(a)(1). The role of the IDG is to meet the physical, medical, psychosocial, emotional, and spiritual needs of the hospice patients and families facing terminal illness and bereavement; "Interdisciplinary group members must provide the care and services offered by the hospice, and the group, in its entirety, must supervise the care and services."<sup>442</sup>

*Comment:* A commenter asked for clarification on the billing requirements for MFTs and MHCs, and if CMS will communicate this through a change request. In addition, the commenter asked if this information will be communicated in the Physicians Fee Schedule final rule or in a hospice final rule. The commenter recommended that this information be included in the 2024 hospice final rule to ensure that the target audience is aware of these proposals and for continuity. Lastly, a commenter asked for additional clarification regarding the language in this proposed rule, specifically, "Division FF, Section 4121 of the CAA 2023 and the establishment of a new Medicare benefit category for MFT and MHC services furnished and directly billed by

---

<sup>442</sup> <https://www.govinfo.gov/content/pkg/FR-2008-06-05/pdf/08-1305.pdf>.

MFTs and MHCs respectively.”

*Response:* The referenced language in the CAA 2023 refers to the establishment of MFT and MHC as providers under Medicare. This rule set forth certain requirements for MFT and MHC enrollment, qualifications, and billing as Part B providers. However, the billing of these services under Part B does not apply to hospices. Hospices are paid at a daily rate for each patient based on the patient’s level of care. Similar to other hospice services, the services of MFTs and MHCs are included in that daily rate. There are no separate billing provisions for MFT and MHC services, and an MFT or MHC cannot independently bill Medicare for services rendered to a hospice patient.

While we understand publishing the proposed rule and finalizing these requirements in a hospice rule may have been more apparent to the hospice industry, due to the hospice wage index publication dates and the CAA 2023 implementation requirements; it was determined that the CY 2024 PFS rule was the best rulemaking vehicle to propose and finalize the CAA requirements. Therefore, all the hospice CoP information and requirements related to MHCs and MFTs are published in this final rule, and there are no plans to republish this information in a separate hospice rule.

*Comment:* One commenter stated that it was their understanding that the MFT and MHC appear to be missing from other applicable regulations, specifically that MFTs and MHCs are not listed as medical social service providers in the way in which social workers are listed at §§ 418.64 and 418.202. One commenter suggested that the MFT and MHC be added to medical social services, or that the mention of the SW be removed from this provision.

*Response:* We thank this commenter for their feedback. While the social worker is a member of core services, a MFT and MHC are not. The CAA 2023 did not modify the Statute to include the MFT or MHC under medical social services. The Hospice Benefit Policy Manual defines medical social services as, “services which contribute meaningfully to the treatment of a patient’s condition. Such services include, but are not limited to: Assessment of the social and

emotional factors related to the patient’s illness, need for care, response to treatment, and adjustment to care in the facility; Appropriate action to obtain case work services to assist in resolving problems in these areas; and Assessment of the relationship of the patient’s medical and nursing requirements to their home situation, financial resources, and the community resources available to them in making the decision regarding their discharge.”<sup>443</sup> In addition, the hospice 2008 final rule entitled, “Medicare and Medicaid Programs: Hospice Conditions of Participation” (73 FR 32088) stated, “It is essential that the individuals providing medical social services to hospice patients be qualified to provide these services.”<sup>444</sup> Section § 418.114 addresses the personnel qualifications that social workers must meet in order “to provide services to hospice patients.” Longstanding CMS regulations and policies across multiple provide types including hospice, home health agencies, and hospitals considers medical social services, also referred to as social services, to be linked directly to the scope of practice and duties of the social worker.<sup>445,446,447</sup> For example, Chapter 9 of the Medicare Benefit Policy Manual, “Coverage of Hospice Services Under Hospital Insurance,” states that “Medical social services must be provided by a person who meets the criteria given in the Conditions of Participation at § 418.114(b)(3).”<sup>448</sup> Section § 418.114(b)(3) defines a “social worker” as, a person who has a Master of Social Work (MSW) degree from a school of social work accredited by the Council on Social Work Education; or has a baccalaureate in social work from an institution accredited by the Council on Social Work Education; or a baccalaureate degree in psychology, sociology, or other field related to social work and is supervised by an MSW as described in paragraph (b)(3)(i)(A) of this section; and has 1 year of social work experience in a healthcare setting; or Has a baccalaureate degree from a school of social work accredited by the Council on Social

<sup>443</sup> <https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/bp102c01.pdf>.

<sup>444</sup> <https://www.federalregister.gov/documents/2008/06/05/08-1305/medicare-and-medicaid-programs-hospice-conditions-of-participation>.

<sup>445</sup> [www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/bp102c09.pdf](https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/bp102c09.pdf).

<sup>446</sup> <https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/bp102c07.pdf>.

<sup>447</sup> <https://www.ecfr.gov/current/title-42/chapter-IV/subchapter-B/part-409/subpart-E/section-409.45>.

<sup>448</sup> <https://www.ecfr.gov/current/title-42/chapter-IV/subchapter-B/part-418>.

Work Education, is employed by the hospice before December 2, 2008, and is not required to be supervised by a MSW.<sup>449</sup> Therefore, it would not be appropriate to add MFT and MHC to the medical social service requirement.

*Comment:* Multiple commenters expressed concern over the staffing shortages and lack of mental health professionals in certain areas of the country, including rural areas. Specifically, commenters stated that rural areas may not have access to MFTs and MHCs and asked how hospices should address this access issue. A commenter also asked if hospices will be able to contract these professionals for remote visits and if this would still meet the intent of the regulation. The commenter expressed concern over transporting the patient to these professionals due to their illness and explained that they were unaware of MFTs or MHCs making home visits.

*Response:* We acknowledge the presence of staffing shortages and recognize the importance of increasing the presence of and access to behavioral health professionals. We are aware that hospices in rural areas experience challenges in recruiting and retaining staff and that there is a shortage of behavioral health providers. We also recognize the value of telehealth services in improving access to health care services. However, the final rule, “Medicare Program; FY 2024 Hospice Wage Index and Payment Rate Update, Hospice Conditions of Participation Updates, Hospice Quality Reporting Program Requirements, and Hospice Certifying Physician Provider Enrollment Requirements” published August 2, 2023, (88 FR 51164) clarifies that the hospice regulations at § 418.204 were amended on an interim basis during the COVID-19 Public Health Emergency (PHE). This amendment of the requirements allows for a waiver for hospices to provide services via telecommunications if it was feasible and appropriate to ensure that Medicare patients could continue receiving services that were reasonable and necessary for the palliation and management of a patient’s terminal illness and related conditions without jeopardizing the patient’s health and or the health of those who are providing such services during the COVID-19 PHE. This amendment only authorized the

---

<sup>449</sup> <https://www.ecfr.gov/current/title-42/chapter-IV/subchapter-B/part-418>.

Secretary to extend this flexibility through December 31, 2024. Additionally, the authors of the Hospice Wage Index Final Rule note that the hospice benefit is best when provided in person and stress the importance of in-person services.<sup>450</sup>

*Comment:* A commenter expressed support for the IDG changes and suggested that CMS should allow PAs and NPs to substitute in the place of a physician as a required member of the IDG.

*Response:* We appreciate the commenters support on the IDG provision. We note that the IDG member requirements at § 418.56(a)(1) are statutorily-mandated at section 1861(dd)(2)(B)(i) of the Act. Therefore, there would need to be a change in the law for CMS to amend the hospice regulations in the manner suggested by the commenter.

*Comment:* One commenter sought additional information regarding HCPCS codes, quality reporting programs, and the hospice cost report. Specifically, this commenter asked if CMS will add HCPCS codes to hospice claims for identification of visits made by MFTs and MHCs. They also asked if there were plans to include MFT and MHC visits in the hospice quality reporting program. Lastly, this commenter asked how hospices should record MFT and MHC visits in the hospice cost report.

Response: We thank this commenter for their thoughtful questions. However, these topics are outside the scope of the CoPs. We will consider this feedback and share it with our CMS colleagues so that it may be taken into consideration in future rulemaking.

b. § 418.56 Condition of Participation: Interdisciplinary group, care planning, and coordination of services.

At § 418.56(a)(1)(iii) we proposed to require that the IDG must include a social worker (SW), MFT, or MHC depending on the preferences and needs of the patient. Section 4121 of the CAA 2023 specifically modified the statute to require the hospice interdisciplinary team to

---

<sup>450</sup> <https://www.federalregister.gov/documents/2023/08/02/2023-16116/medicare-program-fy-2024-hospice-wage-index-and-payment-rate-update-hospice-conditions-of>.

include one SW, MFT, or MHC. However, we emphasized that each hospice patient and family are different in their needs and goals. We explained how the services SWs, MFTs, and MHCs provide are not interchangeable, and that each offers unique support that may be valuable to the patient and family based on the situation. Therefore, it is important for the hospice to assess and determine what care and services best support the needs of the patient. This information would be included in the individualized patient plan of care in accordance with § 418.56(c), as well as which discipline(s) (SW, MFT, or MHC) will be caring for the hospice patient. We note that the IDG must develop an individualized plan of care for each patient that is based on the needs of the patient, so we expect that the needs of the patient will be addressed regardless of whether a SW, MFT, or MHC serves on the IDG.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Several commenters expressed concern that CMS was misinterpreting the statute and that the proposed provisions do not align with congressional intent. Specifically, the commenters noted that they do not believe that the patient preferences and needs of the patient should drive the IDG membership. These commenters pointed out that the provision in the CAA 2023 was meant to be optional, allowing the choice of which practitioner will sit on the IDG. They stated that making it mandatory would create a significant burden for hospices and be difficult to comply with. Commenters emphasized the use of the word “or” in the amended language of the CAA 2023 indicates that the hospice IDG includes at least one SW, one MFT, or one MHC, not all three disciplines. The hospice community interpreted the language in the CAA to mean that hospices have the choice of using a SW, MFT, or MHC, and would not be required to employ or contract with a MFT or MHC. One commenter urged CMS to underscore that it is not a requirement to make them available, even when counseling services are in the plan of care. The commenters emphasized that requiring every hospice to add an MFT or MHC would deprive beneficiaries of access to hospice care. Commenters explained that the statute indicates the

disciplines from which a hospice must choose IDG members to, “provide or supervise the provision of,” covered hospice services. The commenters noted that the statute does not address the needs and preferences of the patient, and one commenter expressed their belief that CMS was exceeding their statutory authority by adding “depending on the preferences and needs of the patient” to this requirement. They explained that their interpretation on the use of this language would require the hospice to have all three disciplines as part of the IDG and that this would eliminate the intended flexibility for hospices to choose the IDG members. They also noted that regulations implementing the statutory language regarding IDG membership have not been connected to patient needs and preferences in the past. Commenters stated it will be necessary to revise the proposed provisions to accurately and completely implement this statutory amendment.

*Response:* The hospice IDG will only be required to include one SW, one MFT, or one MHC. The hospice is not required to include all three of these professions as members of the IDG. We note that the hospice may choose (although is not required) to select more than one of these professions to serve as member(s) of the IDG. The MFT or MHC must be hired as a direct employee which would include the options of hiring full time, part time or per diem. This may alleviate some of the staffing challenges that hospices may experience by allowing more flexibility in the recruitment and hiring process. In addition, the 2008 hospice final rule (73 FR 32088) implemented section 946 of the MMA (Medicare Modernization Act).<sup>451</sup> In accordance with section 946 of the MMA, a hospice (the primary hospice) may enter into arrangements with another Medicare-certified hospice to obtain core hospice services. The MMA provided that this could be done under extraordinary or other nonroutine circumstances. The Act specifically states “substantially all” in recognition of the fact that there are times when hospices must contract for core services. Section 1861(dd)(5)(D) of the Act identifies the circumstances in which hospices

---

<sup>451</sup> <https://www.federalregister.gov/documents/2008/06/05/08-1305/medicare-and-medicaid-programs-hospice-conditions-of-participation>.

are permitted to contract for core services as those that are “extraordinary” or otherwise “nonroutine” such as unanticipated periods of high patient loads, temporary staffing shortages, and travel of a patient outside of the hospice’s service area. The provision at § 418.64(d) requires counseling services to be available to the patient and family to assist the patient and family in minimizing the stress and problems that arise from the terminal illness, related conditions, and the dying process. We believe the MFT and MHC primarily provide counseling services and that counseling services are considered core services of the hospice. The “extraordinary circumstance” provision is generally a short-term temporary event that was unanticipated. This may allow hospices the flexibility to contract for the MFT or MHC during temporary staffing shortages. If a hospice chooses to contract with another Medicare-certified hospice or a non-hospice entity, the contracting hospice or non-hospice entity must maintain professional management responsibility for the services provided, in accordance with § 418.100(e). During a survey to determine the hospice’s compliance with the CoPs, the hospice should be able to explain why it is using the “extraordinary circumstance” to mitigate the staffing shortages and how it is working towards hiring direct staff. The survey process for Medicare and Medicaid participating hospices provides an opportunity for them to demonstrate compliance with all of the applicable CoPs. The methods used by CMS to determine compliance with the hospice regulations include surveys conducted by a State survey agency and surveys conducted by AOs that have deeming authority for Medicare and Medicaid participating hospices. Currently, the professionals (physician, registered nurse, social worker, pastoral or other counselor) that comprise the IDG are responsible for providing and supervising the provision of the care and services for each patient. The CAA 2023 has now provided hospices with the option to select between multiple professionals. In the past, the IDG structure did not require hospices to distinguish between different disciplines, each with their own unique scope of practice, when determining IDG membership. As stated earlier, and commenters agreed, the services provided by SWs, MFTs, and MHCs are not interchangeable. Each offers unique support that may be

valuable to the patient and family based on the situation. For example, a SW may assist the patient and their family with issues regarding finances or connecting the family to valuable community resources. Conversely, therapy and counseling services traditionally may help patients cope with mental distress.

We believe it is important for the hospice IDG to consider the patients' assessed needs to ensure IDG member, whether it be a SW, MFT or MHC, have the appropriate knowledge and scope of practice to share and recommend care options related to the services that patient is receiving or may need. We agree the hospice has the choice to select either a SW, MFT or MHC. We also understand that hospice may have IDG team members pre-selected to serve on specific teams, and it may be administratively impractical to change a member based on the needs of one patient. Therefore, we are not finalizing the requirement that the SW, MFT, or MHC be a member of the IDG "based on the needs and preferences of the patient." While we are modifying the proposed requirement, we stress that hospices have always had the option to have non-IDG staff that provide care for the patient to attend the IDG meetings to share patient status, issues/concerns, and recommendations. For example, if the patient is receiving care and services from a SW and MFT, and the MFT is the designated member of the IDG; the SW could attend the IDG meeting and provide the IDG team with updates related to social work services. Additionally, if the patient is receiving volunteer services, the volunteer may attend the IDG meeting to share information that will assist with informing the plan of care.

The provisions at § 418.56(e) requires the hospice to develop and maintain a system of communication and integration, in accordance with the hospice's own policies and procedures. The provision also requires the hospice IDG to maintain responsibility for directing, coordinating, and supervising the care and services provided; ensure that the care and services are provided in accordance with the plan of care (which is based on the needs of the patient); ensure that the care and services provided are based on all assessments of the patient and family needs, and to provide for and to ensure the ongoing sharing of information between all disciplines

providing care and services in all settings, whether the care and services are provided directly or under arrangement.<sup>452</sup> The hospice model has always been based on an interdisciplinary care model, which requires frequent communication between care disciplines across settings, as well as between the hospice, the patient and the family. The hospice relies on communication between and integration of providers to effectively plan and furnish care to patients and families. Over time, hospices have developed methods within their policies and procedures to ensure that all members of a patient's care team receive timely information about patients. Therefore, we expect that the hospices' "system of communication" would include how information is communicated and shared during the IDG meetings; ensuring pertinent patient care information from each discipline caring for each patient are communicated with the IDG, according to the hospices own policies.

*Comment:* Several commenters shared their support for the inclusion of the MFT and MHC in the interdisciplinary group and in the personnel qualifications. A few commenters stated they appreciate CMS' acknowledgment of the importance of collaborative decision-making between provider, client, and family in providing the best care aligned to that patient's needs and preferences. Beneficiaries' access to robust care provider options to meet their needs is pivotal in providing quality care, during what can be a particularly difficult time, and help to decrease distress. Another commenter supported the proposed changes and suggested that additional information regarding implementing these provisions be included in the State Operations Manual/interpretive guidance. This commenter also sought guidance on whether the hospice would need to document their decision-making process in selecting which practitioner (MFT, MHC, or SW) will serve as a member of the IDG, as they consider the patient's needs and preferences. The commenter stated that this could lead to an additional administrative burden.

---

<sup>452</sup> <https://www.federalregister.gov/documents/2008/06/05/08-1305/medicare-and-medicaid-programs-hospice-conditions-of-participation>.

*Response:* We thank the commenters for their support of these new proposals. Additional information regarding the implementation and execution of these proposals will be provided in the hospice interpretive guidance, which will be published following the publication of this final rule. It is important for the hospice to assess and determine, along with the input from the patient and family, which care and services are most appropriate/ ensure the health and safety of the patient. Therefore, we expect that during the care planning process, the hospice IDG would consider the patient's needs and preferences will provide services to meet the needs of the patient. As stated earlier, the information from the patient's assessment would be included in the individualized patient plan of care, as well as which professional(s) (SW, MFT or MHC) will be caring for the hospice patient.

*Comment:* Several commenters found the language "at least one social worker, MFT, or MHC" in the proposed rule unclear. This language led these commenters to seek clarification regarding whether the hospice IDG must include a SW and MFT, SW and MHC, all three professionals, or just one of these professionals. Additionally, a few comments shared that it was their interpretation that the addition of the MFT and MHC was optional, not mandatory.

*Response:* The statutory language of division FF, section 4121 of the CAA 2023 states that section 1861(dd)(2)(B)(i)(III) of the Act (42 U.S.C. 1395x(dd)(2)(B)(i)(III)) is amended by inserting ', marriage and family therapist, or mental health counselor' after social worker,'" and that, "The amendments made by this section shall apply with respect to services furnished on or after January 1, 2024." This language clarifies that hospices have the ability to discern which professional to choose to serve as a member of the IDG. The language "at least" was used in the proposed rule to qualify that there must be, at minimum, one of these three professionals who serve as members of the IDG. As previously discussed, we emphasize the hospice interdisciplinary care model, which relies on communication between and integration of providers to effectively plan and furnish care to patients and families.

*Comment:* Many commenters concurred with CMS that the needs, preferences, and goals

of each hospice patient and family should be considered when determining which professional (SW, MFT, or MHC) should serve on a hospice IDG. Commenters also noted that grief and bereavement counseling that hospice patients and their families may need should be from a counselor with a master's or higher degree and should be distinguished from the case management services provided by social workers on a hospice interdisciplinary team. Further, the commenter stated these different types of supportive services may both be needed, and hospice programs should be encouraged to ensure access to both, to the extent possible.

*Response:* We appreciated the commenters support on this provision. We note that bereavement counseling is out of scope for this rule and is a separate requirement in the hospice CoPs at § 418.64(d)(1). The bereavement counseling provision requires the hospice to have an organized bereavement program furnished under the supervision of a qualified professional with experience or education in grief or loss counseling. We note the commenters recommendations and will consider this for future rulemaking.

*Comment:* One commenter noted that MFT and MHC services may potentially be needed more often in areas with larger populations.

*Response:* We thank the commenter for providing insight into areas that will benefit from our proposed provisions. We believe all populations, including areas with larger populations, may benefit from MFT and MHC services.

*Comment:* We received one comment that discussed that the MFT and MHC are not defined as “non-core services” like physical therapy, occupational therapy, and speech-language pathology, which are defined at § 418.70. The commenter noted that these “non-core” services have clearly defined expectations for hospices in contracting and providing services, including waivers for when the professionals are not available in a hospice's service area.

*Response:* We are aware that hospices in rural areas experience challenges in recruiting and retaining staff and that there is a shortage of behavioral health providers. Hospices have the option to directly employ MFTs and MHCs full time, part time or per diem, which provides

additional flexibility to the hospice in their recruitment and hiring practices. This may help to hire the most qualified professionals, as well as increase employee retention. Further, § 418.74 allows hospice to waive the requirement to provide physical therapy, occupational therapy, speech-language pathology, and dietary counseling 24 hours a day for hospices located in non-urbanized areas. This waiver does not eliminate the requirement that the hospice must provide these services, it waives the requirement to provide the services 24 hours a day. At this time, we are not proposing revisions to these “non-core services” CoPs but will consider this for future rulemaking.

*Comment:* Several commenters were concerned about the enforcement of these provisions. These commenters asked if there would be consequences if the hospice is unable to comply with these regulations.

*Response:* We acknowledge that there is an increased need for behavioral and mental health services. However, we understand that many regions, particularly rural areas, may not be able to fulfill this need. We will follow the standard survey and enforcement process and additional information regarding the implementation of these provisions will be available in interpretative guidance that will be published following the publication of this final rule.

After consideration of public comments on this provision, we are finalizing the proposed requirements with modification at § 418.56 by removing the phrase “depending on the preferences and needs of the patient.” We believe this modification will provide additional flexibility for the hospice to choose the members of the IDG while also utilizing the hospice’s system of communication (§ 418.56(e)) to ensure information is communicated during the IDG meetings, according to the hospices own policies.

The inclusion of an MFT or MHC as members of the hospice IDG helps to provide hospices with greater flexibility in IDG membership in meeting the mental health needs of their patients. The provisions support our responsibility to protect patient health and safety by encouraging the patients’ and their family members to act as active participants in decision-

making processes. We believe that this action strengthens our response to the need for increased access to behavioral and mental health services.

b. Personnel Qualifications (§ 418.114)

With the introduction of MFT and MHC into the hospice CoPs, it is important to also include these new disciplines into the personnel qualifications at § 418.114. Currently the requirement at § 418.114 establishes the requirements for several disciplines that work in hospices including but not limited to social worker, registered nurse and the therapist. We proposed to add both MFT and MHC to the provider requirements under 42 CFR subpart B, Medical and Other Health Services at §§ 410.53 and 410.54. Therefore, to avoid duplication and confusion between the CoP and the Medical and Other Health Services requirements, we proposed to add both MFT and MHC to the requirements as new standards at § 418.114(c)(3) and (4) and reference the new requirements at §§ 410.53 and 410.54, respectively.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Several commenters shared their support for the inclusion of the MFT and MHC in the personnel qualifications.

*Response:* We thank this commenter for their support for the inclusion of MFT and MHC in the hospice personnel requirements. We believe this provision will help support the introduction of MFTs and MHCs to hospice.

*Comment:* One commenter *that* suggested that the MFT and MHC should be cited at § 418.114(a) instead of the proposed § 418.114(c). This commenter clarified that this change is needed to ensure that MFTs and MHCs can effectively serve as hospice providers.

*Response:* We thank the commenter for bringing this to our attention and we agree that it would be more appropriate for the MFT and MHC personnel requirements to be located at a different regulation citation to accurately reflect the licensure requirements for these professions. However, we believe it is more appropriate to redesignate the proposed personnel requirements

at § 418.114(b)(9) and (10) with the personnel qualifications for certain disciplines in order to reflect the State licensure requirements that the MFT and MHC have. We have collaborated with our colleagues to accurately align the personnel requirements for the MFT and MHC with the proposed definitions for these professions at §§ 410.53 and 410.54.

*Comment:* One commenter noted that States define MFTs and MHCs differently, and that this may result in hospices being unable to utilize MFTs and MHCs in some States.

*Response:* We refer to the definitions of the MFT and MHC at §§ 410.53 and 410.54. If State requirements for MFT and MHC are stricter than our Federal requirements, then those stricter State requirements would take precedence. If State requirements are less stringent than Federal requirements, then the Federal requirements will take precedence. We believe that the scope of this final rule are the minimum health and safety requirements with which facilities could reasonably be expected to comply.

After consideration of the public comments we received, we are finalizing this provision with modification by redesignating the personnel qualifications at § 418.114(c)(3) and (4) to § 418.114(b)(9) and (10) referencing requirements at §§ 410.53 and 410.54, respectively. The inclusion of an MFT and MHC in the personnel requirements will clarify for hospices the qualifications required for MFT and MHC.

P. Request for Information: Histopathology, Cytology, and Clinical Cytogenetics Regulations under the Clinical Laboratory Improvement Amendments (CLIA) of 1988

1. Background

The Clinical Laboratory Improvement Advisory Committee (CLIAC), CMS, interested parties, and State Agency (SA) surveyors have identified areas in the CLIA requirements that may need updating.

a. Histopathology

The Clinical Laboratory Improvement Amendments of 1988 (CLIA) (Pub. L. 100-578, October 31, 1988) regulations related to histopathology have not been updated since 1992. The current Histopathology requirements may not represent new innovations and technology performed in laboratories.

(1) Slide Preparation and Staining

Facilities only collecting or preparing specimens (or both) or only serving as a mailing service but not performing testing are not considered laboratories<sup>453</sup>. Slide staining and tissue processing have not been subject to the CLIA regulations. However, we received inquiries from interested parties stating that slide staining and tissue processing are an essential part of the testing process for histopathology. Absent these steps, the tissue cannot be prepared, mounted onto a slide, or accurately evaluated by a pathologist to make an assessment for diagnosis.

Slide staining in histopathology includes routine Hematoxylin and Eosin (H&E) staining, special stains, and immunohistochemical (IHC) stains. Routine slide staining in histopathology provides simple cellular identification and requires minimal steps with solutions, dyes, and clearing reagents (for example, Hematoxylin & Eosin stains, Giemsa stain). An individual trained under the supervision of a qualified technical supervisor can perform these staining techniques. An independent facility (for example, a processing center, that performs slide staining) is not required to hold a CLIA certificate. IHC stains are complex stains designed to

---

<sup>453</sup> See definition of “laboratory”, <https://www.ecfr.gov/current/title-42/chapter-IV/subchapter-G/part-493#493.2>.

identify specific antigens and targets within the cells. These targets can include ribonucleic acid (RNA) and deoxyribonucleic acid (DNA) specific reactivity. The U.S. Food and Drug Administration (FDA) has categorized instruments that perform automated IHC staining as high complexity. Therefore, individuals that perform IHC staining in a CLIA certified laboratory (for example, histotechnicians, histotechnologists, and pathology assistants) must meet the personnel requirements for facilities carrying out high complexity testing. The facility must also hold a CLIA certificate in the subspecialty of testing performed.

## (2) Gross Tissue Examination Review

Testing in histopathology includes both gross tissue examination (macroscopic) and the microscopic evaluation of the stained slide(s) with evaluation and diagnostic interpretations, and the reporting of diagnostic findings by qualified personnel. Gross examination means the manipulation, orientation, and selection of the desired representative pieces of excised tissue from the total specimen received. This includes the physical examination and description, color, weight, measurements, and other characteristics of the tissue. Selected portions of the tissue are placed into a tissue cassette, subjected to a fixative, processed and infiltrated with paraffin wax, placed onto a slide(s), and stained before being reviewed and evaluated by a technical supervisor.

The CLIA State Operations Manual (SOM), Appendix C (“Interpretive Guidelines”)<sup>454</sup> for 42 CFR 493.1489(b)(7) state that gross examinations may be performed by individuals qualified under § 493.1489 as delegated by the technical supervisor. The technical supervisor is not required to provide on-site supervision, but is responsible for the review, accuracy, and confirmation of the macroscopic gross examination in the patient report. The documentation of the review of the results of the macroscopic gross examination by the technical supervisor must be included in the signed microscopic examination report, as required at § 493.1273(d). The CLIA regulations do not cover the acceptable timeframe in which the review of the gross tissue

---

<sup>454</sup> CLIA Interpretive Guidelines: [https://www.cms.gov/regulations-and-guidance/legislation/clia/interpretive\\_guidelines\\_for\\_laboratories](https://www.cms.gov/regulations-and-guidance/legislation/clia/interpretive_guidelines_for_laboratories).

examination must be completed. The discussion surrounding the review of the gross tissue examination includes CLIA's oversight at this phase of the histopathology testing process. CLIA supports an acceptable timeframe to permit a pathologist to review the tissue specimen prepared during the gross examination by a qualified technical supervisor. This review can be delegated by the technical supervisor to a qualified individual. Gross examination is a critical part of the tissue analysis process to ensure subsequent pathology tests are accurate and reliable. The review of the gross tissue is important to protect the patient's specimen identification during the testing process.

## b. Cytology

### (1) CLIA Statute and Regulations

CLIA revised section 353 of the Public Health Service Act (42 U.S.C 263a) to authorize the regulation of all clinical laboratories. Section 353(4)(B)(vi) of the Public Health Service Act requires that all cytological screening be done on the premises of a laboratory that is certified under this section.

The CLIA regulations for cytology state that cytology slide preparations must be evaluated on the premises of a laboratory certified to conduct testing in the subspecialty of cytology at § 493.1274(a).

### (2) Clinical Laboratory Improvement Amendments (CLIA) Guidance for Temporary Testing Sites under the Multiple Site Exception<sup>455</sup>, CMS Policy Memo (QSO-22-13-CLIA)

The intent of the CLIA program is to ensure that test results provided to individuals and their healthcare providers are accurate, timely, and reliable. During the COVID-19 public health emergency (PHE), we issued memo QSO-22-13-CLIA that informed interested parties that we exercised enforcement discretion to allow pathologists the ability to examine histopathology and cytology slides/images remotely, under the following conditions:

---

<sup>455</sup> QSO-22-13-CLIA:

<https://www.cms.gov/medicareprovider-enrollment-and-certificationsurvey/certificationgeninfo/policy-and-memos-states-and/clinical-laboratory-improvement-amendments-clia-guidance-temporary-testing-sites-under-multiple-site>.

- The primary laboratory’s CLIA certificate must include the specialty of pathology with the subspecialties of histopathology and cytology, as appropriate.
- The remote location complies with other applicable Federal laws, including the Health Insurance Portability and Accountability Act of 1996 (HIPAA).
- The primary laboratory’s written procedure manuals for tests, assays, and examinations are available to the pathologists at the remote location.
- Retention time for histopathology slides (10 years), specimen blocks (2 years), preserved tissue remnants (until a diagnosis was made), and cytology slides (5 years) were maintained.
- The use of equipment, supplies and reagents, and similar items needed at the remote location are not allowed to be permanently stored on site.

Under the memorandum, QSO-22-13-CLIA, the remote location could allow pathologists the opportunity to examine histopathology and cytology slides during the PHE.

Pathologists that held a current CLIA certificate were exempt from this enforcement discretion. The pathology community has expressed their desire to make this enforcement discretion a permanent provision after the end of the PHE for COVID-19.

#### c. Clinical cytogenetics

We require any testing facility that meets the CLIA regulatory definition of a “laboratory” (per § 493.2, *Definitions*<sup>456</sup>) to have a CLIA certificate. A laboratory may choose to outsource a test or a portion of their test procedure because it lacks the equipment, personnel with the expertise in the subject, or is considered more cost-efficient. The CLIA regulations at § 493.1242(c) require the laboratory to only refer a test (for example, reflex, confirmatory, or distributive testing) to another laboratory that is CLIA certified or to a laboratory meeting equivalent requirements as determined by CMS. Therefore, each laboratory or testing facility

---

<sup>456</sup> See definition of “laboratory”, <https://www.ecfr.gov/current/title-42/chapter-IV/subchapter-G/part-493#493.2>.

that performs clinical testing must have its own CLIA certificate and comply with the regulations for the complexity of the testing it performs.

Clinical cytogenetics testing is generally categorized as a CLIA high complexity test. A cytogenetics test may be conducted at one facility or involve a testing workflow model in which one facility performs the analytical bench testing activities (for example, sample processing, extraction, chemical reaction, slide preparation, imaging) and another facility conducts the non-bench testing activities (for example, review of images, analysis, interpretation or reporting of the results). When any part of a test is performed by more than one facility, this testing model is considered distributive testing. CLIA defines distributive testing under § 493.2, *Definitions*, as “laboratory testing performed on the same specimen, or an aliquot of it, that requires sharing it between two or more laboratories to obtain all data required to complete an interpretation or calculation necessary to provide a final reportable result for the originally ordered test. When such testing occurs at multiple locations with different CLIA certificates, it is considered distributive testing.” Therefore, any facility performing clinical cytogenetics testing activities must be CLIA certified and meet high complexity testing requirements.

During the PHE for COVID-19, we exercised enforcement discretion regarding clinical cytogenetics distributive testing models. Under the enforcement discretion, we allowed clinical cytogenetics personnel the opportunity to examine clinical cytogenetics digital images (that is, non-bench testing activities) at a remote testing location without obtaining a separate CLIA certificate for the remote site under certain conditions. Some interested parties have requested we make this enforcement discretion permanent. Changes to the current CLIA regulations would be necessary to allow the examination of clinical cytogenetics images at a different, remote location from the primary CLIA-certified site without a separate CLIA certificate. Please note that a remote location not associated with or covered by a primary CLIA-certified laboratory would be required to obtain its own CLIA certificate. The primary site laboratory director would be responsible for the overall operation and administration of the laboratory including the

employment of personnel who are competent to perform test procedures, record and report test results promptly, accurately, and proficiently; for assuring compliance with applicable regulations in their primary laboratory; and for the supervision of the personnel reviewing digital laboratory data, digital results, and digital images remotely.

## 2. Solicitation of Public Comments

We solicited comments on the following areas of CLIA: Histopathology; Cytology; and Clinical cytogenetics. The topics listed in this RFI are areas that CMS, CDC, interested parties, and SA surveyors have identified that may potentially be used by CMS for future rulemaking.

### a. Histopathology

We solicited comments on the following:

- Whether, and how, CLIA should provide oversight of histopathology preparation and processing of tissue samples for slide staining, specifically related to guidance for routine histopathology slide staining and complex IHC staining.
- What criteria (for example, training programs, on-the-job training, experience, or academic degree) would interested parties recommend for personnel performing high complexity automated IHC staining?
- How does the categorization of automated staining systems impact personnel who are currently performing this task but do not meet the qualifications for performing high complexity testing?
- What is an acceptable timeframe between the review of the macroscopic gross tissue examination, and the review and confirmation of these tissue findings by a pathologist prior to the microscopic review of slides to protect the integrity of the macroscopic tissue?
- What education and experience or training requirements should be required for individuals to qualify as a general supervisor (GS) for histopathology? If qualified, what is an acceptable timeframe for the GS to review and evaluate gross examinations under the specialty of histopathology?

- What education and professional experience, or training requirements should be required for individuals performing gross tissue examination that have an associate degree from a histotechnician program or a PA who has training from an accredited program and is certified as a PA?

b. Histopathology and Cytology Testing at Remote Locations

We solicited comments on the following:

- How should “remote testing location” be defined?
- How should the CLIA regulations be revised to allow pathologists to examine histopathology and cytology slides/images at a remote testing location?
- What conditions (including, location(s)) should apply for a pathologist to examine histopathology or cytology slides/images remotely without obtaining a separate CLIA certification?
- Under what conditions should a primary location cease permitting testing at the remote location?
- How should the remote location be included on the final patient report?
- How should CMS, SAs, or Accreditation Organizations perform onsite surveys at remote locations?

c. Clinical cytogenetics

We solicited comments on the following:

- Under what circumstances should CLIA allow remote locations or testing facilities to examine clinical cytogenetics images without obtaining a separate CLIA certification?
- Under what circumstances would the examination of clinical cytogenetics images be unacceptable for the remote location scenario?
- What clinical cytogenetics testing processes should the primary laboratory have in place to ensure the remote site complies with the CLIA requirements?

- What “conditions” or “criteria” would be necessary for the remote location to ensure quality testing for the examination of clinical cytogenetics images?

We thank the commenters for their submissions. We received 52 comments.

Commentors were in favor of updating the CLIA '88 regulations in Histopathology, Cytology, and Clinical cytogenetics to reflect advancements in technology and current laboratory practices.

We will consider the input received as we continue to evaluate possible future changes to the CLIA regulations.

## Q. Changes to the Basic Health Program Regulations

Section 1331 of the Patient Protection and Affordable Care Act (Pub. L. 111-148, enacted March 23, 2010), as amended by the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111-152, enacted March 30, 2010) (collectively referred to as the Affordable Care Act or ACA), provides States with the option to operate a Basic Health Program (BHP). In the States that elect to operate a BHP, the State's BHP makes affordable health benefits coverage available for lawfully present individuals under age 65 with household incomes between 133 and 200 percent of the Federal poverty level (or in the case of a lawfully present non-citizen, ineligible for Medicaid or the Children's Health Insurance Program (CHIP) due to immigration status, whose household income is between zero and 200 percent of the FPL) who are not eligible for Medicaid, CHIP, or other minimum essential coverage. As of the date of this final rule, only New York and Minnesota have implemented a BHP.

Federal funding for BHP is based on 95 percent of the value of the premium tax credits (PTC) and cost sharing reduction (CSR) subsidies that BHP enrollees would have received had they instead enrolled in Qualified Health Plans (QHPs) through the Exchange in accordance with section 1331(d)(3)(A)(i) of the ACA. These funds are paid to trusts established by the States and dedicated to the BHP, and the States then administer the payments to BHP standard health plans within the BHP. Under section 1331(d)(2) of the ACA, Federal funding for the BHP can only be used to reduce the premiums and cost-sharing of, or to provide additional benefits for, eligible individuals enrolled in standard health plans within the State.

### 1. Allowing States to Suspend a BHP

Current regulations require States to operate a BHP under a certified Blueprint approved by CMS, and to operate the BHP as long as their approved certified Blueprint is in place. Under 42 CFR 600.140, a State may terminate its BHP, which requires that the BHP trust fund balance be refunded to the Federal government. The regulations do not contemplate "suspending" a BHP, and, as such, in the CY 2024 PFS proposed rule, we proposed to give a State the option of

temporarily suspending its BHP program, while retaining funds that were accrued prior to suspending the program in the BHP trust fund for a limited period of time. Specifically, we proposed at § 600.140(b)(1) that States wishing to suspend their BHP program must submit an application to HHS. Under proposed § 600.140(b)(1), States could also seek approval to extend a BHP suspension previously approved by HHS. In § 600.140(b)(1)(vi), we proposed that the application must be submitted at least 9 months in advance of the proposed effective date of the suspension or extension. However, for States seeking to suspend a BHP in the first plan year that begins following publication of a final rule adopting this proposal, we proposed that States must submit an application within 30 days of the publication of such a final rule and HHS would approve or deny such application as expeditiously as possible. We proposed in § 600.140(b)(2) that a suspension application would need to be approved prior to the effective date of suspension, except in the case of a State seeking to suspend a BHP in the first plan year that begins following publication of a final rule adopting this proposal.

The proposed substantive requirements for the suspension application are described in proposed § 600.140(b)(1)(i) through (v). Under the proposed requirements, for the period of suspension, BHP enrollees must receive comparable coverage that is as comprehensive and affordable as, or more comprehensive and affordable than, BHP coverage during the period of suspension. Therefore, in § 600.140(b)(1)(i) through (iii), we proposed to require that the suspension and extension application demonstrates that the benefits that would be provided to individuals that meet the BHP eligibility criteria are at least equivalent to the benefits offered in the State's BHP. We proposed that the cost sharing and premiums that would be charged to such individuals under the new coverage option could not exceed the amounts charged under the BHP to reduce the risk that these individuals are harmed by the transition to other coverage.

Finally, in developing our proposal we believed that the suspension period should not result in individuals losing coverage solely due to a change in eligibility criteria for the program. Therefore, we proposed in § 600.140(b)(1)(iv) that a State must demonstrate in its application

that the eligibility criteria for coverage during the suspension would not more restrictive than the criteria described in § 600.305.

We believed that the suspension period should be long enough to allow the State to evaluate the alternative coverage provided to BHP-eligible individuals but should not be indefinite. Therefore, we proposed in § 600.140(b)(1)(v) that a State could request a suspension of up to 5 years in an initial suspension application, after which a State could request an extension of up to 5 additional years. Additional extension periods would not be allowed. We proposed at § 600.140(b)(7) that at least 9 months before the end of the suspension period, a State would be required to submit a transition plan to HHS that explains how the State would reinstate its BHP, or terminate the program under § 600.140(a) of the current regulations.

Under proposed § 600.140(b)(1)(vii), States requesting an extension of a previously-approved BHP suspension also would need to provide an evaluation of the alternative coverage in its application.

If individuals and/or standard health plans would experience a change in the terms of the coverage, including receiving additional benefits or being charged different cost sharing amounts, in § 600.140(b)(3), we proposed to require that the State provide notice to them at least 90 days prior to the effective date of the suspension. The notices would need to include information regarding the State's assessment of their eligibility for all other insurance affordability programs in the State, and meet the accessibility and readability standards at 45 CFR 155.230(b).

We proposed to require in § 600.140(b)(4) that States that suspend their BHP must submit the data necessary to complete the BHP payment reconciliation process within 12 months of the effective date of the suspension. We believed that 12 months was a reasonable amount of time for a State to submit the actual enrollment data for the periods it was operating a BHP.

We proposed in §600.140(b)(6) that while the State is not providing BHP coverage, any accrued interest on the trust fund would have to be remitted to HHS on an annual basis in the form and manner set out by HHS.

States currently submit the balance of their trust fund and any interest accrued through the BHP annual report described in §600.170. We proposed revisions to §§ 600.140(b) and 600.170(a) to require States that suspend their BHP continue to submit an annual report in order to document the interest earned and to provide assurance that the coverage provided to BHP-eligible individuals meets the standards discussed previously in this section.

If a State does not meet the proposed requirements (that is, completing the financial reconciliation process, remitting interest on the trust fund, continuing to meet the standards that the alternative coverage provides coverage as comprehensive and affordable as the BHP, and submitting the required information in its annual report), we proposed in § 600.140(d), redesignated as § 600.140(c) in this final rule, that the Secretary could withdraw approval of the suspension. We received four public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* All commenters supported allowing States to suspend their BHP, with some commenters mentioning specific changes they would like to see which are discussed later in this section. One commenter noted that flexibility to suspend a BHP while maintaining the trust fund may encourage more States to consider implementing a BHP.

*Response:* We appreciate the commenters support of our proposal, and for reasons discussed below, we are finalizing the regulation changes as proposed, with only minor modifications.

*Comment:* One commenter suggested that CMS require States to outline in the application for suspension a plan to notify physicians who provide care to BHP enrollees about the suspension; share information with physician practices and other clinicians and facilities about how and where patients will receive or can seek alternative comprehensive, affordable

coverage; and work with physician practices to minimize any resulting administrative burden.

*Response:* We appreciate this commenter's suggestion. While we will not be requiring States to provide a specific plan to notify physicians who provide care to BHP enrollees about the suspension in the suspension application, we anticipate informally asking States for how they will notify providers, including physicians, of this change. We will encourage States to communicate any changes that may impact patient care networks to providers. We proposed and are finalizing a requirement that would apply if individuals and/or standard health plans will experience a change in the terms of the coverage during the suspension, including receiving additional benefits or being charged different cost sharing amounts, States would be required to provide notice to them at least 90 days prior to the effective date of the suspension. We also proposed and are finalizing that BHP enrollees must receive comparable coverage that is as comprehensive and affordable as, or more comprehensive and affordable than, BHP coverage during the period of suspension. Therefore, as individuals will be receiving coverage that is as comprehensive and affordable as the BHP coverage, and will have been notified at least 90 days prior to the effective date of the suspension of any changes, we do not believe it necessary to require that States explicitly provide information to physicians regarding where individuals can receive alternative care.

*Comment:* One commenter specifically requested that CMS require that the Secretary must approve an application for the suspension of BHP submitted by the State.

*Response:* We proposed in § 600.140(b)(2) that the State could not implement the suspension or extension of the suspension without prior approval by the Secretary, unless the State is proposing to suspend their BHP in the first plan year following publication of such a final rule. Additionally, for States seeking to suspend a BHP in the first plan year that begins following publication of a final rule adopting this proposal, we proposed that States must submit an application within 30 days of the publication of such a final rule and that HHS would approve or deny such application as expeditiously as possible. We are finalizing this requirement as

proposed, with minor modifications.

We are finalizing the requirement that a State cannot implement the suspension or extension of the suspension without prior approval by the Secretary unless the State is proposing to suspend their BHP in 2024. This is a minor change from the proposed regulation, which stated that a State cannot implement a suspension or extension of a suspension without prior approval by the Secretary, unless the State is proposing to suspend their BHP in the first plan year after this rule is finalized. We are finalizing that, for States proposing to suspend their BHP in 2024, the suspension application must be submitted within 30 days of the effective date of this final rule. This is a minor change from the proposed regulation, which stated that a State proposing to suspend their BHP in the first plan year after this rule is finalized, must submit their suspension application within 30 days of publication of the final rule.

*Comment:* One commenter specifically requested that CMS establish requirements for States to ensure safeguards are in place for individuals that are enrolled in BHP. Another commenter noted support for the proposal to ensure formerly BHP-eligible consumers are not subject to more restrictive eligibility rules under an alternative coverage plan while the BHP is suspended.

*Response:* We share the commenters' desire to ensure there are safeguards for individuals that are enrolled in BHP. We proposed in § 600.140(b)(1)(i) through (iii), that, during the period of suspension, former BHP enrollees should receive coverage that is as comprehensive and affordable as, or more comprehensive and affordable than, BHP coverage during the period of suspension. Specifically, we proposed to require that the suspension and any suspension extension applications demonstrate that the benefits that will be provided to individuals who meet the BHP eligibility criteria are at least equivalent to the benefits offered in the State's BHP. We also proposed that the cost sharing and premiums that will be charged to such individuals under the new coverage option do not exceed the amounts charged under the BHP to reduce the risk that these individuals are harmed by the transition to other coverage. We are finalizing these

requirements as proposed.

*Comment:* One commenter suggested that States be allowed to suspend their BHP beyond 10 years, if the circumstances in States could reasonably justify longer suspension periods, subject to CMS approval.

*Response:* We appreciate the commenter's suggestion, but we believe that our proposal to allow a suspension for 5 years with a one-time extension of an additional 5 years, is sufficient time for a State to evaluate whether or not it should resume its BHP. As discussed in the proposed PFS rule, we chose 5 years for the initial approval period because this aligns with the duration of initial waivers and demonstration projects approved under section 1332 of the ACA and section 1115 of the Act. We believe these are the most likely authorities under which States could seek to provide alternative coverage to BHP enrollees. Similarly, we chose 5 years for the extension period because it aligns with the duration of typical extensions or amendment periods under section 1332 waiver and section 1115 demonstration projects.

*Comment:* One commenter suggested that if a State proposes to suspend its BHP and implement a section 1332 waiver, that the State be allowed to leverage relevant parts of their section 1332 waiver application and actuarial and economic analysis to provide the necessary supporting evidence for their BHP suspension application since aspects of the 1332 application serve a similar purpose.

*Response:* We believe it is likely a State would be able to use relevant parts of its section 1332 waiver application and actuarial and economic analysis to provide supporting evidence for the BHP suspension application. As discussed in the CY 2024 PFS proposed rule, to determine that the cost sharing required of individuals under the new coverage option does not exceed the BHP cost sharing levels, we proposed at § 600.140(b)(1)(ii) to require that the actuarial value of the new coverage option must meet or exceed the actuarial value of the BHP standard health plans in effect immediately prior to the suspension period. If there are multiple health plans being offered under the new coverage option and/or multiple standard health plans in effect in

the State, we proposed that the median actuarial value of the health plans offered under the new coverage option must meet or exceed the median actuarial value of the BHP standard health plans. To the extent this information is required for the State's 1332 waiver application, it could also be utilized for the suspension application and be submitted as part of the suspension application.

*Comment:* One commenter recommended that States be required to submit only the sections of the BHP Annual Report pertaining to financial management and audit findings while the BHP is suspended.

*Response:* In the CY 2023 PFS proposed rule, we proposed to add a new paragraph § 600.170(a)(2) to require that States that have suspended their BHP under § 600.140(b) submit an annual report that includes (1) the balance of the BHP trust fund and any interest accrued on that balance; (2) an assurance that the coverage provided to individuals who would be eligible for a BHP under § 600.305 continues to meet the standards described in § 600.140(b)(1)(i) through (iii); and (3) any additional information specified by the Secretary at least 120 days prior to the date that the annual report is due. We believe it is important for States to continue to provide assurances that any coverage changes under the alternative program continue to meet the BHP suspension requirements.

*Comment:* One commenter requested that States be allowed to use BHP trust funds for the duration of the suspension on, at a minimum, the same uses that were permissible when BHP-eligible consumers were still enrolled in the BHP, and not the alternative coverage program.

*Response:* As discussed in the CY 2024 PFS proposed rule, under section 1331(d)(2) of the ACA and current regulations at § 600.705(c), Federal funding for BHP can only be used to reduce the premiums and cost-sharing, or to provide additional benefits, for BHP-eligible individuals enrolled in standard health plans within the State. When a State suspends its BHP,

individuals will no longer be enrolled in standard health plans. Therefore, Federal funding is not available for costs associated with providing new coverage after the transition has occurred.

After consideration of public comments, we are finalizing the requirements for a suspension of a State's BHP as proposed, with minor changes. We are removing proposed paragraph § 600.140(c), because it was duplicative of the requirement in proposed § 600.140(b)(2). As such, proposed paragraph § 600.140(d) is redesignated to § 600.140(c) in this final rule.

We are finalizing the requirement that a State cannot implement the suspension or extension of the suspension without prior approval by the Secretary unless the State is proposing to suspend their BHP in 2024. This is a minor change from the proposed regulation, which stated that a State cannot implement a suspension or extension of a suspension without prior approval by the Secretary, unless the State is proposing to suspend their BHP in the first plan year after this rule is finalized. We are finalizing that for States proposing to suspend their BHP in 2024, the suspension application must be submitted within 30 days of the effective date of this final rule. This is a minor change from the proposed regulation, which stated that a State proposing to suspend their BHP in the first plan year after this rule is finalized must submit their suspension application within 30 days of publication of the final rule.

## 2. Submission and Review of BHP Blueprints

In developing the BHP proposals included in the proposed rule, we determined that additional parameters were necessary to ensure effective and efficient operation of the BHPs and HHS review of a revised Blueprint, consistent with section 1331(a)(1) of the ACA. Therefore, we proposed changes to § 600.125 to establish timeframes and procedures for the submission and review of BHP Blueprints, similar to the Medicaid and CHIP State plan amendment (SPA) submission and review processes. We noted that these proposed timeframes only apply to the submission and review of revised Blueprints; we did not propose changes to the timeframes for

the submission and review of an initial Blueprint, set forth in current regulations at § 600.120, in the event additional States seek to establish BHPs.

Additionally, we believed States needed flexibility to receive approval of a retroactive effective date for changes to their BHP Blueprint, similar to flexibilities allowed under regulations at §§ 430.20(b) and 457.60 for the submission of Medicaid and CHIP SPAs. We noted, that in the event that a State implements a change to its BHP Blueprint that is ultimately disapproved by HHS, the State could be required to implement a corrective action plan under § 600.715.

Specifically, under existing regulations at § 600.125(a), States must submit a revised Blueprint whenever they seek to make significant change(s) that alter program operations the BHP benefit package, enrollment, disenrollment and verification policies described in its certified BHP Blueprint. Under the proposed revisions to § 600.125(a), we would broaden the circumstances requiring submission of a revised Blueprint to include States' significant changes that alter any core program operations under § 600.145(f). States also would be required to submit a revised Blueprint to HHS whenever necessary to reflect changes in Federal law, regulations, policy interpretations, or court decisions that affect provisions in their certified Blueprint. States would continue to be required to submit a revised Blueprint to make changes to the BHP benefit package or to enrollment, disenrollment, and verification policies described in the certified Blueprint, as currently required under § 600.125(a).

At § 600.125, we also proposed to redesignate paragraph (b) as paragraph (d) and to add new paragraph (b) to provide that the effective date of a revised Blueprint may be as early as, but not earlier than, the first day of the quarter in which an approvable revision is submitted to HHS. This policy mirrors the standards for submission of a Medicaid SPA at § 430.20(b). The current regulations do not specify as to when a revised Blueprint is considered received by HHS. We believe that it is reasonable to consider a revised Blueprint to be received when HHS receives an electronic copy of a cover letter signed by the Governor or Governor's designee and a copy of

the currently approved Blueprint with proposed changes indicated in track changes. In the event a State is unable to submit a revised Blueprint electronically, due to a disaster or other event outside of the State's control, we proposed that CMS could consider other modes of submission on a case-by-case basis. Under current regulations at § 600.125(b), redesignated at § 600.125(d) in the proposed rule, the State is responsible for continuing to operate under the terms of the existing certified Blueprint until the State adopts a revised Blueprint, the State terminates or suspends the BHP, or the Secretary withdraws certification for the BHP.

We also proposed to redesignate paragraph (c) of current § 600.125 as paragraph (g) and to add a new paragraph (c) to create clear timelines for HHS's review, approval, and disapproval of revised Blueprints similar to the timelines currently applicable to CHIP SPAs under § 457.150. Under proposed § 600.125(c)(1), a revised Blueprint would be deemed approved unless HHS, within 90 days after receipt of the revised Blueprint, sends the State written notice of disapproval or written notice of additional information HHS needs in order to make a final determination. If HHS requests additional information, the 90-day review period would be stopped and would resume the day after HHS receives all of the requested additional information from the State. Under proposed paragraph (c)(2), if 90 days from the date a Blueprint revision is received does not fall on a business day, the 90-day review period would end on the next business day. Under proposed paragraph (c)(3), HHS may send written requests for additional information as many times as needed to obtain all information necessary to certify the revised Blueprint. This mirrors the process used by CHIP, of having one 90-day review period that can start and stop multiple times with a request for additional information and response. This process differs from Medicaid, which has a 90-day review period that can be stopped once by a request for additional information, followed by a second 90-day review period when the State responds. At paragraph (c), we proposed that HHS may disapprove a Blueprint amendment if the Secretary determines that the Blueprint revision is not consistent with section 1331 of the ACA or the

regulations set forth in this part at any time during the review process, including when the 90-day review clock is stopped due to a request for additional information.

Once a Blueprint is approved, current § 600.125(b) specifies that the State is responsible for continuing to operate under the terms of the existing certified Blueprint until and unless a revised Blueprint that seeks to make significant change(s) is certified, as described in paragraph (c), except during a public health emergency. We proposed to revise paragraph (b) of § 600.125, redesignated as paragraph (d) in this rulemaking, redesignated as paragraph (d) in this rulemaking, to provide that the State must continue to operate under the terms of an existing certified Blueprint until the State adopts a revised Blueprint, terminates the BHP following the procedures described in § 600.140(a), suspends the BHP following the procedures described in § 600.140(b), or the Secretary withdraws certification of the BHP under § 600.142.

Finally, we proposed to apply some of the existing parameters for initial Blueprint submissions to Blueprint revisions. In paragraph (e), we proposed that a State may withdraw the proposed revised Blueprint during HHS review if the State has not yet implemented the proposed changes and provides written notice to HHS. This proposal mirrors current § 600.130 for initial BHP Blueprints. In paragraph (f), we proposed that HHS will accept a State's request for reconsideration of a decision not to certify a revised Blueprint and provide an impartial review against standards for certification if requested. This proposal mirrors current § 600.135(c) for initial BHP Blueprints.

Under current § 600.135, HHS must act on all initial BHP Blueprint certification and revision requests in a timely matter. Because we proposed to specify timeframes for the submission and review of revised BHP Blueprints under §600.125, we proposed to revise § 600.135 to apply only to the submission of initial BHP Blueprints. Specifically, we proposed to revise the title to clearly state that this section is applicable to only initial Blueprints and to remove the reference to BHP Blueprint revisions in paragraph (a).

For a full discussion of this proposal, please see the CY 2024 PFS proposed rule (88 FR 52545).

We received one public comment on these proposals.

*Comment:* The commenter supported the proposed regulations allowing for retroactive approval of Blueprint revisions and aligning the review process for Blueprint revisions more closely with that for Medicaid State plan amendments. This commenter stated the changes would provide States with further clarity regarding the review process for revising Blueprints as well as more flexibility to implement changes to their BHPs.

*Response:* We appreciate this commenter's support and are finalizing the regulation changes as proposed.

### 3. BHP Notices

Under current § 600.330, States must provide written notice to beneficiaries conveying final determination of eligibility or ineligibility. The regulation does not require States to provide those notices in a manner that is accessible to individuals with disabilities or limited English proficiency (LEP). Therefore, we proposed to add paragraph (f) to § 600.330 to require that BHP eligibility notices be written in plain language and be provided in a manner which ensures that eligible individuals with LEP are provided with meaningful language access and individuals with disabilities are provided with effective communication.

For a full discussion of this proposal, please see the CY 2024 PFS proposed rule (88 FR 52546).

We received one public comment on this proposal.

*Comment:* One commenter supported the proposed changes requiring that eligibility notices be written in plain language.

*Response:* We appreciate this commenter's support and are finalizing our regulations as proposed.

### 4. BHP Appeals

Under current § 600.335(b), individuals must be given the opportunity to appeal BHP eligibility determinations through the appeals rules of the State's Medicaid program or the Exchange, as indicated in the State's Blueprint. Current BHP and Exchange regulations do not provide for appeals of health services matters. Therefore, we proposed in paragraph (b) to remove the option for States to conduct their BHP appeals process according to Exchange rules. In paragraph (b)(2), we proposed to require States to provide individuals an opportunity to appeal a delay, denial, reduction, suspension, or termination of health services, in whole or in part, including a determination about the type or level of service, after individuals exhaust appeals or grievances through the BHP standard health plans. Because current BHP regulations do not include provisions related to the appeal of health services matters, these appeals are not currently included in the list of core operations of a BHP in § 600.145. Therefore, in proposed § 600.145(f)(2), we included appeals of health services matters as specified in § 600.335 as a core operation of a BHP.

For a full discussion of these proposal, please see the CY 2024 PFS proposed rule (88 FR 52546).

The following is a summary of the comments we received and our responses.

*Comment:* One commenter supported the proposal changes to the regulations for appeals of health care services.

*Response:* We appreciate this commenter's support and are finalizing our regulations as proposed, with one modification described later in this section.

*Comment:* One commenter requested clarification on whether an appellant must exhaust utilization review and external appeals before filing a health service appeal through the proposed BHP appeal process.

*Response:* As stated in the preamble of the proposed rule, individuals must first exhaust appeals or grievances through the BHP standard health plans prior to appealing to the State. We have added this requirement to the regulation text, to provide further clarify this requirement.

*Comment:* One commenter requested that States be permitted flexibility to establish the health service appeals process in a manner that takes individual States' needs into account, such as being able to choose the department that will oversee the appeals.

*Response:* We appreciate the comment and agree that individual States' needs should be taken into account, including being able to choose the department that will oversee the appeals. We have revised § 600.335(b) and added § 600.335(c) to specify that subject to HHS approval, a State may request to follow an appeals process for BHP eligibility determinations and health service matters that differs from the State's Medicaid program. We specify that the State must demonstrate in its request that the BHP agency has oversight of any entity delegated the authority to administer appeals and provide a clear description of the responsibilities and functions delegated to such an entity. In addition, the State must ensure that the agency to which eligibility determinations or appeals decisions are delegated: complies with all relevant Federal and State law, regulations, and policies; and informs applicants and beneficiaries how they can directly contact and obtain information from the agency.

We expect this request to be submitted via a Blueprint revision. In determining whether the BHP agency has sufficient oversight, CMS will consider whether:

- The delegated agency has been provided sufficient training to make appeals decisions and apply BHP laws and policies correctly;
- The responsibilities of the delegated agency have been clearly articulated, including the scope of review, whether the delegated entity has final decision making authority, and how the delegated entity coordinates with the BHP agency regarding processing requests and other functions necessary to conduct appeals;
- A written agreement is in place between the delegated entity and the BHP agency regarding the responsibilities of the delegated entity; and
- A process has been established to monitor the accuracy and quality of decisions made by the delegated entity.

*Comment:* One commenter requested that the effective date for the requirement to follow the Medicaid process for appeals of health services matters be extended into the future by 3-5 years.

*Response:* We believe that by allowing a State to request to follow an appeals process for health service matters that differs from the State's Medicaid program, as discussed previously in this section, that the effective date of the policy does not need to be extended.

After consideration of public comments, we are finalizing this proposal as proposed, with one change as described previously in this section. We have revised § 600.335(b) and added § 600.335(c) to specify that subject to HHS approval, a State may request to follow an appeals process for BHP eligibility determinations and health service matters that differs from the State's Medicaid program.

## R. Updates to the Definitions of Certified Electronic Health Record Technology

### 1. Background

The American Recovery and Reinvestment Act of 2009 (Pub. L. 111-5, enacted February 17, 2009) (ARRA), authorized incentive payments to eligible professionals, eligible hospitals and critical access hospitals (CAHs), and Medicare Advantage (MA) organizations to promote the adoption and meaningful use of certified electronic health record (EHR) technology (CEHRT). In 2010, the Office of the National Coordinator for Health Information Technology (ONC) launched the Health IT Certification Program (ONC Health IT Certification Program) to provide for the certification of health information technology (IT), including EHRs.

Requirements for certification are based on standards, implementation specifications, and certification criteria adopted by the Secretary pursuant to section 3004 of the Public Health Service Act. The ONC Health IT Certification Program supports the use of certified health IT under the programs that we administer, including, but not limited to, the Medicare Promoting Interoperability Program (previously known as the Medicare and Medicaid EHR Incentive Programs), the Shared Savings Program, and the Quality Payment Program, which includes the MIPS Promoting Interoperability performance category and the Advanced Alternative Payment Models (Advanced APMs). While these programs continue to require the use of CEHRT, the use of certified health IT has expanded to other government and non-government programs.

For CY 2019 and subsequent years, the definitions of CEHRT for the Promoting Interoperability Programs at § 495.4, the Quality Payment Program at § 414.1305, and the Shared Savings Program at § 425.20 require the use of EHR technology that meets the 2015 Edition Base EHR definition at 45 CFR 170.102 and is certified to 2015 Edition health IT certification criteria under the ONC Health IT Certification Program. In addition, the CEHRT definitions in our regulations for these programs require technology to be certified to certain specific 2015 Edition health IT certification criteria, as specified in each of the definitions, including criteria necessary to be a meaningful EHR user under the Medicare Promoting

Interoperability Program, and criteria necessary to report on applicable objectives and measures specified under the MIPS Promoting Interoperability performance category under the Quality Payment Program. Prior Editions of health IT certification criteria were associated with “stages” of the EHR Incentive Programs (now the Medicare Promoting Interoperability Program and the MIPS Promoting Interoperability performance category), which linked new and updated functionality in certified health IT to significant revisions to the objectives and measures in the programs.

In the CY 2021 PFS final rule (85 FR 84815 through 84825), we finalized that the technology used by health care providers to satisfy the definitions of CEHRT at §§ 495.4 and 414.1305 must be certified under the ONC Health IT Certification Program, in accordance with the updated 2015 Edition certification criteria (2015 Edition Cures Update), as finalized in the ONC 21st Century Cures Act: Interoperability, Information Blocking, and the ONC Health IT Certification Program (Cures Act) final rule (85 FR 25642). We further finalized aligning the transition period during which health care providers participating in the Medicare Promoting Interoperability Program, the MIPS Promoting Interoperability performance category, and Advanced APMs may use technology certified to either the existing or updated 2015 Edition certification criteria, with the December 31, 2022 date established in the ONC interim final rule, Information Blocking and the ONC Health IT Certification Program: Extension of Compliance Dates and Timeframes in Response to the COVID-19 Public Health Emergency (85 FR 70064), for health IT developers to make updated certified health IT available (85 FR 84815 through 84825). After this date, health care providers were required to use only certified technology updated to the 2015 Edition Cures Update for an EHR reporting period or performance period beginning with CY 2023.

In the ONC “Health Data, Technology, and Interoperability: Certification Program Updates, Algorithm Transparency, and Information Sharing” proposed rule (88 FR 23746 through 23917) (hereafter referred to as “ONC HTI-1 proposed rule”), which appeared in the

**Federal Register** on April 18, 2023, ONC proposed to discontinue the year themed “editions,” which ONC first adopted in 2012, to distinguish between sets of health IT certification criteria finalized in different rules (88 FR 23758). In the proposed rule, ONC noted public comments stating that the continued use and reference to the 2015 Edition inaccurately implies an age and outdatedness to the certification criteria ONC has adopted. Given these concerns, ONC stated that it believes there should be a single set of certification criteria, which will be updated in an incremental fashion in closer alignment to standards development cycles and regular health IT development timelines (88 FR 23750).

ONC further stated its belief that maintaining a single set of “ONC Certification Criteria for Health IT” would create more stability for the ONC Health IT Certification Program and for Federal partners who reference the ONC Health IT Certification Program, as well as make it easier for developers of certified health IT to maintain their product certificates over time (88 FR 23759). ONC stated this proposal to remove “editions” from the ONC Health IT Certification Program would also help users of certified health IT identify which certification criteria are necessary for their participation in programs, such as the Medicare Promoting Interoperability Program, the Shared Savings Program, and the Quality Payment Program’s MIPS Promoting Interoperability performance category and Advanced APMs (88 FR 23760). For example, users would only need to know that their Health IT Module is certified to 45 CFR 170.315(b)(3), electronic prescribing, for successful participation in the MIPS Promoting Interoperability performance category related to electronic prescribing, as compared to the current state, where they must also know if the Health IT Module supports electronic prescribing as part of the 2014 Edition Certification Criteria or the 2015 Edition Certification Criteria, or 2015 Edition Cures Update Certification Criteria. To implement this approach, ONC has proposed to rename all criteria within the ONC Health IT Certification Program simply as “ONC Certification Criteria for Health IT,” proposing associated changes to the regulations at 45 CFR part 170 (88 FR 23759).

Similar to ONC's proposal to move away from "editions" and toward incremental changes to its certification criteria, we also have focused in recent years on implementing incremental changes to individual measures under, but not limited to, the Medicare Promoting Interoperability Program, the Shared Savings Program, and the Quality Payment Program, which includes the MIPS Promoting Interoperability performance category and the Advanced APMs. We expect to continue to prioritize incremental changes in future years to reduce burden on participants in these programs (including eligible hospitals and CAHs and MIPS eligible clinicians), and build on the established base of available certified health IT capabilities. We believe our approach is consistent with the strategy discussed in the ONC HTI-1 proposed rule, in which ONC proposes to pursue a framework for the ONC Health IT Certification Program that focuses on incremental updates to a single set of certification criteria.

## 2. Updates to the Definition of Certified Electronic Health Record Technology in the Medicare Promoting Interoperability Program and the Quality Payment Program

### a. Background and Previously Finalized Certification Requirements

In consideration of the updates made to the 2015 Edition certification criteria as described in the CY 2021 PFS final rule (85 FR 84815 through 84828), we finalized that health care providers participating in the Medicare Promoting Interoperability Program and eligible clinicians participating in the Quality Payment Program must use certified health IT that satisfies the definitions of CEHRT at §§ 495.4 and 414.1305, respectively, and is certified under the ONC Health IT Certification Program, in accordance with the 2015 Edition Cures Update certification criteria, as finalized in the ONC 21st Century Cures Act final rule (85 FR 25642). We explained this included technology used to meet the 2015 Edition Base EHR definition at 45 CFR 170.102, technology certified to the criteria necessary to be a meaningful EHR user under the Medicare Promoting Interoperability Program and the MIPS Promoting Interoperability performance category, and technology certified to the criteria necessary to report on applicable objectives and measures. In this final rule, we are finalizing revisions to the CEHRT definitions

in the Medicare Promoting Interoperability Program and the Quality Payment Program (on which the Shared Savings Program’s definition of CEHRT at § 425.20 also relies) to support the proposed transition from the historical state of year themed “editions” to the “edition-less state” in the ONC HTI-1 proposed rule.

We included Table IX.F.-04 in the Hospital Inpatient Prospective Payment System for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Fiscal Year 2024 Rates final rule (88 FR 59278 through 59279), which includes some, but not all, certification criteria for the Medicare Promoting Interoperability Program’s measures and eCQMs for eligible hospitals and CAHs, and Table 57 in section IV.A.4.f.(4)(e)(iv) of this final rule, which includes some, but not all, certification criteria for measures under the MIPS Promoting Interoperability performance category. These tables are only applicable for the measures under the Medicare Promoting Interoperability Program and the MIPS Promoting Interoperability performance category, and do not include all of the updated certification criteria included in the CEHRT definition as discussed in the CY 2021 PFS proposed rule (85 FR 50265 through 50270). For further discussion on the complete list of changes to the certification criteria under the CEHRT definition, we refer readers to the ONC 21st Century Cures Act final rule (85 FR 25667), the CY 2021 PFS proposed rule (85 FR 50265), and the CY 2021 PFS final rule (85 FR 84818 through 84825).

b. Revisions to Certified Electronic Health Record Technology Definitions in Regulatory Text

We proposed to revise the definitions of CEHRT in §§ 495.4 and 414.1305 for the Medicare Promoting Interoperability Program and for the Quality Payment Program respectively (88 FR 52547 through 52548) so these definitions would be consistent with the “edition-less” approach to health IT certification as proposed in the ONC HTI-1 proposed rule, should the ONC proposal be finalized. First, for references to the “2015 Edition Base EHR definition” defined at 45 CFR 170.102, we proposed to add a reference to the revised name “Base EHR definition,” proposed in the ONC HTI-1 proposed rule, to ensure, if ONC’s definition is finalized, it is

applicable for the CEHRT definitions going forward (88 FR 23759, 23905). Next, we proposed to replace our references to “2015 Edition health IT certification criteria,” with “ONC health IT certification criteria” and to add the regulatory citation for ONC health IT certification criteria in 45 CFR 170.315. We are finalizing these proposals as proposed. By revising our regulations to account for ONC’s proposed discontinuation of references to the “2015 Edition,” and pointing to the regulations at 45 CFR 170.102 and 170.315, we believe these changes will ensure the CEHRT definitions do not need to be updated to reflect modified terminology unless ONC changes the location of these certification criteria.

While these proposed revisions will allow us to maintain more permanent cross-references to ONC’s regulations and terminology, we recognize that ONC has historically updated, and will likely in the future continue to update over time, the underlying certification criteria contained in 45 CFR 170.315.

Previously under the year-themed “editions” construct, we periodically revised the language in our regulatory CEHRT definitions to refer to a new Edition in order to incorporate ONC’s updates to health IT certification criteria. Then, in the CY 2021 PFS final rule (85 FR 84818 through 84825), to incorporate ONC’s updates to certification criteria in its 2015 Edition Cures Update, which ONC finalized under the ONC 21st Century Cures Act final rule (85 FR 25642 through 25961), we did not revise the language of the CEHRT definitions for the Medicare Promoting Interoperability Program and the Quality Payment Program. Instead, we finalized that technology used to satisfy the CEHRT definitions must be certified under the ONC Health IT Certification Program, in accordance with the 2015 Edition Cures Update certification criteria as finalized in the ONC 21st Century Cures Act final rule.

Consistent with ONC’s proposal to move away from year-themed “editions,” and to further simplify our regulatory approach, we proposed revisions to our definitions of CEHRT to ensure we would not necessarily be required to update our regulatory text each time ONC proposed or finalized any updates to its definition of Base EHR or certification criteria.

We proposed to establish that any certification criteria adopted or updated in 45 CFR 170.315 would be applicable for the CEHRT definitions in our programs' regulations at §§ 495.4 and 414.1305, if ONC's applicable regulations are referenced directly in our CEHRT definitions. We stated that if finalized, this proposal would allow the CEHRT definitions in our regulations to automatically incorporate ONC's updates to relevant certification criteria without pursuing additional rulemaking.

In the proposed rule, we stated that any update to a certification criterion finalized by ONC would not necessarily be immediately required for use in CEHRT for our Medicare Promoting Interoperability Program, Quality Payment Program, and Shared Savings Program. We remind readers that ONC sets timelines through their rulemaking for when health IT developers must ensure their health IT products meet ONC's new or updated certification criteria to maintain certification under the ONC Health IT Certification Program, including time for health IT developers to implement these updates for their customers who may participate in programs that require use of CEHRT (88 FR 23761). We also noted that CMS will continue to determine when new or revised versions of measures that require the use of certified health IT would be required for participation under the Medicare Promoting Interoperability Program and the Quality Payment Program. In determining requirements for any potential new or revised measures, we will consider factors such as implementation time and provider readiness to determine when we propose requiring participants to complete measures that require the use of certified health IT.

We believe this approach will provide us with more flexibility to finalize updates and is more consistent with the incremental approach to revising measures and technology requirements described above. Moreover, this additional flexibility will allow eligible hospitals, CAHs, and eligible clinicians to adopt, implement, and use ONC's updated certification criteria for health IT, including EHRs, as it becomes available from their chosen vendor, without the

need to wait for us to first amend the regulations at §§ 495.4 and 414.1305 through separate rulemaking.

In summary, we proposed to revise the definitions of CEHRT for the Medicare Promoting Interoperability Program at § 495.4, and for the Quality Payment Program at § 414.1305 (88 FR 52548). Specifically, we proposed to add a reference to the revised name of “Base EHR definition,” proposed in the ONC HTI-1 proposed rule, to ensure, if that rule is finalized, the revised name of “Base EHR definition” is applicable for the CEHRT definitions going forward (88 FR 23759). We also proposed to replace our references to the “2015 Edition health IT certification criteria” with “ONC health IT certification criteria” and add the regulatory citation for ONC health IT certification criteria in 45 CFR 170.315. We proposed to specify that technology meeting the CEHRT definitions must meet ONC’s certification criteria in 45 CFR 170.315 “as adopted and updated by ONC.” We believe that these revisions to the CEHRT definitions, which we are finalizing as proposed, will ensure that updates to the definition at 45 CFR 170.102 and updates to applicable health IT certification criteria in 45 CFR 170.315 will be incorporated into the CEHRT definitions, without additional regulatory action by CMS.

Finally, we noted that while this proposal is consistent with the approach in ONC’s HTI-1 proposed rule (88 FR 23746 through 23917), we do not believe that ONC must finalize its proposed revisions for us to be able to finalize the changes proposed in this section for our regulatory definitions of CEHRT.

We solicited comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Many commenters supported the proposal to revise and streamline the CEHRT definitions and the proposed cross-references for the Medicare Promoting Interoperability Program at § 495.4, and for the Quality Payment Program at § 414.1305, with ONC’s regulations and terminology. Some commenters supported the alignment because disparate definitions for the same terms across different health IT and other health care

regulations can cause confusion and administrative burdens to ensure compliance. Some commenters agreed with the proposal and approach to offer flexibility to clinicians and hospitals to adopt and implement ONC's updated certification criteria as they become available without having to wait on CMS to amend related regulations. Commenters also agreed with our assertion that CMS will determine when to incorporate any new or revised measures requiring new ONC Health IT Certification Program certification criteria – taking into account implementation timelines and readiness.

*Response:* We agree that the revisions will help to reduce potential confusion by clarifying references to certification criteria under the ONC Health IT Certification Program. We believe these revisions are consistent with the strategy described in the ONC HTI-1 proposed rule to move away from year-themed “editions,” including updates to the Base EHR definition and establishment of a single set of ONC health IT certification criteria (88 FR 52547). We believe this alignment, whether or not ONC finalizes its proposals, will simplify participation and reduce confusion for CMS program participants. In determining requirements for any potential new or revised measures, we will consider factors such as implementation time and provider readiness to determine when we propose requiring participants to complete measures that require the use of any new health IT certification criteria.

*Comment:* Some commenters requested more information regarding specific requirements to meet the ONC health IT certification criteria. One commenter recommended that CMS work with ONC to educate providers on the certification process to convey what providers need to know, actions to take now and in future years, and the anticipated costs associated with adopting and implementing certified EHR technology. Another commenter suggested that CMS ensure proper disclosures and plain language be included from EHR vendors to avoid confusion regarding EHR updates so that medical groups remain fully aware of whether the products they are using meet the CMS requirements. Another commenter recommended that CMS work with ONC to ensure health IT developers support awareness of proposed policies that impact

healthcare providers.

*Response:* We thank commenters for their suggestion to work with ONC in development of educational materials for providers so they better understand the certification process. We also appreciate the need to help users of ONC-certified products understand whether those products meet the definition of CEHRT, as well as the need to ensure clear and concise communications when describing the certification status of their products. We note that ONC maintains the Certified Health IT Product List (<https://chpl.healthit.gov/>), which is a comprehensive source of information for all health IT products certified by the ONC Health IT Certification Program. We may take these recommendations into consideration as we engage in continued educational activities. We will also work with ONC to explore the role health IT developers can play in effectively communicating policy changes to healthcare providers.

*Comment:* Other commenters expressed concern that the proposal would create financial and clinician burden in terms of implementation without providing clear or defined advantages and benefits. One commenter noted that many EHR developers charge physicians for “upgrades” and software updates to support new certified “editions” of the ONC health IT certification criteria. These fees often signify a required change in EHR versions to support federal reporting requirements, therefore, leaving it up to the EHR developer to “provide” ongoing certified EHRs to physicians. This results in the EHR developer charging physicians for updates without sufficiently communicating why the update is necessary, which could result in the physician declining the update to save money without realizing this action could result in the physician not possessing certified health IT necessary for participation in CMS’ programs. To address this, the commenter recommended a joint ONC-CMS educational campaign to clearly communicate to physicians what an EHR developer’s “provided product” means and what declining the product means for the EHR’s ability to support provider participation in Federal programs. The commenter also expressed concern that shifting the responsibility to the physician, rather than

requiring explicit use of a specific certified “edition” of ONC health IT certification criteria, as ONC and CMS have required for years, will disadvantage physicians.

*Response:* We understand that financial and other implementation burden for providers may be associated with updates to certified health IT products required for participation in CMS programs. We note that ONC’s focus on moving to incremental updates from the large-scale updates associated with year-themed Editions is intended in part to help mitigate the burden associated with updates. We also appreciate the recommendation to have joint educational resources that underscore the importance of having health IT products that meet the CEHRT definition, and we may take this into consideration as we engage in continued educational activities. Additionally, we agree it is important to support the broader adoption and use of interoperable certified health IT, and we refer readers to several existing resources and technical assistance information that HHS disseminates to support the broader care continuum.<sup>457,458,459</sup> We do not believe that this approach will disadvantage health care providers, relative to our prior focus on year-themed Editions. Rather, we believe this approach will simplify compliance and reduce the burden on healthcare providers who were previously required to ascertain the requirements and complete a large-scale update from one Edition to the next every few years. For a given capability required under the Medicare Promoting Interoperability Program or the Quality Payment Program, a health care provider will only need to know that their health IT product is certified to the appropriate criterion or criteria at 45 CFR 170.315, rather than the appropriate Edition. As previously mentioned, ONC maintains the Certified Health IT Product List (<https://chpl.healthit.gov/>), which is a comprehensive and authoritative listing of all certified Health IT Modules that have been successfully tested and certified by the ONC Health IT Certification program. We believe this will also help healthcare providers to have confidence that their health IT is kept up to date as their developer supports compliance with the ONC Health IT

<sup>457</sup> <https://www.healthit.gov/topic/health-it-health-care-settings/long-term-and-post-acute-care>.

<sup>458</sup> <https://www.healthit.gov/topic/behavioral-health>.

<sup>459</sup> <https://www.healthit.gov/sites/default/files/page/2020-07/Care%20Continuum%20Tipsheet.pdf>.

Certification Program requirements.

*Comment:* One commenter expressed concern with the updates providers would need to implement for criteria that are part of the CEHRT definition, such as those under the Base EHR definition. Specifically, the commenter noted since the CEHRT definition (both current and revised in this rule) directly references the Base EHR definition at 45 CFR 170.102, any such criteria would be updated as part of the Base EHR definition as of a date defined by ONC, and therefore, also updated automatically as part of the CEHRT definition given that direct citation. The commenter urged CMS to revise the CEHRT definition in a way that clarifies a date by which such new or revised criteria would become effective for purposes of Medicare Promoting Interoperability Program and the Quality Payment Program, for instance, by codifying a standard delay of 12 months from ONC's own effective dates intended for applicability for developers. One commenter recommended the timelines related to CEHRT definitions and requirements in this proposed rule not be effective any sooner than 24 months following the publication of the final rule. One commenter recommended that CMS set a date by which it expects all EHRs to achieve certification, requesting that CMS afford EHR vendors and health care providers a transition period of 3 to 5 years to develop, adopt, and integrate certified products. Other commenters requested the proposed timelines be clarified and delayed or extended, and prioritization be given to reducing provider burden across the whole healthcare continuum when implementing provisions of the 21<sup>st</sup> Century Cures Act and updating ONC's Health IT Certification Program.

*Response:* As noted by the commenter, under this final policy, technology meeting the CEHRT definitions must meet ONC's certification criteria in 45 CFR 170.315 "as adopted and updated by ONC." As a result, updates to the definition at 45 CFR 170.102 of a "Base EHR" and updates to applicable health IT certification criteria in 45 CFR 170.315 would be incorporated into the CEHRT definitions of our programs, without additional regulatory action by CMS. ONC sets timelines through their rulemaking for when health IT developers must ensure their

health IT products meet new or updated certification criteria in order to maintain certification under the ONC Health IT Certification Program, including time for health IT developers to implement these updates for their customers (88 FR 23761). We decline to finalize separate effective dates in the CEHRT definitions for the use of updated certified health IT products within the Medicare Promoting Interoperability Program or the Quality Payment Program, as recommended by commenters. We believe that emphasizing the timelines ONC adopts through notice and comment rulemaking for health IT developers to update and provide certified technology to their customers will reduce burden on participants in the Medicare Promoting Interoperability Program and the Quality Payment Program. Conversely, we believe that developing separate deadlines for program participants to ensure their technology has been appropriately updated would increase the regulatory burden for participants. As stated in the CY 2024 PFS proposed rule (88 FR 52548), we will continue to determine when new or revised versions of measures that require the use of certified health IT would be required for participation under the Medicare Promoting Interoperability Program and the Quality Payment Program. In determining requirements for any potential new or revised measures, we will consider factors such as implementation time and provider readiness to determine when we propose requiring participants to complete measures that require the use of certified health IT.

Finally, we refer readers to ONC's HTI-1 proposed rule, which includes two important proposals to further ensure that developers of certified health IT have certified products available for their customers to implement by specific dates. First, ONC proposes across several certification criteria,<sup>460</sup> and across several standards that are incorporated into certification criteria,<sup>461</sup> an expiration date after which a certification criterion and standard would no longer

---

<sup>460</sup> For example, ONC proposed in 45 CFR 170.315(f)(5) that a Health IT Module must conform to the revised requirements of the electronic case reporting certification criterion on an after December 31, 2024 (88 FR 23769 through 23774).

<sup>461</sup> For example, ONC proposed that adoption of the United States Core Data for Interoperability (USCDI) version 1 standard in 45 CFR 170.213(a) would expire on January 1, 2025 (88 FR 23764).

be available for certification under the ONC Health IT Certification Program.<sup>462</sup> Second, ONC proposes a new requirement (88 FR 23828 through 23830) as part of the Assurances Condition and Maintenance of Certification requirements in 45 CFR 170.402(b)(3) that would require a health IT developer to (1) update their products to the most recently adopted capabilities and standards included in a revised certification criterion and (2) provide to its customers such updated products by dates specified according to the revised criterion or standard.<sup>463</sup>

After consideration of public comments, we are finalizing our proposals to revise the definitions of CEHRT for the Medicare Promoting Interoperability Program at § 495.4, and for the Quality Payment Program at § 414.1305, to add a reference to the revised name of “Base EHR definition”; to replace our references to the “2015 Edition health IT certification criteria” with “ONC health IT certification criteria”; and to add the regulatory citation for ONC health IT certification criteria in 45 CFR 170.315.

---

<sup>462</sup> See also 45 CFR 170.315(a)(9)(vi) where ONC proposed that adoption of the CDS criterion for purposes of the ONC Health IT Certification Program expires on January 1, 2025 (88 FR 23782).

<sup>463</sup> For example, several new standards were proposed for the standardized API for patient and population level services certification criterion in 45 CFR 170.315(g)(10), and under the proposed Assurances requirements in 45 CFR 170.402(b)(3) a developer of certified health IT with a Health IT Module certified to 45 CFR 170.315(g)(10) would need to update their products to use the newer standards and provide those updated products to its customers by dates specified in 45 CFR 170 subpart B. In the case of 45 CFR 170.315(g)(10), by January 1, 2025 (88 FR 23828 through 23830).

## S. A Social Determinants of Health Risk Assessment in the Annual Wellness Visit

Medicare coverage for the Annual Wellness Visit (AWV) under Part B is primarily described in statute at section 1861(hhh) of the Act, and in regulation at 42 CFR 410.15. In the CY 2024 PFS proposed rule (88 FR 52262), we proposed to exercise our authority in section 1861(hhh)(2)(I) of the Act to add other elements to the AWV by adding a new Social Determinants of Health (SDOH) Risk Assessment as an optional, additional element with an additional payment. We noted that the proposed new SDOH Risk Assessment would enhance patient-centered care and support effective administration of an AWV. There are no deductible requirements or Part B coinsurance for the AWV. See §§ 410.160(b)(12) and 410.152(i)(13). Our proposal built upon our separate proposal described earlier to establish a stand-alone G code (G0136) for SDOH Risk Assessment furnished in conjunction with an Evaluation and Management (E/M) visit (see section II.E. of this final rule).

### 1. Background

The AWV includes the establishment (or update) of the patient's medical and family history, application of a health risk assessment and the establishment (or update) of a personalized prevention plan. The AWV also includes an optional Advance Care Planning (ACP) service. The AWV is covered for eligible beneficiaries who are no longer within 12 months of the effective date of their first Medicare Part B coverage period and who have not received either an Initial Preventive Physical Examination (IPPE) or AWV within the past 12 months. The goals of AWV are health promotion, disease prevention and detection and include education, counseling, a health risk assessment, referrals for prevention services, and a review of opioid use. Additional information about the AWV is available on the CMS website at <https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNProducts/preventive-services/medicare-wellness-visits.html>.

It is estimated<sup>464</sup> that around 50 percent of an individual's health is directly related to SDOH, which is defined by Healthy People 2030<sup>465</sup> as, "The conditions in the environment where people are born, live, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks." Healthy People 2030 also defines the broad groups of SDOH as: economic stability, education access and quality, healthcare access and quality, neighborhood and built environment, and social and community context. These parameters include factors like housing, food and nutrition access, and transportation needs. Given the large impact on health these factors have, the health care system broadly has been working to take these factors into account when providing care and rendering services.

Several Federal agencies, including the CDC, AHRQ, ACL, ACF, SAMHSA, HRSA, ONC, and ASPE are developing policies and implementation frameworks to better address the impact SDOH has on patients, in support of HHS's Strategic Approach to Addressing Social Determinants of Health to Advance Health Equity.<sup>466</sup> At CMS, addressing SDOH is an essential piece of the CMS Framework for Health Equity,<sup>467</sup> and it is tied in heavily with the CMS Strategic Pillar to advance equity. SDOH was also a foundational concept with the CMS Innovation Center Accountable Health Communities (AHC) Model that ended in 2022. Given the importance of and focus surrounding SDOH and enhancing equity, CMS is exploring ways to recognize and quantify practitioner work currently being done in this area, and to provide support to enable practitioners to assess and intervene when SDOH is relevant to the assessment, prevention and treatment plan of a Medicare patient.

CMS tested the AHC Model between 2017 and 2022. One element of the model test was the development and application of the AHC Health-Related Social Needs (HRSN) Screening Tool, which helps providers to identify patients' SDOH related needs, including housing

<sup>464</sup> <https://aspe.hhs.gov/sites/default/files/documents/e2b650cd64cf84aae8ff0fae7474af82/SDOH-Evidence-Review.pdf>.

<sup>465</sup> <https://health.gov/healthypeople>.

<sup>466</sup> <https://aspe.hhs.gov/sites/default/files/documents/aabf48cbd391be21e5186eeae728ccd7/SDOH-Action-Plan-At-a-Glance.pdf>.

<sup>467</sup> <https://www.cms.gov/files/document/cms-framework-health-equity-2022.pdf>.

instability, food insecurity, family and community support and mental health. Additional information on the AHC model is available on the CMS website at (<https://innovation.cms.gov/innovation-models/ahcm>).

We have heard from many health care professionals and beneficiary groups that there are barriers to completing the AWW, including, but not limited to, language and communication, differences in cultural perspectives and expectations regarding engagement with the healthcare system. We described in the PFS proposed rule that we increasingly understand the importance that SDOH be considered in an assessment of patient histories, patient risk, and in informing medical decision making, prevention, diagnosis, care and treatment.

In February 2018, Health Affairs published an article titled, “Practices Caring for the Underserved Are Less Likely to Adopt Medicare’s Annual Wellness Visit,” which described findings from a statistical study of Medicare primary care providers and AWW’s from 2011 to 2015. The article states, “One of our most striking results was that while underserved patients were less likely to receive an annual wellness visit regardless of where they sought care, practices in rural areas and those caring for underserved and sicker populations were less likely to provide such visits to any of their patients--which suggests these practices may face resource constraints or have priorities that compete with adoption of the visit.”<sup>468</sup>

In August 2022, the Journal of the American Geriatrics Society published an article titled, “Medicare’s annual wellness visit: 10 years of opportunities gained and lost.” The article expresses the concern, “currently AWWs are a ‘one size fits all’,” approach. This uniform approach does not sufficiently take into consideration the medical, psychological, functional, racial, cultural and socio-economic diversity of older adults. Updated AWWs should be tailored to meet the needs and priorities of older adults receiving them.” It goes on to recommend, “Medicare AWWs should include screening and counseling for social determinants of health as a

means of mitigating the growing disparities in health and longevity for underserved older adults.”<sup>469</sup>

## 2. Statutory and Regulatory Authority

Section 4103 of The Patient Protection and Affordable Care Act (ACA) (Pub. L. 111-148) expanded Medicare coverage by adding the AWW benefit at section 1861(hhh) of the Act, effective for services furnished on or after January 1, 2011. We subsequently implemented the AWW in CMS regulations at § 410.15. The AWW is a wellness visit that focuses on identification of certain risk factors, personalized health advice, and referral for additional preventive services and lifestyle interventions (which may or may not be covered by Medicare). The elements included in the AWW differ from comprehensive physical examination protocols with which some providers may be familiar since it is a visit that is specifically designed to provide personalized prevention plan services as defined in the Act. The AWW includes a health risk assessment (HRA) and the AWW takes into account the results of the HRA. The AWW is covered for eligible beneficiaries who are no longer within 12 months of the effective date of their first Medicare Part B coverage period and who have not received either an IPPE or AWW within the past 12 months. Section 1861(hhh)(2) of the Act describes a number of elements included in the AWW and section 1861(hhh)(2)(I) of the Act authorizes the addition of any other element determined appropriate by the Secretary.

Section 410.15(a) requires that the first AWW include the following:

- Review (and administration if needed) of a health risk assessment (as defined in § 410.15).
- Establishment of an individual’s medical and family history.
- Establishment of a list of current providers and suppliers that are regularly involved in providing medical care to the individual.

---

<sup>469</sup> Coll PP, Batsis JA, Friedman SM, Flaherty E. Medicare's annual wellness visit: 10 years of opportunities gained and lost. *J Am Geriatr Soc.* 2022 Oct;70(10):2786-2792. doi: 10.1111/jgs.18007. Epub 2022 Aug 17. PMID: 35978538.

- Measurement of an individual's height, weight, body-mass index (or waist circumference, if appropriate), blood pressure, and other routine measurements as deemed appropriate, based on the beneficiary's medical and family history.

- Detection of any cognitive impairment that the individual may have, as that term is defined in § 410.15.

- Review of the individual's potential (risk factors) for depression, including current or past experiences with depression or other mood disorders, based on the use of an appropriate screening instrument for persons without a current diagnosis of depression, which the health professional may select from various available standardized screening tests designed for this purpose and recognized by national medical professional organizations.

- Review of the individual's functional ability and level of safety, based on direct observation or the use of appropriate screening questions or a screening questionnaire, which the health professional as defined in § 410.15 may select from various available screening questions or standardized questionnaires designed for this purpose and recognized by national professional medical organizations.

- Establishment of the following:

- ++ A written screening schedule for the individual such as a checklist for the next 5 to 10 years, as appropriate, based on recommendations of the United States Preventive Services Task Force (USPSTF) and the Advisory Committee on Immunization Practices, and the individual's health risk assessment (as that term is defined in § 410.15), health status, screening history, and age- appropriate preventive services covered by Medicare.

- ++ A list of risk factors and conditions for which primary, secondary or tertiary interventions are recommended or are underway for the individual, including any mental health conditions or any such risk factors or conditions that have been identified through an IPPE (as described under § 410.16), and a list of treatment options and their associated risks and benefits.

++ Furnishing of personalized health advice to the individual and a referral, as appropriate, to health education or preventive counseling services or programs aimed at reducing identified risk factors and improving self- management, or community-based lifestyle interventions to reduce health risks and promote self-management and wellness, including weight loss, physical activity, smoking cessation, fall prevention, and nutrition.

++ At the discretion of the beneficiary, furnish advance care planning services to include discussion about future care decisions that may need to be made, how the beneficiary can let others know about care preferences, and explanation of advance directives which may involve the completion of standard forms.

++ Furnishing of a review of any current opioid prescriptions as that term is defined in this section.

++ Screening for potential substance use disorders including a review of the individual's potential risk factors for substance use disorder and referral for treatment as appropriate.

++ Any other element determined appropriate through the national coverage determination process.

We noted in the PFS proposed rule that § 410.15(a) requires that a subsequent AWWs include the following:

- Review (and administration, if needed) of an updated health risk assessment (as defined in § 410.15).
- An update of the individual's medical and family history.
- An update of the list of current providers and suppliers that are regularly involved in providing medical care to the individual as that list was developed for the first AWW providing personalized prevention plan services or the previous subsequent AWW providing personalized prevention plan services.

- Measurement of an individual's weight (or waist circumference), blood pressure and other routine measurements as deemed appropriate, based on the individual's medical and family history.

- Detection of any cognitive impairment that the individual may have, as that term is defined in § 410.15.

- An update to the following:

- ++ The written screening schedule for the individual as that schedule is defined in paragraph (a) of § 410.15 for the first AWV providing personalized prevention plan services.

- ++ The list of risk factors and conditions for which primary, secondary or tertiary interventions are recommended or are underway for the individual as that list was developed at the first AWV providing personalized prevention plan services or the previous subsequent AWV providing personalized prevention plan services.

- ++ Furnishing of personalized health advice to the individual and a referral, as appropriate, to health education or preventive counseling services or programs as that advice and related services are defined in paragraph (a) of § 410.15.

- ++ At the discretion of the beneficiary, furnish advance care planning services to include discussion about future care decisions that may need to be made, how the beneficiary can let others know about care preferences, and explanation of advance directives which may involve the completion of standard forms.

- ++ Furnishing of a review of any current opioid prescriptions as that term is defined in this section.

- ++ Screening for potential substance use disorders including a review of the individual's potential risk factors for substance use disorder and referral for treatment as appropriate.

- ++ Any other element determined appropriate through the national coverage determination process.

In the CY 2016 PFS final rule (80 FR 70885), we included ACP as an optional element (at beneficiary discretion) within the AWW. We stated in the final rule we added ACP as a voluntary, separately payable element of the AWW. We provided the instruction that when ACP is furnished as an optional element of AWW as part of the same visit with the same date of service, CPT codes 99497 and 99498 should be reported and will be payable in full in addition to payment that is made for the AWW under HCPCS code G0438 or G0439, when the parameters for billing those CPT codes are separately met, including requirements for the duration of the ACP services. Under these circumstances, ACP should be reported with modifier -33 and there will be no Part B coinsurance or deductible, consistent with the AWW (80 FR 70958). We also added this policy to the regulatory text at § 410.15(a).

### 3. Proposal

In the CY 2024 PFS proposed rule (88 FR 52262), we proposed to exercise our authority in section 1861(hhh)(2)(I) of the Act to add elements to the AWW by adding a new SDOH Risk Assessment as an optional, additional element of the AWW with an additional payment. We recognized that, for some patients, identification and consideration of SDOH is critical to furnishing a fully informed health assessment and personalized prevention plan in the AWW. Interested parties had reported that the current elements of the AWW may not directly or adequately identify those SDOH challenges. We proposed that the SDOH Risk Assessment be separately payable with no beneficiary cost sharing when furnished as part of the same visit with the same date of service as the AWW. We proposed that the SDOH Risk Assessment service include the administration of a standardized, evidence-based SDOH risk assessment tool, furnished in a manner that all communication with the patient be appropriate for the patient's educational, developmental, and health literacy level, and be culturally and linguistically appropriate. We stated that services that are culturally and linguistically appropriate are critical to providing effective, equitable, understandable, and respectful quality care that are responsive to diverse cultural health beliefs and practices, preferred languages, health literacy, and other

communication needs of each patient. We recognized that patients with SDOH risks and challenges may often also experience communication barriers of various kinds when interacting with the health care system. We further noted that we believe that the SDOH Risk Assessment would only be effective in informing the greater AWV (including the health assessment and personalized prevention plan) when furnished in a manner that is intelligible and appropriate to the individualized characteristics and circumstances of the patient. Additional information on culturally and linguistically appropriate services in healthcare can be found at (<https://thinkculturalhealth.hhs.gov/clas>). In addition, we described our belief that the SDOH Risk Assessment Tool would be most effective and actionable when furnished in a setting with staff-assisted supports in place to ensure follow-up for health-related social needs associated to the visit. We also encouraged partnerships with community-based organizations such as Area Agencies on Aging to help address identified social needs. We proposed that the SDOH Risk Assessment be furnished as part of the same visit and on the same date of service as the AWV, so as to inform the care the patient is receiving during the visit, including taking a medical and social history, applying health assessments and prevention services education and planning. We suggested our proposal would directly reduce barriers, expand access, promote health equity and improve care for populations that have historically been underserved by recognizing the importance that SDOH be considered and assessed, where appropriate, in support of the existing AWV. In addition, we expressed our hope that our proposal would help spread general awareness among health professionals about the importance of providing cultural and linguistically appropriate services, which in turn will encourage clinicians to adopt language services and technologies to achieve high quality communication between the practitioner and patient. Our goal was the development of a personalized prevention plan that takes SDOH into account and is truly tailored to the individual patient. We solicited comments on our proposal, including whether a SDOH Risk Assessment would ultimately inform and result in the

development of steps to address and integrate SDOH in the patient's AWW health assessment and personalized prevention plan.

We recognized in the PFS proposed rule that SDOH risk assessments are an emerging and evolving tool in healthcare and so we did not restrict our proposal to a specific list of approved assessments. In selecting an evidence-based tool, we encourage clinicians to explore the many widely adopted and validated tools available, including the CMS Accountable Health Communities<sup>470</sup> tool, the Protocol for Responding to & Assessing Patients' Assets, Risks & Experiences (PRAPARE) tool<sup>471</sup>, and instruments identified for Medicare Advantage Special Needs Population Health Risk Assessment.<sup>472</sup> We also encouraged clinicians, where feasible, to select screening instruments that maximize opportunities to collect and analyze standardized, quantifiable, and actionable data. For instance, clinicians were encouraged to utilize screening instruments where questions and responses are computable and mapped to health IT vocabulary standards (that is, have available LOINC® coding terminology), to ensure that data captured through assessments is interoperable and can be shared, analyzed and evaluated across the care continuum.

Our proposal built upon our separate proposal described earlier in the PFS proposed rule to establish a stand-alone G code (G01365) for SDOH Risk Assessment furnished in conjunction with an E/M visit. See section II.E. of this final rule for additional information on coding, pricing, and additional conditions of payment for the proposed new SDOH Risk Assessment service. We indicated that once the rule was final, CMS would issue public guidance in the Medicare Learning Network, the Medicare & You Handbook, and other policy and payment instructions in the Medicare Benefit Policy Manual and the Medicare Claims Processing Manual on the CMS website.

<sup>470</sup> <https://innovation.cms.gov/files/worksheets/ahcm-screeningtool.pdf>.

<sup>471</sup> <https://www.nachc.org/research-and-data/prapare/>.

<sup>472</sup> CMS-10825.

CMS has worked to develop payment mechanisms under the PFS to improve the accuracy of valuation and payment for the services furnished by physicians and other health care professionals, especially in the context of evolving models of care. Section 1862(a)(1)(A) of the Act generally excludes from coverage services that are not reasonable and necessary for the diagnosis or treatment of illness or injury or to improve the functioning of a malformed body member. Practitioners across specialties have opined and recognized the importance of SDOH on the health care provided to their patients by recommending the assessment of SDOH through position or discussion papers,<sup>473</sup>,<sup>474</sup>,<sup>475</sup> organizational strategic plans,<sup>476</sup> and provider training modules,<sup>477</sup> among others. We have discussed how the practice of medicine currently includes assessment of health-related social needs or SDOH in taking patient histories, assessing patient risk, and informing medical decision making, diagnosis, care and treatment. The taking of a social history is generally performed by physicians and other health professionals in support of patient-centered care to better understand and help address relevant problems that are impacting medically necessary care. Practitioners are expending resources to obtain information from the patient about health-related social needs, and to formulate diagnosis and treatment plans that take these needs into account as part of a person-centered care plan for the treatment of medical problems. This work currently is reported and paid for, in part, under the PFS under E/M visit codes, and we believe as such, is undervalued and not optimized to allow the health professional and patient to benefit from the full value of a dedicated SDOH assessment and have that assessment immediately inform the health assessment and prevention planning services in the AWW.

We proposed that Medicare would pay 100 percent of the fee schedule amount for the SDOH Risk Assessment service (beneficiary cost sharing would not be applicable) when this

<sup>473</sup> <https://www.aafp.org/about/policies/all/social-determinants-health-family-medicine-position-paper.html>.

<sup>474</sup> <https://doi.org/10.7326/M17-2441>.

<sup>475</sup> <https://nam.edu/social-determinants-of-health-201-for-health-care-plan-do-study-act/>.

<sup>476</sup> <https://www.ama-assn.org/system/files/2021-05/ama-equity-strategic-plan.pdf>.

<sup>477</sup> <https://edhub.ama-assn.org/steps-forward/module/2702762>.

risk assessment is furnished to a Medicare beneficiary as an optional element within an AWW (as part of the same visit with the same date of service as the AWW). Our proposal was analogous to our approach to the ACP service, which is an optional service for which beneficiary cost sharing is not applicable when furnished as part of the same visit and on the same date of service as the AWW. Beneficiary cost sharing (coinsurance and deductible) is not applicable to the AWW and, because the SDOH Risk Assessment will be an optional element within the AWW, there will not be any beneficiary cost sharing for the SDOH Risk Assessment either. See §§ 410.160(b)(12) and 410.152(l)(13). We noted that beneficiary cost sharing would apply to the SDOH Risk Assessment if furnished in conjunction with another service (outside of the AWW) that is subject to beneficiary cost sharing. We proposed that the SDOH Risk Assessment would be optional for both the health professional and the beneficiary to empower clinicians and patients to employ this assessment only when appropriate and desired.

We proposed to add regulatory text at § 410.15 that will include the new SDOH Risk Assessment service as an optional element within the AWW, at the discretion of the health professional and beneficiary. Furthermore, we proposed to add regulatory text that the SDOH Risk Assessment be standardized, evidence-based, and furnished in a manner that all communication with the patient be appropriate for the beneficiary's educational, developmental, and health literacy level, and be culturally and linguistically appropriate. We solicited comments on our proposal.

Because we had previously received feedback from interested parties that the AWW may be more effectively furnished if elements were allowed to be completed over multiple visits and days, or prior to the AWW visit, we also solicited comments on this issue for consideration in future rulemaking.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Overall, public commenters expressed broad support and approval of our proposal to exercise our authority in section 1861(hhh)(2)(I) of the Act to add elements to the AWW by adding a new SDOH Risk Assessment as an optional, additional element of the AWW with an additional payment and no applicable beneficiary cost sharing. Many commenters agreed with our position described in the PFS proposed rule that, for some patients, a Social Determinates of Health Risk Assessment would be critical to furnishing a fully informed Health Risk Assessment and Personalized Prevention Plan in the Annual Wellness Visit, and thus, an appropriate additional, optional element in the AWW.

*Response:* We thank the commenters for their support of our proposal to exercise our authority in section 1861(hhh)(2)(I) of the Act to add elements to the AWW by adding a new SDOH Risk Assessment as an optional, additional element of the AWW with an additional payment and no applicable beneficiary cost sharing.

*Comment:* Many commenters expressed agreement with our proposal to make the SDOH Risk Assessment optional for the patient and clinician. A few comments disagreed with our proposal that the SDOH Risk Assessment be optional for the provider and beneficiary and, instead, the commenters recommended that the SDOH Risk Assessment be a mandatory additional element in the AWW.

*Response:* We disagree with the commenters' recommendation that the SDOH Risk Assessment should be a mandatory element of the AWW at this time. We recognize that a SDOH Risk Assessment is an emerging tool in healthcare and that some clinicians and patients may be reluctant to collect and share sensitive information about health-related social needs until this tool becomes more established and familiar. We are not adopting the recommendation by public commenters that the SDOH Risk Assessment be a mandatory element of the AWW, but we may consider it in future rulemaking.

*Comment:* We received a few comments requesting clarification on the type of clinician that would be eligible to furnish the SDOH Risk Assessment as an additional element of the AWW.

*Response:* We clarify in the PFS final rule that as an additional element of the AWW, the clinicians identified within the definition of “Health Professional” (42 CFR 410.15(a)) as eligible to furnish to AWW would also be eligible to furnish the SDOH Risk Assessment as an additional element of the AWW. This would include a physician who is a doctor of medicine or osteopathy (as defined in section 1861(r)(1) of the Act); A physician assistant, nurse practitioner, or clinical nurse specialist (as defined in section 1861(aa)(5) of the Act); and a medical professional (including a registered nurse, a licensed clinical social worker, a health educator, a registered dietitian, or nutrition professional, or other licensed practitioner) or a team of such medical professionals, working under the direct supervision (as defined in § 410.32(b)(3)(ii)) of a physician.

*Comment:* A few commenters requested clarification on the eligibility of the beneficiary and frequency limitations of the SDOH Risk Assessment as an additional element in the AWW.

*Response:* We clarify the PFS final rule that as an additional element of the AWW, the SDOH Risk assessment would be subject to the same limitations on coverage for the AWW described at § 410.15(c). Specifically, the beneficiary must be eligible for an AWW and have not had either an initial preventive physical examination or an AWW within the past 12 months. We note earlier in our final rule in section II.E. that the SDOH Risk Assessment may also be furnished in conjunction with an E/M visit, though in this instance different frequency limitations and other conditions of payment would apply, and Part B coinsurance and deductible would be applicable.

*Comment:* Numerous commenters requested clarification on whether elements of the AWW, including the health risk assessment described at § 410.15(a), and the SDOH Risk Assessment described in the PFS proposed rule, could be initiated by the patient prior to the date

of the AWW, and if so, whether it would fit within the requirement of the PFS proposed rule that it be furnished on the same date of service and as part of the same visit as the AWW.

*Response:* We clarify in the PFS final rule that in some cases, for various reasons, elements of the AWW may be initiated and furnished over a period of multiple days. In these situations, the date of service that should be reported on the claim is the date of service on which the entirety of the AWW (including applicable additional elements) (based on CPT code description) is completed. For example, there could be a scenario where a patient would provide their input for a SDOH Risk Assessment through an online portal on a Monday and the health professional interprets the patient's SDOH Risk Assessment input and applies that information toward the establishment or update of a personalized prevention plan as part of the remainder of the AWW on a Tuesday. In this scenario, the date of service for both the SDOH Risk Assessment and the AWW would be the date of service on which the entirety of the AWW is completed. We further clarify that medical record documentation should reflect that the service began on one day and was completed on another day (the date of service reported on the claim). If documentation is requested, medical records for both days should be submitted. In scenarios where elements of the AWW are initiated on one day and completed on another day, the services are to be billed based on the time involved as described by CPT code and the date of service the entire AWW is completed. This clarification is consistent with our implementing regulations for the health risk assessment element of the AWW, which allow that the health risk assessment may be administered independently by the beneficiary or administered by a health professional prior to or as part of the AWW encounter (§ 410.15(a) "Health risk assessment"). This clarification is consistent with prior CMS guidance on coding and billing date of service on professional Medicare claims. See MLN article # SE17023.<sup>478</sup>

---

<sup>478</sup> CMS website: <https://www.cms.gov/regulations-and-guidance/guidance/transmittals/2017-transmittals-items/se17023>.

*Comment:* Numerous commenters requested clarification on implications of our proposal for Federal Qualified Health Centers (FQHCs) and Rural Health Clinics (RHCs). First, commenters requested clarification on whether FQHCs and RHCs would be eligible to furnish the SDOH Risk Assessment as an additional element of the AWW. Second, many commenters also requested clarification on coding and payment calculations and mechanics for the SDOH Risk Assessment as an additional element of the AWW in relation to the FQHC and RHC bundled payment mechanisms.

*Response:* First, we clarify in the PFS final rule that as FQHCs and RHCs are currently eligible to furnish the AWW, they will also be eligible to furnish a SDOH Risk Assessment as an additional element of the AWW. Second, regarding comments requesting clarification on payment calculations and mechanics for the SDOH Risk Assessment within the AWW in relation to the bundled payment mechanisms of the FQHC Prospective Payment System and the RHC facility-specific all-inclusive rate (AIR), see section III.B. of this final rule for additional information on coding, pricing, and additional conditions of payment for the proposed new SDOH Risk Assessment service in regards to FQHCs and RHCs.

*Comment:* One commenter requested that CMS add screening for chronic kidney disease and rare kidney disease as additional elements in the AWW.

*Response:* While adding screening for chronic kidney disease and rare kidney disease as additional elements in the AWW is out of scope for this rule, we will take it into consideration for possible future rulemaking.

After consideration of public comments, we are finalizing our proposal made in the CY 2024 PFS proposed rule to exercise our authority in section 1861(hhh)(2)(I) of the Act to add elements to the AWW by adding a new SDOH Risk Assessment as an optional, additional element of the AWW with an additional payment and no applicable beneficiary cost sharing. We are also finalizing corresponding updates to regulatory text as proposed.

## **IV. Updates to the Quality Payment Program**

### A. CY 2024 Modifications to the Quality Payment Program

#### 1. Executive Summary

##### a. Overview

This section of the final rule outlines changes to the Quality Payment Program starting January 1, 2024, except as otherwise noted for specific provisions. We continue to move the Quality Payment Program forward, including focusing more on our measurement efforts and refining how clinicians would be able to participate in a more meaningful way, to achieve continuous improvement in the quality of health care services provided to Medicare beneficiaries and other patients through the Quality Payment Program's Merit-based Incentive Payment System (MIPS) and Advanced Alternative Payment Models (APMs) for the CY 2024 performance period/2026 MIPS payment year.

Authorized by the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114-10, April 16, 2015), the Quality Payment Program is a payment incentive program, by which the Medicare program rewards clinicians who provide high-value, high-quality services in a cost-efficient manner. The Quality Payment Program includes two participation tracks for clinicians providing services under the Medicare program: MIPS and Advanced APMs. The statutory requirements for the Quality Payment Program are set forth in section 1848(q) and (r) of the Act for MIPS and section 1833(z) of the Act for Advanced APMs.

For the MIPS participation track, MIPS eligible clinicians (defined in 42 CFR at 414.1305) are subject to a MIPS payment adjustment (positive, negative, or neutral) based on their performance in four performance categories: cost, quality, improvement activities, and Promoting Interoperability. We assess each MIPS eligible clinician's total performance according to our established performance standards with respect to the applicable measures and activities specified in each of these four performance categories during a performance period to compute a final composite performance score (a "final score" as defined at § 414.1305). In

calculating the final score, we must apply different weights for the four performance categories, subject to certain exceptions, as set forth in section 1848(q)(5) of the Act and at § 414.1380.

Unless we assign a different scoring weight pursuant to these exceptions, for CY 2024 performance period/2026 MIPS payment year, the scoring weights are as follows: 30 percent for the quality performance category; 30 percent for the cost performance category; 15 percent for the improvement activities performance category; and 25 percent for the Promoting Interoperability performance category.

Once calculated, each MIPS eligible clinician's final score is compared to the performance threshold we have established in prior rulemaking for that performance period to calculate the MIPS payment adjustment factor as specified in section 1848(q)(6) of the Act, such that the MIPS eligible clinician will receive in the applicable MIPS payment year: (1) a positive adjustment, if their final score exceeds the performance threshold; (2) a neutral adjustment, if their final score meets the performance threshold; or (3) a negative adjustment, if their final score is below the performance threshold. The actual amount paid to the MIPS eligible clinician in MIPS payment year, once the MIPS payment adjustment factor is applied, is subject to further calculations such as application of the scaling factor and budget neutrality requirements, as further specified in section 1848(q)(6) of the Act.

Section 1848(q) of the Act sets forth other requirements applicable to MIPS, including opportunities for feedback and targeted review and public reporting of MIPS eligible clinicians' performance. Section 1848(r) of the Act sets forth more specific requirements for development of measures for the cost performance category under MIPS.

If an eligible clinician participates in an Advanced APM and achieves Qualifying APM Participant (QP) or Partial QP status, they are excluded from the MIPS reporting requirements and payment adjustment (though eligible clinicians who are Partial QPs may elect to be subject to the MIPS reporting requirements and payment adjustment). Eligible clinicians who are QPs for the CY 2023 performance year receive a 3.5 percent APM Incentive Payment in the 2025

payment year, and, beginning with the CY 2024 performance year (payment year 2026), a higher PFS payment rate (calculated using the differentially higher “qualifying APM conversion factor”) than non-QPs. QPs will continue to be excluded from MIPS reporting and payment adjustments for the applicable year.

Participation in the Quality Payment Program (defined as clinicians with a final score greater than 0, including both those who submitted data and those who did not submit data) decreased slightly to 97.59 percent in the sixth year (CY 2022 performance period/2024 MIPS payment year) with 609,148 MIPS eligible clinicians receiving a final score other than zero out of 624,209 MIPS total eligible clinicians. In the CY 2021 performance period/2023 MIPS payment year, all 698,859 MIPS eligible clinicians received a final score other than zero. Therefore, participation rates in MIPS decreased slightly between the CY 2021 and CY 2022 MIPS performance periods.

In addition, 78.76 percent of MIPS eligible clinicians received a positive payment adjustment for the CY 2024 MIPS payment year based on their performance in the CY 2022 performance period. Please note that results for the CY 2022 performance period/CY 2024 MIPS payment year described herein are subject to change as a result of the targeted review process which began on August 10, 2023, and will conclude on October 9, 2023. For more information on the targeted review process for the CY 2022 performance period/ 2024 MIPS payment year, please see our targeted review guide at <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2511/2022MIPSTargetedReviewGuide.pdf>.

Regarding performance in Advanced APMs, for the CY 2022 QP Performance Period, 384,105 eligible clinicians (TIN-NPIs) earned Qualifying APM Participant (QP) status while another 2,528 eligible clinicians earned partial QP status.

We plan to continue developing policies for the Quality Payment Program that more effectively reward high-quality of care for patients and increase opportunities for Advanced APM participation. We are moving forward with implementing MIPS Value Pathways (MVPs)

to allow for a more cohesive participation experience by connecting activities and measures from the four MIPS performance categories that are relevant to a specialty, medical condition, or a particular population.

As we move into the seventh year of the Quality Payment Program, we are finalizing the updates set forth in this section of this final rule, encouraging continued improvement in clinicians' performance with each performance year and driving improved quality of health care through payment policy.

In developing and putting forth these proposed and final policies, we intend to continue our efforts to align the Quality Payment Program with broader CMS initiatives, such as the establishment of the Universal Foundation (<https://www.nejm.org/doi/full/10.1056/NEJMp2215539>) and the CMS National Quality Strategy (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/Legacy-Quality-Strategy>). These initiatives unify strategic efforts across our programs, including the Quality Payment Program, to adopt measures most critical to providing high quality care and accelerate strategic improvements for quality programs and measures.

The vision for the CMS National Quality Strategy is to shape a resilient, high-value American health care system to achieve high-quality, safe, equitable, and accessible care for all. This strategy aims to promote the highest quality outcomes and safest care for all individuals. It also focuses on a person-centered approach as individuals journey across the continuum of care, care settings, and across payer types. The goals of this strategy incorporate lessons learned from the COVID-19 public health emergency (PHE) to inform both short- and long-term direction for our health care system.

The Universal Foundation moves toward a building-block approach to advance the overall vision of the National Quality Strategy and increase alignment across CMS quality programs by capturing measures that are meaningful, broadly applicable, and capable of

being digitally reported and stratified, to identify and track disparities over time. The Universal Foundation seeks to improve health outcomes, reduce provider burden, improve standardization of measurement, and promote interoperability by prioritizing measures to transition to interoperable digital data.

The implementation of MVPs aligns with many of the objectives and goals the CMS National Quality Strategy and the Universal Foundation strive to achieve. For example, to align implementation of the measures in the Universal Foundation across MIPS and APMs, we are finalizing as proposed the updates to consolidate the Promoting Wellness and Managing Chronic Conditions MVPs into the Value in Primary Care MVP to align with the adult Universal Foundation measure set. We also explored the expansion of the APM Performance Pathway (APP) reported by clinicians in the Shared Savings Program and Advanced APMs to include the primary care universal measure set in the future. In our continued strategy to incentivize improved equity as well as advancing value, in Performance Year 2023, the Shared Savings Program will implement an upside-only adjustment to reward ACOs that provide excellent care for underserved populations (87 FR 69838 through 69857).

To support our goal to accelerate interoperability, we are finalizing with modification our proposal to align the Shared Savings Program CEHRT requirement with the MIPS Promoting Interoperability performance category's requirements. We also are finalizing as proposed to modify our certified electronic health record (EHR) technology (CEHRT) use criterion for Advanced APMs to promote flexibility in adopting CEHRT that is clinically relevant to participants, emphasizing the importance of interoperability and health information technology. Moreover, we are finalizing as proposed the expansion of our portfolio of available MVPs for the CY 2024 performance period and remain committed to our goal of ensuring more meaningful participation in the Quality Payment Program through MVPs.

## b. Summary of Major Provisions

### (1) Transforming the Quality Payment Program

The CMS National Quality Strategy addresses the urgent need for transformative action to advance towards a more equitable, safe, and outcomes-based health care system for all individuals. This vision is supported by the alignment of policies and quality measures in MIPS and APMs within the Quality Payment Program. Priorities for the Quality Payment Program include: achieving more equitable outcomes; utilizing clinically relevant measures for specialty performance that inform clinicians and beneficiaries; enhancing quality, patient safety, and efficiency through use of CEHRT; reducing burden and simplifying quality performance reporting; articulating meaningful outcomes, promoting alignment where possible, and moving to all digital reporting.

The Quality Payment Program allows eligible clinicians to engage in patient-centered care via two tracks: MIPS and APMs. We believe the Quality Payment Program should continuously support the measurement and improvement of specialty and primary care. To this end, we are implementing MVPs to allow clinicians to report on measures that are directly relevant to their clinical practice. MVPs provide more clinically relevant performance measurement, engage more specialists in performance measurement, and reduce barriers to APM participation. CMS has recently laid out multiple steps intended to fulfill the potential of APMs. The CMS Innovation Center strategy refresh acknowledges that whole person care requires the depth and scope of services that includes both primary and specialty care and aims to provide ACOs with tools to better engage specialists, test ways to better link primary and specialty care upstream in the patient journey, and further movement into value-based care.<sup>479</sup>

## (2) Major MIPS Provisions

We requested comment on how the Quality Payment Program can facilitate continuous improvement of Medicare beneficiaries' healthcare and best build on existing CMS Innovation Center model policies and Medicare programs, such as the Medicare Shared Savings Program. We sought feedback on how we might modify our policies, requirements, and performance

---

<sup>479</sup> CMMI Strategy Refresh. October 20, 2021. <https://innovation.cms.gov/strategic-direction-whitepaper>.

standards to encourage clinicians to continuously improve the quality of care, particularly for clinicians with little room for improvement in MIPS.

(a) MIPS Value Pathways Development and Maintenance

In an effort to promote high-quality, safe, and equitable care and to implement the vision outlined in the CMS National Quality Strategy, we are finalizing as proposed five new MVPs around the topics of: Women’s Health; Infectious Disease, Including Hepatitis C and HIV; Mental Health and Substance Use Disorder; Quality Care for Ear, Nose, and Throat (ENT); and Rehabilitative Support for Musculoskeletal Care. In addition, we are finalizing as proposed MVP maintenance updates to our MVP inventory that are in alignment with the MVP development criteria, and in consideration of the feedback from interested parties we have received through the maintenance process.

(b) Subgroup Reporting

We are finalizing our proposal to codify previously finalized subgroup policies in the preamble to regulation text. Additionally, we are finalizing updates to previously finalized subgroup policies to help guide clinicians and groups to meaningfully participate in MVPs through subgroup reporting. Specifically, we are finalizing to eliminate the policy allowing a subgroup to submit a separate reweighting application request independent of its affiliated group, to not calculate the facility-based score for a subgroup, to assign the affiliated group’s complex patient bonus score for subgroups under final score calculation, and to allow subgroups to submit a targeted review request.

(c) MIPS Performance Category Measures and Activities

(i) Quality Performance Category

We proposed six modifications to the quality performance category. First, we are finalizing the proposal to expand the definition of the collection type to include Medicare Clinical Quality Measures for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQMs). Second, we are finalizing the proposal to establish

the quality performance category data submission criteria for eCQMs that requires the utilization of CEHRT. Third, we are finalizing the proposal to establish the data submission criteria for Medicare CQMs. Fourth, we are finalizing the proposal to require the administration of the Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Survey in the Spanish translation. Fifth, we are finalizing the proposal to maintain the data completeness criteria threshold to at least 75 percent for the CY 2026 performance period/2028 MIPS payment year, and not finalizing the proposal to increase the data completeness criteria threshold to at least 80 percent for the CY 2027 performance period/2029 MIPS payment year. Sixth, we are finalizing, with modification, the proposal to establish the data completeness criteria threshold for Medicare CQMs to at least 75 percent for the CY 2024, CY 2025, and CY 2026 performance periods/2026, 2027, and 2028 MIPS payment years, and not finalizing the proposal to increase the data completeness criteria threshold for Medicare CQMs to at least 80 percent for the CY 2027 performance period/2029 MIPS payment year. Finally, we are finalizing, with modification, the proposal to establish a measure set inventory of 198 MIPS quality measures.

(ii) Cost Performance Category

We are finalizing our proposal to add five new episode-based measures to the cost performance category beginning with the CY 2024 performance period/2026 MIPS payment year: Depression, Emergency Medicine, Heart Failure, Low Back Pain, and Psychoses and Related Conditions. We are also finalizing our proposal to use a 20-episode case minimum for each of these new measures, and to clarify our policy regarding case minimums for cost measures, as codified at § 414.1350(c). Additionally, we are finalizing our proposal to remove the Simple Pneumonia with Hospitalization episode-based measure beginning with the CY 2024 performance period/2026 MIPS payment year. Lastly, we are finalizing our proposal to update the operational list of care episode and patient condition groups and codes to add all five new measures and remove the Simple Pneumonia with Hospitalization episode-based measure from the operational list of care episode and patient condition groups and codes.

### (iii) Improvement Activities Performance Category

We are finalizing as proposed to add five new, modify one existing, and remove three existing improvement activities from the Inventory. The new and modified activities help fill gaps we have identified in the Inventory as well as seek to ensure that activities reflect current clinical practice across the category. Four of the new activities relate to CMS Health Equity, Increase All Forms of Accessibility to Health Care Services and Coverage. We are also finalizing the removal of three improvement activities, both to align with current clinical guidelines and practice as well as to eliminate duplication, so that the inventory offers flexibility and choice without potentially causing burden with too many activities to choose from.

### (iv) Promoting Interoperability Performance Category

We are finalizing as proposed five policy modifications for the Promoting Interoperability performance category. Specifically, we are finalizing to: (1) lengthen the performance period for this category from 90 days to 180 days; (2) modify one of the exclusions for the Query of Prescription Drug Monitoring Program (PDMP) measure; (3) provide a technical update to the e-Prescribing measure's description to ensure it clearly reflects our previously finalized policy; (4) modify the Safety Assurance Factors for Electronic Health Record Resilience (SAFER) Guide measure to require MIPS eligible clinicians to affirmatively attest to completion of the self-assessment of their implementation of safety practices; and (5) continue to reweight this performance category at zero percent for clinical social workers for the CY 2024 performance period/2026 MIPS payment year. In section III.R of this final rule, we are finalizing the revision of our regulatory definition of CEHRT for the MIPS Promoting Interoperability performance category to be more flexible in reflecting any changes the Office of the National Coordinator for Health Information Technology (ONC) may make to its Base EHR definition, certification criteria, and other standards for health information technology.

### (d) MIPS Final Scoring Methodology

#### (i) Performance Category Scores

We are finalizing as proposed updates to our scoring flexibilities policy. We are finalizing to update the criteria by which we assess the scoring impacts of coding changes and apply our scoring flexibilities.

(ii) Cost Improvement Scoring

We are finalizing as proposed with modification two amendments to the cost improvement scoring methodology that was established in the CY 2018 Quality Payment Program final rule. First, we are finalizing to change improvement scoring from a measure-level to a category-level method and to remove the statistical significance requirement and amend the cost improvement scoring calculation, with a modification to amend the final step of the cost improvement scoring calculation. Second, we are finalizing that the maximum cost improvement score is zero percentage points for the CY 2020 through CY 2024 MIPS payment years, and one percentage point beginning with the 2025 MIPS payment year.

(e) MIPS Payment Adjustments

We are not finalizing our proposed policy to identify the “prior period” by which we will establish the performance threshold as three performance periods, instead of a single prior performance period, beginning with the CY 2024 performance period/2026 MIPS payment year. To determine the performance threshold for the CY 2024 performance period/2026 MIPS payment year, we are finalizing that we will use the CY 2017 performance period/2019 MIPS payment year. Based on the mean final score from that prior period, we are finalizing the performance threshold as 75 points for the CY 2024 performance period/2026 MIPS payment year and codifying this policy at § 414.1405(b)(9)(iii).

(f) MIPS Targeted Review

We are finalizing as proposed to add virtual groups and subgroups as being eligible to submit a request for targeted review. We are finalizing to codify this addition at § 414.1385(a).

In addition, we are finalizing as proposed an amendment at § 414.1385(a)(2) with respect to the timeline for MIPS eligible clinicians, virtual groups, subgroups, groups, and APM entities

to request a targeted review of our calculation of their MIPS payment adjustment factor(s). Specifically, we are finalizing an amendment to permit submission of a request for targeted review beginning on the day we make available the MIPS final score and ending 30 days after publication of the MIPS payment adjustment factors for the MIPS payment year. This will modify the current time period to submit a request for targeted review, which is 60 days beginning on the day that CMS makes available the MIPS payment adjustment factors for the MIPS payment year.

We also are finalizing to amend § 414.1385(a)(5). Specifically, we are finalizing an amendment to require that, if CMS requests additional information under the targeted review process, then that additional information must be provided to and received by CMS within 15 days of receipt of such request. This will modify the current timeline to respond to CMS' request set forth at § 414.1385(a)(5), which is within 30 days of receipt of such request.

(g) Third Party Intermediaries

In this final rule, in addition to codifying previously finalized policies and proposing to make technical updates for clarity, we are finalizing proposals to: (1) Add requirements for third party intermediaries to obtain documentation of their authority to submit on behalf of a MIPS eligible clinician; (2) Specify the use of a simplified self-nomination process for existing QCDRs and qualified registries; (3) Add requirements for QCDRs and qualified registries to provide measure numbers and identifiers for performance categories; (4) Add a requirement for QCDRs and qualified registries to attest that the information contained in the qualified posting about them is correct; (5) Modify requirements for QCDRs and qualified registries to support MVP reporting to increase flexibility for measures supported; (6) Specify requirements for a transition plan for QCDRs and qualified registries withdrawing from the program; (7) Specify requirements for data validation audits; (8) Add additional criteria for rejecting QCDR measures; (9) Add a requirement for QCDR measure specifications to be displayed throughout the performance period and data submission period; (10) Eliminate the Health IT vendor category;

(11) Add failure to maintain updated contact information as criteria for remedial action; (12) Revise corrective action plan requirements; (13) Allow CMS to terminate third party intermediaries that are on remedial action for 2 consecutive years; (14) Specify the process for publicly posting remedial action; and (15) Specify the criteria for audits.

(h) Public Reporting on Compare Tools

In an effort to expand the information available to patients and caregivers when choosing a doctor or clinician, we are finalizing our proposals to modify existing policies for public reporting on individual clinician and group profile pages, including:

- The telehealth indicator, such that, we would use the most recent CMS coding policies at the time the information is updated to identify the telehealth services provided on clinician profile pages instead of only using specific Place of Service (POS) and claims modifier codes.

- Utilization data, such that we have additional procedure code grouping flexibility; can address procedure volume limitations and provide a more complete scope of a clinician's experience by adding Medicare Advantage (MA) data to procedure counts; and align the data in the Provider Data Catalog (PDC) with the procedural groupings shown on profile pages.

Additionally, we solicited feedback from interested parties through a request for information on ways to publicly report data submitted on measures under the MIPS cost performance category on the Compare tool.

(3) Major APM Provisions

(a) APM Performance Pathway

In section IV.A.4.e. of the proposed rule, we are finalizing as proposed to include the Medicare Clinical Quality Measure (Medicare CQM) for Accountable Care Organizations Participating in the Medicare Shared Savings Program collection type in the APM Performance Pathway (APP) measure set.

(b) Overview of the APM Incentive

In section IV.A.4.m. of the proposed rule, we are not finalizing our proposal to end the use of APM Entity-level QP determinations and instead make all QP determinations at the individual eligible clinician level. We also are not finalizing our proposal to modify the “sixth criterion” under the definition of “attribution-eligible beneficiary,” which is listed at § 414.1305.<sup>480</sup> Specifically, we are not finalizing our proposal to include as attribution-eligible any beneficiary who has received a covered professional service furnished by the NPI for the purpose of making QP determinations. We are finalizing our proposal to amend § 414.1430 to reflect the statutory QP and Partial QP threshold percentages for both the payment amount and patient count methods under the Medicare Option and the All-Payer Option with respect to payment year 2025 (performance year 2023) in accordance with amendments made by the CAA, 2023. Relatedly, we are finalizing our proposal to amend § 414.1450 to reflect the statutory APM Incentive Payment amount for the 2025 payment year (performance year 2023) of 3.5 percent of the eligible clinician’s estimated aggregate payments for covered professional services in accordance with amendments made by the CAA, 2023. As described in the proposed rule (88 FR 52601 through 52603), we are finalizing as proposed an amendment § 414.1385 to adjust the Targeted Review period to address operational challenges that have arisen ahead of the required transition beginning for payment year 2026 (performance year 2024) from the APM Incentive Payment to the higher PFS payment rate for QPs (calculated using the differentially higher “qualifying APM conversion factor”).

(c) Advanced APMs

---

<sup>480</sup> Currently, there are six criteria required for a beneficiary to be an “attribution-eligible beneficiary” during the QP Performance Period, which can be found at § 414.1305. The sixth criterion provides that an “attribution-eligible beneficiary” must have “a minimum of one claim for evaluation and management services furnished by an eligible clinician who is in the APM Entity for any period during the QP Performance Period or, for an Advanced APM that does not base attribution on evaluation and management services and for which attributed beneficiaries are not a subset of the attribution-eligible beneficiary population based on the requirement to have at least one claim for evaluation and management services furnished by an eligible clinician who is in the APM Entity for any period during the QP Performance Period, the attribution basis determined by CMS based upon the methodology the Advanced APM uses for attribution, which may include a combination of evaluation and management and/or other services.”

In section IV.A.4.n. of the proposed rule, we are finalizing as proposed our proposal to modify the CEHRT use criterion for Advanced APMs to provide greater flexibility for APMs to tailor CEHRT use requirements to the APM and its participants. We also had proposed to amend the CEHRT use criterion for Advanced APMs at § 414.1415(a)(1)(i) effective beginning for CY 2024 to remove the 75 percent CEHRT use threshold, and to instead specify that the APM must require all APM participants to use CEHRT as defined in a proposed revised definition of CEHRT under § 414.1305. We are finalizing this proposal with a modification in the effective date, to retain the 75 percent CEHRT use threshold in CY 2024 and instead remove that threshold effective beginning for CY 2025. We also finalizing our proposal to amend the Other-Payer Advanced APM CEHRT use criterion at § 414.1420(b) to conform to the proposed changes at § 414.1415(a)(1)(i).

## 2. Definitions

At § 414.1305, we are finalizing as proposed to revise the definitions of the following terms:

- Certified Electronic Health Record Technology (CEHRT); and
- Collection type.
- Qualified posting

These terms and definitions are discussed in detail in the relevant sections of this final rule.

### 3. Transforming the Quality Payment Program

#### a. Advancing CMS National Quality Strategy Goals

##### (1) Increasing Alignment Across Value-Based Programs

The CMS National Quality Strategy<sup>481</sup> addresses the urgent need for transformative action to advance towards a more equitable, safe, and outcomes-based health care system for all individuals. One of the CMS National Quality Strategy goals is to improve quality and health outcomes across the health care journey through implementation of a “Universal Foundation” of impactful measures across all CMS quality and value-based programs.<sup>482</sup> Adoption of the Universal Foundation<sup>483,484</sup> will focus clinician attention on specific quality measures, reduce burden, help identify disparities in care, prioritize development of interoperable, digital quality measures, allow for cross-comparisons across programs, and help identify measurement gaps.

We identified adult and pediatric measures for the Universal Foundation to be used across CMS programs and populations, including the Quality Payment Program, to the extent they are applicable. The Quality Payment Program measure inventory already includes quality measures in the adult core set from the Universal Foundation. In addition, we are finalizing our proposal in the CY 2024 PFS proposed rule (88 FR 52558 through 52559 and 88 FR 53193 through 53197) to consolidate the previously finalized Promoting Wellness and Optimizing Chronic Disease Management MVPs into a single consolidated primary care MVP that aligns with the adult Universal Core set of quality measures at section IV.A.4.b. and Appendix 3: MVP Inventory, Table B.11 of this final rule. We also finalizing our policy, proposed in the CY 2024 PFS proposed rule (88 FR 52426 through 52428) to expand the APM Performance Pathway

<sup>483</sup> Aligning Quality Measures across CMS. <https://www.cms.gov/aligning-quality-measures-across-cms-universal-foundation>.

<sup>484</sup> CMS National Quality Strategy. <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/CMS-Quality-Strategy>. CMS National Quality Strategy. <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/CMS-Quality-Strategy>.

(APP) reported by clinicians in the Medicare Shared Savings Program (Shared Savings Program) to include Medicare Clinical Quality Measure (Medicare CQM) collection types, at section III.G.2.c. of this final rule.

## (2) Advancing Health Equity

We also articulated a detailed strategy to advance health equity and accountability in order to design, implement, and operationalize policies to support health for all people served by our programs, eliminate avoidable differences in health outcomes experienced by people who are disadvantaged or underserved, and provide the care and support that our beneficiaries need to thrive.<sup>485</sup> Specifically, the CMS Office of Minority Health released the *CMS Framework for Health Equity*,<sup>486</sup> which updates the CMS Equity Plan with an enhanced and more comprehensive 10-year approach to further embed health equity across CMS programs including Medicare, Medicaid, Children’s Health Insurance Program, and the Health Insurance Marketplaces. The CMS Office of Minority Health also released “Paving the Way to Equity: A Progress Report”<sup>487</sup> in 2021, which describes the CMS Equity Plan for Medicare and progress from 2015 to 2021.

In accordance with our health equity strategy, both MVPs and APMs share a goal of incentivizing improved equity as well as advancing value (87 FR 70035). For example, beginning in Performance Year 2023 the Shared Savings Program will implement an upside-only Health Equity Adjustment (HEA) to an ACO’s MIPS Quality performance category score to reward ACOs that provide excellent care for underserved populations (87 FR 69838 through 69857, also see HEA proposal at 88 FR 52429 through 52430). We are finalizing the technical clarifications to our previously finalized HEA policy at section III.G.2.d. of this final rule.

## (3) Accelerating Interoperability

---

<sup>485</sup> CMS National Quality Strategy. <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/CMS-Quality-Strategy>.

<sup>486</sup> CMS Equity Plan for Improving Quality in Medicare. [https://www.cms.gov/About-CMS/Agency-Information/OMH/OMH\\_Dwnld-CMS\\_EquityPlanforMedicare\\_090615.pdf](https://www.cms.gov/About-CMS/Agency-Information/OMH/OMH_Dwnld-CMS_EquityPlanforMedicare_090615.pdf).

<sup>487</sup> CMS, Paving the Way to Equity: A Progress Report (2015–2021) <https://www.cms.gov/sites/default/files/2021-01/Paving%20the%20Way%20to%20Equity%20CMS%20OMH%20Progress%20Report.pdf>.

The CMS National Quality Strategy also calls for supporting the transition to a digital and data driven health care system. The CMS National Quality Strategy proposed to achieve this through the development of requirements for sharing, receipt, and use of digital data, including digital quality measures.<sup>488</sup> We believe that, as clinicians strive to make improvements in patient care, clinicians should demonstrate increasingly more advanced and innovative uses of health information technology. In the CY 2024 PFS proposed rule (88 FR 52433 through 52437), we proposed to require individual clinicians, or the ACO as an APM Entity, participating in the Shared Savings Program ACO to report the measures in the MIPS Promoting Interoperability performance category beginning with the CY 2024 performance year. We refer readers to section III.G.2.h.(2) of this final rule, where we finalize these proposals with modification, delaying the implementation of the MIPS Promoting Interoperability performance category reporting requirements for the Shared Savings Program until the CY 2025 performance year.

Additionally, in the CY 2024 PFS proposed rule (88 FR 52625 through 52628), we proposed to modify the CEHRT use criterion for Advanced APMs to provide flexibility for APMs to adopt CEHRT use requirements that are clinically relevant to models and their participants, emphasizing the importance of interoperability and health information technology. We refer readers to section IV.A.4.n.(3) of this final rule where we finalize with modification the CEHRT use criterion for Advanced APMs. We believe these policies, in addition to ongoing efforts to build CMS infrastructure and develop technical solutions, are an important step towards evolving our health information technology ecosystem.

#### b. Quality Payment Program Vision and Goals

##### (1) Emphasizing the Importance of Value-Based Care

The Quality Payment Program was designed and implemented to improve health outcomes, promote smarter spending, minimize burden of participation, and provide fairness and

---

<sup>488</sup> CMS National Quality Strategy. <https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/value-based-programs/cms-quality-strategy>.

transparency in operations (81 FR 77010). In the Advanced APM track of the Quality Payment Program, APM entities and eligible clinicians take responsibility for improving the quality of care, care coordination and health outcomes for a group of beneficiaries through participation in Advanced APMs.<sup>489</sup> Advanced APMs can ensure that beneficiaries get the right care at the right time by reducing fragmentation between clinicians, which can reduce unnecessary duplication of services and preventable medical errors.<sup>490</sup> Advanced APMs also support our goal that all Traditional Medicare beneficiaries be in a care relationship with clinicians accountable for quality and total cost of care by 2030, as outlined by the CMS Innovation Center strategy refresh.<sup>491</sup>

Our ongoing alignment of the Shared Savings Program and the Quality Payment Program supports new as well as long term participation in ACOs for clinicians choosing to participate in accountable care relationships. In the CY 2021 PFS final rule, we finalized the Alternative Payment Model (APM) Performance Pathway (APP) under MIPS, in part, to reduce reporting burden, and create new scoring opportunities for MIPS eligible clinicians participating in MIPS APMs (85 FR 84720).

## (2) MVP Reporting in the Quality Payment Program

We believe the Quality Payment Program should continuously support the measurement and improvement of specialty and primary care practice. To this end, we are implementing MVPs to allow for clinicians to report on measures that are directly relevant to their clinical practice. Rather than selecting individual measures and activities from a large inventory to report under each of the siloed MIPS performance categories under traditional MIPS, eligible clinicians who select an MVP (for example, the Coordinating Stroke Care to Promote Prevention and

<sup>489</sup> Medicare Value-Based Care Strategy: Alignment, Growth and Equity. The Medicare Value-Based Care Strategy: Alignment, Growth, And Equity. Health Affairs, Jacobs, Fowler, Fleisher, and Seshamani.

<sup>490</sup> CMS Announces Increase in 2023 in Accountable Care Organizations and Beneficiaries Benefiting from Coordinated Care in Accountable Care Relationship. <https://www.cms.gov/newsroom/press-releases/cms-announces-increase-2023-organizations-and-beneficiaries-benefiting-coordinated-care-accountable>.

<sup>491</sup> Innovation Center Strategy Refresh. <https://innovation.cms.gov/strategic-direction-whitepaper>.

Cultivate Positive Outcomes MVP) can select from a smaller, cohesive set of measures and activities focused on the clinician's performance in rendering care for their specialty or clinical condition.

We also developed the MVP framework with the intention of supporting clinicians in their journey of continuous performance improvement and reducing barriers to APM participation as clinicians and practices prepare to take on, and successfully manage financial risk (84 FR 62946 through 62949).

### c. Promoting Continuous Improvement in MIPS

For MIPS, we developed policies and methodologies to assess clinicians' performance, and to support performance improvement across four performance categories (quality, cost, improvement activities, and Promoting Interoperability) in accordance with section 1848(q)(1)(A)(i) and (ii) of the Act. We believe we should evaluate our policies, requirements, and standards for MIPS periodically to determine if we need to raise the bar in order to foster the availability of opportunities for continuous performance improvement. We are considering how we can implement future policies to support continuous improvement for clinicians who consistently perform well in MIPS. One challenge we face is that, after a clinician has achieved high performance scores on the same measures and activities year over year, there may be little or no room for the clinician to improve their performance. Another challenge is that some MIPS eligible clinicians choose measures and activities for which they are already performing well, rather than measures and activities where they would be required to implement changes in their workflow, clinical care, or practices in order to achieve a positive payment adjustment. This selection practice, to repeatedly choose the same measures and activities for which the clinician is confident they will perform well, can mean that the clinician has less incentive to transform the way that care is delivered and continuously improve quality of the care they provide. For these reasons, we are considering modifying our policies in the future to encourage clinicians who have consistently been high performers in MIPS to continuously improve various areas of

their clinical practice, including implementing more rigorous standards under MIPS and supporting participation in an APM.

We were interested in feedback on approaches to modifying our policies, requirements, and standards under MIPS, while remaining cognizant of the burden any changes may place on MIPS eligible clinicians. Section 1848(q)(1)(A) and (5)(A) of the Act requires the Secretary to develop a methodology for assessing the total performance of each MIPS eligible clinician according to performance standards for applicable measures and activities in each performance category applicable to the MIPS eligible clinician for a performance period. We were particularly interested in how we can balance the impact of any policy changes on MIPS eligible clinicians who have become accustomed to our current program requirements with the benefit of potential modifications that foster clinicians' continuous improvement. For example, we could increase reporting requirements in traditional MIPS and MVPs, or we could require that specific measures be reported, instead of allowing choice of measures, once MVPs are mandatory to encourage improvement for clinicians with continuously perform well under MIPS.

#### d. Request for Feedback

We solicited comments on how we can modify our policies under the Quality Payment Program to foster clinicians' continuous performance improvement and positively impact care outcomes for Medicare beneficiaries. Such modifications for MIPS may include requiring more rigorous performance standards, emphasizing year-to-year improvement in the performance categories, or requiring that MIPS eligible clinicians report on different measures or activities once they have demonstrated consistently high performance on certain measures and activities.

In accordance with implementing regulations of the Paperwork Reduction Act of 1995 (PRA), specifically 5 CFR 1320.3(h)(4), this general solicitation request for information is exempt from the PRA.

We requested public comment on specifically the following questions:

- What potential policies in the MIPS program would provide opportunities for clinicians to continuously improve care?
- Should we consider, in future rulemaking, changes in policies to assess performance to ensure ongoing opportunities for continuous performance improvement?
- Should we consider, for example, increasing the reporting requirements or requiring that specific measures are reported once MVPs are mandatory?
- Should we consider creating additional incentives to join APMs in order to foster continuous improvement, and if so, what should these incentives be?
- What changes to policies should CMS consider to assess continuous performance improvement and clinicians interested in transitioning from MIPS to APMs?
- We acknowledge the potential increase in burden associated with increasing measure reporting or performance standards. How should we balance consideration of reporting burden with creating continuous opportunities for performance improvement?
- While we are aware of potential benefits of establishing more rigorous policies, requirements, and performance standards, such as developing an approach for some clinicians to demonstrate improvement, we are also mindful that this will result in an increasing challenge for some clinicians to meet the performance threshold. Are there ways to mitigate any unintended consequences of implementing such policies, requirements, and performance standards?

We thank submitters for their responses to this request for information. We may consider the information we received and use it to inform future rulemaking.

#### 4. MVP Development, Maintenance, and Scoring

##### a. Development of New MIPS Value Pathways (MVPs)

In the CY 2024 PFS proposed rule (88 FR 52558), we discuss the detailed MVP development process. Through our development processes for new MVPs (85 FR 84849 through 84856, 87 FR 70035 through 70037), we aim to gradually develop new MVPs that are relevant and meaningful for all clinicians who participate in MIPS. We proposed the inclusion of five new MVPs (88 FR 52558) and (88 FR 53146 through 53166):

- Focusing on Women’s Health;
- Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV;
- Quality Care in Mental Health and Substance Use Disorders;
- Quality Care for the Treatment of Ear, Nose, and Throat (ENT) Disorders; and
- Rehabilitative Support for Musculoskeletal Care.

We referred readers to Appendix 3: MVP Inventory, of this final rule for discussion of each proposed new MVP, the public comments received, and our responses.

##### b. MVP Maintenance on Previously Finalized MVPs

In the CY 2024 PFS proposed rule (88 FR 52558 through 52559) we discuss the MVP maintenance process and refer readers to the proposed rule for those details.

In the CY 2024 PFS proposed final rule (88 FR 53167 through 88 FR 53197), we proposed modifications to our 12 previously finalized MVPs for the addition and removal of measures and improvement activities based on the MVP development criteria (85 FR 84849 through 84854), feedback received through the MVP maintenance process, and based off the removals of certain improvement activities from the improvement activities inventory, as well as the addition of other relevant existing quality measures for MVP participants to select from. In addition, through the MVP maintenance process, we proposed to consolidate the previously finalized Promoting Wellness and Optimizing Chronic Disease Management MVPs into a single consolidated primary care MVP titled Value in Primary Care MVP, that aligns with the Adult

Universal Core Set, as described in the journal article, “*Aligning Quality Measures across CMS-The Universal Foundation*” (<https://www.nejm.org/doi/full/10.1056/NEJMp2215539>).

We refer readers to Appendix 3: MVP Inventory of this final rule for the proposed modifications of the established MVPs, the public comments received, and our responses.

### c. Scoring MVP Performance

In the CY 2022 PFS final rule, we finalized policies for MVP scoring that took effect beginning with the CY 2023 performance period/2025 MIPS payment year. We refer readers to 86 FR 65419 through 65427 for the details of those finalized policies. We previously finalized at § 414.1365(d)(2) that, unless otherwise indicated in § 414.1365(d), the performance standards described at § 414.1380(a)(1)(i) through (iv) apply to the measures and activities included in the MVP (86 FR 65419 through 65421). We noted that in general, we intend to adopt scoring policies from traditional MIPS for MVP participants unless there is a compelling reason to adopt a different policy to further our goals for the MVP framework (86 FR 65419).

We refer readers to the CY 2024 PFS proposed rule for policies we proposed regarding MIPS scoring flexibilities in the quality performance category scoring (88 FR 52592 through 52593); for the change to scoring improvement in the cost performance category (88 FR 52593 through 52596); for the improvement activity “IA\_MVP, Practice-wide quality improvement in the MIPS Value Pathway Program (MVP)” in the improvement activities performance category (88 FR 52577 through 52578 and 88 FR 53133 through 53134); and for the policies for the Promoting Interoperability performance category (88 FR 52578 through 52590), including modifications of the SAFER Guide Measure’s requirements and the Query of Prescription Drug Monitoring Program (PDMP) measure’s exclusion, a technical update to the e-Prescribing measure, an increase in the length of the performance period from 90 continuous days to 180 continuous day, and continuation of our reweighting policy of the performance category for clinical social workers.

In addition, we refer readers to the CY 2024 PFS proposed rule for policies we proposed regarding subgroups, including reweighting proposals, addition of subgroups to our Targeted Review policies, and a clarification regarding the scoring of facility-based clinicians at the subgroup level (88 FR 52559 through 52562).

Finally, we refer readers to the CY 2024 PFS proposed rule for policies we proposed regarding Targeted Review process, including the addition of virtual groups to our Targeted Review policies (88 FR 52601 through 52603).

In this final rule, we are finalizing these policies as proposed. For a discussion of our finalized policies and the public comments received, please refer to section IV.A.4.g.(1)(c)(i) of this final rule for our discussion on MIPS scoring flexibilities in the quality performance category scoring; section IV.A.4.g.(1)(d)(i) in this final rule for our finalized updates to scoring improvement in the cost performance category; section IV.A.4.f.(3) and Appendix 2: Improvement Activities of this final rule for the finalized new improvement activity; section IV.A.4.f.(4) in this final rule for the finalized policies for the Promoting Interoperability performance category, section IV.A.4.d. of this final rule for finalized policies regarding subgroups, and section IV.A.4.d.(4). for finalized policies regarding Targeted Review process.

## d. Subgroup Reporting

### (1) Background

In the CY 2022 PFS final rule, we finalized the option for clinicians to participate as subgroups for reporting MIPS value pathways (MVPs) beginning in the CY 2023 performance period/2025 MIPS payment year (86 FR 65392 through 65394). We referred readers to Title 42 of CFR at §§ 414.1318 and 414.1365, the CY 2022 PFS final rule (86 FR 65398 through 65405), and the CY 2023 PFS final rule (87 FR 70038 through 70045) for additional details on previously finalized subgroup policies.

In the CY 2024 PFS proposed rule, we proposed to: (1) update the subgroup policy for reweighting of MVP performance categories at § 414.1365(e)(2) (88 FR 52559 and 52560); (2) update the facility-based scoring and complex patient bonus for subgroups under final score calculation at § 414.1365(e)(3) and (4) (88 FR 52560 and 52561); (3) update the targeted review policy for subgroups at § 414.1385 (88 FR 52561); and (4) codify in our regulations the subgroup policies finalized in previous years' rules (88 FR 52561 and 52562).

### (2) Subgroup Reweighting

In the CY 2022 PFS final rule (86 FR 65425 through 65426), we finalized at § 414.1365(e)(2)(ii) that for an MVP Participant that is a subgroup, any reweighting applied to its affiliated group will also be applied to the subgroup. Additionally, we finalized that if reweighting is not applied to an affiliated group, then the subgroup may receive reweighting under the circumstances described at §§ 414.1365(e)(2)(ii)(A) and (B). In establishing this policy, we noted our concern about extreme and uncontrollable circumstances (EUC) that would impact only the subgroup (fire or natural disaster at a specific practice location) and does not affect the entire affiliated group. We also finalized that if a subgroup submits data for a performance category which was reweighted, the subgroup data submission will void the reweighting applied to the performance category.

Upon further consideration of the previously finalized policy, we identified technical constraints that affect our ability to implement the policy. Specifically, we are concerned that the time necessary to adjudicate reconsideration requests for both a subgroup and its affiliated group may deprive the subgroup of knowledge of its reweighting status during a significant portion of the relevant performance period and undermine its ability to plan data submission needs accordingly.

There may be instances when a subgroup and its affiliated group have separate reasons to submit reweighting applications. Those separate applications may request the reweighting of different performance categories. Under § 414.1380(c)(2), clinicians, groups, and APM Entities submit reweighting applications annually on a rolling basis throughout the performance period, or a date specified by CMS. However, the requirement in § 414.1365(e)(2)(ii) that any reweighting applied to a subgroup's affiliated group is also applied to the subgroup means that when a subgroup and its affiliated group both submit reweighting applications, the subgroup will not know its reweighting status until CMS makes a determination regarding the group's reweighting application. Depending on when the group submitted its reweighting request, this may not happen until after the close of the performance period for which the reweighting application was made.

We believe the uncertainty created for a subgroup by not knowing its reweighting status until later in the performance period would disrupt its ability to best plan for the measures and activities on which it will be scored. We recognize that there may be instances when only the subgroup is affected by an extreme and uncontrollable circumstance (natural disaster, fire, hurricane, etc.) and would want to request its own reweighting, independent of the affiliated group. However, we believe that the need for a subgroup to know of its data submission requirements outweighs the benefit of being able to request its own reweighting independent of the affiliated group.

Separately, there are certain special status designations (non-patient facing, small practice, etc.) that automatically qualify a group for reweighting of the Promoting Interoperability performance category. A subgroup can learn about its affiliated group's special status designation as described in the second paragraph under the definition of MIPS determination period at § 414.1305. Given that subgroup eligibility and special status determinations are made at the group level, we believe that applying an affiliated group's reweighting to a subgroup and removing the ability of a subgroup to submit a separate reweighting application, would enable subgroups to receive their reweighting status and identify their data submission obligations in a timely manner. Therefore, we proposed to revise § 414.1365(e)(2)(ii) to limit the reweighting applied to a subgroup to that which is also applied to its affiliated group beginning with the CY 2024 performance period/2026 MIPS payment year.

In order to operationalize the previously established policy, we intend to implement a manual process for reviewing subgroup reweighting applications for the CY 2023 performance period/2025 MIPS payment year. We considered also using the manual process for reviewing subgroup reweighting applications in future performance periods. However, we are concerned that manually reconciling the reweighting requests would delay the approval of the reweighting requests received from a subgroup. Additionally, we are concerned that it may create confusion for a subgroup to determine whether a performance category has been reweighted and its potential impact on subgroup data submission, specifically in instances when both the subgroup and its affiliated group submit a reweighting application for one or more of the MVP performance categories. For the above reasons, we would use the manual process only for the CY 2023 performance period/2025 MIPS payment year.

We acknowledge that there may be instances when an extreme and uncontrollable circumstance impacts only a subgroup and not the entire affiliated group (for example, fire or natural disaster at the subgroup's practice location). Because subgroup reporting is not mandatory at this time, we believe that in these instances, when a registered subgroup is unable

to participate in MVP reporting as a subgroup, the eligible clinicians in the registered subgroup would participate in MIPS via another available reporting option. These clinicians could either participate as individuals or as a group, if its affiliated group chooses to participate in traditional MIPS, or in MVP reporting. Additionally, we established the policy in § 414.1318(b)(1) to not assign a score for a registered subgroup that did not submit data for the applicable performance period (87 FR 70045). In the scenario that the registered subgroup did not submit data, we would assign the highest of the available final scores associated with the clinician's TIN/NPI for the eligible clinicians in the subgroup (86 FR 65536 and 65537). We refer readers to the CY 2023 PFS proposed rule (87 FR 46272 through 46275) for examples that illustrate how the final score is applied for a clinician who is part of a group TIN where only some of the clinicians under that TIN choose to participate in MIPS through subgroups. We will continue to monitor subgroup participation trends and will revisit this policy in the future, as needed.

For the above reasons, we proposed (88 FR 52560) to revise § 414.1365(e)(2)(ii) to state that an MVP Participant that is a subgroup will receive the same reweighting that is applied to its affiliated group, but that for the CY 2023 performance period/2025 MIPS payment year, if reweighting is not applied to the affiliated group, the subgroup may receive reweighting in the circumstances independent of the affiliated group as described in § 414.1365(e)(2)(ii)(A) and (B).

We requested comments on this proposal. The following is a summary of the comments we received and our responses.

*Comment:* A few commenters supported our proposal to remove the capability for a subgroup to submit its own reweighting application independent of the affiliated group.

*Response:* We thank the commenters for their support.

*Comment:* A few commenters did not support our proposal to remove the separate application reweighting request for subgroups. One commenter requested additional clarification on how the delayed reweighting review process would impact a subgroup when both the

subgroup and the affiliated group requested reweighting. The commenter also shared their concerns that it is unclear how individual MIPS eligible clinicians in a subgroup affected by a natural disaster could submit MIPS data using other participation options. A commenter requested that CMS monitor the subgroup reweighting application trends and recommended that CMS consider alternate options that would permit both the subgroup and the affiliated group to submit reweighting applications. The commenter expressed concern that the proposed policy might negatively impact subgroups when subgroup reporting is mandatory.

*Response:* We acknowledge the commenter's concerns with removing the separate reweighting application requests for subgroups. We previously finalized at § 414.1365(e)(2)(ii) that a subgroup will receive the same reweighting applied to the affiliated group (86 FR 65425 through 65426). If both the affiliated group and a subgroup submit reweighting applications, CMS would need to wait until it has reviewed the affiliated group's reweighting application prior to making a determination on the subgroup's reweighting request. Doing so would delay informing the subgroup's of its reweighting status, allowing it to determine its data submission needs. Additionally, there could be instances when a group could submit their reweighting application towards the end or after the end of the MIPS performance period, preventing a subgroup from submitting data for a performance period. Therefore, we believe the benefit of a subgroup determining its data submission needs early in the performance period outweighs the benefit of submitting a separate reweighting application.

In the scenario that a subgroup is affected by a natural disaster and the affiliated group is not, we note that the MIPS eligible clinicians in the subgroup will be included in the affiliated group's submission if the affiliated group submits data at the group level. If the affiliated group does not submit data, each MIPS eligible individual clinician could submit a reweighting application at the individual level. We will continue to monitor subgroup participation trends and revisit the policy in the future as we move towards mandatory subgroup reporting.

After consideration of public comments, we are finalizing our proposal to revise

§414.1365(e)(2)(ii) to provide that an MVP Participant that is a subgroup will receive the same reweighting that is applied to its affiliated group, but that for the CY 2023 performance period/2025 MIPS payment year, if reweighting is not applied to the affiliated group, the subgroup may receive reweighting in the circumstances independent of the affiliated group as described in § 414.1365(e)(2)(ii)(A) and (B).

### (3) Subgroup Scoring Policies

#### (a) Facility-based Score for Subgroups

We established policies for facility-based measurement and scoring for MIPS eligible individual clinicians and groups at § 414.1380(e). Under these standards, we calculate a MIPS eligible clinician's final facility-based score using the clinician's performance in another value-based purchasing program (83 FR 59866 through 59867). In the CY 2022 PFS final rule (86 FR 65425), we finalized at § 414.1365(e)(3) that if an MVP Participant that is not an APM Entity and is eligible for facility-based scoring, a facility-based score will also be calculated in accordance with § 414.1380(e). We recognize that we inadvertently overlooked excluding MVP Participants that are subgroups from facility-based scoring. We noted that it was not our intent to calculate a facility-based score at the subgroup level.

In the course of implementing MVPs, we have offered clinicians and groups the opportunity to elect to report via MVPs and via traditional MIPS. If a facility-based MIPS eligible clinician participates in MVP reporting as an individual or as part of a group, we will calculate a final score for the MIPS eligible clinician based on the MVP reporting. We would not use the facility-based scores to calculate the clinician's final scores under the MVP because we currently do not have an MVP specifically focused on facility-based measurement. We believe eligible clinicians would choose to participate in MVP reporting with the intent to report on measures applicable to the scope of care provided and therefore, it would be appropriate for facility-based clinicians participating in MVP reporting to receive a score based on the data submitted for the measures and activities in an MVP. If a facility-based clinician chooses to

participate in an MVP for a MIPS performance period, a facility-based score would be calculated as part of traditional MIPS. Clinicians will also receive a score for MVP reporting, that is not facility-based, and we will use the higher of the scores to determine the MIPS payment adjustment for the MIPS eligible clinicians. Subgroup reporting is limited to MVPs, and subgroup reporting is not available for clinicians reporting on measures in traditional MIPS. Therefore, we proposed (88 FR 52560) to modify the text at § 414.1365(e)(3) to state that if an MVP Participant, that is not an APM Entity or a subgroup, is eligible for facility-based scoring a facility-based score will also be calculated in accordance with § 414.1380(e).

We requested comments on this proposal. The following is a summary of the comments we received and our responses.

*Comment:* A few commenters supported our proposal to not calculate a facility-based score based for clinicians participating as a subgroup.

*Response:* We thank the commenters for their support.

*Comment:* A few commenters did not support our proposal to not calculate a facility-based score at the subgroup level and recommended CMS to calculate a facility-based score for subgroups participating in MVP reporting. The commenters shared their belief that using the higher of the facility-based or subgroup scores to determine the MIPS payment adjustment for facility-based clinicians participating in MVP reporting would align with the scoring policies for facility-based clinicians participating in traditional MIPS.

*Response:* Under the previously established standards for facility-based measurement and scoring for MIPS eligible individual clinicians and groups at § 414.1380(e), we calculate a MIPS eligible clinician's final facility-based score using the clinician's performance in another value-based purchasing program (83 FR 59866 through 59867). Facility-based clinicians and groups participating in traditional MIPS receive a facility-based score in the quality and cost performance categories derived from the applicable value-based purchasing score available for the facility-based clinician or group. Clinicians can choose to report on measures relevant to their

scope of care by participating in subgroups and MVP reporting. It is most appropriate for CMS to assess the performance of a clinician participating in a subgroup and reporting an MVP using the measures and activities reported by the clinician's subgroup as it would allow CMS to provide feedback on the subgroup's performance based on the data submitted by the clinicians in the subgroup for the measures and activities in a MVP. We note that a facility-based clinician could still participate as a subgroup for reporting an MVP. However, we calculate the facility-based score for these clinicians based on their participation in traditional MIPS and not based on their participation as a subgroup in MVP reporting. It would defeat the purpose of MVPs to score a subgroup on a value-based purchasing program's measures that are not part of the MVP. Additionally, doing so would extend subgroup reporting of quality measures outside of MVPs to traditional MIPS, where it was never intended to be available. Our policy to not calculate a facility-based score at the subgroup level does not affect an individual facility-based clinician in a subgroup in that the clinician would also receive all the available scores from the affiliated group, including the traditional MIPS score derived from facility-based scoring. We will assign the highest of the available final scores associated with clinician's TIN/NPI under the existing scoring hierarchy established in the CY 2022 PFS final rule (86 FR 65536 and 65537).

*Comment:* A few commenters recommended that CMS assign the affiliated group's facility-based score for the clinicians participating as a subgroup as it would align with the subgroup scoring policies for cost measures. One commenter requested clarification on why CMS would calculate a facility-based score for a group participating in MVP reporting but not for a subgroup.

*Response:* As noted in the proposed rule (88 FR 52560), if a facility-based clinician chooses to participate as a group in MVP and traditional MIPS reporting for a MIPS performance period, a facility-based score would be calculated as part of traditional MIPS and not part of their MVP reporting. As described in response to the comment above, it would not be appropriate to calculate a facility-based score for a subgroup. Also as noted above, in addition to

calculating a subgroup score based on the subgroup's MVP reporting for a facility-based MIPS eligible clinician participating in a subgroup, we would also assign the MIPS eligible clinician their affiliated group's score if available, for its participation in traditional MIPS or MVP reporting as a group. We would use the higher of the group's traditional MIPS score or MVP score and the subgroup's MVP score to determine the MIPS payment adjustment for the MIPS eligible clinician in the subgroup.

After consideration of public comments, we are finalizing our proposal at § 414.1365(e)(3) to provide that a facility-based score will also be calculated in accordance with § 414.1380(e) for an MVP Participant that is not an APM Entity or a subgroup and is otherwise eligible for facility-based scoring.

(b) Complex Patient Bonus for Subgroups

In the CY 2018 Quality Payment Program final rule (82 FR 53776), we finalized at § 414.1380(c)(3)(i) that we will add a complex patient bonus to the final score of certain MIPS eligible clinicians that submit data on at least one performance category during the applicable performance period. We finalized that this complex patient bonus would be calculated on the basis of the average Hierarchical Condition Category (HCC) risk score and the dual eligible ratio for beneficiaries seen by clinicians and groups. In the CY 2022 PFS final rule (86 FR 65425), we finalized at § 414.1365(e)(4) that a complex patient bonus will be added to the final score for an MVP Participant in accordance with § 414.1380(c)(3). We also revised § 414.1380(c)(3) to permit subgroups to receive the complex patient bonus as, in the case of subgroups, we intended to apply the bonus based on the patient population of the subgroup.

Since then, however, we have identified issues with using claims data associated with the clinicians in a subgroup that prevents us from calculating the complex patient bonus at the subgroup level. Specifically, we are unable to identify the beneficiaries seen by the clinicians in a subgroup, and therefore we cannot calculate the average HCC score and dual eligible ratio scores. At the time the relevant claims data is retrieved, the composition of the subgroup may not

be known, making it impossible to calculate the required data elements for the complex patient bonus (for example, clinicians, beneficiaries that received care, etc.) at the subgroup level. Additionally, the group may have subgroups that do not collectively represent the entire group, restricting our ability to gather the beneficiary data necessary to calculate the complex patient bonus score at the subgroup level.

We recognize that we would need to retroactively modify the previously established policy at § 414.1365(e)(4) for the CY 2023 performance period/2025 MIPS payment year to address the fact that we cannot calculate the complex patient bonus at the subgroup level. Section 1871(e)(1)(A)(ii) of the Act provides for retroactive application of a substantive change to an existing policy when the Secretary determines that failure to apply the policy change retroactively would be contrary to the public interest. We believe that the failure to apply the proposed change retroactively would be contrary to the public interest because the current rule provides for the calculation of the complex patient bonus score at the subgroup level when it would be impossible for CMS to do so. We proposed (88 FR 52560 and 52561) to add § 414.1365(e)(4)(i) to provide that for subgroups, beginning with the CY 2023 performance period/2025 MIPS payment year, the affiliated group's complex patient bonus will be added to the final score. Additionally, we proposed conforming changes in § 414.1380(c)(3)(v) by removing the term "subgroups" so that beginning with the CY 2022 performance period/2024 MIPS payment year, the complex patient bonus is limited to MIPS eligible clinicians, groups, APM Entities, and virtual groups with a risk indicator at or above the risk indicator calculated median (88 FR 52560 and 52561). Similarly, we proposed conforming changes in § 414.1380(c)(3)(vi) by removing the term "subgroups" so that beginning with the CY 2022 performance period/2024 MIPS payment year, for MIPS eligible clinicians and groups, the complex patient bonus components are calculated as described under § 414.1365(c)(3)(vi) (88 FR 52561).

We requested comments on this proposal. The following is a summary of the comments

we received and our responses.

*Comment:* Many commenters supported our proposal to assign the affiliated group's complex patient bonus score to the subgroup as it would appropriately credit both the group and subgroup for the complexity in the care provided. One commenter recommended that CMS use the higher of the group or subgroup complex patient bonus scores, when CMS is able to calculate the complex patient bonus score at the subgroup level.

*Response:* We thank the commenters for their support. We will consider the commenter's recommendation to assign the higher of the affiliated group or subgroup's complex patient bonus score when CMS can calculate the complex patient bonus score at the subgroup level.

*Comment:* A few commenters did not support our proposal to apply the affiliated group's complex patient bonus score for a subgroup. The commenters shared their belief that CMS calculated the scores for administrative claims measures at the subgroup level and recommended that CMS could utilize the clinician information submitted during subgroup registration for attributing beneficiaries to calculate the complex patient bonus score at the subgroup level.

*Response:* While we have established attribution methodologies for individual clinicians (NPI level) and group (TIN level), we are unable to identify beneficiaries at the subgroup level. Therefore, it would be impossible for us to calculate the average HCC and dual eligible ratio scores at the subgroup level. We may develop a methodology for identifying beneficiaries at the subgroup level after gaining further experience with subgroup reporting, at which time, we can consider changing our complex patient bonus approach for subgroup reporting through a proposal in future rulemaking.

Regarding the commenter's concerns on beneficiary attribution and scoring of administrative claims measures at the subgroup level, we discussed in the CY 2023 PFS final rule (87 FR 70043 through 70045) the issues related to testing the reliability and validity of administrative claims measures at the subgroup level. We have established these thresholds only at the individual and group level. Therefore, we currently do not have the capability to score the

administrative claims measures at the subgroup level and would need additional time for testing these measures and calculate the complex patient bonus score at the subgroup level.

After consideration of public comments, we are finalizing our proposal to add § 414.1365(e)(4)(i) such that, for subgroups, beginning with the CY 2023 performance period/2025 MIPS payment year, the affiliated group's complex patient bonus will be added to the final score. Additionally, we are finalizing the proposed conforming changes in § 414.1380(c)(3)(v) by removing the term "subgroups" so that beginning with the CY 2022 performance period/2024 MIPS payment year, the complex patient bonus is limited to MIPS eligible clinicians, groups, APM Entities, and virtual groups with a risk indicator at or above the risk indicator calculated median. We are also finalizing the proposed conforming changes in § 414.1380(c)(3)(vi) by removing the term "subgroups" so that beginning with the CY 2022 performance period/2024 MIPS payment year, for MIPS eligible clinicians and groups, the complex patient bonus components are calculated as described under § 414.1365(c)(3)(vi).

#### (4) Targeted Review for Subgroups

We previously established at § 414.1385(a) that a MIPS eligible clinician or group may request a targeted review of the calculation of the MIPS payment adjustment factor under section 1848(q)(6)(A) of the Act and, as applicable, the calculation of the additional MIPS payment adjustment factor under section 1848(q)(6)(C) of the Act (collectively referred to as the MIPS payment adjustment factors) applicable to such MIPS eligible clinician or group for a year (81 FR 77353 through 77358 and 77546). We also finalized the process to submit a targeted review application, codified at § 414.1385(a) (81 FR 77353 through 77358 and 77546). Similar to the previously established targeted review process for individual clinicians and groups, MIPS eligible clinicians who participate in MVP reporting and are scored as a subgroup may request a targeted review beginning with the CY 2023 performance period/2025 MIPS payment year. We recognize that we did not propose changes in the existing language for targeted review at § 414.1385(a) to reflect the availability of the targeted review process for subgroups.

We proposed to modify § 414.1385(a) to state that a MIPS eligible clinician, group, or subgroup may request a targeted review of the calculation of the MIPS payment adjustment factors applicable to such MIPS eligible clinician, group, or subgroup for a year (88 FR 52561). We also proposed to modify § 414.1385(a)(1) to state that a MIPS eligible clinician, group, or subgroup (including their designated support staff), or a third party intermediary as defined at § 414.1305, may submit a request for a targeted review (88 FR 52561). Additionally, we proposed to make conforming changes at § 414.1385(a)(3), (5), and (6) to remove the term “MIPS eligible clinician or group” and add in its place the term “MIPS eligible clinician, group, or subgroup” (88 FR 52561). With these proposals, a subgroup that would like to request a review of the calculation for the MIPS payment adjustment factor for MVP data submission in the CY 2023 performance period/2025 MIPS payment year may also submit a targeted review application.

In addition, we noted that we also proposed additional changes to the targeted review process overall as set forth in § 414.1385(a) (88 FR 52601 through 52603). We refer readers to section IV.A.4.j. of this final rule for further discussion on these targeted review proposals.

We requested comments on the above proposals related to targeted review for subgroups. The following is a summary of the comments we received and our responses.

*Comment:* Several commenters supported our proposal allowing subgroups to submit a targeted review request. We received no other comments on this proposal.

*Response:* We thank the commenters for their support.

After consideration of public comments, we are finalizing our proposal to modify § 414.1385(a) to state that a MIPS eligible clinician, subgroup, or group may request a targeted review of the calculation of the MIPS payment adjustment factors applicable to such MIPS eligible clinician, subgroup, or group for a year. We are also finalizing our proposal to modify § 414.1385(a)(1) to state that a MIPS eligible clinician, subgroup, or group (including their designated support staff), or a third party intermediary as defined at § 414.1305, may submit a

request for a targeted review. Additionally, we are finalizing our proposal with minor technical corrections to make conforming changes at § 414.1385(a)(3), (5), and (6) to remove the term “MIPS eligible clinician or group” and add in its place the term “MIPS eligible clinician, subgroup, or group.” As previously discussed, we refer readers to section IV.A.4.j. of this final rule for discussion of our other proposals related to targeted review and additional changes to § 414.1385(a).

(5) Codification of previously finalized subgroup policies from preamble

We have identified that some subgroup policies were finalized in prior rulemaking but were not codified in the CFR. Additionally, we neglected to propose to include subgroups in our previously established definition of “attestation” in § 414.1305. We have reviewed the existing language and identified policies that should be codified. We proposed to correct these errors (88 FR 52561 and 52562).

Each of the changes to the policies described in this section must be effective beginning with the CY 2023 performance period/2025 MIPS payment year in order for MIPS Value Pathways to operate effectively. Section 1871(e)(1)(A)(ii) of the Act provides for retroactive application of a substantive change to an existing policy when the Secretary determines that failure to apply the policy change retroactively would be contrary to the public interest. Here, the failure to apply the changes retroactively would be contrary to the public interest because the discrepancies remedied by the below proposals may cause undue confusion for clinicians participating as subgroups and may also create unintended errors in program implementation.

(a) Definitions

(i) Attestation

At § 414.1305, we currently define attestation to mean a secure mechanism, specified by CMS, with respect to a particular performance period, whereby a MIPS eligible clinician or group may submit the required data for the Promoting Interoperability or the improvement activities performance categories of MIPS in a manner specified by CMS. Beginning in the CY

2023 performance period/2025 MIPS payment year, clinicians participating as subgroups would submit data for the Promoting Interoperability and improvement activities performance categories in an MVP as described at § 414.1365(c). As described previously in this section, we proposed to adopt this change retroactively pursuant to section 1871(e)(1)(A)(ii) of the Act. We believe that the failure to apply the proposed change retroactively would be contrary to the public interest because it would create ambiguity in the requirement for a subgroup to submit data through an attestation for the Promoting Interoperability and improvement activities performance categories as described in § 414.1365(c). Therefore, we proposed (88 FR 52562) to add the term “subgroup” and revise the definition of attestation in § 414.1305 to state that attestation means a secure mechanism, specified by CMS, with respect to a particular performance period, whereby a MIPS eligible clinician, group, or subgroup may submit the required data for the Promoting Interoperability or the improvement activities performance categories of MIPS in a manner specified by CMS.

We requested comments on this proposal. The following is a summary of the comments we received and our responses.

*Comment:* One commenter supported our proposals to codify previously finalized policies for subgroups, including the addition of subgroups to "attestation."

*Response:* We thank the commenter for their support.

After consideration of public comments, we are finalizing the proposal to add the term “subgroup” and revise the definition of attestation in § 414.1305 to state that attestation means a secure mechanism, specified by CMS, with respect to a particular performance period, whereby a MIPS eligible clinician, group, or subgroup may submit the required data for the Promoting Interoperability or the improvement activities performance categories of MIPS in a manner specified by CMS. This revision is effective beginning with the CY 2023 performance period/2025 MIPS payment year.

(ii) Submitter Type

At § 414.1305, we defined a submitter type to mean the MIPS eligible clinician, group, Virtual Group, APM Entity, or third party intermediary acting on behalf of a MIPS eligible clinician, group, Virtual Group, or APM Entity, as applicable, that submits data on measures and activities under MIPS. In accordance with the subgroup reporting requirements at § 414.1318(c), we inadvertently overlooked adding subgroups in the definition of submitter type at § 414.1305. As described previously in this section, we proposed to adopt this change retroactively pursuant to section 1871(e)(1)(A)(ii) of the Act. We believe that the failure to apply the change retroactively would be contrary to the public interest because it would create ambiguity in the requirement for a subgroup to submit data as described at § 414.1318(c). Therefore, we proposed (88 FR 52562) to add the term “subgroup” and revise the definition of submitter type at § 414.1305 to state that a submitter type means the MIPS eligible clinician, group, Virtual Group, subgroup, APM Entity, or third party intermediary acting on behalf of a MIPS eligible clinician, group, Virtual Group, subgroup, or APM Entity, as applicable, that submits data on measures and activities under MIPS.

We requested comments on this proposal. The following is a summary of the comments we received and our responses.

*Comment:* One commenter supported our proposals to codify previously finalized policies for subgroups, including the addition of subgroups to "submitter type."

*Response:* We thank the commenter for their support.

After consideration of public comments, we are finalizing our proposal to add the term “subgroup” and revise the definition of submitter type at § 414.1305 to state that a submitter type means the MIPS eligible clinician, group, Virtual Group, subgroup, APM Entity, or third party intermediary acting on behalf of a MIPS eligible clinician, group, Virtual Group, subgroup, or APM Entity, as applicable, that submits data on measures and activities under MIPS. This revision is effective beginning with the CY 2023 performance period/2025 MIPS payment year.

(b) Data Submission Criteria for the Improvement Activities Performance Category

We refer readers to § 414.1360 for data submission criteria for the improvement activities performance category. In the CY 2022 PFS final rule (86 FR 65462), we finalized revisions to the data submission criteria at § 414.1360(a)(2) to allow subgroups to perform and attest to their improvement activities separately and to apply the 50 percent threshold within their subgroup. We inadvertently overlooked codifying subgroups in the regulation text at § 414.1360(a). The existing regulation text at § 414.1360(a) refers to data submission criteria in the improvement activities performance category for only MIPS eligible clinicians and groups. As described previously, we proposed to adopt this change retroactively pursuant to section 1871(e)(1)(A)(ii) of the Act. We believe that the failure to apply the change retroactively would be contrary to the public interest because it would create ambiguity in the data submission requirements established in § 414.1360(a)(2) regarding the reporting of improvement activities by subgroups. Therefore, we proposed (88 FR 52562) to revise § 414.1360(a) to state that for purposes of the transition year of MIPS and future years, MIPS eligible clinicians, groups, or subgroups must submit data on MIPS improvement activities in one of the following manners described at § 414.1360(a)(1) through (a)(1)(i).

We requested comments on this proposal. The following is a summary of the comments we received and our responses.

*Comment:* One commenter supported our proposals to codify previously finalized policies for subgroups

*Response:* We thank the commenter for their support.

After consideration of public comments, we are finalizing our proposal to revise § 414.1360(a) to state that for purposes of the transition year of MIPS and future years, MIPS eligible clinicians, groups, or subgroups must submit data on MIPS improvement activities in one of the following manners described at § 414.1360(a)(1) and (a)(1)(i). This revision is effective beginning with the CY 2023 performance period/2025 MIPS payment year.

## e. APM Performance Pathway

### (1) Overview

In the CY 2021 PFS final rule (85 FR 84859 through 84866), we finalized the APM Performance Pathway (APP) at § 414.1367 beginning in performance year 2021, which was designed to provide a predictable and consistent MIPS reporting option to reduce reporting burden and encourage continued APM participation. We also established that ACOs will be required to report quality data for purposes of the Shared Savings Program via the APP (85 FR 84722).

Under policies finalized under the CY 2023 PFS (87 FR 69858), to meet the quality performance standard under the Shared Savings Program through the 2024 performance year, we stated that ACOs must report the ten CMS Web Interface measures or the three eCQMs/MIPS CQMS and the CAHPS for MIPS survey. Beginning in the 2025 performance year and subsequent performance years, ACOs must report the three eCQMS/MIPS CQMs and the CAHPS for MIPS survey (87 FR 69858 through 69859).

### (2) Provisions for the Medicare Clinical Quality Measure for Accountable Care Organizations Participating in the Medicare Shared Savings Program

As discussed in the proposed rule (88 FR 52420-3), we proposed to establish the Medicare Clinical Quality Measure for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQM) collection type in the APP measure set. The Medicare CQM collection type will be available to only ACOs participating in the Shared Savings Program. ACOs in the Shared Savings Program will have the option to report the Medicare CQM under the APP on only “beneficiaries eligible for Medicare CQMs as defined at § 425.20 ” , instead of their all payer/all patient population, beginning with the 2024 performance year (88 FR 52420). The Medicare CQM also will serve as another collection type in addition to the existing eCQM/MIPS CQM option, which is an all payer/all patient collection type under the APP.

In the CY 2023 PFS final rule, we stated that we will monitor the impact of policies such as the sunseting of the CMS Web Interface in the 2024 performance year and the requirement to report all payer/all patient eCQMs/MIPS CQMs beginning in the 2025 performance year (87 FR 69833). We also stated that we may revisit these and related issues in future rulemaking based on lessons learned as we gain more experience with ACOs reporting eCQMs/MIPS CQMs (87 FR 69833). In the proposed rule, we reiterated that we are committed to supporting ACOs in the transition to all payer/all patient eCQMs/MIPS CQMs and in the transition to digital quality measurement reporting (88 FR 52420-3). We encouraged readers to review additional background on our proposal to include the Medicare CQM collection type in the APP measure set (88 FR 52420-3). Similarly, we now refer readers to section III.G.2.b.(2) of this final rule for additional context on finalizing this proposal.

The following is a summary of the comments we received on this proposal as outlined in this section and our responses. Related comments and responses may be found in section III.G.2.b.(2) of this final rule.

*Comment:* We received one comment supporting the proposal to establish the Medicare CQM collection type in the APP measure set as described in this section.

*Response:* We thank the commenter for their support.

*Comment:* Some commenters expressed confusion about our reference in the proposed rule to “attributed Medicare fee-for-service beneficiaries who meet the definition of a ‘beneficiary eligible for Medicare CQM(s)’” (88 FR 52562). In particular, commenters were concerned that our use of the word “attributed” may indicate a different beneficiary population for the Medicare CQM collection type than the population referenced elsewhere in the proposed rule (88 FR 52420).

*Response:* We agree that our use of the word “attributed” may have been confusing. We now clarify that our proposal to establish the Medicare CQM collection type in the APP measure set is intended to reference the same beneficiary population as that discussed in the Shared

Savings Program section of the proposed rule (88 FR 52420), specifically beneficiaries eligible for Medicare CQMs as defined at § 425.20. For more discussion on this matter, please refer to section III.G.2.b.(2) of this final rule.

After consideration of public comments, we are finalizing as proposed to include the Medicare CQM collection type in the APP measure set beginning with the 2024 performance year.

## f. MIPS Performance Category Measures and Activities

### (1) Quality Performance Category

#### (a) Background

Section 1848(q)(1)(A)(i) and (ii) of the Act requires the Secretary to develop a methodology for assessing the total performance of each MIPS eligible clinician according to certain specified performance standards and, using such methodology, to provide for a final score for each MIPS eligible clinician. Section 1848(q)(2)(A)(i) of the Act provides that the Secretary must use the quality performance category in determining each MIPS eligible clinician's final score, and section 1848(q)(2)(B)(i) of the Act describes the measures that must be specified under the quality performance category.

We referred readers to §§ 414.1330 through 414.1340 and the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77097 through 77162 and 82 FR 53626 through 53641, respectively), and the CY 2019, CY 2020, CY 2021, CY 2022, and CY 2023 PFS final rules (83 FR 59754 through 59765, 84 FR 63949 through 62959, 85 FR 84866 through 84877, 86 FR 65431 through 65445, and 87 FR respectively) for a description of previously established policies and statutory basis for policies regarding the quality performance category.

In the CY 2024 PFS proposed rule (88 FR 52562 through 52568), we proposed to:

- Amend the definition of the term “collection type” to include the Medicare Clinical Quality Measures for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQMs).
- Amend (through technical modifications) the data submission criteria for MIPS quality measures and establish the data submission criteria for Medicare CQMs.
- Require the administration of the Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Survey in the Spanish language translation.

- Maintain the data completeness criteria threshold of at least 75 percent for the CY 2026 performance period/2028 MIPS payment year, and increase the data completeness criteria threshold to at least 80 percent for the CY 2027 performance period/2029 MIPS payment year.

- Establish data completeness criteria for Medicare CQMs.

- Modify the MIPS quality measure set as described in Appendix 1 of the CY 2024 PFS proposed rule, including the addition of new measures, updates to specialty sets, removal of existing measures, and substantive changes to existing measures.

#### (b) Definition of Collection Type

With the proposed establishment of a new collection type, the Medicare Clinical Quality Measures for Accountable Care Organizations (ACOs) Participating in the Medicare Shared Savings Program (Medicare CQMs) specific to the APM Performance Pathway (APP) as described in the CY 2024 PFS proposed rule (88 FR 52420 through 52423), we proposed to amend the definition of the term “collection type” to include Medicare CQMs to account for the new collection type available only to Medicare Shared Savings Program ACOs meeting the reporting requirements of the APP. Specifically, starting with the CY 2024 performance period, we proposed to amend the definition of the term “collection type” in § 414.1305 to mean a set of quality measures with comparable specifications and data completeness criteria, as applicable, including, but not limited to: Electronic clinical quality measures (eCQMs); MIPS clinical quality measures (MIPS CQMs); Qualified Clinical Data Registry (QCDR) measures; Medicare Part B claims measures; CMS Web Interface measures (except as provided in paragraph (1) of this definition, for the CY 2017 through CY 2022 performance periods/2019 through 2024 MIPS payment years); the CAHPS for MIPS survey measure; administrative claims measures; and Medicare Clinical Quality Measures for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQMs). The Medicare CQMs collection type would serve as a transition collection type under the APP and be available as determined by CMS.

We solicited public comment on the proposal to amend the definition of the term collection type to include the Medicare CQMs as an available collection type in MIPS. The following is a summary of the public comments received.

*Comment:* Many commenters supported the proposal to amend the definition of the term collection type to include Medicare CQMs as an available collection type in MIPS. The commenters expressed support for the establishment of the new collection type as an available option to serve as a transitional means for Medicare Shared Savings Program ACOs to prepare for the reporting of eCQMs and MIPS CQMs under the APP.

*Response:* We appreciate the support from commenters.

*Comment:* A few commenters requested for the Medicare CQMs collection type to not be limited to Medicare Shared Savings Program ACOs meeting the reporting requirements under the APP, but expand the availability to MIPS eligible clinicians, groups, virtual groups, subgroups, and other APM Entities participating in MIPS.

*Response:* Due to the complex technical challenges that Medicare Shared Savings Program ACOs encounter as they prepare for the reporting of eCQMs and/or MIPS CQMs, we established the new Medicare CQMs collection type to serve as a transition collection type under the APP. While the reporting of QCDR measures, eCQMs, MIPS CQMs, and Medicare Part B claims measures under MIPS is not new, the reporting of eCQMs and/or MIPS CQMs under the APP for Medicare Shared Savings Program ACOs is new and in order to facilitate the transition to the reporting of eCQMs and/or MIPS CQMs, the availability of the Medicare CQMs as a collection type to Medicare Shared Savings Program ACOs provides a means to assist with the transition of reporting eCQMs and/or MIPS CQMs, particularly as the complex technical challenges specific to Medicare Shared Savings Program ACOs are mitigated and addressed. We do not intend to expand the availability of the Medicare CQMs collection type, serving as a transition collection type, to MIPS eligible clinicians, groups, virtual groups, subgroups, and other APM Entities participating in MIPS.

*Comment:* A few commenters suggested that the Medicare CQMs collection type be afforded the 7-point scoring floor for the first year of implementation and the 5-point scoring floor applied for the second year of implementation as a means for incentivizing Medicare Shared Savings Program ACOs to adopt the Medicare CQM collection type.

*Response:* We note that the scoring policy providing measure achievement points of a 7-point scoring floor and a 5-point scoring floor pertains to the submission of new MIPS quality measures during their first 2 years in MIPS. Specifically, under the scoring policy for new MIPS quality measures in § 414.1380(b)(1)(i)(C), the measure achievement points available for the submission of a new MIPS quality measure (having a benchmark, and meeting case minimum and data completeness requirements) in its first year of MIPS are between 7 and 10 measure achievement points and the submission of a new MIPS quality measure (having a benchmark, and meeting case minimum and data completeness requirements) in its second year of MIPS are between 5 and 10 measure achievement points. The scoring policy for new MIPS quality measures is not applicable to the establishment of a new collection type or the application of a newly available collection type to an existing MIPS quality measure. In the CY 2022 PFS final rule, we noted that such policy will not apply to measures that have existed as a MIPS quality measure but are being introduced for a new collection type (86 FR 65500). For example, if a MIPS quality measure is currently available as a MIPS CQM and it becomes newly available as an eCQM or Medicare CQM, the application of the newly available collection type to an existing MIPS quality measure would not be considered a new measure under such scoring policy.

After consideration of public comments, we are finalizing, as proposed, the proposal to amend the definition of the term collection type in § 414.1305 to include Medicare CQMs as an available collection type in MIPS.

To operationalize the implementation of the Medicare CQMs collection type, specifically the capability to distinguish between the submission of data for a Medicare CQM and a MIPS CQM to CMS, we created an identifier that reflects the Quality number associated with a quality

measure (that is, Q001, Q134, and Q236) followed by the letters “SSP.” For the reporting of Medicare CQMs, the identifiers are as follows: 001SSP, 134SSP, and 236SSP. We note that the Medicare CQM identifiers must be included in the submission files. We refer readers to section III.G.2.b. of this final rule for a summary of public comments received regarding the implementation and operationalization of the Medicare CQMs collection type under the APP.

(c) Quality Data Submission Criteria

(i) Data Submission Criteria for Quality Measures

In the CY 2024 PFS proposed rule, we proposed technical amendments to data submission criteria for MIPS quality measures and proposed to establish data submission criteria for Medicare CQMs. The participants in MIPS have expanded from MIPS eligible clinicians and groups to virtual groups starting with the CY 2018 performance period (82 FR 53593 through 53617), APM Entities starting with the CY 2021 performance period (85 FR 84860), and subgroups starting with the CY 2023 performance period (86 FR 65392 through 65394). In order to account for the expansion of participants in MIPS and the applicability of data submission criteria for MIPS quality measures, we proposed technical amendments. We proposed technical amendments to recognize that a virtual group, subgroup, and APM Entity are able to meet the data submission requirements pertaining to the quality performance category at § 414.1325(a)(1), (c), and (d). Also, we proposed technical amendments to recognize that a virtual group and an APM Entity are able to meet the data submission requirements established at § 414.1335(a)(1)(i) and (ii) for the data submission criteria pertaining to Medicare Part B claims measures, MIPS CQMs, eCQMs, and QCDR measures. Additionally, in § 414.1335(a)(1)(ii), we proposed to modify references of MIPS eligible clinicians and groups, to refer to such clinicians and groups in the singular to ensure that § 414.1335 uniformly references the various types of MIPS participants in the singular. We made a grammatical correction to § 414.1335(a)(1)(i) to ensure subject-verb agreement. We noted that the technical amendments in § 414.1335(a)(1)(i) and (ii) are not applicable to subgroups because MIPS

subgroup participation is part of the MVP framework, which has separate data submission criteria specified in § 414.1365.

We proposed technical amendments to the data submission criteria for the CAHPS for MIPS Survey measure, which will identify the CAHPS for MIPS Survey as a measure in § 414.1335(a)(3). Currently, § 414.1335(a)(3) does not reference the CAHPS for MIPS Survey as a measure, which is erroneous. Also, we proposed a revision to § 414.1335(a)(3) to recognize that a virtual group, subgroup, and APM Entity are able to administer the CAHPS for MIPS Survey in § 414.1335(a)(3)(i).

Additionally, we proposed amendments to the data submission criteria for quality performance category at § 414.1325(a)(1)(i) and (ii) in order to clarify that the data submission of MIPS quality measures specific to eQMs must be submitted utilizing certified electronic health record technology (CEHRT). Section 1848(q)(5)(B)(ii) of the Act provides that under the methodology for assessing the total performance of each MIPS eligible clinician, the Secretary shall: (1) Encourage MIPS eligible clinicians to report on applicable measures under the quality performance category through the use of CEHRT and QCDRs; and (2) For a performance period for a year, for which a MIPS eligible clinician reports applicable measures under the quality performance category through the use of CEHRT, treat the MIPS eligible clinician as satisfying the CQMs reporting requirement under section 1848(o)(2)(A)(iii) of the Act for such year. To encourage the use of CEHRT for quality improvement and reporting on measures under the quality performance category, we established a scoring incentive for MIPS eligible clinicians who use their CEHRT systems to capture and report quality information, specifically the end-to-end electronic reporting bonus points (81 FR 77294 through 77297). We sunset the end-to-end electronic reporting bonus points starting with the CY 2022 performance period (CY 2021 performance period/2023 MIPS payment year was the last performance period in which the end-to-end electronic reporting bonus points were available (85 FR 84907 through 84908)).

With the framework for transforming MIPS through MVPs, we noted in the CY 2021 PFS final rule that we will find ways to incorporate digital measures without needing to incentivize end-to-end electronic reporting with bonus points (85 FR 84907 through 84908). In the CY 2018 Quality Payment Program final rule (82 FR 53636), we encouraged interested parties to consider electronically specifying their quality measures as eCQMs, to encourage MIPS eligible clinicians, groups, and virtual groups to move towards the utilization of electronic reporting. As noted in the CY 2019 PFS final rule (83 FR 59851), bonus points were created as transition policies which were not meant to continue through the duration of the program. Since the inception of MIPS, our intention has been to encourage the utilization of CEHRT, which encompasses the requirement of CEHRT pertaining to eCQM data submission.

With the sunset of the end-to-end electronic reporting bonus points, there is ambiguity regarding the requirement of utilizing CEHRT for the data submission of eCQMs. While the sunset of the end-to-end electronic reporting bonus points was merely to eliminate such bonus points, our intention was to continue the requirement of utilizing CEHRT for eCQM data submission. However, with the sunset of the end-to-end electronic reporting bonus points, there is an inadvertent absence in policy that would continue the requirement of utilizing CEHRT for eCQM data submission. As a result of such inadvertent absence of policy establishing the overarching CEHRT requirements for eCQM data submission for purposes of the quality performance category (aside from the CEHRT requirements under the end-to-end electronic reporting bonus point criteria), we are rectifying the issue by establishing the requirement to utilize CEHRT for the data submission of eCQMs. We proposed to establish the quality performance category data submission criteria for eCQMs that requires the utilization of CEHRT in § 414.1335(a)(1). Specifically, in § 414.1335(a)(1)(i)(A) and (ii)(A), we proposed that the data submission criteria for eCQMs requires the utilization of CEHRT, as defined in § 414.1305. Furthermore, we proposed to amend the definition of CEHRT in § 414.1305(2)(ii) by broadening the applicability of the health IT certification criteria identified in 42 CFR 170.315 that are

necessary to report objectives and measures specified under MIPS (would no longer be limited to the Promoting Interoperability performance category). As a result of this proposal, the health IT certification criteria identified in § 414.1305(2)(ii) would be applicable, where necessary, for any MIPS performance category, including the criteria that support eQMs identified in § 414.1305(2)(ii)(B).

We noted that the proposal pertaining to the data submission criteria for eQMs requiring the utilization of CEHRT will not require third party intermediaries that report eQMs on behalf of a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity to obtain certification. Currently, third party intermediaries may facilitate reporting on behalf of a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity for an eQm while not having been certified to the certification criteria at 45 CFR 170.315(c)(1) through (3). However, if a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity is relying on a third party intermediary for elements of the required certification capabilities for the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity to meet the CEHRT definition applicable for their participation, then the third party intermediary will need to provide the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity with a certified Health IT Module for the needed capability or capabilities.

We noted that the definition of CEHRT in § 414.1305 references several certification criteria in the ONC Health IT Certification Program for clinical quality measurement, including: “Clinical quality measures (CQMs) — record and export” (45 CFR 170.315(c)(1)), as part of the 2015 Base Electronic Health Record (EHR) definition in 45 CFR 170.102; “Clinical quality measures (CQMs) — import and calculate” (45 CFR 170.315(c)(2)); “Clinical quality measures (CQMs) — report” (45 CFR 170.315(c)(3)); and, optionally, “Clinical quality measures (CQMs) — filter” (45 CFR 170.315(c)(4)). Under the proposal, at a minimum, a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity would need to utilize technology certified to the criteria at 45 CFR 170.315(c)(1) through (3) to report on eQMs. We reiterate that certified

Health IT Modules meeting these criteria are not required to be provided by the same health IT developer; a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity may use Health IT Modules to meet the certification requirements provided by more than one developer. For example, a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity could use certified health IT meeting the criteria in 45 CFR 170.315(c)(1) and (c)(2) provided as part of their EHR system while a third party intermediary that supports reporting on behalf of a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity could supply a Health IT Module that meets the criterion in 45 CFR 170.315(c)(3) to generate a measure report and thus, enable a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity to meet the requirement to use CEHRT for eCQMs.

Lastly, we proposed to establish data submission criteria for the Medicare CQM collection type (as proposed under the APP in the CY 2024 PFS proposed rule (88 FR 52420 through 52423)) in § 414.1335(a)(4). Specifically, in § 414.1335(a)(4)(i), we proposed that the data submission criteria pertaining to Medicare CQMs will be met by, a MIPS eligible clinician, group, and APM Entity reporting on the Medicare CQMs (reporting quality data on beneficiaries eligible for Medicare CQMs as defined at § 425.20) within the APP measure set and administering the CAHPS for MIPS Survey as required under the APP.

We solicited public comment on the proposals regarding the technical amendments that pertain to the data submission criteria for MIPS quality measures and the establishment of data submission criteria for Medicare CQMs. The following is a summary of the public comments received.

*Comment:* One commenter supported all proposed technical amendments.

*Response:* We appreciate the support from the commenter.

*Comment:* Several commenters supported the technical amendment pertaining to the data submission criteria for eCQMs requiring the utilization of CEHRT, which provided clarification regarding the requirement of using CEHRT for the data submission of eCQMs. A few

commenters supported that a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity would need to utilize technology certified to the criteria at 45 CFR 170.315(c)(1) through (3) to report on eCQMs. The commenters indicated that while some third party intermediaries may not fully meet CEHRT criteria, it is essential that they adhere to the same standards as others when reporting eCQMs; such consistency would ensure uniform and reliable data submission across all third party intermediaries.

*Response:* We appreciate the support from commenters and agree with commenters regarding third party intermediaries adhering to the same standards to ensure the uniform and reliable submission of data.

*Comment:* One commenter encouraged CMS to further incentivize eCQM submissions by adding enough eCQMs to each MVP, which would allow for eCQMs alone to meet the reporting requirements under the quality performance category.

*Response:* It should be noted that we implement applicable eCQMs in MVPs when they are available. As more eCQMs are implemented in MIPS, we will assess and determine which eCQMs would be available for reporting in an MVP.

*Comment:* A few commenters indicated that EHR vendors with CEHRT do not automatically include the capability to easily report the most recent version of an eCQM for MIPS with minimal manual effort. Also, the commenters indicated that CEHRT requirements do not standardize the capture and reporting of individual eCQM data elements across vendor systems, which would require the tailoring of data extracts and uploads across systems and multiple sights (including Taxpayer Identification Numbers (TINs) participating in the Medicare Shared Savings Program as part of an ACO). Additionally, a few commenters indicated that CEHRT standards have not advanced enough to support quality measurement derived from multiple sources.

*Response:* We appreciate the feedback from commenters. We note that certification criteria referenced in the CEHRT definition for clinical quality measurement incorporate QRDA

standards, which enable standardization of quality data for reporting and exchange. Also, we recognize that MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities, including Medicare Shared Savings Program ACOs, may use additional capabilities beyond those included in the certification criteria in 45 CFR 170.315(c)(1) through (3) to support aggregation of data for eCQMs across systems. We reiterate that the definition of CEHRT references the “clinical quality measurement—filter” certification criterion at 45 CFR 170.315(c)(4) as an optional criterion. Such criterion requires health IT to be able to filter eCQM results at both patient and aggregate levels. Moreover, a Health IT Module must be able to filter by a single data element (for example, provider type) or a combination of any of certain data elements.<sup>492</sup>

*Comment:* One commenter did not support the proposal to require the utilization of CEHRT for the data submission of eCQMs because such requirement would increase costs and complexity for third party intermediaries.

*Response:* We recognize that the proposal requiring the utilization of CEHRT for the data submission of eCQMs may require the investment of resources for third party intermediaries to support the submission of eCQMs. However, we previously noted that under the proposal, at a minimum, a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity would need to utilize technology certified to the criteria at 45 CFR 170.315(c)(1) through (3) to report on eCQMs. We reiterated that certified Health IT Modules meeting these criteria are not required to be provided by the same health IT developer; a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity may use Health IT Modules to meet the certification requirements provided by more than one developer. For example, a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity could use certified health IT meeting the criteria in 45 CFR 170.315(c)(1) and (c)(2) provided as part of their EHR system while a third party intermediary

---

<sup>492</sup> For more information regarding the “clinical quality measurement-filter” criterion, we refer readers to the ONC Certification Companion Guide available at <https://www.healthit.gov/test-method/clinical-quality-measures-cqms-filter>.

that supports reporting on behalf of a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity could supply a Health IT Module that meets the criterion in 45 CFR 170.315(c)(3) to generate a measure report and thus, enable a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity to meet the requirement to use CEHRT for eCQMs.

After consideration of public comments, we are finalizing, as proposed, the technical amendments that pertain to the data submission criteria for MIPS quality measures and the establishment of data submission criteria for Medicare CQMs.

(ii) Data Submission Criteria for the CAHPS for MIPS Survey Measure

The CAHPS for MIPS Survey measures patients' experience of care within a group, virtual group, subgroup, and APM Entity, including Shared Savings Program ACOs. The survey measures 10 dimensions of patient experience of care, known as summary survey measures, for which patients may be the best, if not only source of information. The CAHPS for MIPS Survey is optional for all groups, virtual groups, subgroups, and APM Entities of 2 or more eligible clinicians reporting via traditional MIPS or MIPS Value Pathways (MVPs) and is required for Shared Savings Program ACOs reporting under the APP.

(A) Require the Administration of the CAHPS for MIPS Survey in the Spanish Translation

We have created official translations of the CAHPS for MIPS Survey in 7 languages, including Spanish, Cantonese, Korean, Mandarin, Portuguese, Russian, and Vietnamese, in addition to the required administration of English survey. However, use of these translations is generally voluntary, with the exception of the requirement to administer the Spanish language translation of the CAHPS for MIPS Survey for patients residing in Puerto Rico. Organizations (groups, virtual groups, subgroups, and APM Entities) that elect CAHPS for MIPS Survey must contract with a CMS-approved survey vendor to administer the CAHPS for MIPS Survey and must request survey translations for the vendor to administer the CAHPS for MIPS Survey in an optional language. Generally, the use of the survey translations are an additional survey administration cost to the organizations.

Our analysis of historic CAHPS data indicated that the use of the survey translations has not been widespread and there is unmet need for access to surveys in the 7 available translations. The analysis of survey translation use by groups and Shared Savings Program ACOs fielding the CY 2021 performance period CAHPS for MIPS Survey indicated that 141 out of 559 organizations have 10 percent or more respondents reporting they speak a language other than English at home and out of these 141 organizations, 114 organizations have all of their survey responses in English. Analyzing data from the U.S. Census Bureau, specifically from the 2021 American Community Survey, we found that Spanish is spoken by 61 percent of those who speak a language other than English at home.<sup>493</sup>

To address unmet need, we proposed to require the administration of the CAHPS for MIPS Survey in the Spanish language translation; more specifically, we proposed to require organizations to contract with a CMS-approved survey vendor that, in addition to administering the survey in English, would administer the Spanish language translation to Spanish-preferring patients using the procedures detailed in the CAHPS for MIPS Quality Assurance Guidelines. Also, we recommended that organizations administer the survey in the other available translations (Cantonese, Korean, Mandarin, Portuguese, Russian, and Vietnamese) based on the language preferences of their patients. The proposal and recommendation would make the survey more accessible to survey respondents who can only respond in Spanish or another available translation, better ensure that we are assessing the experience of patients who have limited English proficiency, and is part of our efforts to advance health equity. We refer readers to the CY 2024 PFS proposed rule (88 FR 52565) for further information regarding the proposal requiring the administration of the Spanish language translation of the survey.

We solicited public comment on the proposal to require the administration of CAHPS for MIPS Survey in the Spanish language translation, in particular from organizations that

<sup>493</sup> U.S. Census Bureau, 2021 American Community Survey, S1603: Characteristics of People by Language Spoken at Home, 2021 American Community Survey 5-Year Estimate Subject Tables. Available at <https://data.census.gov/table?q=S1603&tid=ACSST5Y2021.S1603>.

administer the CAHPS for MIPS Survey to understand if they consider contracting with vendors to administer the survey in one or more of the available survey translations based on the language preferences of patients. We were also interested in learning about the factors that more or less likely affect the administration of survey translations where there is need for one or more of the available translations.

Simultaneously, we also proposed the same proposal regarding the requirement to administer the Spanish language translation of the survey for the Medicare Shared Savings Program Accountable Care Organizations (Shared Savings Program ACOs) reporting the CAHPS for MIPS Survey measure under the APP as described in section III.G.2.g. of this final rule.

We received public comments regarding the proposal to require the administration of the CAHPS for MIPS Survey in the Spanish language translation. The following is a summary of the public comments received.

*Comment:* Most commenters supported CMS's efforts to improve health equity and language accessibility by requiring administration of the Spanish language translation of the survey. Many commenters suggested that requiring Spanish language survey administration could improve survey participation and response rates. A few commenters noted that survey results will better reflect the true perspectives of patients when surveys are provided in their preferred language. Some commenters also expressed support of CMS's recommendation to offer other language translations of the survey, while other commenters encouraged CMS to consider requiring use of additional translations in future rulemaking.

*Response:* We appreciate the commenters' support. We agree with commenters that requiring Spanish language survey administration will assist our efforts to advance health equity by assessing the experience of patients whose preferred language is Spanish and may result in increased survey participation and response rates. We are also appreciative of the support for our recommendation that organizations use the other available survey translations based on the needs

of their patient populations and the suggestion to require additional language translations. We will consider this suggestion for future rulemaking; however, we intend to investigate the extent of additional burden, such as cost, to providing the survey translations before expanding the requirement to include translations other than Spanish.

*Comment:* One commenter supported the proposal but expressed concern about the additional cost burden to organizations fielding the survey; this commenter suggested shifting the increased costs to the survey vendors. Another commenter noted that they believed the additional costs associated with the Spanish language administration were outweighed by the benefits.

*Response:* We recognize the commenter's concern about the potential for additional cost burden of the Spanish language requirement to organizations fielding the CAHPS for MIPS survey. We do not have the legal authority to control vendor costs associated with the administration of the survey or to shift any increase in cost to the survey vendors as suggested. Further, we agree with the comment that any additional costs incurred by the Spanish language requirement is outweighed by the potential benefits such as promoting better response rates by enabling more patients to participate in the survey and ensuring that language does not hinder quality or experience of care. As mentioned earlier in this section, we intend to investigate the extent of additional costs to providing the survey translations before expanding the requirement to include translations other than Spanish.

*Comment:* One commenter mentioned the challenges with capturing the correct language from the patient during patient registration and requested more time to administer additional languages after the addition of Spanish during CY 2024. Another commenter expressed support for the intent of requiring use of a validated and reliable translated CAHPS for MIPS survey, but also expressed concern with physician burden to meet the requirement.

*Response:* We appreciate the commenters' concerns about physician burden to meet the requirement as well as the challenges with capturing the correct language preferences of patients during patient registration and the additional time needed to assess the need for the other

available translations. First, assessing Spanish language preference will not result in additional burden to organizations or physicians administering the CAHPS for MIPS Survey as this will be determined by the vendor during survey administration with the survey respondents. We also want to clarify that since we are not requiring the administration of the other available translations, organizations will continue to have the flexibility on how best to determine the language preferences of their patients within their practices and the need for the administration of the other available survey translations.

After consideration of public comments, we are finalizing, as proposed, to require the administration of the CAHPS for MIPS Survey in the Spanish language translation.

(d) Data Completeness Criteria

(i) Data Completeness Criteria for Quality Measures, Excluding the Medicare CQMs

As described in the CY 2017 Quality Payment Program proposed rule (81 FR 28188 and 28189), to ensure that data submitted on quality measures are complete enough to accurately assess each MIPS eligible clinician's quality performance, we established a data completeness requirement. Section 1848(q)(5)(H) of the Act provides that analysis of the quality performance category may include quality measure data from other payers, specifically, data submitted by MIPS eligible clinicians with respect to items and services furnished to individuals who are not individuals entitled to benefits under Part A or enrolled under Part B of Medicare. In the CY 2017 and CY 2018 Quality Payment Program final rules and the CY 2020 PFS final rule, we also noted that we would increase the data completeness criteria threshold over time (81 FR 77121, 82 FR 53632, and 84 FR 62951). For the CY 2017 performance period/2019 MIPS payment year (first year of the implementation of MIPS), CMS established the data completeness criteria threshold to reflect a threshold of at least 50 percent (81 FR 77125). We increased the data completeness criteria threshold from at least 50 percent to at least 60 percent for the CY 2018 performance period/2020 MIPS payment year (81 FR 77125 and 82 FR 53633) and maintained a threshold of at least 60 percent for the CY 2019 performance period/2021 MIPS payment year

(82 FR 53633 and 53634). For the CY 2020 performance period/2022 MIPS payment year, we increased the data completeness criteria threshold from at least 60 percent to at least 70 percent (84 FR 62952). We maintained data completeness criteria threshold of at least 70 percent for the CY 2021, CY 2022, and CY 2023 performance periods/2023, 2024, and 2025 MIPS payment years (86 FR 65435 through 65438). For the CY 2024 and CY 2025 performance periods/2026 and 2027 MIPS payment years, we increased the data completeness criteria threshold from at least 70 percent to at least 75 percent (87 FR 70049 through 70052). We continue to believe that it is important to incrementally increase the data completeness criteria threshold as MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities gain experience with MIPS.

The incorporation of higher data completeness criteria thresholds in future years ensures a more accurate assessment of a MIPS eligible clinician's performance on quality measures and prevents selection bias to the extent possible (81 FR 77120, 82 FR 53632, 83 FR 59758, 86 FR 65436, and 87 FR 70049). We have encouraged all MIPS eligible clinicians to perform the quality actions associated with the quality measures on their patients (82 FR 53632, 86 FR 65436, and 87 FR 70049). The data submitted for each measure is expected to be representative of the individual MIPS eligible clinician, group, or virtual group's overall performance for that measure. A data completeness criteria threshold of less than 100 percent is intended to reduce burden and accommodate operational issues that may arise during data collection during the initial years of the program (82 FR 53632, 86 FR 65436, and 87 FR 70049).

We previously noted concerns raised by interested parties regarding the unintended consequences of accelerating the data completeness thresholds too quickly, which may jeopardize a MIPS eligible clinicians' ability to participate and perform well under MIPS (81 FR 77121, 82 FR 53632, 84 FR 62951, and 87 FR 70049). We want to ensure that an appropriate, yet achievable, data completeness criteria threshold is applied to all eligible clinicians participating in MIPS. Based on our analysis of data completeness rates from data submission

for the CY 2017 performance period<sup>494</sup>, it is feasible for eligible clinicians and groups to achieve a higher data completeness criteria threshold without jeopardizing their ability to successfully participate and perform in MIPS.

As MIPS eligible clinicians, groups, and virtual groups have gained experience participating in MIPS, particularly meeting the data completeness criteria threshold over the last 7 years (from CY 2017 performance period to CY 2023 performance period), such experience has prepared MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entity to meet incremental increases in the data completeness criteria threshold. We have maintained a data completeness criteria threshold of at least 70 percent for four years from the CY 2020 performance period to the CY 2023 performance period and as a result, individual MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities had 4 years of a maintained data completeness criteria threshold of at least 70 percent before transitioning to an increased data completeness criteria threshold of at least 75 percent for a 2-year timeframe (CY 2024 and CY 2025 performance periods) with more than 12 months to prepare for an increased data completeness criteria threshold of at least 75 percent before such threshold becomes effective for the CY 2024 and CY 2025 performance periods/2026 and 2027 MIPS payment years.

As we assessed the timeframe for increasing the data completeness criteria threshold, we determined that maintaining the data completeness criteria threshold of at least 75 percent for a total of 3 years would provide sufficient time for MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities to transition to another increase in the data completeness criteria threshold. For the CY 2026 performance period/2028 MIPS payment year, we proposed to maintain the data completeness criteria threshold of at least 75 percent. This would provide MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities with sufficient time to prepare for an incrementally increase in the data completeness criteria threshold starting

---

<sup>494</sup> As described in the CY 2020 PFS final rule (84 FR 62951), the average data completeness rates were as follows: for individual eligible clinicians, it was 76.14; for groups, it was 85.27; and for small practices, it was 74.76.

with the CY 2027 performance period/2029 MIPS payment year. Therefore, MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities could continue transitioning to an incrementally increased data completeness criteria threshold of at least 75 percent to at least 80 percent. In establishing data completeness criteria thresholds in advance of an applicable performance period, it is advantageous to delineate the expectations for MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities, so they can adequately prepare for a transition to higher data completeness criteria threshold, particularly the increase in data completeness criteria threshold to at least 80 percent. Thus, we proposed to increase the data completeness criteria threshold from 75 percent to 80 percent for the CY 2027 performance period/2029 MIPS payment year.

The use of EHRs and eCQMs can reduce burden associated with meeting higher data completeness standards as the collection of eCQM data within the EHR can allow eligible clinicians to report on 100 percent of the eligible population with data in the EHR for a measure. We continued to encourage individual MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities, including small and rural practices, to explore EHR adoption and the reporting of eCQMs to reduce burden and technical challenges to ensure data accuracy as we seek to increase the data completeness criteria threshold. Individual MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities that continue to utilize other means of data collection for MIPS CQMs, including the collection of MIPS CQM data reported by registries and/or QCDRs, would need to have the logic code of their EHRs to be updated to account for the increased data completeness criteria threshold. Increasing the data completeness criteria threshold would not pose a substantial burden to MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities, unless they are manually extracting and reporting quality data. However, increasing the data completeness criteria threshold provides for the more accurate assessment of performance.

For the aforementioned reasons, it is important to incrementally increase the data completeness criteria threshold. In the CY 2024 PFS proposed rule, we proposed to maintain the data completeness threshold for an additional year before incrementally increasing the data completeness criteria threshold. Specifically, in § 414.1340(a), we proposed the following data completeness criteria thresholds pertaining to QCDR measures, MIPS CQMs, and eCQMs:

- At paragraph (a)(4), for the CY 2026 performance period/2028 MIPS payment year, a MIPS eligible clinician, group, virtual group, subgroup, and APM Entity submitting quality measures data on QCDR measures, MIPS CQMs, or eCQMs must submit data on at least 75 percent of the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity's patients that meet the measure's Denominator criteria, regardless of payer.

- At paragraph (a)(5), for the CY 2027 performance period/2029 MIPS payment year, a MIPS eligible clinician, group, virtual group, subgroup, and APM Entity submitting quality measures data on QCDR measures, MIPS CQMs, or eCQMs must submit data on at least 80 percent of the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity's patients that meet the measure's denominator criteria, regardless of payer.

Similarly, in § 414.1340(b), respectively, we proposed the following data completeness criteria thresholds pertaining to Medicare Part B claims measures:

- At paragraph (b)(4), for the CY 2026 performance period/2028 MIPS payment year, a MIPS eligible clinician, group, virtual group, subgroup, and APM Entity submitting quality measures data on Medicare Part B claims measures must submit data on at least 75 percent of the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity's patients seen during the corresponding performance period to which the measure applies.

- At paragraph (b)(5), for the CY 2027 performance period/2029 MIPS payment year, a MIPS eligible clinician, group, virtual group, subgroup, and APM Entity submitting quality measures data on Medicare Part B claims measures must submit data on at least 80 percent of the

MIPS eligible clinician, group, virtual group, subgroup, or APM Entity's patients seen during the corresponding performance period to which the measure applies.

Also, for the data completeness criteria pertaining to the quality performance category, we proposed technical amendments to recognize that a virtual group, subgroup, and APM Entity must meet the data completeness criteria requirements established at § 414.1340(a), (b), and formerly paragraph (d), new paragraph (e) due to the proposal to establish the data completeness criteria for the new collection type, Medicare CQM, in § 414.1340(d) as described in the CY 2024 PFS proposed rule (88 FR 52567).

We solicited public comment on these proposals. The following is a summary of the public comments received.

*Comment:* A few commenters expressed their appreciation for the gradual and incremental increase in the data completeness criteria threshold, which would allow for a more accurate assessment of performance.

*Response:* We appreciate the support from commenters.

*Comment:* Some commenters supported the data completeness criteria threshold of at least 75 percent for the CY 2026 performance period/2028 MIPS payment year, which would extend the data completeness threshold of at least 75 percent for another performance period.

*Response:* We appreciate the support from commenters.

*Comment:* Some commenters requested for the previously established data completeness criteria threshold of at least 75 percent for the CY 2024 and CY 2025 performance periods/2026 and 2028 MIPS payment years to be lowered to at 70 percent. A few commenters indicated that there are technical and interoperability challenges (that is, data collection variability across multiple EHRs, systems, and sights (including multiple TINs participating in the Medicare Shared Savings Program as part of an ACO); lack of agreed upon semantic and syntactic standards; data privacy concerns; and patient misidentification), which make it difficult to meet the data completeness criteria threshold. A few commenters indicated that a data completeness

criteria threshold of more than 70 percent would make it difficult for small and rural practices with fewer resources and staff to meet the data completeness criteria threshold.

*Response:* As previously noted, we believe that MIPS eligible clinicians, groups, and virtual groups have gained experience participating in MIPS, particularly meeting the increased data completeness criteria thresholds over the last 7 years (from CY 2017 performance period to CY 2023 performance period), and such experience has prepared MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entity to meet incremental increases in the data completeness criteria threshold. The data completeness criteria threshold of at least 70 percent was maintained for 4 years from the CY 2020 performance period to the CY 2023 performance period and as a result, individual MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities had 4 years of a maintained data completeness criteria threshold of at least 70 percent before transitioning to an increased data completeness criteria threshold of at least 75 percent.

We have implemented a slow, gradual, and incremental increase in the data completeness criteria threshold in order to provide sufficient time for the preparation of an increase. We continued to encourage individual MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities, including small and rural practices, to explore EHR adoption and the reporting of eQMs to reduce burden and technical challenges to ensure data accuracy as we seek to increase the data completeness criteria threshold.

Also, we recognize that there are technical challenges such as data collection variability across multiple EHRs, systems, and sights, particularly as such the technical challenges pertaining to Medicare Shared Savings Program ACOs with multiple TINs under an ACO. In order to assist with the mitigation of the technical challenges encountered by Medicare Shared Savings Program ACOs reporting eCQM and/or eCQM, we are finalizing, as proposed, the proposal that establishes the Medicare CQMs collection type; the Medicare CQMs will serve as a transition collection type under the APP and be available as determined by CMS. For the

Medicare CQMs collection type, Medicare Shared Savings Program ACOs report quality data on a subset of Medicare beneficiaries (beneficiaries eligible for Medicare CQMs as defined at § 425.20) instead of the reporting of quality data on all-payers as required for eCQMs and MIPS CQMs. We refer readers to section III.G.2.b. of this final rule for the discussion regarding the implementation and operationalization of the Medicare CQMs collection type under the APP.

We are maintaining the previously finalized policy of increasing the data completeness criteria threshold of at least 75 percent for the CY 2024 and CY 2025 performance periods/2026 and 2027 MIPS payment years and extending such data completeness criteria threshold of at least 75 percent for the CY 2026 performance period/2028 MIPS payment year.

*Comment:* No commenters supported the increase of the data completeness criteria threshold to at least 80 percent for the CY 2027 performance period/2029 MIPS payment year. Many commenters indicated that increasing the data completeness criteria threshold to at least 80 percent would increase burden, and in particular, disproportionately increase burden for smaller and rural practices due to limited resources and staff. Some commenters expressed concerns that an increase in the data completeness criteria threshold to at least 80 percent would exacerbate the technical and interoperability challenges pertaining to data aggregation across multiple EHRs, systems (utilizing different registries, and EHR developers and vendors), and sites (including multiple TINs participating in the Medicare Shared Savings Program as an ACO), which would make it more difficult to meet the data completeness criteria threshold. A few commenters indicated that some practices are still recovering from the COVID-19 Public Health Emergency and as a result, increasing the data completeness criteria threshold would increase burden. One commenter recommended that CMS allow for the implementation of the data completeness criteria threshold of at least 75 percent to occur prior to increasing the data completeness criteria threshold to at least 80 percent, which would enable for the evaluation of the policy.

*Response:* While we believe it is important to increase the data completeness criteria threshold in order to assess a MIPS eligible clinician's performance more accurately on quality

measures and prevent selection bias to the extent possible performance, we recognize the concerns raised by the commenters and believe it is inappropriate to finalize the policy as proposed. In this final rule, we are not establishing the data completeness criteria threshold for the CY 2027 performance period/2029 MIPS payment year.

*Comment:* One commenter requested for CMS to stabilize the data completeness criteria threshold, which would allow clinicians participating in MIPS to focus on improvement and successfully transition to reporting digital quality measures and meeting reporting requirements under MVPs.

*Response:* Advance notice of the gradual and incremental increase in the data completeness criteria threshold provides a sufficiently stable data completeness policy for MIPS eligible clinicians, groups, virtual groups, subgroups, and APM Entities to focus on improvement. The pace at which the data completeness standard has increased provides ample time to prepare for an increase while also transitioning to the reporting of digital quality measures and participation in an MVP. The data completeness criteria threshold of at least 70 percent was maintained for 4 years from the CY 2020 performance period/2022 MIPS payment year to the CY 2023 performance period/2025 MIPS payment year. The data completeness criteria threshold is increasing to at least 75 percent and will be maintained at that level for 3 years from the CY 2024 performance period/2026 MIPS payment year to the CY 2026 performance period/2028 MIPS payment year. The data completeness criteria threshold is predictable and stable during a segment of time.

*Comment:* One commenter requested for CMS to consider the establishment of different data completeness criteria thresholds for certain measures such as patient-reported outcome measures. As an example, the commenter indicated that it would be difficult to meet a data completeness criteria threshold of at least 50 percent for a patient-reported outcome measure.

*Response:* We note that the CAHPS for MIPS Survey, which is a patient-reported outcome measure, has different data completeness criteria requirements from QCDR measures,

eCQMs, MIPS CQMs, and Medicare Part B claims measures. For the CAHPS for MIPS survey measure, groups, virtual groups, subgroups, and APM Entities report data on a sample of Medicare Part B patients provided by CMS. We recognize that patient-reported outcome measures would require differing data completeness criteria threshold requirements from QCDR measures, eCQMs, MIPS CQMs, and Medicare Part B claims measures.

*Comment:* Some commenters requested for CMS to establish a different data completeness criteria threshold for Medicare Shared Savings Program ACOs reporting eCQMs, MIPS CQMs, and Medicare CQMs. Other commenters expressed concerns regarding the data completeness criteria requirement for Medicare CQMs as having a much higher expectation for data completeness than the CMS Web Interface and as a result, may not ease the transition to the collection of all-payer data for the reporting of eCQMs and MIPS CQMs.

*Response:* To provide consistency regarding the data completeness criteria threshold across collection types and prevent confusion regarding the expectations concerning the data completeness criteria threshold, we believe it is imperative to establish the same data completeness criteria threshold requirements for QCDR measures, eCQMs, MIPS CQMs, Medicare Part B claims measures, and Medicare CQMs.

We recognize that there are technical challenges for Medicare Shared Savings Program ACOs as they prepare to report eCQMs and MIPS CQMs under the APP. As a result of the aforementioned technical challenges, we are finalizing, as proposed, to establish the Medicare CQMs collection type; the Medicare CQMs will serve as a transition collection type under the APP and be available as determined by CMS. For the Medicare CQMs collection type, Medicare Shared Savings Program ACOs report quality data on a subset of Medicare beneficiaries (beneficiaries eligible for Medicare CQMs as defined at § 425.20) instead of the reporting of quality data on all-payers as required for eCQMs and MIPS CQMs. We refer readers to section III.G.2.b. of this final rule for the discussion regarding the implementation and operationalization of the Medicare CQMs collection type under the APP.

After consideration of public comments, we are finalizing, as proposed, the proposals in § 414.1340(a), (b), (d), and (e) as follows:

- At paragraph (a)(4), for the CY 2026 performance period/2028 MIPS payment year, a MIPS eligible clinician, group, virtual group, subgroup, and APM Entity submitting quality measures data on QCDR measures, MIPS CQMs, or eCQMs must submit data on at least 75 percent of the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity's patients that meet the measure's denominator criteria, regardless of payer.

- At paragraph (b)(4), for the CY 2026 performance period/2028 MIPS payment year, a MIPS eligible clinician, group, virtual group, subgroup, and APM Entity submitting quality measures data on Medicare Part B claims measures must submit data on at least 75 percent of the MIPS eligible clinician, group, virtual group, subgroup, or APM Entity's patients seen during the corresponding performance period to which the measure applies.

- At paragraph (d)(1), for the CY 2024, CY 2025, and CY 2026 performance periods/2026, 2027, and 2028 MIPS payment years, APM Entities, specifically Medicare Shared Savings Program Accountable Care Organizations meeting reporting requirements under the APP, submitting quality measure data on Medicare CQMs must submit data on at least 75 percent of the applicable beneficiaries eligible for the Medicare CQM, as defined at § 425.20, who meet the measure's denominator criteria.

- Technical amendments at §§ 414.1340(a), (b), and formerly paragraph (d), new paragraph (e) due to the establishment of the data completeness criteria for the new collection type, Medicare CQM, in § 414.1340(d).

However, we are not finalizing the proposals at § 414.1340(a)(5), (b)(5), and (d)(2) to increase the data completeness criteria threshold to at least 80 percent for the CY 2027 performance period/2029 MIPS payment year.

(ii) Data Completeness Criteria for the Medicare CQMs

As we proposed to establish a new collection type, the Medicare CQMs specific to the APM Performance Pathway (APP) as described in the CY 2024 PFS proposed rule (88 FR 52420 through 52423), we also proposed to establish the data completeness criteria thresholds for the Medicare CQMs. Specifically, in § 414.1340(d), respectively, we proposed the following data completeness criteria thresholds pertaining to Medicare CQMs:

- At paragraph (d)(1), for the CY 2024, CY 2025, and CY 2026 performance periods/2026, 2027, and 2028 MIPS payment years, an APM Entity, specifically a Shared Savings Program ACO that meets the reporting requirements under the APP, submitting quality measure data on Medicare CQMs must submit data on at least 75 percent of the APM Entity's applicable beneficiaries eligible for the Medicare CQM, as proposed to be defined at § 425.20, who meet the measure's denominator criteria.

- At paragraph (d)(2), for the CY 2027 performance period/2029 MIPS payment year, an APM Entity, specifically a Shared Savings Program ACO that meets the reporting requirements under the APP, submitting quality measure data on Medicare CQMs must submit data on at least 80 percent of the APM Entity's applicable beneficiaries eligible for the Medicare CQM, as proposed to be defined at § 425.20, who meet the measure's denominator criteria.

We proposed to establish the aforementioned data completeness criteria thresholds for the Medicare CQMs collection type in advance of the applicable performance periods. We recognize that it is advantageous to delineate the expectations for ACOs as they prepare to meet the quality reporting requirements for the Medicare CQMs collection type under the APP. We will assess the availability of the Medicare CQMs as a collection type under the APP during the initial years of implementation and determine the timeframe to sunset the Medicare CQM as a collection type in future rulemaking.

As previously noted, we are finalizing, as proposed, the following proposal the following data completeness criteria thresholds pertaining to Medicare CQMs:

- At paragraph (d)(1), for the CY 2024, CY 2025, and CY 2026 performance periods/2026, 2027, and 2028 MIPS payment years, APM Entities, specifically Medicare Shared Savings Program Accountable Care Organizations meeting reporting requirements under the APP, submitting quality measure data on Medicare CQMs must submit data on at least 75 percent of the applicable beneficiaries eligible for the Medicare CQM, as defined at § 425.20, who meet the measure's denominator criteria.

However, we are not finalizing the proposal at § 414.1340(d)(2) to increase the data completeness criteria threshold to at least 80 percent for the CY 2027 performance period/2029 MIPS payment year.

#### (e) Selection of MIPS Quality Measures

Section 1848(q)(2)(D)(i) of the Act requires the Secretary, through notice and comment rulemaking, to establish an annual final list of quality measures from which MIPS eligible clinicians may choose for the purpose of assessment under MIPS. Section 1848(q)(2)(D)(i)(II) of the Act requires that the Secretary annually update the list by removing measures from the list, as appropriate; adding to the list, as appropriate, new measures; and determining whether measures that have undergone substantive changes should be included on the updated list.

Previously finalized MIPS quality measures can be found in the CY 2023 PFS final rule (87 FR 70250 through 70633), CY 2022 PFS final rule (86 FR 65687 through 65968); CY 2021 PFS final rule (85 FR 85045 through 85377); CY 2020 PFS final rule (84 FR 63205 through 63513); CY 2019 PFS final rule (83 FR 60097 through 60285); CY 2018 Quality Payment Program final rule (82 FR 53966 through 54174); and CY 2017 Quality Payment Program final rule (81 FR 77558 through 77816). We proposed changes to the MIPS quality measure set, as outlined in Appendix 1 of the CY 2024 PFS proposed rule, include the following: the addition of new measures; updates to specialty sets; removal of existing measures, and substantive changes to existing measures. For the CY 2024 performance period, we proposed a measure set of 200 MIPS quality measures in the inventory.

The new MIPS quality measures that we proposed to include in MIPS for the CY 2024 performance period and future years can be found in Table Group A of Appendix 1 of the CY 2024 PFS proposed rule. For the CY 2024 performance period, we proposed 14 new MIPS quality measures, which includes one composite measure; and 7 high priority measures, of which 4 are also patient-reported outcome measures.

In addition to the establishment of new individual MIPS quality measures, we developed and maintained specialty measure sets to assist MIPS eligible clinicians with selecting quality measures that are most relevant to their scope of practice. We proposed modifications to existing specialty sets and new specialty sets as described in Table Group B of Appendix 1 of the CY 2024 PFS proposed rule. Specialty sets may include new measures, previously finalized measures with modifications, previously finalized measures with no modifications, the removal of certain previously finalized quality measures, or the addition of existing MIPS quality measures. Specialty and subspecialty sets are not inclusive of every specialty or subspecialty.

On January 3, 2023, we announced that we would be accepting recommendations for potential new specialty measure sets or revisions to existing specialty measure sets for year 8 of MIPS under the Quality Payment Program.<sup>495</sup> These recommendations were based on the MIPS quality measures finalized in the CY 2022 PFS final rule and the 2022 Measures Under Consideration List; the recommendations include the addition or removal of current MIPS quality measures from existing specialty sets, or the creation of new specialty sets. All specialty set recommendations submitted for consideration were assessed and vetted, and as a result, the recommendations that we agree with were proposed in the CY 2024 PFS proposed rule.

In addition to establishing new individual MIPS quality measures and modifying existing specialty sets and new specialty sets as outlined in Tables Group A and Group B of Appendix 1

---

<sup>495</sup> Message to the Quality Payment Program listserv on January 3, 2023, entitled: "The Centers for Medicare & Medicaid Services (CMS) is Soliciting Stakeholder Recommendations for Potential Consideration of New Specialty Measure Sets and/or Revisions to the Existing Specialty Measure Sets for the 2024 Performance Year of the Merit-based Incentive Payment System (MIPS)."

of the CY 2024 PFS proposed rule, we referred readers to Table Group C of Appendix 1 of the CY 2024 PFS proposed rule for a list of quality measures and rationales for measure removal. We have previously specified certain criteria that will be used when we are considering the removal of a measure (81 FR 77136 and 77137; 83 FR 59763 through 59765; 84 FR 62957 through 62959). For the CY 2024 performance period, we proposed to remove 12 MIPS quality measures and partially remove 3 MIPS quality measures that are proposed for removal from traditional MIPS and proposed for retention for use in MVPs. We referred readers to Table Group DD of Appendix 1 of the CY 2024 PFS proposed rule for further information regarding the proposals to retain such measures for retention for use in relevant MVPs. Of the 12 MIPS quality measures proposed for removal, the following pertains to such measures: 2 MIPS quality measures are duplicative to a proposed new MIPS quality measure; 3 quality measures are duplicative of current measures; 5 MIPS quality measures that are under the topped-out lifecycle; one measure is extremely topped out; and one MIPS quality measure is constructed in a manner that makes it difficult to attribute the quality action to the clinician, which creates burden. We have continuously communicated to interested parties our desire to reduce the number of process measures within the MIPS quality measure set (*see*, for example, 83 FR 59763 through 59765). The proposal to remove the quality measures described in Table Group C of the CY 2024 PFS proposed rule would lead to a more parsimonious inventory of meaningful, robust measures in the program, and that our approach to removing measures should occur through an iterative process that includes an annual review of the quality measures to determine whether they meet our removal criteria.

Also, we proposed substantive changes to several MIPS quality measures, which can be found in Table Group D of Appendix 1 of the CY 2024 PFS proposed rule. We have previously established criteria that would apply when we are considering making substantive changes to a quality measure (81 FR 77137, and 86 FR 65441 through 65442). We proposed substantive changes to 59 MIPS quality measures, which includes 3 MIPS quality measures proposed to be

retained for utilization under MVPs (we referred readers to Table Group DD of Appendix 1 of the CY 2024 PFS proposed rule for such measures that are proposed for retention for use in relevant MVPs). On an annual basis, we review the established MIPS quality measure inventory to consider updates to the measures. Possible updates to measures may be minor or substantive.

Lastly, we proposed substantive changes to the CMS Web Interface measures that are available as a collection type and submission type for the Medicare Shared Savings Program ACOs meeting reporting requirements under the APP. The substantive changes to the CMS Web Interface measures can be found in Table Group E of Appendix 1 of the CY 2024 PFS proposed rule.

We solicited public comment on the proposals to modify the quality performance category measure set, a measure set of 200 MIPS quality measures in the inventory for the CY 2024 performance period, which includes the following:

- Implementation of 14 new MIPS quality measures: one composite measure; and 7 high priority measures, of which 4 are also patient-reported outcome measures;
- Removal of 12 MIPS quality measures: 2 quality MIPS measure are duplicative to a proposed new quality measure; 3 MIPS quality measures are duplicative to current quality measures; 5 MIPS quality measures are under the topped-out lifecycle; one MIPS quality measure is extremely topped out; and one MIPS quality measure is constructed in a manner that makes it difficult to attribute the quality action to the clinician, which creates burden;
- Partial removal of 3 MIPS quality measures: 3 MIPS quality measures removed from traditional MIPS and retained for use in MVPs; and
- Substantive changes to 59 MIPS quality measures.

We refer readers to Table Groups A through E of Appendix 1 of this final rule for a summary of public comments received regarding the proposed modifications to the MIPS quality measure set for the CY 2024 performance period and the discussion regarding final decisions.

After consideration of public comments, and for the reasons stated in the aforementioned Table Groups A through E of Appendix 1 of this final rule and the CY 2024 PFS proposed rule (88 FR 52766 through 53132), we are finalizing, with modification, a measure set of 198 MIPS quality measures in the inventory for the CY 2024 performance period, which includes the following:

- Implementation of 11 new MIPS quality measures: 1 composite measure; and 6 high priority measures, of which 4 are also patient-reported outcome measures;
- Removal of 11 MIPS quality measures: 1 quality MIPS measure is duplicative to a new quality measure; 3 MIPS quality measures are duplicative to current quality measures; 5 MIPS quality measures are under the topped-out lifecycle; 1 MIPS quality measure is extremely topped out; and 1 MIPS quality measure is constructed in a manner that makes it difficult to attribute the quality action to the clinician, which creates burden;
- Partial removal of 3 MIPS quality measures: 3 MIPS quality measures removed from traditional MIPS and retained for use in MVPs; and
- Substantive changes to 59 MIPS quality measures.

## (2) Cost Performance Category

Section 1848(q)(2)(A) of the Act includes resource use as a performance category under MIPS. We refer to this performance category as the cost performance category. As required by sections 1848(q)(2) and (5) of the Act, the four performance categories of MIPS are used in determining the MIPS final score for each MIPS eligible clinician. In general, MIPS eligible clinicians will be evaluated under all four of the MIPS performance categories, including the cost performance category.

In the CY 2024 PFS proposed rule (88 FR 52568 through 52576), we proposed to add five new episode-based measures to the cost performance category using a 20-episode case minimum and to remove the Simple Pneumonia with Hospitalization episode-based measure from the cost performance category beginning with the CY 2024 performance period/2026 MIPS payment year. In addition, we proposed to add the five new episode-based measures and remove the Simple Pneumonia with Hospitalization episode-based measure from the operational list of care episode and patient condition groups and codes.

For a description of the statutory basis for and existing policies pertaining to the cost performance category, we referred readers to § 414.1350 and the CY 2017 Quality Payment Program final rule (81 FR 77162 through 77177), CY 2018 Quality Payment Program final rule (82 FR 53641 through 53648), CY 2019 PFS final rule (83 FR 59765 through 59776), CY 2020 PFS final rule (84 FR 62959 through 62979), CY 2021 PFS final rule (85 FR 84877 through 84881), CY 2022 PFS final rule (86 FR 65445 through 65461), and CY 2023 PFS final rule (87 FR 70055 through 70057).

### (a) Addition of Episode-Based Measures

#### (i) Background

Under § 414.1350(a), we specify cost measures for a performance period to assess the performance of MIPS eligible clinicians on the cost performance category. There are currently 25 cost measures in the cost performance category for the CY 2023 performance period/2025

MIPS payment year, comprising of 23 episode-based measures covering a range of conditions and procedures and two population-based measures. We worked with the measure development contractor to identify the proposed five new episode-based measures for development through empirical analyses and public comment. These measures cover clinical topics and MIPS eligible clinicians currently with limited or no applicable cost measures. As such, these measures will help fill gaps in the cost performance category's measure set. In addition, these measures will support the transition from traditional MIPS to MIPS Value Pathways (MVPs) by allowing new MVPs to be created and enhancing existing MVPs. Further, the addition of these measures will address interested parties' feedback about the need for more clinically refined episode-based measures in the cost performance category. They will also increase the cost coverage of care episode and patient conditions groups, moving closer towards the statutory goal of covering 50 percent of expenditures under Medicare Parts A and B, as specified under section 1848(r)(2)(i)(I) of the Act.

All five of the new measures have been developed with extensive engagement from interested parties, including clinicians, persons with lived experience, and the public. For more information regarding episode-based measures and the measure development process, we refer readers to the overview in the CY 2024 PFS proposed rule (88 FR 52569 through 52571). In sections IV.A.4.f.(2)(a) and IV.A.4.f.(2)(b) of this final rule, we provide detail about the new measures that we proposed to include in the cost performance category beginning with the CY 2024 performance period/2026 MIPS payment year.

(ii) New Episode-Based Measures Beginning with the CY 2024 Performance Period/2026 MIPS Payment Year

In this section of this final rule, we discuss the five new episode-based measures, which we proposed to add to the cost performance category beginning with the CY 2024 performance period/2026 MIPS payment year. As we discuss in this section, after consideration of public comments, we are finalizing our proposal to add the five new episode-based measures to the cost

performance category beginning with the CY 2024 performance period/2026 MIPS payment year.

In conjunction with our measure development contractor, we developed these measures with consideration of the common standards that are described in the CY 2022 PFS final rule (86 FR 65455 through 65459) to ensure consistency across episode-based measures being developed. Specifically, the CY 2022 PFS final rule requires that any episode-based measure for the cost performance category include the following: (1) episode definition based on trigger codes that determine the patient cohort; (2) attribution; (3) service assignment; (4) exclusions; and (5) risk adjustment. The five new episode-based measures we proposed meet all requirements described in CY 2022 PFS final rule, including these features. We provide more information on the specific requirements for each of the episode-based measures later in this section of the final rule.

Generally, for all episode-based measures, we exclude episodes where costs cannot be fairly compared to the costs for the whole cohort in the episode-based measure. These exclusions, like other features of each episode-based measure, are developed with extensive clinician and interested parties' engagement. We have specified exclusions for all five proposed episode-based measures. We discuss certain exclusions for the Psychoses and Related Conditions and the Emergency Medicine measure in further detail in this section of this final rule.

We also apply a risk adjustment model to all episode-based measures in the cost performance category. The model includes standard risk adjusters that are applied to all episode-based measures (for example, CMS Hierarchical Condition Category [HCC] variables, comorbidities, age brackets, disability status, ESRD status), and measure-specific risk adjusters (for example, patient transfers from another setting for the Emergency Medicine measure). We assess the risk adjustment model at the level of each stratification to ensure that only like patients are compared to each other. The risk adjustment model we use in development of the cost performance category's episode-based measures is described in detail in CY 2019 PFS final rule

(83 FR 59767 through 59773). As mentioned previously in this section, all five proposed episode-based measures have been risk adjusted in accordance with this model.

More information on the episode-based measure development requirements, which were outlined so that external interested parties could develop measures in the future, are available in the Blueprint for the CMS Measures Management System

(<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/MMS-Blueprint>) and the Meaningful Measures Framework (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/MMF/General-info-Sub-Page>).

The episode-based measures that we proposed for the CY 2024 performance period/2026 MIPS payment year and future performance periods are listed in the Table 51.

**TABLE 51: Proposed Episode-Based Measures Beginning with CY 2024 Performance Period/2026 MIPS Payment Year**

Measure Name	Episode Type
Depression	Chronic condition
Emergency Medicine	Care Setting
Heart Failure	Chronic condition
Low Back Pain	Chronic condition
Psychoses and Related Conditions	Acute inpatient medical condition

The three chronic condition episode-based measures assess outpatient treatment and ongoing management of the following chronic conditions: depression, heart failure, and low back pain. The measure construction for these three proposed measures follows the approach described in the CY 2022 PFS final rule (86 FR 65445 through 65461), which also includes detailed discussion of the attribution methodology and examples of how episodes are attributed.

The attribution methodology that identifies a clinician-patient care relationship is slightly different at the clinician group and individual MIPS eligible clinician levels, to reflect that care provided at the clinician group and individual MIPS eligible clinician levels, respectively. At a high level, these proposed chronic condition episode-based measures attribute episodes to the clinician group that renders services that constitute a trigger event, which is identified by the

occurrence of two claims billed in close proximity by the same clinician group. Both claims must have a diagnosis code indicating the same chronic condition related to the specific episode-based measure. For example, for the Heart Failure measure, both claims of the trigger event must have a diagnosis indicating heart failure. The services that trigger an event for these chronic condition episode-based measures are identified first by Evaluation and Management (E/M) codes for outpatient services, and then by a second claim with either another E/M code for outpatient services or a condition-related Current Procedural Terminology (CPT)/ Healthcare Common Procedure Coding System (HCPCS) code (CPT/HCPCS) related to the treatment or management of the chronic condition. The trigger event opens a year-long attribution window from the date of the initial E/M outpatient service, during which the same clinician group could reasonably be considered responsible for managing the patient's chronic condition. If we see evidence that the relationship is ongoing, represented by another E/M or condition-related procedure code that we refer to as the reaffirming claim, then this window can be extended.

For individual MIPS Eligible clinicians, we would attribute episodes to each individual MIPS eligible clinician within an attributed clinician group that renders at least 30 percent of trigger or reaffirming codes on Part B Physician/Supplier claim lines during the episode, such as office visits or diagnostic services. We also apply conditions to ensure the MIPS eligible clinicians to whom the episode is attributed are reasonably responsible for the management of the patient's chronic condition. Specifically, the MIPS eligible clinician must have provided condition-related care to this patient prior to or on the episode start date.

Additionally, we use the provider-level prescription billing patterns to ensure that we are capturing the MIPS eligible clinicians directly involved in providing ongoing chronic care management, rather than clinicians who might have only refilled a patient's prescription once, as a courtesy to the patient. Specifically, for some measures (that is, Diabetes, Asthma/COPD episode-based measure that were finalized for use in the MIPS cost performance category for the CY 2022 PFS final rule [86 FR 64996], and Heart Failure episode-based measure that is being

finalized in this rule), the MIPS eligible clinician must also have prescribed at least two prescriptions claimed under Medicare Part D and/or Medicare Part B related to the management of the condition for two different patients during the measurement period, plus a one-year lookback period. These conditions, which we use to attribute a cost measure to MIPS eligible clinicians, also apply to the attribution methodology at the clinician group level. Specifically, the clinician group will always meet the first condition by construction (that is, there will always be an individual MIPS eligible clinician under the clinician group that has provided care to the patient prior to or on the episode start date). However, the clinician group must have at least one potentially attributable MIPS eligible clinician under it who meets the second condition.

The Psychoses and Related Conditions measure is an acute inpatient medical condition episode-based measure, which focuses on patients hospitalized for schizophrenia, delusional disorders, brief psychotic disorder, schizoaffective disorder, manic episode with psychotic symptoms, bipolar disorder with psychotic symptoms, major depressive disorder with psychotic symptoms, or unspecified psychosis. This acute inpatient medical condition was developed in accordance with the previously established framework for episode-based measures, which we described in detail in the CY 2019 PFS final rule (83 FR 59769 through 59771). We selected the Psychoses and Related Conditions measure for development because empirical analyses have identified psychoses-related hospitalizations are one of the most common inpatient stays, so it has a strong potential to be impactful on Medicare spending. This measure would also contribute to filling the current identified gap in the cost performance category's measurement of mental health care, as currently there are no episode-based or other cost measures assessing this clinical area.

The Psychoses and Related Conditions measure has been refined since the RFI in CY 2020 PFS proposed rule (84 FR 40760 through 40761) considering expert and other interested parties' input and to further address the Measures Application Partnership (MAP) Coordinating Committee's previously expressed concerns in the 2018-2019 measure development cycle about

the ability of inpatient clinicians to affect post-discharge care. In response to this input and these concerns, we implemented three refinements to this measure. First, we reduced the length of the episode window from 90 to 45 days. This shortened episode window helps to ensure that MIPS eligible clinicians can reasonably be held accountable for post-discharge care, while still capturing readmissions and ED visits shortly after the trigger event, which persons with lived experience had noted as being important outcomes to identify and measure because these outcomes could be avoided with better discharge planning and follow-up care. Second, we refined this measure's specifications to account for specific scenarios where MIPS eligible clinicians have limited ability to influence a patient's care. Specifically, this measure now excludes episodes with involuntary holds at admission and episodes that are transfers to State hospitals. Third, we refined this measure's specifications to risk adjust for facility type to account for differences in payment policies between Inpatient Prospective Payment System (IPPS) and Inpatient Psychiatric Facility (IPF) hospitals. While we continue to believe that the original measure had accounted for concerns about the ability of inpatient clinicians to influence costs after discharge as described in the CY 2020 PFS proposed rule (84 FR 40760 through 40761), we also believe that these changes further refine the measure to meaningfully assess costs related to the role of clinicians caring for patients during mental health hospitalizations.

The Emergency Medicine measure assesses the cost of care clinically related to the treatment of a patient during an ED visit. The intent of this measure is to comprehensively assess all types of care in an ED, so the construction of the measure reflects the goal of capturing this broad scope of care. As such, this measure is characterized as a "care setting" episode type.

A CPT/HCPCS code indicating that a clinician has furnished care in the ED setting triggers the Emergency Medicine measure. The clinician billing the trigger code is attributed the episode. A clinician group is attributed by aggregating all episodes attributed to clinicians that bill to the clinician group. The trigger code also opens a 14-day episode window, during which the attributed clinician is responsible for costs.

The Emergency Medicine measure stratifies episodes based on the type of care the patient received during their ED visit and by disposition status. First, episodes are divided into 28 mutually exclusive groups called ED visit types that characterize the focus of care a patient received during their visit. These represent more granular, exhaustive patient populations defined by clinical criteria including the three-digit diagnosis codes available on a patient's ED visit claims, as well as a Medicare Severity Diagnosis Related Group (MS-DRG) of a subsequent inpatient stay if present. Given the goal of the Emergency Medicine measure to capture the broader universe of care provided in the emergency setting, dividing this measure's episodes into ED visit types is a technique to ensure clinical comparability. Examples of a few of the most frequent ED visit types associated with this Emergency Medicine measure are respiratory, gastrointestinal or liver, and kidney and urinary conditions. The 28 ED visit types are further stratified by whether (1) the ED visit resulted in subsequent observation care or inpatient admission or (2) the patient was discharged without subsequent observation care or inpatient admission. For example, ED visits for a stroke that end in discharge are only compared with other ED visits for a stroke that also end in discharge.

The Emergency Medicine measure includes all Medicare Parts A and B services during the 14-day episode window, except for certain services determined not to be clinically relevant to the ED visit type. This reflects the intent of the measure and the broad clinician role in the ED setting. The ED visit type associated with the specific episode determines whether a service is clinically unrelated and therefore excluded from the episode. For example, if a patient visits the ED for ear, nose and throat (ENT) and eye disorders, any subsequent services for psychoses or behavioral and developmental disorders are excluded. However, if a patient visits the ED to receive care for an altered mental state, these subsequent services for psychoses or behavioral and developmental disorders are not excluded.

The Emergency Medicine measure risk adjusts costs just like all other episode-based measures. This measure uses the standard risk adjustment model described previously in this

section. Also, as discussed, we assessed the risk adjustment model at the level of each stratification. This means that for the Emergency Medicine measure, the risk adjustment is applied to each combination of ED visit type and disposition status. For example, the risk adjustment model would assess separately a kidney and urinary episode that resulted in an inpatient stay, a kidney and urinary episode that resulted in a discharge, a fracture episode that resulted in an inpatient stay, and a fracture episode that resulted in a discharge.

Similar to other episode-based measures in use in the cost performance category and the episode-based measures being finalized in this rule, we exclude episodes in cases where costs cannot be fairly compared to the costs for the whole cohort in the Emergency Medicine measure. For example, episodes are excluded for patients transferred to another ED facility from the triggering ED facility.

The specifications for all five proposed episode-based measures, which we are finalizing in this rule, are available at <https://www.cms.gov/medicare/quality/value-based-programs/quality-payment-program/quality-payment-program-cost-measure-information>. The specifications documents for each measure consist of a methods document that describes the steps for constructing the measure and a measure codes list file that contains the medical codes used in that methodology. First, the methods document provides detailed methodology describing each step to construct the measure, including: identifying patients receiving care, defining an episode-based measure, attributing episodes to MIPS eligible clinicians and clinician groups, assigning costs, defining exclusions, risk adjusting, and calculating measure score. Second, the measure codes list file contains the codes used in the measure specifications, including the episode triggers, attribution, stratification, assigned items and services, exclusions, and risk adjustors.

More information about the five episode-based measures is available in the measure justification forms, which provide a comprehensive characterization of the measures, their justification, and testing results of these measures' specifications. These documents are available

through the QPP Cost Measure Information page at <https://www.cms.gov/medicare/quality/value-based-programs/quality-payment-program/quality-payment-program-cost-measure-information>.

We solicited public comment on our proposal to add these five episode-based measures, which are listed in Table 51. We received public comments on the proposal. The following is a summary of the comments we received and our responses.

*Comment:* Some commenters supported the adoption of new episode-based measures. Commenters stated that cost measures are critical to understanding the value of care, that they should be centered on specific conditions or periods of care, and that they should reflect the group practice model of care where multiple practitioners utilize a team-based approach to treating patients. One commenter supported the development of more cost measures that measure chronic conditions in primary care settings.

*Response:* We appreciate the commenters' support of the new episode-based measures and we agree with their comments. We will continue to assess potential areas for development of cost measures related to chronic conditions in the future.

*Comment:* Commenters supported the inclusion of Emergency Medicine and Low Back Pain measures, as they capture specialties that have not had an applicable cost measure yet. For example, one commenter stated that physical therapists have limited options to participate in either track of the Quality Payment Program due to few physical therapy-inclusive measures and to have applicable measures available in MIPS is the first step to improving participation by physical therapists and providing financial incentives to them. One commenter expressed that Low Back Pain was also a first step in increasing occupational therapy engagement within MIPS. Another commenter stated that maintaining multiple cost measures applicable to emergency medicine physicians will result in a more robust and adequate assessment of emergency medicine services in future years.

*Response:* We thank the commenters for their support. We agree that the Emergency Medicine and Low Back Pain measures present an opportunity to provide cost measures to MIPS

eligible clinicians who have previously not had an applicable measure.

*Comment:* A few commenters expressed support for the Depression and Psychoses and Related Conditions episode-based measures, as their inclusion indicates that CMS values the care provided for behavioral health.

*Response:* We thank the commenters for their support. We agree that the inclusion of the Depression and Psychoses and Related Conditions episode-based measures aligns with CMS's prioritization of behavioral health and our Behavioral Health Strategy (<https://www.cms.gov/cms-behavioral-health-strategy>).

*Comment:* A few commenters supported the measure development process and engagement with specialty organizations. One commenter appreciated CMS' efforts to engage specialty organizations when developing appropriate attribution for anesthesiologists in cost measures. This commenter stated that its specialty organization's members have participated in several cost measure development panels and hope to continue these collaborative efforts with CMS to work toward a cost measure that fairly and consistently provides attribution to anesthesiologists.

*Response:* We will continue to work with specialty societies in future years to develop episode-based measures for clinicians who currently do not have an applicable measure in MIPS.

*Comment:* Some commenters urged CMS to ensure that measures appropriately adjust for clinical and social risk factors to avoid inadvertently creating disincentives for providing care.

*Response:* We strive to ensure that episode-based measures adjust for clinical risk factors. During measure development, clinician experts discuss and advise on specific risk factors. As discussed previously in this section, the risk adjustment model includes standard risk adjusters as well as risk adjusters for factors specific to the condition or procedure, as identified by clinician feedback and empiric analyses. The standard risk adjusters include the following: comorbidities captured by 86 Hierarchical Condition Category (HCC) codes, which map with thousands of ICD-10-CM diagnosis codes; the number of HCC codes, which reflects the number of conditions

risk adjusted for a patient; interaction variables, which account for instances where comorbidities are impacted by another variable (for example, the interaction between HCC 47 for immunity disorders and cancer); patient age category; patient disability status; patient end-stage renal disease status; the number of clinician specialties and types of clinician specialties from which the patient has received care; and recent use of institutional long-term care.

During measure development, we also consider adjusting for social risk factors. Many measures risk adjust for dual eligibility for Medicare and Medicaid as a proxy for social risk factors when testing suggests that it is appropriate. This includes three of the five proposed episode-based measures we are finalizing: Depression, Emergency Medicine, and Heart Failure. Additionally, the episode-based measure construction helps to safeguard against clinicians withholding necessary healthcare services because stinting on necessary care will lead to worse outcomes and higher cost scores by including the costs of complications and acute exacerbations.

*Comment:* Some commenters suggested that CMS provide timely and actionable feedback on the five proposed measures. Some commenters recommended that CMS does not incorporate additional episode-based measures, suggesting that CMS wait to incorporate the measures into the MIPS cost performance category scoring while clinicians become familiar with the proposed episode-based measures or while clinicians become familiar with understanding their performance on episode-based measures already implemented for previous performance periods.

*Response:* We are continuing to work towards providing meaningful and timely information on cost measures generally and we recognize the importance of providing this information for measures implemented in MIPS. We believe that clinicians have many opportunities to become familiar with the episode-based measures and their specifications in advance of any potential implementation. Opportunities include joining measure development meetings as listen-only participants and reviewing publicly posted meeting summaries, participating in national field testing, reviewing the publicly available information and

discussions on the measures during pre-rulemaking (for example, MAP discussions), as well as reviewing the information outlined in the proposed rule. Generally, the cost performance category constitutes 30 percent of MIPS eligible clinicians' final score as required by section 1848(q)(5)(E)(i)(II)(aa) of the Act and finalized under §§ 414.1380(c)(1)(ii) and 414.1350(d)(5). Unless an exception applies to an individual MIPS eligible clinician, group, virtual group, or subgroup under § 414.1380(b)(2) or § 414.1380(c)(2), we calculate and report all the cost measures for which we have determined a benchmark for MIPS eligible clinicians, groups, virtual groups, and subgroups who are attributed and met the case minimum for those measures implemented for use in the MIPS cost performance category.

*Comment:* Some commenters expressed concerns about the methodology for assessing MIPS eligible clinicians' performance on episode-based measures. One commenter stated that the measure developer's multi-step approach to attributing measure performance, and the use of algorithms for identifying costs relevant to an episode, add unnecessary complexity. Another commenter recommended that the attribution methodology for cost measures be changed so that the same costs are not attributed to multiple physicians. One commenter requested that CMS consider measures for chronic conditions that do not have an inpatient trigger so that costs for chronic conditions can be included even if an inpatient stay does not occur. One commenter expressed concerns that the measures could unfairly affect urologists.

*Response:* We disagree with the commenters' feedback about our methodology for assessing MIPS eligible clinicians' performance on episode-based measures. The attribution methodology for the episode-based measures was developed with extensive stakeholder feedback, as required by section 1848(r) of the Act. The measure developer gathered clinician and person and family feedback through a Technical Expert Panel (TEP), Clinical Subcommittees, Clinician Expert Workgroups, and public comment periods. Our attribution methodology identifies a clinician-patient care relationship and is unique to the type of care that is being assessed by the measure. The measure developer thoroughly tested this approach, and

the analyses suggest that it works to accurately capture clinicians who have influence over the care of patients with a specific condition or procedure. Additionally, considering input from Clinician Expert Workgroups, we determine the triggering methodology for chronic condition episode-based measures based on what is appropriate for the type of condition. We will consider whether the current attribution methodology continues to be an appropriate approach for future measures. Finally, we clarify that a chronic condition measure does not rely on an inpatient trigger to initiate a clinician-patient relationship. A clinician must bill two services specific to the care of the condition. One must be a clinician visit (for example, diagnostic visit, office or other outpatient visit, or annual wellness visit), and the other can be either another visit or a service for the treatment of the condition (for example, lung imaging test for Asthma/COPD). Specifically, the trigger claim is for a “primary care” E/M visit with a relevant chronic condition diagnosis, and the confirming claim is for either another “primary care” E/M visit with a relevant chronic condition diagnosis or a condition-related CPT/HCPCS code with a relevant chronic condition diagnosis.

Additionally, we do not see evidence that urologists are negatively impacted by the current set of episode-based measures we are finalizing for use.

*Comment:* A few commenters expressed concerns with the development and implementation process for cost measures used in the cost performance category. One commenter recommended that CMS not prioritize developing cost measures that cover a large number of clinicians or portion of Medicare Parts A/B spending based on a statutory goal. Commenters recommended that CMS should focus on developing cost measures that align with quality measures (for example, outcome measures) and that CMS address areas of improvement for the clinical population participating in MIPS. Another commenter recommended that cost measures go beyond assessing whether there is waste in the system, and that CMS develop cost measures that seek to promote clinically appropriate utilization of health care services, including for those clinicians who serve a significant portion of the frail and elderly population. One

commenter urged CMS to pursue consensus-based entity (CBE) endorsement of all cost measures.

*Response:* When selecting measures for development, we base our decision on a variety of considerations. While one consideration is the potential scope of Medicare Parts A/B spending that is captured by the measures, as statutorily mandated by section 1848(r)(2)(D)(i) of the Act, we also consider potential for improvement and performance gaps to ensure that the measure will be a meaningful assessment of clinician performance. We also consider potential scope of Medicare beneficiaries that are captured by the measures. The goal of episode-based measures is not to categorically reduce resource use, but to encourage efficient and meaningful resource use. Considering areas where there is potential for improvement in clinicians' efficient use of resources (for example, overuse of diagnostic testing) can help to encourage appropriate use of health care services. During measure development, Clinician Expert Workgroups consider ways to align cost and quality goals, such as aligning with existing quality measures (for example, selecting an aligned episode window length or aligning overall measure scope). Additionally, the cost measures are risk adjusted for patient age and certain measures include risk adjustment variables that indicate patients' frailty to ensure that the measures do not disincentivize care for these populations. Finally, we plan to pursue CBE endorsement for the five new cost measures that we are finalizing in this rule in the future.

*Comment:* Commenters raised concerns about the Heart Failure measure, stating that the complexity and heterogeneity of the patient population could lead to unintended consequences that impact care. Commenters made several recommendations to address this heterogeneity, such as adjusting certain trigger codes (for example, telehealth codes) and limiting the heart failure diagnosis to a more specific subset of ICD-10 codes to avoid capturing patients with other conditions. One commenter mentioned exclusion of patients with underlying health issues and that assessing heart failure with preserved ejection fraction (HFpEF) patient outcomes can be difficult because of a lack of information available on claims. A commenter also recommended

the use of modeling as a proxy to distinguish between different ejection fraction (EF) classes for heart failure patients. Commenters expressed concerns about attribution of a heart failure episode to a single clinician as opposed to a clinician group, due to the breadth of care settings and the inclusion of multiple TINs within the same setting or care team. A commenter also expressed concerns that any clinicians that are part of a patient's care team (that is, cardiologists, primary care clinicians, clinician assistants, advanced practice nurses, and other specialties) could be attributed the full costs of the measure equally. Commenters added that based on field test reports, they anticipate that highly specialized subspecialties, specifically electrophysiologists, are attributed. They stated that while these specialists manage certain aspects of the patient's care, they are often not the primary clinician responsible for overall management. They encouraged CMS and Acumen to consider unintended consequences of specialists and subspecialists being identified as high-cost providers.

Additionally, commenters emphasized the importance of alignment of cost measures with appropriate quality measures. The commenters cautioned against any unintended consequences of the measure, most notably if the measure could potentially inhibit guideline-directed care or encourage clinicians to switch to less effective care to lower costs.

*Response:* While the Heart Failure measure assigns services identified as related to cardiac conditions, the initial trigger for an episode has to indicate explicitly that the patient has Heart Failure. The Clinician Expert Workgroup for the Heart Failure measure supported the inclusion of several ICD-10 diagnosis codes, rather than limiting to just ICD-10 CM codes for Heart Failure under the I50 classification. The measure developer and the Clinician Expert Workgroup also carefully evaluated the CPT/HCPCS trigger codes. The Heart Failure trigger methodology intends to identify care relationships but does not limit those care relationships to a new diagnosis of heart failure. Additionally, codes indicating services delivered via telehealth, such as telephone assessment and management, are used across all chronic condition episode-based measures, like this Heart Failure measure, as triggering, confirming, and reaffirming

codes. The goal of the triggering and attribution methodology for the Heart Failure measure was to be inclusive of all clinically relevant settings where care for heart failure may be provided.

In developing the Heart Failure measure, we addressed the heterogeneity and complexity of the heart failure patient population. The Clinician Expert Workgroup discussed whether to risk-adjust or sub-group patients with diastolic heart failure. However, empirical data demonstrated that it would be challenging to categorize patients into these sub-populations, and that there would be no difference in risk-adjusted episode cost for these sub-populations. The measure developer did exclude high-output heart failure and other conditions with rarer, more complex prognoses. The Heart Failure measure is also risk-adjusted for End-Stage Renal Disease (ESRD), patient eligibility for both Medicare and Medicaid, right heart failure (RHF) clinical syndrome, cardiomyopathy, coronary artery disease (CAD), idiopathic heart failure, rheumatic and other valve disease, all-cause recent inpatient admission, substance abuse/cardiomyopathy, and obstructive sleep apnea. Testing showed that the Heart Failure measure is valid and reliable and the differences, if any, among the other types of heart failure mentioned are unlikely to be impact the measure score.

We had several reasons to not use modeling as a proxy to distinguish between different EF classes. The measure developer did consider qualified registries and/or electronic health record (EHR) data. However, there are concerns with using qualified registries and EHR data in administrative claims-based measures, including sufficient availability of data across the applicable patient and clinician cohorts captured by the measure. Given the lack of detailed information on EF in claims data, and an extensive conversation on shared treatment options and poor prognosis for both systolic and diastolic heart failure, the Clinician Expert Workgroup ultimately recommended pursuing a heart failure definition that was less reliant on EF information.

In regards to the commenter's concern about measure attribution of primary care clinicians or care team members in addition to cardiology specialists, the purpose of the Heart

Failure measure is to assess the ongoing care provided to patients with heart failure and these clinicians contribute to that care. We believe that it is appropriate to attribute primary care clinicians or specialists if they provide relevant chronic condition care management to encourage care coordination. Persons and family with lived experiences provided input that a range of clinician types comprised their care team. In particular, they reported that cardiologists, primary care clinicians, device nurses, cardiac rehabilitation specialists, nutritionists, mental health clinicians, at-home physical therapists, pulmonologists, and electrophysiologists were part of their care team. Given the wide range of clinicians providing care to these patients, they also noted the importance of medication reconciliation for coordination across their care team. As a result, a clinician can be attributed if we see evidence of a relationship between a patient and clinician where they are providing care related to the management or treatment of heart failure. . Additionally, cost measures are not intended to assign partial costs to certain types of clinician. If a clinician is attributed the cost measure, then they are assigned the costs of any services that they provide as outlined in the Heart Failure codes list available at <https://www.cms.gov/medicare/quality/value-based-programs/quality-payment-program/quality-payment-program-cost-measure-information>. The Clinician Expert Workgroup has identified these services as services that the attributed clinician could have influence on their provision, frequency, or intensity. They are intentionally included in the measure to gather a full picture of the care that a clinician provides a patient with the Heart Failure condition.

However, the Heart Failure measure is risk-adjusted for the specialty group providing care to account for higher costs of care provided by certain clinician types like electrophysiologists. This was designed to mitigate the cost differences in expected cost based on attributed specialty. We aim not to penalize clinicians who provide high quality care that is higher cost.

We aim to prioritize the alignment of cost measures with quality measures in MIPS. We consider cost and quality alignment throughout the measure development process and we include cost measures in MIPS in conjunction with quality measures to assess value of care.

In developing cost measures, we strive to ensure that the measure does not inhibit guideline-directed care. Testing has not indicated that there are any concerns about unintended consequences, particularly those raised by the commenter, and we will continue to monitor the measure for any instances.

*Comment:* A few commenters expressed concerns about the Low Back Pain episode-based measure. They recommended removing neurosurgeons and orthopedic surgeons from the list of eligible specialties for attribution to the measure to evaluate non-operative, chronic care. One commenter recommended that CMS develop a different episode-based measure for low back pain for care provided by orthopedic surgeons specifically. The commenters also urged CMS to incorporate clinical quality data from qualified registries into the measure.

*Response:* We disagree with commenters' recommendation to remove neurosurgeons and orthopedic surgeons from potential attribution for the Low Back Pain measure. The intent of the Low Back Pain measure is to assess the treatment and management of Low Back Pain and the triggering logic was designed to capture the range of clinicians that have a role in treating and managing this condition. The Clinician Expert Workgroup thoroughly considered the role of the surgeon in the Low Back Pain measure after reviewing the public's feedback on this topic gathered during field testing. The Workgroup discussed this feedback in conjunction with testing from the measure developer to explore the relationship between low back pain care management and spinal surgery. They ultimately recommended that the role of the surgeon was appropriate to include in the measure, and also recommended that the measure take additional steps to minimize the risk of identifying relationships that are only pre-operative or consultative. The measure developer and CMS agreed that it is clinically appropriate to include surgeons in the measure. To help address these concerns, if a spinal surgery occurs 90 days before a trigger code

through 60 days after a trigger code, the relationship between the clinician group and patient will not be initiated. More information regarding these discussions are available in the Low Back Pain Post Field Test Meeting Summary available on the QPP Cost Measures Information page at <https://www.cms.gov/files/zip/summary-wave-4-post-field-test-refinement-webinar-pftr-workgroup-meetings.zip>.

Additionally, the Low Back Pain measure further safeguards against these concerns by stratifying episodes into subgroups to ensure that the measure fairly compares clinicians with a similar patient case-mix. For the Low Back Pain measure, we include subgroup surgical episodes with and without history of low back pain and non-surgical episodes with and without history of low back pain. The measure is also risk-adjusted for history of spine surgery. The intention of these measure specifications is to make sure that clinically similar patients and episodes of care are being compared to each other.

Finally, we do not include data from qualified clinical data registries in this measure, but we will continue to monitor whether the measure includes the appropriate data elements for inclusion in the future.

*Comment:* Some commenters expressed concerns about the Depression episode-based measure. Commenters stated concerns that a low percentage of clinical psychologists would be attributed to the cost measure, continuing to leave them out of the scope of MIPS cost measures and potentially indicating that the current measure methodology does not align with how clinical psychologists work within healthcare. Commenters also raised concerns that interruptions to treatment due to physical hospitalizations or circumstances related to social determinants of health are not taken into consideration and would result in attributing costs related to circumstances outside the control of a provider to their care. Finally, they expressed concern that the Depression measure does not account for the large variation in costs for different forms of treatment for depression (for example, electroconvulsive therapy (ECT) and Transcranial Magnetic Stimulation (TMS), medications, psychotherapy), and the potentially unintended

consequences of attributing very high-cost interventions like ECT to psychologists who are predominantly delivering significantly less costly treatments such as psychotherapy. The commenters stated that these concerns could be applicable to the Psychoses and Related Conditions measure as well.

Another commenter requested clarification about whether perinatal and postpartum depression is included in the Depression episode-based measure and if the measure would be attributed to obstetricians or gynecologists as a result.

*Response:* We disagree with the concerns the commenters have raised. While it may be the case that few clinical psychologists may meet the case minimum as an individual clinician participant, most clinicians participate in MIPS via clinician groups. Therefore, the participation rate of clinical psychologists is likely higher because they participate by contributing to the total number of episodes of their clinician groups. This is supported by empiric analysis conducted by the measure developer on the specialties attributed the Depression measure.

The attribution methodology for the Depression measure was developed with input from a TEP, a Clinician Expert Workgroup, and patients, families, and caregivers. Individuals with lived experience with receiving care for depression identified the most frequently attributed specialties as having been part of their respective care teams. Additionally, the measure includes a risk adjustor for dual status eligibility for Medicare and Medicaid. The process for determining whether it is appropriate to adjust for dual status involves rigorous statistical testing for each measure, and testing indicated that it is appropriate for the Depression measure. We risk adjust for dual status because it is both available and reliable in claims data at the individual beneficiary level. We will continue to monitor the potential for using Z codes for social determinants of health variables in the future. The measure includes other risk adjustors to account for the different types of care that a patient received. These include risk adjustors for two or more hospitalizations related to depression in the prior year, TMS within the last year, ECT within the last year, and prior observation stays that may indicate treatment-resistant depression (TRD).

We also clarify that it is possible that an obstetrician or gynecologist is attributed the Depression episode-based measure if they render the relevant trigger and confirming claims for an episode and meet the attribution methodology checks. The trigger methodology includes codes for premenstrual depression and adjustment disorder with depression, but it does not include codes for post-partum depression. Additionally, it is unlikely that obstetricians or gynecologists would be frequently attributed this measure due to the typical age of the Medicare population that is assessed by this measure. For more information about these codes, please see the measure specifications available on the QPP Cost Measures Information page at <https://www.cms.gov/medicare/quality/value-based-programs/quality-payment-program/quality-payment-program-cost-measure-information>.

*Comment:* Some commenters expressed concerns about the Psychoses and Related Conditions measure, and certain commenters did not support the implementation of the Psychoses and Related Conditions measure. One commenter stated that the use of this measure in MIPS could have a negative impact on the provision of mental health services to the most vulnerable patients, and may create a disincentive for psychiatrists to participate in Medicare. A couple commenters stated that it is inappropriate to hold inpatient psychiatrists responsible for outpatient care for persons with psychotic disorders because patients do not have adequate support when leaving the hospital and the inpatient psychiatrist rarely serves as the provider for follow-up outpatient care. One commenter expressed concerns about the geographic variation in the availability of care. Finally, one commenter stated that measure selection should not be based on potential savings to Medicare without an understanding of whether savings can be derived by reducing avoidable services while maintaining or improving the quality of care.

*Response:* We disagree that the Psychoses and Related Conditions measure will have a negative impact on the provision of mental health services. Many psychiatrists participating in MIPS are already being assessed on inpatient care through the Medicare Spending Per Beneficiary (MSPB) Clinician measure, and the Psychoses and Related Conditions measure

would allow MIPS eligible clinicians to have their costs of care evaluated on a more specific scope of care. The measure's construction also guards against clinicians withholding necessary healthcare services by including the costs of adverse events, so attempts to lower costs by stinting on care increases the risk of costly events like Emergency Department visits, hospitalizations, or other complications. Testing conducted on this measure does support the commenter's concerns about unintended consequences in providing care. The predicative ratios suggest that the measure calculates risk appropriately across different levels of patient complexity. Testing also shows that geographic location and a patient's dual eligibility status for Medicare and Medicaid has little impact, supporting that the measure would not exacerbate access to care challenges. However, we will continue to monitor the measure closely for any unintended consequences.

Additionally, we believe that it is appropriate to include outpatient care in the Psychoses and Related Conditions measure. The measure aligns with the post-discharge care included in other episode-based measures focused on inpatient care, MIPS claim-based readmission measures, and facility-level quality metrics like those used in the Hospital Inpatient Quality Reporting Program and Inpatient Psychiatric Facility (IPF) Quality Reporting Program. We have also taken steps to ensure that the MIPS eligible clinician has influence over the services they are attributed, as we considered this feedback extensively when revising the measure, as previously discussed in this section and in the proposed rule. We exclude from calculation of this measure specific scenarios where clinicians have less ability to influence care, such as involuntary holds and State hospital transfers, we use a 45-day episode window (shortened from 90 days), and the measure risk adjusts for facility type to account for differences in payment policies between hospitals paid under Inpatient Prospective Payment System (IPPS) and IPFs. Additionally, fragmented care, such as a lack of support for patient discharged from an inpatient setting, points to the need for this measure as it encourages care coordination. Person and family input consistently highlighted the need for better care coordination, discharge planning, and

collaboration across clinicians on diagnosing and treating patients. Some also noted that better care coordination and discharge planning could avoid readmissions. As a result, we believe that the person and family engagement (PFE) perspective suggests including these services could be impactful in reducing more costly adverse outcomes.

While an important consideration in developing the Psychoses and Related Conditions measure was that psychoses is one of the most common inpatient stays, we also considered opportunities to improve care (for example, discharge planning, medication management, care coordination) identified through literature and feedback from interested parties. We believe that improving care and reducing resource use (for example, readmissions) will ultimately help improve capacity of the healthcare system, and improve access overall. MIPS includes cost measures alongside quality measures so that MIPS eligible clinicians can be assessed on the value of their care. The goal of assessing value is furthered through MVPs, which connect measures and activities across MIPS. The inclusion of this measure helps to support the transition to MVPs and reflects feedback from clinicians that they prefer the use episode-based measures.

After consideration of public comments, we are finalizing our proposal as proposed to add the five new episode-based measures to the cost performance category beginning with the CY 2024 performance period/2026 MIPS payment year.

#### (b) Reliability and Case Minimum

In this section of the final rule, we discuss the case minima to use for the five proposed episode-based measures and provide clarification on the interpretation of our regulation at § 414.1350(c) regarding the case minima for episode-based measures. As we discuss in this section of the final rule, after consideration of public comments, we are finalizing our proposals to adopt a case minimum of 20 episodes for each of the five proposed new episode-based measures, as well as codify the 20-episode case minimum for care setting episode-based measures under § 414.1350(c)(7) and revisions to § 414.1350(c)(4) through (6), as proposed.

Reliability is a metric that evaluates the extent that variation in a measure comes from clinician performance (“signal”) rather than random variation (“noise”). Higher reliability suggests that a measure is effectively capturing meaningful differences between clinicians’ performance. However, we continued to caution against using reliability as the sole metric to evaluate a measure because of the tradeoffs between accuracy and reliability, and the role of service assignment in reducing noise. These and other considerations are detailed in the CY 2022 PFS final rule (86 FR 65453 through 65455). We also noted that increasing case minima necessarily reduces the number of clinicians who meet the case minimum for a given measure. Because these are clinically refined measures, we aim to have as many MIPS eligible clinicians as possible to be able to have their costs evaluated by them. Therefore, we considered that a mean reliability of 0.4 represents moderate reliability because it accounts for these considerations and is a sufficient threshold to ensure that the measure is performing as intended when assessed in conjunction with other testing.

We previously established at § 414.1350(c)(5) a case minimum of 20 episodes for acute inpatient medical condition episode-based measures in the CY 2019 PFS final rule (83 FR 59773 through 59774). We also established at § 414.1350(c)(6) a case minimum of 20 episodes for chronic condition episode-based measures in the CY 2022 final rule (86 FR 65453 through 65455). We have not adopted any care setting episode-based measures in the cost performance category, and therefore we have not established any case minima for this type of episode-based measures. In the CY 2024 PFS proposed rule (88 FR 52573 through 52574), we considered a case minimum of 20 for each of the five proposed episode-based measures and then examined the reliability of the measures against this case minimum.

We examined the reliability of the five proposed episode-based measures, and Table 52 presents the percentage of tax identification numbers (TINs) and TIN/National Provider Identifiers (NPIs) that meet the 0.4 reliability threshold and the mean reliability for TINs and TIN/NPIs at our case minimum of 20 for each of the episode-based measures. At a 20-episode

case minimum, the mean reliability for the Depression, Heart Failure, Low Back Pain, and Psychoses and Related Conditions measures exceeds 0.4 for both groups and individual clinicians, and the majority of groups and individual clinicians meet the 0.4 reliability threshold. Similarly, at a 20-episode case minimum, the mean reliability for the Emergency Medicine measure exceeds 0.4 for both groups and individual clinicians, and all groups and individual clinicians meet the 0.4 reliability threshold.

**TABLE 52: Percent of TINs and TIN/NPIs that Meet 0.4 Reliability Threshold and TIN and TIN/NPI Mean Reliability**

Measure name (case minimum)	% TINs meeting 0.4 reliability threshold	Mean reliability for TINs	% TIN/NPIs meeting 0.4 reliability threshold	Mean reliability for TIN/NPIs
Depression	99.62%	0.87	98.61%	0.80
Emergency Medicine	100.00%	0.91	100.00%	0.78
Heart Failure	91.81%	0.68	86.79%	0.60
Low Back Pain	96.27%	0.75	95.66%	0.73
Psychoses and Related Conditions	100.00%	0.83	100.00%	0.86

We believe that calculating these five proposed episode-based measures with these case minimums will accurately and reliably assess the performance of clinicians and clinician group practices. Therefore, we proposed to adopt a case minimum of 20 episodes for each of the five proposed new episode-based measures. Given that we have not previously established any case minimums for the care setting episode-based measures, we also proposed to codify the 20-episode case minimum for care setting episode-based measures under § 414.1350(c)(7).

Additionally, as we reviewed our existing regulatory language under § 414.1350(c), we recognized the need to clarify the intended interpretation of the language because we acknowledged that the current framing is open to reasonable interpretation. Specifically, we clarify that the regulatory language at § 414.1350(c)(4) through (6) establishes the case minima for episode-based measures of each episode type (that is, procedural, acute inpatient medical condition, and chronic condition, respectively) such that the case minimum specified therein applies to all episode-based measures of that episode type, regardless of when the measure is

adopted for inclusion in the cost performance category, unless otherwise specified for individual measure(s). For example, under § 414.1350(c)(6), the chronic condition episode-based measures that were specified beginning with the CY 2022 performance period/2024 MIPS payment year when this regulatory provision was codified (that is, the Diabetes and the Asthma/COPD measure) and any chronic condition episode-based measure specified after the CY 2022 performance period/2024 MIPS payment year will have a case minimum of 20 episodes, unless we specify otherwise for an individual measure.

In the CY 2024 PFS proposed rule (88 FR 52573 through 52574), we proposed to update the regulatory language under § 414.1350(c)(4) through (6) to more clearly reflect this clarified interpretation. In addition, we proposed that this interpretation will also apply to § 414.1350(c)(7) for care setting episode-based measures, as discussed in this section of this final rule.

We believe that it is appropriate to use the case minimum based on the measure type for current and future measures in MIPS, as each measure episode type uses a consistent framework across measures so the case minimum should be also consistent, where possible. Additionally, consistent case minimum simplifies the level of information a MIPS eligible clinician or clinician group must monitor for the episode-based measures as the number of measures used in the cost performance category continues to grow. We noted that for any future measure under consideration to be implemented in the cost performance category, case minima would still be evaluated against reliability testing, and could be different from the standard case minimum established for the respective measure type under § 414.1350(c), as needed.

We invited comment on our proposals in section IV.A.4.f.(2)(b) of the proposed rule, including our proposal to adopt the case minima for the five episode-based measures proposed for the cost performance category and our interpretation of the existing regulatory language on the case minima for episode-based measures.

We received public comments on the proposal. The following is a summary of the

comments we received and our responses.

*Comment:* Some commenters expressed their belief that episode-based measures in use in MIPS should have a high reliability and that CMS should increase all case minima to ensure a measure can meet or exceed this threshold at both the individual NPI and TIN level. One commenter stated that minimum reliability should be at least 0.7 and another stated it should be at least 0.8. A commenter also requested that CMS release more detailed reliability results, noting concerns that less than 100 percent of groups and individuals meet CMS's reliability threshold of 0.4 for certain measures.

*Response:* We refer stakeholders to the CY 2022 PFS final rule (86 FR 65453 through 65455), where we discussed the 0.4 reliability threshold in detail. As noted in section IV.A.4.f.(2)(b), we will continue to monitor the scientific evidence on reliability to consider whether the 0.4 threshold should be increased. In finding a balance between reliability and cost measures that have the potential to be impactful, we also consider stakeholder feedback about the need for clinicians to be assessed under episode-based measures. Since these measures are designed to be specific to a particular type of care, many clinicians would be attributed fewer of these episodes than of episodes for global or population-based cost measures. We do not have concerns about the reliability of these five proposed episode-based measures because their mean reliability is between 0.6 and 0.9, which well above the 0.4 threshold and falls within moderate to high reliability. Using a moderate reliability threshold ensures the reliability of the measures while also guarding against the unintended consequences of excluding clinicians from episode-based measures. More information about the measures' reliability testing, such as the percentage above a 0.7 reliability at the TIN and TIN-NPI reporting level, is included in the Measure Justification Forms that are available on the QPP Cost Measures Information page at <https://www.cms.gov/files/zip/macra-wave-4-measure-justification-forms.zip>.

After consideration of public comments, we are finalizing our proposal to adopt a case minimum of 20 episodes for each of the five proposed new episode-based measures, codify the

20-episode case minimum for care setting episode-based measures under § 414.1350(c)(7), and amend § 414.1350(c)(4) through (6) to clarify our policy, as proposed.

(c) Removal of Simple Pneumonia with Hospitalization Measure from the MIPS Cost Performance Category Beginning with the CY 2024 Performance Period/2026 MIPS Payment Year

In this section of the final rule, we proposed to remove the Simple Pneumonia with Hospitalization episode-based measure from the cost performance category beginning with the CY 2024 performance period/2026 MIPS payment year. As we discuss in this section, after consideration of public comments, we are finalizing our proposal to remove the Simple Pneumonia with Hospitalization episode-based measure from the cost performance category as proposed.

The Simple Pneumonia with Hospitalization episode-based measure was implemented for use in the MIPS cost performance category starting with CY 2019 performance period/2021 MIPS payment year (83 FR 59767 through 59773). Due to the impact of the COVID-19 pandemic, in accordance with § 414.1380(c)(2)(i)(A)(2), we assigned a weight of zero percent to the cost performance category for the CY 2020 performance period/2022 MIPS payment year and CY 2021 performance period/2023 MIPS payment year, and redistributed the prescribed weight to another performance category or categories, as established at § 414.1380(c)(2)(ii)(D) and (E), respectively. For the CY 2022 performance period/2024 MIPS payment year, the measure was excluded from scoring in accordance with § 414.1380(b)(2)(v)(A) due to International Classification of Diseases, Tenth Revision (ICD-10) coding updates related to COVID-19 that impacted the underlying population originally intended to be captured by this measure. More information is available in the CY 2024 PFS proposed rule (88 FR 52574 through 52575).

Empirical testing demonstrated that these coding changes have resulted in a marked decrease in the number of Simple Pneumonia with Hospitalization episodes. The measure does

not use MS-DRGs 177-179 in its trigger logic and, therefore, the measure is unable to capture many pneumonia episodes, per the original measure intent. This significant decrease in the number of pneumonia episodes captured by this measure has resulted in many MIPS eligible clinicians no longer meeting the 20-episode case minimum for attribution of the measure.

Given that these underlying coding issues affect the measure's ability to capture the intended population and that their uneven impact on MIPS eligible clinicians is expected to continue, we proposed to remove the Simple Pneumonia with Hospitalization measure from the cost performance category beginning with CY 2024 performance period/2026 MIPS payment year. We do not believe that it is appropriate to continue to use the measure as currently specified without any changes to address the coding changes that formed our basis to suppress this measure in the CY 2022 performance period/2024 MIPS payment year. More information is available in the CY 2024 PFS proposed rule (88 FR 52574 through 52575).

We invited comments on this proposal.

*Comment:* Some commenters expressed support for the removal of the Simple Pneumonia with Hospitalization episode-based measure.

*Response:* We appreciate the commenters' support of the removal of the Simple Pneumonia with Hospitalization episode-based measure and we agree with their comments.

After considering the public comments, we are finalizing our proposal to remove the Simple Pneumonia with Hospitalization episode-based measure from the cost performance category beginning with the CY 2024 performance period/2026 MIPS payment year, as proposed.

(d) Revisions to the Operational List of Care Episode and Patient Condition Groups and Codes

We proposed revisions to the operational list of care episode and patient condition groups and codes to reflect our proposals to add new episode-based measures and remove the Simple Pneumonia with Hospitalization measure beginning with the CY 2024 performance period/2026

MIPS payment year. As we discuss in this section, after consideration of public comments, we are finalizing our proposal as proposed.

In accordance with section 1848(r)(2)(H) of the Act, we proposed to revise the operational list beginning with the CY 2024 performance period/2026 MIPS payment year to include five new care episode and patient condition groups, based on input from clinician specialty societies and other interested parties, as outlined in section IV.A.4.f.(2)(a)(ii) of the proposed rule. We proposed including Emergency Medicine and Psychoses and Related Conditions as care episode groups and Heart Failure, Low Back Pain, and Depression as patient condition groups. These care episode and patient condition groups serve as the basis for the five new episode-based measures that we proposed in section IV.A.4.f.(2)(a)(iii) of the proposed rule for the cost performance category. The codes that define these five-care episode and patient condition groups align with the trigger codes of the proposed episode-based measures in section IV.A.4.f.(2)(a)(iii) of the proposed rule. As described in section IV.A.4.f.(2)(a)(ii), these specifications are developed with extensive input from interested parties. As discussed in section IV.A.4.f.(2)(a) of the final rule, we will add these five episode-based measures to the cost performance category.

Additionally, we proposed to revise the operational list to remove the Simple Pneumonia with Hospitalization care episode group. As discussed in section IV.A.4.f.(2)(c) of the final rule, we will remove this episode-based measure from the cost performance category, so the codes that define this care episode group will no longer need to remain in the operational list.

More information on the statutory requirements for care episode and patient condition groups and proposed changes to the operational list is available in the CY 2024 PFS proposed rule (88 FR 52575 through 52576). Our revisions to the operational list are available on our QPP Cost Measure Information page at <https://www.cms.gov/medicare/quality/value-based-programs/quality-payment-program/quality-payment-program-cost-measure-information>.

We invited comments on this proposal. We did not receive public comments on this provision, and we are finalizing it as proposed.

(e) Summary of Previously Established and Finalized Measures for the Cost Performance

Category Beginning with the CY 2024 Performance Period/2026 MIPS Payment Year

The previously established and finalized measures for the cost performance category for the CY 2024 performance period/2026 MIPS payment year and future periods are summarized in Table 53.

**TABLE 53: Summary Table of Cost Measures for the CY 2024 Performance Period/2026 MIPS Payment Year and Future Performance Periods**

Measure Topic	Measure Type	Measure Status
Total Per Capita Cost	Population-Based	Currently in use for 2024 Performance Period and Beyond
Medicare Spending Per Beneficiary Clinician	Population-Based	Currently in use for 2024 Performance Period and Beyond
Elective Outpatient Percutaneous Coronary Intervention (PCI)	Procedural episode-based	Currently in use for 2024 Performance Period and Beyond
Knee Arthroplasty	Procedural episode-based	Currently in use for 2024 Performance Period and Beyond
Revascularization for Lower Extremity Chronic Critical Limb Ischemia	Procedural episode-based	Currently in use for 2024 Performance Period and Beyond
Routine Cataract Removal with Intraocular Lens (IOL) Implantation	Procedural episode-based	Currently in use for 2024 Performance Period and Beyond
Screening/Surveillance Colonoscopy	Procedural episode-based	Currently in use for 2024 Performance Period and Beyond
Intracranial Hemorrhage or Cerebral Infarction	Acute inpatient medical condition episode-based	Currently in use for 2024 Performance Period and Beyond
Simple Pneumonia with Hospitalization	Acute inpatient medical condition episode-based	Removed from use for 2024 Performance Period and Beyond
ST-Elevation Myocardial Infarction (STEMI) with Percutaneous Coronary Intervention (PCI)	Acute inpatient medical condition episode-based	Currently in use for 2024 Performance Period and Beyond
Acute Kidney Injury Requiring New Inpatient Dialysis	Procedural episode-based	Currently in use for 2024 Performance Period and Beyond
Elective Primary Hip Arthroplasty	Procedural episode-based	Currently in use for 2024 Performance Period and Beyond
Femoral or Inguinal Hernia Repair	Procedural episode-based	Currently in use for 2024 Performance Period and Beyond
Hemodialysis Access Creation	Procedural episode-based	Currently in use for 2024 Performance Period and Beyond
Inpatient Chronic Obstructive Pulmonary Disease (COPD) Exacerbation	Acute inpatient medical condition episode-based	Currently in use for 2024 Performance Period and Beyond
Lower Gastrointestinal Hemorrhage (at group level only)	Acute inpatient medical condition episode-based	Currently in use for 2024 Performance Period and Beyond
Lumbar Spine Fusion for Degenerative Disease, 1-3 Levels	Procedural episode-based	Currently in use for 2024 Performance Period and Beyond
Lumpectomy, Partial Mastectomy, Simple Mastectomy	Procedural episode-based	Currently in use for 2024 Performance Period and Beyond
Non-Emergent Coronary Artery Bypass Graft (CABG)	Procedural episode-based	Currently in use for 2024 Performance Period and Beyond
Renal or Ureteral Stone Surgical Treatment	Procedural episode-based	Currently in use for 2024 Performance Period and Beyond

<b>Measure Topic</b>	<b>Measure Type</b>	<b>Measure Status</b>
Melanoma Resection	Procedural episode-based	Currently in use for 2024 Performance Period and Beyond
Colon and Rectal Resection	Procedural episode-based	Currently in use for 2024 Performance Period and Beyond
Sepsis	Acute inpatient medical condition episode-based	Currently in use for 2024 Performance Period and Beyond
Asthma/Chronic Obstructive Pulmonary Disease (COPD)	Chronic condition episode-based	Currently in use for 2024 Performance Period and Beyond
Diabetes	Chronic condition episode-based	Currently in use for 2024 Performance Period and Beyond
Depression	Chronic condition episode-based	Finalized for 2024 Performance Period and Beyond

### (3) Improvement Activities Performance Category

#### (a) Background

For previous discussions on the general background of the improvement activities performance category, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77177 and 77178), the CY 2018 Quality Payment Program final rule (82 FR 53648 through 53661), the CY 2019 PFS final rule (83 FR 59776 and 59777), the CY 2020 PFS final rule (84 FR 62980 through 62990), CY 2021 PFS final rule (85 FR 84881 through 84886), the CY 2022 PFS final rule (86 FR 65462 through 65466), and the CY 2023 PFS final rule (87 FR 70057 through 70061). We also refer readers to 42 CFR 414.1305 for the definitions of improvement activities and attestation, § 414.1320 for standards establishing the performance period, § 414.1325 for the data submission requirements, § 414.1355 for standards related to the improvement activity performance category generally, § 414.1360 for data submission criteria for the improvement activity performance category, and § 414.1380(b)(3) for improvement activities performance category scoring.

While we did not propose any changes to the traditional MIPS improvement activities policies for the CY 2024 performance period/2026 MIPS payment year, we proposed changes to the improvement activities inventory for the CY 2024 performance period/2026 MIPS payment year and future years as follows: adding five new improvement activities; modifying one existing improvement activity; and removing three previously adopted improvement activities.

#### (b) Improvement Activities Inventory

##### (i) Annual Call for Activities Background

We refer readers to the CY 2024 PFS proposed rule (88 FR 52576 through 52577) for details about the annual Call for Improvement Activities.

##### (ii) Changes to the Improvement Activities Inventory

We refer readers to the CY 2024 PFS proposed rule (88 FR 52577 through 52578) for details about changes to the improvement activities Inventory.

We also refer readers to the Quality Payment Program website under Explore Measures and Activities at <https://qpp.cms.gov/mips/explore-measures?tab=improvementActivities&py=2022#measures> for a complete list of the current improvement activities.

We proposed to add five new improvement activities, modify an existing improvement activity, and remove three previously adopted improvement activities for the CY 2024 performance period/2026 MIPS payment year and future years. We refer readers to Appendix 2 of the CY 2024 PFS proposed rule (88 FR 53132) for more details.

Two of the five proposed new improvement activities are in the Population Management subcategory. One new activity, IA\_PM\_XX, titled “Improving Practice Capacity for Human Immunodeficiency Virus (HIV) Prevention Services” will allow MIPS eligible clinicians to receive credit for establishing policies and procedures to improve practice capacity to increase HIV prevention screening and linkage to appropriate prevention resources through taking action with the goals of increasing capacity to expand HIV prevention screening, improving HIV prevention education and awareness, and reducing disparities in pre-exposure prophylaxis (PrEP) uptake. Another activity, IA\_PM\_XX, titled “Use of Computable Guidelines and Clinical Decision Support to Improve Adherence for Cervical Cancer Screening and Management Guidelines” will allow MIPS eligible clinicians to receive credit for incorporating cervical cancer clinical decision support (CDS) within the electronic health record (EHR) system. This activity leverages the convenience and efficiency of more sophisticated decision support tooling to assist clinicians in applying complex data-driven guidelines to provide optimal care and better engagement with their patient population, including historically underserved populations. This activity proposal was submitted by the CDC.

Two of the five proposed new activities are in the Behavioral and Mental Health (BMH) subcategory, reflecting this important Federal priority. IA\_BMH\_XX, titled “Behavioral/Mental Health and Substance Use Screening & Referral for Pregnant and Postpartum Women” will

allow MIPS eligible clinicians to receive credit for screening for perinatal mood and anxiety disorders (PMADs) and substance use disorder (SUD) in pregnant and postpartum women, as well as screening and referring to treatment and/or referring to appropriate social services in patient care plans. The second new activity proposed in the BMH subcategory, IA\_BMH\_XX, titled “Behavioral/Mental Health and Substance Use Screening & Referral for Older Adults” will allow MIPS eligible clinicians to receive credit for the completion of age-appropriate screening for mental health and substance use in older adults, as well as screening and referring to treatment and/or referring to appropriate social services in patient care plans.

Of the five proposed new improvement activities, four activities directly align with Priority 5 of CMS’ Framework for Health Equity, Increase All Forms of Accessibility to Health Care Services and Coverage. Efforts undertaken that align with Priority 5 aim to create a fair and just opportunity for all people to attain their optimal health regardless of race, ethnicity, disability, sexual orientation, gender identity, socioeconomic status, geography, preferred language, and/or other factors that affect access to care and health outcomes. These four new improvement activities are the following: IA\_PM\_XX, titled “Improving Practice Capacity for Human Immunodeficiency Virus (HIV) Prevention Services”; IA\_PM\_XX, titled “Use of Computable Guidelines and Clinical Decision Support to Improve Adherence for Cervical Cancer Screening and Management Guidelines”; IA\_BMH\_XX, titled “Behavioral/Mental Health and Substance Use Screening & Referral for Pregnant and Postpartum Women”; IA\_BMH\_XX, titled “Behavioral/Mental Health and Substance Use Screening & Referral for Older Adults.”

The fifth new improvement activity is focused on MVP: IA\_MVP, titled “Practice-wide quality improvement in the MIPS Value Pathways Program (MVP).” With the advent of MVPs, MIPS eligible clinicians can report measures that are more relevant to their specialized practice, including through subgroup reporting. The IA\_MVP activity will require a clinician to complete a formal model for quality improvement action that is linked to a minimum of three of the

measures within the specific MVP. We believe this activity will expand and formalize quality improvement (QI) activities across practices, ultimately leading to improvements in quality of care and fostering a culture of participation among staff. In addition, this activity will incentivize voluntary MVP adoption. It is important to note that, a clinician who reports an MVP can attest to the MVP improvement activity. However, a clinician in traditional MIPS is ineligible to report the MVP improvement activity. Also, registration for an MVP is not sufficient for reporting the MVP improvement activity. Reporting the chosen MVP and attesting to having completed the necessary elements of the MVP improvement activity are both required. We referred readers to the proposed rule (88 FR 52557) for more information on MVPs.

We proposed to modify one existing activity's description, titled "Use decision support and standardized treatment protocols to manage workflow in the team to meet patient needs," and its validation criteria to explicitly promote the use of clinical decision support (CDS), particularly open-source, freely available, interoperable CDS. Additionally, we proposed to remove three previously finalized improvement activities to ensure that the improvement activities Inventory best reflects current clinical practice.

We refer readers to Appendix 2 of the CY 2024 PFS proposed rule (88 FR 53132) for details on the proposed revisions to the improvement activities inventory, comments received and our responses.

### (iii) Improvement Activity Reporting Policies

We did not propose changes to the improvement activity group reporting policies. We refer readers to the CY 24 PFS proposed rule (88 FR 52578) for details related to improvement activities reporting policies.

#### (4) Promoting Interoperability Performance Category

##### (a) Background

Section 1848(q)(2)(A) of the Act includes the meaningful use of certified electronic health record (EHR) technology (CEHRT) as a performance category under MIPS. We refer to this performance category as the Promoting Interoperability performance category (and in past rulemaking, we referred to it as the advancing care information performance category).

For our previously established policies regarding the Promoting Interoperability performance category, we refer readers to our regulation at § 414.1375, the CY 2017 Quality Payment Program final rule (81 FR 77199 through 77245), CY 2018 Quality Payment Program final rule (82 FR 53663 through 53688), CY 2019 PFS final rule (83 FR 59785 through 59820), CY 2020 PFS final rule (84 FR 62991 through 63006), CY 2021 PFS final rule (85 FR 84886 through 84895), CY 2022 PFS final rule (86 FR 65466 through 65490), and the CY 2023 PFS final rule (87 FR 70060 through 70087).

##### (b) Promoting Interoperability Performance Category Performance Period

In the CY 2021 PFS final rule (85 FR 84886), we established that for the CY 2024 MIPS payment year and each subsequent MIPS payment year, the performance period for the Promoting Interoperability performance category is a minimum of any continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year. We codified the policy at § 414.1320(g)(1) of our regulations, and subsequently re-designated that section as § 414.1320(h)(1) in the CY 2022 PFS final rule (86 FR 65671).

In the CY 2024 proposed rule (88 FR 52578 through 52579), we proposed that, beginning with the CY 2026 MIPS payment year, the performance period for the Promoting Interoperability performance category would be a minimum of any continuous 180-day period within the calendar year, up to and including the full calendar year (for CY 2024, January 1, 2024, through December 31, 2024). As discussed in V.B.11.a in this final rule, this policy would

minimally increase the information collection burden on data submitters. We also proposed to revise the regulation text at § 414.1320 to reflect this change. As discussed herein, after consideration of public comments, we are finalizing our proposal to require a continuous 180-day performance period for the Promoting Interoperability performance category beginning with the CY 2024 performance period/2026 MIPS payment year, and to revise the regulation text at § 414.1320 to reflect this change as proposed.

We believe that having additional data available from a longer performance period is beneficial to further improve the Promoting Interoperability performance category, and an integral step towards promoting health information exchange. Reporting on additional data during a longer performance period will provide MIPS eligible clinicians the opportunity to continuously monitor their performance, identify gaps in their reporting, and identify areas that may require their investigation and corrective action. We believe that requiring MIPS eligible clinicians to report additional data during a longer performance period will encourage MIPS eligible clinicians to produce more comprehensive and reliable data demonstrating that they are meaningful users of CEHRT.

Our long-term goal for the Promoting Interoperability performance category is to ensure the meaningful use of CEHRT and information exchange throughout the year, for all data, all clinicians, and all patients. Currently, when MIPS eligible clinicians select a 90-day performance period, this data is often not representative of their overall use of CEHRT throughout the entire calendar year. Instead, it reflects their best performing 90-days during the calendar year. For MIPS eligible clinicians to have a more accurate understanding of their overall performance, we want to move towards reporting on a full years' performance, which can be achieved by incrementally increasing the number of days in the performance period.

We continue to focus on patient safety, and the Promoting Interoperability performance category continues to focus on the safety and safe use of patient data by demonstrating the meaningful use of CEHRT. If a MIPS eligible clinician were to only focus on their best 90-day

performance period, they may not focus on improving their overall performance by meaningfully using CEHRT throughout the year, and ultimately, observe, correct, and mitigate any potential patient safety concerns that may arise due to gaps in interoperability throughout the calendar year. If a MIPS eligible clinician does not meaningfully use CEHRT throughout the entire calendar year, there is a possibility for gaps in the transfer of key patient data necessary for supporting a diagnosis, continued treatment, or overall care planning.

Therefore, in the CY 2024 PFS proposed rule, we proposed to modify § 414.1320(h) for the Promoting Interoperability performance category performance period to remove the reference to subsequent years after the CY 2024 MIPS payment year, and instead specify that the policy applies only through the CY 2025 MIPS payment year. We further proposed to add a new paragraph at § 414.1320(i)(1) to reflect a performance period of a minimum of a continuous 180-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year for the Promoting Interoperability performance category, beginning with the CY 2026 MIPS payment year (88 FR 52578 through 52579).

We invited public comments on these proposals.

The following is a summary of the comments we received and our responses.

*Comment:* Several commenters did not support our proposal to lengthen the performance period to a minimum of 180 days. One commenter stated that they did not believe the proposal was an effective or appropriate policy lever that would move the needle on health information exchange.

*Response:* We respectfully disagree. As required by section 1848(o)(2)(A) of the Act, one of our goals for the MIPS Promoting Interoperability performance category is for MIPS eligible clinicians to demonstrate their meaningful use of CEHRT, and that they maintain the interoperability of their CEHRT by ensuring it is connected in a manner that provides for the electronic exchange of health information to improve the quality of health care. We believe it is important for MIPS eligible clinicians to demonstrate their meaningful use of CEHRT

continuously throughout the year, rather than only during a self-selected best performance period. We believe our proposal, to require a longer period during which MIPS eligible clinicians must meet the requirements of the Promoting Interoperability performance category including ensuring their CEHRT is interoperable, will move health information exchange forward.

*Comment:* Some commenters supported our proposal to extend the length of the minimum performance period to 180 days. One commenter requested that CMS consider offering an “exception” or additional flexibilities for MIPS eligible clinicians that may be switching their EHR vendor during their selected performance period, because EHR implementation often extends well beyond a 180-day timeframe. These commenters further recommended that CMS offer MIPS eligible clinicians the flexibility to report on two separate, but still continuous, 90-day periods within the performance year.

*Response:* We appreciate the feedback provided in support of our proposal and asking for additional flexibilities. We do understand that MIPS eligible clinicians have planned and unplanned system downtime for their CEHRT, which may include scheduled software updates, or even a change in vendor. We do not specify which 180-day performance period a MIPS eligible clinician must select within a calendar year, only that the 180 days are a single, continuous period. Additionally, we understand that updates or changes to CEHRT may occur during any 180-day period, regardless of the performance period chosen. We suggest that MIPS eligible clinicians work with their chosen vendor to minimize downtime during the 180-day performance period selected. We also note that, while downtime may occur during the performance period, this should not directly impact scoring for the Promoting Interoperability performance category, so long as the minimum reporting requirements for the objectives and measures are met during the performance period as well. As discussed in the Stage 1 final rule (75 FR 44329) and the Stage 3 final rule (80 FR 62779 through 62780), we understand that planned and unplanned downtime will occur; so long as the minimum threshold for each measure

is met using CEHRT, specifically numerator/denominator measures, this is acceptable.

As a reminder, for any MIPS eligible clinician that faces a significant hardship, we recommend that the MIPS eligible clinician files a hardship exception application to potentially avoid penalty for reasons outside of their control. Even though there may be specific requirements or limitations associated with a basis to request and receive an exception under § 414.1380(c)(2)(i)(C), we encourage MIPS eligible clinicians to apply for this exception as needed. For additional information on hardship exceptions, please see

<https://qpp.cms.gov/mips/exception-applications?py=2023#promotingInteroperabilityHardshipException-2023>.

*Comment:* Several commenters did not support our proposal to extend the length of the minimum performance period from 90 to 180 days and expressed concern over the increase in relation to administrative burden. One commenter stated that the capacity of EHR vendors is finite, and with multiple clinician types simultaneously drawing from the same pool of vendors, this increases the burden of work for these vendors, and reduces the amount of time the vendor can spend with each client. Compliance among clinicians and health care staff was also a concern, with one commenter expressing that training at the beginning of the year means that practices will not be able to adjust any technical or other problems that occur during the 180-day period, as there is little room for error. One commenter stated that additional support staff will need to be hired to capture information that is not directly collected by EHRs.

*Response:* We believe that MIPS eligible clinicians utilizing CEHRT are using it throughout the entire calendar year. Therefore, we respectfully disagree that our proposal to extend the performance period from 90 to 180 days would create significant burden. We believe the extension will have few implications in implementing, updating, and testing CEHRT to maintain compliance throughout the performance period. We suggest MIPS eligible clinicians consider early planning with health IT vendors on the timing of system updates and downtimes to allow for maximum flexibility in choosing the 180-day performance period. We do

understand that when technical issues arise, MIPS eligible clinicians will work with their vendor to remediate these issues. Unforeseen circumstances happen, and it is possible that they may happen at any time, regardless of the 180-days chosen. As discussed previously, so long as the minimum threshold for each measure is met using CEHRT, specifically numerator/denominator measures, this is acceptable.

Another reminder that for any MIPS eligible clinician that faces a significant hardship, we recommend that the MIPS eligible clinician file a hardship exception application to potentially avoid penalty for reasons outside of their control. Even though there may be specific requirements or limitations associated with a basis to request and receive an exception under § 414.1380(c)(2)(i)(C), we encourage MIPS eligible clinicians to apply for this exception as needed. For additional information on hardship exceptions, please see <https://qpp.cms.gov/mips/exception-applications?py=2023#promotingInteroperabilityHardshipException-2023>.

We understand the burdens MIPS eligible clinicians face with maintaining adequate staffing; however, we disagree with the commenter's concerns regarding the need to hire additional staff solely to collect information to report on objectives and measures during a longer 180-day performance period. Regardless of the length of the performance period, we anticipate minimal additional administrative burden. Several of the objectives and measures for the Promoting Interoperability performance category require MIPS eligible clinicians to use the CEHRT itself to collect and submit the required data. For those objective and measures that require collection and reporting of information regarding the use of CEHRT (such as attestations) that do not rely on data collected by the CEHRT itself (such as the Security Risk Analysis measure or the SAFER Guides measure), we do not believe collection and reporting will be affected by the increased performance period. The completion and reporting of these objectives and measures is the same whether the performance period is 90 days or 180 days.

Comment: Two commenters who opposed our proposal stated that the challenges created

from the COVID-19 public health emergency (PHE) will present complications in meeting reporting requirements during the proposed 180-day performance period. One commenter expressed that different types of clinical practices face different and unique challenges following the PHE. The commenters stated that choosing any continuous 90-day performance period currently allows individual MIPS eligible clinicians to best fit their needs while focusing on patient care in an unpredictable environment. Another commenter stated that the PHE has created financial, workforce, and operational challenges that have implications for the resources needed to meet new Promoting Interoperability performance category requirements.

Response: We believe that the COVID-19 PHE has created opportunities for us to identify areas where MIPS eligible clinicians can put their focus into performance improvement, specifically within the performance period. Considering the COVID-19 PHE, we tried to keep our modifications to the Promoting Interoperability performance category in CY 2024 to a minimum, only proposing substantive changes to the SAFER Guide measure and the lengthening of the performance period. While we empathize with MIPS eligible clinicians that the COVID-19 PHE has brought a unique set of challenges that many continue to face, we also recognize that the COVID-19 PHE heightened the need to strengthen the interoperability of health IT, and to ensure meaningful use of CEHRT throughout the year. During the COVID-19 PHE, telehealth became more widely available, makeshift clinics were created to care for patients, and clinical partnerships allowed for more clinical coverage. The ability and inability to send and receive health information during the COVID-19 PHE showed all clinicians the importance of having fully functional and interoperable systems to best care for their patients and ensure records integral to the patient's care were sent and received.

After consideration of public comments, we are finalizing our proposal to require a continuous 180-day performance period for the Promoting Interoperability performance category beginning with the CY 2024 performance period/2026 MIPS payment year and are revising the regulation text at § 414.1320 to reflect this change, as proposed.

(c) Certified Electronic Health Record Technology Requirements

Section 1848(q)(2)(B)(iv) of the Act requires that, for the Promoting Interoperability performance category, the MIPS eligible clinician must meet the requirements established for the specified performance period under section 1848(o)(2) of the Act for determining whether the MIPS eligible clinician is a meaningful electronic health record (EHR) user. Under section 1848(o)(2)(A) of the Act, a MIPS eligible clinician must be using CEHRT for a specified performance period in order to be treated as a meaningful EHR user. Section 1848(o)(4) of the Act defines CEHRT as a qualified electronic health record (as defined in section 3000(13) of the Public Health Service Act, or PHSA) that is certified by the Office of the National Coordinator for Health Information Technology (ONC) pursuant to section 3001(c)(5) of the PHSA in accordance with the certification standards that ONC adopted under section 3004 of the PHSA.

Accordingly, the MIPS Promoting Interoperability performance category regulation at § 414.1375(b)(1) requires a MIPS eligible clinician to use CEHRT as defined at § 414.1305 for the performance period. Since the CY 2019 performance period/2021 MIPS payment year, this has consisted of EHR technology (which could include multiple technologies) certified under ONC's Health IT Certification Program that meets the 2015 Edition Base EHR definition (as defined at 45 CFR 170.102) and has been certified to certain other 2015 Edition health IT certification criteria as specified in the definition of CEHRT at § 414.1305.

As discussed in the CY 2024 PFS proposed rule (88 FR 52546 through 52548), in the Health Data, Technology, and Interoperability: Certification Program Updates, Algorithm Transparency, and Information Sharing proposed rule (88 FR 23758), which appeared in the April 18, 2023 **Federal Register**, ONC proposed to discontinue the year-themed "editions," which ONC first adopted in 2012, to distinguish between sets of health IT certification criteria finalized in different rules. ONC proposed to instead maintain a single set of "ONC Certification Criteria for Health IT," which will be updated in an incremental fashion in closer alignment to standards development cycles and regular health information technology (IT) development

timelines (88 FR 23750). As further outlined in section III.R. of this final rule, we finalized our proposal to modify the definition of CEHRT for purposes of the Quality Payment Program at § 414.1305 to incorporate any changes made by ONC to its definition of Base EHR and its certification criteria for health IT.

(d) Promoting Interoperability Performance Category Measures for MIPS Eligible Clinicians

i. Changes to the Query of Prescription Drug Monitoring Program Measure under the Electronic Prescribing Objective

We previously adopted the Query of Prescription Drug Monitoring Program (PDMP) measure under the Electronic Prescribing (e-Prescribing) objective for the Promoting Interoperability performance category. For background on this measure, we refer readers to the CY 2019 PFS final rule (83 FR 59800 through 59803) and the CY 2020 PFS final rule (84 FR 62992 through 62994). In the CY 2021 PFS final rule (85 FR 84887 through 84888) and the CY 2022 PFS final rule (86 FR 65466 through 65467), we finalized that the Query of PDMP measure would remain optional and eligible for 10 bonus points for the CY 2021 and CY 2022 performance periods/2023 and 2024 MIPS payment year.

In the CY 2023 PFS final rule, we finalized our proposal to require the Query of PDMP measure beginning with the CY 2023 performance period/2025 MIPS payment year, and that the measure will be worth 10 points (87 FR 70061 through 70067). In addition, along with other key specifications described in the CY 2023 PFS final rule, we removed the phrase “except where prohibited in accordance with applicable law” from the measure description, and established two exclusions beginning with the CY 2023 performance period/2025 MIPS payment year: (1) Any MIPS eligible clinician who is unable to electronically prescribe Schedule II opioids and Schedule III and IV drugs in accordance with applicable law during the performance period; and (2) Any MIPS eligible clinician who writes fewer than 100 permissible prescriptions during the performance period (87 FR 70061 through 70067). Finally, in the CY 2023 PFS final rule, we

finalized a third exclusion for the Query of PDMP measure, but this exclusion was only available for the CY 2023 performance period/2025 MIPS payment year. (87 FR 70067)

The second exclusion is the same exclusion that we adopted for e-Prescribing measure in the CY 2018 PFS final rule (82 FR 53679). It has come to our attention that the second exclusion is problematic because it does not address situations where the MIPS eligible clinician does not electronically prescribe Schedule II opioids or Schedule III and IV drugs, in accordance with applicable law during the performance period, but does write more than 100 permissible prescriptions during the performance period. Therefore, we proposed to modify the second exclusion criterion to state that any MIPS eligible clinician who does not electronically prescribe any Schedule II opioids or Schedule III or IV drugs during the performance period can claim the second exclusion. (88 FR 52579)

We invited public comments on this proposal. The following is a summary of the comments we received and our responses.

*Comment:* Many commenters expressed support for the proposal to modify the second exclusion for the Query of PDMP measure. They stated that the modification is consistent with the intent of this measure and provides necessary clarity surrounding reporting requirements.

*Response:* We believe the modification better reflects our intent. It addresses situations where the MIPS eligible clinician does not electronically prescribe Schedule II opioids or Schedule III and IV drugs, in accordance with applicable law during the performance period.

After consideration of public comments, we are finalizing our proposal to modify the second exclusion for the Query of PDMP measure as proposed so that it reads as follows: “Any MIPS eligible clinician who does not electronically prescribe any Schedule II opioids or Schedule III or IV drugs during the performance period” beginning with the CY 2024 performance period/2026 MIPS payment year, as proposed.

## ii. Technical Update to the Electronic Prescribing Measure

The ONC 21st Century Cures Act final rule (85 FR 25660 through 25661) retired the

“drug-formulary and preferred drug list checks” certification criterion at 45 CFR 170.315(a)(10), which was associated with measures under the Electronic Prescribing objective for the Medicare Promoting Interoperability Program and the MIPS Promoting Interoperability performance category (80 FR 62882 and 83 FR 59817). ONC retired this criterion after January 1, 2022, as provided in 45 CFR 170.550(m)(1) (85 FR 26661).

In the CY 2021 PFS final rule, we finalized that the “drug-formulary and preferred drug list checks” criterion will no longer be associated with measures under the Electronic Prescribing objective and will no longer be required to meet the CEHRT definition for the Medicare Promoting Interoperability Program and the MIPS Promoting Interoperability performance category, beginning with CY 2021 EHR reporting and performance periods (85 FR 84815 through 84825).

In the CY 2023 PFS final rule, we inadvertently omitted a revision to TABLE 92: Objectives and Measures for the Medicare Promoting Interoperability Performance Category for the CY 2023 performance period/2025 MIPS payment year to reflect this change (87 FR 70075). In an effort to more clearly capture the previously established policy finalized in the CY 2021 PFS final rule with respect to the e-Prescribing measure, we proposed in the CY 2024 PFS proposed rule to revise the measure description as shown in Table 54 to read “At least one permissible prescription written by the MIPS eligible clinician is transmitted electronically using CEHRT” and the numerator will be updated to read “Number of prescriptions in the denominator generated and transmitted electronically using CEHRT” to reflect the removal of the health IT certification criterion “drug-formulary and preferred drug list checks.” (88 FR 52579 through 52580)

We invited public comments on this proposal. The following is a summary of the comment we received and our response.

Comment: One commenter expressed support for our proposal to make technical corrections to the e-Prescribing measure.

Response: We thank the commenter for their support.

After consideration of the public comment we received, we are finalizing our proposal to revise the e-Prescribing measure description as shown in Table 54 to read “At least one permissible prescription written by the MIPS eligible clinician is transmitted electronically using CEHRT,” and the numerator will be updated to read to indicate “Number of prescriptions in the denominator generated and transmitted electronically using CEHRT” to reflect the removal of the health IT certification criterion “drug-formulary and preferred drug list checks.”

iii. Changes to the Safety Assurance Factors for EHR Resilience Guides (SAFER Guides) measure

#### A. Background

In the CY 2022 PFS final rule (86 FR 65475 through 65477), we adopted the Safety Assurance Factors for EHR Resilience Guides (SAFER Guides) measure under the Protect Patient Health Information Objective in the Promoting Interoperability performance category beginning with the CY 2022 performance period/2024 MIPS payment year. ONC developed several SAFER Guides, including the High Priority Practices SAFER Guide, to help organizations at all levels conduct self-assessments which optimize the safety and use of EHRs. Under the SAFER Guides measure, MIPS eligible clinicians are currently required to attest to whether they have conducted an annual self-assessment using the High Priority Practices SAFER Guide (available at <https://www.healthit.gov/topic/safety/safer-guides>), at any point during the calendar year in which the performance period occurs, with one “yes/no” attestation statement. Beginning with the CY 2022 performance period/2024 MIPS payment year, we required MIPS eligible clinicians to complete this attestation for this measure, though MIPS eligible clinicians were not scored based on their answer to the attestation, or whether they fully implemented all components of the self-assessment. An attestation of “yes” or “no” is currently acceptable, and a MIPS eligible clinician can attest “no” without penalty. For additional information, please refer

to our discussion of the SAFER Guides measure in the CY 2022 PFS final rule (86 FR 65475 through 65477).

## B. Modification of the SAFER Guides Measure

The SAFER Guides measure is intended to encourage MIPS eligible clinicians to use the High Priority Practices SAFER Guide, annually, to assess their progress and status on important facets of patient safety, including CEHRT implementation and effectiveness, identifying vulnerabilities, and developing a “culture of safety” within their organization. For instance, the High Priority Practices SAFER Guide asks users to review and ensure that entries of allergies, problem lists, and diagnostic test results utilize standardized coding elements in their CEHRT (such as uniformly and consistently coding results as “normal” or “high”). By ensuring their CEHRT consistently documents and codes health information, MIPS eligible clinicians confirm their CEHRT supports clear communication of a patient’s health status, mitigating the risk of oversight, gaps, or potential safety risks introduced by the CEHRT, in the interoperable exchange of health information. By continuing to implement the High Priority Practices SAFER Guide’s recommended practices, MIPS eligible clinicians may be better positioned to operate CEHRT responsibly in care delivery, and to make improvements to the safe use of CEHRT as necessary over time.

Given our interest in promoting the safety and the safe use of CEHRT, in the CY 2024 PFS proposed rule (88 FR 52580 through 52581), we proposed to amend the SAFER Guides measure to require MIPS eligible clinicians to conduct this self-assessment annually, and attest a “yes” response, accounting for completion of the self-assessment for the High Priority Practices SAFER Guide. The self-assessment should be completed as a team among clinicians, staff members, and their vendors together, allowing MIPS eligible clinicians to see a snapshot of the status of the CEHRT used by their organization in terms of safety, and to identify areas needing improvement. Therefore, we proposed to modify the SAFER Guides measure beginning with the CY 2024 performance period/2026 MIPS payment year such that only a “yes” response on

the attestation will constitute completion of this measure, and a “no” response will result in a score of zero for the whole Promoting Interoperability performance category, indicating that the MIPS eligible clinician failed the requirements of the Promoting Interoperability performance category and is not a meaningful user of CEHRT. To reflect this proposed amendment to the SAFER Guides measure, we also proposed to modify our reporting requirements at § 414.1375(b)(2)(ii)(C) to include “For the 2024 MIPS payment year through the 2025 MIPS payment year”, and to add § 414.1375 (b)(2)(ii)(D), to say “Beginning with the 2026 MIPS payment year, submit an affirmative attestation regarding the MIPS eligible clinician’s completion of the annual self-assessment under the SAFER Guides measure during the year in which the performance period occurs.”

We believe this modification is feasible for MIPS eligible clinicians to implement, as they have had two years to grow familiar with the use of the SAFER Guides under this measure by attesting either “yes” or “no” to conducting the self-assessment. We also noted the availability of resources to assist MIPS eligible clinicians with completing the self-assessment as required by the SAFER Guides measure. One example of such a resource is the SAFER Guides authors’ paper titled “Guidelines for US Hospitals and Clinicians on Assessment of Electronic Health Record Safety Using SAFER Guides,” available without charge to download or use at <https://jamanetwork.com/journals/jama/fullarticle/2788984> (88 FR 52580).

Therefore, we proposed to modify our requirements for the SAFER Guides measure beginning with the CY 2024 performance period and subsequent years, to require MIPS eligible clinicians to conduct, and therefore attest “yes,” an annual self-assessment of their CEHRT using the High Priority Practices SAFER Guide (available at <https://www.healthit.gov/topic/safety/safer-guides>), at any point during the calendar year in which the performance period occurs. We further proposed that, although the SAFER Guides measure would continue to be required with no associated points, an attestation of “no” would result in the MIPS eligible clinician not meeting the measure’s requirements and therefore they

would not be a meaningful user of CEHRT, which would result in a score of zero for the Promoting Interoperability performance category. We also proposed to modify our reporting requirements at § 414.1375(b)(2)(ii)(C), and to add § 414.1375(b)(2)(ii)(D). Specifically, at § 414.1375(b)(2)(ii)(C), we proposed to end our current requirements for the SAFER Guides measure with the 2025 MIPS payment year. Then, at § 414.1375(b)(2)(ii)(D), we proposed to require, beginning with the 2026 MIPS payment year, that a MIPS eligible clinician submit an affirmative attestation regarding the MIPS eligible clinician's completion of the annual self-assessment under the SAFER Guides measure during the year in which the performance period occurs. As discussed herein, after consideration of public comments, we are finalizing our proposal to modify the SAFER Guides measure and amend our regulation at § 414.1375(b)(2)(ii), as proposed.

As a reminder, under the SAFER Guides measure, we do not currently require, and did not propose to require MIPS eligible clinicians to attest to whether they have implemented any best practices “fully in all areas” as described in the High Priority SAFER Guide, nor will a MIPS eligible clinician be scored on how many of the practices they have fully implemented. We refer readers to Table 54 in this final rule for a description of the measure, and to the CY 2022 PFS final rule for additional background information (86 FR 65475 through 65477).

Upon review of our current regulation governing reporting of the current SAFER Guides measure at § 414.1375(b)(2)(ii)(C), we identified areas where our regulation is unclear regarding the requirements for reporting the SAFER Guides measure. Therefore, we also proposed to amend the regulatory text at § 414.1375(b)(2)(ii)(C) to specify clearly that a MIPS eligible clinician must submit an attestation, with either a “yes” or “no” response, with respect to whether the MIPS eligible clinician completed the annual self-assessment under the SAFER Guides measure during the year in which the performance period occurs. As previously discussed, the regulatory provision will only be applicable for the 2024 MIPS payment year through the 2025 MIPS payment year. (88 FR 52580 through 52581)

We invited public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Some commenters expressed their overall support for the proposal. One commenter stated that in requiring a “yes” attestation of the SAFER Guides measure, we are promoting safe patient care.

*Response:* We agree that requiring an annual self-assessment of the High Priority Practices SAFER Guide is an important component of promoting safe patient care.

*Comment:* Several commenters supported the overall goals and utility of the High Priority Practices SAFER Guide measure, stating that protecting patient health information remains a top priority for clinicians, vendors, patients, and policy makers alike. However, commenters asked that CMS delay implementation of this proposed requirement from the CY 2024 performance period/2026 MIPS payment year to a later date. One commenter suggested that we consider delaying this requirement until the CY 2025 performance period/2027 MIPS payment year, allowing for MIPS eligible clinicians to continue to submit a “yes” or “no” response without penalty for the CY 2024 performance period/2026 MIPS payment year. Another commenter suggested that CMS wait another three years before requiring a “yes” attestation for this measure, implementing this modification to the SAFER Guides measure beginning with the CY 2027 performance period/2029 MIPS payment year. This commenter stated that such delay would allow ONC additional time to review the guides’ content to ensure it remains current. A couple commenters asked that we delay requiring a “yes” attestation on the SAFER Guides measure until CMS has publicly reported the number of MIPS eligible clinicians who responded “yes” and “no,” allowing for the public to gauge overall performance.

*Response:* We note that MIPS eligible clinicians will have had 2 years to complete the self-assessments without penalty (the CY 2022 and CY 2023 performance periods) before requiring a “yes” attestation beginning with the CY 2024 performance period/2026 MIPS payment year as we proposed. Therefore, while we understand that commenters have asked for

additional time, we believe that the 2 years of preparation that we provided is adequate. We also understand that commenters have requested that CMS and ONC work together on reviewing the SAFER Guides, and that ONC update the content as appropriate. CMS will continue to share the feedback we receive with ONC, so they may update the content as deemed appropriate. In addition, as the SAFER Guides measure was required with both “yes” and “no” attestation fulfilling the requirement, we do not believe that publicly reporting this data reflects performance or ability, as much as it reflects which MIPS eligible clinician chose to complete the self-assessment or not. As a reminder, for all MIPS performance categories, we will continue to publicly post data on MIPS eligible clinicians’ performance on measures and activities as the data becomes available.

*Comment:* Several commenters supported utilizing the High Priority Practices SAFER Guide in clinical practice but suggested that CMS and ONC seek stakeholder feedback regarding updates to consider including in the SAFER Guides. These commenters expressed concern that the SAFER Guides have not had a comprehensive review since their release, several references are outdated, and current practices are not reflected, such as the use of telehealth which grew and changed substantially during and after the COVID-19 PHE. Additionally, commenters asked that CMS communicate suggestions for ONC to consider for the SAFER Guides, such as data privacy protections, social determinants of health, and present-day safety practices.

*Response:* As mentioned, ONC continues to review of the SAFER Guides’ content, and questions included in the self-assessment. At this time, we believe that the baseline self-assessment questions are relevant to MIPS eligible clinicians, but we will share commenters’ suggestions on including telehealth, patient privacy, and social determinants of health with ONC for future consideration. As a reminder, we encourage MIPS eligible clinicians to utilize the annual MIPS Promoting Interoperability performance category call for measures to submit feedback for future policy consideration before we release our next proposed rule.

*Comment:* Several commenters supported requiring MIPS eligible clinicians to complete

an annual self-assessment using the High Priority Practices SAFER Guide, but they asked that CMS and ONC make publicly available the additional resources and materials mentioned in rulemaking (86 FR 65476). Commenters asked for educational materials, examples of how to complete the guides, and sources of information available to aid in the self-assessment.

*Response:* We thank commenters for their support and suggestions. We are sharing one resource that is now publicly available for MIPS eligible clinicians as one additional tool to assist with completing their self-assessments. The “Guidelines for US Hospitals and Clinicians on Assessment of Electronic Health Record Safety Using SAFER Guides,” is now publicly available without charge to download or use at <https://jamanetwork.com/journals/jama/fullarticle/2788984>. We may also take into consideration making additional resources available to the public.

*Comment:* Some commenters did not support the proposed modification to the SAFER Guides measure, stating that requiring MIPS eligible clinicians to attest to having completed the self-assessment places additional administrative burden on already taxed clinicians. Commenters also raised concern that administrative tasks are taking away from clinical time, while many are still recovering from staffing shortages after the COVID-19 PHE.

*Response:* While we fully appreciate that MIPS eligible clinicians are still working through the complexities that arose during the COVID-19 PHE, we also recognize that the COVID-19 PHE has had a direct effect on health IT, patient data, and system infrastructures. We disagree that the administrative burden associated with this proposed modification to this measure outweighs the protection of health IT, as well as the safety and safe use of CEHRT. As mentioned previously, while we understand the initial self-assessment may require the most effort, subsequent self-assessments should largely remain the same, unless there have been changes in vendors, or significant system upgrades (see section V.B.11.a. of this final rule and 86 FR 65476). Also, to reiterate, we are only requiring the completion and attestation of the self-assessment. We do not require that all items in the questionnaire are implemented fully, nor that

the worksheets be completed in full. We also remind commenters that we understand not all recommended practices are applicable to every organization. In these instances, it is acceptable to check “not implemented” for that practice (86 FR 65475). Our minimum requirements to satisfy the SAFER Guides measure are to complete the self-assessment for self-awareness, and to attest to having completed the checklist. Lastly, we encourage MIPS eligible clinicians to complete the self-assessment in a team approach, utilizing administrative staff, clinicians, and their vendors, to lessen clinician burden.

*Comment:* Several commenters supported the High Priority SAFER Guide self-assessment, but they did not agree that we should take an “all or nothing” approach to determining whether a MIPS eligible clinician passes or fails the SAFER Guides measure. Commenters suggested a performance-based scoring approach instead to create incentives for MIPS eligible clinicians to continuously make improvements.

*Response:* We understand that an “all or nothing” approach is not a typical performance-based approach and appreciate the feedback. While we do have performance-based objectives and measures in the Promoting Interoperability performance category, we also have several unscored requirements as well. It is difficult to score the SAFER Guides measure, as it is constructed to only require an attestation of completion (did you complete the self-assessment, “yes” or “no”). Without scoring based on the level of implementation of each of the practices, an all or nothing approach is more appropriate.

After consideration of public comments, we are finalizing our proposal to modify our requirements for the SAFER Guides measure beginning with the CY 2024 performance period/2026 MIPS payment year, to require MIPS eligible clinicians to conduct, and therefore, attest “yes,” to having completed an annual self-assessment of their CEHRT using the High Priority Practices SAFER Guide. We are finalizing our proposal to codify this modification at § 414.1375(b)(2)(ii)(D). Additionally, we are finalizing our proposal to amend the regulatory text at § 414.1375(b)(2)(ii)(C) to clearly specify that a MIPS eligible clinician must submit an

attestation, with either an affirmative or negative response, with respect to whether the MIPS eligible clinician completed the annual self-assessment under the SAFER Guides measure during the year in which the performance period occurs; this regulatory provision will only be applicable for the 2024 MIPS payment year through the 2025 MIPS payment year.

(e) Requirements for the Promoting Interoperability Performance Category for the CY 2024 Performance Period/2026 MIPS Payment Year

i. Objectives and Measures for the CY 2024 Performance Period/2026 MIPS Payment Year

For ease of reference, Table 54 lists the objectives and measures for the Promoting Interoperability performance category required for the CY 2024 performance period/2026 MIPS payment year as revised to reflect the policies we are finalizing in this final rule.

**TABLE 54: Objectives and Measures for the Promoting Interoperability Performance Category for the CY 2024 Performance Period/2026 MIPS Payment Year**

<b>Objective</b>	<b>Measure</b>	<b>Numerator</b>	<b>Denominator</b>	<b>Exclusion</b>
Electronic Prescribing: Generate and transmit permissible prescriptions electronically	e-Prescribing: At least one permissible prescription written by the MIPS eligible clinician is transmitted electronically using CEHRT.*	Number of prescriptions in the denominator generated and transmitted electronically using CEHRT.*	Number of prescriptions written for drugs requiring a prescription in order to be dispensed other than controlled substances during the performance period; or number of prescriptions written for drugs requiring a prescription in order to be dispensed during the performance period.	Any MIPS eligible clinician who writes fewer than 100 permissible prescriptions during the performance period.
Electronic Prescribing	Query of PDMP: For at least one Schedule II opioid or Schedule III or IV drug electronically prescribed using CEHRT during the performance period, the MIPS eligible clinician uses data from CEHRT to conduct a query of a PDMP for prescription drug history.	N/A (measure is Y/N)	N/A (measure is Y/N)	Any MIPS eligible clinician who: 1. is unable to electronically prescribe Schedule II opioids and Schedule III and IV drugs in accordance with applicable law during the performance period; or 2. Any MIPS eligible clinician who does not electronically prescribe any Schedule II opioids or Schedule III or IV drugs during the performance period.*
Health Information Exchange: The MIPS eligible clinician provides a summary of	Support Electronic Referral Loops by Sending Health Information: For at	Number of transitions of care and referrals in the denominator where	Number of transitions of care and referrals during the performance period	Any MIPS eligible clinician who transfers a patient to another setting or refers a patient fewer than 100 times

Objective	Measure	Numerator	Denominator	Exclusion
<p>care record when transitioning or referring their patient to another setting of care, receives or retrieves a summary of care record upon the receipt of a transition or referral or upon the first patient encounter with a new patient, and reconciles summary of care information from other health care providers into their EHR using the functions of CEHRT</p>	<p>least one transition of care or referral, the MIPS eligible clinician that transitions or refers their patient to another setting of care or health care provider (1) creates a summary of care using CEHRT; and (2) electronically exchanges the summary of care record.</p>	<p>the summary of care record was created using CEHRT and exchanged electronically</p>	<p>for which the MIPS eligible clinician was the transferring or referring clinician</p>	<p>during the performance period.</p>
<p>Health Information Exchange</p>	<p>Support Electronic Referral Loops by Receiving and Reconciling Health Information: For at least one electronic summary of care record received for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, or for patient encounters during the performance period in which the MIPS eligible clinician has never before encountered the patient, the MIPS eligible clinician conducts clinical information reconciliation for medication, medication allergy, and current problem list.</p>	<p>Number of electronic summary of care records in the denominator for which clinical information reconciliation is completed using CEHRT for the following three clinical information sets: (1) Medication – Review of the patient's medication, including the name, dosage, frequency, and route of each medication; (2) Medication allergy – Review of the patient's known medication allergies; and (3) Current Problem List – Review of the patient's current and active diagnoses.</p>	<p>Number of electronic summary of care records received using CEHRT for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, and for patient encounters during the performance period in which the MIPS eligible clinician has never before encountered the patient.</p>	<p>Any MIPS eligible clinician who receives transitions of care or referrals or has patient encounters in which the MIPS eligible clinician has never before encountered the patient fewer than 100 times during the performance period.</p>
<p>Health Information Exchange</p>	<p>HIE Bi-Directional Exchange: Statement 1: I participate in an HIE to enable secure, bi-directional exchange to occur for every patient encounter, transition or referral and record stored or maintained in the EHR during the performance period in</p>	<p>N/A (measure is Y/N)</p>	<p>N/A (measure is Y/N)</p>	<p>N/A</p>

	<p>accordance with applicable law and policy.</p> <p>Statement 2: The HIE that I participate in is capable of exchanging information across a broad network of unaffiliated exchange partners including those using disparate EHRs, and not engaging in exclusionary behavior when determining exchange partners.</p> <p>Statement 3: I use the functions of CEHRT to support bi-directional exchange with an HIE.</p>			
Health Information Exchange	<p>Enabling Exchange Under TEFCA MIPS eligible clinicians would attest to the following:</p> <ul style="list-style-type: none"> <li>● Participating as a signatory to a Framework Agreement (as that term is defined by the Common Agreement for Nationwide Health Information Interoperability as published in the <b>Federal Register</b> and on ONC's website) in good standing (i.e. not suspended) and enabling secure, bi-directional exchange of information to occur, in production, for every patient encounter, transition or referral, and record stored or maintained in the EHR during the performance period, in accordance with applicable law and policy.</li> <li>● Using the functions of CEHRT to support bi-directional exchange of patient information, in production, under this Framework Agreement.</li> </ul>	N/A (measure is Y/N)	N/A (measure is Y/N)	N/A

Objective	Measure	Numerator	Denominator	Exclusion
<p>Provider to Patient Exchange: The MIPS eligible clinician provides patients (or patient-authorized representative) with timely electronic access to their health information.</p>	<p>Provide Patients Electronic Access to Their Health Information: For at least one unique patient seen by the MIPS eligible clinician: 1. The patient (or the patient-authorized representative) is provided timely access to view online, download, and transmit his or her health information; and 2. The MIPS eligible clinician ensures the patient's health information is available for the patient (or patient-authorized representative) to access using any application of their choice that is configured to meet the technical specifications of the Application Programming Interface (API) in the MIPS eligible clinician's CEHRT.</p>	<p>Number of patients in the denominator (or patient authorized representative) who are provided timely access to health information to view online, download, and transmit to a third party and to access using an application of their choice that is configured meet the technical specifications of the API in the MIPS eligible clinician's CEHRT.</p>	<p>Number of unique patients seen by the MIPS eligible clinician during the performance period.</p>	<p>N/A</p>
<p>Public Health and Clinical Data Exchange: The MIPS eligible clinician is in active engagement with a public health agency or clinical data registry to submit electronic public health data in a meaningful way using CEHRT, except where prohibited, and in accordance with applicable law and practice.</p>	<p>Immunization Registry Reporting: The MIPS eligible clinician is in active engagement with a public health agency to submit immunization data and receive immunization forecasts and histories from the public health immunization registry/immunization information system (IIS).</p>	<p>N/A (measure is Yes/No)</p>	<p>N/A (measure is Yes/No)</p>	<p>The MIPS eligible clinician: 1. does not administer any immunizations to any of the populations for which data is collected by its jurisdiction's immunization registry or immunization information system during the performance period; OR 2. operates in a jurisdiction for which no immunization registry or immunization information system is capable of accepting the specific standards required to meet the CEHRT definition at the start of the performance period; OR 3. operates in a jurisdiction where no immunization registry or immunization information system has declared readiness to receive immunization data as of 6 months prior to the start of the performance</p>

Objective	Measure	Numerator	Denominator	Exclusion
Public Health and Clinical Data Exchange	Electronic Case Reporting: The MIPS eligible clinician is in active engagement with a public health agency to electronically submit case reporting of reportable conditions.	N/A (measure is Yes/No)	N/A (measure is Yes/No)	period. The MIPS eligible clinician: 1.Does not treat or diagnose any reportable diseases for which data is collected by their jurisdiction's reportable disease system during the performance period; OR 2.operates in a jurisdiction for which no public health agency is capable of receiving electronic case reporting data in the specific standards required to meet the CEHRT definition at the start of the performance period; OR 3. operates in a jurisdiction where no public health agency has declared readiness to receive electronic case reporting data as of 6 months prior to the start of the performance period:
Public Health and Clinical Data Exchange	Public Health Registry Reporting: (bonus) The MIPS eligible clinician is in active engagement with a public health agency to submit data to public health registries.	N/A (measure is Yes/No)	N/A (measure is Yes/No)	none
Public Health and Clinical Data Exchange	Clinical Data Registry Reporting: (bonus) The MIPS eligible clinician is in active engagement to submit data to a clinical data registry.	N/A (measure is Yes/No)	N/A (measure is Yes/No)	none
Public Health and Clinical Data Exchange	Syndromic Surveillance Reporting: (bonus) The MIPS eligible clinician is in active engagement with a public health agency to submit syndromic surveillance data from an urgent care setting	N/A (measure is Yes/No)	N/A (measure is Yes/No)	none
Protect Patient Health Information: Protect electronic protected health information (ePHI) created or maintained by the CEHRT through the implementation of appropriate technical, administrative, and physical safeguards.	Security Risk Assessment: Conduct or review a security risk analysis in accordance with the requirements in 45 CFR 164.308(a)(1), including addressing the security (to include encryption) of ePHI data created or	N/A (measure is Yes/No)	N/A (measure is Yes/No)	none

Objective	Measure	Numerator	Denominator	Exclusion
	maintained by certified electronic health record technology (CEHRT) in accordance with requirements in 45 CFR 164.312(a)(2)(iv) and 45 CFR 164.306(d)(3), implement security updates as necessary, and correct identified security deficiencies as part of the MIPS eligible clinician’s risk management process.			
Protect Patient Health Information	SAFER Guides High Priority Practices Guide: Conduct an annual assessment of the High Priority Practices Guide SAFER Guides*	N/A (measure is Yes/No)	N/A (measure is Yes/No)	none

\* Signifies a policy finalized in this final rule.

ii. Scoring Methodology for the CY 2024 Performance Period/2026 MIPS Payment Year

Table 55 reflects the scoring methodology for the Promoting Interoperability performance category for the CY 2024 performance period/2026 MIPS payment year.

**TABLE 55: Scoring Methodology for the CY 2024 Performance Period/2026 MIPS Payment Year**

<b>Objective</b>	<b>Measure</b>	<b>Maximum Points</b>	<b>Required/Optional</b>
Electronic Prescribing	e-Prescribing	10 points	Required
	Query of PDMP	10 points	Required
Health Information Exchange	Support Electronic Referral Loops by Sending Health Information	15 points	Required (MIPS eligible clinician’s choice of one of the three reporting options)
	Support Electronic Referral Loops by Receiving and Reconciling Health Information	15 points	
	-OR-		
	Health Information Exchange Bi-Directional Exchange	30 points	
	-OR-		
	Enabling Exchange under TEFCA	30 points	
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	25 points	Required
Public Health and Clinical Data Exchange	Report the following two measures: <ul style="list-style-type: none"> <li>• Immunization Registry Reporting</li> <li>• Electronic Case Reporting</li> </ul>	25 points	Required
	Report one of the following measures: <ul style="list-style-type: none"> <li>• Public Health Registry Reporting</li> <li>• Clinical Data Registry Reporting</li> <li>• Syndromic Surveillance Reporting</li> </ul>	5 points ( <i>bonus</i> )	Optional

Notes: The Security Risk Analysis measure and the SAFER Guides measure are required, but will not be scored. In addition, MIPS eligible clinicians must submit an attestation regarding ONC direct review, and attest to the actions to limit or restrict the compatibility or interoperability of CEHRT, as required by § 414.1375(b)(3).

iii. Exclusion Redistribution

Many required measures have exclusions associated with them as shown in Table 54. If a MIPS eligible clinician believes that an exclusion for a particular measure applies to them, they may claim it when they submit their data. The maximum points available in Table 55 do not include the points that will be redistributed if a MIPS eligible clinician claims an exclusion. For ease of reference, Table 56 shows how points will be redistributed among the objectives and measures for the CY 2024 performance period/2026 MIPS payment year in the event a MIPS eligible clinician claims an exclusion for a given measure.

**TABLE 56: Exclusion Redistribution for CY 2024 Performance Period**

<b>Objective</b>	<b>Measure</b>	<b>Redistribution if exclusion is claimed</b>
Electronic Prescribing	e-Prescribing	10 points to HIE objective
	Query of PDMP	10 points to e-Prescribing measure
Health Information Exchange	Support Electronic Referral Loops by Sending Health Information	15 points to Provide Patients Electronic Access to Their Health Information measure
	Support Electronic Referral Loops by Receiving and Reconciling Health Information	15 points to the Support Electronic Referral Loops by Sending Health Information measure
	-OR-	
	Health Information Exchange Bi-Directional Exchange	No exclusion
	-OR-	
	Enabling Exchange under TEFCA	No exclusion
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	No exclusion
Public Health and Clinical Data Exchange	Report the following two measures: <ul style="list-style-type: none"> <li>• Electronic Case Reporting</li> <li>• Immunization Registry Reporting</li> </ul>	If an exclusion is claimed for both measures, 25 points are redistributed to the Provide Patients Electronic Access to their Health Information measure

Notes: The Security Risk Analysis measure and the SAFER Guides measure are required, but will not be scored.

In addition, MIPS eligible clinicians must submit an attestation regarding ONC direct review, and attest to the actions to limit or restrict the compatibility or interoperability of CEHRT, as required by § 414.1375(b)(3).

iv. 2015 Edition Health IT Certification Criteria

For ease of reference, Table 57 lists the objectives and measures for the Promoting Interoperability performance category for the CY 2024 performance period/2026 MIPS payment year and the associated ONC health IT certification criteria set forth at 45 CFR 170.315, as is currently applicable. We refer readers to section III.R. of this final rule for our discussion of and amendments to the definition of CEHRT at § 414.1305.

**TABLE 57: Promoting Interoperability Performance Category Objectives and Measures and ONC Health IT Certification Criteria**

<b>Objective</b>	<b>Measure</b>	<b>Certification Criteria (CY 2024 Performance Period/2026 MIPS payment adjustment year)</b>
<b>Electronic Prescribing</b>	e-Prescribing	§ 170.315(b)(3) Electronic prescribing
	Query of PDMP	§ 170.315(b)(3) Electronic prescribing
<b>Health Information Exchange</b>	Support electronic referral loops by sending health information	§ 170.315(b)(1) Transitions of care
	Support electronic referral loops by receiving and reconciling health information	§ 170.315(b)(1) Transitions of care § 170.315(b)(2) Clinical information reconciliation and incorporation
<b>Health Information Exchange (alternative)</b>	Health Information Exchange (HIE Bi-Directional Exchange)	Examples of certified health IT capabilities to support the actions of this measure may include but are <u>not</u> limited to technology certified to the following criteria:
		§ 170.315(b)(1) Transitions of care
		§ 170.315(b)(2) Clinical information reconciliation and incorporation
		§ 170.315(g)(7) Application access — patient selection
		§ 170.315(g)(9) Application access — all data request
		§ 170.315(g)(10) Application access — standardized API for patient and population services
<b>Health Information Exchange (alternative)</b>	Enabling Exchange under TEFCA	Examples of certified health IT capabilities to support the actions of this measure may include but are <u>not</u> limited to technology certified to the following criteria:
		§ 170.315(b)(1) Transitions of care
		§ 170.315(b)(2) Clinical information reconciliation and incorporation
		§ 170.315(g)(7) Application access — patient selection
		§ 170.315(g)(9) Application access — all data request
		§ 170.315(g)(10) Application access — standardized API for patient and population services
<b>Provider to Patient Exchange</b>	Provide patients electronic access to their health information	§ 170.315(e)(1) View, download, and transmit to 3rd party
		§ 170.315(g)(7) Application access — patient selection
		§ 170.315(g)(9) Application access — all data request
		§ 170.315(g)(10) Application access — standardized API for patient and population services
<b>Public Health and Clinical Data Exchange</b>	Immunization registry reporting	§ 170.315(f)(1) Transmission to immunization registries
	Syndromic surveillance reporting	§ 170.315(f)(2) Transmission to public health agencies — syndromic surveillance
	Electronic case reporting	§ 170.315(f)(5) Transmission to public health agencies — electronic case reporting
	Public health registry reporting	§ 170.315(f)(6) Transmission to public health agencies — antimicrobial use and resistance reporting
		§ 170.315(f)(7) Transmission to public health agencies — health care surveys
Clinical data registry reporting	No 2015 health IT certification criteria at this time.	
<b>Protect Patient Health Information</b>	Security Risk Assessment	The requirements are a part of CEHRT specific to each certification criterion.
	Safety Assurance Factors for EHR Resilience Guides (SAFER Guides)	No 2015 health IT certification criteria at this time.

(f) Clinical Social Workers

In the CY 2022 PFS final rule (86 FR 65387 through 65389), we added clinical social workers to the definition of a MIPS eligible clinician under § 414.1305, beginning with the CY 2022 performance period/2024 MIPS payment year. Prior to the CY 2022 performance period, this clinician type was not eligible to participate in the Medicare Promoting Interoperability Program to earn incentive payments for the meaningful use of CEHRT, or to receive reduced Medicare payments for failing to meaningfully use CEHRT. Clinical social workers were also not eligible for Medicaid EHR incentive payments.

In the CY 2022 PFS final rule (86 FR 65489), we stated that clinical social workers therefore may lack experience with the adoption or use of CEHRT, and that we believed there may not be sufficient Promoting Interoperability performance category measures that are applicable and available to them. In the CY 2022 PFS final rule (86 FR 65489) and the CY 2023 PFS final rule (87 FR 70087), we established that we will apply to clinical social workers the same reweighting policy for the Promoting Interoperability performance category that we adopted previously for nurse practitioners, physician assistants, clinical nurse specialists, certified registered nurse anesthetists, and other types of MIPS eligible clinicians who are non-physician practitioners for the CY 2022 performance period/2024 MIPS payment year and the CY 2023 performance period/2025 MIPS payment year. Specifically, because we believed there may not be sufficient Promoting Interoperability performance category measures available and applicable to clinical social workers, pursuant to section 1848(q)(5)(F) of the Act, we assigned a weight of zero to the Promoting Interoperability performance category for clinical social workers. However, if a clinical social worker submits any data for any of the measures specified for the Promoting Interoperability performance category, then this category will not be reweighted to zero, and we will score the clinical social worker on this category as part of their final composite performance score in accordance with § 414.1380(c)(1). This reweighting policy for clinical social workers is codified at § 414.1380(c)(2)(i)(A)(4)(iii).

Because CY 2022 was the first year that clinical social workers were included in our definition of MIPS eligible clinicians, we do not yet have any performance period data that we could use to evaluate whether the Promoting Interoperability performance category measures are applicable to this type of MIPS eligible clinician. In the CY 2023 PFS final rule (87 FR 70087), when we reweighted the Promoting Interoperability performance category for clinical social workers for the CY 2023 performance period/2025 MIPS payment year, we noted we would evaluate whether this reweighting policy should be continued for future years when we have performance period data available. Given that we do not have data from the CY 2022 performance period available to analyze, we proposed (88 FR 52590) to continue the existing policy of reweighting the Promoting Interoperability performance category for clinical social workers for the CY 2024 performance period/2026 MIPS payment year, and to make the corresponding revisions to the regulatory text at § 414.1380(c)(2)(i)(A)(4)(iii).

We invited public comments on this proposal, but did not receive public comments on this provision, and we are finalizing as proposed.

## (5) APM Improvement Activities Performance Category Score

### (a) Background

Section 1848(q)(5)(C) of the Act establishes scoring rules for the MIPS improvement activities performance category. Section 1848(q)(5)(C)(ii) of the Act specifically provides that a MIPS eligible clinician who is in an Alternative Payment Model (APM), as defined in section 1833(z)(3)(C) of the Act, with respect to a performance period shall earn a minimum score of one half of the highest potential score for the improvement activities performance category. In accordance with section 1848(q)(5)(C)(ii) of the Act, we codified at § 414.1380(b)(3)(i) that individual MIPS eligible clinicians participating in APMs (as defined in section 1833(z)(3)(C) of the Act) for a performance period will earn at least 50 percent for the improvement activities performance category (81 FR 30132). Further, we also stated that MIPS eligible clinicians participating in an APM for a performance period may receive an improvement activity score higher than 50 percent (81 FR 30132). Subsequently, in the CY 2021 PFS final rule, we finalized the APM Performance Pathway (APP) under MIPS (85 FR 84859 through 84866).

The APP is an optional MIPS reporting and scoring pathway available to MIPS eligible clinicians and groups who are also participants in MIPS APMs. The APP is designed to reduce reporting burden and encourage participation in APMs (85 FR 50285). Performance in the APP is weighted across 3 areas - quality, improvement activities, and Promoting Interoperability (§ 414.1380(d)). Like traditional MIPS, the APP allows APM participants to receive credit for improvement activities. With respect to the APP, eligible clinicians, groups, and APM Entities currently receive full credit for the improvement activities performance category with no additional data submission requirements because we have identified all MIPS APMs as having met the improvement activity threshold score requirement to receive a score of 100 percent for that performance category (85 FR 84865, 85031).

### (b) Proposal

We stated in the CY 2024 PFS proposed rule that it had come to our attention that in the preamble to the MIPS Performance Category Scoring in the APM Performance Pathway of the CY 2021 PFS final rule (85 FR 84865) the terminology “automatically” was used in reference to the baseline score provided by section 1848(q)(5)(C)(ii) of the Act (85 FR 84865). This has led to an interpretation by some that the baseline score represents “credit” that is “automatically applied” in all circumstances.<sup>496</sup> This is not how we intended this provision to function, and we wish to clarify that our rules do not automatically grant such “credit”.<sup>497</sup> Further, we are concerned that absent revisions, application of our current regulation, which initiates MIPS composite scoring when at least two performance categories are reported in traditional MIPS, may produce unintended or unexpected scoring outcomes for MIPS eligible clinicians and groups.

To prevent such scoring scenarios, we proposed to amend § 414.1380 by revising paragraph (b)(3)(i) to require that, in order to receive the baseline score of 50 percent for the improvement activities performance category, a MIPS eligible clinician or group with APM participation must have submitted data for two performance categories or attest to having completed an improvement activity. We also proposed to amend § 414.1380 by adding paragraph (c)(2)(iv) to provide that we will not apply a baseline score of 50 percent for the improvement activities performance category if we have also approved a request for performance category reweighting or hardship exception affecting the improvement activities performance category, including MIPS EUC Exception applications under § 414.1380(c)(2)(i)(A)(6) or (C)(2), and automatic EUC events per § 414.1380(c)(2)(i)(A)(8) or (C)(3).

---

<sup>496</sup> For example, in the “2022 Data Submission FAQs,” available at <https://qpp.cms.gov/resources/resource-library>, we stated that MIPS eligible clinicians participating in APMs are eligible to receive “automatic credit” in the improvement activities performance category.

<sup>497</sup> Similarly, in the CY 2021 PFS final rule, we finalized a proposal to modify § 414.1380(b)(3)(ii) to make clear that the baseline score provided by section 1848(q)(5)(C)(i) of the Act for the improvement activities performance category is not automatically granted for clinicians participating in patient-centered medical homes and comparable specialty practices (83 FR 59868).

These proposals relate to reporting and scoring in traditional MIPS. We believe that these proposals are necessary in part because § 414.1380(c)(2)(i)(A)(6) requires us to score any data submitted by a MIPS eligible clinician with an approved application-based hardship exception or who was identified as a clinician in a CMS-designated area affected by an EUC event as identified by CMS under §§ 414.1380(c)(2)(i)(A)(6), (A)(8), (C)(2), and (C)(3), regardless of whether that submission was for the purpose of MIPS final scoring. Based upon our current policies, a submission of data for the quality or Promoting Interoperability performance categories makes the improvement activities performance category eligible for scoring. For MIPS eligible clinicians participating in APMs, this means the improvement activities performance category score would be 50 percent, potentially resulting in a lower composite score than may otherwise be possible, unless additional improvement activities are attested to. We believe that result is contrary to the purpose of hardship exceptions, such as the MIPS EUC Exception application provided by § 414.1380(c)(2)(i)(A)(6), which are designed to reweight the improvement activities performance category to zero percent.

We also believe this proposal will further our vision that “the bedrock of the Quality Payment Program is high-quality, patient-centered care followed by useful feedback, in a continuous cycle of improvement” (81 FR 77010). Generally speaking, through MIPS, we collect feedback based upon data and measures submitted for the quality, Promoting Interoperability, improvement activities, and cost performance categories. We need scores from at least two of those four performance categories for us to calculate a clinician’s final score. There is no data submission requirement for the cost performance category—we use the Medicare claims data submitted by that clinician to calculate their cost-measure performance. Similarly, a MIPS eligible clinician is not required to submit detailed data for the improvement activities performance category; instead, a MIPS eligible clinician simply attests to having completed an activity or activities to report the performance category. Therefore, we believe that it is most appropriate for a MIPS eligible clinician to submit measurable data on the

quality and Promoting Interoperability performance categories for the purpose of final scoring in order to be credited with the baseline score for the improvement activities performance category.<sup>498</sup>

We believe these proposals are timely in light of the proposal at section III.F.h.2. of the CY 2024 PFS proposed rule to require that Medicare Shared Savings Program (SSP) Accountable Care Organization (ACO) clinicians report the Promoting Interoperability performance category at the TIN level, as opposed to the APM Entity (that is, the, ACO) or individual level. Reporting the quality performance category through the APP is already required for MIPS eligible clinicians participating in a Medicare SSP ACO. If our existing policies are not amended, an SSP ACO clinician's submission of data to the Promoting Interoperability category will prompt the baseline score in the improvement activities performance category in every circumstance regardless of whether the clinician's group requested or otherwise qualified for reweighting of the performance categories, leaving these Medicare ACO clinicians reporting improvement activities outside the APP at risk of unintended or unexpected MIPS scoring outcomes. This proposal will allow us to conform to the general scoring expectation that, in the event the participant's request to reweight three or four performance categories to zero percent due to a hardship, per §§ 414.1380(c)(2)(i)(A)(6), (A)(8), (C)(2), and (C)(3), the participant will receive a final score equal to the performance threshold, resulting in a neutral payment adjustment, even if data are incidentally submitted for other performance categories.

In summary, we proposed to amend § 414.1380 by revising paragraph (b)(3)(i) and adding paragraph (c)(2)(iv) to limit the application of baseline scores provided under section 1848(q)(5)(C)(ii) of the Act for the purpose of MIPS final scoring. We sought comment on these proposals.

---

<sup>498</sup> There is no data submission requirement for the quality and cost performance categories for a MIPS eligible clinician assessed under the facility-based measurement scoring methodology described in § 414.1380(e). Therefore, we would require that such clinicians report data on the Promoting Interoperability performance category (or attest to having completed an improvement activity) to prompt the baseline score for the improvement activities performance category.

The following is a summary of the comments we received on these proposals and our responses.

*Comment:* We received one comment in support of our proposed changes.

*Response:* We thank the commenter for their support.

*Comment:* A commenter expressed concern that our proposal will increase reporting burden for MIPS eligible clinicians in APMs reporting through the APP. The commenter stated that the objective of the proposal could easily be accomplished without additional reporting by scoring MIPS eligible clinicians reporting through the APP that have requested a hardship exemption when such clinicians report a MIPS performance category score other than the improvement activities performance category and the final score is higher than performance threshold that would otherwise be achieved through the hardship exception. This commenter further indicated that they believe that our proposal is a departure from current CMS guidance.

Response: We appreciate the commenter's concern about administrative burden as we are mindful of the burden placed on clinicians and groups who are APM participants and report MIPS performance categories. We recognize that we could have been more clear about our intent and what is required of MIPS eligible clinicians to meet MIPS reporting requirements outside the APP. Here, additional information from the MIPS eligible clinician or group is necessary to ensure that a MIPS eligible clinician or group does, in fact, intend to trigger the scoring consequences that will result from their reporting.

As we discussed in the proposed rule (88 FR 52590 and 52591), the submission of quality or Promoting Interoperability data would trigger a minimum improvement activities performance category score of 50 percent for all APM participants, resulting in the calculation of a MIPS final score, even in situations where the improvement activities performance category otherwise would have been reweighted to zero. This is not a common scenario; nonetheless, it is significant for those MIPS eligible clinicians and groups that it affects as it can be the difference between a clinician or group receiving a neutral payment adjustment and a negative payment adjustment

due to existing CMS scoring rules. When a MIPS eligible clinician is scored on two MIPS performance categories, CMS will calculate a final score for the MIPS eligible clinician (§ 414.1380(c)), subjecting the clinician to a MIPS payment adjustment (§ 414.1405(a) and (b)). For this reason, any marginal increase in the reporting burden is justified by the protection it offers MIPS eligible clinicians from inadvertently receiving an unexpected MIPS final score and payment adjustment.

We appreciate the commenter's suggested alternative policy as it highlights some of the confusion that our past statements may have caused. Not all APM participants are scored under the APP, which is an optional reporting pathway for eligible clinicians and groups who are participants in MIPS APMs.

Our proposal was intended to resolve an issue that affects APM participants who are not scored under the APP. Section 1848(q)(5)(C) of the Act provides that a MIPS eligible clinician participating in an APM, with respect to a performance period, shall earn a minimum score of one half of the highest potential score for the improvement activities performance category. Separate and distinct from this statutory credit, CMS scoring rules provide for a MIPS eligible clinician who elects to be scored under the APP to be assigned an improvement activities performance category score "based on the activities required by the MIPS APM" (42 CFR 414.1367(c)(3)).<sup>499</sup> A MIPS eligible clinician who does not elect to be scored under the APP will not automatically receive full credit for the improvement activities performance category but would instead receive the minimum statutory credit of 50 percent unless the clinician attests to additional improvement activities. While affirmatively electing to be scored under the APP demonstrates a MIPS eligible clinician's clear intention to trigger scoring in the improvement activities performance category, passive eligibility for the 50 percent statutory credit outside the APP provides no similar indication of intent.

---

<sup>499</sup> As noted under the proposed rule (88 FR 52590), to date, CMS has determined each MIPS APM to require the performance of improvement activities worth 100 percent of the improvement activity performance score (85 FR 84865, 85031).

For this reason, we proposed to limit the circumstances in which we would provide the statutory credit to a MIPS eligible clinician participating in a APM to circumstances in which the clinician's actions clearly indicate an intention to receive a MIPS final score: when the clinician has attested to one or more additional improvement activities or when the clinician has submitted data for the quality and Promoting Interoperability performance categories. To make this intent easier to understand, we are revising § 414.1380(b)(3)(i) to state that a MIPS eligible clinician participating in an APM receives an improvement activities performance category score of at least 50 percent if the MIPS eligible clinician reports a completed improvement activity or submits data for the quality and Promoting Interoperability performance categories. This revision more clearly reflects the policy we described in the CY 2024 PFS proposed rule (88 FR 52590).

We acknowledge that our proposal could be viewed as different from our past guidance. Indeed, the purpose of the proposal is to correct confusion caused by our past statements while clarifying our intent with respect to those statements. We note that in the proposed rule we acknowledged that we may have caused confusion through past guidance and cited prior rulemaking where we better indicated how our actual intent has evolved based on our experience operating the program (88 FR 52590 and 52591).

After consideration of the comments, we are finalizing this proposal with modification.

## g. MIPS Final Score Methodology

### (1) Performance Category Scores

#### (a) Background

Sections 1848(q)(1)(A)(i) and (ii) and (5)(A) of the Act provide, in relevant part, that the Secretary shall develop a methodology for assessing the total performance of each MIPS eligible clinician according to certain specified performance standards with respect to applicable measures and activities specified for the four performance categories for a performance period and use such methodology to provide for a composite performance score for each such clinician for each performance period.

For the CY 2024 performance period/2026 MIPS payment year, we intend to continue to build on the scoring methodology we have finalized for prior years. This scoring methodology allows for accountability and alignment across the performance categories and minimizes burden on MIPS eligible clinicians. In the CY 2024 proposed rule, we proposed to update our scoring policies consistent with this framework. Specifically, we proposed to—

- Provide a technical update to § 414.1380(a)(1)(i) and (b)(1)(v)(A),
- Amend our criteria for assessing ICD-10 coding impacts under our scoring flexibilities policy; and
- Update our policies regarding Improvement scoring for the cost performance category.

We did not propose changes to scoring policies for the Promoting Interoperability or improvement activities performance categories.

#### (b) Technical updates

In the CY 2022 PFS final rule, we finalized proposals to remove measure bonus points for reporting additional high priority measures and using end to end electronic reporting beginning in the CY 2022 performance period/2024 MIPS payment year (86 FR 65504 through 65507). We updated corresponding regulation at § 414.1380(b)(1)(v)(B)(1)(iii) regarding the end- to- end measure bonus points, but not § 414.1380(a)(1)(i) regarding performance standards

or § 414.1380(b)(1)(v)(A) regarding the high priority bonus points. Accordingly, we proposed to revise § 414.1380(a)(1)(i) to provide that, measure bonus points for submitting high priority measures and using end-to-end reporting are available for performance periods and payment years prior to the CY 2023 performance period/2025 MIPS payment year. We also proposed to revise § 414.1380(b)(1)(v)(A) to state that, beginning with the CY 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians will no longer receive these measure bonus points for submitting high priority measures.

We referred readers to our regulation at § 414.1380 for our current policies on scoring. We requested comments on these technical update proposals.

We did not receive public comments on the technical update proposals. We are finalizing this proposal as proposed.

(c) Scoring the Quality Performance Category for the Following Collection Types: Medicare Part B Claims Measures, eCQMs, MIPS CQMs, QCDR Measures, the CAHPS for MIPS Survey Measure and Administrative Claims Measures

We referred readers to § 414.1380(b)(1) for our current policies regarding quality measure benchmarks, calculating total measure achievement and measure bonus points, calculating the quality performance category score, including achievement and improvement points, and the small practice bonus (81 FR 77276 through 77308, 82 FR 53716 through 53748, 83 FR 59841 through 59855, 84 FR 63011 through 63018, 85 FR 84898 through 84913, 86 FR 65490 through 65509, and 87 FR 70088 through 70091). In the CY 2023 PFS final rule, we finalized policies to score administrative claims measures in the quality performance category using benchmarks calculate from data submitted during the associated performance period and clarified the topped-out measure lifecycle (87 FR 70088 through 70091).

(i) Scoring Flexibility for Changes That Impact Quality Measures During the Performance Period

We referred readers to CY 2018, CY 2019, Quality Payment Program final rules and the CY 2021, and CY 2022 PFS final rules (82 FR 53714 through 53716, 83 FR 59845 through 59847, 85 FR 84898 through 84901, and 86 FR 65491 and 65492 respectively) and § 414.1380(b)(1)(vii)(A) for our previously established scoring flexibilities policy.

We refer readers to the CY 2024 PFS proposed rule (88 FR 52592) for a detailed description of the development of the scoring flexibilities policy.

In the CY 2024 PFS proposed rule, we proposed two modifications to the criteria by which we assess the impacts of ICD-10 coding changes (88 FR 52592). Firstly, we proposed to eliminate the 10 percent ICD-10 coding change factor established in the CY 2018 Quality Payment Program rule (82 FR 53714). The quality and cost performance categories rely on measures that use detailed specifications that include ICD–10 code sets. We annually issue new ICD–10 coding updates, which are effective from October 1 through September 30. As part of this update, codes are added and removed from the ICD–10 code sets. When we adopted this standard in the CY 2018 Quality Payment Program final rule (82 FR 53714), we were concerned that ICD–10 coding changes in the final quarter of the performance period may render a measure no longer comparable to its historical benchmark. However, we have found that a 10 percent change to ICD-10 codes does not necessarily reflect a meaningful impact to clinicians' ability to report and be fairly scored on a quality measure. In the CY 2018 Quality Payment Program proposed rule, we discussed an approach where we would consider any change in ICD–10 coding to impact performance on a measure and thus only rely on the first 9 months of the 12-month performance period for such measures; however, we stated that such an approach was too broad (overly inclusive of changes) and would truncate measurement for too many measures where performance may not be significantly affected (82 FR 30098). We maintain this perspective but have concluded that a 10 percent change in codes is similarly over inclusive as it leads to the suppression of measures that can still be scored using all 12 months of the performance period. In place of the 10 percent threshold, we proposed to assess the overall

impact on a measure resulting from changes to ICD–10 codes. Rather than consider a flat 10 percent change as a factor for when ICD–10 coding changes affect a measure, we will instead assess how the coding changes affect the measure numerator, denominator, exclusions, and exceptions in ways that could lead to misleading or harmful results. We will assess whether resultant changes to the numerator, denominator, exceptions, exclusions, or other measure elements change the scope or intent of the measure.

Changes in measure scope or intent will be considered significant changes that affect the applicability of the historical benchmark. ICD-10 codes include information related to clinical diagnoses and eligible patient population. For example, ICD-10 codes in the denominator correspond to the total eligible patient population considered for a measure. If as a result of a clinical guideline change a code is changed from an exclusion to a code to be considered in the total patient population indicated in the denominator for a measure, this will meaningfully change the scope of the measure and could lead to misleading results in measurement. Additionally, instances in which coding changes change the designation of whether performance was met or not (numerator) could similarly lead to misleading results. These changes would be considered significant and therefore trigger our scoring flexibilities policy.

Second, we proposed to assess the impacts of coding changes and our associated course of action (suppression, truncation, or standard 12-month reporting) by measure collection type. Our scoring policy states that we calculate benchmarks by collection type (§ 414.1380(b)(1)(ii)). As benchmarks are assessed by collection type, we must consider by collection type whether the changes or errors will result in patient harm or misleading results. We refer readers to the 2024 PFS proposed (88 FR 52592) rule for relevant discussion.

Each collection type has different technical limitations. For example, measure specifications for the MIPS CQMs and Medicare Part B claims collection types can be updated in the performance period immediately following the publication each October of changes to ICD–10 codes. If an ICD–10 coding change occurs in October of 2024, CMS can immediately

update the specifications for the measure's MIPS CQMs and Medicare Part B claims collection types for the next performance period, and the ICD-10 changes would not result in any misleading results for the measure for those collection types.

This differs from eCQM measure specifications, which are posted in the May the year before the measure specifications take effect and are valid for the 12-month reporting period. For the CY 2024 performance period/2026 MIPS payment year, eCQM measures specifications will be posted in May of 2023 and are valid for the applicable 12-month performance period in CY 2024. In the example given above, the measure's eCQM collection type would not be updated again until May 2025 for the CY 2026 performance period/2028 MIPS payment year, and clinicians would be left reporting pursuant to outdated specifications for the final quarter of the CY 2024 performance period. This could result in misleading results for the measure's eCQM collection type. As a result, it would be appropriate for CMS to assess the impact of changes to measures and implement the appropriate scoring flexibility by collection type. Lastly, we proposed that measure specifications for eCQMs include the capability to be truncated to a 9-month performance period. Current measure specifications for eCQMs provide exclusively for a 12-month reporting period. If a measure is significantly impacted by ICD-10 coding changes, it therefore cannot be reported for a truncated performance period of 9-month. In order to implement the scoring flexibilities policy as intended and protect our ability to score measures where 9 consecutive months of data is available, we proposed to begin requiring measure specifications to include logic for a 9-month performance period in addition to the currently existing 12-month performance period.

These updates will help us to better provide scoring flexibilities to clinicians by being sensitive to the particular impacts to and capabilities of the particular quality measures collection types. We sought comment on our proposal to update the criteria by which we apply scoring flexibilities in response to ICD-10 coding changes.

We received public comments on the proposal. The following is a summary of the

comments we received and our responses.

*Comment:* Several commenters supported the proposal for CMS to eliminate the criterion of a 10 percent change in the ICD-10 coding specifications and instead assess the significance of changes. One commenter encouraged CMS to work with interested parties in each instance to assess the appropriateness of measuring on 9 months of data for quality measures with a 12-month performance period. Another commenter stated that suppressing a measure at the end of the year could undermine the work of the care team to achieve high performance and that if the measure intent remains the same and the coding impact is minimal, providers should be able to continue to report the measure. One commenter stated that evaluating measure changes on a case-by-case basis could prevent suppression of measures with favorable performance scores. One commenter agreed with assessing the impact of ICD-10 coding changes separately for each collection type.

*Response:* We agree with interested parties that assessing the measures for appropriateness could help to ensure quality measurement, working to recognize and support the hard work clinicians are doing to improve clinical quality. Eliminating the 10 percent change in ICD-10 coding specifications and consideration by collection type and on a case-by-case basis, will help us to better support quality measurement and clinicians in this way.

*Comment:* One commenter opposed elimination of the 10 percent ICD-10 coding change factor, stating that although coding education on annual changes is important, education does not overcome the impact of the transition to updated ICD-10 codes. Another commenter expressed concerns about the burden imposed on practices by coding changes and suppression/truncation of measures during the performance year. The commenter stated that because benchmark and logic changes are released late in the year, their EHR vendor does not implement updates until well into the new year, resulting in workflow changes and administrative burden.

*Response:* Eliminating the 10 percent threshold, will allow us to better find alternatives to suppression or truncation to support clinicians and their workflows. We will continue to consider

alternatives that will preserve scoring and support clinicians, to the extent feasible.

*Comment:* A few commenters opposed the proposal to require eCQM measure stewards to develop specifications to support a truncated 9-month reporting period. One commenter stated that EHR developers should not be required to support two sets of specifications for each measure when CMS or the measure developer makes changes during the reporting period. One commenter stated that it may not be feasible to develop specifications for a 9-month reporting period for measures that depend on actions from more than one patient encounter. A few commenters raised concerns about the burden associated with requiring both 9-month and 12-month specifications for eQMs, stating that this would increase burden for EHR developers and undermine their ability to support eQMs. A few commenters offered alternatives to requiring measure stewards to develop specifications for a 9-month reporting period. One commenter suggested that CMS could change the date of ICD-10 to the end of the calendar year to align with the quality measure performance period. Another commenter recommended that eQMs be specified for only a 9-month reporting period running from January to September.

*Response:* We thank commenters for expressing their concerns regarding the proposed requirement for eCQM measures to account for the reporting of a 9-month performance period. While supporting a truncated 9-month reporting period would help our mission to preserve quality measurement and scoring in MIPS, we recognize the concerns described by commenters in implementing these changes. We will possibly consider the implementation of alternative options through future rulemaking.

After consideration of public comments, we are finalizing this proposal with modifications. We are finalizing our proposal to the implementation of the scoring flexibilities policy at § 414.1380(b)(1)(vii)(A) to eliminate the 10 percent ICD-10 coding change factor established in the CY 2018 Quality Payment Program rule (82 FR 53714) and to assess the impacts of coding changes and our associated course of action (suppression, truncation, or standard 12-month reporting) by measure collection type. We are not finalizing our proposal to

require eCQM measure specifications to include logic for a truncated 9-month performance period.

(d) Cost Performance Category Score

(i) Improvement Scoring Methodology

(A) Background

We refer readers to the CY 2024 PFS proposed rule (88 FR 52593) for details on the history of the cost improvement scoring methodology.

Briefly, in the CY 2018 Quality Payment Program final rule (82 FR 53748 through 53752), we established policies related to measuring improvement for the cost performance category at the measure level. We codified these policies at 42 CFR 414.1380(b)(2)(iii) and (iv) (82 FR 53748 through 53752, 53957). After the publication of the CY 2018 Quality Payment Program final rule, the Bipartisan Budget Act of 2018 (BBA 18) (Pub. L. 115-123, February 9, 2018) was enacted. Section 51003(a)(1)(B) of the BBA 18 added a new clause at section 1848(q)(5)(D)(iii) of the Act which provided that the cost performance category score shall not take in to account the improvement of the MIPS eligible clinician for CY 2018 performance period/2020 MIPS payment year through the CY 2021 performance period/2023 MIPS payment year. On this basis, we set the maximum cost improvement score for the CY 2018 performance period/2020 MIPS payment year through the CY 2021 performance period/2023 MIPS payment year at zero percentage points, in the CY 2019 PFS final rule (83 FR 35956, 36080 through 36082), which we codified at § 414.1380(a)(1)(ii) and (b)(2)(iv)(E). Further, due to the COVID-19 Public Health Emergency (PHE) ((85 FR 19277 through 19278; See “Extension to Data Submission Deadline” on Quality Payment Program website at <https://qpp.cms.gov/>) and under our authority at § 414.1380(c)(2)(i)(A)(8), we reweighted the cost performance category’s score to zero percent of the final score for the CY 2020 performance period/2022 MIPS payment year through the CY 2021 performance period/2023 MIPS payment year. In the CY 2024 PFS proposed rule (88 FR 52593), we this reweighting began with stated the CY 2019 performance period/2022 MIPS payment year, but we want to clarify that we were referring to the CY 2020 performance period/2022 MIPS payment year.

On these bases, to date, we have not applied a cost improvement score to MIPS eligible clinicians' final scores in accordance with the policies we established in the CY 2018 Quality Payment Program final rule and our regulations at § 414.1380(b)(2)(iii) and (iv).

#### (B) Description of Previously Finalized Cost Improvement Scoring Methodology

We refer readers to the CY 2024 PFS proposed rule (88 FR 52593 and 52594) for details on previously finalized cost improvement scoring methodology that we established in the CY 2018 Quality Payment Program final rule (82 FR 53748 through 53752). In summary, we established the following policies:

- Determine the cost improvement score at the individual measure level (82 FR 53749 through 53750);
- Calculate the cost improvement score, generally by comparing the number of cost measures with significant improvement in performance and the number of cost measures with significant declines in performance for a MIPS eligible clinician or group between two consecutive performance periods (82 FR 53750 through 53752);
- Determine whether there was significant improvement or decline in performance for individual cost measures between the two performance periods by applying a common standard statistical test to measure significance, the t-test, as used in the Shared Savings Program (82 FR 53750 through 53752); and
- Establish that the cost improvement score cannot be lower than zero percentage points (82 FR 53750 through 53752).

#### (C) Mathematical Feasibility Issue for Cost Improvement Scoring Methodology

In reviewing our cost improvement scoring methodology, we discovered that calculating cost improvement scoring based on comparing only cost measures with a statistically significant change, determined by using a t-test, is not congruent with the underlying data. We refer readers to the CY 2024 PFS proposed rule (88 FR 52594) for details on the mathematical feasibility issues of calculating cost improvement scoring with a statistical significance requirement.

Generally, we failed to identify that the currently established cost improvement scoring method is not mathematically feasible, because we have not implemented cost improvement scoring since we finalized this methodology in the CY 2018 Quality Payment Program final rule as discussed previously. We identified the mathematical infeasibility of the current cost improvement methodology in the process of implementing cost improvement scoring for the CY 2023 performance period/2025 MIPS payment year. To address this mathematical feasibility issue, we proposed to remove the statistical significance requirement for the cost improvement scoring methodology (88 FR 52594 and 52595).

#### (D) Operational Feasibility Issues for Cost Improvement Scoring Methodology

In addition, in the process of implementing cost improvement scoring for the CY 2023 performance period/2025 MIPS payment year, we identified three issues with our current policy at § 414.1380(b)(2)(iv)(A) because we determine each MIPS eligible clinician's cost improvement score at the individual cost measure level, and not the category level, for the cost performance category. We refer readers to the CY 2024 PFS proposed rule (88 FR 52594 and 52595) for detailed descriptions of these issues. In summary, these issues are:.

- *Measure level improvement scoring implementation issue:* As of CY 2023 performance/2025 MIPS payment year, there are 25 cost measures, two of which are population based measures and the remaining 23 are episode-based measures. We expect to add additional episode-based measures to the cost performance category as MIPS matures. The growing number of cost measures bring into question if using the current methodology for cost improvement scoring introduces complexities to its implementation, which in turn brings into question operational feasibility. Maintaining measure level improvement scoring, for a performance category that will continue to see growth in the number of measures, would be resource intensive, complex to implement, and error prone (88 FR 52594).

- *Performance category improvement scoring consistency:* As set forth at § 414.1380(b)(1)(vi)(C), we calculate each MIPS eligible clinician's improvement score for the

quality performance category in MIPS at the performance category level. Upon further evaluation, we found that using two different methods of improvement scoring for the quality and cost performance categories would increase the implementation cost and operational complexity described above—as well as confuse MIPS eligible clinicians and call into question why we use two different methodologies. As such, we concluded that using category level assessment for cost improvement scoring would establish consistency across MIPS and allow effective communication with MIPS eligible clinicians, while reducing implementation cost and operational complexity (88 FR 52594).

- *Fairness of improvement scoring:* The episode-based cost measures are specific to certain clinical conditions and/or care settings. Some MIPS eligible clinicians might not have the sufficient volume threshold for any or all the episode-based cost measures for two consecutive performance periods, which would make year over year improvement scoring at the measure level less viable. Measure level improvement scoring might negatively impact these clinicians' overall cost performance category score because of the inclusion of measures outside of their scope of practice. A category level assessment provides an equitable cost improvement scoring for MIPS eligible clinicians with different scopes of practice because it would only reflect measures that are applicable to them (88 FR 52594 and 52595).

To address these three issues, we proposed to revise our policy so that we will determine the cost improvement score at the category level, instead of the cost measure level, for the cost performance category.

#### (E) Modifications for Cost Improvement Scoring Methodology Beginning with the CY 2023 Performance Period/2025 MIPS Payment Year

In the CY 2024 PFS proposed rule (88 FR 52595 and 52596), we proposed two modifications to our current cost improvement scoring methodology beginning with the CY 2023 performance period/2025 MIPS payment year because of the mathematical and operational feasibility issues we discovered.

First, we proposed to determine each MIPS eligible clinician's cost improvement score at the category level, instead of the current measure level, beginning with the CY 2023 performance period/2025 MIPS payment year. We proposed this modification based on the operational feasibility considerations previously discussed. We also proposed that, if this proposal is finalized, § 414.1380(b)(2)(iv)(A) and (C) will be amended to reflect that the cost improvement score will be determined at the category level for the cost performance category. In addition, we proposed that, if this proposal is finalized, § 414.1380(b)(2)(iv)(B) will be amended to reflect that we will determine whether sufficient data are available to measure improvement to calculate the cost improvement score based on whether a MIPS eligible clinician or group participates in MIPS using the same identifier in 2 consecutive performance periods and is scored on the cost performance category for 2 consecutive performance periods.

Second, we proposed to modify the cost improvement scoring methodology to remove the requirement that we compare measures with a "statistically significant change (improvement or decline) in performance" as determined based on application of a t-test beginning with the CY 2023 performance period/2025 MIPS payment year. As previously discussed, determining cost improvement scoring based on statistical significance, using a t-test, is not congruent with our underlying data and is mathematically infeasible.

As such, we proposed to remove the statistical significance requirement and update the calculation on how we quantify cost improvement scoring accordingly. Specifically, at § 414.1380(b)(2)(iv)(C), we proposed to determine the cost improvement score at the category level by subtracting the cost performance category score from the previous performance period (for example, CY 2022 performance period/2024 MIPS payment year) from the cost performance category score from the current performance period (for example, CY 2023 performance period/2025 MIPS payment year), and then by dividing the difference by the cost performance category score from the previous performance period (for example, CY 2022 performance period/2024 MIPS payment year), and by dividing by 100.

In our current and established policy set forth at § 414.1380(b)(2)(iii), the overall cost performance category score for the current year with the improvement assessment is based on the following calculation: Cost Performance Category Score = Current Year Performance Score + Improvement Score. We did not propose any changes to this established policy.

We proposed that these two modifications to our cost improvement scoring policy would be effective beginning with the CY 2023 performance period/2025 MIPS payment year. As discussed in the CY 2024 PFS proposed rule (88 FR 52593), section 1848(q)(5)(D)(i) of the Act requires that we account for a MIPS eligible clinician's improvement in the cost performance category if we have sufficient data available to measure improvement. Because we have not implemented cost improvement scoring to date, we did not have sufficient data available to measure year-over-year improvement scoring for the cost performance category until the CY 2023 performance period/2025 MIPS payment year. However, we do have such sufficient data available beginning with the CY 2023 performance period/2025 MIPS payment year. Further, section 1848(q)(5)(D)(iii) of the Act, requiring that we delay our implementation of cost improvement scoring through the CY 2021 performance period/2023 MIPS payment year, no longer applies. Therefore, we proposed to implement cost improvement scoring, with these two proposed modifications, beginning with the CY 2023 performance period/2025 MIPS payment year.

On this basis, we proposed to amend § 414.1380(b)(2)(iv)(E) to state that the maximum cost improvement score for the 2020, 2021, 2022, 2023, and 2024 MIPS payment years is zero percentage points and that the maximum cost improvement score beginning with the CY 2025 MIPS payment year is 1 percentage point. In addition, we proposed to amend § 414.1380(a)(1)(ii) to state that improvement scoring is available in the cost performance category starting with the 2025 MIPS payment year, instead of the 2024 MIPS payment year. The remainder of the language currently at § 414.1380(a)(1)(ii) will remain the same.

We solicited public comment on these proposals.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Several commenters supported the proposed changes to modify the cost improvement scoring methodology stating they appreciate CMS's thoughtful approach in continuing to refine the methodology.

*Response:* We thank and appreciate the commenters for their support of our proposed modifications to the cost improvement scoring methodology.

*Comment:* A few commenters suggested for CMS to use a phase-in approach for increasing the maximum cost improvement percentage point to allow for better year-to-year comparisons in the cost performance category scores, given the COVID-19 PHE and lack of cost data from the last few years.

*Response:* As discussed previously, section 1848(q)(5)(D)(i) of the Act requires that we account for a MIPS eligible clinician's improvement in the cost performance category if we have sufficient data available to measure improvement. We did not implement cost improvement scoring to date because we did not have 2 consecutive years of cost performance category data to measure year-over-year improvement scoring. We do have such data beginning with CY 2023 performance period/2025 MIPS payment year. On this basis, we proposed to implement cost improvement scoring beginning with the CY 2023 performance period/2025 MIPS payment year. Further, we are taking a phased-in approach by also proposing that the maximum cost improvement score beginning with the 2025 MIPS payment year is only 1 percentage point. We may consider amending the maximum percentage point amount for the cost improvement score as the program matures.

*Comment:* A few commenters stated that there is a need for CMS to prioritize clinician education, to help providers understand how the cost improvement score impacts their overall MIPS performance. For example, the commenters asked for clarification regarding how cost improvement score is a bonus for the cost performance category score rather than of a separate

benchmark.

*Response:* We agree with commenters regarding the need to prioritize clinician education on how the cost improvement score impacts their cost performance category and their overall MIPS performance. To this end, we are looking into possible educational resources for cost improvement scoring, in the future.

*Comment:* A commenter shared their concerns regarding our for proposal to increase the maximum cost improvement score to 1 percentage point beginning with CY 2023 performance period/2025 MIPS payment year, which is an increase from 0 percentage points for previous years. The commenter stated they are concerned that this modification is being proposed mid-performance cycle. They stated that practices work to implement updates to their data collection and refinement activities for a given performance year based on proposals made and finalized in previous MIPS rulemaking cycles. Further, the commenter stated that, if this proposal is implemented mid-cycle, they will likely not be able to modify their collection and refinement practices with enough time to mitigate this change in cost performance category scoring. As such, they recommended delaying this proposed update to the cost performance category scoring to give clinicians the ability to prepare for the changes.

*Response:* We believe a few clarifications are needed. First, clinicians do not report cost performance category measures to CMS. Instead, we use administrative claims data, which clinicians already submit for billing purposes, to calculate scores on the cost performance category's measures and we take into consideration all applicable cost measures for each given performance year. Second, our current policy at § 414.1380(a)(1)(ii), established prior to the CY 2024 PFS proposed rule, states that, starting with the 2024 MIPS payment year, improvement scoring is available in the cost performance category. As discussed previously, we are statutorily required to take into account the improvement of a MIPS eligible clinician in the cost performance category and potentially provide a bonus to the cost performance category score through this mechanism. MIPS eligible clinicians are generally incentivized under MIPS to

always improve their performance.

The change in the cost improvement scoring methodology being finalized in this rule for the CY 2023 performance period/2025 MIPS payment year should not necessarily change MIPS eligible clinicians' behavior since they should have been aware of the potential benefit of improving their performance on the cost performance category's measures.

Since we calculate performance on cost measures based on administrative claims data submitted for billing purposes in the regular course of business, MIPS eligible clinicians do not need to make any data collection changes in order to be scored for the cost performance category and are scored on all applicable cost measures for a given performance period. Second, cost improvement scoring is a bonus that can be applied to the cost performance category score. The proposed 1 percentage point is the maximum cost improvement score available that we will apply to the cost performance category.

*Comment:* A commenter shared concerns with the CMS proposal to determine the cost improvement score at the category level instead of the measure level. They shared an example where a clinician was scored on one measure and performed well. However, they were unexpectedly attributed a measure outside of their specialty and scored poorly, bringing their cost performance category score down significantly.

*Response:* We thank and appreciate the commenter for bringing to our attention issues with clinicians being attributed measures outside of their specialty and thus impacting their overall cost performance category score.

We understand that inclusion of out-of-scope cost measures would cause concerns for evaluating improvement at the category level. We score MIPS eligible clinicians on cost measures that are applicable to the care they provided during the performance period for the cost performance category. We continually review our attribution methodology for the cost performance category to make sure we attribute cost measures appropriately to MIPS eligible clinicians. We note that each cost measure has a minimum case volume threshold (§

414.1350(c)) that the MIPS eligible clinician must exceed for CMS to assess performance and calculate a score on that measure (§ 414.1380(b)(2)(ii), (iv)); therefore, a MIPS eligible clinician would need to provide a service that triggered that cost measure more than a few times before CMS would attribute that cost measure to them. Further, we note that, if a MIPS eligible clinician has a concern that CMS has attributed a cost measure to them incorrectly, they may request targeted review under § 414.1385.

In the CY 2024 PFS proposed rule (88 FR 52594 and 52595), we described in detail the three reasons that informed our decision to change cost improvement scoring from measure to category level. These reasons are summarized previously in this section of the final rule. For instance, we explained that some MIPS eligible clinicians might not have the sufficient volume threshold for any or all the episode-based measures for two consecutive performance periods. This would make year over year improvement scoring at the measure level less viable. As such, we explained that measure level improvement scoring might negatively impact these clinicians' overall cost performance category scoring because of the inclusion of episode-based measures outside of their scope of practice (88 FR 52594 and 52595).

*Comment:* A few commenters suggested CMS further modify the cost improvement methodology as it continues to be confusing for clinicians. One commenter suggested a more straightforward approach would be to multiply the change between current and previous year performance scores by the maximum cost improvement score (for example, 1 percentage point as proposed). Another commenter noted that there may be unintended errors in the newly proposed formula for the cost improvement score, specifically in the final step of the calculation (dividing the calculated score by 100).

*Response:* Upon reviewing the final step of the cost improvement score calculation, (that is, dividing by 100), we agree that there was an unintended error in our proposal and the suggested approach to multiply the change between current and previous year performance scores by the maximum cost improvement score (for example, 1 percentage point as proposed)

addresses this error.

After consideration of public comments, we are finalizing our policies for the cost improvement scoring methodology with some modifications.

First, we are finalizing that we will determine each MIPS eligible clinician's cost improvement score at the category level, instead of the current measure level, beginning with the CY 2023 performance period/2025 MIPS payment year. As such, we are finalizing as proposed amendments to § 414.1380(b)(2)(iv)(A) and (C) to reflect that the cost improvement score will be determined at the category level for the cost performance category. In addition, we are finalizing as proposed amendments to § 414.1380(b)(2)(iv)(B) to reflect that we will determine whether sufficient data are available to measure improvement to calculate the cost improvement score based on whether a MIPS eligible clinician or group participates in MIPS using the same identifier in 2 consecutive performance periods and is scored on the cost performance category for 2 consecutive performance periods.

Second, we are finalizing our proposal to modify the cost improvement scoring methodology to remove the requirement that we compare measures with a “statistically significant change (improvement or decline) in performance” as determined based on application of a t-test beginning with the CY 2023 performance period/2025 MIPS payment year. Accordingly, we are finalizing our proposal to remove the statistical significance requirement and update the calculation on how we quantify cost improvement scoring.

However, based on feedback from commenters, we are finalizing our proposal with modification to amend our formula for calculating the cost improvement score at the category level. Specifically, at § 414.1380(b)(2)(iv)(C), we are finalizing that we will determine the cost improvement score at the category level by subtracting the cost performance category score from the previous performance period from the cost performance category score from the current performance period, then by dividing the difference by the cost performance category score from the previous performance period, and by multiplying the result with the maximum available cost

improvement score (for example, 1 percentage point beginning in CY 2023 performance year/2025 MIPS payment year). With this approach, the finalized cost improvement scoring methodology is consistent with improvement scoring for the quality performance category and previously finalized cost improvement scoring calculation at § 414.1380(b)(2)(iv)(C) (82 FR 53748 through 53752), where the final step was also to multiply the resulting fraction with the maximum available cost improvement score.

We are also finalizing our proposal to amend § 414.1380(b)(2)(iv)(E) to state that the maximum cost improvement score for the 2020, 2021, 2022, 2023, and 2024 MIPS payment years is zero percentage points and that the maximum cost improvement score beginning with the CY 2025 MIPS payment year is 1 percentage point. In addition, we are finalizing our proposal to amend § 414.1380(a)(1)(ii) to state that improvement scoring is available in the cost performance category starting with the 2025 MIPS payment year, instead of the 2024 MIPS payment year. The remainder of the language currently at § 414.1380(a)(1)(ii) will remain the same.

## f. MIPS Payment Adjustments

### (1) Background

Section 1848(q)(6)(A) of the Act requires that we specify a MIPS payment adjustment factor for each MIPS eligible clinician for a year. This MIPS payment adjustment factor is a percentage determined by comparing the MIPS eligible clinician's final score for the given year to the performance threshold we established for that same year in accordance with section 1848(q)(6)(D) of the Act. The MIPS payment adjustment factors specified for a year must result in differential payments such that MIPS eligible clinicians with final scores above the performance threshold receive a positive MIPS payment adjustment factor, those with final scores at the performance threshold receive a neutral MIPS payment adjustment factor, and those with final scores below the performance threshold receive a negative MIPS payment adjustment factor.

For previously established policies regarding our determination and application of MIPS payment adjustment factors to each MIPS eligible clinician, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77329 through 77343), CY 2018 Quality Payment Program final rule (82 FR 53785 through 53799), CY 2019 PFS final rule (83 FR 59878 through 59894), CY 2020 PFS final rule (84 FR 63031 through 63045), CY 2021 PFS final rule (85 FR 84917 through 84926), CY 2022 PFS final rule (86 FR 65527 through 65537), and CY 2023 PFS final rule (87 FR 70096 through 70102).

In the CY 2023 PFS final rule (87 FR 70096 through 70102), we established the performance threshold for the CY 2023 performance period/2025 MIPS payment year by calculating the mean of the final scores for all MIPS eligible clinicians using CY 2017 performance period/2019 MIPS payment year data. In addition, we included information about our timing for providing MIPS performance feedback to MIPS eligible clinicians for the CY performance period in accordance with section 1848(q)(12) of the Act.

### (2) Establishing the Performance Threshold

(a) Statutory Background and Authority

As discussed above, in order to determine a MIPS payment adjustment factor for each MIPS eligible clinician for a year, we must compare the MIPS eligible clinician's final score for the given year to the performance threshold we established for that same year in accordance with Section 1848(q)(6)(D) of the Act. Section 1848(q)(6)(D)(i) of the Act requires that we compute the performance threshold such that it is the mean or median (as selected by the Secretary) of the final scores for all MIPS eligible clinicians with respect to a "prior period" specified by the Secretary. Section 1848(q)(6)(D)(i) of the Act also provides that the Secretary may reassess the selection of the mean or median every 3 years.

Sections 1848(q)(6)(D)(ii) through (iv) of the Act provided special rules, applicable only for certain initial years of MIPS, for our computation and application of the performance threshold for our determination of MIPS payment adjustment factors. These special rules are no longer applicable for establishing the performance threshold for the CY 2024 performance period/2026 MIPS payment year. We refer readers to the CY 2024 PFS proposed rule (88 FR 52596) for further information on these previously applicable requirements as they explain our prior computations of the performance threshold.

In the CY 2022 PFS final rule (86 FR 65527 through 65532), we selected the mean as the methodology for determining the performance threshold for the CY 2022 through 2024 performance periods/2024 through 2026 MIPS payment years. We also established in our regulation at § 414.1405(g) that, for the CY 2022 through 2024 performance periods/2024 through 2026 MIPS payment years, the performance threshold would be the mean of the final scores for all MIPS eligible clinicians from a prior period.

For the CY 2022 through CY 2023 performance periods/2024 through 2025 MIPS payment years, we selected a single performance period when selecting a prior period to compute the mean of the final scores and establish the performance threshold. However, as discussed under paragraph (b) of this section, we proposed to modify and refine our policy for

selecting a “prior period” to establish the performance threshold under paragraph (b) of this section.

For further information on our current performance threshold policies, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77333 through 77338), CY 2018 Quality Payment Program final rule (82 FR 53787 through 53792), CY 2019 PFS final rule (83 FR 59879 through 59883), CY 2020 PFS final rule (84 FR 63031 through 63037), CY 2021 PFS final rule (85 FR 84919 through 84923), CY 2022 PFS final rule (86 FR 65527 through 65532), and CY 2023 PFS final rule (87 FR 70096 through 70100).

We codified the performance thresholds for each of the first 7 years of MIPS at § 414.1405(b)(4) through (9). These performance thresholds are shown in Table 58.

**TABLE 58: Performance Thresholds for the CY 2017 through CY 2023 Performance Periods/2019 through 2025 MIPS Payment Years**

MIPS Performance Period	2017 MIPS Performance Period	2018 MIPS Performance Period	2019 MIPS Performance Period	2020 MIPS Performance Period	2021 MIPS Performance Period	2022 MIPS Performance Period	2023 MIPS Performance Period
Year of MIPS	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6	Year 7
Performance Threshold	3 points	15 points	30 points	45 points	60 points	75 points	75 Points
Change from prior year	N/A	12 points	15 points	15 points	15 points	15 points	0 points

(b) Modification to Our Policy for Establishing the Performance Threshold

In previous years, we selected a single performance period when selecting a prior period. In the proposed rule, we reassessed our previous interpretation of “prior period” as described at section 1848(q)(6)(D)(i) of the Act. We refer readers to the CY 2024 PFS proposed rule for more detailed information on how we interpreted “prior period” within the statutory language (88 FR 52597). Because section 1848(q)(6)(D)(i) of the Act does not specifically refer to “a performance period” or “year” to establish the performance threshold, we noted that the term “prior period” could refer to a time span other than a single year or performance period as long as that “prior period” is specified by the Secretary.

Given our interpretation that “prior period” does not require CMS to select a single performance year as the period, we proposed to add § 414.1405(g)(2) to specify that, beginning with the CY 2024 performance period/2026 MIPS payment year, a “prior period” for purposes of establishing a performance threshold as identified in § 414.1405(b) is a time span of 3 performance periods. Subsequently, we also proposed to redesignate language at § 414.1405(g) which states that, for each of the 2024, 2025, and 2026 MIPS payment years, the performance threshold is the mean of the final scores for all MIPS eligible clinicians from a prior period as specified under paragraph (b) of this section, as § 414.1405(g)(1) (88 FR 52597 and 52598).

Using three performance periods as the prior period would prevent the performance threshold from being dependent on a single potentially anomalous performance period, or on two performance periods, whose mean or median final score may be an outlier compared to other performance periods. The mean or median of final scores over 36 months is less likely to be impacted by unusual fluctuations in performance specific to a shorter time frame, is more likely to reflect clinician performance, and therefore, more appropriate to set the performance threshold. Additionally, as more data become available, we will consider whether a longer time span than three performance periods may be appropriate to mitigate outliers and better reflect clinician performance trends.

We requested comments on our proposal to use three performance periods as the “prior period” we use to establish the performance threshold and codify the policy at § 414.1405(g)(2).

We received public comments on the proposal. The following is a summary of the comments we received and our responses.

*Comment:* Several commenters supported the proposal that, for purposes of establishing a performance threshold, a "prior period" would be 3 performance periods beginning with the CY 2024 performance period/2026 MIPS payment year. Some commenters stated that this proposal has promise to improve stability in MIPS in future years.

*Response:* We thank the commenters for their support.

*Comment:* A number of commenters suggested that we treat the CY 2024 performance period/2026 MIPS payment year as a “recovery” period given the public health emergency (PHE) for COVID-19. On this basis, commenters suggested we delay implementation of the proposal to define "prior period" as 3 years. Several commenters suggested not using a 3-year prior period until we are able to use more recent data that is not impacted by the PHE for COVID-19.

*Response:* We agree that MIPS eligible clinicians, health systems, and physician groups may still be recovering from the PHE for COVID-19, which expired on May 11, 2023<sup>500</sup>, and this recovery may continue into CY 2024. After consideration of this feedback, we are not finalizing our proposal in defining a “prior period” as a time span of 3 performance periods for purposes of establishing a performance threshold. While we continue to believe that using 3 years of data better accounts for outliers as opposed to using a single year, we agree with commenters that it is in our best interest to delay finalizing this proposal until we have more recent data that is not impacted by the PHE for COVID-19. We will continue to examine the issue and will propose any changes in future rulemaking. In response to public comment, we also note that we do not intend to rely on data from the CY 2020 through 2021 performance periods/CY 2022 through CY 2023 MIPS payment years due to the PHE for COVID-19, as discussed in section IV.A.4.h.(2)(c) of this final rule.

*Comment:* A few commenters did not support our proposal to define "prior period" for purposes of establishing a performance threshold as a time span of 3 performance periods. More specifically, a few commenters noted their belief that we misinterpreted the statute’s language when it references "prior period" and do not believe that the statute allows us to combine performance data from multiple years to establish the performance threshold. Rather, the commenters stated that we should continue to use a single performance period for the purposes

---

<sup>500</sup> <https://www.hhs.gov/about/news/2023/05/09/fact-sheet-end-of-the-covid-19-public-health-emergency.html#:~:text=Based%20on%20current%20COVID%2D19,day%20on%20May%2011%2C%202023.>

of establishing the performance threshold.

*Response:* We disagree that we misinterpreted the statute's language when it references "prior period." As previously stated, the use of "prior period" in section 1848(q)(6)(D)(i) of the Act differs from other provisions in the statute which specifically refer to "a year" or "performance period." Certain statutory provisions governing MIPS clearly distinguish the terms "performance period" and "year" from "prior period" used in section 1848(q)(6)(D)(i) of the Act. If the "prior period" we use to determine the mean or median of all MIPS eligible clinicians' final scores to establish the performance threshold under section 1848(q)(6)(D)(i) of the Act was intended to be limited to a single year or performance period, we believe the statute would have been more specific and used "performance period" or "year" rather than using the unique term "prior period." However, as discussed herein, after consideration of the feedback we received, we will continue to use a single performance period for the purposes of establishing the performance threshold for the CY 2024 performance period/CY 2026 MIPS payment year. We note that we will continue to examine the issue and will propose any changes in future rulemaking.

After consideration of public comments, we are not finalizing our proposal to add to § 414.1405(g)(2) such that it will specify that, beginning with the CY 2024 performance period, we will define a "prior period" for purposes of establishing a performance threshold as identified in § 414.1405(b) as a time span of 3 performance periods. We are also not finalizing our proposal to redesignate language at § 414.1405(g) which states that, for each of the 2024, 2025, and 2026 MIPS payment years, the performance threshold is the mean of the final scores for all MIPS eligible clinicians from a prior period as specified under paragraph (b) of this section, as § 414.1405(g)(1).

#### (c) Performance Threshold for the CY 2024 Performance Period/2026 MIPS Payment Year

While we chose to use the mean in our methodology for determining the performance threshold for the CY 2022 through 2024 performance periods/2024 through 2026 MIPS payment

years, we did not specify which prior period's mean final score we would use for the CY 2024 performance period/2026 MIPS payment year's performance threshold. From our review of the data available at the time, we identified the mean final scores for each of the CY 2017 through 2021 performance periods/2019 through 2023 MIPS payment years individually, as well as the mean of the final scores for CY 2017 through CY 2019 performance periods/2019 through 2021 MIPS payment years combined, as shown in Table 59. We included means of final scores for MIPS eligible clinicians spanning over three performance periods within Table 59 in addition to a single year performance period. These six values represent the mean final scores for all MIPS eligible clinicians from prior periods that are available for consideration for the CY 2024 performance period/2026 MIPS payment year performance threshold.

We did not consider the means of the final scores for certain prior periods for the purpose of establishing the performance threshold because of issues with the underlying data. First, we did not consider the CY 2020 through 2021 performance periods/2022 through 2023 MIPS payment years because we extensively applied our extreme and uncontrollable circumstances policies described under § 414.1380(c)(2)(i) to MIPS eligible clinicians nationwide due to the COVID-19 PHE, which we believe resulted in skewing the final scores from those years such that they are not an appropriate indicator for future clinician performance. We announced on April 6, 2020, the application of extreme and uncontrollable circumstances policies described under § 414.1380(c)(2)(i) to MIPS eligible clinicians nationwide due to the COVID-19 PHE for the CY 2019 performance period/2021 MIPS payment year (85 FR 19277 through 19278). However, given the timing of the COVID-19 PHE and this announcement, the data from that CY 2019 performance period was likely minimally impacted because many MIPS eligible clinicians had already submitted the data. Second, the final scores for the CY 2022 performance period/2024 MIPS payment year were not finalized in time for the proposed rule and, therefore, the mean final score for the CY 2022 performance period/2024 MIPS payment year was not

included for consideration as a potential performance threshold value for the CY 2024 performance period/2026 MIPS payment year.

**TABLE 59: Possible Values for the CY 2024 Performance Period/2026 MIPS Payment Year Performance Threshold**

2017 Performance Period	2018 Performance Period	2019 Performance Period	2020 Performance Period	2021 Performance Period	2017-2019 MIPS Performance Periods
74.65 Points	87.00 Points	85.63 Points	89.47 Points	89.22 Points	82.06 Points

As shown in Table 59, the mean final scores available for consideration for the CY 2024 performance period/2026 MIPS payment year performance threshold cover a range of values from 74.65 points to 89.47 points (rounded to 75 points and 89 points, respectively). We proposed to use the CY 2017 through CY 2019 performance periods/2019 through 2021 MIPS payment years (mean of 82 points, rounded down from 82.06 points) as the prior period for the purpose of establishing the performance threshold for the CY 2024 performance period/2026 MIPS payment year for several reasons. We refer readers to the CY 2024 PFS proposed rule for our discussion of this proposal (88 FR 52598 through 52599).

For the last 2 performance periods/MIPS payment years, we established at § 414.1405(b)(9) the performance threshold as 75 points based on the CY 2017 performance period/2019 MIPS payment year. We did not increase the performance threshold between the CY 2023 performance period/2025 MIPS payment year and the prior year (CY 2022 performance period/2024 MIPS payment year) due to reasons noted in the CY 2023 PFS final rule (87 FR 70096 through 70100) and discussed in the CY 2024 PFS proposed rule (88 FR 52599). Generally, these reasons were related to expiration of transition policies and the COVID-19 PHE.

We proposed, pursuant to the methodology we established previously at § 414.1405(g), that the performance threshold for the CY 2024 performance period/2026 MIPS payment year would be the mean of the final scores for all MIPS eligible clinicians for the CY 2017 through

2019 performance periods/2019 through 2021 MIPS payment years, which is 82 points (rounded from 82.06 points). We proposed corresponding changes to § 414.1405(b)(9) to reflect this proposal (88 FR 52599).

Alternatively, in an effort to use more recent data, we considered using the single CY 2019 performance period/2021 MIPS payment year, with a mean of 86 (rounded from 85.63) to establish the performance threshold for the CY 2024 performance period/2027 MIPS payment year. However, in an effort to use more robust data from a longer period of time, we proposed using the CY 2017 through 2019 performance period/2019 through 2021 MIPS payment year as the prior period, with its mean of 82 points, to set the performance threshold for the CY 2024 performance period/2026 MIPS payment year. We also believe the performance threshold of 82 instead of 86 would be more appropriate for clinician practices that are still recovering from the impacts of the COVID-19 PHE.

In the Regulatory Impact Analysis (RIA) in section VI.E.22.d.(4) of the final rule, we estimate that approximately 22 percent of MIPS eligible clinicians would receive a negative payment adjustment for the CY 2024 performance period/2026 MIPS payment year if the performance threshold is established at 75 points. Under the original proposal of establishing the performance threshold at 82 points, we estimated that approximately 46 percent of MIPS eligible clinicians would receive a negative payment adjustment for the CY 2024 performance period/2026 MIPS payment year (88 FR 52599). We refer readers to the alternatives considered under the RIA where we present the impact of using data from alternative years to determine the performance threshold for the CY 2024 performance period/2026 MIPS payment year.

We requested comments on this proposal, as well as whether we should use means of final scores from alternative years to set the performance threshold for the CY 2024 performance period/2026 MIPS payment year, which we considered and discussed in the RIA in section VII.F.4 of the proposed rule. We received public comments on the proposal. The following is a summary of the comments we received and our responses.

*Comment:* A few commenters supported our proposal to use the CY 2017 through CY 2019 performance periods/2019 through 2021 MIPS payment years (mean of 82 points), as the prior period for the purpose of establishing the performance threshold for the CY 2024 performance period/2016 MIPS payment year.

*Response:* We thank the commenters for their support.

*Comment:* Many commenters urged us to not finalize the proposal to use the CY 2017 through the CY 2019 performance periods/2019 through 2021 MIPS payment years (mean of 82 points), as the prior period for the purpose of establishing the performance threshold for the CY 2024 performance period/2026 MIPS payment year. Specifically, some commenters stated that many health systems and physician practices continue to face financial and resource constraints and clinicians are continuing to recover from the PHE for COVID-19.

Commenters further opposed using data from the CY 2017 through 2019 performance periods/2019 through 2021 MIPS payment years as the prior period for the CY 2024 performance period/2026 MIPS payment year due to concern that those years, and their data and final scores, reflect prior transition policies. A few commenters voiced concerns that, because there are now new cost measures within the program in addition to the cost performance category weight increasing, MIPS eligible clinicians need more time getting acclimated with those measures. Many commenters suggested we continue to keep the performance threshold at 75 points and treat the CY 2024 performance period/CY 2026 MIPS payment year as a transition year given that we applied our automatic extreme and uncontrollable circumstances (EUC) policy for the COVID-19 PHE for the CY 2019 through 2021 performance periods/CY 2021 through 2023 MIPS payment years.

*Response:* We aim to balance concerns regarding the impact of the PHE for COVID-19 on MIPS eligible clinicians with policies that motivate clinicians to participate in MIPS and strive for continuous improvement on the measures and activities. When we proposed establishing the performance threshold at 82 points for the CY 2024 performance period/2026

MIPS payment year, we considered what was appropriate for clinician practices that are still recovering from the impacts of the COVID-19 PHE (88 FR 52599). However, after consideration of public comments, we believe that establishing the performance threshold at 75 points, using data from the CY 2017 performance period/2019 MIPS payment year, for the CY 2024 performance period/2026 MIPS payment year better achieves this goal. This means that the performance threshold will remain at the same level as was established for CY 2022 through CY 2023 performance periods/2024 through 2025 MIPS payment years.

We recognize that clinician recovery from the PHE coincides with several changes to the Quality Payment Program, including the removal of transition policies such as quality bonus points, which had been established for scoring the quality performance category for the CY 2018 through 2020 performance periods/2020 through 2022 MIPS payment years (86 FR 65491 through 65507). We also acknowledge that for the CY 2019 through 2021 performance periods/2021 through 2023 MIPS payment years, we applied certain extreme and uncontrollable circumstances policies described under § 414.1380(c)(2)(i) to MIPS eligible clinicians nationwide due to the COVID-19 PHE, which resulted in some clinicians not gaining experience with reporting on MIPS measures and activities due to the reweighting of some performance categories. The application of the automatic extreme and uncontrollable policies also resulted in many clinicians not submitting data for certain performance categories in order to receive reweighting of some performance categories leading to potentially inflated scores that would not be representative of our current scoring policies. (87 FR 70097). Given the expiration of those transition policies, as well as the possibility that the performance categories will be reweighted for fewer MIPS eligible clinicians for the CY 2023 performance period/2025 MIPS payment year, we expect the mean final score for CY 2023 performance period/2025 MIPS payment year to be lower than the mean final scores from the CY 2018 through 2020 performance periods/2020 through 2022 MIPS payment years.

We note that, on a similar basis, we established the performance threshold at 75 points

for the CY 2023 performance period/2025 MIPS payment year, without any change from the prior performance period (87 FR 70096 through 70100). Maintaining the performance threshold at 75 points, without any change, for the CY 2024 performance period/2026 MIPS payment year is consistent with our prior policy and addresses concerns raised by commenters, as previously discussed.

After receiving overwhelming public comment in favor of continuing the existing performance threshold of 75 points, we believe the rationale we used in selecting the performance threshold for the CY 2023 performance period/2025 MIPS payment year should be further applied to the CY 2024 performance period/2026 MIPS payment year. We believe this approach addresses commenters' concerns about the COVID-19 PHE, the impact of removing transition policies and bonuses, and changes to the cost performance category weight and measure inventory. This approach also allows for at least one complete year of performance (the CY 2024 performance period) after the COVID-19 PHE expired on May 11, 2023, from which we may later gather data regarding final scores to inform future performance thresholds. Further, this policy aligns with the policy we are finalizing in section IV.A.4.h.(2)(b) of this final rule, where we are not finalizing the proposal that a "prior period" is a time span of 3 performance periods.

We continue to believe that once MIPS eligible clinicians have been given at least one complete year of performance after expiration of the COVID-19 PHE, as clinicians gain more experience with MIPS, and as more recent data are available, we should incorporate more recent data in determining the performance threshold. Accordingly, we will continue to consider updating the performance threshold with more recent data in future years.

*Comment:* A few commenters opposed using the CY 2017 through 2019 performance periods/CY 2019 through 2021 MIPS payment years but agreed that CMS should not use data from the CY 2020 through 2021 performance periods/2022 through 2023 MIPS payment years. One commenter suggested that we use data from CY 2022 through CY 2024 performance

periods/CY 2024 through CY 2026 MIPS payment years for the purposes of establishing the performance threshold in future years.

*Response:* We agree with commenters that we should not use data from the CY 2020 through 2021 performance periods/2022 through 2023 MIPS payment years, as discussed previously, and note our continued intention to not use these data. We also note that as more recent data becomes available (for example, CY 2024 performance period/CY 2026 MIPS payment year) we will continue to consider updating the performance threshold with more recent data in future years.

*Comment:* A few commenters expressed concerns that setting the performance threshold at 82 will inadvertently harm small and rural practices, creating further challenges for them to successfully participate within the MIPS program.

*Response:* We have several policies within MIPS that continue to support small and rural practices, including scoring and reweighting policies, and opportunities to apply for hardships. However, as previously discussed, we are finalizing a policy to establish the performance threshold for the CY 2024 performance period/2026 MIPS payment year at 75 points. As we consider the performance threshold and its related policies in future years, we will continue to consider the impact on small and rural practices.

Comment: A few commenters expressed concerns that there were not enough quality measures within MIPS for certain specialties (for example, psychologists and non-patient facing clinicians) to successfully achieve the performance threshold of 82 points. One commenter suggested we delay increasing the performance threshold until we adopt new quality measures for additional specialties within MIPS. Additionally, a few commenters stated their concerns that certain specialties only have topped out measures to report. For example, the quality measures available for physical therapists are process-based measures capped at seven points which make it difficult for them to meet the increased performance threshold even if they perform very well on those measures.

*Response:* We understand that some MIPS eligible clinicians may not have six measures to select in the quality performance category which are relevant to their practice or may be topped out measures. To address this, we established an eligible measure applicability policy within the quality performance category, to reduce the denominator of required measures for the collection type used by a clinician if the clinician has fewer than six applicable measures to report in that collection type. This allows clinicians to be scored on the quality measures that are relevant to their scope of practice. For more information on the eligible measure applicability policy please see the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77290 through 77291, 82 FR 53730 through 53732). To address the commenters' concerns on the specialty measures available, we solicit commenter recommendations for new specialty measure sets and revisions to existing specialty measure sets on an annual basis. We encourage interested parties to provide recommendations during the specialty measure set solicitation process (for more information please see the QPP resource library at <http://www.qpp.cms.gov>). We also encourage clinicians that do lack sufficient quality measures relevant to their scope of practice to work with their specialty societies to provide recommendations during the specialty measure set solicitation process and to consider reporting a relevant MVP when one becomes available. As previously discussed, we also note that, in response to commenters' concerns with the impact of PHE for COVID-19 still continuing, we are establishing the performance threshold at 75 points for the CY 2024 performance period/2026 MIPS payment year, which may be more achievable for specialists with limited measures relevant to their practice.

*Comment:* A few commenters suggested that we break down the data analysis by specialty and establish multiple performance thresholds for certain clinician types (for example, specialties or MIPS eligible clinicians within their first or second year, etc.).

*Response:* Section 1848(q)(6)(D)(i) of the Act requires that we compute the performance threshold, with respect to which "the composite score of MIPS eligible professionals shall be compared for purposes of determining [MIPS] adjustment factors," such that it is the mean or

median (as selected by the Secretary) of the final scores for all MIPS eligible clinicians with respect to a “prior period” specified by the Secretary. We would like to emphasize that section 1848(q)(6)(D)(i) of the Act requires us to compute “a performance threshold,” meaning one performance threshold. Similarly, section 1848(q)(6)(A)(i) of the Act requires that we then compare each MIPS eligible clinician’s final score to “the performance threshold established” under section 1848(q)(6)(D)(i) of the Act for such year, requiring comparison of final scores against a singular threshold. We are unable to establish multiple performance thresholds as requested.

*Comment:* One commenter stated that clinicians with limited resources tend to score lower within MIPS and therefore have their payments reduced leading to having fewer resources to continue treating patients. Rather, the commenter stated their belief that MIPS is more about rewarding the "well-resourced" groups with significant bonuses at the expense of other groups that may not have the opportunity to score well.

*Response:* We strive to ensure that performing well within MIPS is an achievable goal across all MIPS eligible clinician types, and we have established various policies in place to allow that as possible. Further, we remind the commenter who is concerned about the magnitude or distribution of the positive payments adjustments that MIPS is a budget neutral by statute. Generally stated, it is designed to balance the positive payment adjustments of clinicians that achieve final scores above the performance threshold against the negative payment adjustments of clinicians that achieve final scores below the performance threshold. Therefore, a larger proportion of clinicians receiving a negative payment adjustment generally would result in larger positive payment adjustments for those above the performance threshold. Additionally, as discussed herein, after consideration of commenters’ feedback, we are finalizing the performance threshold at 75 points, which we believe is an achievable performance threshold across all MIPS eligible clinicians. We encourage the commenter to look at our estimates of how our finalized

policies will affect the payment adjustments in our regulatory impact analysis in section VI.E.22.d.(4). of this final rule.

*Comment:* A few commenters stated concerns about the proposed performance threshold due to the absence of an inflationary update and continued cuts to the conversion factor within the PFS.

*Response:* We note that, to determine a MIPS payment adjustment factor for each MIPS eligible clinician for a payment year, we must compare the MIPS eligible clinician's final score for the given performance period/payment year to the performance threshold we established for that same year in accordance with section 1848(q)(6)(D) of the Act. Section 1848(q)(6)(D)(i) of the Act requires that we compute the performance threshold such that it is the mean or median (as selected by the Secretary) of the final scores for all MIPS eligible clinicians with respect to a "prior period" specified by the Secretary. We are unable to consider issues such as the inflation rate or the conversion factor that is discussed in the broader PFS rule. Rather, as is statutorily required, we continue to consider performance thresholds that are the mean or median of the final scores from a "prior period" specified by the Secretary for all MIPS eligible clinicians.

As previously discussed, after consideration of public comments, we are not finalizing our proposal to use the CY 2017 through CY 2019 performance periods/2019 through 2021 MIPS payment years (mean of 82 points, rounded from 82.06 points) as the prior period for the purpose of establishing the performance threshold for the CY 2024 performance period/2026 MIPS payment year. We are no longer required by section 1848(q)(6)(D)(iv) of the Act<sup>501</sup> to methodically increase the performance threshold each year to "ensure a gradual and incremental transition" to the expected performance threshold. Instead, we are establishing that the performance threshold for the CY 2024 performance period/2026 MIPS payment year is 75 points, using the mean of the final scores for all MIPS eligible clinicians using CY 2017

---

<sup>501</sup> Section 1848(q)(6)(D)(iv) of the Act is a special rule applicable to establishing the performance threshold for the third, fourth, and fifth years of MIPS. As we are entering the eighth year of MIPS, the requirements of section 1848(q)(6)(D)(iv) of the Act no longer apply.

performance period/2019 MIPS payment year data. We are codifying this performance threshold of 75 points for the 2026 MIPS payment year, based on the 2019 MIPS payment year, at § 414.1405(b)(9)(iii).

We note that since we anticipate clinicians' scores to increase as they gain more experience in MIPS, the performance threshold may increase in future years based on the selected mean or median. We also strive to foster continuous improvement within MIPS.

### (3) Example of Adjustment Factors

Figure 1 provides an illustrative example of how various final scores will be converted to a MIPS payment adjustment factor using the statutory formula and based on our proposed policies for the CY 2024 performance period/2026 MIPS payment year. In Figure 1, the performance threshold is set at 75 points, as we finalized in section IV.A.4.h.(2)(c) of this final rule.

For purposes of determining the maximum and minimum range of potential MIPS payment adjustment factors, section 1848(q)(6)(B) of the Act defines the applicable percentage as 9 percent for the CY 2024 performance period/2026 MIPS payment year. The MIPS payment adjustment factor is determined on a linear sliding scale from zero to 100, with zero being the lowest possible score which receives the negative applicable percentage and resulting in the lowest payment adjustment, and 100 being the highest possible score which receives the highest positive applicable percentage and resulting in the highest payment adjustment.

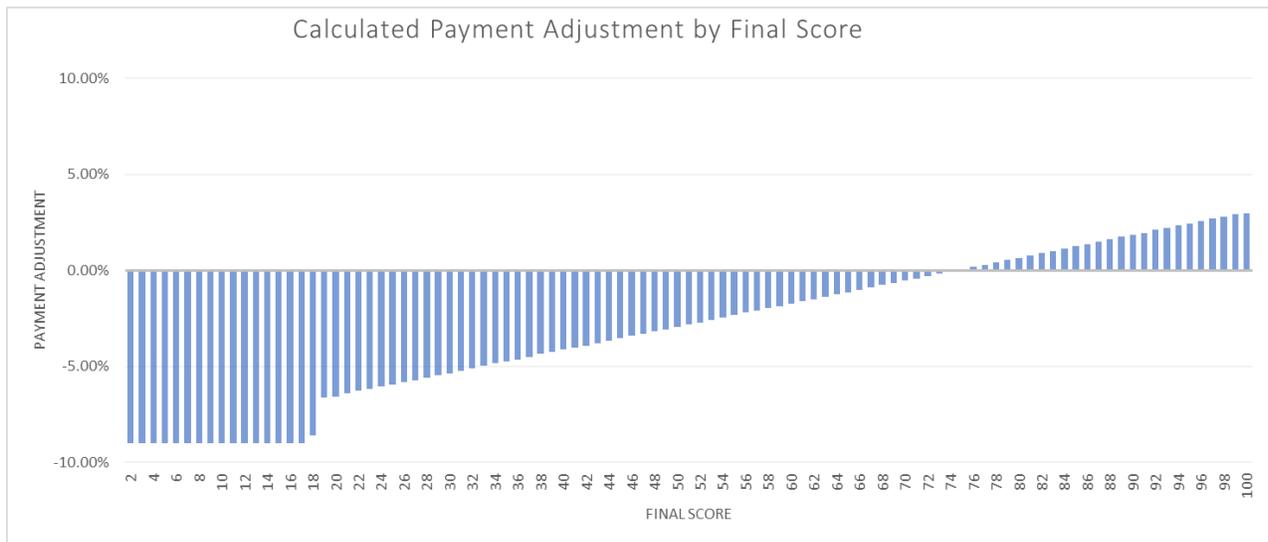

However, there are two modifications to this linear sliding scale. First, as specified in section 1848(q)(6)(A)(iv)(II) of the Act, there is an exception for a final score between zero and one-fourth of the performance threshold (zero and 18.75 points based on the performance threshold of 75 points for the CY 2024 performance period/2026 MIPS payment year). All MIPS eligible clinicians with a final score in this range will receive a negative MIPS payment adjustment factor equal to 9 percent (the applicable percentage). Second, the linear sliding scale

for the positive MIPS payment adjustment factor is adjusted by the scaling factor, which cannot be higher than 3.0, as required by section 1848(q)(6)(F)(i) of the Act.

If the scaling factor is greater than zero and less than or equal to 1.0, then the MIPS payment adjustment factor for a final score of 100 will be less than or equal to 9 percent (the applicable percentage). If the scaling factor is above 1.0 but is less than or equal to 3.0, then the MIPS payment adjustment factor for a final score of 100 will be greater than 9 percent. Only those MIPS eligible clinicians with a final score equal to 75 points (the performance threshold for the CY 2024 performance period/2026 MIPS payment year) will receive a neutral MIPS payment adjustment.

Beginning with the CY 2023 performance period/2025 MIPS payment year, the additional MIPS payment adjustment for exceptional performance described in section 1848(q)(6)(C) of the Act is no longer available. For this reason, Figure 1 does not illustrate an additional adjustment factor for MIPS eligible clinicians with final scores at or above the additional performance threshold described in section 1848(q)(6)(D)(ii) of the Act.

**FIGURE 1: Illustrative Example of MIPS Payment Adjustment Factors Based on Final Scores and Performance Threshold for the CY 2024 performance period/2026 MIPS Payment Year**

**Note:** The adjustment factor for final score values above the performance threshold is illustrative. For MIPS eligible clinicians with a final score of 100, the adjustment factor will be 9 percent times a scaling factor greater than zero and less than or equal to 3.0. The scaling factor is intended to ensure budget neutrality (BN) but cannot be higher than 3.0. This example is illustrative as the actual payment adjustments may vary based on the distribution of final scores for MIPS eligible clinicians.

Table 60 illustrates the changes in payment adjustment based on the final policies from the CY 2023 PFS final rule (87 FR 70096 through 70103) for the CY 2023 performance period/2025 MIPS payment year and the finalized policies for the CY 2024 performance period/2026 MIPS payment year, as well as the applicable percent required by section 1848(q)(6)(B) of the Act.

**TABLE 60: Illustration of Point System and Associated Adjustments Comparison between the CY 2023 Performance Period/2025 MIPS Payment Year and the CY 2024 Performance Period/2026 MIPS Payment Year**

2023 Performance Period		2024 Performance Period	
Final Score Points	MIPS Adjustment	Final Score Points	MIPS Adjustment
0.0-18.75	Negative 9%	0.0-18.75	Negative 9%
18.76-74.99	Negative MIPS payment adjustment greater than negative 9% and less than 0% on a linear sliding scale	18.76-74.99	Negative MIPS payment adjustment greater than negative 9% and less than 0% on a linear sliding scale
75.00	0% adjustment	75.00	0% adjustment
75.01-100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for scores from 75.00 to 100.00 This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality.	75.01-100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for scores from 86.00 to 100.00 This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality.

g. Review and Correction of MIPS Final Score

(1) Feedback and Information to Improve Performance

Under section 1848(q)(12)(A)(i) of the Act, we are required to provide MIPS eligible clinicians with timely (such as quarterly) confidential feedback on their performance under the quality and cost performance categories beginning July 1, 2017, and we have discretion to provide such feedback regarding the improvement activities and Promoting Interoperability performance categories. In the CY 2018 Quality Payment Program final rule (82 FR 53799 through 53801), we finalized that on an annual basis, beginning July 1, 2018, performance feedback will be provided to MIPS eligible clinicians and groups for the quality and cost performance categories, and if technically feasible, for the improvement activities and advancing care information (now called the Promoting Interoperability) performance categories.

We made performance feedback available for the CY 2019 performance period/2021 MIPS payment year on August 5, 2020; for the CY 2020 performance period/2022 MIPS payment year on August 2 and September 27, 2021; and for the CY 2021 performance period/2023 MIPS payment year on August 22, 2022. Feedback for the CY 2022 performance

period/2024 MIPS payment year was made available on August 10, 2023. We direct readers to [qpp.cms.gov](http://qpp.cms.gov) for more information.

## K. Targeted Review

### a. Background

Section 1848(q)(13)(A) of the Act requires that the Secretary establish a process under which a MIPS eligible clinician may seek an informal review of the calculation of the MIPS adjustment factor (or factors) applicable to the MIPS eligible clinician. In the CY 2017 Quality Payment Program final rule (81 FR 77353 through 77358), we finalized a targeted review process and related requirements under MIPS wherein a MIPS eligible clinician or group may request a review of the calculation of the MIPS payment adjustment factor and, as applicable, the calculation of the additional MIPS payment adjustment factor applicable to such MIPS eligible clinician or group for a year. Currently, MIPS eligible clinicians, groups, and Alternative Payment Model (APM) entities may request and receive targeted review of our calculation of their MIPS payment adjustment factor(s) under our established process and related requirements. In the CY 2017 Quality Payment Program final rule (81 FR 77546), we codified the MIPS targeted review process and related requirements at § 414.1385(a).

In the CY 2020 PFS final rule (84 FR 63045 through 63049), we revised the MIPS targeted review process and related requirements to address persons eligible to request targeted review, timeline for submission of targeted review requests, denial of targeted review requests, our requests for additional information, notification of targeted review decisions, and scoring recalculations. We codified these revisions to the targeted review process and related requirements at § 414.1385(a) (84 FR 63197 through 63198).

Currently, as specified at § 414.1385(a)(2), we provide that all requests for targeted review must be submitted within a 60-day period, beginning on the day that we make available the MIPS payment adjustment factors for the MIPS payment year applicable to each MIPS eligible clinician. In addition, § 414.1385(a)(2) provides that we may extend the targeted review request submission period. However, this current submission period for MIPS targeted review presents significant challenges to CMS as we seek to implement application of a differentially

higher PFS conversion factor for eligible clinicians who are Qualifying APM Participants (QPs) for a year beginning with the CY 2024 QP Performance period/2026 payment year, as required by section 1848(d)(1)(A) of the Act.

Specifically, to ensure application of the alternative conversion factor for eligible clinicians who are QPs, we must submit the final list of QPs to our Medicare Administrative Contractors no later than October 1<sup>st</sup> of the preceding year. However, under our current targeted review timeline for MIPS, this information would not be available until the first week of December. This is because the targeted review request submission period begins upon notification of the MIPS payment adjustment factors, which takes place sometime in August, and ends 60 days later, sometime in November. While QPs are excluded from MIPS reporting and any MIPS payment adjustment, we have received and addressed several requests for targeted review based on a clinician disputing whether they should be designated as a QP or a MIPS eligible clinician for purposes of payment under the Quality Payment Program. Based on our experience, we have found that more often than not a MIPS eligible clinician was initially identified as a QP but did not in fact participate in an Advanced APM and, conversely, a MIPS eligible clinician who believes they had achieved QP status was not identified as such. The targeted review process allows for clinicians to bring these issues to our attention. Accordingly, the targeted review process is essential to compiling an accurate list of QPs, which is necessary for purposes of determining who receives the application of the higher PFS conversion factor (also known as “qualifying APM conversion factor”) of 0.75 percent (versus non-QPs, who receive 0.25 percent).

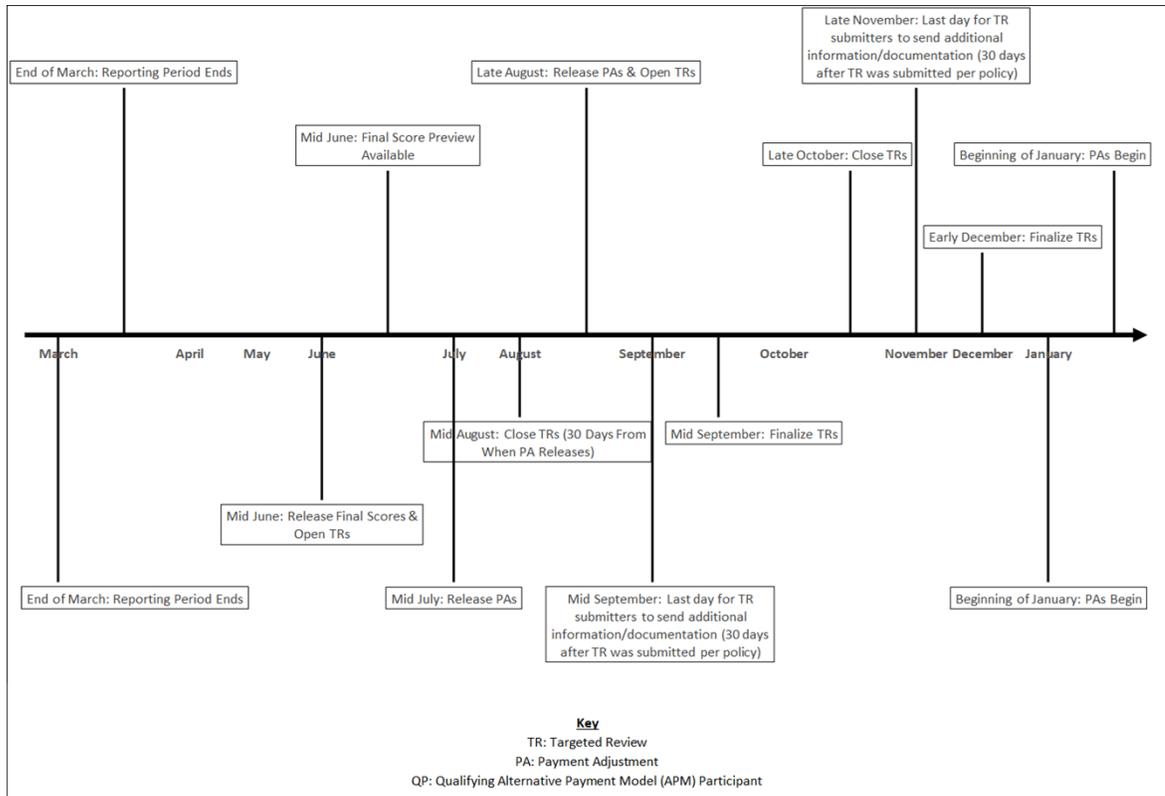

Section 1848(q)(13)(A) of the Act does not specify a timeframe for targeted review, broadly requiring that we “establish a process” for informal review of our calculation of the MIPS adjustment factor. Section 1848(q)(13)(A) of the Act only requires that the targeted review process permit a MIPS eligible clinician to seek “informal review of the calculation of the MIPS adjustment factor (or factors)” applicable to the MIPS eligible clinician for a MIPS payment

year. We believe this broad authority for establishing this targeted review process, and lack of specificity as to any timeframe required for such process, permits CMS to determine a reasonable time period for submission of a request for targeted review so long as a MIPS eligible clinician can submit a request after we have informed them of our calculation of their MIPS adjustment factor(s).

Therefore, we proposed to permit submission of a request for targeted review beginning on the day we make available the MIPS final score and ending 30 days after publication of the MIPS payment adjustment factors for the MIPS payment year (88 FR 52601 through 52603). This proposal will allow for a total of approximately 60 days for the targeted review submission period (approximately 30 days before publication of the MIPS payment adjustments factors and 30 days thereafter). We believe this proposal provides us with the necessary time to adjudicate the targeted reviews and finalize the QP status list by October 1<sup>st</sup>. If finalized, we proposed to codify this modification to this policy at § 414.1385(a)(2).

In Figure 2, we illustrate our proposed change to the timeline of the targeted review. The text above the timeline reflects the current process for targeted review while the text below the timeline reflects the proposed process in Figure 2.

**FIGURE 2: Current and Proposed Targeted Review Process**

To further shorten the timeline of the targeted review process for the reasons outlined above, we also proposed to amend § 414.1385(a)(5) (88 FR 52601 through 52603). Specifically, we proposed to require that, if CMS requests additional information under the targeted review process, that the additional information must be provided to and received by CMS within 15 days of receipt of such request. This proposal will modify the current timeline to respond to CMS’ request set forth at § 414.1385(a)(5), which is within 30 days of receipt.

In the CY 2017 Quality Payment Program final rule (81 FR 77353 through 77358), we implemented a virtual groups participation option under MIPS. Since virtual groups are eligible to submit data to the MIPS program, we proposed to add virtual groups as being eligible to submit a request for targeted review (88 FR 52603). Finally, as discussed in section IV.A.4.d of the proposed rule, we also proposed to add subgroups as being eligible to submit a request for targeted review. We proposed to codify these additions at § 414.1385(a).

We invited public comment on these proposals.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* Commenters supported the proposal to allow virtual groups and subgroups to request a targeted review.

*Response:* We thank commenters for supporting our proposal to allow virtual groups and subgroups to request a targeted review.

*Comment:* Commenters opposed the shortened time for practices to review their payment adjustment information prior to the closing of the targeted review submission period. Most commenters urged CMS to preserve the 60-day targeted review period that allows for a minimum of 60-days after payment adjustments are released, noting that clinicians need sufficient time to fully evaluate their final MIPS scores and see how their adjustments may play out before requesting targeted review. Some commenters also opposed reducing the timeframe for clinicians to respond to CMS requests for additional information from 30 to 15 days, noting their concern that this does not allow enough response time for providers to review and gather the required information.

*Response:* We thank commenters for their feedback and understand the burdens MIPS eligible clinicians may face given the adjustments to the targeted review submission timeframe. In evaluating our options for implementing these operationally necessary adjustments to the targeted review submission timeframe, we considered the complexity of implementation, clinician burden, and ability to communicate this change clearly and effectively. While the proposed targeted review submission timeframe shortens the time in which a MIPS eligible clinician may request targeted review of a payment adjustment *after* receipt of their payment adjustment factors, it does not substantively shorten the total time for MIPS eligible clinicians to request targeted review, which will remain at 60 days. At this point in time, the targeted review process is sufficiently mature in that MIPS eligible clinicians are familiar with scoring,

performance feedback, and the targeted review process to account for the proposed adjustments to the targeted review submission timeline.

We understand that MIPS eligible clinicians prefer to have their payment adjustment factors at the start of the targeted review submission timeframe. However, under our proposal, MIPS eligible clinicians may begin to request targeted reviews related to various elements essential to our final calculation of the MIPS payment adjustment factors, such as their status as MIPS eligible clinicians versus QPs or Partial QPs, their scores on performance categories and their final scores, prior to the release of payment adjustment factors. We believe that starting the targeted review submission period with release of MIPS final scores provides sufficient notice of key information for the MIPS eligible clinician to evaluate whether they would like to request targeted review. As provided in section 1848(q)(6) of the Act and § 414.1405, the MIPS eligible clinician's final score, as compared to the established performance threshold for that MIPS payment year, generally indicates whether the MIPS eligible clinician will receive a positive, neutral, or negative payment adjustment.

Finally, to ease the burden associated with the adjustments to the submission timeline, CMS will ensure adequate, timely and clear communications with eligible clinicians and stakeholders.

*Comment:* One commenter asked CMS to clarify when CMS intends to release the MIPS final score and performance feedback reports.

*Response:* We expect to release MIPS final scores in early June, which, under our proposal, will correlate with the start of the targeted review submission timeframe. Currently, performance feedback reports will be released, along with the issuance of the MIPS payment adjustment factors, approximately 30 days after the release of the MIPS final scores. While we appreciate that MIPS eligible clinicians may benefit from reviewing their performance feedback reports before deciding whether to request targeted review, we believe 30 days should be sufficient time for such review before the targeted review submission period ends. We will

continue to explore options to provide performance feedback reports as early in the process as is operationally feasible to do so.

*Comment:* One commenter noted their support for the proposed adjustment to the targeted review submission timeline so long as CMS can ensure clearer cost measure specifications and cost measure performance feedback reports, preferably at the time that MIPS final scores are released. The commenter noted that this information is essential to understanding the context of their final score. The commenter also requested that CMS consider extending the targeted review submission timeframe for eligible clinicians impacted by multiple promoting interoperability (PI) submissions to allow them to receive the PI category score from the highest scored collection type as required under CMS-finalized policy and to allow those who submitted a performance year 2022 targeted review due to this issue and were denied appropriate PI scoring to resubmit the targeted review.

*Response:* There are operational and budgetary constraints that limit our ability to issue these performance feedback reports earlier. However, we continue to explore options for providing more frequent and useful cost measure feedback data that MIPS eligible clinicians can use to analyze practice patterns that could lead to improved performance and would allow eligible clinicians to react during the performance period. As previously discussed in this section of the final rule, due to operational constraints, we cannot re-open or extend the targeted review submission timeline as requested. As stated in the regulation at § 414.1385(a)(7), **“Decisions based on the targeted review are final, and there is no further review or appeal.** CMS will notify the individual or entity that submitted the request for a targeted review of the final decision.”

After consideration of public comments, we are finalizing our proposal with minor technical corrections to modify § 414.1385(a) to allow virtual groups and subgroups to request a targeted review. We refer readers to section IV.A.4.d of this final rule regarding our discussion of allowing subgroups to request targeted review.

We are also finalizing our proposal to adjust the targeted review submission timeframe to permit submission of a request for targeted review beginning on the day we make available the MIPS final score and ending 30 days after publication of the MIPS payment adjustment factors for the MIPS payment year and to require that, if CMS requests additional information under the targeted review process, that the additional information must be provided to and received by CMS within 15 days of receipt of such request. We are revising the regulation text with minor technical corrections at § 414.1385(a)(2) and (5) to reflect this change.

## k. Third Party Intermediaries General Requirements

### (1) Codification of Previously Finalized Policy from Preamble

A third party intermediary is an entity that CMS has approved under § 414.1400 to submit data on behalf of a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity for one or more of the Quality, Improvement Activities, and Promoting Interoperability performance categories (§ 414.1305). Many of the policies that apply to third party intermediaries were finalized through prior rulemaking, but not codified in the CFR. Among other things, this has made it challenging for third party intermediaries to track certain program requirements and has caused confusion for MIPS participants and third party intermediaries.

We have reviewed the previously finalized language and identified policies that we believe should be codified for these reasons. We describe these proposals and provide background throughout this section.

### (2) General Requirements

#### (a) Background

We refer readers to §§ 414.1305 and 414.1400, the CY 2017 Quality Payment Program final rule (81 FR 77362 through 77390), the CY 2018 Quality Payment Program final rule (82 FR 53806 through 53819), the CY 2019 PFS final rule (83 FR 59894 through 59910), the CY 2020 PFS final rule (84 FR 63049 through 63080), the May 8th COVID–19 IFC (85 FR 27594 and 27595), the CY 2021 PFS final rule (85 FR 84926 through 84947), the CY 2022 PFS final rule (86 FR 65538 through 65550), and the CY 2023 PFS final rule (87 70102 FR through 70109) for our previously established policies regarding third party intermediaries. Where we proposed to codify existing final policy, we incorporated the rationale described in these prior rules by reference.

In the proposed rule, in addition to codifying previously finalized policies and making technical updates for clarity, we proposed to: (1) Add requirements for third party intermediaries to obtain documentation; (2) Specify the use of a simplified self-nomination process for existing

qualified clinical data registries (QCDRs) and qualified registries; (3) Add requirements for QCDRs and qualified registries to provide measure numbers and identifiers for performance categories; (4) Add a requirement for QCDRs and qualified registries to attest that information on the qualified posting is correct; (5) Modify requirements for QCDRs and qualified registries to support MVP reporting; (6) Specify requirements for a transition plan for QCDRs and qualified registries; (7) Specify requirements for data validation audits; (8) Add additional criteria for rejecting QCDR measures; (9) Add a requirement for QCDR measure specifications to be displayed throughout the performance period and data submission period; (10) Eliminate the Health IT vendor category; (11) Add failure to maintain updated contact information as criteria for remedial action; (12) Revise corrective action plan requirements; (13) Specify CMS's authority to terminate third party intermediaries that are on remedial action for 2 consecutive years; (14) Specify the process for publicly posting remedial action; and (15) Specify the criteria for audits (88 FR 52603 through 52610).

(b) Requirement to Obtain Documentation

In the CY 2017 Quality Payment Program final rule (81 FR 77367 through 77369 and 77384 and 77385), we established requirements that QCDRs and qualified registries obtain signed documentation from clinicians and groups regarding their authority to handle and submit data on the clinician and group's behalf. We established that QCDRs and qualified registries must enter into appropriate Business Associate Agreements with MIPS eligible clinicians. QCDRs and qualified registries must obtain signed documentation that each holder of a national provider identifier (NPI) has authorized the third party intermediary to submit "quality measure results, improvement activities measure and activity results, advancing care information objective results and numerator and denominator data or patient-specific data on Medicare and non-Medicare beneficiaries to CMS for the purpose of MIPS participation." The documentation should be annually obtained at the time the clinician or group enters into an agreement with the QCDR or qualified registry for the submission of MIPS data to the QCDR or qualified registry.

A group, subgroup, Virtual Group, or APM Entity may have their authorized representative give permission to the third party intermediary to submit their data. Additionally, in the CY 2018 Quality Payment Program final rule (82 FR 53812), we clarified that Business Associate Agreements must comply with the HIPAA Privacy and Security Rules. Records of the authorization must be maintained for 6 years after the performance period ends (81 FR 77370). We proposed to codify these requirements at § 414.1400(b)(3)(xii) and (xiii) (88 FR 52603).

We invited comments on this proposal.

We received public comments on the proposal. The following is a summary of the comments we received and our responses.

*Comment:* One commenter expressed concern that a requirement for individual signatories for virtual group reporting creates unnecessary administrative burden and suggested that CMS should instead allow for documentation of submission authority for virtual groups to occur at either the TIN or clinician level.

*Response:* If data is reported at a group level, the practice admin can sign for the group. A direct signature from an individual clinician is only required if the individual clinician's data is reported to CMS as an individual.

After consideration of public comments, we are finalizing as proposed our proposal at § 414.1400(b)(3)(xii) and (xiii) to codify that QCDRs and qualified registries must enter into appropriate Business Associate Agreements with MIPS eligible clinicians and that they must maintain records of their authorization to submit data to CMS for the purpose of MIPS participation for each NPI whom they submit data to CMS for. The records must be annually obtained, be signed by an eligible clinician or by an authorized representative of the reporting group, and records of the authorization must be maintained for 6 years after the performance period ends.

(c) Requirement to Report in Form and Manner Specified

(i) Criteria for Data Submission

At § 414.1400(a)(2)(C), we required that all data submitted by a third party intermediary must be submitted in the form and manner specified by CMS. We specified that these requirements include the obligation for a third party intermediary to: (1) report the number of eligible instances (reporting denominator); (2) report the number of instances a quality service is performed (performance numerator); (3) report the number of performance exclusions, meaning the quality action was not performed for a valid reason as defined by the measure specification; (4) comply with a CMS-specified secure method for data submission, such as submitting the QCDR's data in an XML file; (5) be able to calculate and submit measure-level reporting rates or the data elements needed to calculate the reporting and performance rates by taxpayer identification number (TIN)/NPI and/or TIN; (6) be able to calculate and submit a performance rate (that is the percentage of a defined population who receive a particular process of care or achieves a particular outcome based on a calculation of the measures' numerator and denominator specifications) for each measure on which the TIN/NPI or TIN reports; (7) provide the performance period start date the QCDR will cover; (8) provide the performance period end date the QCDR will cover; (9) report the number of reported instances, performance not met, meaning the quality actions was not performed for no valid reason as defined by the measure specification; and (10) submit quality, advancing care information, or improvement activities data and results to us in the applicable MIPS performance categories for which the QCDR is providing data (81 FR 77367 through 77369 and 77384 through 77385). These criteria for data submission are technical requirements of functioning QCDRs and qualified registries.

(ii) Reporting on All Patients, Including Non-Medicare Patients

In the CY 2017 Quality Payment Program final rule (81 FR 77367 through 77369 and 77384 through 77385), we established that QCDRs and qualified registries are required to submit data on all patients, not just Medicare patients. In section IV.A.4.f.(1)(b) of the proposed rule, we proposed a revision to the definition of the term collection type to allow Shared Saving Program ACOs meeting the reporting requirements under the APP to report on a subset of patients that is

partially defined by having the payer of Medicare (88 FR 52563). We proposed to codify our previously established requirement that data submitted by third party intermediaries must include data on all of the MIPS eligible clinician's patients regardless of payer, with the addition of the phrase "unless otherwise specified by the collection type" at § 414.1400(a)(3)(ii)(A) (88 FR 52604). We invited comments on this proposal.

We did not receive public comments on this provision. We are finalizing this proposal as proposed.

### (3) Requirements for QCDRs and Qualified Registries

#### (a) Background

As described at § 414.1305, a QCDR is an entity that demonstrates clinical expertise in medicine and quality measurement development experience and collects medical or clinical data on behalf of a MIPS eligible clinician for the purpose of patient and disease tracking to foster improvement in the quality of care provided to patients. Section 1848(q)(5)(B)(ii) of the Act provides that the Secretary shall encourage MIPS eligible professionals to report on applicable measures through the use of certified EHR technology (CEHRT) and qualified clinical data registries.

We referred readers to § 414.1400(b)(4), the CY 2017 Quality Payment Program final rule (81 FR 77374 and 77375), the CY 2018 Quality Payment Program final rule (82 FR 53813 and 53814), the CY 2019 PFS final rule (83 FR 59900 through 59906), the CY 2020 PFS final rule (84 FR 63058 through 63074), the May 8th COVID-19 IFC (85 FR 27594 and 27595), the CY 2021 PFS final rule (85 FR 84937 through 84944), the CY 2022 PFS final rule (86 FR 65540 through 65550) and the CY 2023 PFS final rule (87 FR 70103 through 70106) for previously finalized standards and criteria for QCDRs and QCDR measure requirements.

As described at § 414.1305, a qualified registry is a medical registry, a maintenance of certification program operated by a specialty body of the American Board of Medical Specialties or other data intermediary that, with respect to a particular performance period, has self-

nominated and successfully completed a vetting process (as specified by CMS) to demonstrate its compliance with the MIPS qualification requirements specified by CMS for that performance period. The registry must have the requisite legal authority to submit MIPS data (as specified by CMS) on behalf of a MIPS eligible clinician or group to CMS.

We referred readers to § 414.1400(b), the CY 2017 Quality Payment Program final rule (81 FR 77382 and 77386), the CY 2018 Quality Payment Program final rule (82 FR 53815 and 53818), the CY 2019 PFS final rule (83 FR 59906), the CY 2020 PFS final rule (84 FR 63074 through 63077), the CY 2021 PFS final rule (85 FR 84944 through 84947), and the CY 2022 PFS final rule (86 FR 65539 through 65548) for previously finalized standards and criteria for qualified registries.

(b) Self-Nomination and Program Requirements

(i) Subgroup Reporting

In the CY 2022 Quality Payment Program final rule (86 FR 65544), we established the requirement that third party intermediaries must support subgroup reporting beginning with the CY 2023 performance period/2025 MIPS payment year. This requirement that third party intermediaries support subgroup reporting was finalized because it would allow for clinicians to meaningfully report MIPS Value Pathways (MVPs) given that subgroups will be implemented concurrently with MVPs. We proposed to add new language to codify this policy. We proposed to revise § 414.1400(b)(1)(iii) that beginning with the CY 2023 performance period/2025 MIPS payment year, QCDRs and qualified registries must support subgroup reporting (88 FR 52604).

We invited comments on this proposal.

We received public comments on the proposal. The following is a summary of the comments we received and our responses.

*Comment:* One commenter suggested that third party intermediaries should only be required to support subgroups if they are reporting on MVPs since subgroups can only report through MVPs.

*Response:* We have announced our intention to eventually make MVP reporting mandatory (although an official start date has not been proposed yet), and therefore, believe that subgroup reporting will be an integral part of reporting in the future.

After consideration of public comments, we are finalizing our proposal as proposed at § 414.1400(b)(1)(iii) to codify that beginning with the CY 2023 performance period/2025 MIPS payment year, QCDRs and qualified registries must support subgroup reporting.

(ii) Simplified Self-Nomination Process for Existing QCDRs and Qualified Registries in MIPS, That Are in Good Standing

In the CY 2018 Quality Payment Program final rule (82 FR 53811 through 53812 and 53817 through 53818), we established that beginning with the CY 2019 performance period/2021 MIPS payment year, QCDRs and qualified registries in good standing (that is, QCDRs and qualified registries that are not on probation or disqualified) (81 FR 77386 through 77389) that “wish to self-nominate using the simplified process can attest, in whole or in part, that their previously approved form is still accurate and applicable” (see also § 414.1400(b)(2)). When this is the case, third party intermediaries may use the simplified process. The goal of the simplified self-nomination form is to reduce the self-nomination burden for third party intermediaries in good standing by allowing them to self-nominate with a mostly pre-populated self-nomination form. The policy allows third party intermediaries to attest that sections of their application have no changes even if there are minimal changes or substantive changes in other parts of their application. An example of a minimal change is adding or removing MIPS quality measures. An example of a substantive change is the submission of new QCDR measures for consideration. For sections of an application that do require changes, the requirements are the same as those for the normal self-nomination process (82 FR 53808).

In the course of implementing this policy, we have learned that the text of § 414.1400(b)(2) has confused some third party intermediaries such that they have attested that their previously approved self-nomination form is still accurate and have not submitted self-

nomination forms because they thought they did not need to do so if they had no changes. We proposed to revise § 414.1400(b)(2) to reflect that QCDRs and qualified registries are still required to submit their self-nomination form even if they utilize the simplified self-nomination process (88 FR 52604 through 52605). Even if a third party intermediary has no change to make to its form from the previous year, there may be new sections to fill out and they need to respond to attestations within the course of the application. We proposed to revise the last sentence of § 414.1400(b)(2) from “For the CY 2019 performance period/2021 MIPS payment year and future years, existing QCDRs and qualified registries that are in good standing may attest that certain aspects of their previous year’s approved self-nomination have not changed and will be used for the applicable performance period” to state, “For the CY 2019 performance period/2021 MIPS payment year and future years, an existing QCDR or qualified registry that is in good standing may use the simplified self-nomination process during the self-nomination period, from July 1 and September 1 of the CY preceding the applicable performance period.” This will ensure that third party intermediaries that have previously participated in MIPS and are in good standing can use the process to reduce the burden of self-nomination.

We invited comments on this proposal.

We did not receive public comments on this provision. We are finalizing this proposal as proposed.

(iii) Measure Numbers and Identifiers and Titles for the Improvement Activity Performance Category, the Promoting Interoperability Performance Category, and MVPs

In the CY 2017 Quality Payment Program final rule (81 FR 77367 through 77369 and 77384 through 77385), we established that QCDRs and qualified registries must provide the measure numbers for the MIPS quality measures on which the QCDR and qualified registry is reporting. We proposed to codify this previously finalized provision at § 414.1400(b)(3)(ix). For completion and consistency, we also need to receive identifiers for improvement activities, Promoting Interoperability, and titles for MVPs. This information is used to track which quality

measures, improvement activities, Promoting Interoperability performance category measures and MVPs QCDRs and qualified registries support in a performance period. This information is available on the qualified postings that are published on the QPP Resource Library. We proposed that § 414.1400(b)(3)(ix) will additionally require QCDRs and qualified registries to submit to CMS the identifiers for the improvement activity performance category, the Promoting Interoperability performance category measures, and titles for MVPs (88 FR 52605).

We invited comments on this proposal.

We did not receive public comments on this provision. We are finalizing this proposal as proposed.

#### (iv) Quality Measures

In the CY 2017 Quality Payment Program final rule (81 FR 77367 through 77369 and 77384 through 77385), we established that one criterion for data submission for QCDRs and qualified registries is that they must be able to submit results to CMS for at least six individual quality measures with at least one outcome measure during self-nomination. If an outcome measure is not available, a QCDR or qualified registry must be able to submit to CMS results for at least one other high priority measure. We proposed to codify this previously finalized provision at § 414.1400(b)(3)(x) (88 FR 52605).

We invited comments on this proposal.

We did not receive public comments on this provision. We are finalizing this proposal as proposed.

#### (v) Qualified Posting Attestation

In the CY 2017 Quality Payment Program final rule (81 FR 77367 through 77369 and 77384 through 77385), we established that QCDRs and qualified registries must sign a document that verifies their “name, contact information, cost for MIPS eligible clinicians or groups to use the qualified registry, services provided, and the specialty-specific measure sets the qualified registry intends to report.” As technology has progressed, we no longer need third party

intermediaries to sign a document and instead require an attestation. We became aware that this requirement is not consistent with our established policy in describing the manner in which the QCDR or qualified registry documents this information. In order to align with current processes, we proposed to add § 414.1400(b)(3)(xiv), which would require that QCDRs and qualified registries attest that the information listed on the qualified posting is accurate. The qualified posting contains information to help clinicians, groups, subgroups, virtual groups, APM Entities determine the services, cost, reporting options, measures/activities, etc. that a CMS-approved intermediary supports. We publish it every performance period and update it, as needed. While we have used the term qualified posting since the inception of the Quality Payment Program, we have not previously defined this term, and therefore, we proposed to define qualified posting as the document made available by CMS that lists QCDRs or qualified registries available for use by MIPS eligible clinicians, groups, subgroups, virtual groups, and APM Entities at § 414.1305.

We invited comments on these proposals.

We did not receive public comments on this provision. We are finalizing this proposal as proposed.

(vi) Data Access Capabilities

In the CY 2017 Quality Payment Program final rule (81 FR 77367 through 77369 and 77384 through 77385), we established that QCDRs and qualified registries must comply with any request by CMS to review data submitted by a third party intermediary for purposes of MIPS. We proposed to codify this previously finalized provision at § 414.1400(b)(3)(xv) (88 FR 52605).

We invited comments on this proposal.

We did not receive public comments on this provision. We are finalizing this proposal as proposed.

(vii) Attestation of Data Access Capabilities

As was previously described, the CY 2017 Quality Payment Program rule finalized the requirement for third party intermediaries to comply with any request by CMS to review data submitted by a third party intermediary for purposes of MIPS reporting requirements (81 FR 77367 through 77369 and 77384 through 77385). However, it did not require third party intermediaries to attest to their capabilities. Attestation during the self-nomination period emphasizes the importance of this capability for third party intermediaries even if the capability is not ultimately utilized later. We proposed to add § 414.1400(b)(3)(xvi)(A) to require that a QCDR or a qualified registry attest that it has required each MIPS eligible clinician on whose behalf it reports to provide the QCDR or qualified registry with all documentation necessary to verify the accuracy of the data on quality measures that the eligible clinician submitted to the QCDR or qualified registry (88 FR 52605). We also proposed to add § 414.1400(b)(3)(xvi)(B) to require that a QCDR or a qualified registry must attest that it has required each MIPS eligible clinician to permit the QCDR or qualified registry to provide the information described in § 414.1400(b)(3)(xvi)(A) to CMS upon request to ensure that data can be accessed by the third party intermediary for auditing purposes. We have received correspondence from some third party intermediaries, stating that they do not have access to the data and depend on clinicians to do the audit (88 FR 52605).

We received public comments on the proposal. The following is a summary of the comments we received and our responses.

*Comment:* One commenter urged CMS to consider the financial and administrative burden of requiring a QCDR or a qualified registry to attest that it has required each MIPS eligible clinician to permit the QCDR or qualified registry to provide the information requested to CMS, and to provide resources QCDRs would need to implement the requirement.

*Response:* Existing policy already requires third party intermediaries comply with CMS requests to review data (81 FR 77367 through 77369 and 77384 through 77385). Attesting to the ability to require clinicians to provide documentation necessary to verify the accuracy of data

submitted and to be able to submit that documentation to CMS should not be viewed as broadening the scope of this requirement as it would be a logical component of an audit. Therefore, we consider this to be a baseline requirement and not overly burdensome. CMS's ability to access the underlying documentation to verify the accuracy of the data submitted by clinicians is critical to ensuring that all data submitted is true, accurate, and complete.

*Comment:* One commenter suggested that the language be modified to require third party intermediaries to attest that they have access to the data to clarify that intermediaries are not expected to maintain all data necessary for an audit at all times.

*Response:* This requirement does not detail how intermediaries maintain the data but rather that the third party intermediary provide the documentation when CMS requests it.

After consideration of public comments, we are finalizing our proposal as proposed at § 414.1400(b)(3)(xvi) that a QCDR or a qualified registry must attest that it has required each MIPS eligible clinician on whose behalf it reports to provide all documentation necessary to verify the accuracy of the data the eligible clinician submitted to the QCDR or qualified registry. Additionally, a QCDR or qualified registry must also attest that it has required each MIPS eligible clinician to permit the QCDR or qualified registry to provide the information described in paragraph 414.1400(b)(3)(xviii)(A) to CMS upon request.

#### (viii) Third Party Intermediary Support of MVPs

In the CY 2022 PFS final rule (86 FR 65543), we finalized a new requirement at § 414.1400(b)(1)(ii) that, beginning with the CY 2023 performance period/2025 MIPS payment year, QCDRs and qualified registries must support MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. QCDRs and qualified registries may also support the APP. This proposal was finalized because MVPs are beginning to be implemented in the CY 2023 performance period/2025 MIPS payment year, and third party intermediaries have the necessary experience reporting data to support MVP reporting.

To further clarify this finalized policy, we responded to a comment in the CY 2022 PFS final rule (86 FR 65543) by explaining that third party intermediaries who support MVPs are required to “support all measures and activities available in the MVP across the quality, improvement activities, and Promoting Interoperability performance categories. The exceptions to this requirement are the cost measures and population health measures . . . [and] QCDR measures, which are only reportable through a QCDR. In instances where QCDR measures are included in an MVP, a qualified registry or health IT vendor will be expected to support all other quality measures included within the MVP.” Some interested parties have expressed concern regarding this requirement as many MVPs include measures that may be reported by clinicians across multiple specialties, some of whom might be outside their intended customer base. We are concerned that continuing this strict requirement for MVP support could undermine adoption during the time in which MVP submission is an option under MIPS. Given that many third party intermediaries may not support measures for clinicians in all specialty areas that might report a MVP, we proposed to add a sentence at the end of § 414.1400(b)(1)(ii) that a QCDR or a qualified registry is required to support MVPs pertinent to the specialties they support (88 FR 52605 through 52606). The addition states that a QCDRs or a qualified registry must support all measures and improvement activities available in the MVP with two exceptions. The first exception to this requirement at § 414.1400(b)(1)(ii)(A) is that if an MVP includes several specialties, then a QCDR or a qualified registry is only expected to support the measures that are pertinent to the specialty of their clinicians. For example, if an orthopedic care MVP includes both surgery and physical therapy measures, and the third party intermediary caters specifically to physical therapists, they are not required to support the surgical measures. The second exception at § 414.1400(b)(1)(ii)(B) is that QCDR measures are only required to be reported by the QCDR measure owner. In instances where a QCDR does not own the QCDR measures in the MVP, the QCDR may only support the QCDR measures if they have the appropriate permissions.

We received public comments on these proposals. The following is a summary of the comments our responses.

*Comment:* Several commenters supported the proposed exception that if an MVP includes several specialties, then a QCDR or a qualified registry is only expected to support the measures that are pertinent to the specialty of their clinicians. One commenter appreciated the agency's recognition that there may be operational barriers to reporting all measures within an MVP that span multiple specialties indicating that a QCDR or qualified registry may not have access to all the necessary data, urging the agency to provide sufficient flexibility to registries when determining the precise scope of a specialty. A few commenters supported the proposed exception that QCDR measures are only required to be reported by the QCDR measure owner and in instances where a QCDR does not own the QCDR measures in the MVP, the QCDR may only support those QCDR measures with the appropriate permissions.

*Response:* We thank the commenters for their support.

*Comment:* One commenter warned that incorporating QCDR measures into MVPs and restricting their availability puts some practices at a disadvantage if they cannot afford to pay the fees associated with the QCDR registration.

*Response:* A QCDR measure incorporated into an MVP is not required to be reported on by an MVP participant or supported by QCDRs who are not the owners of the QCDR measures in the MVP. To the extent possible with the existing MIPS quality measure inventory, we aim to construct MVPs that include MIPS quality measures which are broadly available for as many clinicians as possible.

*Comment:* One commenter urged CMS to consider adding an exception for the requirement that QCDRs or qualified registries support all measures and activities within an MVP in situations in which the care setting associated with the measure or activity does not apply to the participants of the QCDR or qualified registry. One commenter requested CMS clarify that third party intermediaries are only expected to support the categories that are

pertinent to the specialty of their clinicians (such as not supporting Promoting Interoperability in traditional MIPS if the clinicians are exempt).

*Response:* We are uncertain of an organized method to incorporate care setting location into the assessment of whether a QCDR or qualified registry is able to support all measures and activities within an MVP outside of measure specifications that are already included. In regards to the requirements to report the Promoting Interoperability performance category in situations in which the specialty supported is not subject to that performance category, we note that § 414.1400(b)(1)(i)(C) does allow for approval of a self-nomination of a QCDR or qualified registry that does not support the Promoting Interoperability performance category if the third party intermediary's MIPS eligible clinicians, groups, virtual groups, or subgroups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(4)(i) through (iii), or (c)(2)(i)(C)(1) through (7), or (c)(2)(i)(C)(9)

*Comment:* One commenter requested broadening of the exclusion for situations that may be beyond the control of the qualified registry that would limit their ability to collect a measure, such as the timing of the receipt of pharmacy claims in measures that may incorporate this data.

*Response:* The intent of the policy is to recognize that the MVP area of focus may not align in its entirety with the focus of a third party intermediary which we understand often focus on a clinician specialty. We will continue to evaluate the environment to ensure clinicians have access to third party intermediaries while balancing the need to ensure that most clinicians are able to report as many measures on MVPs as possible.

After consideration of public comments, we are finalizing at § 414.1400(b)(1)(ii) our proposal to clarify that that a QCDR or a qualified registry must support all measures and activities included in the MVP except if an MVP is intended for reporting by multiple specialties, a QCDR or a qualified registry are required to report those measures pertinent to the specialty of its MIPS eligible clinician or if an MVP includes a QCDR measure, it is not required to be reported by a QCDR other than the measure owner.

(ix) Readiness to Accept Data

In the CY 2019 PFS final rule (83 FR 59761), we established that a QCDR or a qualified registry must be up and running by January 1<sup>st</sup> of the performance period so that they can accept and retain clinician data starting on January 1<sup>st</sup>. We proposed to codify at § 414.1400(b)(3)(xvii) the requirement that a QCDR or a qualified registry must be able to accept and retain data by January 1 of the applicable performance period (88 FR 52606).

We invited comments on this proposal.

We did not receive public comments on this provision. We are finalizing this proposal as proposed.

(x) Duration of Services Provided

In the CY 2020 PFS final rule (84 FR 63053), we finalized a new requirement at § 414.1400(a)(2)(i)(E) that the organization must provide services throughout the entire performance period and applicable data submission period. In section IV.A.4.k.(3)(b)(xi) of the proposed rule, we outlined the requirements for a transition plan for cases in which organizations are not able to provide services throughout the entire year. While we recognize and allow for cases in which organizations may find themselves unable to provide services throughout the course of an entire year, we would require that they indicate their intent to do so as part of program requirements. We proposed to modify this requirement to state the organization must certify it intends to provide services throughout the entire performance period and applicable data submission period (88 FR 52606). We proposed to make this change at § 414.1400(a)(2)(i)(C) as a result of our proposal to divide requirements for self-nomination from programmatic requirements as outlined in section IV.A.4.k.(7) of the proposed rule.

We invited comments on these proposals.

We did not receive public comments on this provision. We are finalizing this proposal as proposed.

(xi) Transition Plan Requirements

In the CY 2020 PFS final rule (84 FR 63052 through 63053), we finalized a new requirement at § 414.1400(a)(2)(i)(F) that prior to discontinuing services to any MIPS eligible clinician, group, virtual group, subgroup, or APM Entity during a performance period, the third party intermediary must support the transition of such MIPS eligible clinician, group, virtual group, subgroup, or APM Entity to an alternate third party intermediary, submitter type, or, for any measure on which data has been collected, collection type according to a CMS approved transition plan. As part of an overall effort to divide self-nomination requirements from program requirements as discussed in section IV.A.4.k.(7) of the proposed rule, at § 414.1400, we proposed to redesignate and revise paragraph (a)(2)(i)(F) to paragraph (a)(3)(iv) that, prior to discontinuing services to any MIPS eligible clinician, group, virtual group, subgroup, or APM entity during a performance period, the third party intermediary must support the transition of such MIPS eligible clinician, group, virtual group, subgroup, or APM Entity to an alternate third party intermediary, submitter type, or, for any measure on which data has been collected, collection type according to a CMS approved transition plan by a date specified by CMS. The transition plan must address the following issues, unless different or additional information is specified by CMS. We proposed to specify the contents required in the transition plan in paragraphs (a)(3)(iv)(A) through (E) (88 FR 52606). We proposed to add § 414.1400(a)(3)(iv)(A) to require that the transition plan state the issues that contributed to the withdrawal mid-performance period or discontinuation of services mid-performance period. We also proposed to add § 414.1400(a)(3)(iv)(B), which will require that the transition plan state the number of clinicians, groups, virtual groups, subgroups or APM entities inclusive of MIPS eligible, opt-in and voluntary participants that will need to find another way to report and as applicable, and identify any QCDRs that were granted licenses to QCDR measures which will no longer be available for reporting due to the transition. We further proposed to add paragraph (a)(3)(iv)(C) to state the steps the third party intermediary will take to ensure that the clinicians, groups, virtual groups, subgroups, or APM Entities identified in § 414.1400(a)(3)(iv)(B)(1) are

notified of the transition in a timely manner and successfully transitioned to an alternate third party intermediary, submitter type, or, for any measure or activity on which data has been collected, collection type, as applicable. At paragraph (a)(3)(iv)(D), we proposed to require that the transition plan include a detailed timeline of when the third party intermediary will take the steps identified in paragraph (a)(3)(iv)(C), including notification of affected clinicians, groups, virtual groups, subgroups, or APM Entities, the start of the transition, and the completion of the transition. Finally, we proposed to add at paragraph (a)(3)(iv)(E) that the third party intermediary must communicate to CMS that the transition was completed by the date included in the detailed timeline. The proposals would enable CMS to have documentation of the steps, actions, tasks, and timeline for completion of the transition of clients.

We invited comments on these proposals.

We received public comments on these proposals. The following is a summary of the comments our responses.

*Comment:* One commenter supported the proposal for a transition plan for QCDRs and qualified registries withdrawing from the program indicating this would help share the responsibility of clinician support, increase the speed and cooperation for data transfer, and ensure that all pertinent agreements and compliances are in place.

*Response:* We thank the commenters for their support.

*Comment:* One commenter requested that CMS specify how much time is permissible for a completed transition plan indicating that a minimum of 90-business days would allow a QCDR to complete the requirements, with a longer timeline approved by CMS depending on the size of the QCDR.

*Response:* The transition plan should be developed with the intent to cause as little disruption as possible to the clinicians participating with their third party intermediary. While we required a timeline within the transition plan, we did not include a specific timeframe for a completed transition plan.

*Comment:* One commenter recommended that CMS enable other QCDRs in the program be notified immediately upon CMS receiving the resignation notice, as well as the reasoning as this would allow participating QCDRs to anticipate and accept those clinicians, especially if it is past their last day to accept new clients via the qualified posting deadline.

*Response:* We do update the qualified posting each month if a QCDR or Qualified Registry is terminated from the program or placed on remedial action. Third party intermediaries are encouraged to periodically review the updated qualified postings for this information.

After consideration of public comments, we are finalizing our proposal as proposed.

### (c) Submission Requirements

#### (i) Risk-adjusted Measures

In the CY 2017 Quality Payment Program final rule (81 FR 77384 through 77385), we established that qualified registries “submitting MIPS quality measures that are risk-adjusted . . . must submit the risk-adjusted measure results to CMS when submitting the data for these measures” (88 FR 52606). We proposed to codify this previously finalized provision at § 414.1400(b)(3)(xi).

We did not receive public comments on this provision, and therefore, we are finalizing it as proposed.

#### (ii) Data Validation Audit Requirements

Section 414.1400(b)(3)(v) outlines the requirements for third party intermediary’s annual data validation audits. As specified at paragraph (b)(3)(v)(E), the QCDR or qualified registry must conduct each data validation audit using a sampling methodology that meets the following requirements: (1) Uses a sample size of at least 3 percent of the TIN/NPIs for which the QCDR or qualified registry will submit data to CMS, except that if a 3 percent sample size would result in fewer than 10 TIN/NPIs, the QCDR or qualified registry must use a sample size of at least 10 TIN/NPIs, and if a 3 percent sample size would result in more than 50 TIN/NPIs, the QCDR or qualified registry may use a sample size of 50 TIN/NPIs. (2) Uses a sample that includes at least

25 percent of the patients of each TIN/NPI in the sample, except that the sample for each TIN/NPI must include a minimum of 5 patients and does not need to include more than 50 patients. We finalized this policy (81 FR 77366 through 77367) to reflect the number of reporting entities, which may be individuals, as represented by TIN/NPIs, but are often compositions of TIN/NPIs as represented by groups, subgroups, or APM entities. Since these compositions represent a single unit of measurement, we believe that they should be considered as a single unit.

We have received questions about the required sampling methodology from interested parties who are confused by the references to TIN/NPI in the context of sample size and how they map to individual MIPS eligible clinicians, groups, virtual groups, subgroups or APM Entities. To reduce confusion among third party intermediaries regarding the data validation audit sample, we proposed to revise § 414.1400(b)(3)(v)(E)(1) and (2) to replace references to TIN/NPI with “a combination of individual MIPS eligible clinicians, groups, virtual groups, subgroups and APM Entities” (88 FR 52607). The new text would state: (1) Uses a sample size of at least 3 percent of a combination of individual clinicians, groups, virtual groups, subgroups and APM entities for which the QCDR or qualified registry will submit data to CMS, except that if the sample size may be no fewer than a combination of 10 individual clinicians, groups, virtual groups, subgroups and APM entities, and no more than a combination of 50 individual clinicians, groups, virtual groups, subgroups and APM entities, the QCDR or qualified registry may use a sample size of a combination of 50 individual clinicians, groups, virtual groups, subgroups and APM entities; and (2) Uses a sample that includes at least 25 percent of the patients of each individual clinician, group, virtual group, subgroup or APM entity in the sample, except that the sample for each individual clinician, group, virtual group, subgroup or APM entity must include a minimum of 5 patients and need not include more than 50 patients.

We invited comments on this proposal.

We received public comments on the proposal. The following is a summary of the

comments and our responses.

*Comment:* One commenter supported the revision of wording to replace references to TIN/NPI but noted concern that the proposed wording of “a combination of individual MIPS eligible clinicians, groups, virtual groups, subgroups and APM Entities” will make the regulation difficult to read and is confusing. The commenter suggested using the term “submitter type” defined in §414.1305 instead. In addition, the commenter suggested removing the word “may” from the statement indicating sample size reading “the QCDR or qualified registry may use a sample size of... 50” stating the use of the word “may” means the QCDR or Qualified Registry may submit 50 but also more than 50.

*Response:* We appreciate the commenter’s suggestion; however, we fear that acting on this suggestion would only cause more confusion. The term “submitter type” is not limited to MIPS eligible clinicians, groups, virtual groups, subgroups, and APM entities. The term also includes third party intermediaries, which are not intended to be covered by this requirement. We note that the use of the term “may” is correctly interpreted by the commenter as we do not mandate a maximum sample size. We will monitor service center feedback to ensure that this policy is well understood by representatives from third party intermediaries, but do not believe we should change this terminology at this time.

After consideration of public comments, we are finalizing our proposal at § 414.1400(b)(3)(v)(E)(1) and (2) to modify the description of sample size as proposed.

#### (4) Requirements Specific to QCDRs

##### (a) Background

As described at § 414.1305, a QCDR is an entity that demonstrates clinical expertise in medicine and quality measurement development experience and collects medical or clinical data on behalf of a MIPS eligible clinician for the purpose of patient and disease tracking to foster improvement in the quality of care provided to patients. Section 1848(q)(5)(ii)(B) of the Act

provides that the Secretary shall encourage MIPS eligible professionals to report on applicable measures through the use of CEHRT and qualified clinical data registries.

We referred readers to § 414.1400(b)(4), the CY 2017 Quality Payment Program final rule (81 FR 77374 and 77375), the CY 2018 Quality Payment Program final rule (82 FR 53813 and 53814), the CY 2019 PFS final rule (83 FR 59900 through 59906), the CY 2020 PFS final rule (84 FR 63058 through 63074), the May 8th COVID-19 IFC (85 FR 27594 and 27595), the CY 2021 PFS final rule (85 FR 84937 through 84944), the CY 2022 PFS final rule (86 FR 65540 through 65550) and the CY 2023 PFS final rule (87 FR 70103 through 70106) for previously finalized standards and criteria for QCDRs and QCDR measure requirements.

(b) QCDR Measure Self-nomination Requirements

(i) New QCDR Measures May Not be Submitted After Self-nomination

In the CY 2017 Quality Payment Program final rule (81 FR 77375 through 77377), we established that QCDRs could submit measures that are not on the annual list of MIPS quality measures as part of the self-nomination process for an entity to become a QCDR. In the CY 2018 Quality Payment Program final rule (82 FR 53808), we established a process by which existing QCDRs that are in good standing could attest that certain aspects of their previous year's approved self-nomination have not changed. We intended for the self-nomination document to be comprehensive in terms of which QCDR measures would be submitted for consideration. However, we have received requests to add measures following the completion of the QCDR self-nomination process for the performance year. Our review process requires consideration of a complete self-nomination with all measures, so we proposed to add that the measure was submitted after self-nomination to our list of reasons for rejecting a QCDR measure at § 414.1400(b)(4)(iv)(O) (88 FR 52607).

We received public comments on the proposal. The following is a summary of the comments we received and our responses.

*Comment:* One commenter opposed the proposal and stated their belief that it would

discourage the development of new measures and potentially slow participation of QCDRs.

*Response:* It does not logically follow that establishing a deadline for the submission of measures as part of the self-nomination process would hamper the development or use of QCDRs in MIPS. As a practical matter, there is a point at which we can no longer accept the submission of measures in order for us to review a QCDR's complete application. QCDRs have generally met these requirements in the past, and adoption of this proposal would merely clarify for a QCDR what it must include at the time of its self-nomination.

*Comment:* A few commenters requested that CMS clarify whether all measures submitted after September 1 will be rejected for the reporting period or if only newly developed measures would be rejected. One commenter expressed concern that this may lead to the rejection of measures previously approved for use.

*Response:* A QCDR or Qualified Registry can add a MIPS quality measures after the September self-nomination deadline. CMS allows third party intermediaries to support additional MIPS quality measures until early May of the performance period and this date is communicated to third party intermediaries during monthly support calls for the given performance period. However, neither a new QCDR measure nor a previously approved QCDR measure that was not included in the third party intermediary's self-nomination can be accepted after the close of the self-nomination period on September 1st. Each QCDR measure that is self-nominated is evaluated and approved by CMS for its appropriateness and use in the MIPS program.

After consideration of public comments, we are finalizing our proposal to add that the measure was submitted after self-nomination closes to our list of reasons for rejecting a QCDR measure at § 414.1400(b)(4)(iv)(O) as proposed.

(ii) Limitations on Number of QCDR Measures Submitted for Self-nomination

In the CY 2017 Quality Payment Program final rule, we established at § 414.1400(b)(4)(i) that QCDRs must submit certain specifications for QCDR measures that would be considered for approval by CMS (81 FR 77374 through 77378). These measures

would then be considered for approval or rejection under the requirements of § 414.1400(b)(4)(iii) and (iv). CMS reviews these measures carefully and each additional measure takes considerable time and effort to review. We have had experiences in which a single QCDR has submitted a large number of QCDR measures for consideration. While we are mindful that there may be a number of valid measure concepts, we are generally trying to focus measurement within the Quality Payment Program. In an effort to optimize resource allocation and encourage QCDRs to focus their submitted measures on those that have the highest value, we proposed to add at § 414.1400(b)(4)(iv)(P) that a QCDR measure may be rejected if the QCDR submits more than 30 quality measures not in the annual list of MIPS quality measures for CMS consideration (88 FR 52607). We considered a lower limit given that clinicians in traditional MIPS are only required to report on 6 quality measures and clinicians reporting via MVPs may report even fewer. However, we recognize that some QCDRs serve more diverse clinical populations and could conceivably wish to submit this many as part of self-nominations. We noted that we would continue to evaluate individual measures on their merits as specified in our requirements at § 414.1400(b)(4)(iii) and (iv).

We received public comments on the proposal. The following is a summary of the comments we received and our responses.

*Comment:* One commenter supported our proposal that a QCDR measure may be rejected if the QCDR submits more than 30 quality measures not in the annual list of MIPS quality measures for CMS consideration and suggested that it would reduce the likelihood of irrelevant measures being reported by a QCDR.

*Response:* We thank the commenter for their support.

*Comment:* A few commenters opposed our proposal and suggested that establishing this limit would not allow a QCDR to best report for all the subspecialty clinicians which report through that QCDR.

*Response:* We understand that some QCDRs serve diverse clinical populations and may

wish to offer a large number of measure reporting opportunities to their clinicians. However, we also note that we are engaging in efforts such as the development of MVPs that would focus measures on those that are most relevant. We note that QCDRs have no limitation on the number of measures they report that are on the annual list of MIPS quality measures. Even a QCDR supporting diverse populations should have sufficient measures with this limit.

After consideration of public comments, we are finalizing our proposal at § 414.1400(b)(4)(iv)(P) that a QCDR measure may be rejected if the QCDR submits more than 30 quality measures not in the annual list of MIPS quality measures for CMS consideration as proposed.

(iii) Requirements for Previous Data on QCDR Measures

In the CY 2017 Quality Payment Program final rule (81 FR 77368), we established a requirement that for non-MIPS measures the QCDR must provide us, if available, data from years prior to the start of the performance period. We proposed to codify this previously finalized provision at § 414.1400(b)(4)(i)(C) (88 FR 52607 through 52608).

We did not receive public comments on this provision, and therefore, we are finalizing it as proposed.

(iv) Requirement for QCDR Measure Specifications to Remain Published Through the Performance Period and Data Submission Period

In the CY 2017 Quality Payment Program final rule (81 FR 77375 through 77376), we established at § 414.1400(b)(4)(i)(B) that no later than 15 calendar days following CMS posting of all approved specifications for a QCDR measure, the QDCR must publicly post the CMS-approved measure specifications for the QCDR measure (including the CMS-assigned QCDR measure ID) and provide CMS with a link to where this information is posted. While we established when this posting was required, we did not establish a standard for the duration of this posting. We have become aware of situations in which QCDR measure owners have removed this documentation during the course of the performance period or before the closure of

the submission period. We proposed to revise § 414.1400(b)(4)(i)(B) to add a provision that the approved QCDR measure specifications must remain published through the performance period and data submission period (88 FR 52608). Although it was not previously specified, it was our intention that this information be made available for the entirety of the time that the measure could be considered and reported by clinicians or groups as part of the Quality Payment Program. Measure specifications must be available throughout the duration of measure use for interested parties to understand the target population of the measure, how the measure is built and calculated, and to identify existing measure gaps. Clinicians may elect to begin collecting data at various times in the year and even if data collection has started, may need to consult specifications throughout the performance period to confirm that data collection is in concordance with the specifications. We stated that we believe this addition will prevent QCDRs from removing specifications following the initial required posting and increase transparency for participants. We also proposed to make a technical update to the language removing the reference to providing the NQF number due to changes in the contractor that CMS uses for measure endorsement (88 FR 52608).

We received public comments on the proposal. The following is a summary of the comments our responses.

*Comment:* One commenter opposed this proposal and suggested that it would discourage the development of new measures and potentially slow participation of QCDRs in MIPS.

*Response:* We note that this requirement merely specifies the length required before removal of a posted document. We believe that the specifications for a measure used in a public program should be publicly available while being used in that program. It is not clear how this proposal would discourage development of new measures or participation of QCDRs in the MIPS program.

After consideration of public comments, we are finalizing our proposal at § 414.1400(b)(4)(i)(B) that the approved QCDR measure specifications must remain published through the performance period and data submission period as proposed.

## (5) Health IT Vendors

### (a) Background

In the CY 2017 Quality Payment Program final rule (81 FR 77377 through 77382), we established the category of health IT vendor in the Quality Payment Program, along with requirements for data submission. In the CY 2019 PFS final rule, we codified the definition of a health IT vendor as an entity that supports the health IT requirements on behalf of a MIPS eligible clinician (including obtaining data from a MIPS eligible clinician's CEHRT) (83 FR 59907). In the CY 2022 PFS final rule (86 FR 65541), we finalized a reorganization of the regulatory text governing the third party intermediary section to improve clarity and readability. In that revised text, we established general requirements at § 414.1400(a), additional requirements for QCDRs and qualified registries at § 414.1400(b), and additional requirements for health IT vendors at § 414.1400(c).

### (b) Proposal to Remove Health IT Vendor Category

In the CY 2021 PFS final rule, we established additional program safeguards regarding data validation audit and targeted audit requirements that would apply specifically to QCDRs and qualified registries. We noted (85 FR 84928 and 84929) that while we did not propose these additional requirements for health IT vendors, we had become aware of situations in which health IT vendors have submitted data that are inaccurate and unusable and that could result in improper payments or otherwise undercut the integrity of the MIPS program. In our review of comments in response to our solicitation on the future application of such requirements on health IT vendors, we observed that several commenters supported requirements for health IT vendors to perform data validation to align requirements with QCDRs and qualified registries and improve data integrity. We also observed that several commenters opposed additional data

validation requirements for health IT vendors due to the associated cost, and that such a requirement would be duplicative of requirements of health IT vendors under the ONC regulatory framework.

Since the publication of the CY 2021 PFS final rule, we continue to have experiences with third party intermediaries submitting data that is inaccurate and unusable. We believe this necessitates a reconsideration of the lack of data validation requirements for health IT vendors in contrast to those requirements for QCDRs and qualified registries.

In the CY 2019 PFS final rule (83 FR 59747 through 59749), we established the definition of collection type, submitter type, and submission type. These definitions are intended to more precisely describe how data is collected and submitted for the Quality Payment Program. For the quality, Promoting Interoperability, and improvement activity performance categories, an approved third party intermediary may submit directly to the submissions application programming interface (API), or upload files via *qpp.cms.gov*. Historically, third party intermediaries are able to receive tokens by virtue of successful self-nomination as a QCDR or qualified registry or, for those technologies that use CEHRT, through a request to CMS.

In examining the different requirements for QCDRs and qualified registries and health IT vendors, we noted that the primary difference is the requirement for self-nomination at § 414.1400(b)(2) and requirements primarily related to data validation audits at § 414.1400(b)(3). We considered whether we should add a self-nomination requirement for health IT vendors or require data validation audits for health IT vendors or both. However, we noted that we believe that adding a self-nomination requirement or data validation audit requirements would essentially eliminate the difference between a health IT vendor and a qualified registry. We noted our observation that many vendors serve in capacities as qualified registries, QCDRs or health IT vendors with similar technology. Rather than establish identical or nearly identical requirements for different categories of vendors, we instead proposed to eliminate the health IT vendor category beginning with the CY 2025 performance period and by

revising § 414.1400(a)(1)(iii) (88 FR 52608). Absent a self-nomination process for Health IT vendors, we do not believe we can establish a meaningful enforcement mechanism to ensure that the vendors are meeting the requirements as we have laid out.

We noted that our proposal to remove Health IT vendors from the definition of third party intermediary would not preclude the vendors from assisting MIPS eligible clinicians with reporting under the program. Instead, the vendors may still provide their technology for clinicians to directly report under MIPS. We noted our belief that eliminating the category of Health IT vendor as a distinct type of third party intermediary will create a clearer distinction between those vendors that are submitting data to us for the purposes of MIPS and must meet the requirements of a qualified registry or QCDR and those vendors that work with clinicians through the sale and support of health IT that permits the clinician or group to submit the data.

We received public comments on the proposal. The following is a summary of the comments and our responses:

*Comment:* Several commenters supported our proposal to remove the Health IT vendor category, suggesting that this policy would improve clarity and set a consistent standard among third party intermediaries. A few commenters who supported the proposal to remove the Health IT vendor category suggested that CMS establish data validation standards for direct reporting of data for the purposes of MIPS in order to further improve consistency among submission types.

*Response:* We appreciate the support from the commenters for our proposal to remove Health IT vendors from the definition of a third party intermediary and agree it will improve clarity and establish a consistent standard. In response to concerns about data quality for those clinicians and groups that may directly submit data, we note that direct submitters are subject to the same requirements for data quality as data submitted through a third party intermediary and may be subject to audit.

*Comment:* A few commenters opposed our proposal to eliminate the health IT vendor category of third party intermediaries and suggested that this could limit the opportunity for

clinicians to report MIPS data using their EHRs. One commenter recommended that CMS align data submission requirements with the Digital Quality Measure Roadmap and continue to build on existing eCQMs. One of the commenters suggested that CMS instead adopt corrective action plan requirements for health IT vendors that submit inaccurate data and adopt more stringent data validation strategies.

*Response:* Our proposal was made based on our observation that many EHRs can self-nominate to serve as registries or QCDRs under our existing requirements and that many others can also facilitate direct reporting of MIPS data by clinicians and groups. This proposal will not limit opportunities for clinicians to submit data and most clinicians and groups can continue to use the vendors they currently use to facilitate reporting. This change will improve clarity and ensure that there is clear understanding of what has been reviewed in the approval of a third party intermediary. As noted in the 2024 PFS proposed rule (88 FR 52608), a lack of self-nomination process has made it difficult to fully understand the nature of the health IT vendors and therefore made it difficult to properly identify and develop corrective action plans for those with data issues. We continue to emphasize the importance of digital measures in MIPS and throughout CMS quality programs.

*Comment:* A few commenters requested further clarification on how the organizations previously identified as health IT vendors could support MIPS-eligible clinicians. One commenter asked if those organizations could provide QRDA files for the improvement activity and Promoting Interoperability performance categories.

*Response:* The organizations previously identified as health IT vendors may complete self-nomination as registries or QCDRs and submit data, which would include measures and activities in the improvement activity and Promoting Interoperability performance categories which may be reported using QRDA. They may also facilitate the direct reporting of data by clinicians and groups which is reported via QRDA.

*Comment:* One commenter opposed this proposal and suggested that it would have a

disproportionate effect on hospitals that treat disadvantaged patients.

*Response:* We offer a number of different options for clinicians who practice in environments in which they may be treating disadvantaged patients and are uncertain how such a policy would affect them disproportionately.

*Comment:* One commenter opposed our proposal because they stated that it may be difficult for some vendors to support the self-reporting by clinicians and groups and also difficult for these vendors to meet the requirements of a qualified registry or QCDR. One commenter suggested that technological solutions that are available such as OAuth are limited because they are assigned to individuals.

*Response:* Those organizations that served as health IT vendors that are unable to support self-reporting by clinicians and groups may be able to self-nominate to serve as a qualified registry or QCDR. We note that many organizations have successfully completed these requirements so we do not believe that they prevent a significant barrier.

*Comment:* One commenter requested that CMS require that health IT vendors that are serving as third party intermediaries be required to support a transition to another third party intermediary due to the elimination of the health IT vendor category.

*Response:* We will continue to offer as many resources as possible to help clinicians identify third party intermediaries that could facilitate data reporting for MIPS, as well as educate clinicians on opportunities to report data directly. In addition, it is important to note that this change will occur beginning with the CY 2025 performance period—thereby, providing clinicians and third party intermediaries additional time to prepare for the transition.

After consideration of the public comments, we are finalizing our proposal at § 414.1400(a)(1)(iii) to eliminate the health IT vendor category beginning with the CY 2025 performance period.

(6) Remedial Action and Termination of Third Party Intermediaries

(a) Background

We referred readers to § 414.1400(e), the CY 2017 Quality Payment Program final rule (81 FR 77386 through 77389), the CY 2019 PFS final rule (83 FR 59908 through 59910), the CY 2020 PFS final rule (84 FR 63077 through 63080), the CY 2021 PFS final rule (85 FR 84947), the CY 2022 PFS final rule (86 FR 65542 and 65550) and the CY 2023 PFS final rule (87 FR 70106 through 70109) for previously finalized policies for remedial action and termination of third party intermediaries.

(b) Additional basis for remedial action

(i) Failure to Maintain Correct Contact Information

In the CY 2017 Quality Payment Program final rule, we established the process for self-nomination for QCDRs (81 FR 77364 through 77367) and qualified registries (81 FR 77383 through 77384). We also established the process for corrective action plans in the CY 2017 Quality Payment Program final rule (81 FR 77389). In our work with QCDRs and qualified registries, we experienced times when the QCDR or qualified registry did not respond to certain requests in a timely manner, thereby delaying program operations. In some cases, we had further correspondence with the QCDR or qualified registry and those organizations suggested that the contact information (generally an email address) submitted as part of the self-nomination was not correct, so the request was never received. While we understand that personnel can change over time in an organization, such a change does not relieve the QCDR or qualified registry of its obligations under these rules. Therefore, we proposed an additional provision at § 414.1400(e)(2)(iv) to allow us to immediately or with advance notice terminate a third party intermediary that has not maintained current contact information for correspondence (88 FR 52609).

We received public comments on the proposal. The following is a summary of the comments we received and our responses.

*Comment:* A few commenters opposed our proposal to add failure to maintain correct contact information to the list of reasons for corrective action plan and suggested that this

proposal was too inflexible. One commenter suggested that the requirement for three separate contacts already provide an undue burden for smaller registries and that maintaining current information would add to that burden.

*Response:* We note that this policy does not require us to terminate a third party intermediary in all circumstances in which a third party intermediary fails to maintain current contact information; instead, it gives us the discretion to do so. Being able to contact a representative of a QCDR or Qualified Registry is a basic operational requirement.

After consideration of the public comments, we are finalizing our proposal at § 414.1400(e)(2)(iv) to allow us to immediately or with advance notice terminate a third party intermediary that has not maintained current contact information for correspondence.

#### (ii) Consecutive Years on Remedial Action

In the CY 2017 Quality Payment Program final rule, we established a process for placing third party intermediaries on probation for not meeting requirements (81 FR 77387). Specifically, if a third party intermediary did not meet requirements for qualification, they could be placed on probation for the current performance period and/or the following performance period. We also established that after two years on probation, a third party intermediary would be disqualified for the subsequent performance year (81 FR 77387 through 77389). In the CY 2019 PFS final rule, policies relating to probation and disqualification were renamed and reorganized under remedial action and termination of third party intermediaries (83 FR 59908 through 59910). Additionally, we finalized reasons for terminating third party intermediaries including being placed on remedial action, not submitting a corrective action plan, and not promptly correcting data errors (83 FR 59908 through 59910). At that time, we did not propose any actions related to third party intermediaries on remedial action for multiple years, as had been established under our initial probation policy.

We noted that we continue to experience issues with third party intermediaries that require corrective action plans over multiple years. We believe that third party intermediaries

that consistently require corrective action plans, whether for the same or unrelated issues, do not further the goals of the Quality Payment Program, which are to improve quality of care while limiting administrative burden. We believe allowing third party intermediaries that have consistently demonstrated failure to comply with CMS requirements such that they required corrective action plans undermine clinicians' and groups' efforts to improve quality and could result in increased administrative burden for those clinicians and groups. For this reason, we proposed to add at § 414.1400(e)(2)(v) that CMS may terminate third party intermediaries that are on remedial action for 2 consecutive years (88 FR 52609). We noted our belief that this proposal would minimize risk within the Quality Payment Program by terminating third party intermediaries that are consistently deemed as non-compliant.

We received public comments on the proposal. The following is a summary of the comments we received and our responses:

*Comment:* One commenter opposed our proposal that CMS may terminate third party intermediaries that are on remedial action for 2 consecutive years. The commenter suggested that CMS has had difficulty in determining if certain elements of the corrective action plan have been completed and further suggested that continuous years of corrective action could be a result of this lack of awareness.

*Response:* As part of our corrective action plans, we track and maintain status of progress on a monthly basis. Our policy to require third party intermediaries under a corrective action plan to communicate the final resolution of that plan, finalized in section IV.A.4.k.(6)(c) of this rule, will further facilitate awareness on our part of the resolution of a corrective action plan.

After consideration of public comments, we are finalizing our proposal at § 414.1400(e)(2)(v) that CMS may terminate third party intermediaries that are on remedial action for 2 consecutive years.

(c) Revised Corrective Action Plan Requirements

As described in § 414.1400(e)(1)(i), among the remedial actions that CMS may take against a non-compliant third party intermediary is a corrective action plan (CAP). Under paragraphs (e)(1)(i)(A) through (D), unless different or additional information is specified by CMS, the CAP must address the following issues: (A) the issues that contributed to the non-compliance; (B) the impact to individual clinicians, groups, virtual groups, subgroups, or APM Entities, regardless of whether they are participating in the program because they are MIPS eligible, voluntarily participating, or opting in to participating in the MIPS program; (C) the corrective actions to be implemented by the third party intermediary to ensure that the non-compliance has been resolved and will not recur in the future; and (D) a detailed timeline for achieving compliance with the applicable requirements. In the CY 2023 PFS final rule, we finalized a policy at § 414.1400(e)(1)(i)(E) to require third party intermediaries to provide a communication plan for communicating the impact to the parties identified within the corrective action plan (87 FR 70107).

Based on our experience with corrective action plans from third party intermediaries through the years, we have identified a gap in our ability to determine if certain elements of the corrective action plan have been completed in the time and manner specified within the action plan. Therefore, we proposed to add at § 414.1400(e)(1)(i)(F) an additional requirement for a third party intermediary under a corrective action plan to communicate the final resolution to CMS once the resolution is complete, and to provide an update, if any, to the monitoring plan provided under § 414.1400(e)(1)(i)(C) (88 FR 52609). We noted our belief that this additional step will ensure that third party intermediaries complete the required actions within the corrective action plan.

We did not receive public comments on this provision. We are finalizing this proposal as proposed.

(d) Public Posting of Deficiencies

In the CY 2017 Quality Payment Program final rule (81 FR 77386 through 77388), we established a remedial action that, in the event that a QCDR or qualified registry had data inaccuracies that affected more than 3 percent but less than 5 percent of the total number of MIPS eligible clinicians, we would have this information identified on the CMS public posting. We modified this requirement in the CY 2019 PFS final rule (83 FR 59909) that the data error rate would be publicly disclosed until the data error rate falls below 3 percent.

We proposed to modify this requirement. While we previously determined that a single, objective measure (that is, a 3 percent error rate) would support our goals of public notice, we noted our belief that the precise metric is not a meaningful indicator. Specifically, some errors may be minor in nature yet affect a large number of clinicians for whom the QCDR or qualified registry has reported data. Other errors, however, may be materially significant but may not affect 3 percent of the MIPS eligible clinicians due to the unique nature of the data point at issue.

We believe that there is significant value in informing the public and potential customers which QCDRs and qualified registries are under remedial action or are terminated. Therefore, we proposed to add a new provision at § 414.1400(e)(1)(ii)(B) that CMS may, beginning with the CY 2025 performance period/2027 MIPS payment year, publicly disclose on the CMS website that CMS took remedial action against or terminated the third party intermediary. We noted that this public disclosure would be limited to the presence of the corrective action plan and would not include any proprietary information from the QCDR or qualified registry (88 FR 52610). We also proposed to modify § 414.1400(e)(1)(ii) by redesignating it as § 414.1400(e)(1)(ii)(A) and ending this policy after the CY 2025 performance period/2027 MIPS payment year (88 FR 52610). We proposed to remove this policy because we believe it would be superseded by the proposal included in § 414.1400(e)(1)(ii)(B).

We received public comments on these proposals. The following is a summary of the comments we received and our responses:

*Comment:* A few commenters opposed our proposal to publicly post the existence of a

corrective action plan for third party intermediaries, suggesting that this would make it more difficult for these third party intermediaries to participate in MIPS. One commenter suggested that the information only be released if the third party intermediary is unable or unwilling to address the issue.

*Response:* A third party intermediary is given the opportunity to address deficiencies in a corrective action plan. We again note that the nature of the corrective action plan would not be identified. We believe that those considering the use of these third party intermediaries should be aware if there is a current deficiency when considering options for reporting MIPS data.

After consideration of public comments, we are finalizing our policies to add a new provision at § 414.1400(e)(1)(ii)(B) that CMS may, beginning with the CY 2025 performance period/2027 MIPS payment year, CMS will publicly disclose on the CMS website that we took remedial action against or terminated the third party intermediary. We also finalize our proposal to modify § 414.1400(e)(1)(ii) by redesignating it as paragraph (e)(1)(ii)(A) and end this policy after the CY 2025 performance period/2027 MIPS payment year.

#### (e) Considering Past Performance in Approving Third Party Intermediaries

In the CY 2017 Quality Payment Program final rule, we established that third party intermediaries would be placed on probation status if they had not met criteria for qualification following self-nomination (81 FR 77386 through 77389). Under the terms of the probation policy, a corrective action plan could be required to address any deficiencies or prevent them from recurring. In addition, a third party intermediary that was on probation status for 2 years would be disqualified for the subsequent performance period. In the CY 2019 PFS final rule (83 FR 59909), we consolidated the corrective actions that we would take in the event of a deficiency or error on the part of a third party intermediary. This included the elimination of a policy of probation for third party intermediaries and the establishment of a policy of remedial action for third party intermediaries. We did not change the factors made to determine a remedial action or probation.

We have continued to experience issues related to data errors from third party intermediaries and these errors often extend over multiple years. We are concerned that some third party intermediaries fail to address deficiencies with regularity, and are required to perform remedial actions as defined in corrective action plans over the course of many years. This suggests that these organizations are not able to properly adhere to the criteria for qualification for third party intermediaries. While we have established criteria for approval of third party intermediary at § 414.1400(a)(2)(ii)(A) which state that our determination to approve a third party intermediary may take into account whether the entity failed to comply with the requirements for a previous MIPS payment year, we wish to clarify that the consideration of past compliance can also include remedial actions. While we already have the ability to consider whether the entity failed to comply with certain requirements, we do not believe that the existing requirements are explicit enough for third party intermediaries to understand that a history of remedial actions, even if addressed such that the third party intermediary was not terminated could result in CMS not approving future approval.

We did not receive public comments on this provision. We are finalizing this proposal as proposed.

#### (f) Terms of Audits

In the CY 2017 Quality Payment Program final rule (81 FR 77389 through 77390), we finalized that third party intermediaries submitting MIPS data must comply with auditing procedures as a condition to participate in MIPS. In the proposed rule, we did not establish the reasons we have for auditing a particular third party intermediary. We noted that we perform both random and targeted compliance audits based on a number of reasons and we wish to document those reasons for transparency to the public. Therefore, we proposed at § 414.1400(f) that third party intermediaries may be randomly selected for compliance evaluation or may be selected at the suggestion of CMS if there is an area of concern regarding the third party intermediary (88 FR 52610). For example, areas of concern could include but are not limited to:

high data errors, support call absences, delinquent deliverables, remedial action status, clinician concerns regarding the third party intermediary, a continuing pattern of Quality Payment Program Service Center inquiries or support call questions, and/or CMS concerns regarding the third party intermediary. We also proposed to redesignate the existing section § 414.1400(f) (which includes paragraphs (f)(1), (2), and (3)) as paragraph (a)(3)(v) with minor changes in the text for clarity (88 FR 52610). We noted that this section refers to program requirements, which we believe is a more appropriate characterization of these requirements.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

*Comment:* A few commenters opposed the specific element of our proposal which referenced a continuing pattern of Quality Payment Program service center inquiries or support call questions. The commenters suggested this could discourage third party intermediaries from engaging with the support center.

*Response:* We clarify that a third party intermediary would not be identified for an audit on the basis of communication between the service center and the third party intermediary. However, a pattern of particular third party intermediary users contacting the Quality Payment Program for issues could indicate that the third party intermediary was having trouble meeting our program requirements, which would be a basis for taking corrective action.

After consideration of public comments, we are finalizing our proposal at § 414.1400(f) that third party intermediaries may be randomly selected for compliance evaluation or may be selected at the suggestion of CMS if there is an area of concern regarding the third party intermediary. We are also finalizing our policy to redesignate the existing section § 414.1400(f) (which includes paragraphs (f)(1), (2), and (3)) as paragraph (a)(3)(v) with minor changes in the text for clarity.

(7) Technical Changes

In the course of reviewing the regulation for third party intermediaries, we identified areas in which certain language was used that is not as consistent or clear as it could be. We proposed to make the following changes to § 414.1400 to improve clarity as denoted below (88 FR 52610) :

- At paragraph (a)(2), to clarify that an organization may only become a third party intermediary for the purposes of MIPS by meeting the approval criteria by replacing the term “third party intermediary” with “organization”.

- Redesignate paragraph (a)(3) to delineate third party intermediary approval criteria from requirements for third party intermediaries as they participate in the Quality Payment Program. We proposed the following redesignations:

- § 414.1400(a)(3) redesignated as § 414.1400(a)(3)(i);
- § 414.1400(a)(2)(i)(C) redesignated as § 414.1400(a)(3)(ii);
- § 414.1400(a)(2)(i)(D) redesignated as § 414.1400(a)(3)(iii);
- § 414.1400(a)(2)(i)(F) redesignated as § 414.1400(a)(3)(iv); and
- § 414.1400 (a)(2)(iii) redesignated as § 414.1400(a)(3)(vi).

These reorganized sections also include minor changes to the text. Please note that we outlined new proposals related to these requirements in section IV.A.4.k.(3) of the proposed rule. There is also a conforming change to reference this section at § 414.1400(e)(1).

- At § 414.1400(e)(3) to remove the word “total” from the phrase “total clinicians” as this word was included in error.

- At § 414.1400(e)(4) to improve clarity and remove a paragraph.

We invited comments on these proposals.

We did not receive public comments on this provision. We are finalizing these technical changes as proposed.

## I. Public Reporting on Compare Tool

Section 10331(a)(1) of the Affordable Care Act provides for the development of a Physician Compare Internet Website (“Physician Compare”) with information on physicians and other eligible professionals enrolled in Medicare who participate in the Physician Quality Reporting Initiative (PQRI). Section 1848(q)(9) of the Act, as added by section 101(c) of MACRA, aligned Physician Compare with the newly established Merit-Based Incentive Payment System (MIPS) by requiring the public reporting of MIPS performance information for MIPS eligible professionals through Physician Compare.

For previous discussions of public reporting of physician and clinician performance and information, we refer readers to the CY 2016 Physician Fee Schedule (PFS) final rule (80 FR 71116 through 71123), the CY 2017 Quality Payment Program final rule (81 FR 77390 through 77399), the CY 2018 Quality Payment Program final rule (82 FR 53819 through 53832), the CY 2019 PFS final rule (83 FR 59910 through 59915), the CY 2020 PFS final rule (84 FR 63080 through 63083), the CY 2022 PFS final rule (86 FR 65550 through 65554), the CY 2023 PFS final rule (87 FR 70109 through 70113) and the Care Compare: Doctors and Clinicians Initiative web page at <https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/care-compare-dac-initiative>. We also note, that as finalized at § 414.1305 “Physician Compare” is defined as the Physician Compare internet website of CMS (or a successor website). As discussed in prior rulemaking, the current website is the Compare Tools hosted by the U.S. Department of Health and Human Services (HHS), referred to as the “Compare tool” throughout prior rulemaking and this proposed rule (86 FR 39466). (<https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/care-compare-dac-initiative>.) As finalized at § 414.1305, “Physician Compare” is defined as the Physician Compare internet website of CMS (or a successor website). As discussed in prior rulemaking, we note the current website is the Compare Tools hosted by the U.S. Department of

Health and Human Services (HHS), referred to as the “Compare tool” throughout prior rulemaking and this proposed rule (86 FR 39466).

(1) Telehealth Indicator

In the CY 2023 PFS final rule, we finalized the addition of an indicator to the profile pages of clinicians who furnish telehealth services (87 FR 70109 through 70111) to established processes and coding policies to identify such clinicians (*id.*). As discussed in the CY 2024 proposed rule (88 FR 52611), under our current policy, we would already be using the most current CPT codes for each telehealth indicator update; however, we would need to use annual rulemaking to update the POS and claims modifier codes used for telehealth indicator public reporting purposes. Adding coding flexibility for other codes, such as POS and claims modifiers, would both help avoid future regulatory burden and allow for more real-time accuracy of the telehealth information provided on Care Compare.

For these reasons, we proposed to update our policy for identifying clinicians furnishing telehealth services, such that we remain current with CMS coding changes, without proposing and finalizing such coding changes via rulemaking. Specifically, instead of only using POS code 02, 10, or modifier 95 to identify telehealth services furnished for the telehealth indicator, we will use the most recent codes at the time the data are refreshed that identify a clinician as furnishing services via telehealth. We proposed that at the time of such a data refresh we will publish the details of which codes are used for the telehealth indicator through education and outreach, such as via a fact sheet, listserv, and information posted on the Care Compare: Doctors and Clinicians Initiative page, available at <https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/care-compare-dac-initiative>. We refer readers to the CY 2024 PFS proposed rule (88 FR 52611) for details on the Telehealth Indicator proposal.

The following is a summary of the comments on this proposal we received and our responses.

*Comment:* Commenters supported the use of the most recent codes at the time the data are refreshed that identify a clinician as furnishing services via telehealth. The commenters noted the importance of providing an accurate indicator of telehealth services on clinician profile pages. One commenter noted that providing meaningful information on care delivery options available could help to further access to care and health equity goals.

*Response:* We appreciate the commenters' support for updating the telehealth indicator process for identifying and updating telehealth service information on clinician profile pages. We agree that it is important to ensure accuracy in knowing whether a clinician offers services via telehealth to be useful to patients and caregivers, particularly for those who have access to care barriers.

*Comment:* One commenter recommended having a clinician review and correction process that would allow clinicians to update and correct the telehealth indicator and other information listed on their profiles if needed.

*Response:* Since claims are the data source for identifying telehealth services rendered by a clinician, we encourage clinicians to first look into any billing errors. However, as with any other questions or concerns regarding the information on clinician and group profile pages on the Compare tool, interested parties may contact the Quality Payment Program at 1-866-288-8292 or by e-mail at [QPP@cms.hhs.gov](mailto:QPP@cms.hhs.gov). Those who are hard of hearing can dial 711 to be connected to a Telecommunications Relay Service (TRS) Communications Assistant. We also encourage clinicians to ensure their information is current in the Provider Enrollment, Chain, and Ownership System (PECOS) and to visit the Doctors and Clinicians initiative page for more information <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Care-Compare-DAC-Initiative>.

After consideration of public comments, we are finalizing our proposal to use the most recent codes at the time the data are refreshed that identify a clinician as furnishing services via telehealth, as proposed.

## (2) Publicly Reporting Utilization Data on Profile Pages

Section 104(a) of MACRA provides that, beginning with 2015, the Secretary shall make publicly available on an annual basis, in an easily understandable format, information with respect to physicians and, as appropriate, other eligible professionals, on items and services furnished to Medicare beneficiaries. Section 104(e) of the MACRA also requires that we integrate this data into the Compare tool. We finalized a policy to report the most recent available utilization data in downloadable format beginning in late 2017 (80 FR 71130). This information continues to be available today in the Medicare Provider Data Catalog (PDC) available at <https://data.cms.gov/provider-data/topics/doctors-clinicians>. Separately, we have reported on the Compare tool clinician training information as well as a clinician's primary and secondary specialties.

In the CY 2023 PFS final rule (87 FR 70111 through 70113), and as discussed in the CY 2024 proposed rule (88 FR 52611 through 52612), we established a policy for publicly reporting procedure information on clinician profile pages to provide patients more information in their clinician searches in an understandable format, beginning no earlier than CY 2023.

We also established that priority procedures selected for utilization data public reporting will meet one or more of the following criteria:

- Have evidence of a positive relationship between volume and quality in the published peer reviewed clinical research;
- Are affiliated with existing MIPS measures indicating importance to CMS;
- Represent care that a patient might shop for a clinician to provide; and/or
- Are an HHS priority.

We finalized that this data would be based on a 12-month lookback period, with data refreshes updated bi-monthly, as technically feasible, and we would not initially prioritize complex, rare procedures. We noted that the utilization data shown on profile pages would only reflect Medicare Fee-for-Service (FFS) claims data and would not include procedures performed

for patients who have other types of insurance. To meaningfully categorize procedures, we finalized the policy of using the Restructured Berenson-Eggers Type of Service (BETOS) Codes Classification System to collapse Healthcare Common Procedure Coding System (HCPCS) data into procedural categories, and when no Restructured BETOS categories are available, procedure code sources used in MIPS, such as the procedure categories already defined for MIPS cost or quality measures.

Consumer testing showed that publicly reporting utilization data on patient-facing clinician profile pages and using plain language, is helpful for patients and caregivers to make informed healthcare decisions, since it allows them to find clinicians who have performed specific types of procedures. Consumer testing results showed that patients and caregivers understand this language, would not select a health care provider based on this information alone, and find the information helpful but would like the procedure volume to also reflect patients with other insurance if possible. Our data analyses have confirmed the availability of Medicare Advantage (MA) data increasing the representativeness of the procedure (that is, utilization) data, as discussed later in this section.

(a) Updating the Provider Data Catalog (PDC) Utilization Data Policy

As discussed in the CY 2024 PFS proposed rule (88 FR 52611 through 52612), we historically have published a PDC file that is a subset of the most commonly performed procedures in the PUF. With the upcoming release of the initial procedural utilization data, we will publish a second utilization file in the PDC that will reflect the procedure category information on clinician profile pages. That is, consistent with what will be publicly reported on profile pages, the second PDC file will aggregate like procedures and include an indication of low volume counts, in accordance with the CMS small cell size policy, in which counts below 11 cannot be publicly reported, to protect patient privacy.

It would be of greater use for the PDC to only have one utilization downloadable file that reflects the same subset of data, in the same format, as what will be publicly reported on

clinician profile pages. Doing so aligns the criteria for selecting utilization data in the PDC to reflect the same criteria for selection on clinician profile pages and will assist researchers in analyses of utilization data on clinician profile pages.

Therefore, we proposed revising the policy to publicly report a subset of the Medicare PUF on the PDC to instead provide a single downloadable dataset including the procedure utilization data that would appear on clinician profile pages. We proposed to remove the PUF subset file from the PDC and only keep the utilization data file that reflects the information on clinician profile pages in the PDC. We refer readers to the CY 2024 PFS proposed rule (88 FR 52612 through 52613) for details on the PDC Utilization Data File proposal.

We solicited comment on all aspects of this proposal, including any concerns about technical feasibility; our approach to aligning the criteria for selecting utilization data in the PDC to reflect the same criteria for selection on clinician profile pages; ways in which we inform researchers on the location of the full CMS PUF for continued use; and any other considerations.

The following is a summary of the comments on this proposal we received and our responses.

*Comment:* One commenter supported providing a single downloadable dataset including the procedure utilization data that would appear on clinician profile pages, noting the importance of access to the data for research purposes.

*Response:* We appreciate the commenter's support and agree that maintaining a single downloadable dataset that reflects the same procedure utilization data that will appear on clinician profile pages will be useful to researchers and clinicians interested in this information.

After consideration of public comments, we are finalizing the PDC Utilization Data File Policy as proposed. We will remove the PUF subset file from the PDC and only keep the utilization data file that reflects the information on clinician profile pages in the PDC.

(b) Procedure Grouping Policy for Publicly Reporting Utilization Data

As mentioned earlier in this section, in the CY 2023 PFS final rule, we finalized using Restructured BETOS and procedure code sources used in MIPS when no Restructured BETOS categories are available, such as the procedure categories already defined for MIPS measures to meaningfully categorize procedures for public reporting (87 FR 70111). However, since finalizing this policy, we identified some commonly sought procedures, such as hysterectomy, that do not have a procedure category specified in the Restructured BETOS categorization system or a relevant code set in any MIPS quality or cost measures.

In the CY 2024 PFS proposed rule (88 FR 52613), we proposed to define meaningful categories using subject matter expert (for example clinician) input in instances where a procedure category is unavailable under the Restructured BETOS or MIPS measures, if a code category exists but is not suitable for public reporting, or in instances where a procedure category does not exist, to create new, clinically meaningful, and well-understood procedure categories as needed. Added flexibility in grouping HCPCS codes to create procedure categories meaningful to patients and caregivers will allow users of the Compare tool to better assess a clinician's volume and scope of experience with a particular procedure and inform healthcare decision making.

To implement this, we proposed to modify the existing policy such that, in addition to the two previously finalized sources (Restructured BETOS categorization system and code sources used in MIPS), we may use alternate sources to create clinically meaningful and appropriate procedural categories, particularly when no relevant grouping exists. If we develop new procedure categories for publicly reporting utilization data on clinician profile pages, we proposed to engage subject matter experts and interested parties through periodic requests for feedback using methods outside of rulemaking, such as listserv emails, listening sessions, and focus groups to solicit feedback on bespoke procedure categories planned for future releases of utilization data, as appropriate and technically feasible. We refer readers to the CY 2024 PFS

proposed rule (88 FR 52613) for details on methods to solicit feedback on new procedure categories planned for future utilization data releases, as appropriate and technically feasible.

The following is a summary of the comments on the proposal we received and our responses.

*Comment:* Two commenters supported the proposal to modify existing procedural categorization policy to use alternate sources to create clinically meaningful and appropriate procedural categories.

*Response:* We appreciate the commenters' support and agree that the ability to create clinically meaningful and appropriate procedural categories, particularly when no relevant grouping exists will allow users of the Compare tool to better assess a clinician's volume and scope of experience with a particular procedure and inform healthcare decision making.

*Comment:* One commenter expressed concerns that BETOS is outdated, has broad categories and, as a result, may lead to errors that mislead patients. The commenter additionally stated there is no standard or systematic way to group procedures by Common Procedural Terminology (CPT) or HCPCS codes beyond the BETOS system and expressed concern that Restructured BETOS does not contain all procedure codes.

*Response:* In response to the concern that BETOS is outdated, we clarify that we do not use original BETOS. We use Restructured BETOS, which is updated on an annual basis, the most recent of which are from 2022. We discuss the differences between the two categorization systems in the CY 2023 PFS final rule (87 FR 70111 through 70113). We also recognized limitations with Restructured BETOS, which was why in the CY 2023 PFS final rule we also finalized that we would utilize procedure code sources used in MIPS, such as the procedure categories already defined for MIPS cost or quality measures, for procedures in which no Restructured BETOS categories are available. However, we have since identified the need for additional flexibility in defining procedure categories, as proposed in the CY 2024 PFS proposed rule (88 FR 52613).

*Comment:* One commenter noted that specialty societies could provide helpful feedback to aid CMS in making accurate determinations in the creation of new, clinically meaningful, and well-understood procedure categories.

*Response:* We appreciate the support specialty societies and other subject matter experts may provide in the development of additional procedure categories in future years.

*Comment:* One commenter cautioned against expanding the list of publicly reported procedures to include services such as reproductive health care and gender-affirming care citing safety concerns for physicians who furnish such services.

Response: We appreciate the commenter raising this concern and will take it into consideration as we expand procedure categories in the future.

After consideration of public comments, we are finalizing the Procedure Grouping Policy for Publicly Reporting Utilization Data as proposed. Specifically, in addition to Restructured BETOS and code sources used in MIPS, we may use alternate sources to create clinically meaningful and appropriate procedural categories, particularly when no relevant grouping exists. We will engage subject matter experts and interested parties through periodic requests for feedback using methods outside of rulemaking, including but not limited to listserv emails, listening sessions, or focus groups to solicit feedback on bespoke procedure categories planned for future releases of utilization data, as appropriate and technically feasible.

(c) Incorporating Medicare Advantage (MA) data into Public Reporting

As discussed in the CY 2024 proposed rule (88 FR 52613 through 52614), between the time of the CY 2023 PFS proposed and final rules, our Medicare FFS claims data analyses showed that for the initial 13 priority procedures identified, approximately 50 percent of clinician-procedure combinations fall into the low volume category, which meant that, based on Medicare physician and ancillary service (carrier) claims in the past 12 months, we could only publish an indicator that a clinician has experience with the procedure rather than specific counts. Under the small cell size policy, we prohibit the use of specific procedure or patient

counts in cases where the count is below ten. The high number of clinicians with a low volume indicator is partly due to not including data for patients with other coverage, such as MA plans or other payers, for whom a given clinician has also performed such procedures. As such, we are currently limited in our ability to contextualize low volume clinician experience with procedures in a way that is useful and easily understandable for patients and caregivers who may be looking for a clinician with experience performing a specific procedure.

As we identify more priority procedures for public reporting, more procedures may be subject to the small cell size policy using Medicare FFS data alone, which would prevent us from publicly reporting health care provider experience with such procedures for patients and caregivers to use in their healthcare decisions. Based on public comments and consumer testing, including other payer data would help prevent this issue. Consumer testing findings have also shown that patients and caregivers would like procedure information to reflect all procedures performed, since it better represents clinicians' experience.

While we agreed with comments received on the CY 2023 PFS proposed rule, we were unable to finalize the possibility of using other payer data as appropriate and technically feasible at that time. However, we have subsequently determined through analysis of MA encounter data submitted to CMS that it is technically feasible to integrate MA encounter data into procedure category counts and that adding such data adds to the representation of some clinicians' scope of care.

Therefore, we proposed to publicly report aggregated counts of procedures performed by providers based on MA encounter data in addition to Medicare FFS utilization data, given that we have determined it is appropriate and technically feasible. Section 104(a) and (b) of MACRA provides for the public reporting of items and services furnished to Medicare beneficiaries under title XVIII of the Act, including, at a minimum, information on the most frequent services or groupings of services furnished by physicians or other eligible professionals under part B of title XVIII of the Act. This provision authorizes the publication of information on the items and

services furnished to “Medicare beneficiaries under Medicare by physicians and certain other professionals.” Notably, the statute authorizes the disclosure of information on all items and services furnished to Medicare beneficiaries under the Medicare Act; that is, the statute does not limit the disclosure to a particular subset of Medicare services. Indeed, section 104(c)(1) of MACRA provides that the information made available must include “at a minimum” certain information on Part B services. This does not limit the disclosure authorized by section 104(a) of MACRA to information on Part B items and services; instead, it specifies the minimum information that CMS must disclose, leaving additional disclosures under section 104(a) of MACRA to CMS’ discretion. MA plans cover Part A and Part B benefits (excluding hospice services, acquisition costs for kidneys used for transplants, and, for a limited period, certain services under new National Coverage Determinations and changes in legislation) for Medicare beneficiaries that elect to enroll in an MA plan; this coverage is also under Title XVIII of the Act. Section 104(a) of MACRA thus authorizes the disclosure of certain information about items and services provided as benefits under an MA plan and furnished by a physician or other eligible professional.

Separately, section 10331(b)(4) of the Affordable Care Act provides for the Secretary to, in developing and implementing his plan to make information as determined appropriate by the Secretary available on Physician Compare, include data that reflects the care provided to all patients seen by physicians, under both the Medicare program and, to the extent practicable, other payers, to the extent such information would provide a more accurate portrayal of physician performance. Thus, the inclusion of MA encounter data is consistent with the relevant statutory provisions regarding the disclosures on the Care Compare website.

Per section 1853(a)(3)(B) of the Act, CMS has required MA organizations to submit the data necessary to characterize the context and purposes of each item and service provided to a Medicare beneficiary enrolled in an MA plan to use for risk adjusting payments by CMS to MA plans. Per the MA regulation at § 422.310(f)(1)(vii), CMS may use this risk adjustment data,

which includes MA encounter data, for activities to support administration of the Medicare program and for purposes authorized by other applicable law. The MA regulation at § 422.310(f)(2) allows CMS to release encounter data for any of the purposes specified in § 422.310(f)(1) in accordance with applicable Federal laws and CMS data sharing procedures, subject to protections of beneficiary confidentiality and commercially sensitive data. Finally, § 422.310(f)(3) imposes restrictions on when the data is available for release. We proposed to rely on § 422.310(f), as well as section 104 of the MACRA and section 10331 of the Affordable Care Act, for using and releasing the MA encounter data as part of the Care Compare website. To accomplish this, we also proposed to amend § 422.310(f)(3) to permit the release of the MA encounter data on the timeframe(s) used for disclosure and release of the data on the Care Compare website. We stated in the proposed rule that this proposal would ensure that there is no confusion about our ability to use and release the MA encounter data for the Care Compare website and downloadable files and permit release of MA encounter data when necessary and appropriate to support activities or authorized uses under paragraph (f)(1)(vii) of this section.

Using and analyzing MA encounter data as part of the aggregated information disclosed through the Care Compare website will more completely fulfill the public reporting required by section 104 of the MACRA and section 10331 of the ACA and using the MA encounter data in implementing these statutory provisions supports administration of the Medicare program. In addition, it is also consistent with administering the Medicare program overall to provide appropriate and helpful information to beneficiaries in selecting a provider. Thus, the use and disclosure of the MA encounter data here are within the scope of § 422.310(f)(1)(vii) without any amendment to § 422.310(f)(1)(vii).

The aggregated utilization data we proposed to include in the Compare tool meets the additional requirements to protect beneficiary and commercially sensitive information at § 422.310(f)(2) because only identifying information about healthcare providers and types of procedures performed within a specific time period were proposed to be disclosed on the website

and available for release in the PDC downloadable files. The disclosure and release of these portions of the MA encounter data are consistent with CMS data sharing procedures, which are applied to the Medicare FFS data already displayed and available for download on the Care Compare website. However, when releasing the MA encounter data under § 422.310(f)(2), the timing limitations at § 422.310(f)(3) prohibit releasing the encounter data before the applicable payment year's reconciliation has been completed except for in specified circumstances, none of which apply here. Because we proposed to use information from the MA encounter data, in combination with FFS claims data, over a 12-month rolling period, but risk adjustment reconciliation occurs no sooner than 13 months after the end of the year that services were provided, the timing of the release of the MA encounter data is not within the scope of the timing requirements in § 422.310(f)(3).

MA organizations submit encounter data continuously, but do not have the same timeliness requirements for submission that FFS providers have for submitting claims. In the August 22, 2014 final rule entitled, "Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Fiscal Year 2015 Rates; Quality Reporting Requirements for Specific Providers; Reasonable Compensation Equivalents for Physician Services in Excluded Hospitals and Certain Teaching Hospitals; Provider Administrative Appeals and Judicial Review; Enforcement Provisions for Organ Transplant Centers; and Electronic Health Record (EHR) Incentive Program" (79 FR 49854), CMS adopted § 422.310(f)(3) to address concerns that the need to update or correct MA encounter data prior to the final submission deadline could mean that the MA encounter data was not sufficiently complete or fully reliable for public release. However, since that time, which was during the first few years of submission of MA encounter data to CMS, submissions of MA encounter data have improved. In particular, the provider identifying information and procedure codes required for the Compare tool are well reported. Furthermore, including utilization and limited provider-identifying data from MA encounters prior to the data

being reconciled by the MA organization would substantially improve the Compare tool and, thereby, the administration of the Medicare program overall by providing patients and caregivers with more useful and easily understandable information about procedures performed by providers in their search for a clinician. Therefore, we proposed to amend § 422.310(f)(3) to include an additional exception at paragraph (f)(3)(iv) that permits CMS to release aggregated risk adjustment data before the reconciliation for the applicable payment year has been completed if CMS determines that releasing aggregated data is necessary and appropriate for the purposes specified in § 422.310(f)(1)(vii).

Based on our analyses, the inclusion of data about utilization in the MA program will reduce the low volume procedure counts subject to the small cell size policy, in which precise counts less than ten procedures or patients cannot be publicly reported. This will allow us to more accurately report the types of services that Medicare clinicians provide. Based on the public comments in our prior rulemakings about the Care Compare website and consumer feedback, aggregating utilization data from the Medicare FFS and MA program will also enhance patient use of the information. Although the initial release of publicly reported utilization data on the Compare tool is limited to clinicians' Medicare FFS claims, publicly reporting utilization data that includes Medicare FFS and MA would also be more consistent with MIPS quality information submitted via health IT vendors or registries that include other payer data. Lastly, adding MA data to the counts in the existing Medicare FFS utilization data file will mitigate interested party concerns that information available through the Compare tool does not fully reflect the physician's/clinician's scope of practice. Including MA data with the FFS data will provide more information about a physician's/clinician's experience and scope of practice. We refer readers to the CY 2024 PFS proposed rule (88 FR 52613 through 52615) for details on incorporating MA data to FFS procedure counts.

The following is a summary of the comments on these proposals we received and our responses.

*Comment:* Three commenters supported the proposal to incorporate Medicare Advantage data to FFS procedure counts without any concerns. The commenters stated it is important to include MA data so that beneficiaries receive accurate information regarding what procedures are conducted by a specific clinician. One commenter noted this proposal directly addressed their concerns expressed in the CY 2023 PFS proposed rule public comment period that publicly reporting utilization data did not reflect the clinician's full scope of experience. Two commenters also encouraged CMS to continue exploring expanding the data to include Medicaid, Veterans Affairs, and private payers to provide a fuller representation of clinicians' experience. One commenter provided similar suggestions but also stated that utilization data that only reflects Medicare FFS and MA would not be meaningful to beneficiaries.

*Response:* We agree that publicly reporting additional sources, such as Medicare Advantage data, provides more accurate information on procedures performed by a clinician. We appreciate the suggestion to look into adding other types of payer data. We also note that our consumer testing has found patients and caregivers would find utilization data based only on Medicare FFS and MA data to be helpful, even if it does not cover clinicians' full scope of practice.

*Comment:* Several commenters expressed concerns related to patient understanding of the information. Two commenters were concerned patients could incorrectly equate higher volume of procedures to higher quality of care and better outcomes, particularly in the absence of quality information on profile pages. Another commenter expressed concern regarding the number of clinicians with low-volume counts as still too high and that, as a result, procedure volume could be misleading to patients.

*Response:* Prior to the CY 2023 PFS proposed rule public comment period and the CY 2023 PFS final rule (87 FR 70109 through 70113), we conducted comprehensive user testing with patients and caregivers to see if they accurately understand the information. Plain language text included explanations that: the data do not reflect all procedures the clinicians perform; the

information shown only reflects procedures performed on patients with Medicare (Original Medicare and Medicare Advantage); and that the utilization data on their own are not the only indicator of quality. Findings show that patients and caregivers: understood that higher volumes may not be a consistent indicator of quality; would not select a provider based on utilization data information alone; and found the information helpful but would like the procedure volume to also reflect patients with other insurance if possible. We also found that low volume counts are well understood, perceived as an indicator that the clinician has experience performing the procedure, and that patients would not rely on utilization data alone to inform clinician selection.

*Comment:* Two commenters noted that “incident to” billing may limit procedure attribution for certain clinicians, such as nurse practitioners (NPs) and physician assistants (PAs).

*Response:* We agree that if a clinician, such as a NP or PA, bills Medicare incident to a physician, then we would attribute a procedure billed in this way to the physician listed on the claim. However, we believe such attribution is appropriate, since the billing physician supervised and is accountable for the procedure billed. Additionally, we note that the attribution concern is a non-issue for clinicians who only bill Medicare incident to a supervising physician since these clinicians would not have a Compare tool profile page through which we could display utilization data specific to that clinician. Furthermore, due to an operational update since the time of the previous final rule, utilization data will not currently be publicly reported on NP and PA profile pages.

*Comment:* One commenter expressed concerns that the encounter data are incomplete and that options for validating the data are limited. Given these concerns, the commenter requested CMS to publish the methodology used to calculate counts of procedures from the encounter data; which encounter data files were used to identify procedures (for example, physician, outpatient, inpatient, etc.); how procedures were attributed to individual clinicians (including whether any edits or data-cleaning procedures were applied to the NPI field); and what deduplication procedures were applied to the data. Two other commenters expressed concerns with potential

data inaccuracies. One commenter noted difficulty in maintaining accurate counts on a routine basis, and another noted inaccurate encounter data might skew portrayals of clinician performance. One additional commenter provided a suggestion to release Part C utilization encounter data in a manner similar to how Part B data is released to allow for greater evaluation of how utilization differs between Part B and Part C.

*Response:* Regarding concerns that the encounter data are incomplete or inaccurate and options for validating the data are limited, MA plans are required to submit encounter data records for all items and services provided to their enrollees. CMS regularly undertakes analyses to understand what data MA organizations may have challenges submitting. CMS also provides guidance and technical assistance to MA organizations to help resolve these challenges. We continually monitor the accuracy and completeness of the encounter data and take steps to remedy identified issues as appropriate. In using the MA encounter data for this purpose, we identify the procedures using physician/supplier Medicare Part C non-institutional encounters on certain services and procedures and will group them using Restructured BETOS categories or utilize procedure code sources used in MIPS, such as the procedure categories already defined for MIPS cost or quality measures, for procedures in which no Restructured BETOS categories are available in the same way in which we finalized in the CY 2023 final rule for Medicare Part B non-institutional claims (87 FR 46331). We note that, similar to Part B non-institutional claims, Part C physician/supplier non-institutional encounters use clinician NPIs, so there is no further attribution process. We may also use alternate sources to create clinically meaningful and appropriate procedural categories, particularly when no relevant grouping exists, which we are finalizing as proposed in section IV.A.4.1.(2)(b) of this final rule. According to § 422.310(d)(5), MA organizations must submit a NPI in a billing provider field on each MA encounter data record, per CMS guidance. Procedures are then attributed to individual clinicians using their individual NPI, specifically the rendering clinician and procedure code are listed on the same line. Regarding edits or data-cleaning applied to the NPI field, we are limiting what procedure

data is publicly reported on clinician profile pages based on Medicare's definition of a physician. Procedure data for other types of clinicians would be reported in the PDC only. Lastly, deduplication procedures are applied at the clinician, patient, date of service, and procedure category level.

*Comment:* Two commenters expressed concerns regarding the proposal to publicly report aggregated claims data of both Medicare Advantage and FFS. One commenter noted the MA encounter data may not be complete, having found in their analysis that some MA enrollees had inpatient, home health, and dialysis services not reported in the MA encounter data, and that it may be more appropriate to publish the data separately when there are sufficient sample sizes for each. Another commenter stated that it is not appropriate to report the aggregated data before reconciliation given that CMS has stated in other contexts that pre-reconciled encounter data is not always complete and accurate and referenced section 104 of MACRA as not being supportive of using unreconciled encounter data for this purpose.

*Response:* We disagree that section 104 of MACRA pertains only to items or services provided under Medicare part B. We refer the commenter to the CY 2024 PFS proposed rule (88 FR 52613 through 52615), where we discussed in detail the legal basis for using Medicare Advantage encounter data, including our interpretation of the scope of section 104 of MACRA.

Regarding the suggestion to report FFS and MA data separately, the proposal to include encounter data in the procedure count is intended to reduce the number of instances when data could not be reported due to small cell sizes. That is, to describe the types of Medicare covered services that a provider has performed as accurately as possible. Presenting separate counts of the services for a clinician would not aid this goal as, when separated, each count may be too small to be reported. We do not believe consumers would make a meaningful distinction between the two sources, nor is it clear why they should do so. For this reason, reporting counts separately may cause unnecessary confusion.

We have determined that reporting the aggregated data before reconciliation is appropriate for the following reasons. First, since the adoption of § 422.310(f)(3) to address concerns that the need to update or correct MA encounter data prior to the final submission deadline could mean that the MA encounter data was not sufficiently complete or fully reliable for public release, MA organizations' data submission processes have matured and are well-established. MA encounter data submissions have improved compared to the early years of encounter data collection, such that data are submitted more timely and comprehensively. In addition, CMS maintains several checks and edits in the encounter data system to minimize duplicate, incomplete or inappropriate data stored in the encounter data system. Moreover, because using the data submitted before reconciliation might result in the under counting of procedures (for example, if encounter data records are updated to include more procedures as the data becomes more complete), including procedures from encounter data records is not likely to misinform consumers.

We proposed to amend § 422.310(f)(3) to include an additional exception at paragraph (f)(3)(iv) that permits CMS to release aggregated risk adjustment data before reconciliation for the applicable payment year has been completed if CMS determines that releasing aggregated data is necessary and appropriate for the purposes specified in § 422.310(f)(1)(vii). When releasing aggregated encounter data for Medicare program administration before risk adjustment reconciliation, CMS will evaluate the potential for the release to misinform or otherwise result in undesirable consequences. CMS will not release aggregated encounter data before risk adjustment reconciliation unless we have determined releasing the data is necessary and appropriate.

For the Compare tool, including utilization and limited provider-identifying data from the MA encounter data prior to risk adjustment reconciliation is necessary in that the Compare tool's utility is substantially improved by including the data, and as noted before, is appropriate because there is limited risk that consumers will be misinformed if the MA encounter data are

included. Rather, including the encounter data will provide patients and caregivers with more useful and easily understandable information about procedures performed by providers in their search for a clinician.

After consideration of public comments and for the reasons outlined in the proposed rule and our responses to comments, we are finalizing both the proposal to incorporate Medicare Advantage data to FFS procedure volume counts and the proposal to amend § 422.310(f)(3) to add a new paragraph (iv) authorizing CMS to release aggregated risk adjustment data before the reconciliation for the applicable payment year has been completed if CMS determines that releasing aggregated data is necessary and appropriate for activities to support administration of the Medicare program, as proposed.

(d) Request for Information: Publicly Reporting Cost Measures.

In the CY 2024 PFS proposed rule (88 FR 52615 through 52617), we included a Request for Information (RFI) to evaluate ways to publicly report MIPS eligible clinicians' performance on measures under the MIPS cost performance category (cost measures). Specifically, we sought public comment on ways to publicly report performance on cost measures on clinician and group profile pages and signaled our intent to propose in future rulemaking to publicly report cost measures in CY 2026 beginning with data from the CY 2024 performance period/2026 MIPS payment year. We believe public reporting of these data would assist patients and caregivers in making healthcare decisions.

Additionally, in the proposed rule, we noted that we have not publicly reported any cost measure information from the MIPS cost performance category since the inception of MIPS. (88 FR 52615). As one of the reasons for this current status, we stated “[W]e have not had cost measures available for public reporting because of the COVID-19 Public Health Emergency (PHE), during which we reweighted the cost performance category to zero percent for MIPS eligible clinicians' final scores in the CY 2019 performance period/2021 MIPS payment year, as discussed at <https://qpp.cms.gov/resources/covid19?py=2019>.” (88 FR 52615). As stated in

section IV.A.4.g.(1) of this final rule, we clarify that the reweighting of the cost performance category to zero percent began in CY 2020 and not 2019.

We thank commenters for their feedback on this RFI, which may be considered in future rulemaking.

## m. Overview of QP Determinations and the APM Incentive

### (1) Overview

The Quality Payment Program provides incentives for eligible clinicians to engage in value-based, patient-centered care under Medicare Part B via MIPS and Advanced APMs. The structure of the Quality Payment Program enables us to advance accountability and encourage improvements in care. The Secretary has also adopted the closely related goal that all people with Original Medicare will be in an accountable care relationship by 2030, so that their needs are holistically assessed and their care is coordinated within a broader total cost of care system. Our vision for increased participation among clinicians in Advanced APMs is driven by the belief that integrating individuals' clinical needs across a spectrum of providers and settings will improve patient care and population health.

As we continue to make improvements to the Quality Payment Program, we seek to develop, propose, and implement policies that encourage broad and meaningful clinician participation, including by specialists, in Advanced APMs. For example, in this section, we had proposed to calculate QP determinations at the individual level for each unique NPI associated with an eligible clinician participating in an Advanced APM. As discussed further in the proposal, we believe that this change would provide a more accurate measure of the actual engagement of individual clinicians participating in Advanced APMs. Accuracy is important for administration of the Quality Payment Program incentives and could help us better identify and understand the motivating factors and indicators of clinician readiness for greater adoption of Advanced APMs.

In the CY 2017 Quality Payment Program final rule (81 FR 77439 through 77445), we finalized our policy at § 414.1425(b) for Qualifying APM Participant (QP) determinations. For the purposes of making QP determinations, an eligible clinician must be present on the Participation List of an APM Entity in an Advanced APM on one of the "snapshot dates" (March 31, June 30, or August 31) for the QP Performance Period. An eligible clinician

included on a Participation List on any such snapshot date is included in the APM Entity group even if that eligible clinician is not included on that Participation List at one of the prior- or later-listed dates. We perform QP determinations for eligible clinicians in an APM Entity group three times during the QP Performance Period using claims data for services furnished from January 1 through each of the respective QP determination snapshot dates. An eligible clinician can be determined to be a QP only if the eligible clinician appears on the Participation List on a snapshot date that we use to determine the APM Entity group and to make QP determinations at the APM Entity group level based on participation in the Advanced APM. For eligible clinicians who appear on a Participation List for more than one APM Entity, but who do not to achieve QP status based on any APM Entity-level determinations, we make QP determinations at the individual level as described in § 414.1425(c)(4). Likewise, for eligible clinicians on an Affiliated Practitioner list for an Advanced APM, we make QP determinations at the individual-level three times during the QP Performance Period using claims data for services furnished from January 1 through each of the respective QP determination snapshot dates as described in § 414.1425(b)(2).

## (2) Individual QP Determination

Under the current policy at § 414.1425(b), QP determinations for most eligible clinicians participating in Advanced APMs are made at the APM Entity-level. In the CY 2017 Quality Payment Program proposed rule (81 FR 28319), we contemplated that “as with any group assessment, there will be some situations in which individual Threshold Scores would differ from group Threshold Scores if assessed separately. This could lead to some eligible clinicians becoming QPs when they would not have met the QP Threshold individually (a ‘free-rider’ scenario) or, conversely, some eligible clinicians not becoming QPs within an Advanced APM Entity when they might have qualified individually (a dilution scenario).” At that time, we believed that the benefits of performing QP determinations at the APM Entity-level for groups outweighed these potential scenario concerns. However, as we previously indicated in a Request

for Information in the CY 2023 PFS proposed rule (87 FR 46337 through 46339), we started to believe that the effects of these types of scenarios, including effects that we had not intended or foreseen in the 2017 rule, were outweighing the benefits of performing QP determinations at the APM Entity-level.

First, it has been brought to our attention that our policy to conduct most QP determinations at the APM Entity-level may have inadvertently discouraged some APM Entities from including certain types of eligible clinicians, particularly in multi-specialty APM Entities such as ACOs, leading those clinicians to be excluded from participation in Advanced APMs. Because the APM Entity Threshold Scores (using the payment amount and patient count methods) that are used to make APM Entity-level QP determinations are based on an aggregate calculation across all eligible clinicians participating in the APM Entity group, eligible clinicians in the APM Entity group who furnish proportionally fewer services that lead to attribution of patients or payment amounts to the APM Entity are likely to lower the APM Entity's Threshold Score. Many Advanced APMs attribute patients to APM Entity groups based in part on the provision of primary care services, but not all eligible clinicians furnish primary care services. For example, primary care physicians may furnish proportionally more evaluation and management (E/M) (office visit) services, which, as we explain more in the next section, are frequently the basis for attribution of patients and payment amounts to the numerator of the APM Entity's Threshold Score, whereas specialist physicians may furnish proportionally more diagnostic tests and surgical procedures, which are not usually part of the attribution basis to the APM Entity.

We have received reports from Advanced APM participants and specialty societies that some APM Entities have taken steps to exclude from their APM Entity groups (and consequently from their Participation Lists) eligible clinicians who furnish proportionally fewer services that lead to the attribution of patients or payment amounts for purposes of calculating Threshold

Scores for APM Entity-level QP determinations. For reasons stated above, this action typically would lead to the exclusion of certain specialists from the APM Entity.

However, there are also benefits to the APM entity of including specialists and other eligible clinicians who furnish relatively fewer services that lead to attribution. For example, in both the Medicare Shared Savings Program and in models tested by the Innovation Center that meet the criteria to be Advanced APMs, CMS seeks to promote patient-centered care that is integrated across the continuum of care. The inclusion of specialists in APM Entities is helpful for achieving this goal. A comprehensive network that includes a range of specialists is central to the success of an ACO in the Medicare Shared Savings Program for its intended purpose in patient-centered care that coordinates items and services for Medicare FFS beneficiaries, a key aim of value-based care and practice transformation.<sup>502</sup> The methodology used in beneficiary assignment for the Shared Savings Program is deliberately constructed such that assignment is largely based on primary care, rather than specialty care, which results in specialists contributing proportionately less in terms of payment amounts and patient counts to the numerator of the ACO's Threshold Score calculation used for APM Entity-level QP determination. Moreover, it was not our intent to create a policy whereby eligible clinicians who see most or all their Medicare patients through an Advanced APM to remain unable to achieve QP status because the APM Entity with which they participate in the Advanced APM includes eligible clinicians who furnish very few services through the Advanced APM. It has always been one of the goals of the APM track of the Quality Payment Program for the availability of QP status to incentivize eligible clinicians to join Advanced APMs. But under our current policy to make most QP determinations at the APM Entity-level, there is the potential that eligible clinicians who individually fully engage with an Advanced APM may still be unable to earn QP status because it is calculated at the entity-level. We carefully considered our policy to make most QP determinations at the APM Entity-level, and believed it was the best approach at the time.

<sup>502</sup> <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/about>.

However, we did not intend for the policy to create potentially conflicting incentives for APM Entities between the goal for their eligible clinicians to achieve QP status under the Quality Payment Program, and their full participation in an Advanced APM with a group of eligible clinicians that can deliver a full spectrum of care.

In the CY 2017 Quality Payment Program proposed rule (81 FR 28319), we stated that “the statute consistently refers to an eligible clinician throughout section 1833(z) of the Act and clearly identifies that the QP determinations are to be made for an eligible clinician,” then noted that “in section 1833(z)(3)(B) of the Act, the definition of an eligible clinician includes a group of such professionals.” While the statutory scheme provides for the flexibility to establish policies that apply for groups of eligible clinicians, it does not require that approach. When we proposed the policy to calculate Threshold Scores at the APM Entity-level, we based this policy in part on “a premise that positive change occurs when entire organizations commit to participating in an Advanced APM and focusing on its cost and quality goals as a whole.” While we continue to believe in this premise, we also recognize that, if APM Entities are removing or otherwise excluding eligible clinicians who may technically contribute less to the APM Entity-level Threshold Score, such actions may impede other worthy goals of the Advanced APM (such as increased care coordination among all providers caring for a patient), in which case that larger positive change we were seeking to foster is not being achieved.

Conversely, we are concerned that, under our current policy to make most QP determinations at the APM Entity-level, in situations where an APM Entity does achieve QP status, some eligible clinicians who furnish relatively fewer services through that APM Entity may receive a QP designation despite limited Advanced APM participation because their QP status was achieved as a result of the care furnished by other eligible clinicians in the APM Entity while their APM Incentive Payment is calculated based on all of the covered professional services that the individual eligible clinician furnishes during the base year, including services that were not furnished through an Advanced APM. Our policy to make most QP determinations

at the APM Entity-level allows these anomalies because we calculate the Threshold Scores using the aggregate of payment amounts or patient counts for attributed patients based on Medicare Part B covered professional services furnished by all the eligible clinicians in the APM Entity, whether an individual eligible clinician furnished a few or many such services. When an eligible clinician receives QP status for a year, the individual QP will receive an APM Incentive Payment for covered professional services across all their TINs in the base year. This can enable an eligible clinician with minimal Advanced APM participation to receive an APM Incentive Payment, which we do not believe aligns with the intent of the Quality Payment Program.

As a result, we proposed to amend § 414.1425(b) so that, beginning with the QP Performance Period for CY 2024, we would make all QP determinations at the individual-level. We note that we already make some QP determinations at the individual level. Under §§ 414.1425(b)(2) and 414.1425(c)(4) we currently calculate Threshold Scores at the individual level when the Advanced APM includes eligible clinicians only on an Affiliated Practitioner List, and further, under § 414.1425(c)(4) we also make QP determinations individually when the eligible clinician participates in multiple Advanced APMs and does not achieve QP status at the APM Entity-level. The proposal would not have changed our policy for these determinations but would have changed the way we make QP determinations for all other eligible clinicians. Under the proposal, we would have calculated Threshold Scores for QP determinations at the individual-level for each unique NPI associated with an eligible clinician participating in an Advanced APM. We would have calculated a Threshold Score for each NPI based on all covered professional services furnished across all Tax Identification Numbers (TINs) to which the eligible clinician has reassigned their billing rights. This individual Threshold Score would have provided a more specific measurement of each eligible clinician's participation in an Advanced APM. This proposed methodology would have ensured that those eligible clinicians who individually meet a QP threshold would receive QP status and its commensurate financial incentives and other benefits. At the same time, it would have removed the incentive for APM

Entities to exclude certain types of eligible clinicians from their Participation Lists, because the success or failure of the APM Entity's eligible clinicians to reach QP status no longer would be collective. Because each eligible clinician on the APM Entity's Participation List would have been evaluated individually at the NPI level, eligible clinicians with lower proportions of payments and payments through the Advanced APM Entity would not have affected the QP status of other eligible clinicians on the APM Entity's Participation List.

We solicited comment on this proposal to amend § 414.1425(b) so that, beginning with the QP Performance Period for CY 2024, we would make all QP determinations at the individual-level.

We received public comments on the proposal. The following is a summary of the comments we received and our responses.

*Comment:* Two commenters supported our approach to move to QP determinations at the individual-level. One of these commenters stated that certain APM entities may be excluding specialists in order to meet the QP threshold. This commenter supports efforts that promote accurate attribution and increased inclusion of specialists in APMs.

*Response:* We appreciate these comments.

*Comment:* Many commenters suggested we keep the APM Entity-level determinations for QP status. These commenters stated that the proposed change would make it very difficult for individual specialists to qualify for QP status. They also stated it would negatively impact specialists' participation in ACOs and APMs.

*Response:* We appreciate this comment and are taking these concerns seriously. As we detail in the previous section, while APM Entity-level determinations have been used in some circumstances since the beginning of the Quality Payment Program, we have identified conflicting incentives for APM Entities between the goal for their eligible clinicians to achieve QP status under the Quality Payment Program, and the goal to build participation in an Advanced APM with a group of eligible clinicians that can deliver a full spectrum of care. We

also believe that when QP determinations are made at the APM Entity level, some eligible clinicians who furnish relatively fewer of their services through that APM Entity would receive a QP status that is not reflective of their individual participation in the APM. The intent of our proposal was to mitigate these conflicting issues, which we recognize are difficult.
